cient utilization, especially in low temperature carbonization. Important work was done also toward classifying and standardizing British coal. Coal production in 1928 was 237,774,000 tons, a decline from 251,232,336 tons in 1927.

The production of the more important industries of Great Britain is shown below:

INDUSTRIAL PRODUCTION

Product	1925	1926	1927
Coal 1000 long tons..	248,176	126,279	255,417
Iron ore	10,146	4,096
Salt	1,926	1,722

COMMERCE. The achievement of a substantial recovery in the export trade of the United Kingdom in 1927 was notable in view of the severe handicap with which the year began as a result of the seven months' coal stoppage. When the industrial upheaval and unsettled conditions of 1926 are remembered, it is not surprising that the 1927 exports of British produce and manufactures exceeded those of 1926 by some £56,000,000, or 8.5 per cent. It is especially noteworthy that in quantity British exports for 1927 were practically equal to those of the more normal year, 1925, though lower price levels caused a relative decline of 8.3 per cent in value.

The total adverse visible merchandise balance for 1927 was £387,219,000—a marked drop from the huge total of £462,819,000 for 1926, the year of the coal stoppage and general strike, and even a more substantial decline from the adverse balance of £393,298,000 in 1925. Board of Trade figures showing values of overseas merchandise trade for the three calendar years, 1925-1927, are as follows:

UNITED KINGDOM FOREIGN TRADE VALUES

Year	Imports (c. i. f. value)	Exports (f. o. b. value)	Re-exports (f. o. b. value)	Net excess of imports
1925	£1,320,715,190	£773,880,702	£154,036,799	£293,297,689
1926	1,241,361,277	653,046,909	125,494,968	£462,819,400
1927	1,219,387,424	709,105,402	123,062,727	£87,219,295

The value figures show declines from 1925 in imports of food, drink, and tobacco; raw materials; and parcel-post goods; but increases in

since 1925. Compared with the abnormal year, 1926, all classes of exports show substantial increases.

C. I. F. VALUE OF IMPORTS INTO THE UNITED KINGDOM BY CLASSES

<i>Class</i>	1925	1926	1927
Food, drink, and tobacco	£570,101,018	£529,788,541	£539,339,083
Raw materials and articles mainly unmanufactured ...	424,783,148	392,183,456	351,961,728
Articles wholly or mainly manufactured	319,631,089	314,682,305	322,407,885

receipts of manufactured goods and in "animals not for food" classification.

Of the total 1927 imports, 16.4 per cent came from the United States as against 6.3 per cent from Argentina, the second most important source. The share of the United States was 2 per cent below the 1925 percentage in this trade, the smaller return for raw cotton being largely accountable for this relative decrease. The principal countries supplying the import requirements of the United Kingdom, with the valuation of each in comparison with the two previous years are given above.

Of the total imports, the percentage obtained from the British Empire was 32.5 in 1925, 30.3 in 1926, and 30.1 in 1927.

Exports of British goods to the United States aggregated £45,000,000, which was 6.4 per cent of the total export valuation. Although these figures represent slight actual and relative recessions from the two previous years, the United States continued to rank third among buyers of British products. The direction of this trade is indicated by the accompanying table, which gives the countries figuring most conspicuously as markets for British goods.

Other countries taking substantial values of British goods in 1927 were as follows: New Zealand (£19,607,000); Italy (£13,486,000); Denmark (£9,780,000); Sweden (£9,654,000); Switzerland (£7,645,000); Norway (£7,456,000); Poland (£5,316,000); Japan (£15,161,000);

Exports of produce and manufactures of the United Kingdom in 1927 showed a decline from 1925 in all five classes, when values alone are considered. Price corrections would show a slight net increase of exports, as the percentage of decrease in each class about equals, or is somewhat less than, the percentage of fall in price

Straits Settlements (£11,406,000); China (£9,691,000); Hong Kong (£4,910,000); Ceylon (£5,876,000); Brazil (£14,391,000); Chile (£5,183,000); Egypt (£12,568,000); Nigeria (£8,381,000); and the Gold Coast (£5,137,000). The percentage of the total exports of United Kingdom goods that went to the British Empire was 43.3

in 1925, 48.5 in 1926, and 46 in 1927. The total value of exports of imported merchandise (re-exports) in 1927 was only about 80 per cent as great as that of 1925.

In two of the years 1925, 1926, and 1927, imports of bullion and specie have exceeded exports and have thus added to the total adverse visible balance of trade. Heavy bullion movements in 1925 were doubtless influenced by the return of sterling to par early in that year.

FINANCE. Government revenue for 1927-28 (April 1-March 31) was greater by £4,239,000 than expenditures, a budget surplus for the first time since 1924-25. Receipts exceeded the budget estimates by about 1 per cent and were $4\frac{1}{2}$ per cent larger than in the previous year, by reason of extra installments of the landlords' property tax and brewers' excise, the appropriation of £12,000,000 road-fund reserve to the general budget account, the death of a large number of wealthy persons increasing the inconsistent item of estate duties, and other causes. Expenditures were slightly less than in 1926-27 despite an increase in the debt sinking-fund allotment from £60,000,000 to £65,000,000. Interest charges of £313,816,000 were more than one-third of the governmental expenditures. The reduction of expenditures was effected principally in the civil departments.

The budget for 1928-29 presented to the House of Commons on Apr. 24, 1928, by the Chancellor of the Exchequer, contemplated drastic relief to productive industries through large-scale remittance of local taxes. The proposed aid was subject to the passage of local government and valuation ascertainment bills to be introduced in Parliament in the fall. The projected assist-

ance would grant total exemption from local taxes to all farm lands and farm buildings and exemption up to 75 per cent of their valuation to all other productive premises, except public utility companies. The scheme was estimated to cost the national treasury £29,000,000 yearly. The launching of the project was to be financed mainly by the application of the 1927-28 budget surplus and the estimated surplus for 1928-29, as well as the proceeds of a newly imposed gasoline tax.

Owing to its different form, the 1928-29 budget may not be readily compared with previous estimates. This year the Chancellor of the Exchequer omits from the general budget under revenues that part of the motor-vehicle tax which was to be expended on road work and also post-office receipts to an extent considered sufficient to defray the expenses of the Post Office Department services. The general expenditures account accordingly omits estimates for the road fund and for the post office; also, it does not include the usual sinking fund item, as this part of the national-debt services is to be provided by taking the existing reserve against currency note depreciation (£13,200,000), plus £51,000,000 from an accumulation on the fixed debt charge and £800,000 from the exchequer. With these amounts removed, the estimated revenue for 1928-29 is £756,083,000.

Expenditure against current revenue was estimated at £676,581,000, and with the sinking-fund provision of £65,000,000 added, the estimated total exchequer payments amount to £741,581,000, thus leaving a net estimated surplus of £14,502,000. This latter amount, added to the 1927-28 surplus of £4,239,000, gives a

PROPOSED BUDGET RECEIPTS AND EXPENDITURES OF THE BRITISH GOVERNMENT FOR THE
FINANCIAL YEAR ENDING MARCH 31, 1929, COMPARED WITH PAST TWO YEARS
[000 omitted from all items]

Item	1927	1928	1929

Budget account total for 1928-29	760,322

^a Net. See preceding paragraph; ^b see explanation above.

total of £18,741,000 available for current year budget contingencies and for the suspensory fund, into which the new gasoline revenue will go for application on local tax relief.

In the accompanying table the new estimates are set opposite those for the previous two fiscal years, but the different arrangement necessitates caution in any attempted comparison. Only a small fraction of the receipts from motor-vehicle duties will figure as a revenue item, but there is the compensating omission of the "road fund" on the expenditure side of the account. Presumably, there has been set up, separate from the general budget figures, a road-fund account into which will go motor-vehicles duties collected for the purpose. In the case of the Post Office Department services, only a credit item appears; total receipts and total expenditures, as heretofore shown, do not appear under this heading.

For the year ended Mar. 31, 1928, the external debt of Great Britain amounted to £1,095,230,000 and the internal debt to £6,432,340,000, making a total of £7,527,570,000 as compared with £7,554,618,000, at the end of the 1926-27 fiscal year. Thus the net figure of the dead-weight debt outstanding at the end of the 1927-28 fiscal year indicated a decline of some £27,000,000 during the year, the external debt having been reduced by £6,224,000 and the internal by £20,824,000. The total floating debt, at £689,000,000 on Mar. 31, 1928, marked the lowest point reached since the War.

SHIPPING. The British merchant marine on June 30, 1927, comprised 8216 vessels of 19,309,022 gross tons. During the previous year 76,440 vessels of 82,278,000 net registered tons entered the ports of Great Britain and 76,312 vessels of 82,608,000 tons cleared in the foreign trade. See **SHIP BUILDING** and **SHIPPING** for statistics concerning the vessels launched during the year in Great Britain.

RAILWAYS. Railway freight traffic continued to be somewhat disarranged in the early months of 1927, owing to the abnormal movement of coal imported on the previous year's contracts, as contrasted with the normal outward movement, but thereafter the service was able to show improvement. Unfavorable weather during the summer adversely affected both passenger and freight traffic, but probably the greatest single adverse factor was the competition of motor vehicles. Freight receipts were of course above those for the previous disturbed year, and compared favorably with 1925, but passenger receipts were below all other recent

years except 1926. Additional facilities for excursion trips and the modernization of equipment continued.

The railroads of Great Britain are divided into four systems, all privately owned, namely, the London, Midland & Scottish, the London & Northeastern, the Great Western, and the Southern. Statistics covering all four systems are given in the accompanying table.

Probably the outstanding feature of the history of railroads during the course of the year was the permission granted by Parliament in the autumn allowing the companies to operate on the highways of the country to offset the ever-increasing competition of motor vehicles. There was considerable objection to the measure, but it was passed by an extremely large majority. Apparently all the railway workers as well as the public in general were for the measure. In connection with the keen competition in England between the railways and the motor-transport agencies, a coöperation agreement was reached near the end of the year by the London, Midland & Scottish and the Great Western Railway companies, for a more united opposition to road competition. This working scheme was to be applied first to railways working in the west of England, where up until then the two companies, had overlapped each other in the area served by each respective railway. In many instances great losses had been occasioned through maintenance, in some cases requiring extra terminals for passengers and freight where one of the rail carriers had available station accommodation for the passenger trains of both companies, and where one line had also an adequate amount of siding and equipment to deal with all freight traffic previously handled separately. It was understood that three important stations on the London, Midland & Scottish Railway were to be closed as a result of the agreement.

During the year the railway labor unions agreed with the four railway companies to accept a wage reduction of 2½ per cent for all classes of employees. A like reduction was accepted by directors and chief officers of the companies. The reduction became effective Aug. 13, 1928, and will be in effect for a period of 12 months, with provision for termination by either side on three months' notice. The immediate result of the reduction will be an annual saving of £2,500,000 in labor cost to the companies. More than 650,000 employees of the four companies were affected.

ARMY AND NAVY. The military system of the United Kingdom provides for a regular and territorial army and a reserve. Troops in the army serve both at home and abroad. Territorial troops serve only at home in peace times. The regular army in 1927-28 totaled 210,436, of whom 60,223 were in India. The strength of the Territorial Army on Dec. 1, 1928, was 146,266. See **MILITARY PROGRESS**.

The accompanying table from the *Statesman's Year Book* for 1928 shows the number of classes of the more important units of the British fleet,

including the ships and vessels of the Dominions. See NAVAL PROGRESS.

GOVERNMENT. George V, born June 3, 1865, was the reigning monarch during 1928. He succeeded his father, Edward VII, on May 6, 1910. The cabinet during 1928 was as follows: Prime Minister, Treasury, and Leader of the House of Commons, Stanley Baldwin; Foreign Affairs, Sir J. Austen Chamberlain; Privy Seal and Leader of the House of Lords, Marquis of Salisbury; President of the Council, Earl of Balfour; Chancellor, Lord Hailsham; Chancellor of the Exchequer, Winston S. Churchill; Home Affairs, Sir William Joynson-Hicks; Colonies and Dominions, Leopold C. M. S. Amery; War, Sir L. Worthington-Evans; India, Earl of Birkenhead; Air, Sir Samuel Hoare; Admiralty, W. C. Bridgeman; President of the Board of Trade, Sir Philip Cunliffe-Lister; Health, Arthur N. Chamberlain; Agriculture and Fisheries, Lieut.-Col. Walter E. Guinness; Secretary for Scotland, Sir John Gilmour; Education, Lord Eustace Percy; Labor, Sir Arthur Ramsay-Steel-Maitland; Chancellor of Duchy of Lancaster, Lord Cushendun; First Commissioner of Works, Viscount Peel; Attorney-General, Sir Thomas W. H. Inskip; Pensions, George C. Tryon; Transport, Wilfrid W. Ashley; Solicitor-General, Sir Frank Boyd-Merriman; Postmaster-General, Sir William Mitchell-Thomson; Lord Advocate, William Watson; Solicitor-General for Scotland, A. M. MacRobert. For changes in the cabinet see paragraphs below under *History*.

HISTORY

SITUATION AT THE BEGINNING OF THE YEAR. The entire year for Great Britain was rather dull and did not come up to the expected hopes of industrial, commercial, and financial expansion which the leaders of all shades of opinion had wished. In the early months there was the so-called Mond conference between capital and labor, held with the idea of the two groups getting together when there were no industrial strifes and settling their disputes in an orderly and satisfactory manner. Although this conference met intermittently throughout the year, nothing of value was accomplished and as the year closed it appeared that the conference idea would be given up because of the vast gulf that separated the two groups. Parliament opened on February 7, and was addressed from the throne by the King in a very uninteresting and colorless speech. The only outstanding points of his speech were the promise of a reduction in local taxation and a promise that the suffrage bars would be let down to permit a wide extension of woman suffrage. The death of the Earl of Oxford and Asquith on February 15 caused a deep sense of loss throughout the entire country. Consult his biography.

Scandals of various kinds agitated England throughout the year, especially those dealing with speculation in francs by members of the Foreign Office and the disclosures of police corruption in the London district, as well as the disturbance of the "jazz band" incident aboard H.M.S. *Royal Oak* in the Mediterranean Sea. The franc scandal was settled by the expulsion of some under members from the Foreign Office and a delimiting of just how far a person may use his official position to advance his own fortunes. Lord Byng, in command of Scotland

Yard, promised a "clean up" of the conditions of vice and graft existing in that bureau, and the *Royal Oak* affair was settled after the position of the navy had been upheld by courts martial.

Probably the outstanding act of Parliament during the entire year was the passage of the bill increasing the number of voters in England by granting suffrage to all women over 21. This bill which passed its second reading in the House of Commons on March 29 and which was adopted by the House of Lords on May 22 granted the franchise to approximately 5,000,000 women and reduced the age requirement from 30 to 21 for the women. It was estimated that the women voters of England would now outnumber the male voters by about 2,000,000. In numbers alone, if for no other reason, the women were bound to play a tremendously greater part in the next general election. The only other legislation of any importance was that rejecting the Prayer Book Bill. It was felt in many quarters that this latter measure brought the disestablishment of the Anglican Church a step nearer consummation. See ENGLAND, CHURCH OF.

SITUATION AT THE CLOSE OF THE YEAR. Parliament reopened for its autumn session on November 6. In his address the King in touching on foreign affairs stated that his Government had been glad to accept the Kellogg pact (see KELLOGG TREATIES) and expressed a friendly and helpful interest in the future of China. In referring to domestic affairs he stated that every effort would be made at this session of Parliament to alleviate the economic and unemployment conditions of the country. He expected a great deal along these lines from the adoption of Mr. Churchill's budget for 1928-29. See above under *Finance*.

It should have been mentioned in passing that the resignation of the Earl of Birkenhead as Secretary of State for India was announced on October 7. He was succeeded by Viscount Peel, whose position as First Commissioner of Works was filled by the Marquis of Londonderry. Practically no measure of importance was passed during the remainder of the year, although the three parties, the Conservatives, Liberals, and Laborites made every attempt to mend their political fences in view of the general election coming in 1929. The Laborites, in particular, sought to lay at the doors of the Baldwin government the breaking down of the economic system of the country and the tremendous increase in unemployment.

The last six months of the year were shrouded in gloom and uncertainty because of the serious illness of King George. In the latter part of November he was stricken with a complication of pleurisy and congestion of the lungs and for the balance of the year seemed to hang between life and death. However, the reports given out in the last week of December seemed to indicate that he was on the road to recovery, although it would be a very long and slow process. The Prince of Wales, who was on a hunting and "good will" tour in Africa was called to his father's bedside and was virtually acting King in the last two weeks of the year, although the formality of creating a Council of State, including the Queen, the Prince of Wales, the Duke of York, the Archbishop of Canterbury, the Prime Minister, and the Lord Chan-

cellor was adopted. The King's serious illness was a climax to a very dull year in British history at home and abroad.

GREECE. A republic in southeastern Europe, comprising the lower Balkan peninsula and many islands in the Aegean Sea; formerly a constitutional monarchy. King George II was forced to leave Greece Dec. 19, 1922 and the Republic was established Apr. 13, 1924, as the result of a plebiscite. In continental Greece are included Macedonia, Western Thrace, and Epirus; the chief island possession is Crete. Capital, Athens.

AREA AND POPULATION. The total area of Greece before the Balkan wars of 1912-13 was 25,223 square miles; as a result of these wars Greece added 20,730 square miles to her territory. According to the Treaty of Lausanne (1923), Greece obtained a further area of 3182 square miles; the total area of the present Greek Republic is 49,912 square miles. According to the census of 1920 and that of the refugees made in April, 1923, the population was 5,973,721. It was estimated that between August, 1922, and January, 1925, 1,350,000 Greek refugees returned to Greece from Asia Minor. Preliminary results announced for the census taken in 1928 showed a population of 6,198,669.

During 1927 satisfactory progress was made by refugees already settled during the year, as indicated by the increase in payments toward amortization of the refugee loan of 1924. Since the proceeds of this loan, however, have been practically exhausted and there still remains a large part of the refugee programme to be completed, the League of Nations approved the application for additional funds to carry on the settlement work. Of a total of approximately 1,400,000 refugees, it was estimated that over 800,000 had been settled up to the spring of 1928.

EDUCATION. Education is compulsory for all children, between the ages of 7 and 12, although the law is not very well enforced in the country districts. According to the latest statistics there were 7200 primary schools with 13,996 teachers and 499,084 pupils; 650 high schools with 2523 teachers and 86,500 pupils; 24 commercial schools, with 183 teachers and 3607 students. There are two universities at Athens; the National University and the Capodistria University, with 61 professors and 9799 students. There are also various technical and agricultural schools.

PRODUCTION. Agricultural production in Greece was generally satisfactory in 1927. Tobacco, the most important export item, was estimated at 120,358,300 pounds as compared with 120,172,000 pounds in 1926. Preliminary returns for currants, however, indicated a decrease from 1926, resulting from unfavorable weather conditions; the 1927 crop was estimated at 283,000,000 pounds, as compared with 315,000,000 pounds in the previous year. Larger returns for cereals were anticipated, following the increase in sown area and the more liberal use of fertilizer; the total yield was placed at 927,700 metric tons as against a revised figure of 649,000 metric tons in the previous year. The fig crop was expected to be slightly larger than in 1926, but a decrease was indicated for olives in consequence of the unfavorable weather.

Preliminary data on industrial production for 1927, excluding wine and olive oil, showed an increase of 20 per cent in drachma value over

the previous year, the figures being 6,115,620,000 drachmas for 1927 and 5,096,350,000 for 1926. The principal increases were recorded in the textile, chemical, and building material industries. In 1926 the value of olive-oil and wine production was 2,491,500,000 drachmas, as compared with 1,696,000,000 drachmas in 1925. Industry in general benefited from the improved economic condition of the country, but a shortage of ready cash continued to retard its development.

COMMERCE. The foreign commerce of Greece in 1927, reflecting the increased activity during the year, was marked by a large increase in imports and a small expansion in exports over 1926. The total turnover was 26.7 per cent greater in dollar value and 20.8 per cent in drachma value than in the previous year, while the adverse trade balance increased considerably. The difference in dollar and drachma valuations is largely accounted for by the higher exchange value of the drachma, which averaged \$0.132 during 1927 as compared with \$0.0126 in 1926. The drachma has since been stabilized at \$0.0129.

Imports were 20 per cent larger in drachma value and 32 per cent in dollar value than in 1926, while the volume showed an increase of 22 per cent. The gain in imports was evenly distributed—textiles, wheat, motor vehicles, sheet iron, livestock, and coal showing the principal increases. The only decrease of importance was in wheat flour, as a result of the heavy import duty placed on this commodity in the spring of 1927. This loss, however, was offset by larger purchases of wheat.

Exports during 1927 exceeded those of 1926 by 23.8 per cent in drachma value and 29.7 per cent in dollar value, while the volume increased 16 per cent. The major items with few exceptions, showed increases in value, with smaller volumes in many instances. Greek imports from the United States rose from \$20,427,300 in 1926 to \$26,492,300 in 1927. Wheat, motor cars, ginned cotton, rice, sheet iron, and leather registered the principal increases, while wheat flour, oleo oil, sugar, textiles, and agricultural machinery recorded declines. Exports from Greece to the United States totaled \$17,319,000 as against \$16,176,300 in 1926. Principal exports to the United States include tobacco, currants, figs, chrome ore, emery, olives, and olive oil.

FINANCE. From a financial point of view the year 1927 was an important one. The debts to Great Britain and the United States were funded, negotiations were carried on with respect to the claims of France, and the approval of the League of Nations was obtained for the flotation abroad of a loan to balance the budget, stabilize drachma exchange, and carry on the refugee work. This series of developments marked the formulation of a definite financial programme and had a stimulating effect on business in general. The loan to be granted under the auspices of the League of Nations was not to exceed £9,000,000 net, including the United States' share; but upon settlement of the debt to the United States, and the simultaneous agreement for a loan of \$12,167,000, this latter amount was to be deducted from the total amount authorized by the League. The loan was to be secured by the revenues under the control of the International Financial Commission, in so far as the yield of these revenues was not required for the service of

FOREIGN TRADE OF GREECE IN 1926 AND 1927

loans having a prior charge. Under the terms of this loan, a number of reforms in the administration of public finances in Greece were to be instituted. These included the creation of a new bank of issue independent of the National Bank, the establishment of a mortgage bank, and in general the relieving of the National Bank of certain functions which now hinder its ordinary commercial work. By this process of decentralization it was expected that the newly created institutions will be placed in a position to cope effectively with the various problems connected with financial reconstruction.

In line with the policy of financial reconstruction, £3,000,000 of the League of Nations loan was to be used for attaining budget equilibrium and settling deficits accumulated from previous years. Under the proposed plan the Greek Government undertook to keep the budget within a limit of about 9,000,000,000 drachmas until the end

of the financial year 1929-30, and to maintain a balanced budget after that time. Exception was made, however, for capital expenditures for revenue-producing purposes, which may be provided from other sources than for the current budgetary expenditures. The budget draft for the entire fiscal year 1927-28, as submitted to Parliament by the ministry of finance, proposed revenues of 8,829,532,000 drachmas and expenditures of 8,878,332,000 drachmas, indicating a deficit of 49,000,000 drachmas.

On December 3, 1928, the U. S. *Commerce Reports* stated that the public debt of Greece was shown for the first time in terms of paper drachmas. The debt had been computed on the basis of 375 paper drachmas to the pound sterling (or 77 to the dollar), at which rate the drachma was stabilized. According to this statement, the public debt as of June 30, 1928, totaled 36,886,238,419 drachmas (about \$479,000,000), distrib-

uted as follows: Loans in gold, 25,883,461,594 drachmas; loans in banknotes, 4,480,482,808; floating debt, 4,130,375,158; and railroad debt, 2,391,918,859 drachmas. The debt per capita, on the basis of the census of May 15, 1928, which placed the population at 6,198,670, was therefore 595 drachmas, or approximately \$76.75. The service on this debt during the fiscal year ended Mar. 31, 1929, was estimated at 3,132,541,867 drachmas (\$40,400,000). By Nov. 30, 1928, the debt had been reduced to 36,654,874,000 drachmas.

COMMUNICATIONS. Of the nine systems which comprise the entire Greek railway mileage of 2846 kilometers, the state railways operate 1425 kilometers. During 1927 operating revenues of the state railways amounted to 309,401,242 drachmas, and other revenues to 3,391,807; operating expenses reached 317,982,807 drachmas, and other expenses 14,333,226, thus there was left a deficit of 19,522,349 drachmas. The rolling stock in operation consisted of 190 locomotives, 4085 freight cars, and 238 passenger cars. During the year, 50 locomotives, 9 freight cars, and 30 passenger cars were purchased. All equipment is in good condition. The Piræus-Athens-Peloponnesus Ry. operates 918 kilometers of track, of which 750 kilometers are main line, 95 kilometers branches, and 73 kilometers sidings. Operating revenues during 1927 amounted to 170,682,974 drachmas, and operating expenses were 153,409,992 drachmas. The rolling stock in operation at the close of the year comprised 90 locomotives, 881 freight cars, and 309 passenger cars. Although no new equipment was purchased during the year, it was all in good condition. At the close of 1927 the Thessaly railways were operating 241 kilometers of track, of which 204 kilometers were main line, 29 kilometers branches, and 8 kilometers, sidings. Operating revenues amounted to 32,913,180 drachmas, and other revenues to 2,360,233 drachmas; operating expenses reached 28,880,383 drachmas, and other expenses 3,654,039 drachmas. Rolling stock in operation consisted of 18 locomotives, 334 freight cars, and 65 passenger cars. The equipment was in fairly good condition.

The general depression of world shipping in 1927 had little effect on Greek lines, which profited from the difficulties arising between Soviet Russia and Great Britain with respect to traffic in the Black Sea. Most of this traffic, formerly handled by British ships, was diverted to Greek steamers. The Greek merchant marine on Dec. 31, 1927, totaled 501 steamers of 1,052,446 gross tons, as against 472 of 929,619 tons at the end of 1926.

For Army and Navy, see MILITARY PROGRESS and NAVAL PROGRESS.

GOVERNMENT. By a plebiscite on Apr. 13, 1924, the Republic of Greece was established. A new constitution was published on Sept. 22, 1926. It was revised by the chamber elected on Nov. 7, 1926. The new constitution was published on June 3, 1927. It provides, among other things, that a second house (senate) consisting of 120 members shall be established, that Parliament shall be elected by direct, universal, and secret voting and that the senate shall be elected partly by the people, partly by the Parliament and Senate in a common meeting, and partly by the corporations of the different professions. President in 1928, Admiral Konduriotis; the cabinet as constituted on Feb. 8, 1928: Premier, A.

Ziamis; Foreign Affairs, A. Michalacopoulos; War, General Mazarakis; Marine, J. Merlopoulos; Interior, A. Maris; National Economy, S. Velentsas; Agriculture, G. Exindaris; Social Insurance, A. Kyrkos; Justice, V. Tourkovassilis; Finance, G. Kaphandaris; Communications, Gen. J. Metaxas; Education, D. Nicoloudis.

HISTORY. The outstanding event in the history of Greece during the year was the return to power of Venizelos. He had been in virtual retirement for a period of six years and his return to public life was a surprise to his friends as well as to most of the governments of western Europe. His return was preceded by an announcement on his part that he was going to reassume the leadership of the Liberal party and save Greece from what appeared to be certain economic ruin. In many quarters in Greece his reappearance was not particularly pleasing, because, in a sense, he was the stormy petrel of Greek politics and had been the cause of the rise of many factions in Athens. The effect on the Zaimis government was almost immediately felt. Several members of the cabinet resigned and although Premier Zaimis replaced them, it was felt that his days as head of the Government were numbered.

Toward the end of June, Venizelos bitterly attacked the financial policies of the Zaimis government and was responsible for the withdrawal of support from the cabinet of the members of the Liberty party. This was merely the beginning of his return to power, inasmuch as on July 3 he was requested by President Konduriotis to form a government. This he promptly did and in his cabinet he included practically all the real leaders of the Liberal party, who were bitterly opposed to the monarchist group which had played a prominent part in Greek politics in the first half of the year. Evidently knowing that he would not get very far with the existing Parliament, Venizelos determined to dissolve that group and order new elections. This was done on July 9 and the new elections ordered for August 19. By a dictatorial stroke, Venizelos compelled the president to issue a decree changing the method of election from proportional representation to that of the district method. Although this was obviously unconstitutional and against the wishes of the opposition parties, the president was moved to accede to the venerable leader of the Liberal forces on his threat to resign and take his cabinet with him.

The result of the elections, although fore-ordained, was an unexpected landslide for Venizelos and the Liberal party, which favored the retention of the Republic. Out of the 250 seats contested, 228 were won by Venizelists. One the first phases that the new "strong man" of Greece dealt with was the question of foreign policy. This activity immediately bore fruit. A pact of friendship and arbitration was signed with Italy; a visit was made to Paris; negotiations with Jugo-Slavia concerning the establishment of a free zone in the harbor of Saloniki were undertaken; and Turkey was approached on the proposition of settling once and for all the refugee problem. Despite what one may think of the manner and method of the return of Venizelos to power, the fact was undeniable that the close of the year saw Greece in a stronger position from the point of view of interna-

tional relations than she had been at any time since the close of the World War.

GREEK ARCHÆOLOGY. See **ARCHÆOLOGY**.

GREEK STUDIES. See **PHILOLOGY, CLASSICAL**.

GREENLAND. The largest island in the world next to Australia; the only colonial possession of Denmark. The area is variously estimated at from 826,000 to 849,000 square miles. The settled portion, the only part included in Denmark's colony, has an area of 46,740 square miles, with a population, according to the census of 1921, of 14,355, of whom 274 were Danes. The largest settlement is Sydproven, with a population of 901, and the smallest, Skansen, with a population of 49. The interior remains unknown in detail, but the main geographical features are understood. Nearly the entire country consists of a plateau from 2000 to 3000 meters above the level of the sea, which means that it is covered by a thick, permanent coat of snow and ice, only about one-twenty-fifth of the surface being free from it and suitable for cultivation. Most of the inhabitants are located on the coast or on adjacent islands. The trade with Denmark in 1925 consisted of 3,271,000 kroner of imports and 7,192,000 kroner of exports. The trade, chiefly in seals, sealskins, fox skins, and oil is a monopoly of the Danish Government. At the head of the government is a director who resides in Copenhagen. See **POLAR RESEARCH**.

GRENADA, gre-nî'dà. An insular possession of Great Britain in the Windward group of the West Indies. Area, 133 square miles; population at the census of 1921, 66,302; estimated in December, 1926, 71,621. Grenada includes half of the Grenadine Islands, the other half being administered from St. Vincent. The capital is St. George with a population of about 5000. In 1926 the movement of population was: Births, 2402; deaths, 1460. In 1926 there were 58 government and government-aided schools for elementary education with 11,731 pupils and one secondary school. The chief products which are also the chief exports are cacao, spices, lime juice, cotton, and cotton seed. The production of sugar was rapidly increasing; in 1926, the local production of rum was 45,096 proof gallons. In the same year the revenue was £148,447 and the expenditure, £119,000. The exports were £447,401 and the imports, £386,483. The total shipping entered in 1926 was 453,802 tons, nearly all British. The colony is under the Governor of the Windward group, but has its own institutions. Governor and Commander-in-Chief of the Windward Islands, including Grenada in 1928, Sir Frederick Seton James; Colonial Secretary for Grenada, H. Ferguson.

GREVILLE, LEOPOLD GUY FRANCIS MAYNARD. See **WARWICK, EARL OF**.

GRIFFIS, THE REV. DR. WILLIAM ELLIOT. American clergyman, educator, historian, and lecturer on Japan, died at Winter Park, Fla., February 5. He was born at Philadelphia, Sept. 17, 1843. He served with the Forty-fourth Pennsylvania Regiment in the Civil War, and then entered Rutgers College, where he was graduated in 1869. After one year of study at the Dutch Reformed Theological Seminary at New Brunswick, N. J., he accepted an appointment to organize schools, on the American model, in Japan, and was the first American teacher in regions beyond the open ports. On the fall of the

feudal system and the unification of the Empire, he was appointed professor of the physical sciences in the Imperial University of Tokyo. He prepared the *New Japan Series* of reading and spelling books and primers for Japanese students in the English language, and contributed to the Japanese press and to newspapers and magazines in the United States numerous papers of importance on Japanese affairs. In 1874 he returned to New York, where he finished his theological studies at the Union Theological Seminary, and in 1877 was made pastor of the First Reformed Church at Schenectady, N. Y.; in 1886, of the Shawmut Congregational Church, Boston, Mass.; and in 1893 of the Congregational Church, Ithaca, N. Y. After 1903 he was chiefly engaged in writing and lecturing. He made a lifework of the fostering of friendly relations between the United States and Japan. Shortly before his death he returned from a visit to Japan, where he was received by the Emperor and was decorated for the third time with the Order of the Rising Sun. He received the degree of D.D. from Union College in 1884 and that of L.H.D. from Rutgers College in 1899. Dr. Griffis left a long list of books dealing with Japan and other subjects; among them were *The Mikado's Empire* (1876); *Corea, the Hermit Nation* (1882); *Sir William Johnson and the Six Nations* (1891); *Japan—Its History, Folklore, and Art* (1892); *Brave Little Holland and What She taught Us* (1894); *The Religions of Japan* (1895); *The Pilgrims in Their Three Homes—England, Holland, and America* (1898); *China's Story in Myth, Legend, Art, and Annals* (1910); *The House We Live In—Architect and Tenant* (1914); *Bonnie Scotland and What We Owe Her* (1916); *Young People's History of the Pilgrims* (1920); *Was Brant at Wyoming?* (1921); *The Story of the Walloons* (1924); *An American in the New Italy* (1925), and a series of books on the fairy tales of various nations. He edited Sawyer's *History of the Pilgrims and Puritans* (1922), and Scheffer's *History of the Free Churchmen in Holland* (1922).

GROMER, grô'mër, SAMUEL DAVID. American educator and former president of the Executive Council of Porto Rico, died August 26, at Kansas City. He was born at McFall, Mo., Sept. 8, 1865, and was graduated from the University of Missouri in 1889. He taught history and political science and economics at the Stanberry normal school in Missouri from 1891 until 1904, carrying on post-graduate studies at various times at Chicago, Harvard, and Columbia. He served as commissioner of schools in Gentry County, Missouri, from 1893 until 1897. He taught history at the College of the City of New York in 1906, and at the University of Missouri in 1906 and 1907, being a member of the Republican State Committee of Missouri from 1903 until 1907. On July 1, 1907, he was appointed treasurer and member of the Executive Council of Porto Rico, serving as president of the Porto Rican Senate from 1910 until 1912. He was also chairman of the finance committee and of the insular board of agriculture. He was acting president of the board of trustees of the University of Porto Rico, from which institution he received the degree of LL.D. in 1913. After his return to the United States in 1913 he taught rural economics at the University of Missouri, and in 1926 he became professor of agricultural economics at

that institution. He wrote "The Farmer and His Money," chap. 3, in the *Encyclopædia of Farm Knowledge* (1918).

GUADELOUPE, ga'dā-lōop'. A French insular possession in the Lesser Antilles in the West Indies, consisting of two islands separated by a narrow channel, the one on the west being Guadeloupe proper or Basse-Terre, and the one on the east, Grand-Terre. Combined area, 532 square miles; total area, including five small dependent islands, 688 square miles; population in 1926, 243,243. Basse-Terre is the capital, with a population of 8379; chief town, Pointe-à-Pitre, with 26,455 inhabitants.

There were 113 public and private elementary schools in 1926-27 with 364 teachers and 18,058 pupils. For higher education there was one lycée with 464 pupils and a secondary course for girls at Pointe-à-Pitre with 322 pupils. The chief products for exports are cacao, coffee, sugar, and rum. For local consumption, bananas, sweet potatoes, maize, tobacco, manioc, and various vegetables are produced. In 1926 the imports were 144,849,469 francs and the exports, 167,683,138 francs. Revenue and expenditure for 1927 balanced at 29,018,596 francs; the public debt on Dec. 31, 1926, was 499,078 francs. There is communication with France by means of two steamship companies, and there is a wireless station at Destrellan. At the head of the Government are a governor and an elected council and the colony sends to the French Parliament at Paris one senator and two deputies.

The tropical hurricane which swept over the West Indies on Sept. 12, 1928, was the worst in the history of the islands. The storm burst upon Pointe-à-Pitre with unprecedented suddenness and the wind reached terrific velocity within a few minutes. Houses were wrecked, trees uprooted, sailing craft sunk or demolished, electric, telephone, and telegraph wires carried away, and the streets filled with debris. Nine hundred persons were known to have been killed, thousands injured, and practically the entire population was without shelter. The storm reduced the sugar-cane crop of Guadeloupe approximately 50 per cent below normal (which would be 30,000 to 35,000 long tons) and destroyed the banana and coffee crops, shade trees falling upon the coffee bushes, causing considerable damage. Fifty per cent of the distilleries were wiped out and others damaged. All sugar mills, except one, sustained severe damage to superstructures and machinery and all managers' houses, staff quarters, and laborers' huts were destroyed. A moratorium was declared. The islands' economic future received a serious setback and total damages were estimated between 300,000,000 and 500,000,000 francs.

GUAM, gwām. An insular possession of the United States, situated at the southern end of the Marianne or Marianna Islands, of which it is the largest and most populous, in the Pacific Ocean at a distance of about 1500 miles from Manila and 5053 from San Francisco. Area, 210 square miles; population, exclusive of the military and naval establishments, 17,018, on June 30, 1927, of whom 15,944 were classed as natives. Capital, Agaña, with about 8500 inhabitants. In 1928, the school registration was 3272 pupils. Spanish and English are spoken in addition to the native Chamorro. The products

of the island include cacao, coffee, copra, corn, rice, sugar, sweet potatoes, and timber. The exports in 1927 amounted to \$88,367 and the imports to \$415,936. The island constitutes an American naval station, of which the governor, appointed by the President, is commander of the naval station and military governor of the island. He is virtually the entire government. Governor in 1928, Capt. L. S. Shapley, U.S.N. (appointed Nov. 21, 1925).

GUATEMALA, gwā'tā-mälā. A republic of Central America lying between the Caribbean Sea and the Pacific Ocean, and south and south-east of Mexico. Capital, Guatemala City.

AREA AND POPULATION. The area is estimated at 48,290 square miles, but the limits have been uncertain on account of boundary disputes and the area has been figured as low as 42,353 square miles; population, according to the census of 1920, 2,004,900; estimated in 1927, 2,454,000. The populations of the chief cities were: Guatemala City, 115,928; Totonicapán, 30,888; Cobán, 26,774; Chiquimula, 25,191; Escuintla, 20,574; and Quezaltenango, 30,125.

EDUCATION. It was stated by President Chacón in his annual message to Congress delivered on Mar. 1, 1928, that the total enrollment in the schools of Guatemala during the year 1927 was 113,308 and the average attendance 105,993, a figure considerably larger than in former years. Schools numbered 3297, of which 2736 were national primary schools and 506 private institutions of learning. The school personnel numbered 3430 teachers. According to the report of the Minister of Public education, in 1928 there were 50 schools above the primary grade with an enrollment of 3278 and an average attendance of 2775. The various schools of the University had an enrollment of 645.

PRODUCTION. Agriculture is the principal source of wealth in Guatemala. The economic well-being of the country is directly and almost wholly dependent upon its coffee, which, because of its mildness and high quality, has an enviable reputation and commands generally high prices. The comparatively limited annual production assures a steady market and any increase in the world's demand for mild coffee results immediately in higher prices but not necessarily in increased production which is relatively inelastic. The average export from 1921 to 1927 was 960,000 quintals. The 1926-27 crop, which amounted to 88,184,000 pounds, was one of the largest ever produced and brought exceptionally high prices. The bulk of the 1927-28 crop was also exported in 1927, thus accounting for the record exports. Production in 1927-28 was estimated at about 82,000,000 pounds. Another important crop is sugar. Sugar production was 33,000 tons in 1926-27 and was estimated at 30,500 tons for 1927-28. Other crops are rice, wheat, corn, and potatoes. There are about 1,300,000 acres of forests. Mahogany and dyewoods are produced to some extent. In 1926 there were 260,300 cattle, 51,400 swine, 98,000 sheep, 16,500 goats, and 54,700 horses. Mica and gold are the only minerals produced commercially in the country. Aside from coffee-cleaning plants and sugar mills, factories are small and manufacture cigars and cigarettes, cotton cloth and hosiery, soap, candles, shoes, furniture, and glass bottles; there are also distilleries and bottling works, planing mills,

machine shops, tanneries, and ice and electric plants.

COMMERCE. The total foreign trade of Guatemala for 1927 was valued at 58,947,311 quetzales (1 quetzal equals \$1), exports amounting to 33,915,225 quetzales, and imports to 25,032,086 quetzales, thus producing a favorable trade balance of 8,883,139 quetzales. The following figures will give some idea of the great development of commerce during the years 1921-1927:

Year	Exports Quetzales	Imports Quetzales
1921.....	12,130,890.00	13,616,438.00
1922.....	11,977,039.00	10,751,659.00
1923.....	14,743,323.00	13,763,497.00
1924.....	24,491,535.00	18,271,257.00
1925.....	29,661,958.00	23,393,874.00
1926.....	28,978,087.00	26,601,588.00
1927.....	33,915,225.00	25,032,086.43

In 1927 coffee shipments amounted to 112,700,000 pounds, valued at 28,568,289 quetzales, or 84.2 per cent of the total exports, an increase of about 4 per cent over 1926. Banana exports were second in importance, 6,021,978 bunches, valued at 3,010,989 quetzales, having been shipped. Of the total imports, 13,968,000 quetzales' worth, or about 56 per cent, were supplied by the United States, 14.1 per cent by Germany, 11.8 per cent by Great Britain, and 2.8 per cent by France. According to data published in the annual report of the Ministry of the Treasury for 1928, an increase of 1,255,346 quetzales was shown in import duties collected during the fiscal year 1927-28 over the collections of the previous year. The respective figures were 5,344,654 quetzales for 1926-27 and 6,600,000 for 1927-28. The export duties during the same years were 2,237,469 quetzales for 1926-27 and 2,200,000 for 1927-28.

FINANCE. According to a message of the President to the National Assembly, ordinary revenues and expenditures during the fiscal year ending June 30, 1927, totaled \$12,411,000 and \$12,259,000, respectively. The purchase of the Government's share in the Banco Central de Guatemala amounting to \$500,000 was included in the expenditures. Import duties were by far the most important source of governmental income, totaling \$5,344,654. Ordinary revenues during the calendar year 1927 were stated to have amounted to \$13,115,000. In October, 1927, the Government effected a settlement of the deferred interest of the English debt; it agreed to issue bonds totaling £844,603. An agreement was also made to fund the debt owed to the International Railways of Central America by a bond issue of \$2,515,000. In July, 1927, an issue of bonds for the completion of the Los Altos Railway totaling \$1,950,000 was authorized. The amount of the public debt on Dec. 31, 1927, was approximately \$21,665,000, of which \$14,818,000 was foreign debt, floated partly in England and partly in the United States. Public revenues for the fiscal year 1928-29 were calculated "with severity" at 12,500,000 quetzales. Expenditures were fixed at the same amount, thus representing an increase of 1,500,000 quetzales as compared with the budget for 1927-28.

COMMUNICATIONS. The only railroad of importance in Guatemala is the International Railways of Central America, which in 1927 operated 638 miles of line, carried 2,747,000 passengers

and 879,000 tons of freight, and had gross receipts of \$7,012,190. In September, 1928, it was announced that the junction of the Salvadorean and Guatemalan branches of the International Railways of Central America was expected to be completed early in 1929. Rail was laid to a point approximately five kilometers beyond Metapan, and was ready for operation. Whether or not the through line to Puerto Barrios could be operated as soon as completed was a matter of conjecture. Even though constructed it would be necessary to allow the line to settle and, as the rainy season begins early in May, it was reasonable to suppose that the new line would present many difficulties such as slides and washouts. It was, therefore, possible that the new line might not be regularly operated until after the rainy season of 1929 (May-November). The importance of the junction of the Salvador and Guatemala lines can hardly be overestimated. The time to Europe and to Atlantic coast points of the United States will be shortened greatly for both freight and passengers, as compared with the time required over the present route via the Panama Canal. In 1926 the tonnage of vessels entered, 1,723,757 tons; of vessels cleared, 1,703,132 tons.

GOVERNMENT. The executive power is vested in a president elected for six years and legislative power in a National Assembly, consisting of representatives elected for four years, and a council of state of 13 members, part of whom are elected by the National Assembly and part appointed by the President. President in 1928, Lazaro Chacón. The National Assembly on Mar. 24, 1928 elected Gen. Mauro de León, First Designate, Rudolfo E. Sandoval, Second Designate, and Col. Baudilio Santos, Third Designate. The designates succeeded to the presidency in the order named, in case of a vacancy during the presidential term, holding office only until a new president can be elected in a special election.

For an account of the boundary dispute with Honduras, consult the historical paragraphs in the article on HONDURAS. In the fall, according to the press, the activities of the opposition groups in the country caused the virtual establishment of martial law for a period of five months by President Chacón.

GUERRERO, gá-rá-rò, MARIA (MARIA GUERRERO DE DIAZ DE MENDOZA). Spanish actress, died January 23. She was one of the foremost actresses of the Spanish-speaking world and appeared with success in the plays of Lope de Vega, Calderon, and others, in Latin America and the United States as well as in her own land. She made many tours in South America, Central America, and Cuba; her company was so successful in Buenos Aires, Argentina, that she built her own theatre there. She played in New York in 1926 and 1927. Her husband, the Duke of Balazoto, also appeared with success on the stage, in the company of his wife. She was called sometimes "the Sarah Bernhardt of Spain."

GUERRY, THE RIGHT REV. WILLIAM ALEXANDER. American clergyman, Protestant Episcopal bishop of South Carolina, died at Charleston, S. C., June 9, from a gunshot wound inflicted by an apparently demented clergyman, who then killed himself. Bishop Guerry was born in Clarendon County, South Carolina, July

7, 1861, and was educated at the Porter Military Academy, Charleston, S. C., and at the University of the South. He received his A.M. degree in 1884 and his B.D. in 1891. He became a deacon of the Protestant Episcopal church in 1889 and a priest in 1890, and held charges at Florence, Marion, and Darlington, S. C., 1888-93, before becoming chaplain and professor of homiletics at the University of the South. He was consecrated coadjutor bishop of South Carolina in 1907 and bishop in 1908. From 1917 to 1926 he was president of the Provincial Board of Social Service, Province IV. He was especially active in church work among the negroes. He published tracts on baptism and on marriage, reprinted from *The Living Church*.

GUGGENHEIM FOUNDATION. See AERO-NAUTICS.

GUGGIARI, JOSE P. President of Paraguay, See PARAGUAY.

GULICK, MRS. CHARLOTTE VETTER. American sociologist and founder of the Campfire Girls, died at South Casco, Me., July 28. She was born at Oberlin, Ohio, Dec. 12, 1865, and studied at Washburn College, Topeka, Kan., and Drury College, Springfield, Mo. She then studied for a year at Wellesley College, and, after her marriage in 1887 to Dr. Luther Halsey Gulick (1865-1918), sociologist and advocate of outdoor life, she studied medicine for a year to aid her husband in his contemplated work as a medical missionary. That purpose was abandoned and they moved to Springfield, Mass., to take up the Y. M. C. A. work in which Dr. Gulick was to become distinguished. While Mrs. Gulick was actively associated with her husband in several movements and also had independent interests, her most prominent activity was the establishment and conduct of the Campfire Girls of America, an organization similar to the Girl Scouts. In the World War Dr. and Mrs. Gulick went to France for the Y. M. C. A. She was a pioneer in the advocacy of sex instruction for children, and wrote *Emergencies* for the Gulick hygiene series, besides numerous articles for women's and child-study magazines.

GUMPPENBERG, HANN'S FREIHERR VON. German author and journalist, died March 29. He was born at Landshut, Bavaria, Dec. 4, 1866, and, moving to Munich, he attended the gymnasium and the University. He worked on various newspapers, at one time editing the *Hannover Kurier*. He wrote a psychological novel, *Der fünfte Prophet*, which appeared in 1895, and later published a collection of poems and produced several comedies, including: *Münchhausens Antwort* (1910); and *Der Pinsel Yings* (1914). He also wrote historical plays, notably: *König Konrad I* (1904); and *König Heinrich I* (1904). Two of his books, *Grundlagen der wissenschaftlichen Philosophie* (1903); and *Philosophie und Okkultismus* (1921) were translated into Swedish and French. *Die elf Scharfrichter* (1901) and *Überdramen* (1902) were written under the pen name, Jodok.

GUY, WILLIAM EVANS. American mining engineer and railroad builder, died at Coopers-town, N. Y., July 24. He was born at Cincinnati, Ohio, Dec. 22, 1844, and was educated at Miami University, Princeton University, Heidelberg, Germany, the Freiberg School of Mines, and

the Collège de France; he left the last-named institution in 1869. In 1862 he served in the Civil War in the Eighty-sixth Ohio Infantry. After a year, 1870-71, in mining engineering in Colorado, Mr. Guy became assistant geologist of the Missouri State Geological Survey, 1872. Then he helped in the founding of the St. Louis Bolt & Iron Company, of which he was an officer, 1872-81; in the meantime he organized and was president of the Tudor Iron Works, which absorbed the former company. In 1879 he took a degree at the Cincinnati Law School. He organized, built, and was president of the St. Louis & Eastern Railway Company, 1889-95, and was the organizer and president of the Madison Coal Company, 1889-99. He also organized, and became president and general manager of the St. Louis, Peoria & Northern Ry. until 1899, when it became part of the Illinois Central system. Two other railroads which he built were the St. Louis Valley and the St. Louis & Gulf, absorbed, respectively, by the Missouri Pacific and the Frisco systems. He retired from active business in 1913. Mr. Guy was for twenty years a member of the executive committee of the Civil Service Reform Association, and was a member of the St. Louis Academy of Science, the Archaeological Society, and the National Forestry Association. Westminster College conferred on him the degree of LL.D. in 1917.

GUYOT, YVES. French politician, economist, and publicist, died at Paris, February 21. He was born at Dinan, France, in 1843, and was educated at Rennes. After work as a journalist and service as a member of the Chamber of Deputies, he was appointed minister of public works in the Tirard ministry (1889) and retained this portfolio in the Freycinet ministry (1890-92). He became known as a champion of commercial and industrial freedom and an opponent of protection and of Socialism, especially of the government ownership theory. M. Guyot took a prominent part in the discussion of the Dreyfus affair, as a defender of the accused man. His literary output, chiefly in the form of contributions to economic and statistic periodicals and the transactions of learned societies, was enormous. He was well known in England, where he lectured frequently in English. In 1904 he visited the United States and was received cordially, as he had been one of the foremost European supporters of America at the time of the Spanish-American War. At one time he wrote regularly for the economic press of Great Britain and the United States. In association with A. Raffalovich, he published *Dictionnaire du Commerce, de l'Industrie, et de la Banque*. His works include *Études sur les Doctrines Sociales du Christianisme* (2d ed., 1881); *La Science Économique* (2d ed., 1887); *La Tyrannie Socialiste* (1893); *Les Conflits du Travail et leur Solution* (1903); *Le Commerce* (1908); *La Gestion par l'État* (1913; translated and published in New York City in 1914 as *Where and Why Public Ownership Has Failed*); *L'Industrie et les Industriels* (1914).

GYMNASTICS. The national Amateur Athletic Union gymnastic championships were held under the auspices of the Swiss Turn Verein, Union City, N. J., the individual winners in the various events being: All-around, Alfred Jochim, Swiss Turn Verein; long horse, R. Hradecky, Bohemian Gymnastic Association;

side horse, Alfred Jochim; parallel bars, Alfred Jochim; horizontal bar, Alfred Jochim; tumbling, William Hermann, Philadelphia; club swinging, Ray Dutcher, New York Athletic Association; rope climbing, John R. Waterman, United States Navy.

Princeton University won the intercollegiate championship, the victors in the several events being: All-around, F. Davidson, Chicago; horizontal bar, F. Davidson; side horse, W. Thompson, United States Navy Academy; parallel bars, F. Falkner, United States Military Academy; flying rings, R. Snively, Princeton; tumbling, W. Hobson, Dartmouth; rope climbing, R. Russell, Dartmouth.

See OLYMPIC GAMES.

GYPSUM. The production of gypsum in the United States in 1927 was characterized by diversification of products, stabilization of the enterprises engaged therein, and stabilization of the demand. According to the reports of the United States Bureau of Mines, the quantity of crude gypsum mined in the United States in 1927 was 5,346,888 short tons, or a decrease of 288,553 tons, which, compared with 1926, was a decrease of 5 per cent. Prices of gypsum and gypsum products declined during 1927, especially for wall board, block, and plaster, in some markets as much as 25 per cent under prices for 1926, but only 5 to 8 per cent when the country as a whole was taken into consideration. The principal reason for the decline in prices was the competition in a market which did not increase in proportion to the increase in production capacity in the industry, which according to some estimates was 25 per cent, whereas building activity was not as great as in 1926. The result was that plants operated at about 65 per cent of their capacity, the total number in operation being 60, or one more than during 1926. As in the previous year, New York led in the production of crude gypsum, with an output of nearly one-third of the entire quantity mined in the United States, while Iowa ranked second. The total value of sales in 1927 was \$42,174,454, as compared with \$46,721,219 in 1926. Gypsum imports showed an increase over 1926 in quantity but a considerable decrease in value, the total imports being 828,619 short tons, valued at \$1,167,581, of which Canada furnished 757,785 tons. Mexico, which ranked second, was the source of the supply of gypsum rock for an American plant in southern California. Of the imports, about 586,000 tons were sold calcined and were used in the manufacture of gypsum plasters. Production of gypsum in Canada reached a new high record, exceeding 1,000,000 for the first time in the history of the industry, when 1,063,117 short tons, valued at \$3,251,015 were produced, in response to an increased demand from American plants. Canadian output came principally from Nova Scotia, New Brunswick, Manitoba, and Ontario.

GYPSY MOTH. See ENTOMOLOGY, ECONOMIC.

HAGUE TRIBUNAL. See ARBITRATION, INTERNATIONAL.

HAIG, EARL (DOUGLAS HAIG). British soldier, commander-in-chief of the British Army in the World War from 1915 until the close of the War, died at London, January 30. He was born in Fifeshire, Scotland, June 19, 1861. He was educated at Clifton and at Brasenose College, Oxford. He joined the army in 1885 and

served with the Seventh Hussars in the Sudan, where he distinguished himself in Kitchener's famous march on Khartoum. He took part in the fight at Atbara, and on the final advance on Omdurman and Khartoum in 1898 and was mentioned in dispatches and received the British Medal, the Khedive's Medal, and promotion to brevet major. In the following year he saw service with the cavalry in Natal, and there came into close contact with a man with whom he was to be associated in the World War—General French, later Lord French of Ypres. He was chief of staff to French in the series of operations around Colesburg which preceded the close of the Boer War. He commanded a group of columns in 1901-02 and for his services in South Africa he was made an aide-de-camp to the King and a Companion of the Bath, was promoted to the rank of brevet colonel, and received the Queen's Medal with seven clasps and the King's Medal.

Haig was lieutenant-colonel commanding the Seventeenth Lancers, 1901-03, and inspector general of cavalry in India, 1903-06. He was promoted to major general in 1904 and to lieutenant-general in 1910. In 1909 he became, as a Knight Commander of the Royal Victorian Order, Sir Douglas Haig.

The outbreak of the World War, August, 1914, found Haig in the office of director of military training at the War Office. He prepared and sent to the front the first British troops in France, the "Old Contemptibles," as they were called afterwards because the Kaiser referred to them as the "contemptible little British army." They were commanded by Sir John French. It was not long before French sent to London an urgent call for Haig, and he went into active service as commander of the first of the two corps of the army. In the retreat from Mons to Ypres, Haig commanded the van and he took part in the battles of the Marne and the Aisne. French singled him out for praise for his "skillful, bold, and decisive" handling of his forces.

The military critics also found much to commend in Haig's leadership, in both offense and defense. In October, 1915, he fought the greatest battle the British Army had ever engaged in, the struggle at Ypres. After the retirement from Belgium in 1915, Sir Douglas was placed in command of the First Army, one of the two into which the reorganized British forces were divided. In the important battles of Neuve Chapelle, Festubert, and Loos, which followed, he won anew the right to be named as successor of French in the supreme command of the British Expeditionary Forces in France and Flanders when the former commander-in-chief retired, in December, 1915. Haig remained in command until the close of the War and gave loyal support and close cooperation to Marshal Foch after the French general took over the direction of the Allied forces in March, 1918. On Apr. 12, 1918, Haig issued his famous "backs to the wall" order (dated the day before), in which he lauded the British resistance to the great German advance and urged all ranks of the British Army to fight on to the end. Until the day of the Armistice, Foch lent an attentive ear to the plans of Haig for the use of the British.

After the War, Haig devoted much of his time to the welfare of the ex-soldiers, who were devoted to him. From 1919 to 1920 he was field

marshal commander-in-chief of the forces in Great Britain. Many high offices were suggested for him, but he preferred to work in aid of the war veterans and their families. Honors of all kinds, military and civil, were accorded to him. Twelve universities gave him honorary degrees, including Oxford, where his old college, Brasenose, had already made him an honorary fellow. He had been made a Knight of the Thistle (the highest Scottish order) in 1917, the year of his promotion to field marshal, and in June, 1919, he received the high distinction of membership in the Order of Merit. All the Allied nations conferred on him their most exalted honors. On Aug. 6, 1919, the House of Commons voted to him a grant of £100,000, and soon thereafter Sir Douglas Haig became Earl Haig, Viscount Dawick and Baron Haig of Bemersyde. The name "Bemersyde" is that of his ancestral home in Scotland; in 1921 a popular subscription of nearly \$1,500,000 purchased for Earl Haig the estates of Bemersyde. See *Lord Haig*, by Sir George Arthur (London, Heinemann, 1928).

HAIL INSURANCE. See **INSURANCE**.

HAITI, hā'tē. A West Indian republic comprising the western part of the island of Haiti or Santo Domingo, the other part comprising the Dominican Republic. Capital, Port-au-Prince. See **DOMINICAN REPUBLIC**.

AREA AND POPULATION. The area has been variously estimated at from 10,204 to 11,072 square miles; population, estimated, Jan. 1, 1927, 2,300,000 excluding 3000 foreign white residents and the military and naval forces of the United States stationed there in conformance with the treaty of 1915. The majority of the inhabitants are Negroes, but there is a large number of mulattoes, who are descended from the former French settlers. The language is a dialect of French known as Creole French. The capital, Port-au-Prince, has a population of approximately 125,000; Cape Haitien, about 22,-

and prices. Successful experiments have been conducted by American capital in connection with the growing of sisal. Mineral resources are considerable although undeveloped. They include copper, coal, and iron, for the working of which some concessions have been granted; also gold, silver, antimony, tin, sulphur, kaolin, limestone, porphyry, nickel, and gypsum. There are two sugar mills, a logwood factory, a cottonseed oil plant, and a number of smaller manufacturing plants supplying local requirements. Among the minor products manufactured in Haiti, of little commercial importance but typical of domestic life, are baskets, ropes, fish nets, and hammocks.

COMMERCE. The distribution of the foreign trade resulted in a favorable balance of \$2,418,989 in 1927-28 (Oct. 1, 1927 Sept. 1, 1928) as compared with an unfavorable balance of \$452,232 in 1926-27. The favorable trade balance had not been exceeded in a normal year and only once, in 1918-1919, since the establishment of the receivership. The total value of the foreign commerce in 1927-28 was \$42,915,502, an increase of \$11,865,094, or about 38 per cent over the preceding year. Of the total trade, exports amounted to \$22,667,246 as compared with \$15,299,088 in 1926-27 and imports to \$20,248,256 as against \$15,751,320 in the previous year. A considerable recession of business was felt in 1926-27, but the 1927-28 trade was also 10 per cent above that of 1925-26 and nearly as far above that of 1924-25, two years which were generally regarded as very favorable. The expansion of trade in 1928 was largely the result of an exceptional yield of coffee that found a ready market at remunerative prices. The dominant position of the United States in the import trade was maintained in 1928, imports from that source amounting to \$15,246,508, or 75.2 per cent of the total. France was the leading market for exports taking 49.7 per cent of the total.

EXPORTS OF HAITI'S MAJOR PRODUCTS

Product	1926-27		1927-28	
	Kilos	Value	Kilos	Value
Coffee	28,692,984	\$11,384,394	41,146,804	\$17,916,462

000; Cayes, 12,000; Gonaives, 10,000; and Port-des-Paix, 5000.

EDUCATION. Primary instruction is free and has been compulsory since 1910. In 1926-27 there were 1060 schools with 71,503 pupils enrolled. In recent years the rural schools have been much improved. Secondary education is provided by national *lycées* and by private institutions. The University of Haiti was established in 1921.

PRODUCTION, ETC. Haiti is preponderantly agricultural. Coffee, cotton, logwood, sugar, and cacao are exported in considerable volume, but prosperity follows the trend of coffee production

FINANCE. As the revenues of the Government are derived almost entirely from business (about 90 per cent from customs collections alone), the year 1927-28 naturally made a favorable showing and resulted in an appreciable strengthening of Haiti's financial position. Revenues of \$10,100,955 constituted a record and after allowing for disbursements of \$8,632,263, left a surplus of \$1,468,692. The budget for 1928-29 provided for revenues of 37,900,000 gourdes (of which customs duties supplied 33,600,000 gourdes) and expenditures of 37,898,486 gourdes. The chief item of expenditure was service

on the public debt which amounted to 12,528,885 gourdes. On Sept 30, 1928, the gross public debt stood at \$18,887,623 as compared with \$19,951,371 at the close of the fiscal year 1926-27, a reduction of \$1,053,748. In the same period the unobligated cash reserve in the treasury showed a large increase as a result of the budgetary surplus.

COMMUNICATIONS. In 1926 there were 158 miles of railway line, all privately owned. The number of passengers carried was 301,949 and gross receipts were \$205,500. There were 92 postal stations in 1926-27, 3,131,000 pieces of mail were handled, and gross receipts were \$57,000. In the same year there were 1490 miles of telegraph wire, 80,000 messages were sent, and gross receipts were \$35,200. There were also 4608 miles of telephone wire, 1556 telephone instruments, and gross receipts of \$79,800.

GOVERNMENT. The constitution as adopted by the people on June 12, 1918, provides for a National Assembly to consist of a Senate and House of Representatives. This body has never been elected. Instead, the legislative functions are carried on by the Council of State, consisting of 21 members appointed by the president and holding office at his pleasure and apportioned among the several departments, who were supposed to act until the president fixed the date for the election of the Assembly. As he had never done so, this body still functioned at the end of 1928. Executive power is vested in a president elected for four years by the Council of State. He acts through a ministry of five members. The President in 1928 was Louis Borno, who was elected April 10, 1922, and re-elected April 10, 1926.

HISTORY. Thirteen amendments to the Constitution of 1918, submitted to popular vote on Jan. 10, 1928, after having been approved by the Council of State, were ratified by a large majority. The most important one dealt with the election of the president and stipulated that his term of office should be six, instead of four, years and that he should be ineligible to succeed himself. In the spring the American Ambassador to Haiti, Hannibal Price, who had been appointed in 1925, was recalled by the State Department at Washington.

HALDANE, hăl'dān, THE RT. HON. RICHARD BURDON. British statesman and philosopher, died August 19, at Cloan, Aucherarder, Scotland. He was born at Cloan, July 30, 1856, and was graduated from the University of Edinburgh, where among other honors, he received the Gray and Ferguson scholarships in philosophy in 1876. He continued his study of German philosophy at the University of Göttingen. Studying law, he was called to the bar at Lincoln's Inn in 1879, and practiced under Davey in the Chancery Courts. In 1890 he became Queen's council, and by 1894 the extent of his work forced him to specialize, so that he was successful before the higher courts. Lord Haldane, who was a Liberal, was sent to the House of Commons from Haddingtonshire in 1885, being repeatedly returned until 1911. He served as the Gifford lecturer in natural theology at St. Andrews University from 1902 until 1904. He was appointed minister of war in 1905, when the Liberal party came into power, and, having studied army administration at the Berlin War Office, he commenced a reorganization of the military forces, establishing the newly created

General Staff in 1906, and developing his plan for the concentration of the reserve forces in 1908. The detailed organization which he had accomplished before he left the War Office to become Lord Chancellor in 1912 made possible the swift transportation of troops at the outset of the World War in 1914. Lord Haldane, however, did not at the time receive the credit later accorded him for his achievement. Instead, he was violently criticized because it was thought that his admiration for Germany had caused him to underestimate the imminent danger of war, and to advise insufficient preparation on his return from an armament limitation conference at Berlin in 1912. He held the Lord Chancellorship until he was excluded at the formation of the first coalition ministry in 1915. The Liberal party, to which he had belonged, having changed character, Lord Haldane joined the Labor party, and in 1924, when that party came into office, he again became Lord Chancellor, being the only member of the Government with previous experience in the cabinet. He was not accepted thoroughly, however, by the majority of this party, and he in turn not being able to accept thoroughly its principles, consequently did not dominate during the party's brief administration. Lord Haldane especially desired to extend the work of the Judicial Committee of the Privy Council, of which he was a member, by sending representatives outside of England to try cases on appeal, and accomplished a part of his task by improving the reputation of the council in India and the Dominion. Lord Haldane was created First Viscount of Cloan in 1911, and in 1915 was awarded the Order of Merit. He was also a Fellow of the Royal Society and a Knight of the Order of the Thistle. He wrote: *Essays in Philosophical Criticism* (with Seth, 1882); *Life of Adam Smith* (1882); *Education and Empire* (1902); *The Pathway to Reality* (1903-04); *The Reign of Relativity* (1921); *The Philosophy of Humanism* (1922); and *Human Experience; A Study of Its Structure* (1926).

HALE, WILLIAM GARDNER. American Latinist, died at Shippan, Conn., June 23. He was born at Savannah, Ga., Feb. 9, 1849. He was graduated from Harvard University in 1870, and studied at the Universities of Leipzig and Göttingen (1876-77). He served as tutor in Latin at Harvard, 1874-76 and 1877-80. In the latter year he was appointed professor of Latin at Cornell University, and in 1892 he was appointed head of the Latin department in the University of Chicago. He retired in 1919. He took a prominent part in establishing the American School of Classical Studies at Rome and was its first director (1895-96). He received the degree of LL.D. from Union College in 1895, from Princeton University in 1896, and from St. Andrews and Aberdeen in 1907. In 1892 he was elected president of the American philological Association. While in Rome Professor Hale, after a long study of the Vatican library, discovered a manuscript of importance that proved to be the work of Catullus, Roman poet, which had been mislaid in indexing. He was head of a committee organized to produce a set grammatical form in all countries, for the study of languages. His publications included: "The Cum-Constructs: Their History and Functions," in *Cornell Studies in Classical Philology* (1887-89); "The Sequences of Tenses in Latin," in *American*

Journal of Philology, vols. viii-ix (1887-88); *The Anticipatory Subjunctive in Greek and Latin* (1894); (with C. D. Buck) *A Latin Grammar* (1903); papers in classical journals, and several school books for the study of Latin.

HALL, JAMES PARKER. Dean of the University of Chicago law school, died at Chicago, March 13. Born at Frewsburg, N. Y., in 1871, he was graduated from Cornell University in 1894, and from the Harvard law school in 1897. Admitted to the bar in the latter year, he practiced at Buffalo, N. Y., until 1900, also lecturing on constitutional law and real property at the Buffalo Law School from 1898 until 1900. He was then appointed professor of law at Leland Stanford Jr. University. Coming to the University of Chicago in 1902, he was made dean of the law school in 1904, a position which he held until his death. Professor Hall served as major, judge advocate, in the United States Army, 1918-19. He was at one time a director of the the American Judicature Society, a member of the executive committee of the council of the American Law Institute, and president of the Association of American Law Schools, 1921-22. In addition to writing articles for various legal periodicals, and editing *American Law and Procedure*, 12 vols. (1910), Mr. Hall wrote: *Constitutional Law* (1910); and *Cases on Constitutional Law* (1913).

HAMILTON COLLEGE. A non-sectarian institution for the higher education of men at Clinton, N. Y., founded in 1812. A total of 438 students was registered for the 1928 autumn session, divided as follows: Seniors, 75; juniors, 98; sophomores, 111; freshmen, 154. There were 43 members on the faculty for the year 1928-29. The productive funds of the college were approximately \$3,943,989, and the income for the year 1927-28 was \$358,183. The library contained 125,269 volumes and 30,000 pamphlets. President, Frederick C. Ferry, Ph.D., Sc.D., LL.D.

HAMILTON, hām'il'tūn, LORD FREDERIC SPENCER. English author and former diplomat, died at London August 11. He was born Oct. 13, 1856, and, soon after leaving Harrow School, he joined the diplomatic service and was sent to Rome in 1876. Within the year he was appointed attaché to Lord Amphil, the British Ambassador at Berlin, and he later received successive appointments to St. Petersburg, Lisbon, and Buenos Ayres. He sat in Parliament as a Conservative for Southwest Manchester from 1885 until 1886, and as a Unionist for North Tyrone from 1892 until 1895. Besides writing numerous books, Lord Hamilton edited the *Pall Mall Magazine* until 1900. His writings include: *The Holiday Adventures of Mr. P. J. Davenant* (1915); *Some Further Adventures of Mr. P. J. Davenant* (1915); *The Education of Mr. P. J. Davenant* (1916); *The Beginnings of Mr. P. J. Davenant* (1917); *Lady Eleanor, Private Simmons, and others* (1918); *The Vanished Poms of Yesterday* (1919); and *Here, There, and Everywhere* (1921).

HAMILTON, HAMILTON. American painter, died at Norwalk, Conn., January 4. He was born at Oxford, England, Apr. 1, 1847, and was taken to America as a child. He was self-taught. As a young man he showed talent in portrait painting, and for several years practiced that art at Buffalo, N. Y. From 1875, following a visit to the Rocky Mountains, he devoted him-

self to genre and landscape painting. He spent a year in England and France painting, and met and was encouraged by John Ruskin. A year after his return from Europe in 1881, he made his home at New York. He became an associate of the National Academy of Design in 1886 and a National Academician in 1889. He passed considerable time painting in Connecticut, and was chiefly instrumental in the founding of the Silvermine, Conn., colony of artists. One of his best-known paintings is "Laramie Peaks," exhibited at Philadelphia in 1876 and now in the Buffalo Fine Arts Academy.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE. An institution founded in 1868 at Hampton, Va., for the education of Negroes and Indians. The enrollment on October 1, 1928, was 1044, of whom 988 were boarding students; and the enrollment for the two summer sessions of 1928 was 1132. The faculty for the regular school session ending May 29, 1928, numbered 125. The productive funds of the Institute on June 30, 1928, amounted to \$9,081,969, and the income therefrom was \$442,064. There were 64,738 volumes in the library. Principal, James Edgar Gregg, D.D.

HANDBALL. Joseph Griffin of the Detroit Y. M. C. A. supplanted George Nelson of Baltimore as the United States singles four-wall champion in 1928. The doubles title went to Alfred Schaufelberger and William Kamman of Detroit. Murray Vernon of the Crescent A. C. of Brooklyn successfully defended his national one-wall title.

HARBORS. See PORTS AND HARBORS.

HARDY, THOMAS. English poet and novelist, died at Dorchester, England, January 11. He was born at Upper Bockhampton, Dorsetshire, England, June 2, 1840. The great writer—whose works, especially his earlier poems and stories, evinced wide erudition and knowledge of classical and modern literature—did not attend a university or any of the famous schools of England but received his early education at home and at local institutions. This he supplemented, while working as an architect, by intense study and much reading at night, with courses in modern languages at King's College, London. At the age of sixteen he was articled to an ecclesiastical architect at Dorchester, and studied to good purpose; critics have professed to see in the structure of some of his books the influence of his training in architectonic design. In 1863 he received a prize from the Royal Institute of British Architects for an essay upon "Coloured Brick and Terra-Cotta Architecture." He worked as an architect, especially in the Gothic school, under Sir A. Blomfield in London from 1862 to 1867, before he forsook the profession for literature. His first essays were in verse, as were his last; throughout his life the writer retained his preference for metrical composition, despite the fame which he won by means of his prose masterpieces.

Hardy's first publication was an article in *Chambers's Journal* (March, 1865) entitled *How I Built Myself a House*. After a first unsuccessful attempt at fiction, called *The Poor Man and the Lady*, which George Meredith advised him to reconsider, he produced his first novel, *Desperate Remedies* (1871), a crude and fantastic effort, but interesting as a work of the author's formative stage. He struck a surer note in *Under the Greenwood Tree* (1872), an

idyllic love story, with a lightness of touch that is not surpassed in any of his later books. *A Pair of Blue Eyes* (1873) is a study in the ways of womankind, and *Far From the Madding Crowd* first won popular favor for Hardy. It ran anonymously as a serial in the *Cornhill Magazine* in 1874, and was attributed by some critics to George Eliot. Hardy's next production was a farce, *The Hand of Ethelberta*; a *Comedy in Chapters* (1876), which was illustrated by George du Maurier. In 1878 appeared *The Return of the Native*, considered by many the masterpiece of the Wessex novelist; in its opening chapters the description of Egdon Heath foreshadows the stormy careers of the characters in the story, and the latter shows a command of plot, character, and situations that is wanting in his earlier work. *The Trumpet Major* (1880) and *A Lodicean* (1881) are not generally numbered among Hardy's best books, but the ironic tale, *Two on a Tower* (1882) is a good example of his skill in handling complicated situations. *The Romantic Adventures of a Milkmaid* (1883) was followed by *The Mayor of Casterbridge*, one of Hardy's masterpieces, dominated by a strong central character.

Next came *The Woodlanders* (1887) and *Tess of the D'Urbervilles* (1891). The latter, probably the best known of all of Hardy's books, brought forth a storm of criticism. The tragedy of Tess, caught in a chain of uncontrollable circumstances, was deeply felt by a wide circle of readers, and he was charged with fatalism and rigid moralism, exemplified in the tale of the unfortunate Wessex maid. The unhappy ending of the story elicited regret from many readers.

Wessex Tales (1888), a collection of stories that had appeared in various magazines, was followed by *Jude the Obscure* (1895), a powerful exposition of the author's genius for the analysis of character. The story of Jude's early efforts to get a university education is said to be largely autobiographical. *Life's Little Ironies* (1894) is a collection of short stories well characterized by their collective title. *The Well Beloved* was published in serial form in 1892 and in book form in 1897. It was Hardy's last essay in fiction; critics hold that the attacks on *Tess* and *Jude* influenced the author to abandon prose and revert to metrical composition, always his favorite mode of expression. *Wessex Poems* appeared in 1898 and *Poems of the Past and Present* in 1901. In 1904-08 came *The Dynasts*, published in three parts, a metrical drama which is called one of the greatest works of English literature, combining a poetic philosophy of the mysteries of life with minute historical knowledge. It deals with the days of the first Napoleon. *Time's Laughing-stock* was published in 1909; *Satires of Circumstance* in 1914, and *Moments of Vision* in 1919. Despite his advanced years, he wrote many poems dealing with the World War, and two volumes of poetry appeared after the War, *Late Lyrics and Earlier* (1922) and *Human Shows* (1925). A poetic play, *The Famous Tragedy of the Queen of Cornwall at Tintagel in Lyonesse* was produced at Dorchester, Nov. 28, 1923, and published soon after. Mr. Hardy's last published poem was *Christmas in the Elgin Room*, which appeared in the *London Times* on Christmas Eve, 1927. *Winter Words in Various Moods and*

Metres and Old Mrs. Chundle were published in 1928.

There is a long list of books about Hardy, some published as early as 1902. (See THE NEW INTERNATIONAL ENCYCLOPÆDIA, vol. x.) *The Life of Thomas Edward Hardy*, by his widow, Florence Emily Hardy, was published in 1928. There were also published *Essay on Hardy* by H. M. Tomlinson, and *The Landscape of Thomas Hardy*, by Donald Maxwell.

In 1910 Hardy received the high honor of membership in the Order of Merit. He was made a Doctor of Literature of Oxford University, where he was Honorary Fellow of Queen's College, and Doctor of Literature of Cambridge, where he was Honorary Fellow of Magdalene College. Aberdeen University conferred on him an LL.D.

HARRIS MEMORIAL FOUNDATION.

See INTERNATIONALISM.

HARRISON, AUSTIN. English editor, author, and critic, died at Seaford, England, July 14. He was born Mar. 27, 1873, son of the late Frederic Harrison, English philosopher and author. The younger Harrison studied at Harrow, 1887-90, and at the Universities of Lausanne, Marburg, and Berlin. He was a foreign correspondent at Berlin and Vienna, and for five years represented Reuter's at Berlin. In 1905 he became joint editor of the *Observer* and in 1908 literary editor. In 1910 he became editor of the *English Review*, remaining in that chair until 1923, when he resigned, but he continued to contribute articles on foreign affairs. While editor of the *English Review* he introduced to the public several writers who became famous, including John Masefield. He was especially conspicuous as a writer against Germany in the World War period. His books are *The Pan-Germanic Doctrine*; *England and Germany*; *The Kaiser's War*; *Then and Now*; *Lifting Mist*; *Frederic Harrison*; *Thoughts and Memories*; *Essays of To-day and Yesterday*; *Pandora's Hope* (published in 1925; called an ambitious study of woman through the ages).

HARTZELL, härts'əl, JOSEPH CRANE. Former American Methodist Episcopal Bishop of Africa, died at Cincinnati, September 6, as the result of injuries received at the hands of a burglar on June 1. He was born at Moline, Ill., June 1, 1842, and, having been graduated from Illinois Wesleyan University and from the Garrett Bible Institute, he entered the ministry in 1868. He was given a church in Pekin, Ill., the following year, and from 1870 until 1873 he was pastor of Saint Charles Church, New Orleans. He remained in that city until 1896, serving as superintendent of educational and editorial work from 1873 until 1882, during which time he founded the *Southwestern Christian Advocate* in 1875, and served as assistant secretary until 1887, when he became secretary of the Freedmen's Aid and Educational Society of the Methodist Episcopal Church. He was a delegate to the General Quadrennial Conference from 1876 until 1896. In 1896 he went to Africa as missionary bishop, and there he worked for twenty years, part of the time with the co-operation and assistance of Cecil Rhodes, establishing missions throughout Africa and the Madeira Islands. Mr. Hartzell once went to the United States and to England as a representative of the Republic of Liberia, and succeeded in averting a break which threatened between

Germany and the Negro Republic. He retired from his African mission in 1916, when he had reached the age limit, and lived in Cincinnati.

HARVARD UNIVERSITY. A non-sectarian institution of higher learning for men at Cambridge, Mass.; founded in 1636. The number of students enrolled for the year 1928-29 was 8110, distributed as follows: College, 3233, divided into: Seniors, 635, juniors, 717, sophomores, 794, freshmen, 989; out of course, 98; graduate school of arts and sciences, 908; engineering, 270; theological, 110; law, 1589; medical, 515; dental, 114; school of public health, 13; graduate school of business administration, 868; school of architecture, 80; landscape architecture, 46; graduate school of education, 290; special students, 56; Bussey Institution, 18. For the summer session of 1928 the registration was 3149. The officers of instruction for 1927-28 numbered 1311, of whom 215 were professors, 43 associate professors, and 129 assistant professors. The total productive funds of the University in June, 1928, were \$86,702,875, and the total income for the year, including gifts for immediate expenditure, was \$11,639,715. The operating expenses for the year ended June 30, 1928, were \$10,589,940, which were budgeted from the following sources of income: From funds, \$4,570,632; from gifts and receipts for immediate use, \$1,674,853; from operating receipts including tuition, dormitory rentals, dining halls, and athletic sports, \$5,394,230. The number of volumes and pamphlets in the library was 2,784,300. New chemical laboratories and important enlargements to the law school were completed during the year.

The list of visiting professors and lecturers at Harvard during the year included a group of Chinese scholars under the Harvard-Yenching Institute of Chinese Studies, founded, as a result of a \$2,000,000 endowment from the estate of the late Charles Martin Hall of Niagara Falls, to carry out a study and interpretation of Chinese culture. Among the distinguished Sinologists secured to teach at Harvard were three professors from Yenching University: Baron Alexander von Staël-Holstein, Prof. Lucius Porter, and Prof. William Hung, together with Prof. Paul Pelliot of the Collège de France, an eminent scholar of the language, art, and archaeology of Central Asia, who was to lecture on the History of Chinese Art. Professor Paul Hazard of the Collège de France, whose special field is in the comparative history of the literatures of Southern Europe and Latin America, filled the position of Exchange Professor from France; from England came Charles Jasper Sisson, Lord Northcliffe professor of modern English literature at the University of London, and Ralph G. Hawtrey, assistant secretary of the treasury, who lectured in economics. Teutonic scholarship was represented by Prof. Gustav Pauli, Director of the Kunsthalle, Hamburg, Germany, who came to lecture on fine arts.

Among the lecturers from American colleges and universities were Verner Winslow Crane of Brown University, in the department of history, Ralph Mason Blake of the University of Washington, in philosophy and psychology, John Masson Smith of Grinnell College, in Romance Languages, and Miles Standish Sherrill of Massachusetts Institute of Technology, in physical chemistry. The Western exchange pro-

fessors chosen for the second half-year of 1928-29 were Assistant Prof. Harlan True Stetson, astronomy (Knox, Carleton, and Pomona) and Associate Prof. Louis Joseph Alexandre Mercier, French (Beloit, Colorado State College, and Grinnell), no appointments having been made for the first half-year. Dr. Walter Bradford Cannon, a graduate of Harvard, and since 1906 George Higginson Professor of Physiology at the Harvard Medical School, was chosen as exchange professor from Harvard to France for the academic year 1929-30.

Harvard University received an anonymous gift during the year of \$3,000,000 to build and endow a group of dormitories, dining halls, and common rooms, with accommodations for from 200-300 students, carrying out suggestions made by a committee on education published by the Harvard student council in 1926, for a separate college, within Harvard College, as an adaptation of the Oxford and Cambridge University systems, to promote undergraduate life and better understanding between diverse groups of students. President, Abbott Lawrence Lowell, Ph.D., LL.D.

HARVEY, här'vī, GEORGE (BRINTON McCLELLAN). American politician and journalist, died at Dublin, N. H., August 20. He was educated at the grammar school at Peacham, Vt., where he was born Feb. 16, 1864. He first worked as a reporter on the Springfield *Republican*, then on the Chicago *News*, and in 1882 he took a position on the New York *World* which he held until 1886. In 1890 he became insurance commissioner of New Jersey, but he returned to the *World* as managing editor in the following year. In 1893 he relinquished this connection, and the following year he commenced his association with various electric railroad companies. This field he forsook in 1898, and in 1899 he bought and became editor of the *North American Review*, which he published until his death. From 1900 until 1915 he was president of Harper & Bros., publishers, and he established a paper called *Harvey's Weekly*. For many years Harvey was active in politics, and received his title of "colonel" through being aide-de-camp on the staffs of Governors Green and Abbot of New Jersey from 1885 until 1892, and holding the same honorary positions on the staffs of Governors Heyward and Ansel of South Carolina. He expressed his political convictions through his journals in a forceful manner. He was, at first, a Democrat, and it was he who fostered the popular appeal for Woodrow Wilson to leave the presidency of Princeton University to be elected Governor of New Jersey, in 1910. Successful in this movement, Harvey continued his widely influential support until Governor Wilson was elected President of the United States in 1912. There was, however, a temporary estrangement, as Governor Wilson was not convinced of the advantage of the support of *Harvey's Weekly*, then edited by Colonel Harvey, and requested the withdrawal of his name from the editorial page. This difference increased until by the end of the World War, in 1918, the two men were no longer in accord, and Harvey used his utmost influence to prevent the United States from entering the League of Nations, as the President urged. Before the presidential election of 1920, Harvey had enrolled himself as a Republican, and it was believed that he was among those responsible for Warren G. Harding's nomination. Harding ap-

pointed him Ambassador to Great Britain in 1921, and, being active in post-war agreements, he held the position until shortly after the President's death in 1923. On his return to the United States, Harvey again took up journalism, and supported President Coolidge, though he was not active in his advocacy of Herbert Hoover in the presidential campaign of 1928. Harvey received the LL.D. degree from the universities of Nevada and Vermont, and from Middlebury and Erskine colleges, and the Litt.D. degree from Dartmouth. He was a trustee of Stevens Institute of Technology. He wrote: *Women* (1908); *The Power of Tolerance, and Other Speeches* (1911); *Hughes or Wilson?* (1916); and *Henry Clay Frith, the Man* (1928).

HAVANA, CUBA. PAN AMERICAN CONFERENCE. See PAN AMERICAN UNION.

HAVERFORD COLLEGE. An institution of higher education under the control of the Society of Friends, at Haverford, Pa.; founded in 1833. Registration for the autumn term of 1928 totaled 297 students, distributed as follows: Graduates, 12; exchange student, 1; seniors, 60; juniors, 63; sophomores, 75; and freshmen, 86. There were 33 members on the faculty. The productive funds of the institution amounted to \$4,188,313, par value, and the total income for 1927-28 was \$450,408. The library contained 107,000 volumes. President, William Wistar Comfort, Ph.D., Litt.D., LL.D.

HAWAII, hā-wī'ē. A territory of the United States, consisting of a group of islands in the north central Pacific Ocean; formally annexed, Aug. 12, 1898. The nine inhabited islands with their respective areas in square miles are as follows: Hawaii, 4015; Maui, 728; Oahu, 599; Kauai, 547; Molokai, 261; Lanai, 139; Niihau, 97; Kahoolawe, 69; Midway, 2.7. Capital, Honolulu, on the island of Oahu. The population according to the census of 1920 was 255,912 as compared with 191,909 in 1910. The population of the territory was estimated by the board of health to be 348,767 on June 30, 1928; of this number 228,276 were American citizens. The race classification showed 75,209 Caucasians, 20,720 Hawaiians, 25,984 part Hawaiians, 60,078 Filipinos, 134,590 Japanese, 25,310 Chinese, 6318 Koreans, and 548 of other races. The birth rate was 33.84 per 1000 population as compared to 37.16 for 1927, the total births being 11,543. The death rate for 1928 was 11.7 per 1000 population as compared to 11.87 for 1927, the total of deaths being 3992. The infant mortality rate was 83.69 as compared with 95.97 for 1927 and 104.21 for 1926. Marriages for the year were 2736 or 8.02 per thousand population, an increase of 140 marriages.

EDUCATION. Hawaii's public-school system is centralized under Territorial control. All public schools are under the direction of the superintendent of public instruction and commissioners appointed by the governor. The total expenditures for public schools, including the teachers' normal and training school, for the year ending June 30, 1928, was \$5,741,788. During the year there were maintained 250 schools with 2738 teachers and 75,931 pupils. There were 65 private schools with 440 teachers and 9497 pupils.

PRODUCTION AND COMMERCE. Agricultural interests experienced a most satisfactory year in 1928. The sugar industry recorded a steady gain in production without a corresponding increase

in acreage—a fortunate circumstance as the increase in production compensated somewhat for the lower average price of sugar. Practically all of Hawaii's sugar crop is refined on the Pacific coast and consumed west of the Missouri River. The 1927 crop showed the largest total production in the history of Hawaii, amounting to 811,333 short tons, and the 1928 crop according to late estimates was expected to reach 903,000 short tons. From 1924 to 1927, inclusive, production had increased steadily and substantially. The area cropped varied from 120,000 acres in 1922 to 127,417 acres in 1927, and dropped as low as 115,000 acres in 1923. Over this period annual production increased over 200,000 short tons.

Shipments of sugar to the mainland in 1927 reached the value of \$69,827,000, as compared with \$59,043,000 in the preceding year, and, in addition, a considerable return was received from molasses, a by-product of the sugar industry. Shipments of molasses to the mainland in 1927 were valued at \$570,000.

Good markets for larger quantities of canned pineapples continued. The principal problem of the industry, which is only second in importance to sugar in the islands' economic structure, at present apparently is to secure more lands to enable producing companies to satisfy the demand. Canned pineapples valued at \$33,800,000 were shipped to the mainland of the United States in the fiscal year ended June 30, 1928. The Association of Hawaiian Pineapple Canners reported the amount of capital invested in canneries in 1928 as \$16,381,500 and in fields, \$13,958,500; acres under cultivation, 49,356; cannery employees, 5000; and field employees, 6000. A total of 739 homesteaders produce and sell their crops to canners. Increasing use, with profit, is being made of pineapple by-products, which include pineapple bran, citric acid, alcohol, and vinegar.

While the production of coffee in Hawaii is small, it is of excellent quality and is rapidly gaining favor where it has been introduced. Approximately 5,650,000 pounds of milled coffee produced in 1927-28 in the Kona district were valued at \$1,500,000. The livestock industry of Hawaii now constitutes a vital factor in the wealth of the Territory. Approximately 80 ranches of varying sizes, containing 100,000 head of cattle, are about equally divided between those producing for beef and those for dairy-ing purposes.

FINANCE. The income of the various counties for the fiscal year to June 30, 1928, was \$13,759,714, as against \$12,618,826, or an increase of \$1,140,893 over the income for the previous year. The assessment of property, real and personal, in the Territory aggregated \$390,558,491, as against \$414,064,603 for the prior year. The total revenues collected aggregated \$11,579,668; the total expenditures, \$9,579,053, the excess income over operating expenses being \$2,169,951. The total bonded indebtedness on June 30, 1928, was \$23,585,000 as compared with \$24,210,300 on June 30, 1927.

COMMUNICATIONS. In the Pacific coast-Hawaiian trade, the Matson Navigation Company operated 25 vessels. Its fleet had in all 158,859 gross tons and offered fortnightly passenger and freight service between Honolulu and San Francisco, Portland, and Puget Sound. The Los Angeles Steamship Company entered the Hawai-

ian trade in 1922 and operated four steamers in passenger and freight trade. Oil tankers were operated between the Pacific coast and Hawaiian ports by the Associated Oil Company, the Standard Oil Company of California, and the United Oil Company of California. Honolulu is a regular port of call for steamers of the Dollar Steamship Company and those of the Admiral Oriental Line. The Inter-Island Navigation Company, established in 1833, owns and operates a fleet of 14 passenger and freight vessels engaged exclusively in the transportation of passengers and freight between ports of the islands in the Hawaiian group. There are steam railways on all the islands operating on regular schedules and most of them carrying passengers. In addition plantations have their private railway equipment for transporting cane and laborers. There were about 372 miles of railways in the islands, mostly of narrow gauge.

GOVERNMENT. The territorial elections are held regularly in November of each even year, to elect the delegate to Congress for two years, one-half of the Hawaiian Senate for four years, and all the members of the Hawaiian House of Representatives for two years. The sessions of the legislature are held biennially in odd-numbered years. Governor in 1928, Wallace R. Farrington.

HISTORY. From August 15 to 20 there was held a celebration in the Hawaiian Islands commemorating the one hundred and fiftieth anniversary of the discovery of the islands by Capt. James Cook, the navigator. Through the approval given by the President of the United States, representatives of Great Britain and her dominions were invited to attend the ceremonies and upon accepting the invitation sent war vessels to participate with those of the United States in the formal proceedings. Congress authorized the striking of a silver coin to commemorate the event. The programme was designed to recall and honor the great work of Captain Cook; also to suggest the blessings of prosperity and contentment that follow the continuation of the traditional good will prevailing in the Pacific. The United States Government was officially represented by Secretary of War Davis. See under **Celebrations**.

HAY. The total hay crop of the United States in 1928, according to estimates by the Department of Agriculture, was 105,953,000 tons produced on 70,919,000 acres or at the rate of 1.49 tons per acre and comparing respectively with 123,327,000 tons, 75,698,000 acres and 1.63 tons for the preceding year. The average farm price on Dec. 1, 1928, was \$11.74 and on Dec. 1, 1927, \$10.68 per ton. On this basis the total value of the 1928 yield was \$1,243,359,000 as against \$1,317,167,000, the corresponding value of the preceding crop. The production of 1928 comprised 93,031,000 tons of tame hay and 12,922,000 tons of wild hay produced on 57,775,000 and 13,144,000 acres and at the average rate of 1.61 and .98 tons per acre respectively. The average farm value on Dec. 1, 1928, was \$12.34 for tame and \$7.36 for wild hay per ton.

The tame hay yields in the leading States were reported as follows: New York 6,439,000 tons, California 5,104,000 tons, Wisconsin 5,017,000 tons, Pennsylvania 4,645,000 tons, Minnesota 4,387,000 tons, Michigan 4,277,000 tons and Iowa 4,203,000 tons. The average yield per acre ranged from .64 of a ton in Georgia to

3.77 tons in Arizona. The States in which the crop is wholly or largely grown under irrigation showed the higher average yields per acre. The average farm price per ton on Dec. 1, 1928, ranged from \$6.70 in North Dakota to \$22. in Rhode Island. The more important wild hay producing States in 1928 and their yields were as follows: Nebraska 2,526,000 tons, Minnesota 2,171,000 tons, North Dakota 1,355,000 tons, South Dakota 1,264,000 tons, and Kansas 1,107,000 tons. These States produced approximately two-thirds of the total wild-hay crop.

The tame-hay production of 1928 was made up of 29,054,000 tons of alfalfa hay (see **ALFALFA**), 22,976,000 tons of mixed clover and timothy hay, 10,720,000 tons of timothy hay, 9,755,000 tons of millet, sudan grass, and other miscellaneous hay, 8,436,000 tons of red, alsike, and crimson clover hay, 4,866,000 tons of soybean, cow-pea, and peanut hay, 4,255,000 tons of small grains cut green for hay, 2,476,000 tons of sweet-clover hay, 495,000 tons of Japan clover and lespedeza hay. The acreage of wild hay was reduced in the northern Great Plains area from Montana to Kansas, where in some sections drought had made cutting unprofitable.

A hay inspection school for the benefit of the Veterinary Corps of the United States Army was held from Nov. 10, to Dec. 11, 1928. Hay inspection and the adoption of Federal specifications were reported as assuring the Army of better grades of hay than were formerly obtained.

HAY, hā, MARY GARRETT. American political leader, died at New Rochelle, N. Y., August 29. She was born at Charlestown, Ind., Aug. 29, 1857, and attended the Western College for Women, in Oxford, O. Her first political activity was with the local prohibition organization of her State, and becoming interested in woman suffrage, she worked for ten years for the organization of the National American Woman Suffrage Association. She was also president of the New York State Federation of Women's Clubs, 1910-12, and of the New York Equal Suffrage League, 1910-18, and chairman of Woman Suffrage, 1912-18. After the nineteenth amendment had been passed, Miss Hay was active in educating women for the vote and she herself became a prominent member of the Republican party of New York State. She was chairman of the Republican Woman's National Executive Committee, 1910-20, and of the League of Women Voters of New York City, 1918-23.

HAYES, hāz, EDWARD CARY. American sociologist and educator, died at Urbana, Ill., August 7. He was born at Lewiston, Me., Feb. 10, 1868, and having been graduated from the Bates College, Lewiston, Me., in 1887, he studied at the Cobb Divinity School, 1889-92, and was ordained into the ministry of the Congregational Church the following year. He was given a parish in Augusta, Me., which he held until 1896, and a year later he was made dean of Keuka College, (N. Y.). In 1900 he went to the University of Berlin, and two years later he received the Ph.D. degree at the University of Chicago. He then resigned from the ministry, and became professor of economics and sociology at Miami University (Ohio), and in 1907 he was appointed professor of sociology and head of the department, at the University of Illinois, retaining that position until his death. Dr. Hayes was honored with the LL.D. degree from Grinnell College

(Iowa) in 1920, and from Bates College in 1927. He was advisory editor of the *American Journal of Sociology* and coöperating editor of the *Journal of Applied Sociology*; his books include: *The Sociologist's Object of Attention* (1903); *Memoir of Benjamin Francis Hayes* (1907); *Introduction to the Study of Sociology* (1915); and *Sociology and Ethics* (1921).

HAY FEVER. Plants which are able to cause hay fever in the sensitive seem to have been wrongly accused in certain cases, while others which have always been regarded as harmless have been found to attack certain individuals. As an example of the former class may be mentioned golden rod, once regarded as dangerous but recently given a clean bill of health. Of the second group, a new recruit has been found in the paper mulberry tree formerly included among the harmless vegetation but according to Dr. H. S. Bernton incriminated in a number of cases during the past two years. In some of these the sensitiveness to mulberry pollen developed in Greek emigrants exposed originally before coming to this country.

HAYTI. See HAITI.

HAYWOOD, WILLIAM DUDLEY. American agitator, died at Moscow, Russia, May 18. He was born at Salt Lake City, in 1869. It is said that he was first put to work in a mine at the age of nine, and two years later was "bound out" to a farmer by his step-father. He worked on the farm for four years, and then returned to mining, becoming a prospector and contractor and operating in Nevada, Utah, Idaho, and Colorado. He first attracted public notice by his leadership of the Western Federation of Miners, of which he was secretary, during the Cripple Creek, Colo., strikes of 1904. When ex-Governor Frank Steunenberg of Idaho was assassinated in 1905, Haywood, with others, was implicated by the confession of the assassin, Harry Orchard, but he was acquitted two years later. Haywood was ousted by the Western Federation of Miners and, as a member of the executive committee of the Industrial Workers of the World, became known as one of the most prominent and uncompromising radicals of America. He was a leader of the I. W. W. when he conducted the Lawrence (Mass.) textile strike in 1912 and the strike in the Paterson (N. J.) silk mills in 1913. In the latter year his advocacy of violence and sabotage, and his contempt for political action by the Socialist party, cost him his membership in the national executive committee of that organization. He became again conspicuous in 1917 when as secretary of the I. W. W. he was arrested on a charge of seditious conspiracy. He was sentenced to twenty years' imprisonment and a fine of \$10,000, but he was released on bail, and in April, 1921, fled to Russia, with whose Soviet Government he had long professed sympathy. In March, 1922, he headed a group of American members of the I. W. W. who received a concession to operate the Nadejdinsky Iron Works in Russia, but the enterprise was unsuccessful, and Haywood became leader of the Kuzbas autonomous colony, in Siberia. This, too, failed, and he returned to Moscow in 1923. The rest of his life was spent in minor activities for the Soviet Government.

HEART DISEASE. Dr. H. A. Christian, director of the Peter Bent Brigham Hospital, Boston, contributes an important paper on benign chronic heart disease to the *Journal of the Amer-*

ican Medical Association for August 25, in which there is no valvular lesion, no lesion of any kind with the exception of hypertrophy at times and no evidence of disease in the tracings of the electro-cardiograph. The subjects are mostly above the age of forty and complain of many of the symptoms normally present in organic heart disease, as shortness of breath, palpitation, heart flutter, etc. A convenient term is heart fatigue of functional nature. These patients are mostly cardiac hypochondriacs who cannot get their minds off their condition. Unwisely they have been told that they suffer from weak heart and the author impresses on his readers never to tell these subjects that they have any cardiac affection. Great care must of course be taken to exclude organic disease. Some of the patients with merely functional disease depend on small doses of digitalis either steadily or at intervals, but as there is no real work for this remedy the sense of relief must be purely mentally motivated. Although a certain amount of effort is useful in actual heart disease, these patients do much better at first under rest and comforting assurance. After a rest interval the patient should slowly and progressively readapt himself to a life of activity.

HESSE, hës. Since November, 1918, a republican state of the German Republic, situated in the western part of Germany; formerly a grand duchy of the German Empire. Area, 2968 square miles; population, at the census of 1925, 1,347,279. The capital is Darmstadt with a population of 89,465. Other important cities are Mayence, or Mainz, with 108,537 (with suburbs); Offenbach, 79,362; Worms, 47,015; and Giesen, 33,600. In 1926 there were 960 public elementary schools with 3898 teachers and 143,033 pupils. The areas and yields of the chief crops in 1926 were: Wheat, 63,645 acres, 42,591 tons; rye, 138,285 acres, 91,796 tons; barley, 110,902 acres, 85,601 tons; oats, 118,982 acres, 94,832 tons; potatoes, 147,225 acres, 784,655 tons; 34,602 acres under vines, yielding 2,988,260 gallons of wine. On Dec. 1, 1926 there were 292,266 cattle, 46,003 sheep, 333,836 swine, and 140,746 goats. The ordinary revenue and expenditure for the year 1927 were estimated to balance at 161,990,746 marks. The funded debt as of Jan. 1, 1928 was 644,959 marks, and the floating debt 20,160,000 marks. The government has a unicameral legislature and a responsible ministry. As a result of the elections held on Nov. 13, 1927, the Landtag (70 members elected for three years), the new diet is composed as follows: Socialist, 24; Democrats, 5; German People's party, 7; Centre, 13; German Nationalists, 3; Hessian Peasants Union, 9; Communists, 6; other parties, 3. The cabinet, nominated on Feb. 14, 1928, was as follows: Premier and Minister of Education, Herr Adelung; Finance and Justice, Herr Kirnberger; Interior, Herr Lenchner; Labor and Economic Affairs, Herr Korell.

HIBBEN, PAXTON. American journalist, died at New York, December 5. Born at Indianapolis, Ind., Dec. 5, 1880, he was graduated from Princeton in 1903 and after receiving the A.M. degree from Harvard in 1904 attended the law school

of that university for one year, being admitted to the bar in 1906. Entering the diplomatic service, he was secretary to the American Embassy at Petrograd, and at Mexico City, between 1905 and 1908, secretary of legation, and chargé d'affaires at Bogotá, Colombia, 1908-09, at The Hague and at Luxemburg, 1909-12, and at Santiago, Chile, until his retirement from the diplomatic service in the latter year. He became war correspondent for *Collier's Weekly* in 1914, transferring to the Associated Press the following year. After the United States entered the World War, Hibben was commissioned first lieutenant in the field artillery, Nov. 27, 1917, and later was made captain, being stationed successively at the War College, at Camp Grant, in France with the 332nd Field Artillery, at the finance bureau of the supply department, and in the office of the inspector general of the American Expeditionary Force, until his discharge, Aug. 21, 1919. After the Armistice, Hibben went to Armenia on a military mission, remaining from August until December, 1919; he then worked on the Near East Relief mission, 1920-22, being secretary of the Russian Commission from June until December, 1921. During the same period he was employed as staff correspondent for the *Chicago Tribune*, 1919-20, and he was war correspondent for *Leslie's Weekly* in the Near East, 1921. Returning to the United States, he became, in 1922, secretary of the Russian Red Cross commission in America, and of the American relief commission for Russian children, and the following year was made vice director for the U. S. Nansen relief mission. Hibben, who had been commissioned captain in the Officers' Reserve Corps, Feb. 7, 1920, was repeatedly in conflict with his superior officers, because he did not hesitate to express freely views on public matters, being particularly outspoken in his belief that the United States should recognize Soviet Russia. He wrote: *Constantine I and the Greek People* (1920); *The Famine in Russia* (1922); and *Henry Ward Beecher—An American Portrait* (1927), which was denounced for its criticism of the popular hero. At the time of his death he was working on a biography of William Jennings Bryan.

HINITT, hi'nit, FREDERICK WILLIAM. American Presbyterian clergyman, and former educator, died at Indiana, Pa., October 25. He was born at Kidderminster, England, Nov. 2, 1866, and was taken to the United States at the age of eight; he was graduated from Westminster College in 1889, receiving the A.M. degree three years later. He was also graduated from the McCormick Theological Seminary, Chicago, in 1892, and being ordained into the Presbyterian ministry, he was assigned to a church in Warrensburg, Mo., where he remained until he went to Ottumwa, Iowa, in 1895. Dr. Hinit was chosen for the presidency of Parsons College, Fairfield, Iowa, in 1900, and 1904 he became president of Centre College of Kentucky, serving as moderator at the Kentucky Synod the following year. He was made president of Washington and Jefferson College in 1915, also becoming director of the Western Theological Seminary, Pittsburgh. He resigned from the college in 1918, in order to

work as a field secretary of the Y. M. C. A., with the A. E. F., having headquarters in London, 1918-19, and he acted as director for the United Kingdom of the Army Educational Commission. He was given the pastorship of the First Church, Indiana, Pa., in 1918, and he held that position until his death. He was secretary of the educational and administrative committee of the General Assembly of the Presbyterian Church, and he served on the general church council, 1923-24. Dr. Hinit received the Ph.D. degree in 1896, and the D.D. degree in 1902, from the University of Wooster, and in 1915 he was given the LL.D. degree from Centre College of Kentucky, and from Allegheny College.

HISA, PRINCESS. Infant daughter of the Emperor and Empress of Japan, died March 7. She was born at Tokyo, Sept. 10, 1927. She was the second child of the Emperor Hirohito and his consort, the Empress Nagako, and was named Sachiko (Hisa no Miya). The older child was also a princess (Jeru no Miya). In the absence of a male heir to the throne the succession was vested in the oldest brother of His Majesty, Prince Yasuhito, head of the house of Chichibu, frequently known as Prince Chichibu. See JAPAN.

HISPANIC SOCIETY OF AMERICA, THE. An international organization founded in 1904, in New York City, to establish a public library and museum designed to be a link between the English-, Spanish-, and Portuguese-speaking peoples, and to advance the study of the Spanish and Portuguese languages, literature, and history, and the study of the countries wherein Spanish and Portuguese are or have been spoken languages. Since 1904, when a collection of paintings, manuscripts, maps, and coins, and a library of about 40,000 volumes were placed in charge of the Society, valuable additions have been made to this collection, and a number of temporary exhibitions have been held of the works of noted Hispanic artists. Membership in the Society is limited to 100, is honorary, and includes specialists and scholars of all nationalities distinguished in the Hispanic field. The Society has published over 200 catalogues, reprints of old manuscripts, and monographs. The *Revue Hispanique* is published every two months in Paris. The museum and headquarters of the Society are at 156th Street, West of Broadway, New York City. The president for 1928 was Archer M. Huntington and secretary, George Bird Grinnell.

HISTORICAL ASSOCIATION, AMERICAN. A society for the promotion of historical studies and writing, formed in 1884 by a group of American scholars and chartered by Congress in 1889. Under provision made by the United States Government, it publishes annual reports and is charged with the office of communicating its proceedings and its information on the state of historical study and writing to the secretary of the Smithsonian Institution, for transmission to Congress.

In 1928 the Association had some 3500 members who represented not only every State of the Union but also Canada and many European and South American countries. It invites to membership not only those engaged in historical work and teaching but all feeling a sufficient interest in historical science to prompt them to join. Meetings of the Association are annual, that of the year 1928 having been held on December 28-31, at Indianapolis, Ind. Among

the subjects of papers delivered and topics discussed at the various conferences were the following: The Relation of the English Coal Industry in the Seventeenth Century to the Growing Economic and Political Power of the Town Merchant; Interrelationships of Social and Constitutional History; The Historical Beginnings of Judaism; The Mediæval Manor; Absentee Landlordism in the British Caribbean, 1750-1833; Commercial Relations between the United States and the Dutch West Indies, 1783-1789; Ethan Allen, an Interpretation; The New Crusade (the annual address of the president—James H. Breasted, of the University of Chicago); The Spanish Contribution to American Agriculture; The Cattlemen in the Agricultural History of the Northwest; The Central Theme of Southern History (a paper printed in the *American Historical Review* for October); The Problem of Coöperative Research for College Teachers; Origins and Significance of the Public Health Movement in the United States; The Ming Dynasty Background of Chinese Foreign Problems; "Diary of a Public Man," in *North American Review*, 1879; Conference on Hispanic America; Conference on The Problem of Freshman History Instruction.

For the encouragement of historical research the Association offers two biennial prizes of \$200 each, for the best monograph, printed or manuscript, in the English language, submitted by a writer who has not achieved an established reputation: The Herbert Baxter Adams Prize, awarded in odd years for an essay on the history of the eastern hemisphere, and in even years the Justin Winsor Prize for an essay on the history of the western hemisphere, including the insular possessions of the United States. Two annual prizes for which no awards were made in 1928 were: The George Louis Beer Prize of \$250, in honor of its founder, the late George Louis Beer, for the best work upon any phase of European international history since 1895; and a medal struck in honor of Jean Jules Jusserand, former Ambassador of the French Republic to the United States and a former president of the Association, for the best work on intellectual relations between America and one or more European countries. A fifth prize, established in accordance with the terms of the bequest of Miss Mathilde M. Dunning, provides that the income from the sum of \$2000 shall be used for the John H. Dunning Prize to be offered for the best historical essay by a member of the Association dealing preferably with the historical matter connected with the Southern States during the reconstruction period.

The official organ of the Association is *The American Historical Review* (quarterly). The *Annual Report* is also published, containing proceedings, important papers read at the annual meetings, texts of significant documents, reports on American archives, reports on history teaching, and papers on agricultural history. An additional publication issued during 1928 was *Annual Report, 1924, Supplement (Writings on American History for that year)*. Officers for the year were: President, James H. Breasted; first vice president, James Harvey Robinson; second vice president, Evarts B. Greene; secretary, John S. Bassett, who died Jan. 27, 1928, and was succeeded by Dexter Perkins, as acting secretary until his appointment at the 1928 meeting; treasurer, Charles Moore; assistant

secretary-treasurer, Patty W. Washington; editor, Allen R. Boyd. New officers elected for 1929 were: President, James Harvey Robinson; first vice president, Evarts B. Greene; second vice president, Ephraim Douglass Adams; secretary, Dexter Perkins; treasurer, Charles Moore; assistant secretary-treasurer, Patty W. Washington; editor, Allen R. Boyd.

HISTORY. See LITERATURE, ENGLISH AND AMERICAN; FRENCH LITERATURE; GERMAN LITERATURE; ITALIAN LITERATURE; SCANDINAVIAN LITERATURE; SPANISH LITERATURE.

HOCKEY. Professional hockey established itself as one of the most popular winter sports in 1928. More than a million persons witnessed the games played by the National Professional League, which comprised six United States teams and four from Canada. The Stanley Cup series to decide the world championship was played in Montreal, the New York Rangers winning by 3 games to 2 and a total of 6 goals to 5. When the regular league season closed, the Rangers were in second place in the American Group. They engaged in a series with the Pittsburgh Pirates to determine which team should meet the Boston Bruins who had finished first for the American Group honors. The Rangers defeated the Pirates by a total goal score of 6 to 4 and then triumphed over Boston by 5 goals to 2, thus qualifying for the Stanley Cup series with the Montreal Maroons, who had taken first place in the International Group of the league.

The Toronto Grads, who represented Canada in the Olympic Games (q.v.) swept all before them at Amsterdam. In the final match for the Olympic title they defeated the Swiss team by the overwhelming score of 13 to 0.

Winners of other important competitions during 1928 were: Canadian Professional League, Stratford Nationals; Canadian-American League, Springfield Indians; American Association, Duluth; Allan Cup, Manitoba University; Canadian Senior Intercollegiate Championship, University of Toronto. Among the United States colleges, Yale, Harvard, Princeton, and Dartmouth once more presented the strongest sextettes.

FIELD HOCKEY. There was an international flavor added to the field hockey competition in 1928 due to the invasion of the United States by an English women's team which won a large percentage of the games played. In the final match of the intersectional tournament played at Philadelphia, the visiting aggregation buried an All-American team under an 11 to 0 score.

HODSON, SIR JAMES (W. B.) Scotch surgeon, died on a train between London and Edinburgh, May 29. He was born May 15, 1858. He was educated at Queen's College, Belfast, Ireland; the University and School of Medicine, Edinburgh, and studied also at London, Vienna, and Paris. He was knighted in 1920 for public services during the World War, being created a Knight of the Order of the British Empire. He was at the front in France as a major and was twice mentioned in dispatches. Besides being president of the Royal College of Surgeons at Edinburgh, 1914-17, and vice president, 1917-19; he was consulting surgeon at the Royal Infirmary, Edinburgh, a member of the Dental Board of the United Kingdom, senior surgeon at the Royal Infirmary, and chairman of the governing board of the school of medicine of the Royal Colleges. He was the author of many papers dealing with surgery.

HOLFORD COLLECTION. See ART SALES.

HOLGUIN, JORGE. Colombian statesman, died March 2, at the age of eighty-two. He was twice President of the Republic of Colombia, and continued his activity in politics to the end of his long life. He was also prominent in the business circles of the Republic. General Holguin was a member of the Colombian mission to Washington in 1890 concerning the Panama Canal, and it was while he was President of Colombia, in 1921, that the Colombian Congress ratified a treaty with the United States involving recognition of the independence of Panama.

HOLLAND. See NETHERLANDS.

HOLY CROSS, COLLEGE OF THE. A Roman Catholic college under the Society of Jesus, at Worcester, Mass.; founded in 1843. The enrollment for the autumn of 1928 totaled 1090 in the regular course, with a distribution as follows: Seniors, 245; juniors, 242; sophomores, 269; freshmen, 324. In the B.S. course there was an enrollment of 57 distributed as follows: Seniors, 10; juniors, 8; sophomores, 18; and freshmen, 21. The graduate enrollment in M.S. courses amounted to 5; and there were 5 special students. The faculty numbered 91, of whom 11 were new members in 1928. The library contained 100,000 volumes. President, the Rev. John M. Fox, S.J.

HONDURAS, hōn-dōō-rās. A Central American republic, bounded on the north and northeast by the Caribbean Sea, on the southeast by Nicaragua, on the southwest by Salvador and the Pacific Ocean, and on the west by Guatemala. Capital, Tegucigalpa.

AREA AND POPULATION. The estimated area is 44,275 square miles; population, Jan. 1, 1923, according to official figures, 773,408, mostly Indians with a strain of Spanish blood. The chief towns with their populations according to the latest available statistics are Tegucigalpa, 38,950; Santa Rosa, 13,000; Santa Barbara, 6000; San Pedro, 8000; and Juticalpa, 8000. The chief ports are Amapala on the Pacific and Porto Cortez and Omoa on the Atlantic.

EDUCATION. Elementary education is free and compulsory between the ages of 7 and 15. During 1926-27 there were 859 public, and 36 private, schools, three kindergartens, and 13 night schools, the average enrollment being 35,216 and attendance 28,277. There were 165 students enrolled in six normal schools or normal departments, 283 in eight secondary schools, 344 in four commercial schools, 58 in the school of law and political sciences, 27 in the medical school, and 10 in the school of engineering.

PRODUCTION, ETC. The principal occupation is agriculture and the chief product bananas. They are grown mostly along the Atlantic coast, and constitute the main export. American banana companies enjoyed a very prosperous year in 1927. More than 19,000,000 bunches of bananas were produced and exported. The record shipment in 1918 was 19,200,000 bunches. The production of sugar had steadily increased since 1915 and in 1917 over 60,790,000 pounds were produced as compared with approximately 31,000,000 in 1926. Other agricultural products in-

cluded coffee, coconuts, tobacco, corn, kaffir corn, beans, and rice. The exports of coffee in 1926-27 amounted to 3,153,000 pounds as compared with 2,496,000 pounds in 1925-26. There were one large silver mine and several small gold workings in the republic; deposits of zinc, copper, lead, iron, and coal are known but to date had not been worked. Aside from the sugar mills, manufacturing is on a small scale.

COMMERCE. The foreign trade of Honduras for the fiscal year ended July 31, 1927, amounted to \$28,176,706, of which \$10,630,416 represented imports and \$17,546,290 exports. The figures for the preceding fiscal year, 1925-26 were: Imports, \$9,899,950, exports, \$13,456,005, total \$23,355,955. There was, therefore, for the year 1926-27, an increase in imports of \$730,466, and in exports of \$4,090,285, or an increase in the total foreign trade of \$4,820,751. The exports of bananas alone amounted to \$13,580,937. Of the total exports the United States absorbed 77 per cent; 79 per cent of the imports came from the United States. The chief class of imports was manufactures, valued at \$6,364,769.

FINANCE. The following table from the Pan American *Bulletin* for September, 1928, shows the budget of general expenditures and revenues for the fiscal year 1928-29:

	Pesos
Revenues:	
Customs revenue	3,710,000.00
Monopolies	2,298,000.00
Stamp tax	840,000.00
Various services	1,455,000.00
Miscellaneous revenues	256,000.00
	8,559,000.00
Less: Percentage on receipts and commission on some revenues for special funds:	
	Pesos
For public instruction, 10% on customs revenue ..	345,000.00
For public instruction, 10% on stamp tax	279,000.00
For justice, 1% on stamped paper and revenue stamps	140,000.00
For justice, 1% on net revenue from liquor ..	18,555.00
	782,555.00
Revenues for the public services	7,776,445.00
Special revenues—special funds:	
Taxes for special funds ..	2,146,620.00
Payments and percentage of other revenue	782,555.00
	2,929,175.00
Total revenue	10,705,620.00
Expenditures:	
Interior	1,707,265.32
Justice	341,720.00
Public Health	235,000.00
Foreign relations	293,622.70
Public instruction	672,520.00
Promotion, agriculture, and labor	2,147,088.00
War and Navy	1,596,874.75
Treasury	1,166,820.80
Public credit	2,344,708.43
Total expenditures	10,705,620.00

COMMUNICATIONS. There are about 1000 miles of railway line. On July 31, 1926, there were 306 post offices and during the year 1925-26, 3,601,000 pieces of mail were handled. Mileage of telegraph wire at the end of the fiscal year 1925-26 totaled 3844; 1,520,000 messages were handled during the year and gross receipts were \$379,000. On July 31, 1926, there were 4343 miles

of telephone wire, 1652 telephone instruments, and receipts for 1925-26 were \$28,000.

GOVERNMENT. According to the constitution of Oct. 3, 1924, the executive power is vested in a president nominated and elected by popular vote, and holding office for four years; legislative power is in a chamber of deputies consisting of 43 members chosen for four years directly by popular vote. President in 1928, Dr. Miguel Paz Barahona.

HISTORY. During the year the United States Government was asked by both Guatemala and Honduras to use its good offices as mediator in an endeavor to bring about a settlement of the boundary dispute between Guatemala and Honduras, which had again been recently receiving the active consideration of those two governments. The United States Government, in accordance with this request, named Roy T. Davis, American Minister to Costa Rica, as its representative on a mixed commission to make a thorough inspection of conditions along the disputed border and to endeavor to fix upon a provisional line which could be accepted by both Guatemala and Honduras pending a definite and final agreement on a permanent frontier.

The commission was installed on Apr. 12, 1928, Dr. Carlos Salazar being president of the Guatemalan Commission and Señor don Augusto C. Coello, president of that of Honduras. The disputed area was valuable banana plantation soil and the matter became serious after a lapse of several years when the two countries attempted to give concessions to the same area for banana exploitation. The feeling in each country ran high against the other and the usual method of recourse to war was commonly heard in the press and in speeches. Secretary of State Kellogg suggested, after the boundary commission failed to make progress, that the entire matter be submitted to the International Central American Tribunal, created in Washington early in the year. Guatemala accepted the proposal, but Honduras rejected it on the grounds that the newly created tribunal did not have the technical facilities for handling the matter. Secretary Kellogg in a later note insisted upon the matter being handled by the tribunal and rejected the suggestion that the President of the United States or the Chief Justice of the American Supreme Court act in the case. There the matter apparently rested until the close of the year.

In elections held on October 28, Dr. Vincent Mejía Colindres was elected president of the Republic for a four-year term and Rafael C. Chávez, vice president.

Ratification of a general treaty of friendship, commerce, and consular prerogatives, signed by representatives of Honduras and the United States in Tegucigalpa on Dec. 7, 1927, were exchanged in Tegucigalpa on July 19, 1928. It replaced the treaty of July 4, 1864. The new instrument was ratified by the National Congress of Honduras on Mar. 7, 1928, and by the Senate of the United States on May 25, 1928, being signed by President Coolidge on June 9, and proclaimed on July 23.

HONDURAS, BRITISH. See **BRITISH HONDURAS.**

HONG KONG. A possession of Great Britain at the mouth of the Canton River, about 90 miles to the south of Canton; comprising an irregularly shaped island, 11 miles long from

east to west, varying from 2 to 5 miles in breadth, with an area of 32 square miles; also the opposite Peninsula of Kowloon, separated from it by a strait about a half-mile wide. Total area, 391 square miles. In 1916 a scheme was begun for the reclamation of 9,500,000 square feet of land from the sea in Kowloon Bay; this project was still in progress in 1928. The population, according to the census of 1921, was 625,166, of whom 612,310 were Chinese; estimated in the middle of 1925 at 874,420. The movement of population in 1926 was: Births, 4041; deaths, 12,516. In the same year the number of Chinese immigrants was 276,501 and the number of emigrants, 460,479. While education is not compulsory, the schools are under government inspection and required to keep certain standards. The total number of pupils in all schools in 1926 was 44,947 and the total expenditure on education, \$910,063. For higher education there is the British University of Hong Kong which is attended mostly by Chinese students.

The principal industries are sugar refining, shipbuilding, rope making, the manufacture of tobacco, cement, and knit goods, and tin refining. The latest available statistics for trade are those of 1925 when the imports were valued at £43,484,410, and exports £40,353,906. The revenue for 1925 was £2,711,843 and the expenditure £3,297,795. In 1926, 30,231 vessels (including 15,027 junks and 2829 steamships under 60 tons) representing altogether 28,371,104 tons, entered and cleared in the foreign trade. Of these, 3401 with a tonnage of 9,257,417 were British ocean-going steamers. The colony is under a governor aided by executive and legislative councils. Governor in 1928, Sir Cecil Clementi (appointed in 1925).

HOOVER, HERBERT (CLARK). American engineer and public official, who was elected thirty-first President of the United States on November 6, was born at West Branch, Iowa, Aug. 10, 1874, the son of a pioneer farmer-blacksmith. Both his parents were Quakers. Orphaned at the age of 10, he was sent to live on his uncle's nearby farm. When, two years later, another uncle established a Quaker Colony, with its own academy, near Newberg, Ore., young Hoover joined him. Having moved to Salem as the colony expanded, he determined to study engineering, and in 1891 persuaded his guardians to allow him to enter the first class of Leland Stanford, Jr. University. While a student he supported himself in various ways, working with the U. S. Geological Survey, in the summers, and in 1895 was graduated in engineering. He was a worker in a California mine for a year, then secured a place on the staff of Louis Janin, a celebrated mining engineer of the West. On Janin's recommendation Hoover was commissioned, in 1897, by an English syndicate to establish American methods in Australian mining companies. The Chinese government appointed him director general of mines two years later, and, making his base at Peking, he frequently prospected in remote districts. At the time of the Boxer Rebellion, 1900, he led in the defense of Tientsin.

During the next 13 years, Mr. Hoover was associated with mining, railroad, and metallurgic work in the United States, Mexico, Canada, Italy, Great Britain, South Africa, India, Russia, and other parts of the world, always showing particular executive ability. Being in Eu-

rope in behalf of the Panama-Pacific International Exposition at the outbreak of the World War, in July 1914, Mr. Hoover was made chairman of the American Relief Commission in London, which was aiding many Americans stranded in Europe without negotiable funds. Persuaded also to undertake the creation and direction of a neutral Commission for Relief in Belgium, he gave up his private interests, and, by continual negotiations in London, Brussels, Paris, Rotterdam, and the secret German headquarters at Charleville, he overcame the suspicions of the belligerents and established the relief work on an efficient basis. The Commission he directed received aid from governments, and private gifts, and of the \$1,000,000,000 entrusted to it, only one-half of 1 per cent was used for overhead expenses.

When the United States entered the War, in 1917, President Wilson appointed Mr. Hoover head of the U. S. Food Administration, and in that position he controlled the food supply of one-third of the world. He at once organized production and shipping, gaining the general support of business interests, leading an enthusiastic campaign to reduce consumption and waste, in the United States, and designating "meatless" and "wheatless" days.

After the Armistice was signed, Nov. 11, 1918, Mr. Hoover went to Paris, authorized by the American government to discuss questions of food supplies. The main problem was to provision Europe, using the wheat, pork, and other resources of the United States to the best advantage. He was an important influence in the revival of the economic stability of the world, as a member of the War Trade Council, as chairman of the U. S. Grain Corporation, of the U. S. Sugar Equalization Board, of the Interallied Food Council, of the food section of the Supreme Economic Council, and of the European Coal Council. He directed many of the economic measures of Europe during the armistice period, particularly the organization of food supplies in Poland, Serbia, Czechoslovakia, Germany, Austria, Armenia, and the Baltic States. He was also made chairman of the American Relief Administration in 1919, which attempted to provide proper nourishment for European children, and in 1920 he was appointed vice chairman of President Wilson's second industrial conference, and chairman of the European Relief Council.

His engineering and organizing experience together with his work in practical international economics well equipped him to become Secretary of Commerce, to which office President Harding appointed him on Mar. 5, 1921, and to which President Coolidge reappointed him. He straightway improved the functioning of the department and was said to have increased its output 14 times, with only a four-fold increase of personnel. In addition, he became chairman of the President's Conference on Unemployment, Sept. 20, 1921, and he served on the advisory committee of the Limitation of Armaments Conference, November, 1921, and on the World War Debt Commission; he was also chairman of the Colorado River Commission, and of the special Mississippi Flood Relief Commission, 1927.

As it was gradually accepted that President Coolidge would not be a candidate for the presidential nomination in 1928, it seemed a

natural development that his Secretary of Commerce, who had proved his understanding and capacity in connection with administrative problems, should lead the Republican party which made as its major issue the record of prosperity. Mr. Hoover, accordingly, was nominated by the Republican National Convention at Kansas City, Mo., on June 14. He resigned his secretaryship on July 14, crossed the continent to his home at Palo Alto, Calif., where he delivered his speech of acceptance on August 11, and returned eastward to speak at West Branch, Iowa., on August 21. His addresses were broadcast from ocean to ocean. His radio audience was estimated at 30,000,000. He pledged himself to farm relief, to uphold prohibition and the protective tariff, and to continue the foreign policy of the Coolidge administration. He later spoke in New York and in Tennessee. At the election, in which European countries showed a vital interest, because of the fear that Mr. Hoover, as President, would press commercial competition, and would insist on full payment of war debts, Mr. Hoover received 444 electoral votes, including those of Florida, North Carolina, Virginia, and Texas, against 87 for Alfred E. Smith, the Democratic candidate. He soon started on a "good will" tour of Central and South America, visiting Honduras, Nicaragua, Costa Rica, Ecuador, Peru, Bolivia, Chile, and Argentina, being received with enthusiastic acclaim and official welcome at the various capitals.

Mr. Hoover translated, with his wife, Agriola's *De Re Metallica*, and wrote, *Principles of Mining* (1909), and *American Individualism* (1922). His presidential campaign speeches were published as *The New Day* (1928).

See UNITED STATES under *Presidential Campaign*.

HOPKINS, WILLIAM ALONZO. French-American publisher, founder of the Paris newspaper, *Le Matin*, died February 27, at the age of eighty-seven. Mr. Hopkins went to Paris, on the advice of his physicians, in 1878, after a successful career as a foundryman in New Jersey. He interested himself in journalism, and was mainly instrumental in founding *Le Matin* as an independent newspaper. He also founded the American Relief Society (now the American Aid Society) in the French capital, and during the World War established and maintained the hospital of La Providence at Dinard, France.

HOPS. The production of hops in Europe in 1928, according to reports from various sources, was below that of 1927, but the quality was said to be very satisfactory. As reported by the International Institute of Agriculture, Rome, Belgium produced 4,630,000 pounds—only about 81 per cent of the crop of the preceding year, but of excellent quality—and Czechoslovakia had a yield of 16,192,000 pounds, which was only about 68 per cent of the yield of 1927. Reports received by the U. S. Department of Agriculture placed the production of England and Wales at 27,104,000 pounds from 23,762 acres. This yield was over 5 per cent below that of 1927, and the average yield per acre, 1141 pounds, was 172 pounds below that for the ten-year period 1918–1927. The production of hops in Germany was estimated at 18,446,000 pounds, or 16.5 per cent above that of 1927 and the largest crop since 1915. The area devoted to hops in 1928 was 38,048 acres, which is still below the pre-war average.

According to estimates published by the Department of Agriculture, the United States produced 32,742,000 pounds on 26,100 acres as compared with 30,658,000 pounds on 24,600 acres in 1927. The average yields per acre for the two years were 1254 and 1246 pounds respectively. As for several years previously, yields were reported only from the Pacific Coast States. Oregon produced 17,000,000 pounds on 17,000 acres, California 9,480,000 pounds on 6000 acres and Washington 6,262,000 pounds on 3100 acres. The average yields per acre for the three States were 1000, 1580, and 2020 pounds, respectively. The average farm price on Dec. 1, 1928, in these States was 19.3 cents per pound, or 3.6 cents below the corresponding price of the year before.

For the fiscal year ended June 30, 1928, the United States exported about 11,800,000 pounds of hops representing a value of approximately \$2,875,000. The imports for the same period reached about 750,000 pounds. The United Kingdom continued to take a large proportion of the hops exported from the United States. For four years the quantities so imported ranged from 4,162,000 pounds to 8,417,000 pounds while the imports from all other countries ranged from 737,000 to 4,901,000 pounds. The Continent of Europe produces largely a mild type of hops; but the British market favors the strong-flavored type produced in the United States and Canada.

The Canadian acreage for 1928 was reported at 1369 acres, an increase of 332 acres over 1927, and this increase in area is probably connected with the growth of English imports from British possessions. The importation of hops into Great Britain is determined largely by the stocks on hand. During recent years heavy accumulations of stocks have reduced the annual importation to less than 5,000,000 pounds while in years when stocks on hand were limited the importations rose to more than 10,000,000 pounds even after the increase in duty on imports in effect since 1925.

HOPWOOD, AVERY. American playwright, died at Juan-les-Pins, France, July 1. He was born at Cleveland, Ohio, May 28, 1884, and was graduated from the University of Michigan in 1905. He went to New York as special correspondent for the *Cleveland Leader* in 1905, and almost immediately sold his first play, *Clothes*, written in collaboration with Channing Pollock. It was produced in 1906. Thereafter, until within two or three years before his death, Hopwood was a frequent contributor of plays to the American stage and was one of the most prolific of playwrights. Many of his plays, however, were written in collaboration with others. Virtually every one of his plays was a popular success, but he was criticized for introducing broad situations in his attempt to secure a general popularity as a maker of "bedroom farces." In the fall of 1920 four of Hopwood's plays held the boards at one time on Broadway. He wrote: *Clothes*; *This Woman and This Man*; *Judy Forgot*; *Nobody's Widow* (produced in London as *Roxana*); *Fair and Warmer*; *Sadie Love*; *Our Little Wife*; *Double Exposure*; *The Gold Diggers* (with Mary Roberts Rinehart); *Seven Days*; *The Bat*; and *Spanish Love*; *The Girl in the Limousine*; *Ladies' Night*; *The Demi-Virgin*; *Why Men Leave Home*; *Little Miss Bluebeard*; *The Alarm Clock* (with David Gray); *The Best People*; *Naughty Cinder-*

ella; *Getting Gertie's Garter*; and *A Thief in the Night*.

HORTICULTURE. Large production attaining with certain crops a stage of overproduction, with associated low prices and resulting losses to the growers, marked the 1928 horticultural year in the United States. The Bureau of Agricultural Economics, of the United States Department of Agriculture, in its *Crop Report* of December, stated that approximately 3,917,000 bushels of peaches in California and 1,000,000 bushels in Georgia were not harvested or not utilized. Approximately 153,000 tons of California grapes were not harvested in 1928. The largest white potato crop on record brought very low prices to the growers. Good growing weather such as prevailed quite generally throughout the United States and Canada in 1928, was thus not without its drawbacks. A few crops, notably the orange and the grapefruit, enjoyed unprecedented prosperity due to low yields and effective marketing organizations. An unusual demand for apples in the markets of the Old World contributed to stabilizing apple prices despite unusual production in the Pacific States and the Shenandoah Valley region.

The threatened embargo in European markets of American apples, because of excessive arsenical spray residues, was successfully offset by the development of effective methods of removal, thus relieving an embarrassing situation. Extensive plantings of grapefruit in southern California, Arizona, and in the Rio Grande Valley of Texas were viewed with anxiety by careful students of the situation. A citrus census of the lower Rio Grande Valley of Texas, taken in the summer, showed a 50 per cent increase in grapefruit plantings. Whether adequate markets may be found for this potential increased production was considered problematical.

THE WORLD SITUATION. The 1928 apple and pear crops of Continental Europe were considerably below normal size, a situation very favorable to North American fruit which continued in strong demand throughout the fall months. Droughts throughout central and southern Europe were important causes of lower yields. That Russia was becoming an important factor in apple production was indicated in prospective shipments of 100,000 boxes to the Hamburg market. The Canadian apple crop was larger than in 1927, the greatest increase occurring in British Columbia. Quality, as represented by high color, was, however, below average. The Australian fruit crop harvested in the spring of 1928 was unusually large, reaching record proportions in most sections of the island continent. Apples were estimated at 8,500,000 bushels as compared with an average production of 6,500,000 bushels. Australian oranges in trial shipments were successfully transported to England. A total of approximately 46,000 acres of oranges in Australia indicated a need of new markets.

Ceylon, with considerable plantings, was a new entry in the grapefruit industry. The prune and olive crops of southern Europe were below average as a result of the unfavorable weather conditions. Decided improvement in English apple-growing practices was manifested in the fine exhibits of home-grown fruit at the Imperial Fruit Show held at Manchester, England, Oct. 19-27, 1928. For the first time, English fruit was exhibited in boxes. Grape production in the Northern Hemisphere, as reported by the *Inter-*

national Crop Report and Agricultural Statistics, approximated that of 1927, but was below the 1922-26 average. Japan exported large quantities of oranges to the Canadian markets for the holiday trade.

FOREIGN TRADE. Figures presented by the U. S. Department of Commerce for 1928, (Bureau of Foreign and Domestic Commerce Part 1, December 1928, *Monthly Summary of Foreign Commerce of the United States*) showed substantial increases in the value of both horticultural exports and imports, indicating an active trade situation. The total value of exported horticultural products for the year 1928 was \$152,829,490 as compared with \$144,012,880 for 1927. The total value of imported horticultural products for 1928 was \$136,854,602, as compared with \$129,550,970 for 1927.

As usual, tropical fruits and nuts constituted a conspicuous part of the imports. Bananas, with a total value of over \$35,000,000, were the largest single item and showed a slight increase in value over the 1927 period. Other import items to show a rise in value include lemons, olives, dates, figs, filberts, peanuts, and dried beans. Horticultural imports showing reduced value in the 1928 period include almonds, walnuts, dried peas, white potatoes, fresh tomatoes, and tomato paste. An analysis of export items shows quite consistent gains in value. Boxed apples, raisins, dried peaches, canned peaches and pineapples, prunes, peanuts, and dried peas were among the advancing products, while barreled apples, dried beans, grapefruit, and oranges were among the exports declining in value.

PRODUCTION IN 1928. With few exceptions, the yields of important horticultural crops in the United States were larger in 1928 than in 1927, as based on figures released by the United States Department of Agriculture on Dec. 14, 1928. In some cases higher production resulted in lower total values at the farm, this being the case with the white potato, grape, the commercial apple crop, and the strawberry. However, as a rule, satisfactory prices prevailed. In California the grape and the peach crops were so large that considerable portions of each were not harvested.

Data on individual fruits showed a total yield of 184,920,000 bushels of apples in 1928, as compared with 123,693,000 bushels in 1927. The peach crop of 1928 was 68,374,000 bushels as compared with 45,463,000 bushels in 1927. The 1928 pear crop totaled 23,783,000 bushels as compared with 18,373,000 bushels in 1927. The year's production of grapes, 2,636,076 tons—the largest on record—was not conspicuously larger than that of 1927, 2,605,238 tons. The orange crop, estimated at 43,000,000 boxes for 1928, was considerably larger than the 31,200,000 box crop of 1927. Grapefruit, estimated at 9,736,000 boxes for 1928, was not greatly different from the 1927 crop of 8,586,000 boxes. Florida, by far the leading grapefruit State, contributed 8,000,000 boxes to the 1928 crop. California lemons totaled 7,100,000 boxes in 1928, as compared with 6,000,000 boxes in 1927. Cranberries gained 7 per cent, from 496,000 barrels in 1927, to 531,000 barrels in 1928. Strawberries, with the immense production of 324,999,000 quarts in 1928, were only slightly above the 320,499,000 quart crop of 1927. The pecan crop, estimated at 42,000,000 pounds, was almost

twice as large as that of 1927, but less than the bumper crop of 1926. The almond crop was 14 per cent larger, and the walnut crop 49 per cent smaller than the crops of 1927.

That most fluctuating of the vegetables, the white potato, yielded 462,943,000 bushels in 1928, an increase of 60,000,000 bushels above the 1927 crop. Sweet potatoes, on the other hand, declined from 94,112,000 bushels in 1927, to 77,661,000 bushels in 1928. Cabbage declined from 1,202,800 tons in 1927, to 976,900 tons in 1928. Onions fell off from 23,525,000 bushels in 1927 to 19,025,000 bushels. The tomato crop was estimated at 1,405,400 tons in 1928, a decline from 1,641,300 tons in 1927. Celery also dropped off from 7,585,000 crates in 1927, to 7,173,000 crates in 1928. Other less important crops to show reduced yields in 1928 were carrots, lettuce, and spinach. Cantaloupes, with 15,521,000 crates in 1928, and 15,014,000 crates in 1927, did not greatly change. Cauliflower production in 1928 was 4,987,000 crates, as compared with 4,096,000 in 1927. Sweet corn for canning increased from 399,000 tons in 1927, to 536,000 tons in 1928. With 8,256,000 bushels in 1927, and 8,535,000 bushels in 1928, cucumbers showed but little change. Eggplant increased from 782,000 bushels in 1927, to 896,000 bushels in 1928. Peppers gained from 3,502,000 bushels in 1927, to 4,418,000 bushels in 1928. Watermelon production was recorded as 61,773,000 in 1928, as compared with 57,682,000 in 1927.

RESEARCH ACTIVITIES. Because of the intensity of culture practiced and the many serious insect and fungous pests, no branch of agriculture is more dependent on scientific research than is horticulture. Continued evidence of satisfactory support was forthcoming in 1928.

The Oregon Agricultural Experiment Station (*Oregon Sta. Bul.* 234, 1928 pp. 38), and the Washington Agricultural Experiment Station (*Washington Sta. Bul.* 226, 1928, pp. 100), reported on successful investigations in the removal of arsenical residues from apples and pears by washing with dilute hydrochloric acid. With this aid commercial growers were enabled to meet the international tolerance of less than one one-hundredth of a grain of arsenious oxide to one pound of fruit. The success of the experiment stations in the arsenical residue problem was an outstanding example of the effectiveness of combined effort, the United States Department of Agriculture, the respective agricultural experiment stations, and the commercial interests working together wholeheartedly.

The fact that severe pruning reduces vegetative growth and fruiting capacity has been conclusively demonstrated for the apple, pear, and other tree fruits. During the year the Michigan Agricultural Experiment Station (*Michigan Sta. Spec. Bul.* 162, 1927) and the Ohio Agricultural Experiment Station (*Ohio Sta. Bimo. Bul.* 13, 1928, No. 3, pp. 113-118), reported that red raspberries suffered material yield losses when heavily pruned.

The Michigan Agricultural Experiment Station (*Michigan Sta. Tech. Bul.* 89, 1928) found that the empirical practice of hardening tomato plants by exposure to cold prior to field planting, was not advantageous and was in fact harmful since the hardened portion failed to bear normal fruits. Apparently, hardening caused an excessive tissue differentiation and maturation which resulted in a permanent check.

Progress in the solution of fruit sterility problems was recorded during the year. For example, the Ohio Agricultural Experiment Station (*Ohio Sta. Bul.* 422, 1928), in studying cherry pollination, found abnormal pollen development in every variety studied. Such conditions were especially prevalent in the so-called Duke cherries, frequent in the sours, and occasional in the sweet varieties; and largely accounted for the inability of certain varieties to set fruit when self-pollinated.

PLANT QUARANTINES. As a measure to increase the effectiveness of the plant quarantine service, a new unit, known as the Plant Quarantine and Control Administration, was established in the United States Department of Agriculture, on July 1, 1928. By virtue of an amendment to the Quarantine Act, which became effective May 1, 1928, Federal authorities were given full right to search persons and vehicles for plants and plant products being transported between States or into the United States in violation of regulations. Rigorous inspection was maintained at the Mexican border and at all ports of entry, to prevent the introduction of pests. The campaign to clear up the Parlatoria date scale in the Southwest was vigorously pursued. A general survey showed this insect to be widely distributed and difficult to eradicate. On the other hand, attempts to control the Mexican fruit worm in the lower Rio Grande Valley of Texas were very successful, not a single infested fruit being found in the 1927-28 citrus crop. Mexican officials cooperated by conducting a similar clean-up campaign on their side of the river.

THE SEPTEMBER HURRICANE. Porto Rico, the Bahamas, the Virgin Islands, and other West Indian islands suffered terrific damage from the September hurricane which finally spent its force in Florida and along the Atlantic coast. According to the report of the Central Survey Committee, appointed by Governor Towner of Porto Rico, the crop losses in Porto Rico totaled over \$46,000,000 and this did not include necessary buildings such as packing houses, etc. The coffee industry alone suffered over \$18,000,000 loss with estimates that three to five years will be required to restore damaged plantations. The losses in the banana, citrus, and coconut-growing industries were estimated at \$5,656,160, \$3,255,811, and \$1,650,829 respectively. The value of the gardens destroyed was over \$2,000,000. Florida suffered moderately in comparison to Porto Rico. The *New York Packer* estimated that 2,000,000 boxes of Florida citrus fruit were destroyed. The California citrus growers responded to the situation by donating the proceeds from the sale of five cars of citrus fruit to Florida relief, a highly commendatory act in view of the intense rivalry between the two States. Severe damage to the winter tomato crop in the Bahamas was considered less serious in view of the possibility of rapid replanting.

HORTICULTURAL PERSONNEL. The year 1928 witnessed several noteworthy changes in the ranks of professional horticulturists. Dr. U. P. Hedrick, of the New York (Geneva) Experiment Station; Dr. S. W. Fletcher, of the Pennsylvania Experiment Station; and Professor V. R. Gardner, of the Michigan Experiment Station, all known because of their outstanding leadership in American horticulture, were advanced to directorships in their respective institutions. Dr. Eugene C. Auchter, horticultur-

ist of the University of Maryland, was selected as head of the newly organized office of Horticultural Crops and Diseases in the United States Department of Agriculture. The services of Dr. J. T. Rosa, Jr., one of the most promising of the younger scientific horticulturists of the nation, were lost to the University of California through his untimely death on August 8, at the age of 33 years.

Col. William Boyce Thompson, founder of the Boyce Thompson Institute for Plant Research at Yonkers, N. Y., and of the Southwestern Arboretum in Arizona, was the recipient of the highly coveted George Robert White Medal of Honor, awarded by the Massachusetts Horticultural Society for eminent service in horticulture.

BIBLIOGRAPHY. A large number of books of general horticultural interest were published during the year. Among those of note may be recorded: L. H. Bailey, *The Garden Lover* (New York, 1928); O. W. Barrett, *The Tropical Crops* (New York, 1928); W. H. Chandler, *North American Orchards* (Philadelphia, 1928); E. H. M. Cox and G. C. Taylor, *Primulas for Garden and Greenhouse* (London, 1928); A. C. Hottes, *The Book of Shrubs* (New York, 1928); H. A. Jones and J. T. Rosa, *Truck Crop Plants* (New York and London, 1928); J. W. Lloyd, *Muskmelon Production* (New York and London, 1928); F. F. Rockwell, *Iris* (New York, 1928); F. C. Sears, *Fruit Growing Projects* (New York, 1928); C. L. Thayer, *Spring Flowering Bulbs* (New York, 1928); H. H. Thomas, *Herbaceous Border Flowers* (London and Toronto, 1928); H. B. Tukey, *The Pear and its Culture* (New York, 1928); R. A. Van Meter, *Bush Fruit Production* (New York, 1928); E. H. Wilson, *More Aristocrats of the Garden* (Boston, 1928).

HOWARD, KEBLE. See BELL, JOHN KEBLE.

HOWARD, how'ard, RALPH HILLS. American civil engineer, died at Petoskey, Mich., September 20. He was born at Zanesville, Ohio, Aug. 15, 1870, and after attending the city high school, he studied engineering under Edmund Turner, a civil engineer. His first employment was as a draftsman in 1889 on the Cincinnati & Muskingum Valley R. R., later a part of the Pennsylvania R. R. After service in the engineering department in 1901 he went to Pittsburgh, Pa., to join the engineering organization of the Pittsburgh, Cincinnati, Chicago & St. Louis R. R. A year later he was appointed assistant engineer on the St. Louis division of the Vandalia R. R., which subsequently was merged with the Pennsylvania R. R. Mr. Howard was made principal assistant engineer of the construction work of the Chicago & Eastern Illinois R. R., in April, 1905, and six months later he was promoted to be engineer of maintenance of way, holding that position for five years. He became, in January, 1911, chief engineer of the Great Southern Lumber Company, and engineer of the maintenance of way of the New Orleans, Great Northern R. R., being also in charge of construction, and in June of the same year he became general manager of the railroad. In May, 1915, he was placed in charge of the Wabash Railway Company, with headquarters at St. Louis, and Oct. 1, 1923, he was made chief engineer of the road.

HOWARD UNIVERSITY. A non-sectarian institution for the higher education of men and women at Washington, D. C.; incorporated by

Act of Congress, Mar. 2, 1867, "for the education of youth in liberal arts and sciences," open to students without regard to race, but principally for the education of Negroes. The registration in the several colleges and schools of the University for the summer school and autumn quarters of 1928 totaled 2384, and was distributed as follows: College of liberal arts, 748; college of education, 483; school of applied science, 70; school of music, 50; school of religion, 31; school of law, 88; school of medicine, 357; academic evening classes, 155; summer session, 404. The faculty in the autumn totaled 183 members, divided as follows: Academic, 64; medical, dental, and pharmaceutical, 84; law, 12; religion, 7; music, 6; applied science, 10. The total endowment amounted to \$843,018, and endowment income for 1927-28 to \$41,351. The library contained 46,389 volumes. The United States Government appropriated \$240,000 for maintenance for 1928-29; and \$150,000 toward the construction of a chemistry building. The Secretary of the Interior was authorized to enter into a contract not to exceed \$390,000 for this building, the remaining \$240,000 to be appropriated by the second session of the Seventieth Congress, which convened Dec. 3, 1928. An additional appropriation of \$40,000 was authorized by the Second Deficiency Act (1928), for the new dormitory building for women, bringing the total cost up to \$190,000. Miscellaneous donations totaled \$7989. Administrative officers: Mordecai W. Johnson, S.T.M., D.D., president; Emmett J. Scott, A.M., LL.D., secretary-treasurer.

HUDSON RIVER BRIDGE. See BRIDGES.

HUGHES, CHARLES EVANS. See PAN-AMERICAN CONFERENCE; WORLD COURT.

HUGHITT, MARVIN. American railway official, died at Lake Forest, Ill., January 6. He was born in Genoa township, Cayuga County, N. Y., Aug. 9, 1837. Mr. Hughitt was connected with railroading in the Western and Northwestern sections of the United States for three-quarters of a century, and at the time of his death was still in active service as chairman of the finance committee of the Chicago & Northwestern Railway Company. He was one of the last of the American railway pioneers, in age and length of service second only to Chauncey M. Depew, who died Apr. 5, 1928. Mr. Hughitt began his railroad service as a telegrapher for the Chicago & Alton and the Illinois Central. He was divisional trainmaster of the latter road during the Civil War, and earned promotion by skillful handling of trains to move troops for the Federal Government. Twice within a week he remained continuously at the dispatcher's key for thirty-six hours. He became division superintendent and general superintendent of the road, then became in turn assistant general manager of the Chicago, Milwaukee & St. Paul and general manager of the Pullman Palace Car Company. In 1872 began his more than a half-century of connection with the Chicago & Northwestern, successively as general superintendent (1872), general manager (1876), vice president and general manager (1880), president (1887), chairman of the board (1910), and chairman of the finance committee (1918). He was also a Director of the New York Central system and the Merchants' Trust Company of Chicago.

HULDINSKY COLLECTION. See ART SALES.

HULL, ARTHUR EAGLEFIELD. A distinguished

English organist and musicologist, died in London, November 4. He was born at Market Harborough, Mar. 10, 1876, and studied in London under Sir Henry Wood, Dr. Pearce, and Tobias Mathay. In 1900 he founded the Huddersfield Chamber Music Society and in 1908 the Huddersfield College of Music, of which he was principal until his death. From 1904 until his death he also was organist and choirmaster of Huddersfield Parish Church. In 1912 he added to his already numerous responsibilities those of editor of the *Monthly Musical Record*. Chiefly through his efforts the British Musical Society was established in 1918. He wrote *Organ Playing, its Technique and Expression* (1911); *Modern Harmony, its Explanation and Application* (1914); *A Short History of Music* (1916); *Modern Musical Styles* (1916); *Design or Construction in Music* (1917); *A Dictionary of Modern Music and Musicians* (1924); *Music: Classical, Romantic and Modern* (1927). He edited the complete organ works of Bach and Mendelssohn, and translated into English Rolland's *Handel and Beethoven*.

HUMPHREYS, MILTON WYLIE. American educator, died at Charlottesville, Va., November 20. He was born in Greenbrier County, Va. (now W. Va.), Sept. 15, 1844, and served in the Confederate Army, 1862-65. He was graduated from Washington and Lee University in 1869, being at the same time associate professor of Latin and Greek at that university, and adjunct professor of ancient languages, 1870-75. While on leave of absence, 1872-74, he studied at Berlin and Leipzig, receiving the Ph.D. degree from the latter university in 1874. When Vanderbilt University was founded in 1875, Dr. Humphreys was appointed professor of Greek. Leaving this post in 1883, he became professor of Latin and Greek at the newly established University of Texas. He joined the faculty of the University of Virginia in 1887, teaching Greek until his retirement, Sept. 15, 1912. He was vice president of the American Philological Association, 1880-82, and president, 1882-83. Besides being American editor of the *Revue des Revues*, 1878-88, he published interesting editions of *The Clouds* of Aristophanes (1885), the *Antigone* of Sophocles (1891), and the oration *On the Crown* of Demosthenes (1913). Dr. Humphreys was an accomplished mathematician, as well as a classical scholar. His interpretive skill, and his mastery of ancient metres were considered extraordinary. His learning and understanding have been particularly noted in his introduction to the *Antigone*, and in several papers printed in the *Transactions of the American Philological Association* (1876, 1878, 1879), including: "On Certain Influences of Accent in Latin Iambic Trimeters"; "On Elision, especially in Greek"; "The Influence of Accent in Latin Dactylic Hexameters"; and "On the Nature of Cæsura."

HUNGARY. A state of Central Europe; formerly a kingdom constituting with Austria the Dual Monarchy of Austria-Hungary. Capital, Budapest.

AREA AND POPULATION. Before the World War Hungary had an area of 125,609 square miles; area at the time of the census of 1920, 35,875 square miles. Population before the War, according to the census of Dec. 21, 1910, 20,886,487; population at the census of Dec. 31, 1920, 7,980,143; estimated Dec. 31, 1926, 8,457,852. After the

census of 1920 was taken, an additional area of 36 square miles, with a population of 7000 was awarded to Hungary. Budapest, the capital, had a population at the 1920 census of 928,996. Other cities with a population of more than 100,000 at the same census were: Szeged, 119,109; and Debrecen, 103,186. The movement of population in 1926 was: Births, 229,484, deaths, 139,905;

permanent meadow and pasture, 796,000 acres of shrubs and bushes, and 2,700,000 acres of woods and forests. The total value of field crops in 1927 was \$363,358,000, including wheat, \$105,000,000; corn, \$62,997,000; rye, \$28,292,000; and potatoes, \$24,947,000. There were 186,000 metric tons of beet sugar produced in 1927-28 according to the latest estimates. In 1927 there were

INDUSTRIAL PRODUCTION

Product	Quantity (thousands of metric tons)		Product	Value (thousands of dollars)	
	1926	1927		1925	1926
Coal	827	784	Iron, metal, and machinery	61,688	72,454
Lignite	5,822	6,243	Food products and tobacco	159,091	161,196
Iron ore	182	194	Stone and glass	12,763	17,551
Pig iron	189	300	Textiles	43,677	46,109
Steel (ingots and castings)	328	472	Woodworking and bone	9,158	8,768
Artificial silk	441*	...	Leather and shoes	12,400	11,387
			Chemicals	20,658	27,105
			Paper, printing, film, and duplicating	8,645	10,864

* Thousands of pounds.

marriages, 76,849. The population of 1920 was distributed according to religion as follows: Roman Catholics, 5,096,729, or 63.9 per cent; Helvetican Evangelicals, 1,670,144, or 21 per cent; Augsburg Evangelicals, 497,012, or 6.2 per cent; and smaller numbers of Greek Catholics, Greek Orientals, and Unitarians. The Jews numbered 473,310, or 5.9 per cent.

EDUCATION. In the school year 1925-26 there were 6438 elementary schools with 656,349 pupils and 16,705 teachers. There were also 4528 general and 1092 agricultural continuation schools. There were 19 training colleges for elementary school teachers for men and 24 for women with 590 teachers and 4901 students. The number of primary schools for boys was 163, for girls 212, with 87,161 pupils and 3392 teachers. For secondary education there were 28 gymnasia, 70 realgymnasia, 22 modern schools, and 32 girls' secondary schools. The total number of teachers in these secondary schools was 2959 and the number of students 61,757. Hungary has four universities and since 1919 an independent faculty of economics at Budapest all maintained by the state. In 1926-27 the University of Budapest had 373 professors and 5393 students; the University of Szeged, 80 professors and 1135 students; the University of Pecs, 68 professors and 1005 students; and the University of Debrecen, 57 professors and 952 students. There are also many theological schools and a number of technical institutions for higher learning, such as technical high schools, etc.

CROPS: AREA AND PRODUCTION

Crop	Area ^a		Pro- duction ^c
	1927	1927	
Wheat	4,049	76,933	
Rye	1,653	22,569	
Barley	1,011	23,319

All others	240,260	256,855
Total	869,729	800,473

COMMERCE. Hungary's foreign trade in 1927 was marked by an increase in the excess of imports over exports to more than four times the 1926 figure. While imports increased 21 per cent, to 1,146,797,000 pengos, exports declined 8 per cent, to 800,473,000 pengos. A great part of the increase in imports was attributed to the extensive building operations during the first three-quarters of the year. An even more important factor, however, was the generally in-

creased consumption of manufactured goods of all kinds, presumably because of the greater purchasing power of the country as compared with the previous year. The export trade failed to maintain the level of 1926. The proportion of raw material exported including unmanufactured foodstuffs to total exports declined from 70 per cent in 1926 to 64 per cent in 1927, with a corresponding increase in importance on the part of semi-manufactures and finished manufactures. Among the causes of this export decline were a smaller agricultural excess, the cessation in June of coal deliveries to Jugo-Slavia on reparations' account, and the high protection policy and certain import regulations of neighboring countries.

FINANCE. The Government budget for the fiscal year ended June 30, 1927, despite some tax reductions, closed with a considerable surplus which was used for capital investment. The accounts for State enterprises, although exactly balanced, actually closed with a surplus which was reinvested for the purpose of increasing their productivity. Total revenues for the fiscal year July 1, 1927, to June 30, 1928, were estimated at 1,192,421,960 pengos, and total expenditures at 1,192,255,320. For the 1928-29 year the revenues were estimated at 1,360,261,000 pengos and the expenditures at 1,357,804,000 pengos. Hungarian foreign long-term loans in 1927 totaled approximately \$48,000,000, of which more than \$34,000,000 were placed in the United States. The greater part of these loans went to public bodies, banks, and agricultural institutions. The total debt on Dec. 31, 1926, according to privately published sources amounted to \$426,605,000, of which \$235,325,000 represented pre-war debt.

COMMUNICATIONS. Of the 4382 miles of railroad line operated by the Government in 1924-25, 1881 miles were government owned. Only minor lines are privately operated.

STATISTICS OF GOVERNMENT-OPERATED RAILWAYS, YEAR ENDED JUNE 30

	1926
Length of line	4,418 miles..
Locomotives	1,935 number..
Passenger cars	2,751 do.....
Freight cars	31,834 do.....
Passengers carried	54,227 thousands..
Passenger miles	1,247 millions..
Freight carried	21,483 1000 metric tons..
Ton miles	1,525 millions..
Train miles	13,628 thousands..

The new commercial free port of Budapest, situated on Csepel Island, about 2½ miles below the city, was opened on Oct. 22, 1928. It comprises an area of about 1500 acres and has cost about \$4,500,000. It consists of two parts, the free port and the petroleum port. The free port has a length of 1000 meters and is about 150 meters wide. Barges can tie up along the wharves for a distance of about 2200 meters (7217.83 feet), and there is a depth of water of 2.6 meters (8.53 feet) above the low-water mark in this part of the Danube. The big grain elevator is here, comprising 14 floors, with a capacity for 45,000 tons of grain. The petroleum port is situated south of the free port, and comprises a basin 360 meters (1181.1 feet) long by 120 meters (393.7 feet) wide. This part of the port was finished four years ago, and during 1928 it handled about 70,000 tons of oil.

GOVERNMENT. Technically, Hungary is a constitutional monarchy with the throne vacant. When the Horthy rule came into power it was decided to keep the old constitution and let the question of who was to be monarch wait until the people were freed from external pressure. In the meantime Admiral Nicholas Horthy acted as regent. The ministry originally formed on June 27, 1922, was reorganized on Oct. 15, 1926, as follows: Prime Minister, Count Stephen Bethlen; Foreign Affairs, Dr. Louis Walko; Interior Dr. Béla Scitovsky; Finance, Dr. John Bud; Agriculture, John Mayer; Commerce, Maximilian Hermann; Public Instruction, Dr. Count Kuno Klebelsberg; Justice, Dr. Paul Pesthy; National Defense, Count Charles Csáky; Social Welfare, Dr. Joseph Vass.

HISTORY

A tempest in a teapot was caused in the early days of the year by the discovery of the shipment of several carloads of machine guns from Italy to Hungary. They were discovered at the station of St. Gothard in Austria and a storm was immediately aroused because of this evident violation of the terms of the treaty of Trianon. The Little Entente, fearing a rapprochement between Italy and Hungary, along the lines of Italy's economic penetration of the Balkans, demanded an investigation by the League of Nations. The matter, which was comparatively insignificant at the beginning loomed larger as time went on because Italy refused to sanction an investigation by the League and Hungary merely shrugged her shoulders and passed the matter over lightly. Hungary destroyed the troublesome guns, which the League Council desired as evidence, and when questioned concerning her action expressed surprise that the League should be interested in such an affair.

The demand for an investigation continued, however, and when France, Great Britain, and Germany came out strongly for such a move, Italy reluctantly consented, expressing at the same time her admiration and friendship for Hungary. Hungary reciprocated this admiration and friendship through the vehicle of the press and public demonstrations. The Italian press took the attitude that the Little Entente desired the aid of Great Britain and France, especially, to crush Hungary even further than the Treaty of Trianon had done.

As was to be expected from such an investigation, nothing really fruitful came of it. France, the chief backer of the Little Entente's demand for an investigation, did not care to push Italy too far, and although the entire world knew the facts in the case, the Council of the League pretended in its decision given out on June 7, that the evidence in the case had been destroyed and the actual destination of the guns could not be learned. It might be said in passing that Hungary stoutly maintained that the weapons were on their way to Poland and were merely in transit when discovered. The League saved some of its dignity by telling Hungary and, parenthetically, all other countries, not to repeat the offense and asserted its right to investigate such matters. Probably Mussolini smiled when he read the decision and probably, again, Count Bethlen, the Hungarian Premier, felt that his mission in life, the revision of the

Treaty of Trianon was much nearer consummation with such a strong ally as Mussolini on his side.

The other outstanding event in Hungarian history was the recurrence of the so-called "king question." As noted above under *Government*, Hungary was officially a kingdom with the throne vacant. On one or two occasions during the year, especially in answer to Socialist queries, Premier Bethlen reiterated this status of the Hungarian Government. It was reported at one time in the fall that a referendum would be held on the question of the election of a monarch. The matter was brought to the fore by the coming of age of Archduke Otto, the son of the late Emperor Charles. His followers were of course in favor of his accession to the throne, but Bethlen let it be known that he would oppose such action to the bitter end. This gave rise to the belief that the Hungarian Government favored the crowning of Archduke Albert, the son of the Hapsburg Archduke Frederick. Although there was considerable discussion, nothing was done concerning the selection of a king down to the close of the year. Count Bethlen fell back on his old excuse, i. e., that the time was not ripe for such action as yet. Needless to say, the Little Entente was bitterly opposed to any return of the Hapsburg, no matter what branch of the family. Such action was specifically condemned by the Treaty of Trianon, and it was stated in several quarters that, despite Mussolini's friendship for Hungary, he was not prepared to receive the return of the Hapsburgs with open arms. In the last week of the year several Hungarian Fascist leaders were arrested and charged with treason.

HYDROPHOBIA. Dr. W. Schoening of the U. S. Bureau of Animal Industry has stated that wholesale vaccination of dogs against rabies has not proved 100 per cent effective. Several methods have been tested with the same result. This has become known through reports from State and city veterinarians of localities where vaccination has been on trial. Many dogs which have escaped the disease in infested regions owe their immunity to segregation and cannot be used for statistical purposes. But where compulsory vaccination has been in effect the number of cases of rabies has shown a decrease although it is difficult to decide as to what extent this is due to vaccination alone and how much to quarantining and destroying stray and suspected animals. Some figures appear to show that vaccination alone cannot be proved to have affected the number of cases of canine rabies.

ICELAND. An island state united with Denmark in the person of the king by the act of union of Nov. 30, 1918. Area, variously esti-

mated at from 39,707 to 40,456 square miles; population according to the census of 1920, 94,690; estimated at the end of 1927, 100,000. The capital, Reykjavik, had a population of 23,000 in 1927. All the other towns had populations of less than 3000. The number of foreign-born inhabitants is very small and consists chiefly of Danes and Norwegians. The movement of population in 1926 was: Births, 2659; deaths, 1134; marriages, 623. Although religious freedom is complete, and to be a non-conformist entails no civil disability, there were only 463 dissenters from the endowed national church, the Evangelical Lutheran, at the census of 1920. Primary instruction is compulsory between the ages of 10 and 14, children up to the age of 10 being privately educated as a rule. According to the latest available statistics, there were 209 elementary schools, with 318 teachers and 6485 pupils; several continuation schools; and a university at Reykjavik. Only about one-fourth of 1 per cent of the area of the island is under cultivation, producing chiefly, hay, potatoes, and turnips. The crops in 1926 were: Hay, 3,548,000 cwt.; potatoes 66,000 cwt.; and turnips, 23,000 cwt. Livestock figures in the same year were: Horses, 52,800; cattle, 27,900; sheep, 590,000; and goats, 2800. The fisheries were valued at 46,791,000 crowns in 1925, of which the value of codfish was 43,378,000 crowns and herring, 3,413,000 crowns. According to the *Iceland Year Book* for 1928, the total exports in 1925 were valued at 78,640,218 crowns and the imports at 70,190,913. crowns.

Iceland's total exports during 1927 amounted to 57,500,000 crowns, as compared with 48,000,000 crowns in 1926, according to official statistics. Imports totaled 48,000,000 crowns as against 50,500,000 crowns in 1926. While the foreign trade of 1926 revealed an import surplus of 2,500,000 crowns, 1927 showed an export surplus of 9,500,000 crowns. Fish products represented 50,000,000 crowns, or about 87 per cent of the total exports in 1927, while 7,000,000 crowns, or 12½ per cent, covered agricultural products. Government finances of necessity have always been characterized by conservatism. During the late years of rapid economic development and disturbed conditions, budgetary expenditures in Iceland, as elsewhere, had risen appreciably. In the proposed budget for 1928, revenues were estimated at 10,452,000 crowns and expenditures at 10,454,000 crowns. The national debt of Iceland, after remaining at a very low figure until 1915, during the following years of war emergency rose very sharply, reaching in 1917 a record figure of nearly 20,000,000 crowns, or roughly 210 crowns per capita. Since 1917 a retrenchment had taken place and, as the result of vigorous efforts by the Government, especially during 1926 and 1927, the debt was reduced to 10,800,000 crowns. The merchant marine of Iceland in 1927 consisted of 316 vessels of 29,818 gross tons.

Executive power is vested in the King of Denmark who acts through a responsible ministry; and legislative power in the King and Althing or Parliament, which consists of 42 members, of whom six are elected for eight years, by proportional representation for the whole country, and 36 for four years by universal suffrage. The Althing is divided into two houses, of which the upper has 14 members and the lower 28. The right to vote is possessed by both men and women over the age of 25. King in 1928, Christian X; Presi-

dent of the Council and Minister of Trade and Communications, Tryggvi Thorhallsson; Justice and Ecclesiastical Affairs, Jonas Jonsson; Finance, Magnus J. Kristjansson. During the year there was considerable discussion throughout the island concerning the abandonment of the union with Denmark. All shades of opinion, including the Government, seemed to favor the proposition and hoped for its consummation before 1940.

IDAHO. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 431,866. The estimated population on July 1, 1928, was 546,000. The capital is Boise.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1927	1,148,000	2,766,000 *	\$30,123,000
	1928	1,115,000	3,313,000 *	28,433,000
Wheat	1927	1,160,000	28,792,000	25,913,000
	1928	1,171,000	32,374,000	31,570,000
Potatoes	1927	116,000	19,720,000	8,874,000
	1928	115,000	24,980,000	13,409,000
Oats	1927	137,000	6,439,000	3,091,000
	1928	143,000	6,721,000	3,860,000
Barley	1927	144,000	6,192,000	3,901,000
	1928	128,000	5,676,000	3,850,000
Dry beans	1927	32,000	1,476,000	5,314,000
	1928	72,000	1,707,000	4,265,000
Corn	1927	53,000	2,438,000	2,243,000
	1928	76,000	3,116,000	2,555,000

* tons.

MINERAL PRODUCTION. In all the metals of the gold, silver, copper, lead, and zinc group, the production in Idaho expanded considerably in 1927, as compared with 1926; but the lower prices obtained for the chief metal product, lead, and for silver, the second in importance, brought it about that the total value of production in 1927 in the five metals was lower than that obtained in 1926. This total was, for 1927, \$28,104,413; for 1926, \$30,969,551. Lead supplied about two-thirds of the total, in either case. The quantity of recoverable lead mined was, for 1927, 302,038,423 pounds; for 1926, 272,980,212. That of silver, 1927, 8,901,409 ounces; 1926, 7,556,444; of copper, 1927, 2,173,163 pounds; 1926, 1,337,442; of zinc, 1927, 53,556,345 pounds; 1926, 52,614,691. Gold production rallied moderately, to 15,315 fine ounces for 1927, from 13,669 for 1926. The values of the metals produced in 1926 were, respectively: Gold, \$282,569; silver, \$4,715,221; copper, \$187,242; lead, \$21,838,417; zinc, \$3,946,102. Save for stone, no other mineral was produced in considerable total. The entire mineral production of the State was, for 1926, \$31,752,821; for 1925, \$31,611,166.

The 1928 production of gold, silver, copper, lead, and zinc had an estimated value of \$27,231,000, and scored a gain over 1927. An electrolytic zinc plant was completed and put in operation at Kellogg. The gold production of the year was about \$410,000; that of silver 8,811,000 ounces, in value \$5,047,099; copper about 2,117,000 pounds, in value \$309,000; lead about 290,753,000 pounds, in value \$17,736,000; zinc recovered from ores and concentrates totaled about 60,369,000 pounds, in value \$3,622,000.

FINANCE. State expenditures in the year ended Sept. 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$5,135,756 (of which \$629,704 was aid to local education); for interest on debt, \$333,231; for perman-

ent improvements, \$3,163,260; total, \$8,632,247 (of which \$3,497,600 was for highways, \$846,705 being for maintenance and \$2,650,895 for construction). Revenue was \$8,160,495. Of this, property and special taxes furnished 28.9 per cent; departmental earnings and charges for officials' services, 5.6 per cent; sales of licenses and the tax on gasoline, 24.5 per cent. Property valuation was \$482,690,646; State taxation thereon, \$2,980,138. Net State funded debt on September 30, 1927, was \$4,783,106, chiefly highway debt.

TRANSPORTATION. The total number of miles of railroad line under operation in the State on Jan. 1, 1928, was 2898.72. There were built in 1928 20.6 miles of additional second track.

EDUCATION. Some initial work was done on the revision of the State course of elementary studies, and a modernized elementary course in language activities was introduced. The school-age population of the academic year 1927-1928 was put at 138,235. There were enrolled in the public schools in that year 120,846 pupils, of whom 97,073 were in the elementary schools and 23,773 in high schools. Expenditure for public school education totaled \$10,906,604.17.

CHARITIES AND CORRECTIONS. The central governmental agency of the State for the care of invalid and of defective dependents, as well as for the general care of public health, was in 1928 in the State Department of Public Welfare. It combined the duties of a board of health and of a board of institutional control. It supervised the Idaho State School and Colony, an institution for the feeble-minded; the Northern Idaho sanitarium for mental patients, at Orofino; the Idaho State Sanitarium, for the feeble-minded, at Nampa. A separate body, the State Prison Board, had charge of the State Prison, while an industrial training school was under the State Board of Education. Feeble-minded and epileptic inmates of the State School and Colony numbered 301 on Jan. 1, 1928.

POLITICAL AND OTHER EVENTS. Following the death of Frank R. Gooding, U. S. Senator from Idaho, John Thomas, a banker and cattleman, member of the National Republican Committee, was appointed to succeed him by Governor Baldridge, June 30. Complaint was made in March, at a meeting sponsored by the Wallace Board of Trade, of heavy State taxation, Chairman Robertson of the State chamber of commerce asserting that the property tax already formed an oppressive burden and could not be increased to defray cost of proposed old-age pensions, which had been brought forward in the previous session of the legislature. State finances, however, were in good condition, Governor Baldridge stating in a July 4 address that the State had investments of more than \$12,000,000, and that the total had increased in the previous eight years at the average rate of more than \$500,000 a year. Under a new certificate of title law applying to automobiles, the State Department in three months was reported to have issued more than 80,000 certificates to owners of motor vehicles. A spotted fever epidemic at Boise in April was combated with serum furnished by the Federal Health Service.

ELECTION. The State went solidly Republican in the election of November 6. The popular vote for President was: Hoover (Rep.), 97,322; Smith (Dem.), 52,926; Hoover's plurality, 44,396. Governor H. C. Baldridge was reelected; John Thomas, United States Senator by interim ap-

pointment was elected for the remainder of the term ending in 1933; the two members of the House of Representatives, both Republican, were reelected. Constitutional amendments to set terms of elective State officers at four years and to give the State power to limit water-power use of streams received favorable majorities in a referendum vote.

OFFICERS. Governor, H. C. Baldrige; Lieutenant-Governor, Oscar E. Hailey; Secretary of State, Fred E. Lukens; State Auditor, E. G. Gallet; State Treasurer, Byron Defenbach; Attorney-General, Frank L. Stephan; Superintendent of Public Instruction, Mabelle M. Lyman; Inspector of Mines, Stewart Campbell.

JUDICIARY. Supreme Court; William E. Lee, Alfred Budge, Raymond Givens, Herman H. Taylor, T. Bailey Lee.

IDAHO, UNIVERSITY OF. A coeducational, State institution of higher learning at Moscow, Idaho, founded in 1889, with the Southern Branch a junior college, at Pocatello, established by Act of the State legislature and opened in the autumn of 1927. The total enrollment at Moscow in the autumn of 1928 was 2109, of whom 797 were women and 1312 men, the distribution being as follows: College of letters and science, 687; college of agriculture, 128; college of engineering, 191; college of law, 23; school of mines, 49; school of forestry, 89; school of education, 354; school of business, 306; special courses, 42; and non-resident, 240. The total enrollment at the Southern branch was 531, of whom 225 were women and 306 men. The 1928 University summer session registration was 309, and the Southern Branch registration, 111. The faculty in 1928 numbered 153. The physical plant of the University was valued at \$2,807,000, and the valuation of the Southern Branch was placed at \$640,000, making a total of \$3,447,000. The productive funds of the University amounted to \$2,016,460, and the income for 1927-28 was approximately, \$1,250,000. The library contained 90,000 volumes. Building improvements during 1928 included a \$300,000 armory-gymnasium, in memory of Idaho's service men and women in the World War, and other wars, erected through the joint efforts of University alumni and the Idaho department of the American Legion. A science hall was erected on the campus of the Southern Branch, in addition to other building improvements valued at \$100,000. A forestry experiment station was established at the University, and two research men in forestry were added to the faculty; the position of assistant president was also created. The president, Frederick James Kelly, Ph.D., was inaugurated in June, 1928.

ILLINOIS. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 6,485,280. The estimated population on July 1, 1928, was 7,396,000. The capital is Springfield.

Chicago's population, late in 1926, was estimated on the basis of birth rates and school assessor's statistics as being 3,151,989, an increase of 16.7 per cent over the 1920 official census. The population of the metropolitan area of the city was estimated at 4,100,000. In 1928 the U. S. Bureau of the Census estimated the population of Chicago as of July 1, at 3,157,400.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1928	9,570,000	367,488,000	\$257,242,000
	1927	8,469,000	254,070,000	180,390,000
Hay	1928	3,105,000	4,091,000 ^a	52,649,000
	1927	3,590,000	5,334,000 ^a	60,658,000
Wheat	1928	1,568,000	24,200,000	27,143,000
	1927	2,509,000	34,844,000	41,696,000
Oats	1928	4,640,000	174,338,000	66,248,000
	1927	4,008,000	102,204,000	43,948,000
Barley	1928	680,000	20,060,000	10,632,000
	1927	453,000	13,364,000	9,756,000
Potatoes	1928	70,000	7,700,000	5,005,000
	1927	64,000	5,376,000	6,182,000

^a tons.

MINERAL PRODUCTION. The State, ranked seventh in order of yearly total mineral production in 1926, continued to derive this production chiefly from coal and iron. Coal production, however, fell considerably, to 46,848,224 net tons, for 1927, compared with 69,366,923 for 1926. Coal produced in 1927 had a value of \$101,356,000; in 1926, of \$148,604,000. The blast furnaces of the State produced, in 1927, 3,466,203 long tons of pig iron; in 1926 this product had totaled 3,626,330 long tons. The value of pig iron produced in 1927 was \$66,442,068; in 1926, \$73,460,392. The by-product coke industry declined slightly with the fall in coal production. There were produced in 1927, 2,986,000 short tons of coke, as against 3,336,962 in 1926, valued at \$25,050,474. The decrease in coal mining and closely allied industries was due to a strike in the coal fields. Clay products, the classification attaining the largest totals after the coal and iron group, yielded a total of \$37,030,004 for 1926, the latest year of record; for 1925, of \$36,763,980. There were produced in 1927 7,017,047 barrels of cement; in 1926, 6,747,241; cement shipments of 1927 had a value of \$11,312,783; those of 1926, \$11,388,800. Petroleum production was somewhat lower, being 7,024,000 barrels for 1927, as against 7,760,000 for 1926; in value, \$11,800,000 for 1927 (estimated), and for 1926, \$17,200,000. The total mineral production of the State was, for 1926, \$237,241,600; for 1925, \$231,658,604.

FINANCE. State expenditures in the year ended June 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$44,037,302 (of which \$8,485,637 was for local education); for conducting public service enterprises, \$39,022; for interest on debt, \$5,944,465; for permanent improvements, \$20,768,850; total, \$70,789,639 (of which \$19,275,200 was for highways, \$2,556,918 being for maintenance and \$16,718,282 for construction). Revenue was \$79,483,126. Of this, property and special taxes formed 51.5 per cent; departmental earnings and charges for the services of officers of the State, 3.8 per cent; sale of licenses, 38.4 per cent. Assessed valuation of property was \$4,195,581,136; State taxation thereon, \$27,271,277. Net funded State debt was \$140,158,985. Of the outstanding debt \$91,013,000 was in highway bonds.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 12,004.17. There were built in 1928 126.83 miles of additional first track, 3.16 of second track, and 2.55 of third track; in all 132.54 miles of track, built by 4 companies.

EDUCATION. Increasing demand, especially in rural districts, for more thoroughly trained elementary teachers, was reported in the *Journal* of the National Education Association. The school-age population of the State was given, for

the academic year 1926-27, at 1,988,642. There were enrolled in the public schools 1,357,638 pupils. Of these, 1,106,383 were in the elementary schools and 251,255 in high schools. Of the elementary pupils, 59,628 were in kindergartens. Current expenditure of the year for public-school education averaged \$82.11 to the enrolled pupil; total expenditure, \$107.10. Public-school teachers numbered 45,293. Of these, 22,756 had had full college or State normal school courses. The salaries of all teachers averaged \$1589.30 a year; those of men teachers, \$1821.47; of women teachers, \$1536.96.

CHARITIES AND CORRECTIONS. The State had in its care or custody in June, 1928, 36,090 individuals in penal, reformatory, or charitable institutions under the direction of the State Department of Public Welfare. Among the institution inmates were 21,111 mental patients in nine State hospitals. These hospitals, with their respective populations for June 1, 1928, were those at Kankakee, 3885; Elgin, 2819; Jacksonville, 3110; Anna, 1839; East Moline, 1850; Peoria, 2671; Chester, 285; Chicago, 3258; Alton, 1394. The Lincoln State School and Colony (feeble-minded) had 2450, chiefly feeble-minded and epileptics; Illinois State School for the Deaf, Jacksonville, 425; School for the Blind, 236 enrolled pupils; Soldiers' Home, Quincy, 553; Research and Education Hospital, Chicago, 127; St. Charles School for Boys, St. Charles, 811; State Training School for Girls, Geneva, 510; Illinois State Penitentiary, Joliet, 3075; Illinois Woman's Prison, Joliet, 81; Southern Illinois Penitentiary, Menard, 1974; Illinois State Reformatory, Pontiac, 1399; Illinois State Farm, near Vandalia (for misdemeanants and for mitigated treatment of convicts), 369.

LEGISLATION. Two special sessions of the State Legislature were held in the year. The first, convening January 10, had for its purpose the amendment of the primary election law. The second, convening May 15, dealt with legislation to enable the city of Chicago to gain control of its traction lines.

POLITICAL AND OTHER EVENTS. The refusal of the United States Senate to seat Frank L. Smith, Republican Senator-elect from Illinois (see UNITED STATES; Legislation) drew from Governor Small on January 20 a bitter characterization of the Senate's course as an "unwarranted and outrageous proceeding fraught with most serious consequences to constitutional government." Smith became a candidate for the Republican nomination for the vacant Senatorship, and was opposed by State Senator Otis F. Glenn. The Deneen faction of the State Republican party not only supported Glenn but backed Louis F. Emmerson, secretary of state, against Small for the nomination for governor and Judge John A. Swanson to oppose the renomination of Robert E. Crowe as State's attorney. Emmerson, Small, and Swanson were all nominated by large Republican majorities in the State primary elections of April 10. The result was closely connected with the rise of sentiment against the Thompson administration in the city of Chicago, as the Thompson group had favored the defeated candidates. The campaign that preceded the primary election was attended in Chicago with a number of acts of violence, including bombing and shooting. Mayor Thompson shortly before the primaries was reported to have intimated that he would resign unless the

candidates that he supported should be nominated, but he nevertheless afterward continued in office.

The Supreme Court of Illinois rendered in March a decision invalidating the 2-cent gasoline tax as unconstitutional. The tax had been attacked by the Chicago Motor Club, chiefly on the ground of conflict with an earlier act which provided that all gasoline tax funds should be used for service on debt incurred in previous road construction. The decision was therefore not regarded as necessarily implying a likelihood of similar upsets of gasoline tax laws in other States. The Illinois Association for Criminal Justice, working in concert with the Chicago Crime Commission, recommended in June that the State abolish the grand jury system, and resort to the institution of criminal process by information. Hanging as the legal mode of execution ceased and was replaced by the electric chair, the last person hanged being Charles Birger, murderer of Mayor Adams of West City, who was executed April 19. Digging of the Ozark Tunnel, a 3-mile tunnel of the Southern Illinois & Kentucky Railroad near Ozark in Pope County, said to be the longest in the Middle West, was completed in April.

The coal mining industry of the State continued unsettled for the greater part of the year. Following the indefinitely phrased settlement of the bituminous coal strike of 1927, mines in Illinois as in others of the Central States reopened, but on April 1 there followed a general movement to reduce the rate of wages below the level of the Jacksonville agreement and cessation of work in the mines was widespread. After the action of the central body of the United Mine Workers in July, releasing locals to make the best terms that they could, negotiations for separate wage scales proceeded. See COAL.

In Chicago the proceedings of the Thompson administration to remove School Superintendent McAndrew, accused of pro-British teachings, were carried on with much delay, until he was declared ousted March 21, more than two months after the expiration of his contract of employment. The proceeding was severely criticized by educators and civic bodies as tending to render education subordinate to control by politicians. It played a part in stirring the voters to repudiate the group holding authority in Chicago and in the State offices, at the primaries of April 10. After the political upset of April there followed a wave of investigation into city affairs. The Illinois Association for Criminal Justice issued May 20, a review of the relations of politics and criminality in Chicago, in which it declared the city to be ridden by organized gangs furnishing protection to illegal forms of traffic and themselves generally immune from action on the part of the public authorities during several previous city administrations. The gangsters and their protectors were asserted to be making gains of about \$13,500,000 a year.

The Chicago Crime Commission at the end of April made a public demand for the removal of three judges serving on the criminal court bench, alleged to have aided defendants to avoid conviction on felony charges. The Chicago Bar Association on May 9, demanded that a special Grand Jury inquire into charges of irregularities at the April primaries. The proposal was broadened to include a further grand jury inquiry into vice and crime conditions in the city, and a

fund was raised by private subscription to meet the expense of grand jury proceedings. The grand jury investigation of the primary brought indictments against about 40 persons for acts of terrorism and other forms of illegality at the polls. An inquiry into payment of city funds to real estate experts during the previous Thompson administration resulted in a court order for the repayment to the city of \$1,700,000 of the money thus disbursed. The city comptroller and the police commissioner resigned in July. Six grand jury investigations into civic matters were held, in all, up to December. That of November found indication of the participation of police captains in fraud conspiracy in the April election and recommended the formation of a metropolitan police force under a commissioner to hold office for ten years, independent of change in the city administration. A deficit of about \$12,000,000 in the budget of the Chicago school system was reported November 27, and difficulty arose in effecting further temporary borrowing to keep the school system in operation for the remainder of the fiscal year.

ELECTION. In the National election of November 6 for President, the State gave Hoover (Rep.) 1,768,141 votes; and Smith (Dem.) 1,313,817. The Republican plurality, however, was but approximately half those rendered the Republican National tickets in 1924 and 1920. The number of Republican votes cast was actually higher than in either of these years, while the vote for the Democratic presidential candidate was more than double what it had been on the two previous occasions. The greater part of the Democratic gain was scored in Cook County, including Chicago, where there existed much opposition to Prohibition and to the manner of its enforcement. Chicago rendered a slight Republican plurality, the chief part of the Republican majority being obtained outside of the city.

Otis F. Glenn, Republican nominee, was elected United States Senator, defeating A. J. Cermak, Democrat, who however, carried Chicago. The State delegation in the House of Representatives was reelected with three exceptions: Mrs. Ruth Hanna McCormick, Republican, was elected Representative-at-large; O. De Priest, colored Republican, won the seat of the late Martin B. Madden in the First District; and F. M. Ramer, Republican, was elected in the 21st District. Ramer alone succeeded a Democrat. The Republican nominee for Governor, Louis L. Emmerson, was elected over Floyd E. Thompson, Democrat, by a very substantial plurality. The strife within the Republican State organization, which had produced great bitterness at the time of the primary elections, did not prevent the polling of a very large Republican vote. Substantial majorities were reported as having been obtained by all the Republican candidates for the State offices. Fred E. Sterling was elected lieutenant-governor; William J. Stratton, secretary of State; Oscar Nelson, auditor; O. N. Custer, State treasurer; Oscar E. Carlstrom, attorney-general; F. G. Blair, superintendent of public instruction. A referendum proposition for the approval of an issue of \$20,000,000 of State bonds for the acquisition of State hunting and fishing preserves was carried by a large favorable vote.

OFFICERS. Governor, Len Small; Lieutenant-Governor, Fred E. Sterling; Secretary of State, Louis L. Emmerson; Treasurer, G. D. Kinney; Auditor, Oscar Nelson; Superintendent of Public

Instruction, Francis G. Blair; Attorney-General, O. E. Carlstrom.

JUDICIARY. Supreme Court: Chief Justice, Oscar E. Heard; Associate Justices; Floyd E. Thompson, Warren W. Duncan, Frank K. Dunn, William M. Farmer, Frederic R. DeYoung, and Clyde E. Stone.

ILLINOIS, UNIVERSITY OF. A coeducational State institution of higher education at Urbana-Champaign, Ill.; founded in 1867. The enrollment in the autumn of 1928 was 12,150, of whom 8944 were men and 3206 were women, distributed among the several colleges as follows: Liberal arts and sciences, 4129; commerce and business administration, 1822; education, 899; engineering, 1695; agriculture, 642; music, 125; journalism, 51; law, 436; library, 103; graduate school, 882; medicine, 503; dentistry, 207; pharmacy, 656. The 1928 summer session enrollment was 2270, of whom 1381 were men and 889 were women. The number of those on the teaching staff above the rank of assistant was 743; in the grade of assistant or lower there were 418; and administrative officers totaled 26. The library contained 762,187 volumes and 160,560 pamphlets. The productive funds from Federal endowment totaled \$649,013, and from private gifts, \$116,000. The income for the year 1927-28 was \$7,730,842, of which \$5,722,113 was from the State. During 1927-28 a building for architecture and kindred arts was constructed and an addition was made to the library; and a laboratory of applied mechanics and an addition to Lincoln Hall were under construction. President, David Kinley, Ph.D., LL.D.

IMMIGRATION. During the fiscal year 1927-28 the Congress of the United States passed three laws that were of importance in the regulation of immigration. On March 31 there was passed a law for the postponement of the national-origins quota plan until 1928; on April 2 an act was passed allowing Indians born in Canada to cross the border into the United States; on May 29 an act was passed changing to some extent the preference classes under the quotas with the end in view of facilitating the union of families separated by the coming of the bread-winner to the United States.

The Secretary of Labor's annual report contained the following immigration statistics for the fiscal year 1927-28: In that period 500,631 aliens were admitted into the country and 274,356 aliens departed. About three-fourths of the immigrants admitted were in adult life, i.e., between 16 and 44 years of age. The male immigrants outnumbered the female, the figures being 165,977 males and 141,278 females. Immigrants from the Western Hemisphere numbered almost half of those admitted. For example, the Mexicans and Canadians who came into the country in the fiscal year ending June 30, 1928, made up 43 per cent of all the immigrants admitted during the year. There were 73,154 Canadians and 59,016 Mexicans. Europe sent 158,513 immigrants, the following countries being represented in the fashion indicated: Germany, 45,778; Irish Free State, 24,544; Great Britain, 19,958; Italy, 17,728; Scandinavian countries, 16,184.

During the same period the Immigration Service was responsible for the deportation of 11,625 undesirable aliens. Of this number, 5021 were sent back to Europe, 2511 to Canada, 2934 to

Mexico, 532 to other countries of the Western Hemisphere, 529 to Asia, and 98 to Africa, Australia, and the islands of the Pacific. During the year 7996 Chinese were admitted to the country of whom 931 were immigrants and 7065 non-immigrants. The department was finding that the most important problem in connection with Chinese immigration was not the admission of aliens but the admission of those Chinese who claimed a legal right to entry on the score of citizenship, i. e., that they were the children of American-born Chinese. During the fiscal year 3276 such Chinese applied for admission. With regard to grandchildren of Chinese born in this

glers of aliens. Of the total 871 persons were turned over to the Customs Service; 105 persons to the Prohibition Unit; 533 to State and municipal authorities; and 124 persons to other branches of the Government. The Secretary of Labor said of the border patrol: "It is the greatest deterrent of alien smuggling that has ever been devised; and besides its activities devoted to immigration ends, it has made a substantial contribution to the cause of law enforcement in other departments of the country, notably the prohibition and customs units." The following tables are extracted from the report of the Secretary of Labor for 1928.

INCREASE OR DECREASE IN POPULATION, BY ADMISSION AND DEPARTURE OF ALIENS, DURING THE YEAR ENDED JUNE 30, 1928, BY RACE OR PEOPLE, SEX, AND AGE

Race or people	Aliens admitted			Aliens departed			Increase (+) or decrease (-)

country and whose fathers had not been in America prior to the birth of the applicants the Supreme Court (in *Chin Yow v. United States*) has ruled that citizenship does not exist.

BORDER PATROL. PREVIOUS YEAR BOOKS have spoken of the creation of this arm of the Immigration Service. By the end of the fiscal year 1928 it had a personnel of 747 members and had spent \$1,600,000. During the year this patrol apprehended 25,534 persons engaged in questionable activities, of whom 18,000 were found to be smuggled aliens and 330 were found to be smug-

MEXICAN IMMIGRATION. The Box-Harris bills for the restriction of Mexican immigration brought this question to the attention of the American people once more. Students of the question put the number of Mexicans in the United States at between one and two millions with 1,200,000 a conservative figure. Mexicans had become integral parts of the life of the States of Texas, Arizona, and California and to a lesser extent of New Mexico, Colorado, and Kansas. The Mexican grows onions in Texas, cotton in Mississippi, beet sugar in Nebraska, and lima beans,

walnuts, and citrus fruits in the Imperial Valley. The Mexican had become indispensable to railroad operation in the United States and the railroads had consistently opposed the restriction of Mexican immigration. Another characteristic of Mexican labor was that it was seasonal, so that the winter months find Mexicans congregating in such cities as Los Angeles, San Antonio, and El Paso. While one group in the southwest was calling for the restriction of Mexican immigration (Representative Box was from Texas), another was demanding that the prevailing restrictions, i.e., head taxes and visa fees, be lifted. There is no question that the prevailing fees were limiting Mexican immigration. In 1928 an adult Mexican had to pay \$18 to cross the frontier—\$10 for a visa and \$8 for a head tax. In 1924, 89,339 Mexicans entered the country as against 32,378 in 1925 and 69,685 in 1927. The proponents of Mexican immigration insisted that the Mexicans were doing certain necessary menial tasks, that they were orderly and that they returned to Mexico. The opponents of the group sought their presence in this country on the grounds of racial purity: Mexicans had too large families, they were of low intelligence, they were the recipients of charity. (That they had to resort to charity because they were economically exploited, did not occur to these sociologists.) The Secretary of Labor was strenuously opposed to the free admission of Mexicans (as well as all other residents of the Western Hemisphere) on the grounds that they were furnishing cheap labor to compete with organized American workmen. On the other hand, the Secretary of State was a consistent opponent of any attempt to restrict immigration from the Western Hemisphere, particularly of Latin America, because if the effect this would have on the prevailing friendly relations between the country and its Latin-American neighbors.

NATIONAL ORIGINS PLAN. It will be recalled that the immigration law of 1924 called for the fixing of the total number of immigrants at 150,000 annually, three years after its enactment, and that quotas were to be reapportioned on the basis of the "national origins" of the population in 1920. A National Origins Commission was created made up of the Secretaries of Commerce, Labor, and State, but twice Congress had deferred putting the provision into operation because of the inability of the Commission to agree on a table of national origins. There can be no question that the preparation of a table showing the national origins of the present population must be attended with great difficulties. For one, as Dr. Joseph A. Hill, the expert of the Commission pointed out, intermarriage had succeeded in mixing the population pretty badly.

To indicate the task before the Commission, it is interesting to note a few of the things that had to be done before a table could be prepared. The Commission first analyzed the number of immigrants from the records of immigration from 1820 to date; it analyzed the decennial census from 1850 to 1900; it made a classification of the racial stock of the white population in 1790; the white population of the country was divided into two divisions: one representing the population descended from the original white population of 1790, and the other representing the population descended from, and consisting of, immigrants who have come into this country since 1790. In March, the Senate by a unanimous

vote and the House by a large majority, voted to defer once more the presidential proclamation announcing the use of the national origins basis for immigration quotas.

The table that follows is from the presidential order that was postponed. Column A gives the national origins quotas as arrived at in 1928. Column B gives the national origins quotas recommended in 1927. Column C gives the quotas as they were under existing law. The total figure for Column A is 153,685; for Column B, 153,541; for Column C, 164,867.

<i>Nation</i>	<i>A</i>	<i>B</i>	<i>C</i>
Austria	1,639	1,485	785
Belgium	1,328	410	512
Czechoslovakia	2,726	2,248	3,073
Denmark	1,234	1,044	2,789
Finland	568	559	471
France	3,308	3,827	3,954
Germany	24,908	23,428	61,227
Great Britain and Northern Ireland	65,894	73,039	34,007
Greece	312	267	100
Hungary	1,181	967	473
Irish Free State	17,427	13,862	28,567
Italy	5,989	6,691	3,845
Lithuania	492	494	344
Netherlands	3,083	2,421	1,648
Norway	2,403	2,267	6,453
Poland	6,090	4,978	5,982
Rumania	311	516	603
Russia	3,540	4,781	2,248

Switzerland	1,614	1,198	2,081
Turkey	233	233	100
Jugo-Slavia	739	777	671

It should be pointed out that the Secretary of Commerce was dubious of ever working out quotas on the basis of national origins while the Secretary of Labor spoke frequently in favor of the scheme. In view of the fact that the Secretary of Commerce, Mr. Hoover, became the President-elect, it was doubtful if the scheme would be pressed.

PRESIDENTIAL CAMPAIGN. Both Secretary Hoover and Governor Smith, in their speeches of acceptance, gave attention to the problem of immigration. They agreed that the separation of families should be checked and that the total number of immigrants to be admitted yearly should remain as at present. But they disagreed on the basis for quota fixing. Secretary Hoover was in favor of the existing law based on the number of natives of each country already in America in 1890. Governor Smith said plainly: "... I am opposed to the principle of restriction based upon the figures of immigrant population contained in a census 38 years old." But the Governor did not indicate what census he was prepared to base quotas on. During the campaign Republican speakers insisted that the Democratic candidate was in favor of unrestricted immigration and though he denied the imputation several times the rumor nevertheless persisted throughout the contest for votes.

REGISTRATION OF ALIENS. Previous YEAR BOOKS have told of the unsuccessful attempts on the part of the Secretary of Labor to induce Congress to grant him the authority to register all aliens in the country, with a view toward discovering the 1,000,000 persons residing unlawfully. It appeared, however, that the Secretary of Labor was effecting practically the same thing through the passports that all aliens, entering after July 1, 1928, must carry. These identifications were obtained from the consuls at the ports of embarkation. The Secretary of Labor always

championed such a system on the ground that it would give the alien an easy method of identifying himself, particularly for citizenship purposes. But what of persons who entered before July 1, 1928, and who, therefore, did not require identification certificates? Critics pointed out that one of the ways of checking the smuggling of aliens was by a closer surveillance at ports of entry rather than nuisance regulations of the kind that the Secretary of Labor had in mind.

INDIA. A dominion of Great Britain, consisting of the peninsula of Hindustan and the region to the north, and including in addition to the territory directly governed by British officials, Indian states indirectly governed, that is to say, subject to British law. The capital is Delhi.

AREA AND POPULATION. The total area, including the Indian states and agencies which are in political relations with the Government, according to the census of 1921, was 1,805,332 square miles, of which 1,094,300 square miles were in the British provinces. The total population in 1921 was 318,942,480 as compared with 315,156,396 in 1911. The population of the British provinces in 1921 was 247,003,293 as compared with 243,933,178 in 1911. In 1923 the census commissioner for India estimated the population at about 319,000,000 or a gain of 1.2 per cent over 1911; average density, 177 to the square mile; maximum provincial density, 608 to the square mile in the Province of Bengal. Over 90 per cent of the population were classed as rural, only 9½ per cent living in towns of 5000 or more.

The following table from the *Statesman's Year Book* for 1928 gives the area and population of all the divisions of India according to the census of 1921:

<i>British Provinces</i>	<i>Area in square miles in 1921</i>	<i>Population in 1921</i>
Ajmer-Merwara	2,711	495,271
Andamans and Nicobars	3,143	27,066
Assam	53,015	7,606,230
Baluchistan	54,228	420,648
Bengal	76,843	46,695,526
Bihar and Orissa	83,161	34,002,189
Bihar	42,236	23,380,288
Orissa	13,736	4,968,873
Chota Nagpur	27,065	5,653,028
Bombay (Presidency)	123,621	19,348,219
Bombay	77,035	16,012,342
Sind	46,506	3,279,377
Aden	80	56,500
Burma	233,707	13,212,192
Central Provinces and Berar	99,876	13,912,760
Central Provinces	82,109	10,837,444
Berar	17,767	3,075,316
Coorg	1,582	163,888
Delhi	593	488,188
Madras	142,260	42,318,985
Northwest Frontier Province	13,419	2,251,340
Punjab	99,846	20,685,024
United Provinces	106,295	45,375,787
Agra	82,137	33,209,145
Oudh	24,158	12,166,642
Total provinces	1,094,300	247,003,293

The following Indian states and agencies were in political relations with the Indian Government at the time of the 1921 census:

<i>State or Agency</i>	<i>Area in square miles in 1921</i>	<i>Population in 1921</i>
Assam (Manipur) State	8,456	384,016
Baluchistan States	80,410	878,977
Baroda State	8,127	2,126,522
Bengal States	5,434	596,926
Bihar and Orissa States	28,648	3,959,669
Bombay States (including States in Western India Agency) ..	63,453	7,409,429
Central India Agency	51,531	5,997,023
Central Provinces States	31,176	2,066,900
Gwalior State	26,357	3,186,075
Hyderabad State	82,698	12,471,770
Kashmir State	84,258	3,320,518
Madras States Agency	10,696	5,460,312
Mysore State	29,475	5,978,892
Northwest Frontier Province (Agencies and Tribal areas) ..	25,500	2,825,136
Punjab States Agency	37,059	4,416,036
Rajputana Agency	128,987	9,844,384
Sikkim State	2,818	81,721
United Provinces States	5,949	1,134,881
Total States	711,032	71,939,187
Total India	1,805,332	318,942,480

RELIGION, ETC. The enumeration of the population in 1921 was: Hindus, 216,734,586; Moslems, 68,735,233; Buddhists, 11,571,268; Animistic, 9,774,611; Christians, 4,754,064; Sikhs, 3,238,803; Jains, 1,178,596; Parsis, 101,778; Jews, 21,778. The preponderating languages are Hindu, Bengali, and Telugu. Cities of over 250,000, with their populations in 1921 are: Calcutta (with suburbs), 1,327,547; Bombay, 1,175,914; Madras, 526,977; Hyderabad, 404,187; Rangoon, 341,962; Delhi, 304,420; Lahore, 281,781; and Ahmedabad, 274,007.

EDUCATION. There are two kinds of schools in India, namely, those which meet certain requirements of the Government, known as "recognized schools" and those which do not, known as "unrecognized schools." The recognized schools may be under public or private management. The schools are divided into English and vernacular schools and consist of primary and secondary grades. There were in India in 1925-26, 203,110 recognized schools with 9,892,703 scholars and 24,726 unrecognized with 621,618 scholars. In the same year there was spent on education 227,792,532 rupees, a sum representing less than 10 cents per capita. Notwithstanding sincere and earnest effort, little real advancement has been made in the education of the masses. Of the country's vast population it was stated by competent authority that more than 90 per cent is illiterate.

PRODUCTION, ETC. In the British provinces in 1925-26 there were 304,811,000 acres of arable land (43 per cent of the total); 1,471,000 acres of trees, shrubs, and bushes; 86,934,000 acres of forests; 151,869,000 acres of uncultivated productive land; and 150,187,000 acres of unproductive land. In India the monsoon, which lasts from June to September, is the chief controlling factor in crop production. The crops harvested during the "winter" (around February) are rice, sugar cane, castor beans, and ground nuts. Wheat, rape, and mustard are gathered in the spring, and sesame is harvested in the fall. There are two crops of cotton; one in April and one in October. Toward the end of the year it was reported that the Indian monsoon which had finished its cycle for 1928 was, on the whole, satisfactory, but its

distribution was not especially general and several districts were complaining of insufficient rainfall.

The real wealth of India lies in its soil. The climate ranging from tropical to temperate, favors the production of a wide variety of agricultural products. Vast irrigation projects, moreover, are bringing more area into production each year. In the case of jute, India has a practical monopoly. It is second as a world cotton producer, and ranks high in the production of wheat, sugar cane, rice, tea, nuts, and a number of other agricultural commodities. The acreage and production of the principal crops in 1927-28 season were as follows: Wheat, 31,089,000 acres, 334,059,000 bushels; rice (rough), 77,790,000 acres, 2,114,000,000 bushels; sugar cane, 2,954,000 acres, 3,221,000 long tons; oilseeds, 17,873,000 acres, 3,250,000 long tons; cotton 23,812,000 acres, 2,192,000,000 pounds; jute, 3,371,000 acres, 4,092,000,000 pounds; and indigo, 3,002,000 acres, 1,254,000 pounds. See AGRICULTURAL EXTENSION WORK; COTTON.

The report of the Indian Royal Commission on agriculture, covering nearly 900 pages, was issued on June 27, 1928, and included the following recommendations: (1) The establishment of an imperial council on agricultural research, with a fund of 5,000,000 rupees; (2) the promotion of land mortgage banks with the assistance of the Government; and (3) the establishment of regulated markets as a means of solving the marketing problems of the cultivators. According to the report, the commission was firmly of the opinion that coöperative credit is the only means of financing agriculture on sound lines, and stated that the greatest hope for the salvation of the rural masses from their crushing burden of debt rests in the growth of a well-organized coöperative movement.

The coöperative movement in India was making comparatively rapid progress despite the many handicaps to be overcome. At the end of 1926-27 there were in India 89,071 societies with a membership of 3,422,000, and a total capital of 679,400,000 rupees. With 199 rupees per member, capital was apparently increasing faster than membership. Bengal claimed 33 societies per 100,000 inhabitants, compared with 26.4 for Bombay and 31.6 for Madras. In Bengal the coöperative movement has grown rapidly, and appears to have changed the outlook of the people and strengthened their economic position. The department of commercial intelligence stated that with more expert guidance progress would be greater.

Indian manufactures continued to make progress in the coarser grades of articles which required little skill and which were in greatest demand in the domestic market. Though still depending on tariff protection, textile manufacturers had formed ambitious programmes for extending sales to foreign markets. According to the industrial census of 1921, the total number of persons employed in mines and factories was 2,681,125, distributed as follows: On tea plantations, 747,661; in mines, 266,743; in quarries, 27,234; in the manufacture of cotton textiles, 433,896; of jute, 310,511; in metal industries, 169,693; in glass and earthenware industries, 82,020; in the manufacture of chemical products, 109,157; in food industries, 109,868; in railway shops, 112,532; and in printing, 49,378.

During 1927 considerable labor unrest was experienced in India and 129 strikes occurred, in-

volving 131,655 men and a loss of 2,019,970 working days. During 1926 more men were involved, but only about one-half as many days were lost. This large increase in days lost was incident largely to two prolonged strikes in the Bengal-Nagpur Railway shops, which resulted in 880,218 idle working days. Difficulties in cotton and jute mills accounted for the bulk of the remaining days lost. Bombay reported 54 disputes, involving 28,078 men and a loss of 165,061 working days, while Bengal reported 34 disputes, involving 66,674 men and a loss of 1,464,889 days.

COMMERCE. India's importance in world trade is not generally realized outside of foreign trade circles. In the aggregate value of its foreign trade it ranks among the first seven countries of the world, being exceeded regularly by only the United Kingdom, the United States, France, and Germany, and usually, but not always, by Canada and Japan. In exports India ranks after the four leading countries, contesting with Canada and Japan for fifth, sixth, or seventh place. As an importer India usually vies with Belgium for tenth place. Considering the relative poverty of India's population, it is astonishing to find the country occupying such a high place among trading nations. There are several reasons for this large trade—the principal one, perhaps, that the country is so largely agricultural.

Much has been heard lately of India's industrial progress, but about two-thirds of the population was still directly supported by agriculture and cattle raising, and if those dependent indirectly upon the products of the soil were included, the total would probably reach nine-tenths. Being almost entirely agricultural, it must seek its manufactured goods abroad, and, in order to purchase from abroad, it must necessarily produce a surplus of raw materials for export—hence the large foreign trade.

TRADE BY PRINCIPAL GROUPS OF COMMODITIES
[Thousands of Dollars]

	Group	1926-27
General imports *		988,283
Food, drink, and tobacco		139,070
Raw materials and produce and articles		
mainly unmanufactured		74,336
Articles wholly or mainly manufactured		610,109
Live animals		1,517
Postal articles not specified		13,486
Gold and silver, bullion and specie *		149,765
Domestic exports		1,089,967
Food, drink, and tobacco		270,297
Raw materials and produce and articles		
mainly unmanufactured		502,720
Articles wholly or mainly manufactured		309,247
Live animals		1,389
Postal articles not specified		9,051
Gold and silver, bullion and specie *		7,263

* Including currency notes since 1922-23.

The value of imports of merchandise during the calendar year 1927 rose to \$896,421,000 from \$849,032,000 during 1926, while the value of exports, including reexports, fell from \$1,195,144,000 to \$1,186,429,000. The favorable balance of trade was \$289,354,000 for 1927 against \$346,770,000 for 1926. Imports from the United States during 1927 reached the value of \$81,148,000 as compared with \$62,197,000 during 1926. The largest increase occurred in imports of raw cotton with smaller increases in machinery and electrical equipment, automotive products, leather, refined copper, and leaf tobacco. A tendency for imports to become more varied was noticeable. The share of the United States in the

imports of India had risen markedly in recent years. Exports to the United States, which in most recent years had increased, declined from \$130,924,000 during 1926 to \$127,039,000 during 1927, owing to smaller shipments of jute products, crude rubber, and shellac. Exports of castor beans, tea, wool rugs, and manganese ore were larger in quantity than during 1926.

FINANCE. During five years India's finances had prospered. Budget deficits were turned into surpluses, provincial contributions had been abolished, the cotton excise duty had been removed, and the rupee had been stabilized. The revised budget of 1926-27 estimated a surplus of 26,300,000 rupees and the budget estimates for 1928-29 anticipated a surplus of 26,300,000 rupees. Government securities were in good demand in 1927, both on the domestic market and abroad. The public debt of the Government of British India, including that incurred in behalf of the provincial governments, amounted on March 31, 1927 to 9,755,400,000 rupees, equivalent at par to \$3,560,721,000. Of this total 7,738,300,000 rupees was contracted for productive purposes, principally for railways and irrigation, and of this productive debt 1,194,100,000 rupees was incurred in behalf of the provincial governments. The per capita debt was about 31 rupees or \$11.30.

COMMUNICATIONS. A decided improvement was shown in railway earnings during 1927. Car loadings of all principal commodities, except raw cotton, were larger. Additions to lines totaled 421 miles in 1926-27, and several important new lines were commenced. Construction of 7000 miles of line during the five years ending March 31, 1932, was planned. The total length of line on March 31, 1927, was 39,049 miles, of which 28,004 miles were Imperial State lines and 11,045 miles belonged to Indian States and private companies.

^a Including miscellaneous receipts not shown separately.

In 1926-27, 3682 vessels of 8,345,000 net registered tons entered the ports of India in the foreign trade and 3756 vessels of 8,694,000 tons cleared.

GOVERNMENT. Executive and legislative power rests with the Governor-General in council. The council consists of no fixed number of members, but at least three of them must have had ten years' service in India and one must be a lawyer of at least ten years' standing. The administration of India in England is under a Secretary of State for India, aided by a council appointed by him, of which at least half the members must have been residents of India for 10 years and must not have left India more than five years

previous to their appointment. A high commissioner for India in England acts as agent for the Governor-General-in-Council and conducts business assigned by the Secretary of State. There is also in India a legislature consisting of the Governor-General and two chambers, namely the council of state and the legislative assembly, both constituted under the Montagu-Chelmsford Act. See YEAR BOOKS for 1919 et seq. The Viceroy and Governor-General during 1928 was Baron Irwin of Kirby Underdale (appointed April 4, 1926). The Secretary of State for India was the Earl of Birkenhead (appointed November, 1924, and succeeded in October, 1928, by Viscount Peel). The High Commissioner for India in the United Kingdom was Sir A. C. Chatterjee.

HISTORY. As noted in the previous YEAR BOOK, the British Government early in November, 1927, announced that it had determined to appoint a commission to investigate the workings of the Montagu-Chelmsford plan of local self-government in India for the express purpose of finding out whether that plan had met with sufficient success to increase the amount of autonomy that the possession enjoyed. The appointment of this commission came about two years earlier than the original act of Parliament provided and it was stated that the reason for this was the strained relations that existed between the Hindus and the Mohammedans. The chairman of the commission was Sir John Simon, a well-known lawyer in London. For the balance of the membership of the committee and its failure to include any Indians, see preceding YEAR BOOK.

The Simon Commission arrived in India early in February and found a very divided country awaiting them. The failure to include any Indian members caused numerous strikes in many parts of the country and the native press of the Hindus bitterly complained of the ex parte nature of the investigation. On the other hand, the Moslems appeared strongly to favor the proposed investigation and possibly hoped thereby to strengthen their position with respect to the Hindus, who so completely outnumbered them. Sir John Simon pleaded for a chance to make a calm and adequate study of Indian affairs and begged that suspicions of the motives of his committee be banished. The two houses of the Indian legislature were opposed to the investigation as it was organized, the upper house suggesting the election of representatives to work with the commission, and the lower house suggesting, by a very close vote, the enforcing of a complete boycott of the plan. English officials both at London and in India stated in no uncertain tones that no matter what the opinion in India was the investigation was going forward as planned. In the conservative press it was freely intimated that the divided Indian opinion was all the argument necessary against the extension of more home rule for India. The Simon Commission traveled extensively throughout the country and returned to London on April 7, having completed the preliminary part of the investigation, in the carrying out of which they were scarcely hindered by the radical Hindu leaders. The Simon Commission again visited India early in October and made plans to continue its study. The method of attack was considerably liberalized, however, by making arrangements for an Indian committee to examine and report of the evidence collected. In the early investigation this

phase was virtually overlooked by the committee and caused considerable protest throughout the country. It should be said, however, that the caste system of India prevented many people from sitting on the same committee with members of another caste. Such a state of affairs was met by having practically no Indian participation at all. Under the new arrangements, Indians were able to assist in the examination no matter what their caste was. The close of the year saw the investigation still going on and it was expected that it would be many months before a report, even of a preliminary nature, could be made.

INDIA. LANGUAGE AND LITERATURE OF. See PHILLOGY, MODERN.

INDIANA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,930,390. The estimated population on July 1, 1928, was 3,176,000. The capital is Indianapolis.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1928	4,583,000	161,822,000	\$111,312,000
	1927	4,205,000	132,458,000	90,071,000
Wheat	1928	910,000	9,590,000	11,871,000
	1927	1,790,000	27,749,000	34,406,000
Hay	1928	1,828,000	2,504,000 ^a	29,979,000
	1927	2,048,000	3,006,000	31,221,000
Oats	1928	2,532,000	93,684,000	34,668,000
	1927	1,948,000	48,700,000	20,941,000
Potatoes	1928	61,000	6,649,000	4,654,000
	1927	53,000	5,035,000	5,538,000
Rye	1928	86,000	946,000	889,000
	1927	119,000	1,618,000	1,424,000
Tobacco	1928	13,700	11,234,000 ^b	2,247,000
	1927	8,400	6,884,000	1,403,000

^a tons, ^b pounds.

MINERAL PRODUCTION. The iron industry of the State and the coal mine production alike felt the effects of disturbed labor conditions in the coal fields in the course of 1927. The production of coal fell to 17,935,758 net tons for 1927, from 23,186,006 for 1926; in value, to \$36,381,000 for 1927, from \$45,889,000 for 1926 (see COAL). The pig iron production in 1927 was 3,477,764 long tons, as against 3,670,478 in 1926; the product of 1927 was valued at \$62,097,518, that of 1926 at \$69,292,329. Coke production fell to 5,499,000 short tons in 1927, from 5,990,344 in 1926, when the year's output was valued at \$44,143,059. Stone production in 1926, the latest year of record, was nearly the same as in 1925, being 4,699,230 short tons, as against 4,455,310 for 1925; the value of the total product was higher, being \$22,797,189, as against \$18,140,974 for 1925. Clay products attained a value, for 1926, of \$18,747,835, and for 1925, of \$18,037,932. Petroleum output was 852,000 barrels in 1927, 808,000 in 1926; in value, \$1,300,000 (estimated) for 1927 and \$1,770,000 for 1926. The total mineral production of the State in 1926 was \$118,692,304; in 1925, \$111,833,732.

FINANCE. State expenditures in the year ending Sept. 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$28,194,760 (of which \$5,233,413 was aid to local education); for interest on debt, \$77,606; for permanent improvements, \$13,846,016; total, \$40,118,382 (of which \$17,287,205 was for highways, \$6,839,494 being for maintenance and \$10,447,711 for construction). Revenues were \$43,078,196. Of this, property and special taxes furnished 34.7 per cent, departmental earnings

and charges for officials' services 10 per cent and sales of licenses and the tax on gasoline 39.8 per cent. Property valuation was \$5,188,356,739; State taxation thereon, \$11,933,220. Net State debt on Sept. 30, 1927, was \$1,649,500.

TRANSPORTATION. The total number of miles of railroad line under operation in the State on Jan. 1, 1928, was 7181.99. There were built in 1928 7.9 miles of additional second track.

EDUCATION. The work of formulating, with teacher participation, a State plan of high-school study was carried out by the State Department of Education and similar work with regard to elementary and intermediate grades was undertaken, during 1928. The school-age population, as estimated in May, 1928, was 851,125. There were enrolled in the public schools in the academic year 1927-28, 654,600 pupils. Of these, 523,103 were in the elementary schools and 131,497 in the high schools. Expenditures for public-school education totaled \$78,378,702.16. The median salaries of elementary, high-school and junior-high-school teachers, respectively, were: in cities, \$1441, \$1834, \$1530; in towns, \$1115, \$1480, \$1388; in townships, \$915, \$1347, \$1260.

CHARITIES AND CORRECTIONS. The Board of State Charities, which in 1928 was the central welfare agency, maintained supervision over institutions, both charitable and correctional, of the State, counties, townships, and municipalities, but did not administer them. The board consisted of six unpaid appointive members, serving three years, with the governor as their ex-officio chairman. Its duties included placing dependent and neglected children in foster homes, sanctioning adoptions, and deporting feeble-minded, epileptic, and insane non-resident paupers. It also supervised outdoor poor relief and kept watch over charitable employment agencies.

The institutions of the State for the care or custody of individuals, with the numbers of their inmates on Sept. 30, 1928, were: Central State Hospital, 1546; Logansport State Hospital, 1303; Richmond State Hospital, 1147; Evansville State Hospital, 1026; Madison State Hospital, 1026; School for Feeble-Minded Youth, 1569; Farm Colony for the Feeble-Minded, 344; Village for Epileptics, 709; Soldiers' Home, 401; Soldiers' and Sailors' Orphans' Home, 514; State Sanatorium, 177; University Hospital, 327; School for the Deaf, 382; School for the Blind, 122; Indiana State Prison, 2051; Indiana Reformatory, 1941; Indiana State Farm, 1183; Indiana Women's Prison, 197; Indiana Girls' School, 351; Indiana Boys' School, 488. The State institutions contained 2541 feeble-minded and epileptics on Jan. 1, 1928.

POLITICAL AND OTHER EVENTS. Governor Ed. Jackson was tried in February on a charge of conspiracy to bribe, but was acquitted. The charge alleged that Jackson in 1923, when secretary of state, acting in concert with George V. Coffin, republican county chairman, of Marion County, and Robert I. Marsh, an attorney, offered Warren T. McCray, then Governor of the State, \$10,000 to appoint James E. McDonald Prosecutor of Marion County. Ex-Governor McCray, recently paroled from Federal prison, appeared and testified to the offer of the money, and his son-in-law, William P. Evans testified to having been present when such an offer was made. The defense, prior to offering any testimony, moved that Special Judge Charles M. McCabe direct a verdict of acquittal. This the court did, on the

ground that the State had failed to show concealment of conspiracy prior to the previous July, and that consequently the crime charged was barred from prosecution under the State law by the statute of limitations. Some amount of public demand for the resignation of Governor Jackson followed, but he remained in office. The cases against his alleged accomplices were not prosecuted.

In connection with the impeachment in the previous year of Mayor Duvall of Indianapolis, City Councilman Boynton F. Moore was convicted March 2 of having accepted a bribe to vote against the impeachment. Four other councilmen pleaded guilty to receiving bribes and were fined. Attorney-General Gilliom early in the year instituted a suit against the Ku Klux Klan with the purpose of having it expelled from the State for illegal activities. He obtained information from a number of men formerly connected with the organization.

The State law of 1927 providing that the court appoint disinterested experts to testify as to the disputed sanity of criminal defendants was attacked and was held unconstitutional by a circuit court decision in April. A memorial drawn up by the State general assembly was transmitted to Congress in March, asking that Congress limit by statute the power of the Federal courts to receive appeals of public utility corporations from the orders of the State public service commissions until such corporations had first sought all means of remedy in State courts. This demand resulted from the successful Federal Court appeals that had been made from State rulings in Indiana by the Indianapolis Water Company and several other utilities. One large public utility, the Indianapolis and Cincinnati Traction Company, was sold at receiver's sale April 30, and the property was reorganized into two companies, the Indianapolis and Southeastern Railway Company and the Indiana Power Company. An ordinance of the city of South Bend, requiring motor buses in interstate service to pay a tax of \$200 a year each and to furnish liability insurance, was declared invalid May 14 by the U. S. Supreme Court. It represented a phase of efforts in the State to restrict the operations of such vehicles coming from across the borders.

State highway work in 1928 was devoted largely to the construction of 250 miles of concrete highway and 80 miles of bituminous macadam road, to bring the total of paved road in the State to about 2000 miles by the close of the year. The coal mining industry of the State continued upset during the early part of the year, owing to the unwillingness of the operators to continue the Jacksonville wage scale. After the action of the Policy Committee of the United Mine Workers at Indianapolis on June 18, granting districts the liberty to make their own terms with operators, the representatives of District 11 met with operators on August 3 to negotiate an agreement.

At Indianapolis the City Council was replenished by the Democrats and Reform element at an election to fill the places of seven members removed for misconduct or resigned. Meredith Nicholson, the author, was one of the new members. The United Christian Missionary Society, the chief benevolent and mission agency of the Church of the Disciples of Christ, announced its removal from St. Louis to Indianapolis. Suit

was brought by Joseph L. Hogue, former controller of Indianapolis, asserting his claim to succeed Mayor Duvall, who had resigned after his conviction on a charge of corruption in 1927. Hogue as controller under Duvall's predecessor, Shank, claimed that Duvall's prior dereliction had disqualified him as mayor, and that consequently Hogue became mayor by right of succession on Duvall's leaving the office for which he had been represented as ineligible by reason of his conviction. The State supreme court, sustaining the Marion County Circuit Court, ruled July 26 that Hogue held no further right of succession after having turned the office over to the controller under the Duvall administration. The Court further held that the Council in electing Slack temporary mayor had taken the correct course.

ELECTION. The voters of the State on November 6 gave an exceptionally large plurality for the Republican National ticket. The vote for President was: Hoover (Rep.), 842,290; Smith (Dem.), 562,691. A farm group opposed to Hoover had conducted an active campaign, which did not in most sections affect the result, since all but some eight of the 92 counties of the State gave Hoover majorities. Senator A. R. Robinson, Republican, shared in the large Republican vote and was reelected, defeating his Democratic opponent. A prevailingly Republican delegation to the United States House of Representatives was likewise elected. Harry G. Leslie, Republican candidate for Governor, defeated his Democratic opponent, Frank C. Dailey. Edgar D. Bush was elected lieutenant-governor; Otto G. Field, secretary of State; Archie Bobbitt, State auditor; James N. Ogden, attorney-general.

OFFICERS. Governor, Ed. Jackson; Lieutenant-Governor, F. H. Van Orman; Secretary of State, F. E. Schortemeier; Treasurer, Mrs. Grace B. Urbahns; Auditor, L. S. Bowman; Attorney-General, A. L. Gilliom; Superintendent of Public Instruction, Roy P. Wishart.

JUDICIARY. Supreme Court: Julius C. Travis, David A. Meyers, Clarence R. Martin, B. M. Willoughby, and Willard B. Gemmill.

INDIANA UNIVERSITY. A coeducational State institution of higher learning at Bloomington, Ind.; founded in 1820. For the first semester of the academic year 1928-29, the registration aggregated 4233 students, of whom 2533 were men and 1700 women. These were distributed as follows: Graduate school, 217; arts and sciences, 2474; law, 118; commerce and finance, 173; music, 92; education, 314; medicine, 432; dentistry, 176; nurses' training, 188; social service, 49. The faculty had 299 members. The endowment funds amounted to \$774,778, and the total income for the year, from State and private sources, was \$2,000,000. The library contained 197,700 volumes. In 1927, the legislature appropriated a mill tax that was expected to yield at least \$350,000 per year, for ten years, to be used exclusively for the construction of new buildings and the purchase of land. A new home for the nurses' training school, costing \$500,000, the gift of Ball Brothers of Muncie, Indiana, was dedicated in October, 1928. President, William Lowe Bryan, Ph.D.

INDIANS. According to the report of the Secretary of the Interior dated June 30, 1928, there were 355,901 Indians in the United States, excluding Alaska. They belong to 200 tribes, speak 58 languages, and live on 200 separate

reservations in 26 States, the greatest number being in Oklahoma, with Arizona second and South Dakota third. For the fiscal year 1928 Congress appropriated \$17,410,211.20 for Indian Affairs, or an increase of \$4,365,021.06 over 1927. During the same period the expenditures were \$16,697,053.09, and a great deal of the balance would be available for the fiscal year 1929. The Department of the Interior, besides administering the Congressional appropriations, is trustee for a large amount of tribal money received from oil, gas, and mining rentals, or from the sale of wood on Indian lands, etc., and its policy is to deposit part of this money in banks, and to utilize the remainder to add to the Congressional appropriation in paying for improvements such as irrigation, etc., to Indian tribal property.

On Feb. 21, 1928, the Institute for Government Research, which is an agency independent of the Government, presented the Secretary of the Interior with its survey of economic and social conditions among the Indians entitled, *The Problem of Indian Administration*, and undertaken at the request of the Department in 1926. This was the most complete and comprehensive survey of Indian affairs ever made, and contained many constructive suggestions for the improvement of all parts of the service. During the year some of its recommendations were made effective and a careful study of the others was being made to see if their application was practicable.

HEALTH. Trachoma, tuberculosis, and the diseases of childhood remain the most prevalent illnesses among the Indians. There were actually fewer cases of trachoma discovered in the fiscal year of 1928 than in the previous year, probably due in part to the separation of pupils in trachoma and non-trachoma schools. There were, however, an unusually great number of sufferers from measles and influenza, which led to the reappearance of many "cured" cases of tuberculosis and, by weakening the resistance of the younger population, increased its susceptibility to this disease. In treating Indian illnesses the earlier difficulties of lack of adequate equipment and the high turnover of the personnel of the hospitals were again experienced. It was hoped that the addition of 33 nurses and increases in salaries provided by the Welsh Act of May 28, 1928 (effective July 1, 1928), would reduce this high turnover. Seven new hospitals and a projected eighth, with a total of 169 beds, plus 50 more when the Kayenta hospital is ready, were added during the year. Owing to the difficulties in certain localities of providing water free from contamination, a consulting engineer is being employed to make a survey of the water and sewer systems throughout the reservations, and to make recommendations, wherever necessary, for a pure and sufficient water supply, and for sanitary sewage disposal.

EDUCATION. In 1928, \$5,923,000 was appropriated for Indian education and \$350,000 to pay the tuition of \$100 a year for the Indians in the public schools of the various States. There were 77 boarding schools, and 129 day schools, with a capacity of 25,766 pupils. There were 34,163 Indians in the State public schools, and 7621 more attended the various mission or private schools. This means that only one out of 20 eligible children between the ages of 6 and 18 was receiving a school education. There were only slightly over 1000 pupils more than in 1927,

while between the two preceding years the increase was 1811 pupils. Among the 206 schools there were only six where a so-called high-school education might be received, and in none of them was this instruction comparable to that given to the whites. The chief difficulty was the lack of funds which meant that teachers' salaries were low, equipment was poor, insufficient, and antiquated, and that the lack of books was very serious. The yearly allowance for the support of the schools was from \$230 to \$260 per student (\$4.73-\$5. per week).

In the boarding schools the survey of the Institute for Government Research found "the diet deficient in quality, quantity, and variety," the schools overcrowded, "supported in part by the labor of students," and in both day and boarding schools the medical attention was "below a reasonable standard" and the personnel was untrained and inexperienced. Lack of funds also delayed the extension of the platoon system which requires more teachers and space. By the law of May 8, 1928, 60 days' educational leave of absence was granted to teachers and physicians in order that they might attend summer courses.

An effort was also made to educate the Indians to the advantage of solid, well-made, and ventilated houses in which proper sanitary conditions were emphasized. Aided by reimbursable funds, the more advanced Indians used their resources to provide better homes for themselves and their families. The greatest progress was made by the Indians of the Kiowa, Comanche, and Apache reservations, where their houses were equal or even better than the average buildings of the whites. Wherever the Indians so wish it, a government superintendent advises them how to obtain the best and most suitable house, considering both the means at the disposal of the builder and the possibilities of the site.

OCCUPATION. After school, one of the chief difficulties and duties of the superintendents is to try to place Indians in positions that are congenial to them. Many do not wish to live on the reservations but prefer to enter some trade where they work with whites, and others wish to enter the civil service. In 1928 it was arranged that, on passing the usual civil service requirements, they would be allowed a preference percentage if they wish to enter the Indian branch of the service. Farming and stock raising are the most common occupations of the Indians. The government aids them by irrigation projects, notably the Coolidge Dam across the Gila River near San Carlos, Arizona, where Indians cultivate 12,000 acres, and by the reimbursable funds from which they may buy equipment, seeds, etc. One great problem is that the whites have gained control by sales, etc., of many of the best Indian farming lands. Another source of income is the sale of their handicrafts, such as blankets, pottery, embroidery, etc., from which they received \$1,267,816 in 1928, three-fourths of this being earned by the Indians of Arizona, Minnesota, and New Mexico. The purchasers are mostly tourists, people at a distance being uncertain that the goods are authentically Indian, and also being concerned over the sanitary conditions in which the article was made. It was suggested that a trade-mark, registered in the U. S. Patent Office, be employed to guarantee genuine Indian work and the sanitary con-

ditions under which it was made. It is felt that this would be of nearly untold benefit to the Indians.

LAW AND ORDER. In 1924 Congress conferred the right of citizenship, which includes the suffrage, on all Indians born in the United States. Although allowed to take part in the elections of the States in which they live, the Indians on reservations are not subject to the State laws, and so are unable to be prosecuted for the many offenses which they commit. Another problem is that of the liquor traffic which flourishes among them. In 1928, \$22,000, as well as State and Federal prohibition grants, was appropriated for the suppression of this traffic, but with no very noticeable results.

ALLOTMENTS. On the reservations 1067 allotments amounting to 101,234.42 acres, were made to individual Indians, and 91 allotments of 12,916.42 acres were made to residents of the public domain in the States. Besides small purchases of land made here and there for homeless Indians, the Seventieth Congress withdrew about 91,000 acres of the public land for the use of the Indians. This property was largely in New Mexico, Nevada, and Oregon. Sales of 1268 tracts totaling 151,413 acres were made for \$2,321,860, and fee patents worth 22,618 acres were given to 242 applicants and heirs of allottees, 4336 acres were released from government supervision by the issuance of 53 certificates of competency. INFANTILE PARALYSIS. Through a gift of \$250,000 by Jeremiah Milbank, the following institutions were to cooperate in a concerted international campaign against this malady: University of New York, Columbia University, Harvard University, University of Chicago, University of Brussels, Lister Institute of London, and the Metropolitan Life Insurance Co. of N. Y. Dr. Wm. H. Park was made chairman of a committee which represented these various institutions and the latter were all to carry out their investigations independently of one another. The results after study and coordination by the committee were to be presented jointly.

In the early summer there was published in the daily press information from the Associated Press concerning an intensive campaign to be waged against infantile paralysis by practitioners and research men throughout the United States, which was said to have the backing or indorsement of the Rockefeller Institute. Some of the objects were as follows: the preservation and accumulation of convalescent serum, instruction of parents as to protection of their children from unnecessary and possibly danger-

ous contacts and as to the earliest symptoms of the disease before paralysis develops. The incentive for these movements was supplied in part by the likelihood of an epidemic similar to those of 1907 and 1916.

SUCCESSFUL SERUM TREATMENT. Relatively small groups of patients under specially favorable conditions, chiefly early diagnosis and treatment, have shown startlingly favorable results under the use of serum which was almost wholly from human convalescents. Drs. Aycock and Luther of the Harvard Medical School and Vermont Department of Health reported their experience to the American Medical Association at its annual session. If the injections were practiced before paralysis developed, only 19 per cent developed the total form, although in the untreated the figure was 65.6 per cent. The usual mortality was similarly cut down. At a meeting of the Interstate Post-graduate Medical Association of North America held at Atlanta Oct. 17, Dr. W. D. Ayer of Syracuse, N. Y., reported a personal series of 129 cases of which 96 made complete recoveries. Only 25 or about 20 per cent developed paralysis of any extent while but eight deaths occurred, a mortality of but 6 per cent. Of the 25 paralyzed, 10 made recoveries, which reduced the number of badly crippled to about 12 per cent. The author was able to show that had the administration of the serum been sufficiently prompt the number both of paralytics and fatalities should have been still further cut down. This author used convalescent serum, injected directly into the spinal canal, in nearly all cases, but in a few he substituted ordinary horse serum, apparently with the same good result.

THE SWIMMING TREATMENT FOR PARALYZED MUSCLES. It has long been known that swimming is the natural form of exercise for the paralysis which follows acute poliomyelitis and that through following up persistently remarkable results have been obtained, even old cases showing considerable improvement while recent ones go on to practical recovery, to the extent of dispensing with retentive and supporting apparatus. Until recently the method has been impracticable in the temperate zone, but in 1921 Franklin Roosevelt, elected Governor of New York in 1928, called the attention of the public to the waters at Warm Springs, Ga. where there are abundant swimming facilities in water with a temperature of 89° F. The result was the Georgia Warm Springs Foundation, a non-profit-making institution with a notable enlargement of the original plant. It is to be hoped that similar institutions will develop where there are warm bathing facilities, so that eventually the 125,000 sufferers from infantile paralysis in the United States will be placed in position to secure the utmost salvage from their loss of muscle power. The most noted testimonial to the efficacy of the swimming treatment was Governor Roosevelt himself, who was at the head of the Foundation, which dates only from January 1927.

An article with the title "Poliomyelitis Greatly Overrated," appeared in *Certified Milk* for December, 1928, and comprised the views of the well-known pediatricist, Dr. John Lovett Morse, as reproduced in the *Boston Transcript* on the occasion of the semi-annual meeting of the Middlesex South District Medical Society (Massachusetts). The speaker condemned the policy of the lay press in making capital of the incidence of

infantile paralysis and thus frightening the public and making hardships for health officers. People did not become hysterical over measles, whooping cough, and tonsillitis (a source of numerous internal diseases), yet each of these was a much more serious public health problem than infantile paralysis. Dr. Morse had a theory that the disease is all but universal, that all children pass through it, while only a few suffer death or paralysis. He condemned efforts to accuse this or that factor, such as the milk supply, and deprecated isolation and the closing of public schools. He even condemned the attempt to detect early cases and administer drastic treatment as apt to do more harm than good.

INFANTRY. See MILITARY PROGRESS.

INFLUENZA. In 1928 there was rather more influenza than usual in the United States after the advent of late autumn and winter weather, which caused speculation as to the possibility of a pandemic or a second and more severe wave of the disease. The fact that the disease was spreading from West to East, the first outbreak having appeared in southern California, appeared to be an exception to the general rule of centuries of epidemics. Up to the end of the year there was little of actual importance to record as seasonal influenza was to be expected; but in a news dispatch published in the daily papers under date December 23, it was stated that Dr. Arthur MacDonald of Washington, known principally as an anthropologist, criminologist, and alienist and a former assistant of the bacteriologist, Pfeiffer, who was for a long time regarded as the discoverer of the cause of the influenza pandemic of 1890-91 (Pfeiffer's bacillus), had expressed the opinion based on comparative studies that the disease was not propagated by contact but was air-borne. His figures showed that wherever there was open overcrowding, as in great cities, there was less susceptibility than in villages and rural districts; while those not exposed to the open air, as isolated criminals, appear to remain immune. It will be recalled that in the pandemic of 1918-19, some of the most deadly episodes occurred on shipboard.

INJUNCTIONS. See LABOR.

INSANITY. Dr. A. S. Lovenhart and Dr. W. F. Lorenz, of the University of Wisconsin, announced in the public prints the discovery of a method for arousing stuporous insane patients from their lethargy. Hitherto this had been deemed an impossibility although there is sometimes a spontaneous awakening. The rally is only transitory, but the patients are for the time being in a rational mental state and able to discuss their affairs coherently. The experiments along this line date back to 1916, but were interrupted by the World War and were only renewed after a number of years. The earliest tests were made with intravenous injections of certain drugs, but success led the scientists to substitute respirable gases or mixtures of the same in which attempts were made to test those which had an action opposed to the narcotic vapors. The experiments were in progress during the year 1928, and in due time the formula of the inhalation was to be presented to alienists everywhere for a thorough trial. While the gain thus far was considerable from the practical standpoint, it was believed that a new and promising field of research had been opened.

INSURANCE. In certain respects 1928 was a hectic year for the insurance business in the United States. Life insurance continued its magnificent growth in a normal way, but in fire and casualty insurance the year was marked by an activity in the organization of new companies and the refinancing of old ones such as never before was seen. During 1927 the prices of insurance company stocks had been soaring and the public had been buying with unexampled avidity. With the opening of 1928 the organization of new companies became even more active. Not only were these companies more numerous, but they were financed on a scale never before witnessed in the United States. The organization of companies with a million dollars of capital and with a surplus ranging from one to four millions became a common occurrence. In some instances bankers underwrote the entire issue and distributed it to the public in a few days.

Established companies took advantage of the conditions to increase their capital. While a few declared stock dividends and some others permitted their stockholders to subscribe for new stock at par, others issued the new shares at a very high premium. The prices of the shares of many companies placed them beyond the means of the small investor, and in order to get a wider distribution a number of companies split their shares, increasing the number and reducing the par value to \$10 or even \$5. Approximately \$150,000,000 was paid in as capital and surplus of fire and marine insurance companies, old and new, in 1928. About \$75,000,000 was paid into casualty and surety companies. The total was more than three times that of 1927.

This unusual activity created problems for company managements. The volume of premiums in some important branches of insurance was increasing but slightly. With new companies seeking part of the business and old ones endeavoring to increase their premium income in proportion to the increase in their capital investment, the most intense competition was to be expected. It will be fortunate for the business if this does not lead to laxity in underwriting, disregard of good practices, and payment of excessive commissions for acquisition of business.

For some years a tendency toward concentration of ownership or control of insurance companies has been growing. Fire insurance companies have acquired control of other companies and operated "fleets" with the same officers and employees. Casualty companies have organized fire insurance companies to be operated by their organizations, or vice versa. This tendency was strongly in evidence in 1928. A number of new fleets were organized and several important old ones increased their membership by securing control of larger companies than ever before had become subsidiaries of others. There were also several instances where life insurance companies became associated with fire and casualty com-

panies through common control. The developments of the year indicated that in the future insurance companies were likely to be the subjects of large financial transactions to a greater extent than in the past.

During 1928 the sales of life insurance nearly every month exceeded those of the corresponding month in 1927. The total sales for the year were approximately eighteen and a half billions of dollars, and a careful estimate made by the Association of Life Insurance Presidents placed the insurance in force in legal reserve companies at ninety-five billions of dollars at the end of the year.

The most pronounced increase was made in the volume of group life insurance, the total in force rising from \$6,378,000,000 to about \$8,000,000,000 during the year. It was estimated that about six million employees were protected by group life insurance. In addition to this, a large amount of accident and health and of accidental death and dismemberment insurance was being written on the group plan. The underwriting by life insurance companies of retirement and pension plans, the cost of which is borne jointly by employers and employees, was becoming more common. One of the largest of these programmes ever underwritten was announced in 1928.

There is no doubt that the increased interest in group insurance is due in a considerable measure to the development of the coöperative or contributory plan. When the first groups were written in 1911 and following years the employers paid the entire premium. Now in most cases employers and employees bear the expense jointly and it is possible for employees to secure a larger amount of protection. Many concerns have both systems, the original policy being paid for by the employer, while additional insurance has been taken out on the coöperative plan.

The mortality experience of the life insurance companies in 1928 was favorable. Leading companies in an increasing degree invested in loans on real estate which pay a much higher rate of interest than that assumed in the computation of their rates. Hence the savings from the expected mortality and the excess interest enabled them generally to continue or increase the liberal dividends to holders of their participating policies. The field of investments open to life insurance companies of New York State was broadened early in 1928 by an amendment to the law which permits investment in preferred stocks which meet certain requirements.

During the year many conferences were held between the Superintendent of Insurance of New York and officers and agents of the life insurance companies for the discussion of proposed amendments to the New York Insurance Law. The purpose of these amendments was to permit the use of the American Men Table of Mortality, which reflects present-day conditions, instead of the old American Experience Mortality Table and also to limit expenses of companies in certain directions in which there are signs of undue liberality. The use of the new American Men Table would enable companies to reduce their premium rates if they so desire. This, of course, would reduce the amount of dividends returned to policy-holders and would not greatly change the ultimate net cost of insurance, but, as the commissions paid to agents for selling life insurance are based on a percentage of the premiums charged, a reduction in rate would also reduce

acquisition cost. With very few exceptions the actuaries of the companies have expressed approval of the proposed amendments, but a considerable body of agents is opposing them.

The National Association of Life Underwriters, composed of thousands of the leading life insurance agents of the country, declared in favor of an extensive campaign of coöperative advertising of life insurance with a view to acquainting the public more fully with its advantages and thus encouraging the buying of more insurance.

The volume of premiums for fire insurance was virtually the same as in 1927, possibly a little smaller. Notwithstanding the vast amount of insurable property created every year, so much of it is written at a low rate because of the excellent type of construction of the buildings that the new premiums resulting only slightly more than offset the loss of premiums on property destroyed by fire, wind, and flood and on buildings razed to make room for new ones, together with the loss of premiums where rates are reduced because of improved municipal fire protection. As first losses for the year were some nineteen million dollars less than in 1927 the fire insurance companies generally made a very good underwriting profit on their fire business. See FIRE PROTECTION.

Automobile fire and theft insurance increased in volume as the output of new cars was large, but the stock companies did not gain much advantage from this as a large part of the increase went to mutual companies. The stock companies generally made such a profit on this class that the rates for 1929 were to be reduced, at least in the most profitable territories.

Fire insurance companies which write hail insurance on growing crops had a bad year in this class of their business as losses were heavy. This was especially true in Western Canada where many American companies write a large volume of this business. Companies writing tornado insurance in eastern Florida sustained very severe losses as the result of the hurricane which devastated the Palm Beach district in September. This storm, following by two years the one which visited Miami, caused a few companies to cease writing windstorm insurance on the East Coast of Florida. The large majority, however, decided to continue but to charge higher rates and restrict the volume of business accepted. The development of that territory would be seriously retarded if loans for building construction were curtailed, because windstorm insurance could not be secured to protect the interests of mortgagees.

In the field of casualty insurance 1928 was not an exceptionally favorable year. The volume of business grew somewhat, but not as much as in 1926. On most classes of their business, except workmen's compensation and health insurance, companies make some profit but nothing remarkable. Workmen's compensation rates were not yet satisfactory. It was very difficult to make them so, conditions which affect the losses were constantly changing. The fact that the amount of unemployment was relatively small at the time was likely to prove advantageous to the insurance companies as full payrolls increase premium income and losses usually decrease when industry is prosperous. However, more than 40 legislatures were to meet in 1929 and a number of them would almost certainly amend the compensation laws of their States, probably in the

direction of more liberal benefits. This would necessitate rate increases, but usually these lag behind the increase in claim payments.

One of the leading questions before the compensation rate-making organization was the rating of small risks. The expense of writing and inspecting a small risk consumes so much of the small premium received that this class had proved unprofitable at the same rates as yield a profit on large risks. A plan was adopted in several States of making a flat charge on the premium on risks paying a premium of less than \$300, and then making a slight reduction in rates generally. This resulted in small risks paying more than they had previously done and large ones paying a little less. Other plans had been worked out which it was believed would produce similar results in a more satisfactory manner, and they were to be put into effect in 1929. See **WORKMEN'S COMPENSATION**.

The experience on automobile liability insurance was such as to warrant a reduction in rates in a number of territories early in 1929. The experience in Massachusetts, where automobile liability insurance was made compulsory by law and the rates fixed by official authority, was bad. The rates promulgated for 1927 and continued for 1928 were inadequate. When the Commissioner of Insurance sought to promulgate higher rates for 1929, so much political opposition developed that he resigned. Under orders from a court, the acting commissioner then promulgated rates for 1929, but it is questionable whether they are adequate. They have been attacked in the courts both by insurance agents and by automobile owners, and the litigation was still pending as 1928 closed.

The volume of personal accident insurance increased a little, probably about 5 per cent. New forms of protection were constantly being introduced in this class of insurance. One of the latest was group accident and sickness insurance covering installment buyers so that their installments would be paid by the insurance company as they fell due if the buyer was prevented from paying them by reason of disability resulting from accidental injury or illness. There was a marked tendency among companies to restrict policies which had been liberalized too greatly. The sale of non-cancellable accident and health insurance, which was popular a few years previously, had diminished. But few companies were writing this class and the medical examinations which they require make it difficult to sell.

Another noticeable development in accident and health insurance was the increasing demand for policies which pay no indemnity for the first week, month, or even three months of disability. It is possible, of course, to sell these at much lower rates than the regular forms, and the purchaser who would suffer no great financial inconvenience from a brief disability can protect himself against the losses occasioned by lingering illness or a very serious accidental injury.

Companies writing steam-boiler and machinery insurance had a satisfactory year. Although the number of steam boilers was decreasing because of the greater use of power generated at central plants, the volume of steam-boiler insurance increased slightly by reason of the greater number of heating boilers insured. The number of explosions of such boilers had been sufficient to convince many owners that the frequent inspection given by the insurance companies were well

worth the premiums charged. The field of machinery insurance was being constantly broadened and flywheels, engines, turbines, and electrical machinery were being insured. Insurance of all these classes was taken more for the prevention of accidents by inspection than in expectation of receiving indemnity.

A reduction of about 9.4 per cent in plate glass insurance rates, which became effective Sept. 1, 1928, resulted in a decrease in premium income from insurance of stationary glass, but this loss was partially overcome by an increased volume of insurance on plate glass in automobiles. As there had been no reduction in the cost of replacing broken plates, the underwriting profit on this class would be rather small.

The surety companies in general enjoyed a fairly good year. The premium income from this class of business was believed to have reached \$100,000,000 for the first time. Bonds issued to contractors to guarantee the performance of their contracts constitute about a third of the total volume of bonding business, and the vast amount of large construction, both private and public, had swelled the premium income from this class. Losses on fidelity bonds, guaranteeing the honesty of employees, continued to be heavy. The companies had hesitated to advance rates as that would tend to aggravate under-insurance. In 1928 it was estimated that only about 10 per cent of the losses resulting from the dishonesty of employees in positions of trust were covered by insurance. Losses on bonds guaranteeing the safety of deposits in banks were less serious in 1928 than in the two previous years.

The burglary insurance companies on July 1 adopted a more liberal form of residence burglary policy, which it was believed would be more satisfactory to the public and would result in a larger volume of this class of business being written. Bank burglary insurance rates were revised as experience in various localities dictated, especially in the Middle West and Mountain States. In towns of less than 1000 population the losses had been so heavy that it was found necessary for underwriters to increase the rates materially.

One interesting development in casualty insurance was the better coordination of organizations. Casualty insurance is made up of a number of classes which originally were written by separate companies. Each class formed its own organizations to make rates and rules for the conduct of the business of that class. As most of the companies were writing many classes, they had found it necessary to become members of various organizations, whose functions in some cases overlapped. At the same time there were services required for the entire business, such as looking after legislative and supervisory matters, which none of these individual organizations could perform. Late in 1927 the Association of Casualty and Surety Executives was organized. It is composed exclusively of high officials of companies who could speak for their institutions in their entirety. By the end of 1928 it had brought several of the individual organizations into closer contact, had assigned them functions which did not interfere with those of others, and promised in time more fully to consolidate the casualty and surety business into one business rather than a collection of more or less related businesses.

INTERNAL-COMBUSTION ENGINES. The total production of Diesel engines in the United States during 1928 was close to 450,000 horse power. These engines went into the central station, industrial, marine, oil-line, and refrigeration fields. The largest central-station engine installed was a 4000-horse power unit at Tuscan, Ariz. But such installations were not confined to the oil-producing sections, for at the municipal plant in Rockville Center, Long Island, three four-cycle engines of 3300 horse power were put in. In the marine field over half of the world's tonnage built during the year, as well as that under construction, employed Diesel drive. This applied more to foreign yards than to American yards because of the lower cost of European-built Diesels and because turbine-electric drive is becoming a strong competitor of the oil-engine in American-built ships.

The Italian yards turned out three large Diesel passenger liners, the *Augusta*, a four-screw ship driven by four main engines of 7000 horse power each and having an additional 5000-horse power driving auxiliaries; the *Vulcania*, of 20,000 horse power; and the *Saturnia*, with 20,000 horse power. Another large transatlantic Diesel liner to complete its maiden voyage during the year was the 26,000-ton *Kungsholm*, of the Swedish-American line, which is driven by 15,000 horse power in Diesels. While oil engines had been employed in a number of cases for auxiliary drive on warships, and for main drive in smaller surface vessels and submarines, the first large war vessel to be propelled by Diesel engines was under construction by Germany. This vessel, it was stated, would have two 10,000 horse power Diesels.

The gas engine field which had been rather inactive for several years, except for a few orders for large engines to run on blast-furnace gas in steel mills, received a stimulus through the construction of long distance gas lines from the Texas and Oklahoma fields to Denver, Kansas City, and St. Louis.

A Diesel type of engine was adapted to the use of pulverized coal by Rudolph Pawlikowski and was reported to have passed the experimental stage in an installation at Gortitz, Germany. Two such units were built. The first was a single-cylinder unit of 80 horse power and the second is a three-cylinder unit of 180 horse power. A small charge of oil was employed to supplement the pulverized coal and insure ignition.

INTERNATIONALISM. **CHRISTIAN PRESS CONFERENCE.** As one of the outcomes of the Universal Christian Conference on Life and Work, held in Stockholm in 1925, an International Christian Press Commission was created under the chairmanship of Prof. D. Hinderer of Berlin. As a result of his leadership, the First International Christian Press Conference convened in Cologne on August 19-21. Among the speakers were Archbishop Soderblom of Sweden, Professor

Deissman of Germany, Dr. Frederick Lynch of New York, Professor Alivisatos of Athens, the Rev. E. Gounelle of France, and Dr. Slotemaker de Bruine, the Dutch Minister of Labor. During the weeks preceding the Conference there was held in Cologne an International Christian Press Exhibit, organized in connection with a World Press Exhibit which the city was sponsoring.

LIFE AND WORK. The Continuation Committee of the Universal Christian Conference on Life and Work met at Prague, August 31 to September 5. The American Section included 13 members under the chairmanship of Dr. S. Parkes Cadman, president of the Federal Council of the Churches.

NORMAN WAIT HARRIS MEMORIAL FOUNDATION. This institute was permanently established through the generosity of the members of the Harris family. It is under the control of a faculty committee of the University of Chicago representing members of the various social science departments. The plan as arranged was to devote the entire fund to an institute held two or three weeks during June or July of each year. At each institute a rather limited field is chosen in the general field of international relations and three foreign lecturers are invited to give public lectures on topics within that field. The emphasis of the institute, however, is placed upon the round table meetings which are of a distinctly technical character. In addition to the foreign lecturers, experts from the United States are invited, including representatives of the Government at Washington, business men and bankers, as well as other scholars. These round tables are attended only on invitation and are confined to 30 or 40 persons. The records of the discussion are kept, but in confidential form for distribution only to the members of the round table itself. The aim of the round table is thus to furnish an opportunity for free discussion among experts in the topic, trusting that whatever of value emerges from these discussions will be utilized through the activity of these men themselves. No wide newspaper publicity has been sought, although the public lectures given by eminent European scholars attracted a good deal of attention. At first the plan was to deal with some particular region of the world, and Western Europe, the Far East, Mexico, and the British Empire have been taken up in successive institutes. In 1928 a somewhat different plan was followed in devoting the entire institute to the subject of foreign investments. The public lectures are published in regular series by the University of Chicago Press.

AMERICAN COMMITTEE, GENEVA. The work of this Committee has been continued since 1924. During the summers of 1924, 1925, 1926, and 1927, the Committee maintained in Geneva an office for the reception of American visitors with a staff of competent people devoting themselves to making contacts for English-speaking people in Geneva. In 1927-28 the office was maintained at the International Club throughout the year. An addition to the Club Building, erected by the City of Geneva, has enabled the work to be done much more adequately.

In October, 1927, the Committee appointed Mrs. F. H. Whitin of New York, Directress of its work in Geneva. She was in Geneva throughout 1928 and thoroughly established the work of the committee. Her duties consisted generally of the management of the preparations for the Geneva Institute of International Relations; the recep-

tion of Americans in Geneva; and the distribution of documents and information in America.

The number of visitors who come to Geneva for the purpose of studying international organization was increasing. They now include many serious-minded students, some of them remaining in Geneva for several months. The Library of the League of Nations Secretariat and the Library of the International Labor Office are open to accredited students. The visitors include many Americans, particularly during the summer months. Numerous American college and university groups come to Geneva to spend several days and all of them require some assistance. In fact, the presence of such a large number of visitors in Geneva makes it essential that the American Committee should continue its important and useful work.

THE UNIVERSITY INSTITUTE OF HIGHER INTERNATIONAL EDUCATION. This organization at Geneva is devoted to systematic post-graduate study of international problems. Its creation was made possible by the Rockefeller Foundation. At the head of it was M. Paul Mantoux, formerly director of the Political Section of the League of Nations Secretariat and before the War professor of American history in London University. Students of the Institute are able to attend lectures on special subjects, take part in round-table conferences, and receive help and guidance in their personal research. A special diploma or doctorate will probably be granted, the latter by the University of Geneva, the former probably by the Institute itself, on the basis of essays and theses presented by students. In addition to its permanent staff, the Institute draws on the services of the many distinguished visitors who pass through Geneva almost every week. It is governed by a board of five members—Professor Under, of the University of Upsala (formerly Foreign Minister of Sweden); Mr. Vernon Kellogg, American member of the League Committee on Intellectual Cooperation; the Rector of Geneva University; the head of the Department of Public Instruction of the Canton of Geneva, and the head of the Federal Department of the Interior.

INSTITUTE OF INTERNATIONAL EDUCATION. This institute, founded in 1919 with headquarters at 2 West 45th Street, New York, pursued its general purpose of "developing of international good will and education through such activities as the exchange of professors; the establishment of international fellowships; the holding of conferences on the problems of international education; and the publication of books and pamphlets on the systems of education of the different countries."

The Institute, which also serves as the New York office of the American University Union, acts as a clearing house of information and advice for the Americans concerning things educational in foreign countries, and for foreigners concerning things educational in the United States. In addition it administers and maintains the offices of the American University Union in London, Paris, and Rome, and has contact offices and correspondents in other countries. It publishes a number of bulletins of interest to students, particularly on *Fellowships and Scholarships Open to Foreign Students for Study in the United States* and *Fellowships and Scholarships Open to American Students in Foreign Countries*, as well as the *Handbook for American Students in France*, bulletins dealing with

higher education in other countries of Europe, and a *Guide Book for Foreign Students in the United States*.

Among the fellowships administered by the Institute are the American Field Service Fellowships for French Universities; American-German Student Exchange Fellowships; American-Czechoslovak Exchange Fellowships; American-Hungarian Exchange Fellowships; Austro-American Exchange Fellowship; Franco-American Exchange Scholarships; Swiss-American Exchange Fellowships; Scholarships for the Junior Year Abroad; Germanistic Society Fellowship for study in Germany and the Willard Straight Research Fellowship for Study in China.

In addition the Institute arranges for the placement of a number of young American men in *postes d'assistant d'Anglais* in French lycées and écoles normales. It is also instrumental in bringing to this country distinguished scholars, educators, and university professors from all countries of the world. These it distributes among American colleges and universities to deliver lectures in all fields of scholarship, but particularly in those which will enable Americans better to understand the institutions, culture, and civilization of the other countries. Dr. Stephen P. Dugan is director; Archie M. Palmer, assistant director, and Mary L. Waite, executive secretary.

THE ENGLISH-SPEAKING UNION OF THE UNITED STATES. This American society, incorporated in 1920 with national headquarters in New York, conducted activities aimed to foster understanding and good will between all English-speaking people. It cooperated to this end with a parallel British organization, the English-Speaking Union of the British Empire. Its working programme included meetings to discuss pertinent subjects and exchange views with representative men and women from overseas; individual service to members, especially in providing information and introductions when they go abroad; giving friendly assistance to members of the British Society and other English-speaking visitors to America; and promoting exchange visits by American and British students, teachers, and journalists.

Under this exchange plan, special groups of American college students have visited England every summer, while on this side the union has helped to entertain parties of undergraduates from England. A member of the union had endowed four scholarships for British graduate students, with the society's cooperation, at the University of Michigan. Teachers have likewise visited the United States each summer, some on traveling scholarships provided in England and some appointed to scholarships offered by the Chautauqua Institution at Chautauqua, N. Y. American teachers have made similar visits to England, and the Chautauqua Chapter of the Union had provided a scholarship enabling an American teacher to take a summer course at a British university. Exchanges of teachers for the full school year also had been arranged between American and British secondary schools.

Under the American Newspaper Fellowship in memory of Walter Hines Page (see *YEAR BOOK*, 1927), two British journalists ("Junior" and "Senior") are selected from year to year to spend sufficient time on this side to become familiar with American life. Reciprocal newspaper fellowships were provided in England, with the same purpose of advancing mutual understanding through the medium of the press. Member-

ship in the American society had grown in seven years from about 2500 to 17,000 and in 1928 it had forty branches with outposts at Honolulu and Manila. The British society, founded in 1918, had a membership of about 13,000 and sixteen branches in Great Britain and the Dominions. Thus between the two there were already more than fifty links in a chain of friendship which encircled the globe.

INSTITUTE OF INTERNATIONAL RELATIONS. The Fourth Session was held at the University of Southern California, Los Angeles, December 9 to 13. The subject matters discussed included: Our Latin-American Policy; The Resident Alien Problem in the Southwest; International Commerce; Reorganization of the Department of State; The New China; Japan; The Foreign Student; Kellogg Peace Pacts; International Finance; Problems of Food and Population; Foreign Policies of American Political Parties. The chancellor of the institute was president, Dr. Rufus B. von Klein Smid of the University.

INTERNATIONAL JUSTICE. See LEAGUE OF NATIONS.

INTERNATIONAL LAW. The Preparatory Committee provided for by the Assembly of the League of Nations in connection with the first conference for the Codification of International Law, which is to be called by the League at The Hague in 1929, was duly appointed by the Acting president of the council on November 4; and consisted of Professor Basdevant (French); M. Carlos Castro Ruiz (Chilean); Professor Francois (Dutch); Sir Cecil Hurst (British); and M. M. Pilotti (Italian). Its task was not to attempt to write new law, but to analyze and put in order the views received from the different governments on the three questions on the conference agenda, i.e. nationality, territorial waters, and the responsibility of a state for damages to foreigners through crimes committed within its territorial limits.

A ten-day session of the Committee was held at Geneva in the spring of 1928. For the three questions on the agenda of the conference, the committee drew up detailed questionnaires to be sent to all governments for reply at the latest by October 31, and to contain, if possible, information as regards present national and international legislation, experience gained from their own practice and views as regards the filling up of gaps in international law. The scope of the questionnaires may be seen from the fact that the first covers questions as to the exclusive competence of each state regarding nationality, double nationality, the effects of the naturalization of parents on the nationality of children, nationality of children of unknown parents, cases of double nationality or loss of nationality, as with married women; that the second raises the question of the nature of the sovereignty of a state over its territorial waters, the status of waters surrounding islands and in straits, discrimination between inland waters and territorial waters; and the third, the international responsibility of states for damages done on their territory to foreign property or persons; cases of riot or insurrection, pecuniary reparation, and other matters.

The thirty-fifth biennial meeting of the International Law Association met in Warsaw, Poland, August 9-15. The American Branch of the Association, including members both in the United States and Canada, constituted one of the largest

sections of the Association and was making a strong bid for a meeting of the Association in North America in the near future. The last general meeting in the Western Hemisphere was at Buenos Aires in 1922, when the delegates were largely the guests of the Argentine Government. The last meeting in the United States was held at Portland, Maine, in 1907. Chief Justice William H. Taft was honorary president of the American branch, and the Rt. Hon. Sir Robert L. Borden, former Premier of Canada, and the Hon. John Bassett Moore, who during 1928 resigned as a member of the Court of International Justice at The Hague, and the Hon. John W. Davis are honorary vice presidents, Amos J. Peaslee of New York was elected president of the American branch at its last annual meeting in New York City. Edmund A. Whitman of Boston was vice president, and Oscar R. Houston of New York was honorary secretary.

The Polish Branch arranged a programme of unusual interest for the biennial session, including many functions at which the Association was the guest of the Polish Government. The principal topics were the effect of war on private contracts, the progress of the codification of international law, international cartels, and some new developments in the principles of international law respecting extradition, the laws of war in occupied territory, and conflict of laws.

The American Government through the Department of State addressed a communication to the Secretary General of the League of Nations, Sir Eric Drummond, stating that the United States could not agree to the advisability of the codification of three questions of international law. These three questions are Communication of Judicial and Extra-Judicial Acts on Penal Matters; the Legal Position and Functions of Consuls; the Revision of the Classification of Diplomatic Agents.

The full text of the announcement by the Department of State follows:

The Secretary General of the League of Nations, with a communication dated June 7, 1927, was good enough to transmit to the Secretary of State of the United States certain questionnaires and reports prepared by the Committee of Experts for the Progressive Codification of International Law and to request the opinion of the Government of the United States as to whether the regulation by international agreement of the subjects treated in the questionnaires, having regard both to their general aspects and the specific points mentioned in the questionnaires, is desirable and realizable in the near future.

Question No. 8: With respect to the amended draft convention on this subject submitted with the report of the subcommittee of the Committee of Experts, it may be stated that the taking of the testimony relating to criminal cases in foreign countries by the use of letters rogatory, with which Article I of the amended draft deals, is a process for which no provision has been made by the legislation of the Federal Government and one which under the system prevailing in the United States can be employed, if at all, only pursuant to the laws of the several States. It is not deemed advisable to make commitments by international convention to change the existing practice in this regard prevailing in the United States. Moreover, evidence obtained in foreign countries through letters rogatory could not be used in criminal cases in the United States, since under the Constitution the accused must be confronted by the witnesses against him.

With respect to the second article of the revised draft, it may be stated that the Government of the United States is not prepared to commit itself to serve summonses emanating with foreign courts on witnesses or experts resident in the United States or to surrender persons in custody, except through the process of extradition.

It is the view of the Government of the United States that the matter of the surrender of exhibits dealt with in the third article of the amended draft convention can be adequately provided for in extra-

dition treaties. Indeed, provisions for the surrender of property in possession of fugitives are contained in some of the extradition treaties of the United States. The list of treaties appended to the report, as examples of judicial co-operation, indicates that the subject as heretofore treated is closely related to extradition.

While conventions on the subject of judicial co-operation doubtless serve a useful purpose among countries in close geographic proximity to each other, it is not apparent that uniform application of such agreements is necessary.

Question No. 9: The experience of the Government of the United States has not revealed any considerable uncertainty regarding the legal position and functions of consuls. Furthermore, this matter has been the subject of numerous provisions in bilateral treaties. It is the view of the Government of the United States that no compelling necessity exists for the treatment of this subject by a general international convention.

Question No. 10: The Government of the United States does not consider it desirable to revise the classifications of diplomatic agents as proposed. No circumstances or conditions demonstrating the desirability of changing the classification have been revealed, nor is there reason to expect that the proposed change, if made, would effect any material improvement.

The Government of the United States does not consider that the regulation by multilateral international agreement of questions 8 and 9 or the change of classification proposed in question 10 is desirable or attainable in the near future.

Question No. 11: The Government of the United States is inclined to the view that an international agreement on the subject of competence of the courts in certain classes of cases against foreign States, would serve a useful purpose, and would therefore be desirable, and that there should be no insuperable obstacle to the concluding of an agreement on that subject.

On the initiative of the faculty of the Harvard Law School, a group of Americans interested in international law undertook to organize a co-operative research in international law, dealing with the three topics which had been selected for the agenda of the Conference on Codification of International Law, to be held in 1929 under the auspices of the League of Nations. The necessary funds having been appropriated by the Commonwealth Fund, at the first meeting of the group George W. Wickersham was elected chairman of the committee, and an executive committee was created, composed of Joseph H. Beale, Manley O. Hudson, Prof. Charles Cheney Hyde, Elton R. James, Francis B. Sayre, Dr. James Brown Scott, and Mr. Wickersham. It was decided that the research should be undertaken along the general lines followed by the Institut de Droit International and the American Law Institute with a director of research, with a reporter for each of the subjects to be considered by the 1929 conference, and with advisers to assist each of the reporters. Mr. Hudson was chosen to be the Director of Research, and the reporters were named as follows: On Nationality, Richard W. Flourney; on Territorial Waters, Prof. George Grafton Wilson, and on Responsibility of States for Damage Done on Their Territory to the Person or Property of Foreigners, Prof. Edwin M. Borchard.

Prof. Manley O. Hudson of Harvard contributed to the *American Journal of International Law* (April, 1928) a comprehensive article on "The Development of International Law Since the War."

INTERPARLIAMENTARY UNION. The 25th Conference was held in Berlin, August 23-28 in the Reichstag. Its sessions were principally occupied with three questions: Evolution of the Parliamentary System; Migration Problems; and the Rights and Duties of States. On each of these questions the conference adopted a resolution.

The significance of the work done by the Union was referred to in a speech, delivered at the open-

ing session by the German Chancellor, Herr Hermann Müller. He said:

The catastrophe of the World War had naturally interrupted the work of the Interparliamentary Union, but those present at the conferences of the Union in the years immediately following the war would recall that it was just at those conferences that the bonds were reknit which must never again be rent, lest Europe be reduced to a heap of ruins. . . . No epoch had ever more need of community of effort. In the necessary labors on behalf of the mutual progress of the peoples the Union is a particularly effective instrument. Parliamentarism, like every human institution, has its weaknesses; but, of all methods of government, the parliamentary system offers the easiest, surest, and most just compromise of interests. In every parliament the task is to effect a compromise of conflicting interests, and to win over the majority. This is, above all, true for the great world parliament constituted by the Interparliamentary Union. Difficulties and conflicts will always exist among the nations, but it is the aim of the Union to see that these conflicts are fought out in the same arena in which struggles are conducted within parliaments, namely, in the arena of intellectual conflicts.

The early sessions were devoted to a discussion of the report presented to the conference by the Secretary General of the Union. Dr. Christian L. Lange, and centred around questions of disarmament and the outlawry of war, and on the day of the signing of the Kellogg Pact in Paris the following telegram was dispatched to Messrs. Kellogg and Briand:

The 25th Interparliamentary Conference, composed of the elected representatives of 38 countries, sends a sincere greeting in the name of the Interparliamentary Union to the authors of the pact condemning war, Messrs. Kellogg and Briand, and to the other representatives of states who will today solemnly sign that treaty. It expresses the hope that every other state will adhere to the document. At its 22d Conference in Bern, in 1924, the Union proclaimed the principle of the outlawry of war. It considers that one of its chief tasks will now be to work in favor of the complete embodiment of that high principle in international relations and in the legislation and policy of every country.

On the question of the evolution of parliamentary system, the conference had before it a comprehensive report on the subject, prepared by Dr. J. Wirth, former German Chancellor, and the resolutions presented by him. In the place of this resolution, with its series of specific proposals, the conference adopted a general resolution, at the same time referring Dr. Wirth's resolution and the several amendments to it proposed in the course of the debate on the subject back to the Council's Committee for Political and Organization Questions for fresh study.

On the question of migration the conference had before it three documents; a report, presented in the name of the Committee for the Study of Social and Humanitarian Questions, by Dr. Slavko Secerov, of Jugo-Slavia; a memorandum on the subject, prepared by the Bureau of the Union on the basis of information furnished by the various national groups; and the project of a resolution presented by Dr. Secerov. In the course of the discussion on the subject, Dr. Secerov's resolution was slightly modified in two unimportant respects and was adopted by the Conference unanimously, except that the American delegation abstained from voting on it.

The American point of view was expounded by Representative Andrew J. Montague, who, in the absence of Representative Theodore E. Burton, President of the American group, headed the American delegation. Mr. Montague stated that America regards the problem of migration as one of purely domestic policy, and that while in Dr. Secerov's report, as well as in the general discussion, this point of view was conceded to

some extent, nevertheless both the report and the resolution tend to suggest the need of an international discussion of the problem. For this reason the American delegation felt compelled to abstain from voting on the resolution.

The American delegation also abstained from voting on the resolution dealing with the rights and duties of states, which was presented to the conference by Senator Henri La Fontaine, of Belgium. The view of the American delegation was stated by Representative Roy G. Fitzgerald who declared that the American delegation could not accept Article 7 of the proposed resolution, which read as follows:

"A state victim of armed aggression has the right to legitimate defense, and the community of states is obliged to lend it its support. A state is also entitled to that support in the case of disregard or violation of an acknowledged right."

This article, in the interpretation of the American delegation, imposes, under certain conditions, upon states the obligation to take part in a war. The American delegation maintained that there are only two methods of regulating relations among states: 1, the method of arms, i.e. war, provided for in Article 7; and, 2, the method of law, i.e. peace. It declared its unequivocal preference for the second of these methods. The text of the resolution aroused a certain amount of opposition in some of the other delegations as well. It was finally adopted by a majority vote.

The conference brought together representatives of thirty-eight parliaments. The American Congress was represented by the following delegation: Senator Walter E. Edge, of New Jersey; Senator Elmer Thomas, of Oklahoma; Representatives Fred Britten, of Chicago; Thomas E. Cochran, of Pennsylvania; Roy C. Fitzgerald, of Ohio; F. H. LaGuardia, of New York; Charles Linthicum, of Maryland; Andrew J. Montague, of Virginia; and former Representative Richard Bartholdt, of Missouri. The delegation was accompanied by Arthur Deerin Call, executive secretary of the American group, and Leo Pasvolosky, assistant secretary.

Baron Theodor Adelsward, the former president of the Interparliamentary Council, having tendered his resignation, M. Fernand Bouisson, president of the French Chamber of Deputies, was elected president in his stead. M. Bouisson thus also becomes the chairman of the executive committee. The conference elected Dr. L. Moltesen, Minister of Foreign Affairs of Denmark, to take the place of Dr. J. Brabec (Czechoslovakia) the retiring member, on the committee. The executive committee therefore was to be composed as follows: M. Fernand Bouisson (France) president; Senator R. Dandurand (Canada) until the 26th Conference; Dr. W. Schucking (Germany) until the 27th Conference; M. H. La Fontaine (Belgium) until the 28th Conference; Dr. L. Moltesen (Denmark) until the 29th Conference. The committee nominated Dr. Schucking to act as president of the council in case of the absence, resignation, or death of the president. The secretary general of the union was Dr. Christian L. Lange, with headquarters at Geneva.

The 25th Annual meeting of the American group was held in Washington, on February 24, with the Hon. Theodore E. Burton presiding.

IONA SOCIETY, AMERICAN. An association chartered May 23, 1925, by the Regents of the University of the State of New York to "preserve, encourage, and promote Celtic culture," and for the establishment in Scotland of a centre of Gaelic culture. Progress was made during 1928 in the plans for the establishment of a university, offering courses in the Celtic language, literature, music, arts, and crafts, to be located in Scotland with its principal office in New York. The officers in 1927 were: President, Richard M. Montgomery; vice presidents, Dr. John H. Finley and James Stewart Cushman; secretary, Marshall Beuick; treasurer, Nelson Macy; counsel, Col. Alexander R. Fordyce. The headquarters are at 300 Madison Avenue, New York.

IOWA. POPULATION. According to the fourteenth census of the United States, the population of the State on Jan. 1, 1920, was 2,404,021. According to the State census taken in 1925, the population was 2,419,927. The estimated population on July 1, 1928, was 2,428,000. The capital is Des Moines.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1928	11,174,000	475,012,000	\$318,928,000
	1927	10,901,000	386,986,000	287,020,000
Oats	1928	6,001,000	240,040,000	88,815,000
	1927	6,001,000	192,082,000	80,652,000
Hay	1928	3,056,000	4,516,000 ^a	57,769,000
	1927	3,416,000	5,554,000 ^a	68,532,000
Wheat	1928	428,000	8,270,000	8,276,000
	1927	441,000	8,236,000	9,623,000
Potatoes	1928	81,000	10,935,000	5,577,000
	1927	75,000	6,150,000	6,150,000
Barley	1928	808,000	27,068,000	14,617,000
	1927	454,000	14,256,000	9,409,000

^a tons.

MINERAL PRODUCTION. Coal output, the chief item in the mineral production of the State, fell off sharply in 1927, owing to labor trouble which the State felt in common with other coal States. The quantity of coal produced in 1927 was 2,949,622 net tons, as against 4,625,487 in 1926; in value, \$9,304,000 for 1927, and for 1926, \$14,214,000. Iowa ranked second among the States in 1926 in the production of gypsum. There were produced, in 1926, 802,910 short tons, and in 1925, 800,167; in value, \$6,588,203 for 1926 and for 1925, \$6,734,271. Cement production in 1927 was 5,415,144 barrels, and in 1926, 4,925,811; the value of cement shipments was, for 1927, \$9,124,405, and for 1926, \$8,167,341. The value of clay products declined to \$4,459,724 for 1926, from \$5,703,537 for 1925. The total value of the mineral production of the State was, for 1926, \$35,971,787; for 1925, \$38,420,203.

FINANCE. State expenditures in the year ending June 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$23,033,531 (of which \$778,361 was aid to local education); for interest on debt, \$816,559; for permanent improvements, \$13,053,164; total, \$36,903,254 (of which \$14,333,370 was for highways; \$4,358,469 was for maintenance and \$9,974,901 for construction). Revenues were \$37,540,663. Of this, property and special taxes formed 35.2 per cent, departmental earnings and charges for officials' services, 15.0 per cent, and sales of licenses and a tax on gasoline, 38.0 per cent. Property valuation was \$1,544,577,654; State taxation

thereon, \$10,803,840. Net State funded debt on June 30, 1927, was \$20,195,085.

TRANSPORTATION. The number of miles of railroad line under operation in the State on Jan. 1, 1928, was 9759.96. There were built in 1928, 7.9 miles of additional second track.

EDUCATION. A State plan of study in elementary public schools was prepared in 1928. The school-age population for the academic year 1927-28 was put at 713,297. There were enrolled in the public day schools of the State 551,400 pupils. Of these, 261,505 were in the elementary schools, 162,608 in unconsolidated rural schools, 17,811 in kindergartens, and 109,476 in high schools. The total expenditure for education from the General Fund, was \$47,610,453. Teachers' salaries averaged, for men, \$200.39 a month; for women, \$112.58.

CHARITIES AND CORRECTIONS. The Board of Control of State Institutions has exercised full management over State institutions since 1898. It had under its care in 1928, 15 institutions. It further inspected county and private insane institutions, detention homes, and organizations to aid friendless children. The State institutions were: Soldiers' Home, Marshalltown; Soldiers' Orphans' Home, Davenport; Juvenile Home, Toledo; Institution for Feeble-Minded Children, Glenwood; State Sanatorium for Treatment of Tuberculosis, Oakdale; Training School for Boys, Eldora; Training School for Girls, Mitchellville; Mount Pleasant State Hospital (insane), Mount Pleasant; Independence State Hospital (insane), Independence; Clarinda State Hospital (insane), Clarinda; Cherokee State Hospital (insane), Cherokee; Hospital for Epileptics and School for the Feeble-Minded, Woodward; State Penitentiary, Fort Madison; Men's Reformatory, Anamosa; Women's Reformatory, Rockwell City.

The three penal and reformatory institutions of the State had on Jan. 1, 1928, 2157 inmates; admittances in the year previous had numbered 760. Epileptics and feeble-minded in State institutions on the same date numbered 2367.

LEGISLATION. Governor Hammill summoned the Legislature to meet in special session in March, for the purpose of highway financing. The Legislature passed an act providing for the issue of \$100,000,000 of road bonds to bear 4 per cent interest and mature in 20 years. The proposal was subject to approval by popular vote at the November election. Governor Hammill signed the act March 14.

POLITICAL AND OTHER EVENTS. Governor Hammill made the State road programme a chief feature of his campaign for reelection, asserting that the proposed bond issue would provide the State in the course of six years with 4900 miles of paved primary highways. It was the purpose of his administration to expend on the road programme not only the proceeds of bonds but those of the gasoline and automobile registration taxes, providing ultimately a highway system representing an investment of \$250,000,000. The use of propaganda in Iowa schools, for the benefit of a group of public utilities, was related in testimony given in the course of the Federal Trade Commission's investigation of public utility activities. It was alleged that members of the teaching force had received financial aid, that influence had been used to obtain the use of a favored textbook and that matter favorable to the utilities had been fed to the public through some 650 Iowa newspapers that received utilities' ad-

vertising. The Iowa State College maintained an experimental organization to study the utilization of cornstalks in the manufacture of wall-board. The upper Mississippi wild life and fish refuge, developed along the course of the Mississippi adjacent to Iowa and neighboring States, under the control of the Federal Government, was enlarged by land acquisitions, notably by the gift of 488 acres near McGregor, Iowa, largely timbered, belonging to James B. Munn.

ELECTION. Iowa, as the early home of Herbert Hoover and as the centre of much agricultural dissatisfaction, was a scene of acute political division in 1928. Hoover and Curtis, the Republican nominees, carried the State by a much reduced plurality as compared with 1924 and 1920, the Progressive vote of 1924 apparently going chiefly to Smith. The vote was: Hoover (Rep.), 623,818; Smith (Dem.), 378,936. An entirely Republican delegation of United States Representatives were elected, among whom all but two were the existing incumbents. Among the reelected Representatives was Gilbert N. Haugen, co-author of the McNary-Haugen Bill, who supported Hoover. The voters approved the proposal for an issue of \$100,000,000 of State bonds for standardizing the State highway system, by a vote of about two to one. John Hammill, Governor, was reelected on the Republican ticket.

OFFICERS. Governor, John Hammill; Lieutenant-Governor, Clem F. Kimball; Secretary of State, W. C. Ramsay; Treasurer, R. E. Johnson; Auditor, J. W. Long; Attorney-General, John Fletcher; Superintendent of Public Instruction, Agnes Samuelson; Secretary of Agriculture, Mark G. Thornburg.

JUDICIARY. Supreme Court Justices: Truman S. Stevens, Charles W. Vermillion, Frederick F. Faville, Lawrence DeGraff, William D. Evans, E. G. Albert, E. W. Morling.

IOWA, STATE UNIVERSITY OF. A coeducational State institution of higher learning at Iowa City, Iowa, founded in 1847. The enrollment for 1927-28 was 9249, of whom 4428 were women, and 4821 men, and for the autumn of 1928 the enrollment was 6711. The summer school registration totaled 4473. There were approximately 600 members on the faculty in the autumn of 1928. The general library contained 279,575 volumes, and the law library, 47,866. The income for 1927-28, including revolving funds, was \$6,440,898. Gifts to the university during the same period aggregated \$530,409; including: \$450,000 from the General Education Board and Rockefeller Foundation for a new medical building; and \$7500 from the Institute of Social and Religious Research in Character Education. A new \$5,000,000 general hospital was completed and occupied during the year, and a large addition was made to the nurses' home. President, Walter A. Jessup, Ph.D., LL.D.

IOWA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS. A State institution for the higher education of men and women at Ames, Iowa, founded in 1868. The enrollment for the autumn term of 1928 was 4022, distributed as follows: Agriculture, 819; agricultural engineering, 49; engineering, 1285; home economics, 1015; industrial science, 408; veterinary medicine, 139; and graduate college, 307. The first half of the summer session had a registration of 1530, and the second, 823. The faculty numbered 373 members. The endowment funds amounted to \$695,000, and the income for

the year to \$4,267,000. The library contained 160,000 volumes. Additions to the physical plant of the college during the year included the erection of a dairy industry building, a memorial union, and a chemical engineering building. President, Raymond Mollyneux Hughes.

IRAK or IRAQ. See MESOPOTAMIA.

IRELAND. The smaller of the two main British Isles, with an area of 32,586 square miles; politically divided into Northern and Southern Ireland, the former consisting of the parliamentary counties of Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone, and the parliamentary boroughs of Londonderry and Belfast; and the latter of the remaining 26 counties. The northern counties are known as Northern Ireland and are under a separate parliament and executive by the Government of Ireland Act of 1920 (see IRELAND, NORTHERN). The Southern counties constitute a self-governing dominion, known as the Irish Free State, under the treaty of Dec. 6, 1921. (See article, IRISH FREE STATE.) The total population of the Island June 13, 1921, was estimated at 4,485,000 as compared with 4,390,218 at the census of 1911. No census for all Ireland was taken in 1921. Statistics for Ireland as a whole are no longer available, but for the two divisions they will be found under their respective titles, IRELAND, NORTHERN, and IRISH FREE STATE.

IRELAND, NORTHERN. The northeastern part of Ireland, comprising six of the nine counties of Ulster: Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone, and the two parliamentary boroughs of Belfast and Londonderry. Capital, Belfast.

AREA, POPULATION, ETC. The area of Northern Ireland, exclusive of water, is 3,351,446 statute acres (also given as 5238 square miles). According to the census taken in 1926, the population was 1,256,322, as compared with 1,250,531 in 1911, the date of the previous census. The estimated population as of June 30, 1927, was 1,253,000. The movement of population in 1926 was: Births, 28,162; deaths, 18,827; marriages, 7228. The population of the capital, Belfast, was 415,007 in 1926. The following are the latest statistics (1927) with respect to education: Elementary education, 1970 public elementary schools with 202,437 pupils on roll; secondary education, 70 schools with 9012 pupils; technical education, 55 technical schools and 88 other centres with over 23,000 pupils; higher education, Queen's University at Belfast, with 111 professors and lecturers and 1236 students in 1928.

PRODUCTION, ETC. Northern Ireland is distinctly an agricultural section. The pursuit of this occupation employs as many people as all other occupations combined. The principal products are potatoes, cattle, bacon and hams, butter and eggs, the exportable surplus being shipped to Great Britain. The yield of the chief crops in 1926 was: Oats, 292,730 tons, potatoes, 1,068,800 tons, turnips, 876,010 tons, flax, 6030 tons, and hay, 1,095,975 tons. The livestock in 1927 was: Cattle, 697,345; sheep, 484,067; pigs, 236,285; goats, 52,769; horses used in agriculture, 88,758; and asses, 8544. The two principal industrial enterprises are linen manufacturing and shipbuilding, both centred at Belfast. Other important manufactures are ropes and twines, tobacco, soaps, aerated waters, biscuits, spirits, hosiery, and underwear. No separate figures for commerce of Northern Ireland are available, be-

cause they are included in the general figures for the United Kingdom.

FINANCE. The revenue accruing to the Northern Irish Exchequer in 1926-27 amounted to £11,173,000 and the expenditure to £11,137,000. The revenue for the year 1927-28 was estimated to amount to £11,203,000 and the expenditure to approximately the same sum.

COMMUNICATIONS. In addition to 765 miles of railway, the country is served by various inland waterways, supplemented by 180 miles of canals.

GOVERNMENT. Northern Ireland has a local parliament with restricted jurisdiction; it forms an integral part of Great Britain and is represented in the House of Commons by 13 members. The district is subject to the same taxation as that of Great Britain. The Governor in 1928 was the Duke of Abercorn. The ministry was as follows: Prime Minister, Viscount Craigavon; Finance, H. M. Pollock; Home Affairs, Sir R. Dawson Bates; Labor, J. M. Andrews; Education, Viscount Charlemont; Agriculture, E. M. Archdale; Commerce, J. M. Barbour.

IRISH FREE STATE. A self-governing dominion of Great Britain, constituted under the Irish Free State Government Act of December, 1922, which embodied the terms of the treaty of Dec. 6, 1921. Capital, Dublin.

AREA AND POPULATION. The Irish Free State comprises about five-sixths of the total area of all Ireland. According to the census of 1926, the total area was 17,019,155 statute acres or 26,592 square miles. The population, according to this same census, was 2,972,802, as compared with 3,139,688 in 1911. The loss in population is almost entirely due to emigration caused by unsatisfactory economic conditions in the dominion. The movement of population in 1926 was: Births, 61,176; deaths, 41,740; marriages, 13,570; immigrants (1926), 10,638; emigrants (1926), 29,412. Dublin, the capital, had a population (within its registration area) in 1911 of 397,957. At the census of 1926, the population was 419,156.

The second report of the Irish Free State census of population for 1926, which was published in the fall of 1928, showed that 57 per cent of the population above 12 years of age was gainfully occupied. The numerical distribution of the Free State's gainfully employed population by occupations was as follows: Agriculture, 672,129; fisheries, 5753; mining and quarrying, 2599; other "producers," including makers and repairers, 186,617; transport and communications, 64,952; Public administration (excluding professional men and typists), 37,333; professions (excluding clerks), 55,441; commerce, finance, and insurance, 85,008; domestic service, 90,198; clerks, typists, and other gainfully employed occupations, 107,632.

EDUCATION. No later statistics for education were available than those given in the preceding YEAR BOOK, when there were 5636 schools in operation with an enrollment of 493,382 pupils and approximately 13,000 teachers; 284 secondary schools, with 25,510 students; and a university attendance of 3088 and a professorial staff of 269.

PRODUCTION, ETC. The Free State had 3,832,000 acres under crops in 1926, or about 22.5 per cent of the total land area; 8,416,000 acres of grass and grazing mountain land; and 7514 acres under trees and shrubs. On June 1, 1927, there were 4,048,000 cattle, 1,178,000 swine, 3,121,000 sheep,

186,000 goats, 318,000 horses (used for agriculture), 197,000 asses, and 19,000 mules. The area and production of the principal crops in 1927 were as follows:

CROPS: AREA AND PRODUCTION, 1927

Crop	Area ^b	Pro- duction ^c
Wheat	34	1,421
Barley	121	6,295
Oats	645	46,735
Potatoes	365	91,212
Turnips	183	3,478 ^a
Hay	2,183	4,992 ^a

^a Unit, long ton; ^b thousands of acres; ^c thousands of units—bushels except as indicated.

There was evidence of a gradual improvement in the fishing industry. The 1927 catch of all sea fish was officially estimated at 33,000 tons valued at £2,372,000. The mineral resources include: Coal, clay, copper ore, gravel and sand, igneous rock, limestone, ochre, umber, sandstone, and slate. The mineral resources had not been developed to any great extent. The principal industries were the preparation of dairy and meat products, hoot and shoe making, the manufacture of confectioneries, biscuits, and woollens, and brewing and distilling.

The completion of the hydro-electric project on the Shannon River near Limerick was expected to remedy an outstanding bar to industrial progress through the provision of cheap power. The Shannon works, which were to cost \$30,000,000 and provide 90,000 horse power in the initial stage of development, were progressing rapidly and the generators were expected to be ready to turn over toward the close of 1929. The capacity, however, was about twice that of the Free State's existing consumption, so that a very considerable amount of missionary effort was considered necessary in order to bring the domestic load up to the point where cheap industrial power would become a reality. The Electricity Commission appointed by the Government was (December, 1928) wiring houses in some 30 towns in Leinster Province, and owners were to be permitted to repay the cost of installation on an installment basis over a period of ten years. The system was to be extended later to approximately 100 towns of more than 500 population when the entire network for the Shannon scheme will have been completed.

COMMERCE. In the calendar year 1927, the exports of the Irish Free State were valued at \$214,701,000 and the imports at \$295,565,000. The adverse trade balance in that year was the smallest in the four years since separate trade statistics had been maintained, imports having declined slightly and exports having gained by nearly \$15,000,000 or 7 per cent as compared with 1926. Exports in 1926 were valued at \$200,087,000 and imports at \$295,896,000. The export price index of agricultural produce, the dominant factor in export trade, averaged 148.8 in 1927 as compared with 157.7 in 1926, so that the increase in the volume of cross-channel shipments was substantially more than the gain in value. Great Britain supplied 66.8 per cent of the imports in 1927 and received 84.6 per cent of the exports. Similar figures for the United States were 7.7 per cent and 1.0 per cent.

FINANCE. The Irish Free State budget proposals for the fiscal year ending Mar. 31, 1929, included the extension of the tariff on automotive imports to commercial vehicles and to all tires,

and an increase in the duty on sugar. Total expenditure for the fiscal year was estimated at £26,298,000, which compares with £26,080,681 for the 1927-28 year; of this amount, £2,235,000 was considered non-recurrent and was to be cared for from the loan fund. Ordinary receipts were expected to total £22,914,000, leaving a deficit of approximately £1,149,000, which was to be met by changes in the schedule of collection of the income tax, property tax, and the beer excise. Ordinary receipts in 1927-28 totaled £24,123,270, in addition to which the 5 per cent second national loan brought proceeds of £6,889,000; £2,500,000 of this was apparently appropriated for the redemption of short-dated bills, leaving a treasury surplus on Mar. 31, 1928, of £2,377,581 and outstanding temporary borrowings of £1,250,000.

The Currency Commission, appointed in 1926, to carry out the provisions of the currency reform, issued on Sept. 10, 1928, legal tender notes of the Free State in £1, £5, and 10-shilling denominations. The higher denominations of the new currency were not expected to be available for several months. The new tender was guaranteed by the Government and was convertible, pound for pound, into sterling.

COMMUNICATIONS. In 1927, 13,494 vessels of 9,262,000 net registered tons entered the ports of the Free State in the foreign trade, and 13,368 vessels of 9,282,000 tons cleared. The accompanying table gives the latest available statistics on railways in the country.

RAILWAY STATISTICS, 1926

Length of line	miles..	3,028

Gross receipts equivalent	\$1000..	25,530

GOVERNMENT. The Irish Free State has a written constitution which provides that her status shall be similar to that of the Dominion of Canada. It has a coequal status with the other dominions of the United Kingdom, has complete control of its economic life, with a customs boundary right against all nations, including Great Britain and Northern Ireland. The Governor-General in 1928 was James MacNeill, appointed Dec. 6, 1927. The executive council as organized in October, 1927, was as follows: President, William T. Cosgrave; Vice President, Finance, Posts and Telegraphs, Ernest Blythe; Defense, Desmond Fitzgerald; Industry and Commerce and External Affairs, Patrick McGilligan; Education, J. Marcus O'Sullivan; Lands and Agriculture, Patrick Hogan; Local Government and Public Health, Richard Mulcahy; Fisheries, Finian Lynch.

HISTORY. After the rather hectic year 1927, with its general elections and the assassination of Kevin O'Higgins, the year 1928 seemed rather dull by comparison, although steady progress was made along economic lines. President Cosgrave visited the United States in January and early February, and sought throughout his wide and enthusiastic tour of the country to undo the work of the de Valera faction in undermining the

Government of the Free State. Mr. Cosgrave reiterated time and again the fact that Ireland had taken her place among the free nations of the world and her future lay in building up and strengthening the present system rather than tearing it down and demanding absolute freedom such as de Valera and his followers sought. Throughout the entire year relations with Northern Ireland remained pacific and the Free State Government took occasion to announce that it would not seek to unite the two sections of the island by coercive measures but expected such an occurrence to happen naturally in a few generations. Members of the Government also expressed publicly their satisfaction with the dominion status of the country. The sessions of Parliament were orderly and most of the time was spent working over government measures.

IRISH LANGUAGE AND LITERATURE.

IRON. See CHEMISTRY, INDUSTRIAL.

IRON AND STEEL. The iron ore mined in the United States in 1928, exclusive of ore that contained 5 per cent or more of manganese in the natural state, was estimated by the U. S. Bureau of Mines, at 62,151,000 gross tons, an increase of nearly 1 per cent, as compared with that mined in 1927. The ore shipped from the mines in 1928 was estimated at 63,244,000 gross tons, valued at \$154,491,000, an increase of 3 per cent in quantity and of 2 per cent in total value as compared with the figures for 1927. The average value of the ore per gross ton at the mines in 1928 was estimated at \$2.44, as compared with a valuation of \$2.47 in 1927. The stocks of iron ore at the mines, mainly in Michigan and Minnesota, apparently decreased from 10,104,673 gross tons in 1927, to 9,266,000 gross tons in 1928, or 8 per cent.

The Bureau of Mines estimates were based on preliminary figures furnished by producers who in 1927 mined about 99 per cent of the total iron ore. They showed the totals for the principal iron-ore-producing States, and, by grouping together certain States, the totals for the Lake Superior district and for groups of Southeastern, Northeastern, and Western States. About 85 per cent of the iron ore shipped in 1928 came from the Lake Superior district, in which approximately 52,467,000 gross tons were mined and 53,610,000 tons were shipped, increases of 2 and 5 per cent, respectively, as compared with the quantities mined and shipped in 1927. The ore shipped in 1928 was valued at the mines at \$133,543,000, an increase of 5 per cent.

These totals include the ore from mines in southern Wisconsin and ore shipped by rail as well as by water from all mines, but exclude manganiferous ores amounting to approximately 1,080,000 gross tons in 1928, and 1,300,084 tons in 1927 that contained 5 per cent or more of manganese in the natural state. The ore is chiefly hematite. The stocks of iron ore in this district apparently decreased from 8,850,638 gross tons in 1927 to 7,980,000 tons in 1928, or 10 per cent. The stocks at the end of 1928 were about 1,382,000 tons less than the average for the preceding 5 years. The shipments of iron ore by water from the Lake Superior district in 1928 (including manganiferous iron ores), according to the Lake Superior Iron Ore Association, amounted to 53,980,874 gross tons, an increase of 6 per cent as compared with these shipments in 1927. The aver-

age value of the ore at the mines in the Lake Superior district in 1928 was \$2.49 a ton; in 1927 it was \$2.50.

The Southeastern States, which constitute the second largest iron-ore producing area, including the Birmingham and Chattanooga districts, mined approximately 6,646,000 gross tons of iron ore in 1928, a decrease of 2 per cent as compared with 1927. The shipments of iron ore from mines in these States in 1928 amounted to 6,462,000 gross tons, valued at \$12,784,000, decreases of 6 and 8 per cent, respectively, in quantity and value as compared with 1927. The ore is mainly hematite; brown ore and magnetite come next in order. The average value of the ore produced in these States in 1928 per gross ton was \$1.98; in 1927 it was \$2.04. The stocks of iron ore at the mines in this group of States, mainly in the Birmingham district, increased from 873,539 gross tons in 1927 to 1,057,000 gross tons in 1928. These stocks were about 286,000 tons more than the average for the preceding five years.

The Northeastern States, which include the Adirondack district, New York, and the Cornwall district, Pennsylvania, in 1928 mined 1,980,000 gross tons of iron ore and shipped 2,114,000 tons, valued at \$6,596,000, decreases of 12 per cent in quantity mined, 7 per cent in quantity shipped, and 17 per cent in value of shipments, compared with 1927. The stocks of iron ore in this group of States decreased from 368,331 gross tons in 1927 to 217,000 gross tons in 1928. These stocks were considerably less than were usually carried over at these mines, being about 246,000 tons below the average for the preceding 5 years. The average value of the ore in these States in 1928 per gross ton was \$3.12; in 1927 it was \$3.53. By far the greater part of this ore was magnetite.

The Western States which ordinarily produce iron ore, in the order of their importance, are Wyoming, Utah, New Mexico, Colorado, Montana, and Washington. Occasionally California, Idaho, and Nevada contribute small amounts. All the ore from Wyoming, New Mexico, and Colorado and most of that from Utah is used for the manufacture of pig iron. Much of the remainder is used as a flux in smelting copper and the precious metals. It is estimated that the Western States mined and shipped in 1928 approximately 1,058,000 gross tons of iron ore, valued at \$1,568,000, a decrease of 2 per cent in the quantities mined and shipped but an increase of 2 per cent in value of shipments as compared with 1927. The ore comprises hematite, magnetite, and brown ore.

IMPORTS AND EXPORTS. According to the statistics of imports and exports compiled from the records of the Bureau of Foreign and Domestic Commerce, of the Department of Commerce, the imports of iron ore reported for the year ended Dec. 31, 1928, amounted 2,452,646 tons valued at \$5,428,019 as against 2,620,717 tons valued at \$6,068,283 in 1927. Exports were 1,282,306 tons valued at \$4,797,881 in 1928 and 898,793 tons valued at \$3,425,435 in 1927.

The accompanying table shows the quantity and value of the iron ore mined and shipped in the United States by the principal producing States. The figures for 1927 are final, but those for 1928 are subject to revision.

ESTIMATES OF IRON ORE MINED AND SHIPPED IN THE UNITED STATES IN 1928 AND ACTUAL OUTPUT IN 1927

District	Ore mined		Ore shipped			
	Gross tons	1928	Gross tons	Value	Gross tons	Value
	1927		1927		1928

PIG IRON. The production of pig iron in 1928 was exceeded in only five other years in the history of the industry, and three of those were the War years of 1916, 1917, and 1918. The total production for 1928 was 37,837,804 gross tons, an increase of 4.4 per cent as compared with 36,565,645 gross tons in 1927, and 40,361,146 tons in 1923 which was the record year in the industry. Prices, however, reached the lowest point since 1915 in mid-year, but recovered in the late months of the year to a point higher than any since the first half of 1927. The *Iron Age* composite average for July, 1928, was \$17.10, as against \$17.73 in February and March, and \$18.59 in December, which was the year's peak. The composite average for the year was \$17.67, the lowest for any year since 1915. According to estimates of the *Iron Age* the production was brought from below normal to 15 per cent above normal at the end of the year. Estimates of the world's pig-iron output in 1928 were 86,230,000 gross tons, or an increase of 1.1 per cent over the 85,270,000 tons produced in 1927, although it was 10.95 per cent more than the 77,720,000 tons produced in 1913.

STEEL. The high rate of pig-iron production was exceeded by the output of steel ingots in 1928, which far surpassed that of the previous year, the output amounting to 50,400,000 (estimated), as against 43,776,717 gross tons, in 1927. The estimated daily output of ingots reached a record in March, 1927, which was broken in October, when a new peak was established at 4,647,891 tons.

Although it was expected at the beginning of 1928 that the steel trade would recover to some extent from the recession of 1927 the degree of prosperity attained was beyond all expectations. Rated in figures, the year 1928 witnessed 86 per cent of possible production as compared with 75 per cent in 1927 and 81 per cent in 1926. During 1928 the industry made a new record in steel output, in spite of poor railroad demand, reached a high production record, maintained a stable market with a steady demand which permitted of more uniform and economical operation of mills, and an almost unprecedented scale of output in the summer months, with

production in December beyond all expectations. Toward the end of 1928 car orders and car-building programmes gave a new impetus to demands for steel, while on the basis of the year's demand the automobile industry took 18 per cent of the output as compared with the highest previous percentage of 14.5 in 1926 and for the first time in the industry took the lead in the consumption of steel. A feature of the 1929 situation was the important part taken by price advances and attempted advances. In order to get prices with a profit in them the expedient most resorted to, with varying degree of success, was the announcement of an advance and then the free booking of immediate business at the price previously prevailing, or putting a time limit on the receipt of specifications on lower-priced business.

In spite of the fact that railroad tonnages were not satisfactory, the building trade more than compensated for this shortcoming. The building volume was remarkable and the number of large contracts for structural steel during the year was notable. The estimated total of fabricating contracts reached approximately 3,250,000 tons, or 6 per cent above the high record of 3,060,000 tons in 1927. Large steel orders from agricultural implement works attracted considerable attention during the year, and it was probable that it was the best year the steel industry had known for that trade, with prospects encouraging for 1929. The automobile dealers together with manufacturers of agricultural machinery were largely responsible for raising the sheet output by a large margin, or close to 5,000,000 tons, as compared with 4,565,000 tons in 1926, the previous high record.

WORLD PRODUCTION. The accompanying tables from the *Iron Age* give the world's production of iron and steel for the year before the War and later years.

As judged by the exports of the six leading exporting nations of the world, the world consumption of steel did not expand in 1928. Estimates placed the combined exports of these nations at 20,500,000 in 1928, although final figures might increase the total slightly. Imports into these same six countries also fell off noticeably during the year, the estimated total being 6,

600,000 as contrasted with 8,100,000 tons in 1927, or a decrease of 18.5 per cent. These estimates did not include scrap, which in the case of American and British exports exceeded all recent records. The excess of exports over imports evident in former years was further increased during the year, indicating that the world's consumption of steel, particularly of the non-producing nations, had more nearly reached normal proportions. The excess of exports over imports in 1928 was 13,900,000 tons; in 1925 it was 10,190,000 tons. The outstanding feature in imports was the sharp decline in the German and British volume. American increase in steel exports for 1928 was 2,400,000 tons or the largest increase since the War.

TABLE OF WORLD PRODUCTION OF PIG IRON IN MILLIONS OF GROSS TONS

Country	1913	1926	1927	1928 *

Total	74.83	91.79	100.18	107.49

* Partly estimated. Lorraine's output is included in Germany's in 1913, but in that of France since 1918.

As in the past, Canada was the largest importer of American steel products in 1928, taking 41 per cent of the total, as compared with 38½ per cent in 1927 and 39 per cent in 1926. Exports to Japan in 1928 also increased, 14½ per cent of the American exports going to this market, as compared with 12½ per cent in 1927. An important development of the year was the institution of a joint effort, on a large scale, to increase American foreign trade in iron and steel. To cultivate the foreign markets more ef-

fectively, the Steel Corporation and the Bethlehem Company formed a common export organization, the Steel Export Association of America, thereby providing a single outlet for 75 to 80 per cent of the rolled steel shipped out of the country. Imports remained practically stationary for the year.

The output of steel in Great Britain in 1928 amounted to 8,525,100 tons, as compared with 9,097,000 tons in 1927. Iron production for 1928 was 6,611,300 tons as against 7,292,900 in the preceding year. There were 132 furnaces in operation at the end of 1928.

The iron and steel industry in France during 1928 was characterized by favorable production, sales, and profits, and an expanding domestic market, all of which were responsible for excellent conditions at the end of the year. Records were established in both the production of pig iron and the output of steel, the estimated figures being 10,100,000 metric tons for pig iron, and 9,300,000 metric tons for steel, as compared with 9,293,000 and 8,275,000 metric tons, respectively, in 1927. In the case of exports of iron and steel, the heavy movements during November and December, following the lockout in the German mills, brought the figures up for the entire year to compare favorably with 1927. The high production level reached at the end of the year would continue, it was pointed out, into 1929, since there was a heavy domestic consumption of fabricating and construction items and a stronger demand from the colonies, Turkey, and the Balkan States. Labor conditions were generally satisfactory, and strikes of minor importance; some wage increases occurred and others were expected because of the continued rise in living costs; and there was a continued shortage of common labor. Total exports of steel from France amounted to 4,490,000 tons.

According to estimates the production and export of steel in Germany in 1928 equaled the 1913 figures, Germany being second only to the United States in world production and world export. Production for the year 1928 was 11,804,330 tons, as compared with 13,102,528 tons in 1927. It was estimated that about 1,000,000 tons of this decrease could be attributed to the lockout which occurred in November. Orders on the books of the Western Steel Trust at the end of the year were 99 per cent of the average figure during the preceding business year.

ITALIAN LITERATURE. A survey of Italy's literary activity in 1928 disclosed a season accentuated by several polemics, a theatrical crisis, a wave of "journalistic literature," and the untimely death of the analytical novelist Italo Svevo.

The current polemic on the technique of prose creations, undertaken by a group of young writers (Angioletti, Flora, Perri, and others), had its note of interest and carried with it a modest exchange of opinions and courtesies as to whether narrative art of the future should base its creation on the foundations of literary tradition and history, or else was to find its medium in introspection, in high-powered "cerebration" with

complete destruction of all "stilted" and "abortive" conventionalities of past schools and theories. The controversy closed with no perceptible influence made on the literary groups in Italy, and aside from having furnished interesting subject matter for several literary journals it was a useless one.

The theatrical crisis centring on the cinema versus legitimate drama, foreign drama versus native drama appeared to be more alarm than general evil. The *Giornale dell'Arte* (Milan) took up in detail the pros and cons as to the drop in box-office receipts of the legitimate stage productions as compared with the increase in those of the motion pictures, the decrease in number of native drama productions as compared to the increase in foreign productions and adaptations. From these articles by leading dramatists and actors it may be inferred that for the most part Italian dramatists were not viewing the situation with alarm considering the fact that if the crisis existed in Italy it existed also to a marked degree in countries throughout the world. The cinema flourished this season in Italy, as also in France, in America, everywhere. Nowhere had the attendance for the legitimate drama dropped to an alarming degree; not even in Italy considering the high price of admission for the theatre. The crisis, if nothing else, brought the Italian dramatist *vis à vis* with the fact that the "psychology of the theatre crowd" was to be taken more and more into consideration and that both theme and technique must undergo revision and readjustment.

The publication in book-form of journalistic articles by highly organized publishing houses enjoyed a most ambitious and strenuous season. The authors, especially the most popular, could not keep up with the demand for more material and so found it convenient to compile, revise, and publish their newspaper contributions. This wave of "journalistic literature" was the revelation of a delicate and wholesome humor on the part of distinguished *littérateurs*; their "columns" possessed literary qualities of the first order. One is almost tempted to say that this genre has given rise to the school of contemporary humor in Italy. To mention a few of these books, first in order come two of Massimo Bontempelli. *La donna del Nadir* (Milan) consists of a potpourri of impressions made on current topics ranging anywhere from poker to ethics. His other book, *Donna nel sole, ed idilli* (Milan), is a collection of sixteen short stories worked in delicate satire and touching on the element of mystery and fantasy. These articles were resuscitated from the newspaper files of 1922-27. Arturo Lanocita in his *Scrittori del tempo nostro* (Writers of Today; Milan) and Lucio D'Ambra in *Trent'anni di vita letteraria* (Thirty Years of Literary Life; Milan), two volumes of which were published (*La partenza a gonfie vele* and *Il viaggio a furia di remi*), present studies and interviews on the leading men of letters in Italy and abroad. Under this category come three books written on America: *Vita d'America* (Life in America) and *New York ciclone di gente* (New York a Cyclone of People), by Arnaldo Fraccaroli; *Scoperta dell'America cattolica* (Discovery of Catholic America), by Silvio D'Amico. The title of the last book, taken on the occasion of the Eucharistic Congress at Chicago, misleads as to the content which in reality is a study of the American people. Curiously enough both Fraccaroli and D'Amico were

play-wrights and journalists and their books bear marked resemblances both in observations and presentation of studies. Both authors view America optimistically. They have presented a series of pictures taken from life plus the dramatic touch: a series of short, swift-moving one-act episodes on the life, the morals, and the culture of American people.

September witnessed the passing of Italo Svevo, better known among his friends by the name of Ettore Schmitt, paint merchant of Trieste. (See his Biography.) His work as a novelist was just attracting universal criticism when death overtook him in an automobile accident, thus depriving him of the opportunity of defense of his theses in the analytical and psycho-analytical novel. His work consists of three novels only, yet he had ushered in the analytical school in Italy, and for that matter anticipated the European school, long before James Joyce, Marcel Proust, and Valéry Larbaud attained fame. It suffices to call attention to the act that Svevo's masterful novel, *A Life*, was published in 1893 and *Senility* in 1898. Italo Svevo waited a lifetime for the laurels that went to the others in the field that he unconsciously anticipated. In 1923 he published the *Conscience of Zeno* which received favorable criticism in Italy but failed to cross the geographical boundaries until James Joyce, his personal friend and a resident of Trieste, Benjamin Crémieux, Prezzolini, and Larbaud, combined to focus the world's attention on his art.

FICTION. A wealth of novels was published during the year, a record for fiction. With here and there a favor cast for bizarre themes the public as a whole leaned decidedly toward the old order of fictional literature for spiritual enjoyment. Deledda, Brocchi, Vivanti, Chiesa were responsible for the "best sellers," while Viani, Campanile, Perri, Bontempelli furnished the shocks and the headaches. The Nobel Prize of 1926, awarded to Grazia Deledda, seems to have been a timely honor for over a score of years' toil and productiveness in prose literature. Her contribution in 1928, *Il vecchio e i fanciulli* (The Old and the Young; Milan), is a tale of country folk molded out of simplicity and local color. It is representative of all of Deledda's "types," and the author seems to breathe into her characters something of her own modesty and sincerity of purpose. In connection with this type of regional novel, a word could be said with reference to Marino Moretti's recent book, *Il trono dei poveri* (The King of the Poor; Milan). This novel bears marked resemblance to Deledda's simple treatment of subject matter, with exception, however, that Moretti is the champion of the destitute and the helpless as against Deledda's idealization of the poor but not helpless. Virgilio Brocchi, who for many years has fondled the theme of the "eternal triangle," whose whole output has always been reflective of optimism, presents another "triangular" novel in two long volumes, *Il sapore della rita* (A Taste of Life; Milan). This time, however, Brocchi has gone to the opposite of his optimism. Anne Vivanti offers as her annual novel, *Mea culpa*, a pseudo-political theme centring about a girl Sinn-Feiner and an Egyptian patriot—a love story with a cinematographic setting that accounts for some of the novel's popularity. In spite of a few shortcomings there is always the redeeming side of Vivanti's writing: spontaneity and freshness of style,

"dashing" episodes, and dramatic situations.

To Francesco Chiesa go the highest honors for the dozen or so "prize novels" of the year (not without some differences of opinions in the literary circles) for his novel, *Villadorna* (Milan), winning the Mondadori Academy Prize of 10,000 lire. Francesco Chiesa's meteoric rise in popularity was contingent almost exclusively on the merits of *Villadorna* in spite of the fact that not a few of his previous creations are known universally in translations (see *Romantic Review* vol. xx, No. 1). The novel is a bucolic tale embracing a brief episode in the life of a few beings, —an idyll in prose suggestive of the serenity found in Vergilian poetry. Francesco Chiesa has expressed himself here in the Manzonian creed: the individual is to serve and not to enjoy; he is to preoccupy himself in aiding the afflicted; he is to withdraw from materialistic cupidity and turn to religion and meditation.

To Bianca de Mai went the prize of the *Trenta* (thirty leading publishers' prize) for her novel *Pagare e tacere* (Pay the Penalty in Silence; Milan), a masterful characterization of the heroine of the novel, Theresa Bardi. The creation is recommendable for its sound structure, its well-worked details, and its keen penetration in humanity. Giuseppe Fanciulli wrote the best novel of the year for youths, *Fiore* (Florence), receiving the Bempored Prize.

Pitted against the foregoing novelists of the conventional order, more or less, may be considered Lorenzo Viani, *littérateur* and jack-of-all-trades (barber, poet, painter), who presents an enigma in the literary output of 1928 in his novel, *sans méthode et sans forme*, *Angiò, uomo d'acqua* (Angiò, Man of the Seas; Milan) in which myriads of sea people pass in display before our eyes; their salient characteristics sharply outlined: brutality, superstition, affection, hatred. Another puzzling author is Achille Campanile, who during the year threw Italian critics into confusion with respect to his two books published recently. Although a few commend his humorous novels, the usual run of adjectives from the critics' mouths had an unsavory sound. The public, however, quickly purchased fifty thousand copies of his first novel, *Ma che cosa è quest'amore?* (What Is This Thing Called Love?; Milan). His second novel, *Se la luna mi porta fortuna* (If the Moon Brings me Luck; Milan), abounds in comic situations and libertine observations. Francesco Perri's *Emigranti* (Milan) was another novel that comes under no particular category or school. It received a prize of 10,000 lire from the Mondadori Academy. The story of the return of the emigrants is kept at a point of incandescence from cover to cover, teeming with effusions and extravagant emotions. Withal, it carries an undertone of fatality.

For a study on the trend of the contemporary novel, Giacomo Antonino's *Il romanzo contemporaneo in Italia* (Aquila) should be read, discussing, as it does, Panzini, Deledda, Pirandello, De Roberto, Mario Puccini, Rosso di San Secondo, Vergani, Saponari, and minor novelists. The studies are intentionally informative rather than critical. The conclusion, although giving an accurate résumé as to the merits of the contemporary novel, is pessimistic and negative with regard to the future.

SHORT STORIES. Three volumes of short stories were especially popular during the year. *La don-*

na nel sole e altri idilli, a collection of sixteen short stories, has been discussed above in the paragraph on journalistic literature. Guido Milanese's *Quando la terra era grande* (When the Earth Was Large; Milan) includes stories based on the reminiscences of the author's service in the navy. While they lack plots of palpitating interest (a few chapters are travelogues), they possess by contrast abundant humor. At times the prose is so delicately worked out that it reads like poetry. From the prolific pen of Luciano Zuccoli came *I ragazzi se ne vanno* (The Children Scamper Away, a novelette; Milan), together with five short stories (a few are reprints). *I ragazzi se ne vanno* offers a psychological study on the naïveté and the innocence of adolescence. The rest of the stories in this volume are delightful for their originality of theme and for their sparkling style. Giuseppe Morpurgo, novelist and short-story writer, published *Le più belle novelle italiane dai sette Savii a Pirandello* (Milan), containing a selection of short stories representative of every century of Italian literature. Yet the volume makes a useful handbook with notes and comments on the writings of the greatest of the Italian *novellieri*.

THEATRE. The activity revolving about the theatrical crisis, discussed in the introductory paragraph, did not bring a single outstanding production. At best the season has been enlivened by new plays and revivals of dramatists of long standing, Pirandello, Chiarelli, Sem Benelli, Nicodemi, Lopez, and others. In *La nuova colonia* (The New Colony: Florence), Pirandello digressed somewhat from the drama of "art creates character." His theme here was the masses versus laws and conventions. The play had the usual Pirandellian success. Luigi Chiarelli, author of *The Mask and the Face*, the nearest approach to a dramatic sensation of the past decade, continues in the theatre of caricature and of the grotesque in *Jolly*. Sem Benelli, the author of *The Jest*, found it profitable to revive his *Ritorna della Gorgona*, first staged 15 years previously. Dario Nicodemi, the most successful of Italian producers, contributed as his play of the year, *La madonna*, in no way a departure from his list of good plays. It deals with the theme "in love with love" and "right you are if you think so." Sabatino Lopez, author of the unforgettable *Gli ultimi zingari* (The Last of the Gypsies—Strolling players) contributed a "hit" in *Signora Rosa*, a play spun on the frailties of reality, heart beats, and intricate emotions. Lopez continued in this play his drama of subtleties and reflexes. Enrico Corradini, the ultra-nationalist, waited two years to see the production of his *Giulio Cesare* published in 1926 at Milan. Several gala performances of the play were given in the open-air theatre at Taormina. Caesar is depicted by Corradini as being the greatest of all heroes, a complex and versatile genius, little understood by the Romans. Anton appears in this tragedy as an opportunist, Cassius a resentful egotist, and Brutus a sentimental nonentity. Another historical play (inspired by Fascism) was G. Cassi's *L'esule di San Casciano* (The Exile of San Casciano; Florence) written in commemoration of the fourth centenary after the death of Niccolò Machiavelli. The play, in the form of a dramatic poem, elaborates on the life and the milieu of the Florentine Secretary. Historically the poem offers a résumé of the salient events on the political aspects of Italy under the de' Medici. The

merits of the play rest in the sympathetic and forceful characterization of the "Supreme Politician," forerunner of modern nationalism.

Foreign plays and adaptations came for the most part via France (Rostand, Bernard, Guitry, Amiel). Shakespeare, Ibsen, Bernard Shaw had much popularity. From America *Broadway* and the musical comedy *Rose Marie* played to capacity audiences.

A critical study on the contemporary theatre, Giuseppe Ruberti's *Storia del teatro contemporaneo* (Bologna), appeared in three volumes, being a critical survey of the European drama with particular study of the Italian theatre with its cross-currents into the theatre throughout the world.

POETRY. Of the usual three or four books of poems published monthly, one especially stands in relief: *I canti dei goliardi* (Milan) by Corrado Corradino, revised and rearranged with a critical preface and exhaustive bibliography by Francesco Pico, consists of *ballades* and *rondeaux* translated from poems and legends on the mediæval students who followed a Bacchic and carnal philosophy. Another book of fine poems, *Il volto nemico* (The Enemy's Face; Ancona) was contributed by Giorgio Umami who divides his time at present between researches in biological sciences and studies in poetry. The poems contained in this volume are couched in a philosophical vein and reflect the author's love for nature. The structure for his meter is disciplined, possessing elementary melody but little nuance. Vincenzo Gerace earned the title of poet laureate for the year, critics disagreeing, for his *La fontana nella foresta* (Milan), a mixture of lyricism and mysticism. Mention should be made of an *Anthologie de la poésie italienne* (Paris), poems compiled and translated from the Italian by Lionello Fiumi in coöperation with the "italianisants." Signor Fiumi, erstwhile Italian poet who resided in Paris, undertook a huge task but certainly a very useful one in the preparation of this anthology. More literary ambassadors of this type are needed to help universalize Italian literature. The French press expressed gratitude for a book that brings within reach the best poems of Italy's poets of the day.

For a critical study of the poets Salvatore di Giacomo, Trilussa, Marinetti, and Govoni, Paolo Orano's *Contemporanei* (Milan), dealing with poetry of the dialects and poetry of the futurists, may be read.

VARIA. The Vincenzo Monti centenary celebrated during the year was fruitful in studies and researches made on the poet. Following is a list of the most important works (1927-1928): *Poésie* with an introductory essay, notes, and comments, by Francesco Flora (Florence); *Epistolario di Vincenzo Monti*, a collection of letters with notes by Alfredo Bertoldi (Florence); *Le più belle pagine di V. Monti*, selected by U. Fracchia (Milan); *Tragedie, Poemeti, Liriche*, compiled by G. F. Gobbi (Milan); *Liriche scelte, Cantiche, Canti e poemi scelti*, in three volumes, selected poems of Monti by G. Peppi (Signorelli); *Gemme liriche e La Feroniade*, with introduction and notes by G. Natali (Palermo); *V. Monti, la vita, l'opera, i tempi* (The Life, the Work, and Times of V. Monti), by Enrico Bevilacqua (Florence); *La vita e l'opera di V. Monti* (The Life and Works of V. Monti), by G. Bustico (Trevisini); *V. Monti e Giuseppe Piazza*, by Carmelina Nasselli (Palermo).

Tolstoi's centenary was celebrated with much distinction judging from the ceremonies through Italy. An exhaustive bibliography was compiled in connection with this centenary consisting of over five hundred studies made on the great Russian by Italian, Russian, French, German, and English scholars. For the list and other comments, see *Fiera letteraria* in its September issues. Arturo Lancellotti published *Tolstoi intimo* (Rome). Professor E. Lo Gatto, of the University of Naples, published the first of four volumes of the *History of Russian Literature*. The volume published deals with Russian literature from the period of conversion to Christianity (Eleventh century) to the reformatory period of Peter the Great (sixteenth century). Professor Lo Gatto also published a study of Russian literature in the twentieth century, *La letteratura russa, secolo XX* (Home).

The editor Formiggini of Rome published an Italian "Who's Who" *Chi è?* In the notices on the important women the date of birth is omitted as a special courtesy. Antonio Carpi, the blind twenty-four-year-old scholar, made a commendable study of the most representative *littérateurs* of modern times in his book *Rappresentanti più noti della letteratura moderna* including such names as, Oriani, Goethe, Pirandello, Tolstoi, Tozzi, France, Unamuno, and others. Carpi had won the esteem of the leading scholars of Italy for his admirable interpretation of these European men of letters. The chapters on Pirandello and Goethe (discussion of Faust) were especially interesting for their lucid evaluations of the art of these two geniuses.

In France, Benjamin Crémieux published what appeared to be the best foreign study on contemporary Italian literature, *Panorama de la littérature italienne contemporaine* (Paris). It presents a keen analysis of contemporary culture. The regional classification of the authors makes an interesting outline, although it does tend to disregard the actual universality of some of their creations.

See also PHILOLOGY, MODERN.

ITALIAN SOMALILAND, sō-mā'lelānd. A colony and three protectorates of Italy, making up the territory that extends along the east coast of Africa from British Somaliland and Kenya Colony to the Juba River. Area, approximately 405,000 square miles; population, about 1,000,000 (about 1000 Italians). The colony was formerly known as Benadir, but the official title is now Italian Somaliland. It extends from 4°40' N. latitude to the mouth of the Juba River and is divided into three administrative districts. Mogadiscio is the capital with a population of about 20,700. The three protectorates are the Sultanate of the Mijertins, under an Italian commissioner who resides at Alula; the Territory of the Nogal between Cape Gabee and Cape Garad; the Sultanate of Obbia, extending from the northern boundary of the colony of Benadir to Cape Gerad, under an Italian commissioner, resident at the capital, Obbia. The chief occupations are agriculture and stock raising, the latter engaging about half the population. The principal exports are cotton, amber, iron, myrrh, copper, tobacco, and grains. The principal imports are cotton and cotton yarn, textiles, coffee, petroleum, rice, tobacco, sugar, fats, soap, cereals, flour, and preserved products. The total exports in 1926 amounted to 29,031,366 lire; the total imports, 129,441,852. The budget of Italian Soma-

liland for the year 1927-28 was as follows: Revenue proper of the colony, 21,240,000 lire; State contribution, 55,515,250 lire; extraordinary revenue, 3,750,000 lire; total, 80,505,250 lire. Civil expenditure, 3,750,000 lire; military, 30,579,100 lire; extraordinary expenditure, 7,649,000 lire; total, 80,505,250 lire; revenue and expenditure, 1928-29, 75,255,250 lire. The governor in 1928 was Count Cesare de Vecchi (appointed in 1923).

ITALO-TURKISH TREATY. See ARBITRATION, INTERNATIONAL.

ITALY. A constitutional monarchy of southern Europe, comprising, besides Italy proper, the islands of Sardinia, Sicily, Elba, and some 70 other small islands, together with the territory on the eastern shore of the Adriatic acquired as a result of the Treaty of St. Germain, and arrangement with Jugo-Slavia in 1920. Capital, Rome.

AREA AND POPULATION. The area of Italy before the war was 110,632 square miles, with a total population on Jan. 1, 1915, of 36,120,118. The area as a result of the survey made at the time of the census of 1921 is 119,710 square miles and the population according to that census, 38,756,433; estimated in 1927 at 40,548,683. The movement of population in 1927 was: Births, 1,121,072; deaths, 631,897; marriages, 296,293 (1926). The total number of emigrants in 1926 was 263,810, of whom 122,496 went to countries overseas. In 1926, 177,619 Italians returned to Italy, 39,524 coming from the United States and Canada. The cities with a population of more than 175,000 as estimated on Jan. 1, 1926, were as follows: Bologna, 227,447; Catania, 263,030; Florence, 265,799; Genoa, 333,320; Messina, 187,996; Milan, 879,424; Naples, 852,362; Palermo, 419,153; Rome, 758,569; Turin, 520,164; Trieste, 242,059; and Venice, 203,665.

EDUCATION. The latest figures available on education in the primary schools were those for 1924-25, when there were 3,644,606 pupils enrolled in the public elementary schools. In other institutions of all grades, other than infant schools, there were about 525,000 pupils enrolled. In the infant schools (5828) there were 27,192 children. In 1928 there were 25 universities, including four which were free, besides university courses given in certain lyceums. There were, in addition, several institutions of university rank, namely, the Institute of Higher Education at Florence, the Royal Scientific and Literary Academy at Milan, and the Higher Technical Institute of Milan. There are higher institutions for commercial education at Rome and other cities; also higher schools for agriculture and engineering, and various schools for technical education.

PRODUCTION, ETC. Of the total area of Italy, 32,761,000 acres, or 43 per cent, were under crops in 1926, 16,864,000 acres under permanent meadow and pasture, 5,299,000 acres in trees and shrubs, and 12,285,000 acres in woods and forests, 3,091,000 acres were uncultivated productive land, and the remainder unproductive land. In 1927 increased efforts were directed by the Government toward improving agricultural methods and increasing crops, especially wheat. This so-called "Battle for Grain" had for its object the reduction of cereal imports by better culture, and also by substituting in consumption rice and other articles produced in large quantities in Italy. The Government rendered assistance by premiums upon crops, loans at low rates of in-

terest, postponement of taxes, and sale of fertilizers at fixed prices, which broke the monopoly existing in the fertilizer industry. Instruction was also given in more scientific methods of operation. The crops of 1927, however, because of very adverse weather conditions, were in general inferior to those of recent years, especially as compared with the exceptional figures of 1926. Rice and fruits were the only important products showing increased yields.

CROPS: AREA AND PRODUCTION

Crop	Area (thousands of acres)		Production (thousands of units—bushels, except as indicated)	
	1926	1927	1926	1927
Wheat	12,146	12,320	220,642	195,808

^a Unit, metric ton. ^b Includes land carrying also one or more other crops. ^c Unit, gallon of oil. ^d Unit, gallon of wine.

According to the industrial census of Oct. 15, 1927, there were in Italy 728,150 establishments employing 3,965,500 employees. The number of employees by principal industries was as follows: Textiles, 636,687; transport and communications, 514,729; clothing, 490,789; machinery and related industries, 468,699; foodstuffs, 339,520; construction, 328,734; lumber and woodworking, 284,931.

The total value of mineral production, proper, in Italy in 1926 was \$29,773,000. The value of the principal metallurgical and mineral products in that year was as follows: Pig iron, \$14,383,000; crude steel, \$61,286,000; coke, \$7,031,000; mercury, \$3,639,000; lead, \$3,685,000.

Toward the close of the year it was announced that the Italian Government was launching an extensive scheme having for its prime objects the increase of population and the improvement of economic and agricultural conditions in the country. It recommended the increase of native population by approximately 10,000,000 in order to give the country a domestic consuming public great enough to make profitable all kinds of domestic industrial production; and, by bringing under cultivation—forcibly if necessary—all the potentially agricultural land of the country, to render the nation independent of the import of staple food supplies. At the same time it aimed to supply agrarian employment for a large part of the people overcrowded and underemployed in the urban centres, and to supply foodstuffs and employment for the increasing population. An important though subsidiary phase of the plan, it was hoped, would be the practical elimination of unemployment for a considerable number of years while the improvements are being carried out. The programme was expected to cost \$392,250,000 and to require fourteen years to carry out.

COMMERCE. Although the paper currency value of both imports and exports registered a decline in 1927 when compared with the preceding year, values expressed in dollars, as a result of the appreciation of the lire, were considerably higher in both cases with \$1,051,055,000 for imports and \$805,723,000 for exports. The import excess was \$245,332,000, as compared with \$280,638,000 in

1926. Export values (in dollars) were the highest ever attained, and imports the highest since 1920. The Government increased its efforts to improve the trade balance by endeavoring in every way to decrease imports, especially of luxury articles or goods which could be produced advantageously in the country itself, and to increase domestic production. Redoubled efforts were made to expand the hydro-electric industry, thus reducing the import requirements of coal.

For some years the United States had been the leading country in the import trade of Italy. In 1927 it furnished \$204,252,000 worth of goods, or approximately 19 per cent of the total trade. Germany held second place, furnishing about 10 per cent, followed by Great Britain, France, and British India. Germany, which for some years had held first place in the export trade of Italy, took in 1927 about 14 per cent of the total. The next most important market was the United States with about 10 per cent, followed by Great Britain, Switzerland, France, and Argentina. The articles making up the bulk of the imports from the United States were grain, cotton, petroleum products, lumber, metals, and coal. The articles constituting the bulk of the export trade with the United States were cheese, nuts, olive oil, fruits, tomato paste, rayon, felt hats, and wool. During 1928, foreign trade suffered from the high stabilization point of the lire. Imports increased and exports decreased, resulting in an adverse trade balance of nearly 7,000,000,000 lire as compared with 5,000,000,000 in 1927.

FINANCE. Preliminary figures for the fiscal year 1927-28 showed total receipts at 19,623,000,000 lire, as compared with 20,979,000,000 lire for 1926-27, a decrease of 1,356,000,000 lire. These receipts were, however, some 3,000,000 lire above budget estimates. The Government announced a surplus of revenues amounting to 227,000,000 lire. Italian budget estimates for the fiscal year, 1928-29, according to press articles, showed an estimated surplus of 271,000,000 lire. The estimates for both revenues and expenditures indicated a considerable reduction from the estimates of the 1927-28 period and a still greater decline from the actual returns for the 1926-27 period. The estimates for 1928-29 placed revenues at 17,643,000,000 lire and expenditures at 17,372,000,000 lire, whereas the corresponding estimates for the 1927-28 period were 19,513,000,000 lire and 18,747,000,000 lire, respectively. The final returns for the 1926-27 fiscal year were: Effective revenues, 21,450,000,000 lire; effective expenditures, 21,014,000,000 lire. The public debt at the close of 1928 was 86,500,000,000 lire.

COMMUNICATIONS. Most of the railways in Italy are controlled and operated by the Government. On Oct. 1, 1927, the total length of the network of State railways was 10,300 miles; 356 miles of railway were in course of construction; 775 miles of electrified line were in operation; and 215 miles were in the course of being transformed for operation by electricity. In addition, in 1926, there were 3055 miles owned by private companies, most of these being local lines of minor character. There was a considerable increase in train mileage during the fiscal year 1926-27 compared with the preceding year, as regards both passenger and freight trains. Volume of traffic and gross receipts had increased markedly in recent years.

A new high record was established in 1927 in the number and tonnage of ocean-going vessels (except sailing ships) calling at, and the cargo loaded and discharged in, the ports of Italy. However, the number of passengers both embarking and disembarking in Italian ports underwent a decline from the high level recorded in 1926. There were in 1926 237,987 vessels of 63,552,570 tons entered the ports of Italy in the foreign and domestic trade and 238,055 vessels of 63,644,516 tons cleared.

ARMY AND NAVY. Liability to military service beginning at the age of 20 and lasting for 19 years is compulsory and universal. The strength of the active army in 1927 was 17,684 officers and 283,200 men. See MILITARY PROGRESS.

The accompanying table from the *Statesman's Year Book* for 1928 shows the classification of the navy in 1926 and 1927.

	Completed at end of	
	1926	1927

Torpedo boats	58	55
Submarines	42	45

See NAVAL PROGRESS.

GOVERNMENT. Executive power is vested under the constitution in the King, who acts through a responsible ministry, and legislative power in the King and Parliament, the latter consisting of two chambers: a Senate, which on Jan. 1, 1927, had 373 senators and 10 members of the royal family, and a chamber of deputies, with 535 members. (See below.) The King in 1928 was Victor Emmanuel III, born Nov. 11, 1869, who succeeded his father, Humbert I, July 29, 1900. The cabinet was composed as follows: Head of the Government, Prime Minister, Secretary of State, Foreign Affairs, Interior, War, Marine, Aeronautics, Corporations, Benito Mussolini; Colonies, Luigi Federzoni; Justice, Alfredo Rocco; Finance, Count Volpi; Public Instruction, Pietro Fedele; Public Works, Giovanni Giuriati; National Economy, Giuseppe Belluzzo; Communications, Costanzo Ciano. On December 18, Mussolini assumed the portfolio of Colonies on the resignation of Luigi Federzoni.

HISTORY

The year for Italy was marked by internal reform and a comparatively quiet year in external affairs. The vexing problem of Tyrol is discussed under AUSTRIA, *History*. The outstanding event

in internal affairs was the virtual abolition of parliamentary government and the substitution thereof of control by the Grand Council of the Fascists. The first step was the approval by the cabinet of a measure on February 20, reducing the number of members in the Chamber of Deputies from 535 to 400. The candidates were to be selected by the associations of employers and employees and then submitted to the Grand Council. From the list, which was to include about 800 names, the Grand Council was to select 350 members and add fifty more from the cultural and spiritual leaders of the country, who, of course, must be ardent advocates of Fascism.

The power of the Grand Council to select the members of the Chamber of Deputies was interpreted in many quarters as meaning that it also had the power to select a successor to Mussolini, when he should step down from control of the Government. The list as finally approved was to be offered to the electorate, not the old electorate based on universal suffrage, but one selected because of the size of families, the amount of taxes paid, connection with the Government, or religious affiliations. There was to be no opposition list and the handpicked deputies must be accepted, or, if unsatisfactory, certain changes may be made if the Grand Council so wills it.

Thus passed in Italy the entire principle of free government and untrammelled elections. Mussolini, in defense of the new system, declared that the principle of popular sovereignty was extremely defective and the leadership of a chosen few must be substituted for it. The membership of the Senate was not changed very much although provision was made for the inclusion of some of the leaders of Fascism. The new electoral law was promulgated on March 17, and later adopted by both Houses of the legislature.

Besides the cabinet change noted above under *Government*, it should be mentioned that Count Volpi resigned as Minister of Finance and Pietro Fedele as Minister of Public Instruction. Count Volpi was succeeded by Senator Antonio Mosconi and Signor Fedele by Giuseppe Belluzzo, Minister of National Economy. Signor Belluzzo, in turn, was succeeded by Alessandro Martelli. Although no reason was allowed to filter through the press censor, it was felt in many quarters that these cabinet changes resulted from either fundamental disagreement with the Duce or from his desire to place younger men in office.

The final step in making the Grand Council of the Fascist party "the Government" of Italy occurred in the fall. On September 20, the Council approved a measure incorporating itself in the National Government. Summed up very briefly the work of the council under this law was to select the candidates for the Chamber of Deputies as mentioned above, provide for the successor to Mussolini, and nominate all the members of the Government at home and abroad. It thus acts as a unifying force in all the branches of government and remains the head of the Fascist party at the same time. The Grand Council was to hold a position placing it above the ordinary control of the State and was to hold secret meetings.

The bill was passed by the Senate on November 15 and by the Chamber of Deputies on December 8. This was the last act of the Chamber of Deputies, which had been elected in 1924 on the basis of universal suffrage. The next chamber, to be elected early in 1929, was to be selected in

accordance with the new electoral law described above. Thus did Mussolini and the Grand Council, which, after all, was his tool, fasten the grip of Fascism tighter around the economic and social life of Italy. One evidence of the strength of this grip was the reports current throughout the year that the Mafia and Vanditti societies of Sicily and Sardinia had been completely wiped out during the year. Whether this was actually true or whether it was only another rumor which had been circulated for several decades, time alone can tell.

IVORY COAST. A French colony, forming a constituent part of the government-general of French West Africa, situated between Liberia and the British Gold Coast. Area, about 121,976 square miles; population, estimated in 1926 at 1,724,545, of whom 1614 were Europeans. Binger-ville is the capital and has a European population of about 94. The principal commercial products are mahogany, palm oil and kernels, cacao, dried and smoked fish, cotton, and rubber. Some gold has been found. In 1926 the imports amounted to 181,580,971 francs and the exports to 213,819,198 francs. The budget of the colony for 1927 was fixed at 43,668,700 francs. The ports of the colony are visited by the vessels of several British, French, and Belgian steamship companies.

JACQUES, zhàks, GEN. BARON ALPHONSE DE DIXMUDE. Belgian soldier, died at Brussels, November 24. He was born at Stavelock, in 1858, and entered the Belgian national military school in 1876. Entering the army, he fought in the Congo in the early nineties, against Arab slave dealers. During the opening battle of the World War, at Liège, 1914, General Jacques commanded the Twelfth Regiment, one of the famous units of the Belgian Army. He was subsequently appointed commander of the Third Division, and after the war was placed in command of the Belgian Army. He accompanied King Albert on his visit to the United States in 1919, returning in 1921 as guest of honor at the American Legion's third annual convention, at Kansas City. General Jacques received seventeen military decorations, including the Grand Cross of the Order of Leopold I.

JAMAICA. A colony of Great Britain, consisting of the island of Jamaica, which is the largest in the British West Indies, and the following dependencies: Turks and Caicos Islands; Cayman Islands; Morant Cays; and Pedro Cays. Area of Jamaica, 4450 square miles; of the dependencies, 224 square miles. Population of Jamaica, according to the census of 1921, 858,118, including 660,420 blacks, 157,223 colored; 14,476 whites; 18,610 East Indians; and 3696 Chinese; estimated population at the end of 1926, 936,927. The movement of population in 1926 was: Births, 35,784; deaths, 19,072; marriages, 3981. Kingston, the capital, had a population of 62,707 at the census of 1921. In 1926 there were 672 public elementary schools, with 122,337 pupils enrolled and an average attendance of 75,063. In 1926-27 the acreage under cultivation was 1,129,046 acres, apportioned as follows: under tillage 288,386; pasture, 840,660; sugar-cane, 52,676; coffee, 21,726; bananas, 89,768; coconuts, 32,730; cocoa, 4407; ground provisions, 54,942; mixed cultivation, 29,559; guinea grass, 92,525; commons, 748,135. The livestock included 139,382 cattle and 5064 sheep. In 1926-27 the imports were valued at £5,635,-

342 and the exports at £4,258,991. Chief among the exports were bananas, sugar, rum, coconuts, coffee, logwood extracts, cocoa, and logwood; among the imports, flour, cotton goods, and fish. Aside from an electric railway in Kingston, the only rail transportation on the island is the Jamaica Government Railway, with a length of 210 miles. Revenue in 1926-27, £2,147,042; expenditure, £2,046,205; public debt, £4,671,640. The Governor in 1928 was Sir R. E. Stubbs who was appointed in 1925 and assumed office April 27, 1926.

JANACEK, LEOS. A Czech composer, died at Mährisch-Ostrau, August 12. He was born at Hukvaldy, Moravia, July 3, 1854, and received his musical education at the Organ School in Prague and at the conservatories of Leipzig and Vienna. After unsuccessful efforts to win reputation as a piano virtuoso, he settled, in 1881, in Brünn as conductor for the Philharmonic Society. In the same year he opened there his private Brünner Orgelschule and in a short time he was recognized as a teacher and choral conductor of exceptional ability. In 1885 he wrote his first opera, *Jarka*, but was unable to secure its performance. Discouraged, he turned to the composition of choral works which immediately found great favor with his countrymen, who proclaimed him the foremost contemporary national composer. For almost twenty years he made no further attempts at opera, until the very effective text of *Jenufa* aroused his interest. However, the première of this work at Brünn, in 1904, passed almost unnoticed and during the next twelve years only sporadic performances on provincial stages can be recorded. But when *Jenufa* was heard at Prague, in 1916, it scored an overwhelming success, so that from then on the composer devoted his energy almost exclusively to the stage. Of the operas that followed in rapid succession, the most successful are *The Adventures of Mr. Broucek* (Prague, 1920), *Fate* (Brünn, 1921), *Katya Kabanovna* (Brünn, 1922), *The Sly Little Women* (Brünn, 1925, awarded the State Prize of the Czechoslovak Republic), and *The Makropoulos Case* (Prague, 1926). Shortly before his death the composer completed his last opera, *The House of the Dead*, which had not been produced up to 1928. Through the influence of Jeritzka, *Jenufa* was produced at the Metropolitan Opera House (Dec. 6, 1924), but disappeared from the repertory after a few repetitions. The reason Janacek's operas have not gained a foothold outside of Czechoslovakia is to be found in the fact that the librettos deal almost exclusively with local peasant life, and the music is not sufficiently great to overcome this handicap.

JAN MAYEN. An isolated island in the Greenland Sea, 70° N., 8°30' W., which since 1920 has been occupied by the Norwegian Geophysical Institute. Its staff sends daily to Norway by radio a detailed weather report, supplemented during the fishing seasons by a similar report from the Norwegian station of Mygbutken, on the east coast of Greenland. These reports are useful in forecasting the violent storms on the coast of Norway.

JAPAN. A Far Eastern empire, consisting of the five main islands of Honshiu (mainland), Shikoku, Kinshu, Hokkaido (Yezo), and Formosa or Taiwan; also a number of smaller islands and island groups (approximately 4000 islands), and the peninsula of Korea or Chosen, and Karafuto,

i.e. the southern half of the island of Sakhalin. Capital, Tokyo.

AREA AND POPULATION. The total area of the Japanese Empire is given at 260,707 square miles, made up chiefly as follows; Honshiu, 86,775; Korea, 85,228; Hokkaido, 30,275; Kiushiu, 15,588; Formosa, 13,840; Karafuto, 13,934; Shikoku, 7031; Kurile or Chisima Islands, 6024. In 1920 the total population of the Japanese Empire according to the census of that year was 76,988,379, distributed chiefly as follows: Honshiu (Japan proper), 55,963,053; Korea, 17,264,119; Formosa, 3,655,308; Karafuto, 105,899. The population of Japan proper, according to the census of 1925, was placed at 59,736,822. The movement of population in 1926 was: Births, 2,104,405; deaths, 1,160,734; marriages, 502,847; divorces, 50,119. The population of the principal cities at the census of 1925 was: Tokyo, 1,995,303; Osaka, 2,114,809; Kobe, 644,212; Kyoto, 679,976; Nagoya, 768,560; Yokohama, the port of Tokyo, 405,888; Nagasaki, 189,071; and Hiroshima, 195,731. On Apr. 1, 1927, nine towns and villages adjacent to Yokohama, containing a total population of 112,204, were incorporated in the city of Yokohama, thus making the population of that city 518,092. Among the towns included were two of considerable importance—Tsurumi, with a population of 53,135, and Hodegaya, with 28,570.

EDUCATION. An elementary school course of six years is compulsory between the ages of 6 and 14. In 1924-25 there were 9,188,355 attending elementary schools, 559,882 secondary schools, 1,025,544 preparatory technical schools, 48,492 special schools, 41,436 normal schools, 213,638 technical schools, and 42,692 universities. There were 242,812 in schools of miscellaneous grades. Japan has five Imperial universities and 26 other institutions of university rank.

CROPS: AREA AND PRODUCTION, 1926-1927

Crop	Area (thousands of acres)		Production (thousands of units—bushels except as indicated)	
	1926	1927	1926	1927
Wheat	1,146	1,159	28,430	29,248
Barley	2,431	2,343	88,078	71,559
Oats	269	...	10,764	...
Rice	7,740	7,777	492,505	550,175
Tea	109	106	79,862 ^a	81,479 ^a
Tobacco	91	91	132,278 ^a	147,986 ^a

^a Unit, pound.

PRODUCTION, ETC. In 1926 there were in Japan, out of a total area of 94,289,000 acres, 7,269,000 acres of rice fields, 6,765,000 acres of upland farms, 4,099,000 acres of moors and pastures, and 20,980,000 acres of forests. Agricultural conditions were more favorable in 1927 than in the previous year. The rice crop, by far the most important, was officially estimated at 317,952,000 bushels of brown rice (550,175,000 bushels of rough rice), an increase of 11.7 per cent compared with 1926, and the largest crop since 1920. Under normal conditions large crops in Japan tend to increase the purchasing power of the landlords and farmers who constitute approximately one-half of the total population. Returns from agriculture in 1927 were greatly reduced, however, as farmers had difficulty in financing their crops because of a bank crisis and were forced to sell at low prices. The price of rice fell to the lowest point recorded during the past few years, and in an effort to relieve the situation, the Gov-

JAPAN—THE CORONATION FESTIVITIES
THE "JIDAI-MATSURI" PROCESSION ARRIVING AT HEIANJUNGU SHRINE

JEW'S

ernment purchased 5,120,000 bushels of the 1927 crop.

The production of silk cocoons in 1927 was 753, 309,000 pounds, an increase of 5 per cent over 1926. The value of cocoons declined about 24.1 per cent because of the financial situation and the fall in the market price of raw silk. On Dec. 31, 1926, there were in Japan 1,465,000 cattle, 621,000 swine, 18,000 sheep, 179,000 goats, and 1,444,000 horses.

While deposits of gold and silver had been known to the Japanese and worked by them for centuries, the only mineral substances of material importance at the present time are coal and copper. The production of gold in 1927 was 299,569 troy ounces; silver, 4,344,000 troy ounces; copper (1926), 67,365 metric tons; and coal, 31,200,000 metric tons. The principal industries of the country are silk, cotton, iron and steel, dyes and chemicals, and shipbuilding.

JAPAN'S TRADE IN PRINCIPAL COMMODITIES, 1926-1927 [In thousands of dollars—000 omitted]

Item	1926	1927
EXPORTS		
Raw silk	\$345,005	\$352,675

COMMERCE. Japan's total foreign trade in 1927 amounted to \$1,981,448,735, or \$96,991,086 less than the 1926 figure. Exports during 1927 aggregated \$946,350,653, against \$961,022,109 in 1926, while imports were valued at \$1,035,098,082, against \$1,117,417,712 in 1926—thus developing a decrease of 7.4 per cent in imports and 1.5 per cent in exports as compared with the previous year. Taking into consideration, however, the financial crisis of 1927, which led to a reduction in the purchasing power of the nation, and the disturbed conditions in China, which adversely affected Japan's exports, the decrease in trade was surprisingly slight. The adverse import bal-

JEW'S

ance was reduced from \$156,395,603 in 1926 to \$88,747,429 in 1927. A compilation of Japan's total export and import trade in principal commodities for the years 1926 and 1927 is given in the preceding table.

Trade of the United States with Japan during 1927 was 1.1 per cent lower than the 1926 figure. Exports to the United States decreased 2.1 per cent, while American imports increased 0.1 per cent. However, compared with 1913, Japanese exports to the United States have quadrupled and imports from the United States have quintupled in value. Japan's exports to the United States during 1927 amounted to \$396,057,022 against \$404,613,872 in 1926, and imports from the United States were valued at \$320,000,805 as compared with \$319,687,308 in 1926.

FINANCE. In the absence of a budget law the 1927-28 budget, providing for a total expenditure of 1,730,000,000 yen, was to be in force for the fiscal year 1928-29, with a supplementary budget of 16,000,000 yen to cover the expenses of the Emperor's coronation. Japan's national debt in-

creased about 4 per cent during 1927, entirely in internal debt. The total debt on Dec. 31, 1927, was 5,362,011,000 yen (equivalent at par to \$2,672,962,000).

The table on page 373, from the *Commerce Year Book* for 1928, gives the items of the 1927-28 budget, which were to be carried over into 1928-29.

COMMUNICATIONS. In 1927 the Japanese merchant marine comprised 2035 vessels of 4,033,304 gross tons. In the same year 17,025 vessels of 49,312,000 net registered tons entered the ports of Japan and 17,031 vessels of 49,811,000 tons cleared.

At the close of the year ended Mar. 31, 1927, the Imperial Government Railways of Japan owned 8008 miles of main line, branches, and sidings, an increase of 171 miles over the preceding year. Operating revenue amounted to 475,325,287 yen; other revenue, 11,700,130 yen; operating expenses, 276,674,159 yen. The equipment in operation at the close of the year comprised 3965 locomotives, 10,058 passenger cars, and 61,897 freight cars. During the year the following new equipment was purchased from foreign countries: 135 steam locomotives, 12 electric locomotives, 583 passenger cars, 89 tram cars, and 2498 freight cars. The State Railways bought from private lines, two steam locomotives, three passenger cars, and 13 freight cars. It was reported that 667 freight cars were rebuilt during the year. The equipment of rolling stock with air brakes was furthered during the year, there being at the end of March, 1927, 2399 locomotives, 762 passenger cars, and 60,267 freight cars equipped with air brakes.

During the year the railway board spent some 12,016,119 yen for electrical equipment such as improving electric car lines, installing steam electric generators, and building electric substations. A total of 10,850,000 yen was appropriated also for the construction of an electric power station at Tsurumi.

There were 230 privately owned railways in Japan with a total mileage of 2917. These railways are classified as follows: Steam, 1317 miles; electric, 1497 miles; steam and electric, 73 miles; gasoline, 30 miles. Operating revenues for the year amounted to 68,676,905 yen, of which amount passenger revenue was 44,304,082, and freight revenue 20,720,015 yen. Other revenue amounted to 3,652,808 yen. Operating expenses reached 37,715,019 yen, and other expenses totaled 13,531,107 yen. Private railways formed during the year totaled 31, and 166 miles of railways were built.

ARMY AND NAVY. Military service is universal and compulsory. Liability commences at 17, but actual service begins at 20 years and lasts for 20 more. The peace strength of the active army in 1927 was 220,840 of all ranks. The military

budget for 1927-28 amounted to 173,614,412 yen. See **MILITARY PROGRESS.**

The accompanying table from the *Statesman's Year Book* for 1928 shows the classification of the Japanese fleet for the three years ending with 1927. See **NAVAL PROGRESS** for further statistics and information.

GOVERNMENT. Executive power is in the Emperor who acts with the advice and aid of a ministry appointed by and responsible to himself; legislative power is in the Emperor and the Imperial Diet of two chambers, namely, the Upper House or House of Peers, composed of membership based on rank, wealth, and other qualifications, and numbering 407 members at the beginning of the year; and the Lower House or House of Representatives, elected for four years, unless sooner dissolved, and numbering 466 members after the election of February, 1928. Emperor in 1928, Hirohito, born April 29, 1901; succeeded his father, Yoshihito, Dec. 25, 1926. The cabinet at the beginning of the year was composed as follows: Prime Minister and Foreign Affairs, Baron Tanaka; Home Affairs, Kisaburo Suzuki; Finance, Chuzo Mitsuuchi; War, General Shirakawa; Marine, Admiral Okada; Justice, Yoshinori Hara; Education, Rentaro Mizuno; Agriculture and Forestry, Teijiro Yamamoto; Commerce and Industry, Tokugoro Nakahashi; Communications, Keisuke Mochizuki; Railways, Heikichi Ogawa.

HISTORY

As noted in the previous **YEAR BOOK**, the political situation in Japan was considerably complicated at the close of 1927. The cabinet was in the rather uncomfortable position of not having a majority in the House of Representatives. Baron Tanaka, the Prime Minister, decided on a bold stroke, that of dissolving the legislature and calling a general election before the opposition could censure it or bring before the public its shortcomings. The Diet met on January 21 and was immediately dissolved, a general election, the first under the Manhood Suffrage Act of 1925, being called for February 20. The Government party (Baron Tanaka's) went before the public on a platform of government aid to industry and finance and a strong hand in China.

As a result of the election, the Government party, the Seiyukai, increased its membership from 159 to 221, a gain of 32 seats. The leading opposition party, the Minseito, only returned 214 of the 223 constituencies it held before the election. The Independents elected 16 members, Labor, 8, the Business Men's party, 4, and the Shinsei Club, 3. This result was almost a foregone conclusion because a government party in Japan rarely loses an election. The opposition claimed that some of the members claimed by the Government party were really independents. Although the Seiyukai did not have an absolute majority in the new House of Representatives it could depend upon a sufficient number of the minority groups to give it a working control over the chamber. The election was carried out with unusual quietness, although there was considerable enthusiasm. More than four-fifths of the registered voters came to the polls, which was highly significant in light of the absence of real issues between the two leading parties. The hopes of the opposition that the universal suffrage rule in vogue would strengthen their cause was not fulfilled, and if one is to interpret the election the conclusion must be reached that a majority

of the new voters, although not from the propertied classes, were conservative in politics and did not desire a change in government. It was also felt that the success of the Government party was slight enough to compel it to take a more cautious attitude, particularly in connection with China. For a discussion of the relations between China and Japan during the year consult the article on CHINA, *History*.

A change was made during the year in the Japanese representative at Washington. Mr. T. Matsudaira, the Ambassador to Washington, was transferred to Great Britain and was succeeded by Katsuki Debuchi, the Vice Minister of Foreign Affairs.

On November 10, all of Japan was thrilled by the ascension to the throne of Emperor Hirohito after a series of traditional ceremonies lasting three weeks. On December 20, the largest budget in the history of the country was announced for the fiscal year 1929-30, 1,753,000,000 yen (\$806,380,000). It represented an increase of 43,700,000 yen over the 1928-29 budget, and it was stated in some parts of the Japanese press that the increase was much smaller than the Government desired, but it feared that a larger increase would jeopardize its rather weak position in the House of Representatives.

JÉHIN, LÉON-NOËL-JOSEPH. A French orchestral conductor, died at Monte Carlo, in February. He was born in Spa, Belgium, July 17, 1853. After graduation from the Brussels Conservatory, where he was a pupil of Léonard, he began his career as conductor in Brussels. From 1879 to 1889 he taught theory at the conservatory. Then he became principal conductor at Monte Carlo, which post he filled with distinction until his death. Under his direction of the private opera of the Prince of Monaco, Monte Carlo became the most important operatic centre of France next to Paris. Jéhin was entrusted with the world première of several works by Massenet, Bruneau, Leroux, and Messager.

JENNINGS, SIDNEY JOHNSTON. American mining engineer, died at New York, November 17. Born at Hawesville, Ky., Aug. 13, 1863, he attended schools in Tours, France, and in Germany, and was graduated from the Lawrence Scientific School of Harvard in 1885. He continued his studies at the University of California, while surveying for the New Alameda Quicksilver Mining Company, 1885-87. He was next employed by the Anaconda Copper Company, of Butte, Mont., 1887-89. During the following eighteen years, Mr. Jennings was associated with mining concerns in the Rand, first going to South Africa in 1889 as manager of the Willow Copper Company. He became assistant general manager of the De Beers Consolidated Mines at Kimberley two years later. Having transferred to the Crown Deep Mine, Ltd., in 1893, he remained in Johannesburg as manager of the Crown Mines, 1896-1907, also serving as consulting engineer of H. Eckstein & Company. After the British occupied Johannesburg, May 29, 1900, Mr. Jennings was placed on the town council and chosen as the head of the works committee. Under his super-

vision, electric trolley lines and water supply and sewerage systems were installed. Returning to the United States, Mr. Jennings became vice president of the U. S. Smelting Refining & Mining Company in 1908, a position which he held until his death. He was also director of the Cia de Real del Monte y Pachuca, and president of the Hanover Bessemer Iron & Copper Company. Among other scientific societies of America, Great Britain, and Africa, he belonged to the American Institute of Mining Engineers and served as its president, 1918-19. He was also president of the American Mining Congress, 1922-23.

JERUSALEM. See ARCHAEOLOGY.

JEWS. STATISTICS FOR THE UNITED STATES. In a significant article by Dr. H. S. Linfield in the *American Jewish Year Book* (1928), there is disproved apparently a long-established misconception, namely, that the Jews of the United States are to be found in the large urban centres only. As a result of a nation-wide survey in which his inquiries penetrated into every community in the country, Dr. Linfield found that Jews were living not only in every city having a population of 25,000 and over, but that Jewish families were to be found in 80 per cent of the cities between 2500 and 25,000 population, in 30 per cent of incorporated villages of less than 2500 population and in 7 per cent of rural unincorporated areas. There was a total of 6420 communities and 3292 unincorporated places in the country where Jewish families had settled.

Another factor threw light on Jewish mobility in the last few years. In 1917 there were 1900 Jewish congregations in the United States; by 1927 the number had increased to 3000 of which 93 had been established in rural places. The new census showed that there were 4,228,029 Jews in the country or 3.58 per cent of the total population. The cities continued to hold the great majority of the Jewish population. At least 190 cities had 1000 or more Jews. New York City had 1,765,000 (29.56 per cent of that city's population), Chicago had 325,000 (10.47 per cent of the city's population), Philadelphia had 270,000 (13.26 per cent), Boston had 90,000 (11.35 per cent), Cleveland had 85,000 (8.63 per cent), Detroit had 75,000 (5.62 per cent), Baltimore had 68,000 (8.3 per cent), Los Angeles had 65,000 (5 per cent), Newark had 65,000 (13.93 per cent). Smaller cities had large Jewish densities. Of Atlantic City's population, 22.56 per cent was Jewish; 13.26 per cent of Bayonne's population was Jewish; 40.92 per cent of Chelsea's (Mass.) population was Jewish; 16 per cent of Hartford's population was Jewish; 15.5 per cent of Paterson's (N. J.) population was Jewish. Dr. Linfield showed the concentration in the cities, and at the same time the dispersal of the Jews, in this way:

68 cities of	100,000 or over	had	3,553,600 Jews
219 cities of	100,000-25,000	had	378,862 Jews
461 cities of	25,000-10,000	had	111,742 Jews
721 cities of	10,000-5,000	had	41,855 Jews
1,321 cities of	5,000-2,500	had	32,370 Jews
12,908 places of	2,500 or less	had	43,513 Jews
Rural unincorporated territories		had	66,087 Jews

There were interesting distributions by political divisions. In the northern part of the United States (New England, Middle Atlantic, Maryland, Delaware, District of Columbia, East North Central, and the West North Central States) were to be found 90.4 per cent of the country's

Jewish population. In the South (made up of the South Atlantic States, East South Central and the West South Central States) were to be found only 5.35 per cent of the country's Jews; while the Jews of the West (made up of the Mountain and the Pacific States) comprised 4.26 per cent of the total.

Dr. Linfield's canvass of Jewish congregations in the United States (made for the U. S. Census Bureau) showed a preliminary total of 2948 permanent congregations of which 2855 were located in urban areas (2500 inhabitants or over) and 93 were in rural places. The average number of persons served by a congregation was 1386 Jewish persons (1426 persons in urban areas and 166 persons in rural places). Of these congregations, 1131 reported the value of their buildings as being \$100,891,669. A total of 1335 congregations reported an annual expenditure of \$16,445,235.

IMMIGRATION. For the year ending June 30, 1927, 11,482 Jews (3.4 per cent of the total) were admitted into the United States. The following were the reported destinations of these Jewish immigrants: California, 214; Connecticut, 155; Illinois, 762; Maryland, 101; Massachusetts, 385; Michigan, 470; New Jersey, 524; New York, 7068; Ohio, 269; Pennsylvania, 787; other States, 747. During 1927, 4471 Jews entered Canada via ocean ports (this does not include immigrants from the United States). During 1926, 7534 Jews entered the Argentine; during 1927, 2713 Jews entered Palestine and 5071 Jews departed from that country.

JEWS IN OTHER COUNTRIES. It was estimated by the *American Jewish Year Book* that there were 15,324,515 Jewish persons in the world. (See 1927 YEAR BOOK for table.) The following were the more important Jewish populations: Austria, 350,000; Canada, 126,196; British Empire, 514,442; Czechoslovakia, 354,342; France, 200,000; Germany, 564,379; Great Britain, 279,000; Hungary, 473,310; Lithuania, 155,125; Palestine, 157,800; Poland, 2,854,000; Rumania, 900,000; Russia (U.S.S.R.), 2,820,429; United States, 4,228,020.

EVENTS OF THE YEAR. Important communal activities that may be noted were: the interesting census taken by the American Jewish Committee (above noted) which indicated a dispersion of Jews over the country; the survey of New York conducted by the Bureau of Jewish Social Research, which showed the breakup of the old ghetto districts and the removal of Jews into new middle-class areas; the granting of a charter to the Yeshiva College of America for conducting the first Jewish denominational college in the country; the passing of the *Jewish Daily News*, the first Yiddish daily in the United States; the closing down of the Jewish Art Theatre and the closer approximation of the Yiddish stage of New York to Broadway models; the disappearance of the Order B'rith Abraham, one of the oldest Jewish fraternal orders. Observers were agreeing that the old Jewish life, with its physical separatism, was breaking up. Whether it was to be replaced by a unity of the spirit remained yet to be seen. That there were already some evidences of this reorientation could be observed in the recent extraordinary developments in Jewish education and synagogue-centre building.

American Jewry continued to pay attention to the status of the Jews in Russia and Rumania. During the year the Joint Distribution Commit-

tee announced that it had collected \$21,000,000 for the carrying out of its rehabilitation programme in Eastern Europe. In March it was reported that Julius Rosenwald had contributed \$5,000,000 toward a ten-million-dollar fund for the purpose of continuing the Jewish colonization work in Russia. This fund was to augment a similar grant to be made by the Soviet Government. Continued ill-treatment of Rumanian Jews aroused the resentment of their American kinsmen and led to further official assurances from the Rumanian Government. The American Jewish Congress was particularly outspoken in its hostility toward the Rumanian Government.

The United Palestine Appeal reported that it had collected for Zionist work from Oct. 1, 1927, to July 15, 1928, a total of \$4,537,514 of which sum it had sent to Palestine at that date \$2,431,522.

FOREIGN. In Germany, minor disturbances centering particularly in the desecration of Jewish cemeteries, were dealt with energetically by the police. In other countries in Western Europe Jewish communal life was peaceful.

In Hungary, Jewish life continued unhappy. The long-promised abolition of *numerus clausus*, as it passed the Hungarian Parliament in February, was obviously a subterfuge. For the *numerus clausus* there was set up a series of preferences. First to be admitted to the universities were to be children of government officials, then were to follow children of war veterans and army officers, then were to come children of peasants, then were to come children of persons engaged in industry, finally were to be admitted the children of merchants. The deceit may be seen when it is understood that most of the Jews of the country are engaged in trade and the system of preferences was calculated to be quite as effective as the old *numerus clausus*. In this fashion Hungary was prepared to report to the League of Nations the abolition of the *numerus clausus*.

Anti-Semitic riots among the students of the universities of Budapest, Debreczin, Pech, and other large towns were reported late in October. The outrages were due to the fact that the students were suspecting the Government of admitting larger numbers of Jewish students into the universities than the law allowed. The Government closed four colleges as a result of the disorders and made 140 arrests. The troubles led to a stormy debate in the Hungarian Parliament and resulted in the charge being passed by a Jewish deputy that the under-Secretary of the Department of the Interior had secretly encouraged the rioting.

Jewish life in Rumania appeared quite as insecure as ever. Toward the end of 1927 a congress of students, held at Oradeamare, got out of hand and attacked and desecrated Jewish synagogues. Lesser outbreaks occurred along the routes home of the students. The Government, upon being taxed with its neglect, promised to rebuild synagogues at public expense and punish the guilty students. The University of Bucharest promised to expel all students who had participated in the outrages. Later advices told that a number of the participants had been imprisoned for short terms, while 380 students had been suspended from their universities for a year. A number of police officers were cashiered. The overthrow of the Averescu government, at the end of the year, had been followed by a series of edicts opening the Jewish schools and excus-

ing the Jewish children from writing at the public schools on Saturday.

From a variety of sources, during the year, reports came to deny the official disclaimers that the Jews of Rumania were being persecuted. The American Committee on the Rights of Religious Minorities (made up of non-Jews), printing the results of its investigation in May, found anti-Semitism everywhere fomented by societies which the Government made no attempt to check. For example this was the programme of the National Rumanian Christian Students Union, headed by the notorious Prof. A. C. Cuza: "Drive every Jew out of Greater Rumania. Refuse to employ any Jew for any kind of work. Do not permit any Jew to attend any class in any school within Rumania. Do not buy from any Jew. Do not sell to any Jew. Do not allow any Jew to vote or take part in any election. Keep the Jews out of all positions of honor, emolument, or service to the State."

In Poland events appeared on the mend. The Jewish bloc seemed to have disappeared and Jews appeared to be accepting Polish party loyalties. The result was the return of but half the number of Jewish deputies to the Sejm. But the number of Jewish representatives on municipal assemblies was reported to be increasing. Late in 1927 in the country's municipal elections, 540 Jewish councilors were elected out of a total of 1597. The Government took a vigorous stand against the *numerus clausus* and even went so far as to establish a Jewish chair at the University of Warsaw to train teachers in religious instruction at the state high schools. Early in the year the Jewish schools of Warsaw were placed on the same footing as the public schools with increases in their allotments. Thus political liberty appeared nearer. But observers united in declaring that the economic status of the Polish Jew was just as wretched as ever. The threat of government monopoly of characteristic industries appeared as real as ever. Steps were being taken to limit the number of Jewish artisans by providing for an apprenticeship and attendance in trade schools where only Polish was the language of instruction.

In four years, 1924-28, the Soviet Government had settled 35,000 Jewish families on 800,000 acres of land. It was reported that in the spring the Soviet Government had started a new colony for Jewish agriculturists in Siberia. It was also reported that anti-Semitism appeared on the increase in Russia and the governmental organs as well as official agencies were making serious efforts to combat it.

REPORT OF THE JOINT PALESTINE SURVEY COMMISSION. The preceding YEAR BOOK spoke of the truce that had been effected between Zionists and anti-Zionists and of the creation of the Jewish Agency in Palestine, together with the setting up of the Joint Palestine Survey Commission for the purpose of formulating a common programme of action. The report of the commission, based on the study of its experts, was submitted early in the summer. There follow the more important recommendations contained therein: a more careful regulation of the immigration into the country, particular attention being paid to the needs of the industries; the Palestine Government to be urged to hasten the settlement of more Jewish farmers on the land; the afforestation of more waste lands; the Government must know that the only equitable form of taxation must be based

not on the yield of the land but on the unimproved value of the property to be taxed; the Government can encourage agriculture by exempting from taxation for five years all new farming enterprises; before settlers are placed on the land their holdings should be adequately prepared for them, i.e. drained, irrigated where necessary, roads constructed, etc., etc.; settlers ought to become the owners of their lands though most of the land now being tilled is under leasehold from the Jewish National Fund; coöperative purchase and marketing should be encouraged; the creation of a Board for agriculture upon which is to be represented the Government, the Jewish Agency, the Hebrew University, and the Pica; industry should be encouraged; certain local industries might well be protected by customs' duties; freight rates should be reduced and a special rate on goods for export should be established; the establishment of agencies for the encouragement of manufacturers to locate in Palestine; the Government should support education and should aid all non-government schools when they come up to certain minimum standards; the Government should assume a larger responsibility in matters relating to the public health; grants-in-aid should be extended to private hospitals based upon number of free hospital days; labor must accept the principle that industry and agriculture can be encouraged only by the offering of a suitable return for the capital and labor invested; setting up of arbitration machinery for the handling of trade disputes; coöperative organizations of producers and consumers should be encouraged; a minimum annual budget needed for Palestine is £1,000,000, this to be provided by Zionist effort. Under this budget "for the present no new enterprises can be undertaken."

The commissioners felt very strongly that a policy which did not allow of further development and the acquisition of new territory, the founding of new colonies, and the initiation of broader schemes of great importance to the economic life of the country, must be considered entirely unsatisfactory. The commission called upon the Jewry of the world for raising the sum needed annually for the redemption of the Jewish National Home. The report was signed by Lord Melchett of England, Oscar Wasserman of Berlin, and Lee K. Frankel and Felix M. Warburg of the United States.

ZIONISM. There were two outstanding events in the history of Zionism during the year: the struggle that took place at the annual American convention in June to oust the leadership of Mr. Lipsky and the peace that was made between Zionists and non-Zionists for the support of the Jewish Agency, that was reached in October. The storm against Mr. Lipsky's administration was long brewing. The leading charges against the conduct of the Zionist Organization of America centred in the wasteful management of funds that led up to the collapse of the American Zion Commonwealth. So threatening did the controversy become that a group of New York judges, called in to sit as arbitrators, found that the present administration was fast losing the confidence of American Jewry and that it would be the counsel of wisdom to elect a new administration at the annual convention in July. On the eve of the convention Mr. Lipsky threw his followers into a panic by announcing that he would not seek reëlection.

The convention, that assembled in Pittsburgh on July 1, therefore, at once became the scene of a great test of strength. The opposition, led by Mr. Abraham Tulin of New York (though actually Judge Julian Mack was its inspirer), proved at once more noisy than large. The majority on the second day passed a vote of confidence in the administration and thus early paved the way to the reelection of Mr. Lipsky. He, however, held out against his reelection until the story was spread that his personal honesty had been impugned by members of the opposition. His supporters, at this turn of affairs, felt that nothing would satisfy them but complete vindication with the result that Mr. Lipsky was put in nomination and reelected once more. An important change in the constitution of the organization was also effected for the purpose of relieving the president of the burden of his administrative duties. This was accomplished through the creation of administrative and executive committees and the setting up of a governing council of nine persons to be recruited from the administrative committee, each of whose members was to head a separate department. The business of the organization was to be in the hands of an executive director.

In October non-Zionists, under the leadership of Louis Marshall, pledged their support toward the upbuilding of the Jewish National Home. Reference was made above to the report that was submitted by the joint commission for the creation of the Jewish Agency. Preliminary to the New York meeting in October, the report of this commission was taken up at Berlin by the Inner Actions Committee of the World Zionist Organization and adopted almost unanimously. The way was thus clear for the creation of the Jewish Agency which was to be the official representative of world Jewry in the Government of Palestine. This great task was finally consummated in the conferences held October 20 and 21. Here a group of persons representing the Zionists and non-Zionists of the United States voted unanimously to adopt the report of the Palestine Commission and the leaders of both groups publicly congratulated each other for the peace that had finally been effected. By the convention it was agreed that the Jewish Agency was to consist of 50 per cent Zionists and 50 per cent non-Zionists and that the latter was to be made up two-fifths of Americans. The Zionists on the Agency were to be chosen by the Zionist World Organization. A committee of seven members was named to choose the American non-Zionist representatives in the Jewish Agency.

JODAK. See GUMPPENBERG, HANNS, FREIHERR VON.

JOHNS HOPKINS UNIVERSITY. A non-sectarian institution of higher education for men (women are admitted to certain courses), at Baltimore, Md., founded in 1876. The enrollment for the autumn of 1928 was 5575, distributed as follows: School of higher studies, 508; school of medicine, 282; school of hygiene and public health, 91; college of arts and sciences, 331; institute for biological research, 1; school of engineering, 287; school of business economics, 66; college for teachers, 1397; night courses for technical workers, 450; evening courses in business economics, 1055. The registration for the 1928 summer session was 1107. The faculty numbered 575. The productive funds amounted to

\$24,947,011, and the income for 1927-28, from all sources, to \$2,110,221. The library contained 300,000 volumes. The Welch Medical Library of Johns Hopkins, named for Dr. William H. Welch, was opened in the autumn, to house the libraries of the school of medicine, the hospital, and the school of hygiene and public health. Lieut.-Col. Fielding H. Garrison, head of the Army Medical Corps Library in Washington, was appointed as consulting librarian and William G. Shules, as assistant librarian. The Institute for the Study of Law, established in June, 1928, completed a programme of expansion formulated in 1910. The institute is an independent school of the university and has its own advisory board. The staff and their assistants for 1928-29, who, with the exception of Dr. Cook, were all newly appointed were as follows: Walter Wheeler Cook, A.M., LL.M.; Leon Carroll Marshall, A.M., LL.D.; Herman Oliphant, A.B., J.D.; Hessel Edward Yntema, Ph.D., S.D.J. President of the University, Frank Johnson Goodnow, LL.D.

JOHNSTON, WILLIAM DAWSON. American librarian, died at Washington, D. C., November 18. He was born at Essex Center, Vt., June 11, 1871, and was graduated from Brown University in 1893. After studying at the University of Chicago, 1893-94, he attended Harvard, 1897-98, receiving the A.M. degree. He had been an instructor of history at the University of Michigan, 1894-97, and in 1899 he received a similar appointment at Brown. Becoming interested in bibliography, he accepted a position as assistant at the Library of Congress in 1900, where he remained until 1907, also lecturing on bibliography at Simmons College, 1905-07. He then became librarian at the Bureau of Education, in Washington, subsequently holding corresponding posts at Columbia University, 1909-14, at the public library of St. Paul, Minn., 1914-21, and at the American Library in Paris, 1921-25. Renewing his association with the Library of Congress in 1926, he was made European representative. He had returned temporarily to the United States at the time of his death, in order to negotiate important business of the library. Dr. Johnston received the Litt.D. degree from Rutgers College in 1911. Besides contributing to library journals, he wrote *History of the Library of Congress*, vol. i (1904); and collaborated with I. G. Mudge in *Special Collections in Libraries in the United States*.

JUGO-SLAVIA. A Balkan state, formed after the War, comprising under a federal form of government the following territories: The formerly independent kingdoms of Serbia and Montenegro; Bosnia and Herzegovina; Croatia and Slavonia, former autonomous states of Hungary, portions of the Banat, Backa, and Baranja, integral parts of Hungary proper; Dalmatia, a former province of the Austrian Empire; and Slovenia, composed of portions of former Austrian provinces. Capital, Belgrade.

AREA AND POPULATION. According to the census of Jan. 31, 1921, the area of Jugo-Slavia was 96,134 square miles and the population 12,017,323, representing a density of 125 to the square mile. The majority of the inhabitants speak Serbian and Croatian. Other important linguistic groups are the Slovene and other Slavic languages. German, Rumanian, Hungarian, and Albanian. The principal cities with their populations, according to the 1921 census, are: Bel-

grade, 111,740; Zagreb (Agram), 108,338; Subotica, 101,857; and Serajevo, 66,317.

EDUCATION. Education is compulsory, and in all the primary schools under the Ministry of Education it is free. According to the latest available statistics, those for 1925-26, there were 7208 elementary schools with 17,576 teachers and 786,324 pupils. The number of secondary schools was 173 with 3595 teachers and 83,399 pupils. There were also 44 training colleges for elementary school teachers with 454 instructors and 7549 students. Of civil schools there were 155, with 1423 teachers and 26,635 pupils. There were also 19 commercial schools with 185 teachers and 2698 pupils. There are three universities in the kingdom: Belgrade, with 143 professors and 6114 students; Zagreb, with 145 professors and 3175 students; and Ljubljana, with 72 professors and 1031 students.

PRODUCTION, ETC. The country is rich in natural resources, comprising large tracts of fertile soil, varied and abundant mineral deposits, wide forest areas, and the power, largely undeveloped, of many watercourses. Agriculture is the basic industry of the country and is closely followed in importance by cattle raising and forestry. Approximately 85 per cent of the total population is engaged in agricultural pursuits, and more than 27,181,480 acres, or about 45 per cent of the entire area, are devoted to agriculture. Cereals cover approximately 80 per cent of the area under cultivation. Corn is the leading crop, with wheat a close second. These two cereals furnish about 85 per cent of the total grain production and normally constitute the most valuable item of export. Barley, rye, oats, and other grains are also grown.

CROPS: AREA AND PRODUCTION, 1926-1927

Crop	Area (thousands of acres)	Production (thousands of units—bushels, except as indicated)		
			^a Unit, metric ton.	^b Unit, pound.
Wheat	4,178	4,522	71,428	56,568
Rye	500	516	7,454	5,923
Barley	867	966	17,275	14,449
Oats	871	936	24,645	20,114
Corn	4,929	5,097	134,251	84,344
Potatoes	548	558	34,539	37,169
Sugar beets	86	103	591 ^a	691 ^a
Tobacco	38	27	31,864 ^b	14,748 ^b
Grapevines	432	441	76,923 ^c	75,428 ^c
Hemp fibre	68	87	56,964 ^b	68,648 ^b
Flax fibre	30	32	16,588 ^b	18,518 ^b

^a Unit, metric ton. ^b Unit, pound. ^c Unit, gallon of wine.

The raising of livestock is the second industry of importance in the kingdom, normally supplying from 25 to 30 per cent of total exports. The forestry industry ranks first as regards capital invested, and normally is third in total value of exports. It is estimated that more than 1,000,000,000 dinars, or about one-third of the capital invested in industrial enterprises, is placed in the development of forest products. Forests cover 18,745,340 acres, or about 30.5 per cent of the entire area of the country. The State owns 47.7 per cent of the forest lands, private individuals 33.3 per cent, and the remainder is owned by municipalities and other public organizations.

Industrial development, excluding the forestry industry, is still in its infancy. There are, however, several small but active industries, including the textiles, chemicals, paper, ceramics, leather and tanning, etc., but these with the exception of the chemical industry, produce chiefly for home consumption.

The minerals of the kingdom are classified chiefly as follows: Metallic minerals, comprising ores of copper, lead, iron, gold, silver, aluminum, molybdenum, manganese, chromium, and antimony; non-metallic, comprising sulphur and asphalt; fossil fuels, comprising black coal, brown coal, and lignite; useful rocks, such as marble, limestone, granite, cement marl, and gypsum; mineral wells, comprising salt wells and petroleum wells. Coal is the most important mineral resource of the country, but production of the higher grades is insufficient for home needs. Mining has been carried on in all the provinces, but development, except in regions adjacent to ports, has been hampered by lack of means of communication.

COMMERCE. For the first time since 1923 the annual foreign-trade balance was unfavorable in 1927. This was brought about by a sharp decline in exports, which were 18.3 per cent less than in 1926, whereas imports decreased only 4.6 per cent.

FOREIGN TRADE OF JUGO-SLAVIA FOR 1927

Commodity	Quantity	Value (million dinars)
IMPORTS		
Cotton, yarns, tissues, etc. metric tons..	32,531	1,680.1

All others do.....	1,725,820	1,797.8
Total value		6,400.1
Equivalent in dollars		112,312,000

Corn and wheat showed the largest decreases among the exports; shipments of lumber and livestock increased. The decline in imports was evenly distributed among the principal items. Austria was first as a source of Jugo-Slav imports, furnishing 19.55 per cent. It was followed by Czechoslovakia, Italy, Germany, and Great Britain in the order named. Italy led as a country of destination, taking 24.84 per cent of total exports. Italy was followed by Austria, Czechoslovakia, Germany, and Greece. Imports from the United States were valued at \$4,488,000 and exports to the United States at \$846,650.

FINANCE. The proposed budget for the 1928-29 fiscal year, as submitted to Parliament, showed expenditures of 11,592,794,000 dinars and revenues of 11,555,794,000 dinars, or a deficit of 37,000,000 dinars. The reduction from the preceding year (receipts and expenditures in 1927-28 balanced at 11,690,000,000 dinars) was based on adverse agricultural developments, which were expected to affect the tax-paying capacity of the population. This was the first time that a budget estimate had indicated a deficit; in fact, budget operations since 1922, when the public finances entered a period of stability, had shown a surplus of receipts over expenditures. The latest public statement concerning the debt of the country was that of June 30, 1925, when the consolidated debt totaled \$429,980,695, and the floating debt \$13,010,300.

COMMUNICATIONS. During 1927, the volume of traffic over the railroads was much less than in the preceding year, largely because of the smaller harvest and consequent decline in exports. Special attention was devoted to the railroad construction programme, and an important loan was obtained abroad for such work. Approximately 70 kilometers of railroad line were completed during the year, while work was in progress on 1800 kilometers. The railroad system was recognized as the weakest link in the national economy, and further development of the country's natural resources was dependent upon the expansion of the transport system. There were about 6200 miles of railway line, of which 5564 miles belonged to the Government. In 1926 there were 37,713,000 passengers and 17,236,000 metric tons of freight carried; gross receipts were \$39,241,000, of which approximately two-thirds represented income for passenger service.

GOVERNMENT. Under the constitution adopted June 28, 1921, executive power is vested in the King and legislative power in a single chamber of National Assembly, which consists of 315 members. As a result of the election of Sept. 11, 1927, the party grouping the National Assembly was as follows: Radicals, 111; Independent Democrats, 23; Democrats, 61; National Agrarian party (Raditch party), 62; Agrarians, 9; Mohammedans, 18; People's party, 21; other parties, 10. The King in 1928 was Alexander I, Born Dec. 17, 1888, who succeeded to the throne with full royal rights on Nov. 6, 1921. The cabinet as formed on Feb. 23, 1928, was as follows: Prime Minister, V. Vukitchevitch; Finance, B. Markovitch; Foreign Affairs, V. Marinkovitch; Interior, A. Koroshetz; Justice, M. Vuitchitch; Public Worship, M. Simonovitch; Posts and Telegraphs, V. Kotitch; Education, Dr. Groll; Public Health, V. Popovitch; Forests and Mines, A. Mijovitch; Agrarian Reform, V. Andvitch; Unification of Laws, I. Shumenkovitch; Agriculture, S. Stankovitch; Public Works, P. Markovitch;

Social Affairs, C. Radovitch; War, General Hadzitch; Communications, General Milosavljevitch; Commerce and Industry, M. Spaho.

HISTORY. The year was a most gloomy one for Jugo-Slavia from the very beginning to the end. As noted above under GOVERNMENT a new Government was formed under the leadership of V. Vukitchevitch, the third one he had formed in the last year or two. It was purely a makeshift affair, not being satisfactory in any way to the Croats, whose support was necessary if the Government was to do any business. The question of Croatian autonomy was in the limelight the entire year and its acuteness blotted out practically every other question of internal politics and foreign relations. The Croat question has been a very prominent one from the very formation of the Jugo-Slav Kingdom. Summed up very briefly it might be said that the cause of the conflict had been the constant desire of the Croatian party, under the leadership of Stephan Raditch, to establish an autonomous Croatia in Jugo-Slavia, somewhat similar to the old Austro-Hungarian dual régime. The opponents of the Croatian dream were the Serbians who believed in a strong centralized kingship with as little self-government as possible for the various political units which make up the country. In the offing appeared the Slovenes who also desired local autonomy, although they are not as aggressive as the Croats.

When one considers that many authorities call this country the Kingdom of the Serbs, Croats, and Slovenes, the problem of decentralization may be better understood. The three branches of the South Slav races are opposed to each other in many ways. If possible it might be said that the Croats and Slovenes are more polished and civilized than the Serbians, who outnumber them by more than a million. The problem of welding these three groups into one homogeneous nation was one that would tax the craft of a Bismarck or Cavour, and it might be said that no such personality had as yet appeared in Jugo-Slav public life. King Alexander, while possessing great executive ability, was distinctly a Serb at heart, and apparently had little sympathy for the national aspirations of the Croats and Slovenes.

The Croatian opposition to the Government came to a head in the early summer over the question of ratification of treaties with Italy concerning the question of colonization in Dalmatia. The opposition, led chiefly by the Croats, was bitterly opposed to the treaties which had been negotiated three years previous and severe rioting and anti-Italian demonstrations were prevalent throughout the country. Charges and counter charges were made by the Italian and Jugo-Slav governments and demands were made on both sides for satisfaction. For a time the war clouds seemed about to appear on the horizon. Foreign Minister Marinkovitch seemed to favor the ratification of the treaties, for which attitude he was bitterly assailed by the opposition.

The climax of the debate on the treaties came on June 20, when Punica Ratchitch, a member of the Serbian Radical party, attacked Stephan Raditch, the Croat leader and several of his followers with a revolver. Raditch's nephew and another Croat deputy were killed outright and Stephan Raditch himself was seriously wounded. The entire country was in an uproar and rioting

broke out particularly in Zagreb, the capital of Croatia. Raditch hung on to life tenaciously for a little while and the King offered all kinds of promises to him and his party to heal the breach. The King's advances were abruptly rejected and the Croats determined to boycott the Government politically, socially, and financially. As a result of the shooting episode and the resultant unrest and disorder throughout the country, the Vukitchevitch cabinet resigned on July 4. Attempts to get the injured Raditch to form a cabinet or at least to outline a policy on the strength of which the Croats would support the Government failed and ultimately the King called upon Anton Koroshetz, the Slovene clerical leader, to organize a cabinet. The new cabinet included Croat representatives, who, however, refused to cooperate. The death of Stephan Raditch, which occurred on August 8 (consult his biography) widened the breach between the Serbian and Croatian groups and permitted government to continue chiefly because of the abstention of the Croatian leaders. With a "rump" legislative body, the objectionable treaties with Italy concerning colonization in Dalmatia were concluded.

For the balance of the year the situation remained *in statu quo*. The Croats refused to participate in the government and went so far as to establish their own Parliament at Zagreb and issue a statement to the effect that acts of the Belgrade Parliament would not be considered law in Croatia. The new leaders of the Croats, Dr. Macek and M. Pribicevitch, refused all overtures from the Koroshetz government, and demanded complete autonomy for Croatia. The King and the Serbian leaders were unwilling to grant the Croats' demands, but stated that they would grant partial autonomy. This failed to satisfy, and as the year closed Croatia was virtually under martial law, with military leaders in control of all the districts and the members of the Opposition party being prosecuted, in many cases on trumped up charges. The King adopted very strenuous measures, even going to the extreme of compelling the Croats to participate in the celebration of the tenth year of the establishment of Jugo-Slavia. Quite obviously such tactics did not bring the opposing groups any closer together and it was the opinion of most observers that King Alexander had only two courses open to him at the end of the year if he wanted to keep his kingdom intact, one was the formation of an absolutely non-partisan government after holding a fair election, and the other was the establishment of a dictatorship under his control. The future looked very black and unpromising. Premier Koroshetz resigned on December 30.

JUIILLARD FOUNDATION. See MUSIC.

JUVENILE DELINQUENCY. See CHILD WELFARE.

KAISER WILHELMSLAND, ki'zer-vil-helmslant'. A mandated territory under the control of Australia. It was a colony of Germany at the outbreak of the War in 1914, but was shortly captured by Australian forces. It occupies the northern part of S. E. New Guinea. On Dec. 17, 1920, the League of Nations assigned it to Australia under a mandate. See GERMAN NEW GUINEA.

KAMERUN, kame-roon', CAMEROON or CAMEROONS. The name applied to the territory between British Nigeria and French Equatorial

Africa, extending from the Gulf of Guinea to the south shore of Lake Chad; formerly a German protectorate, but occupied by the British and French during the War and divided in 1919 between France and Great Britain, the former getting far the greater part. Area (exclusive of the tract transferred to Germany from the French Congo in 1911), 191,130 square miles; population, 2,540,000.

FRENCH KAMERUN. At the time of the division of the former German protectorate in 1919. France received an area of 166,489 square miles (also exclusive of the area ceded to Germany in 1911, which, after the War, was annexed to French Equatorial Africa); population in 1926, 1,878,683, including 1570 Europeans. The seat of the Government is at Yaoundé, and the chief port is Donala. In 1925 there were 73 government schools with a total attendance of 10,549. The principal products are cacao, coffee, ivory, tobacco, palm oil, and palm nuts. In 1926 the imports amounted to 192,000,000 francs, and the exports to 155,000,000 francs. In the same year 217 vessels entered at the port of Donala. The general budget for 1927 balanced at 41,768,350 francs and there was a special railway budget of 16,000,000 francs. There are 369 miles of railway. The colony was created an autonomous territory by decree of Mar. 28, 1921, and is under the administration of a French Commissioner. Commissioner in 1928, M. Marchand.

BRITISH CAMEROONS. Great Britain received about 31,000 square miles of Kamerun in the division of 1919. The population is estimated at about 660,000. Cacao, palm kernels, rubber, hardwood, and ivory are the principal products. In 1926 the imports were £275,439 and the exports £220,740. In the same year 136 vessels of 265,536 tons entered the port of Victoria. The revenue and expenditure for the British Cameroons are now incorporated with those of Nigeria. The Governor of Nigeria is the administrator of the British Cameroons. See NIGERIA.

KANSAS. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,769,257. According to the State census taken in 1925 the population was 1,812,986. The estimated population on July 1, 1928, was 1,835,000. The capital is Topeka.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928.

Crop	Year	Acreage	Prod. bu.	Value
Wheat	1928	10,473,000	177,833,000	\$167,144,000
	1927	9,946,000	111,327,000	130,252,000
Corn	1928	6,634,000	179,118,000	116,427,000
	1927	5,897,000	176,910,000	107,915,000
Hay	1928	2,396,000	4,646,000*	39,023,000
	1927	2,625,000	5,476,000*	43,524,000
Oats	1928	1,801,000	37,729,000	15,846,000
	1927	1,801,000	30,574,000	13,758,000
Grain sorghum	1928	1,234,000	28,633,000	17,466,000
	1927	1,547,000	32,487,000	19,492,000
Potatoes	1928	54,000	7,560,000	3,402,000
	1927	49,000	5,390,000	5,390,000
Barley	1928	633,000	17,661,000	8,830,000
	1927	452,000	5,695,000	3,132,000

* tons.

MINERAL PRODUCTION. The State produced in 1926 minerals to a total value of \$165,060,612; in 1925, of \$142,944,214. Petroleum production, which furnished the greater part of these totals, was slightly less active as to quantity in 1927, while the fall in price occasioned a severe drop

in the value total for this item. The output by quantity was 40,740,000 barrels in 1927 and in 1926, 41,498,000; by value it was \$57,900,000 (estimated) for 1927, as against \$93,800,000 for 1926. Lead was produced to a total of 27,497 short tons in 1927 as compared with 28,463 in 1926, with a value, for 1927, of \$3,464,622, and for 1926, of \$4,554,080. Zinc production fell somewhat in quantity to 109,427 short tons in 1927, from 126,307 in 1926; and in value, to \$14,006,656, from \$18,946,050. The coal output, adversely affected by labor conditions, was 3,443,762 net tons in 1927, as against 4,416,480 in 1926; in value it was \$9,648,000 in 1927 and in 1926, \$12,535,000. The natural gas output of 1926 was 38,095,000 M cubic feet, a material increase over the 26,917,000 M cubic feet of 1925; in value it was: 1926, \$12,547,700; in 1925, \$9,991,000. From natural gas were derived 33,000,000 gallons of gasoline in 1927, as compared with 25,369,000 in 1926; the value was, for 1927, \$1,563,000 (estimated); for 1926, \$2,105,000. Cement production of 1927 was 6,180,255 barrels; of 1926, 6,357,581. Cement shipments attained \$9,939,412 in 1927, and in 1926, \$9,757,699. Clay products totaled \$3,969,040 for 1926, as against \$4,345,971 for 1925. Salt was produced to a total value of \$2,741,534 in 1926; in 1925, of \$2,494,423. Stone, gypsum, sand, and gravel were each produced to a value of over \$1,000,000 in 1926.

FINANCE. State expenditures in the year ended June 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$14,254,973 (of which \$691,604 was aid to local education); for conducting public service enterprises, \$440,562; for interest on debt, \$1,215,202; for permanent improvements, \$9,105,088; total, \$25,015,825 (of which \$9,773,112 was for highways, \$1,789,743 being for maintenance and \$7,983,369 for construction). Revenues were \$27,086,679. Of this, property and special taxes formed 39.3 per cent, departmental earnings and charges for officials' services 11.5 per cent, and sales of licenses and the tax on gasoline 34.8 per cent. Property valuation was \$3,674,105,303; State taxation thereon, \$9,502,190. Net State debt on June 30, 1927, was \$24,836,544.

TRANSPORTATION. The total number of miles of railroad line under operation in the State on Jan. 1, 1928, was 9362.18. There were built in 1928, 6.96 miles of additional first track.

EDUCATION. The Kansas School Code Commission prepared an extensive revision of the school code for submission to the Legislature in 1929. For the year 1928 the State Department of Education reported the following statistics: School population, 543,390; total enrollment in public schools, 425,424; enrollment in common schools including kindergarten, 315,864; enrollment in high schools including both junior and senior, 109,560; expenditure for education (1928) public schools, \$39,409,848.86; average salaries of school teachers per month: men, \$164.97; women, \$139.81.

CHARITIES AND CORRECTIONS. Since 1905 the State Board of Administration has exercised centralized control over the State institutions of care and custody. It had full charge in 1928 of 16 institutions. These, with their inmate populations, were: State Penitentiary, Lansing, 1750; Reformatory (for prisoners from 16 to 21 years), Hutchinson, 900; Boys' Industrial School, Topeka, 350; Girls' Industrial School, Beloit, 150;

Women's Industrial Farm, Lansing, 150; Hospitals for the insane at Topeka, 1700; Osawatomie, 1424; Larned, 628; Hospital for Epileptics, Parsons, 628; Home for the Feeble-Minded, Winfield, 800; State Orphans' Home, Atchison, 150; School for the Deaf, Olathe, 200; School for the Blind, Kansas City, 125; Vocational School (colored), Topeka, 158; Western University (colored), Quindaro, 125; Tuberculosis Sanatorium, Norton, 200.

LEGISLATION. The State legislature convened in special session at the call of Governor Paulen on July 19. It was summoned to pass an amendment of the State constitution in order to render Kansas eligible for further Federal contribution to the road-building outlays of the State. Kansas, though receiving such aid through the United States Secretary of Agriculture during many years of the operation of the Federal-aid plan, had omitted to create a highway department to expend road construction funds, as the Federal act required. Successive extensions of time to allow States to create properly empowered departments had expired, leaving Kansas the only State without one. One year before the expiry of the last extension (in 1929), Secretary of Agriculture Jardine wrote to Governor Paulen at the end of June, 1928, pointing out that the existing highway commission of Kansas lacked control of adequate funds to meet Federal road-aid contributions, and lacked authority to determine roads and types of improvement, and that unless these and other defects were remedied, the Federal aid to the State must cease. The amount of this aid was approximately \$2,000,000 a year. The legislature, summoned in consequence of this situation, passed a series of constitutional amendments designed to cover the needs expressed in the Jardine letter. These amendments were submitted to popular vote in November, for ratification. The legislature adjourned without undertaking other business of consequence.

POLITICAL AND OTHER EVENTS. The State law rendering directors of State banks personally liable for deposits received by their banks after these had become insolvent was contested in cases relating to a bank failure that had occurred in 1923 in Butler County, and the contest was carried to the U. S. Supreme Court. The court by a decision of May 14 sustained the statute, and affirmed the decision of the State supreme court awarding damages to a depositor. The State Federation of Labor passed a resolution in favor of restoring the existence of the State labor department, which in its former career had met with labor opposition. An election held in Kansas City April 17 on the proposal to ratify a grant by the city commissioners of a 20-year franchise to the Knorrp interests to supply industrial natural gas resulted in ratification. The Doherty interests, already in the field, opposed the granting of the rival franchise. In Douglas County the commissioners undertook the removal of billboards obstructing the view of travelers on the county highways. The State Supreme Court in May sustained their exercise of power in doing so. Southwest of Erie, the State, in its game and fish preserve, created a lake for fishing purposes, which was named Lake Neosho, the first of a series of similar lakes to be formed. Work on the formation of several State parks was carried on, including parks in Neosho, Meade, Crawford, Ottawa, and Scott counties. There were under con-

struction in 1928. State buildings of a total cost of \$3,000,000, including Snow Hall at the State University, a training school at Emporia, and other educational buildings.

ELECTION. At the election of November 6 the voters of the State gave a majority for the Republican candidates. Hoover and Curtis, greater than that for Coolidge and Dawes in 1924. The fact that a son of the State, Senator Charles Curtis, was Republican candidate for vice president afforded an offset to the adverse feature of agricultural opposition to the Hoover candidacy. The popular vote for President in 1928 was: Hoover (Rep.), 513,672; Smith (Dem.), 193,003. One Democratic Representative was reelected, the rest of the State delegation sent to the House of Representatives being Republican. Clyde M. Reed, Republican, was elected Governor, defeating Chauncey B. Little, Democrat, and with him were elected Republican State officers.

OFFICERS. Governor, Ben S. Paulen; Lieutenant-Governor, D. A. N. Chase; Secretary of State, F. J. Ryan; Treasurer, Carl R. White; Auditor, Will J. French; Attorney-General, William A. Smith.

JUDICIARY. Supreme Court: Chief Justice, William A. Johnston; Justices: Rousseau A. Burch, Henry F. Mason, John Marshall, John S. Dawson, W. W. Harvey, and Richard J. Hopkins.

KANSAS CITY. See MISSOURI.

KANSAS, UNIVERSITY OF. A State institution of higher education at Lawrence, Kans., founded in 1864. The 1928 autumn registration was 4224, of whom 129 were registered in more than one school, leaving a total enrollment of 4095. Of this number 1528 were women and 2567 men, distributed as follows: Graduate school, 239; college of liberal arts and sciences, 2314; engineering, 561; fine arts, 329; law, 143; pharmacy, 80; medicine, 305; education, 122; and business, 131. The 1928 summer session had an enrollment of 1883, of whom 937 were women and 746 men. The faculty numbered 280. The endowment fund amounted to \$230,000 and the income for the year, including the balance carried over from 1927, was \$2,420,608. There were 200 volumes in the library. Chancellor, Ernest Hiram Lindley, LL.D.

KARAFUTO. The name applied to the Japanese half of the island of Sakhalin (see SAKHALIN), which comprises that portion south of the 50th parallel of N. latitude. Area, approximately 13,934 square miles; population, according to the census of 1925, 203,504. The chief industry is the herring fisheries, although the colony is suitable for agriculture and pasturage. The Japanese Government supplies Japanese settlers with seed and domestic animals. There are also valuable forest lands and mines, the chief minerals being coal and alluvial gold. The budget for the year ending Mar. 31, 1927, balanced at 18,791,079 yen.

KATTE, EDWIN BRITTON. American electrical engineer, died at Irvington-on-the-Hudson, N. Y., July 19. He was born at St. Louis, Mo., Oct. 16, 1871. He was graduated from Cornell University (M.E.), 1893; studied and served as apprentice in the H. R. Worthington shops, Brooklyn, N. Y., 1894-96; and for two years was assistant engineer to the Park Avenue Improvement Commission of New York City. Thereafter he was successively draftsman, assistant engineer, mechanical engineer, and electrical engineer of the New York Central & Hudson River R. R., becoming

chief engineer in 1906, with full charge of design, construction, and operation of the electrical traction systems. He was also consulting electrical engineer of the Cleveland Union Terminals Company. He was recognized as one of the leading engineers in America in the electrification of steam railroads. He was a former vice president of the American Society of Mechanical Engineers, a fellow of the American Institute of Electrical Engineers, a member of the American Railway Engineering Association, and a former president of the New York Electrical Society.

KELLEY, HOWARD G. American railway engineer and official, died at San Diego, Calif., May 15. He was born at Philadelphia, Jan. 12, 1858, and was graduated from the Polytechnic College of Pennsylvania. He began his railroad work as an engineer in the service of the Northern Pacific in 1881, in the days when that railroad was being pushed westward. He remained with the road until 1884; then, until 1887, he was a superintendent of mines in Montana. After three years as resident engineer and superintendent of bridges and buildings of the St. Louis Southwestern Railway system, he served as chief engineer until 1898. His next work was done as chief engineer of the Minneapolis & St. Louis R. R. Co., including the Iowa Central, 1898-1907, and until May, 1899, as consulting engineer of the St. Louis Southwestern. In 1907 he was appointed chief engineer of the Grand Trunk Railway system, and under his control more than 10,000 miles of new track was laid. In 1911 he became vice president in charge of operation, maintenance, and construction, and in 1917 president of the system. He was also chairman of the board of the Iowa Vermont Ry. When the Canadian Government took over the Grand Trunk and included it as part of the Canadian National system, Mr. Kelley retired. He received the order of St. John of Jerusalem in England, in 1913.

KELLOGG TREATIES. Under the leadership of the American Secretary of State, Frank B. Kellogg, the United States entered upon one of the most extensive efforts thus far undertaken to diminish the possibilities of war. The Briand proposals of 1927 (see YEAR BOOK, 1927) had been applied in a series of multilateral treaties that had been described in England as "potentially the biggest event in modern diplomatic history." The American Secretary of State, backed up by the President, the Chairman of the Committee on Foreign Relations of the Senate, and by a widespread public opinion offered to the nations of the world a treaty designed to do away with war.

M. Briand, the French Minister of Foreign Affairs, took the initial step on April 6, 1927, in a statement to representatives of the press, in which he suggested the abolition of war as between France and the United States. Interest in this proposal led to the exchange of six notes between M. Briand and Mr. Kellogg beginning December 28, 1927. From these it appeared that Secretary Kellogg desired to enlarge M. Briand's proposal to include a general multilateral treaty, not only between France and the United States, but between all the powers. Mr. Kellogg wished to ban all war, whereas M. Briand would limit the ban to wars of aggression. On April 13, Secretary Kellogg invited the British, the German, the Italian, and the Japanese governments to join France and the United States in an agreement to sign a treaty the spirit and substance of which was as follows:

Deeply sensible that their office imposes upon them a solemn duty to promote the welfare of mankind; inspired by a common desire not only to perpetuate the peaceful and friendly relations now happily subsisting between their peoples, but also to prevent war among any of the nations of the world; desirous by formal act to bear unmistakable witness that they condemn war as an instrument of national policy and renounce it in favor of the pacific settlement of international disputes; and hopeful that, encouraged by their example, all the other nations of the world will join in this humane endeavor and by adhering to the present treaty as soon as it comes into force bring their peoples within the scope of its beneficent provisions, thus uniting the civilized nations of the world in a common renunciation of war as an instrument of their national policy, they have decided to conclude a treaty and for that purpose have appointed as their respective plenipotentiaries . . . and have agreed upon the following articles:—(These are given below.)

France mentioned reservations which were not mentioned in the Kellogg statement. She believed that she should not give up her rights of legitimate defense within the framework of existing treaties. She purposed to do no violence to her obligations under the Covenant of the League of Nations, the Locarno Agreement, or to her alliances with some nine other powers, but M. Briand felt that a multilateral pact such as proposed by Mr. Kellogg was practically possible only with reservations. He granted that the proposal would become most effective when all the governments were invited to participate and that any treaty which did not depend upon the security of all the States concerned would expose its signatories to certain real dangers. Senator Borah suggested if a multilateral pact was not to become an instrument of oppression, the failure of any one signatory to observe its engagement should automatically release the other signatories from their engagements toward the defaulter. It was with these qualifications that the French statesman agreed with the United States to the submission of the draft treaty for the consideration of the German, British, Italian and Japanese governments. These French reservations were not referred to in the Kellogg Treaty or letter of transmission.

Thus there were wide differences between the American and the French positions. Mr. Kellogg rejected the French reservations and the French opposed Mr. Kellogg's plan without reservations. Mr. Kellogg proposed to renounce war as an instrument of national policy without conditions. The French reserved for themselves the right to make war under the war clauses of the Covenant of the League of Nations, the treaties of Locarno, and their treaties of alliance. Mr. Kellogg was offering a substitute for alliances. The French proposed to adhere to their alliances. Mr. Kellogg proposed two things—the renunciation of war by the powers as an instrument of national policy, and the peaceful settlement of all disputes. The French would add a variety of amendments. The Kellogg proposal was that the great powers should scrap their military alliances, the military sections of the Covenant of the League, and other commitments, for a simple, unconditional treaty to renounce war. To the logically minded French, this seemed a bit too airy. France approved the transmission to the four governments of the original Briand proposal of last June and of the six notes subsequently exchanged between France and the United States. Thus six major governments of the world, with the consent of France, were in a position fully to explore the entire situation.

Speaking upon this point, Mr. Kellogg said:

The Government of the United States attaches the very greatest importance to the negotiations which have thus been initiated among the six powers and it is my earnest hope that after the problem has been studied by all six powers in the light of their common desire to agree upon a practicable method for the promotion of world peace, our joint efforts may be crowned with success.

Certainly, so far as the Government of the United States is concerned, no effort will be spared to find a solution for any technical difficulties which may arise in the course of the negotiations and I am confident that the other governments concerned will be no less ready to do everything within their power to facilitate agreement upon the terms of an effective treaty for the renunciation of war.

After the exchange of numerous notes between France and the United States and the other countries which the latter had suggested, the following draft treaty was finally agreed upon:

ARTICLE I

The High Contracting Parties solemnly declare in the names of their respective peoples that they condemn recourse to war for the solution of international controversies, and renounce it as an instrument of national policy in their relations with one another.

ARTICLE II

The High Contracting Parties agree that the settlement or solution of all disputes or conflicts of whatever nature or of whatever origin they may be, which may arise among them, shall never be sought except by pacific means.

ARTICLE III

The present treaty shall be ratified by the High Contracting Parties named in the preamble in accordance with their respective constitutional requirements, and shall take effect as between them as soon as all their several instruments of ratification shall have been deposited at Washington.

This treaty shall, when it has come into effect as prescribed in the preceding paragraph, remain open as long as may be necessary for adherence by all the other powers of the world. Every instrument evidencing the adherence of a power shall be deposited at Washington, and the treaty shall immediately upon such deposit become effective as between the power thus adhering and the other parties hereto.

It shall be the duty of the Government of the United States of America to furnish each Government named in the preamble and every Government subsequently adhering to this treaty with a certified copy of the treaty and of every instrument of ratification or adherence. It shall also be the duty of the Government of the United States of America telegraphically to notify such Governments immediately upon the deposit with it of each instrument of ratification or adherence.

In faith whereof the plenipotentiaries have signed this treaty in the French and English languages, both texts having equal force, and hereunto affix their seals.

Fifteen nations signed the treaty in the Salle de l'Horloge in Quai d'Orsay, Paris, on Monday afternoon, August 27, a year and a quarter after M. Briand sent his message to the American people through the Associated Press. The government heads who signed for the various nations were: Dr. Gustav Stresemann for Germany; Frank B. Kellogg for the United States; Paul Hymans for Belgium; Aristide Briand for France; Lord Cushendun for Great Britain, William Lyon Mackenzie-King for Canada; Alexander John McLachlen for Australia; Sir Christopher James Parr for New Zealand; Jacobus Stephanus Smit for South Africa; William Thomas Cosgrove for the Irish Free State; Lord Cushendun for India; Count Gaetano Manzoni for Italy; Count Uchida for Japan; A. Zales for Poland; Dr. Edward Benes for Czechoslovakia.

Mr. Kellogg did not speak. The only address was by M. Briand who paid glowing tribute to Mr. Kellogg, Dr. Stresemann, and the absent Sir Austen Chamberlain, and then said:—

The League of Nations, a vast political undertaking of insurance against war and powerful institution of organized peace, where there is room to welcome all

ARISTIDE BRIAND

MINISTER OF FOREIGN AFFAIRS OF FRANCE

fresh contributions to the common work, cannot but rejoice at the signing of an international contract whereby it is to benefit.

Far from being inconsistent with any of its obligations, this new act, on the contrary, offers it a kind of general reinsurance. Thus those of its members who will soon be able to ask the League to register today's contract will rightly feel they are bringing it a precious token of their attachment and loyalty.

In his address of welcome M. Briand said:

For the first time, on general plans accessible to all nations in the universe, a congress of peace does something else than settle politically the immediate conditions of a particular peace such as they are imposed in fact by the results of war.

For the first time in the face of the whole world, through a solemn covenant involving the honor of great nations, all of which have behind them a heavy past of political conflict, war is renounced unreservedly as an instrument of national policy; that is to say, in its most specific and dreaded form—selfish and wilful war. Considered of yore as of divine right, and having remained in international ethics as an attribute of sovereignty, that form of war becomes at last juridically devoid of what constituted its most serious danger—its legitimacy. Henceforth, branded with illegality, it is by mutual accord truly and regularly outlawed so that a culprit would incur the unconditional condemnation and probably the enmity of all its co-signatories.

Peace is proclaimed. That is much; but it still remains necessary to organize it. In the solution of difficulties right and not might must prevail. That is to be the work of to-morrow.

On the day following the Paris ceremony, the United States Government sent from Washington a note to 48 nations inviting their adherence to this general pact for the renunciation of war. The invitation to Russia was sent by France, inasmuch as the United States had no diplomatic relations with the Soviet. Twenty-one nations up to the end of the year had given notice of adherence to the pact.

At the end of the year the treaty remained to be ratified by the United States Senate. *The Peace Pact of Paris*, by David Hunter Miller, was published in New York late in the year.

KENLY, WILLIAM LACY. American soldier, died at Washington, D. C., January 10. He was born at Baltimore, Md., Feb. 18, 1864. He was graduated from the U. S. Military Academy in 1889 and entered the army as second lieutenant of the Fourth Artillery in June of the same year. He continued in the service until 1919, when he was retired with the rank of colonel. In the war with Spain he participated in the actions of El Caney and Santiago, and during 1899-1902 he was in the Philippines. Before the United States entered the World War, he studied aviation and although he landed in France in the Field Artillery, he soon became chief of the air service, American Expeditionary Forces. He held the post August-November, 1917. In 1918 he returned to the United States and was made director of military aeronautics, with the rank of major general in the National Army. He held this post until March, 1919, and retired in 1919. He was active in the organization of the Army Air Service Association in 1918 and was its first president. General Kenly's services abroad were recognized by the decoration of the French Legion of Honor, 1919, the British Order of the Bath, 1919, and the Italian Order of the Crown (Grand Officer), 1920. He received also the Distinguished Service Medal of the United States. After his retirement from the Army, General Kenly was vice president of the Marland Oil Company.

KENTUCKY. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,416,630. The estimated population on July 1, 1928, was 2,553,000. The capital is Frankfort.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928.

Crop	Year	Acreage	Prod. bu.	Value
Corn	1928	3,029,000	66,638,000	\$63,972,000
	1927	2,885,000	75,010,000	66,009,000
Tobacco	1928	394,700	306,000,000 ^a	58,550,000
	1927	290,200	202,269,000 ^a	43,349,000
Hay	1928	1,311,000	1,725,000 ^b	28,066,000
	1927	1,350,000	1,916,000 ^b	27,620,000
Potatoes	1928	57,000	5,985,000	4,788,000
	1927	52,000	4,732,000	6,152,000
Sweet potatoes	1928	14,000	1,246,000	1,423,000
	1927	16,000	1,488,000	1,786,000
Wheat	1928	115,000	920,000	1,270,000
	1927	296,000	2,812,000	3,796,000
Oats	1928	805,000	7,930,000	4,520,000
	1927	215,000	4,085,000	2,451,000

^a pounds, ^b tons.

MINERAL PRODUCTION. Retaining in 1926 the fourth rank among the States in the production of coal, Kentucky in 1927 in spite of the fall in the coal production of the United States as a whole, incident to labor difficulties in the industry, increased its coal output to 69,123,998 net tons, from 62,924,462 in 1926; the value of the product was \$119,249,000 for 1927, and for 1926, \$109,740,000. The coal mine employees averaged 237 days of work in 1927. Petroleum production in 1927 recovered, as to quantity, from the decline of the year previous, totaling 6,733,000 barrels, as against 6,274,000 in 1926; in value, \$11,200,000 for 1927 (estimated) in which year low prices prevailed, and for 1926, \$15,250,000. The natural gas yield of 1926, the latest reported year, was 10,410,000 M cubic feet; in 1925, 10,770,000 M. In value it was: 1926, \$3,378,000; 1925, \$3,213,000. Gasoline made from natural gas was 7,689,000 gallons in 1926, and the production in 1927 was 7,000,000 gallons. Clay products amounted for 1926 to \$7,676,858; for 1925, to \$7,853,355. Asphalt was produced in 1926 to a total of \$2,530,480; stone and sand and gravel, each to more than \$2,000,000; fluorspar, in which the State ranks as the foremost producer, to over \$1,000,000. The total mineral production of the State was, for 1926, \$146,768,273; for 1925, \$131,870,840.

FINANCE. State expenditures in the year ended June 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$17,971,201 (of which \$5,421,646 was aid to local education); for interest on debt, \$618,388; for permanent improvements, \$11,143,001; total, \$29,732,590 (of which \$11,116,658 was for highways, \$2,599,000 being for maintenance and \$9,517,658 for construction). Revenues were \$30,719,702. Of this, property and special taxes formed 36.8 per cent; departmental earnings and charges for officials' services, 7.5 per cent; sales of licenses and the tax on gasoline, 39.5 per cent. Property valuation was \$2,923,088,336; State taxation thereon, \$10,193,642. Net funded State debt on June 30, 1927, was \$2,503,153.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 4049.43. There was built in 1928, 1 mile of additional first track.

EDUCATION. The defeat of a legislative measure to upset the system of county administration of school affairs, as established in 1920, through the county superintendents selected by county boards, was regarded by some educators in the State as an evidence that the existing system

had attained general approval. For the academic year 1927-28 the school-age population of the State was placed at 676,849. There were enrolled in the public schools 582,181 pupils. Of these, 527,770 were in the elementary schools and 54,411 in high schools. Expenditures for public-school education in the year were \$26,367,386.31. Salaries of all teachers averaged \$880.70 for the year.

CHARITIES AND CORRECTIONS. The State conducted in 1928 a series of institutions for the care of the insane and the feeble-minded and for the correction of criminals. These were governed by a State Board of Charities and Corrections and a Commissioner of Public Institutions. The institutions so governed, with the numbers of their inmates on June 30, 1928, were Eastern State Hospital (mental), Lexington, 1398; Central State Hospital (mental), Lakeland, 1894; Western State Hospital (mental), Hopkinsville, 1716; State Houses of Reform, Greendale, 544; Feeble-Minded Institute, Frankfort, 458; State Reformatory, Frankfort, 1651; State Penitentiary, Eddyville, 690.

LEGISLATION. The General Assembly of the State convened in regular session on January 3 and adjourned March 16. It enacted a measure to provide pupils in the schools with textbooks at the State's expense. This textbook law, of which the advocacy had formed a chief part of the appeal of Governor Sampson for election in 1927, rendered the State liable for an estimated expenditure of \$2,500,000 a year. Accordingly, revenue bills were introduced to produce the required sum. These failed of passage, but a measure to transfer \$400,000 a year from State school funds to help pay for the books was enacted. Under the Textbook Act, the State Textbook Commission, charged with textbook selection, was required to give local school boards the choice of three texts in high school and junior high school subjects; ten years were allowed cities to bring their textbooks gradually into conformity with the State lists. Acts passed by the Legislature to redistrict the voting subdivisions of the city of Louisville and to amend the method of registration, both demanded by the Louisville members, were vetoed by the Governor. Other measures enacted were those rendering permanent the 5-cent gasoline tax, establishing a State Judicial Council, giving women the right to claim exemption from jury service, creating a uniform State law commission, altering the method of paying county judges, permitting cities of second and third class to adopt city managers, giving those of the second class city planning and zoning powers, establishing competitive bidding in the letting of contracts by the State Purchasing Commission and furnishing an appropriation for advertising the State and bringing in new industries.

A Kentucky National Park Commission was created, with power to condemn lands and caves to become national parks. A measure licensing fishermen at a fee of \$1 was enacted. A bill providing State training schools for psychiatric nurses was signed by the governor after the close of the legislature. It then was alleged that the State Senate had not duly passed this bill. The Attorney-General of the State held that the bill, having been signed by presiding officers of both houses and approved, would become operative. Governor Sampson on March 27 vetoed certain sections of the biennial budget, thereby cutting the appropriations for certain welfare

activities by the sum of \$400,000 approximately, which thus became available for school-book purchases. The State Highway Commission was authorized by act to build toll bridges and meet the cost by bonds.

POLITICAL AND OTHER EVENTS. After the end of the legislative session a grand jury at Frankfort brought indictments against some 23 individuals charged with lobbying and offering inducements to legislators to secure their votes. James C. Wallace, former State treasurer, was convicted January 27, on a charge of having altered election returns from five counties, in the Republican primary election of 1927, when he sought the nomination for the party's candidate as auditor; W. H. Shanks, State auditor in the Fields administration, was indicted April 17 on a charge of misuse of State funds. The U. S. Supreme Court in a decision of April 30, held invalid the State law imposing a tax of 20 cents on each \$100 for the recording of mortgages not maturing in five years, which was attacked by the Louisville Gas and Electric Company, the issuer of \$18,805,000 of mortgage bonds maturing in 30 years, for which payment of the tax had been demanded; the tax was held to contravene the Fourteenth Amendment of the United States Constitution. The Democratic Executive Committee passed a resolution April 14, excluding from participation in State conventions those who had not supported the Democratic nominee in the vote of 1927, when in spite of a Democratic majority for other offices, a Republican Governor was elected.

A bipartisan racing commission personnel of five members was appointed in May by Governor Sampson. There occurred in July floods in the valleys of the Big Sandy and several other water-courses of the State. These ruined the crops on thousands of acres. Relief for sufferers was afforded by the American National Red Cross and by private contributions on the appeal of Governor Sampson. Development of a 7500-acre field of asphalt deposits in Grayson County was started in July. A drive for contributions to the cost of the projected Mammoth Cave National Park, prorated by counties, was conducted early in the year. A concrete and steel bridge over the Kentucky River south of Nicholasville was completed and was dedicated March 10. A thirty-five mile highway between Harlan and Pineville, built of concrete and forming part of the Mayo Trail, opened July 10, linked a section of the Kentucky mountain country for the first time by a modern highway route with the lowlands. The Mercer County court house at Harrodsburg, the depository of some of the oldest records in the State, including some relating to Abraham Lincoln's family, was destroyed by fire May 15, but it was reported that historical records stored in steel vaults had escaped. In Louisville the effort to carry out the law to redistrict the city was delayed by litigation; the site of a new Federal building on Broadway between Sixth and Seventh streets was selected. The city of Lexington installed a zoning and city planning commission, and petitions were circulated for a referendum vote on a proposal that the city should adopt government by city manager.

ELECTION. In the election of November 6, the voters of the State gave Hoover (Rep.), for President, 558,064 votes; Smith (Dem.) received 381,070; the Hoover plurality was much greater than that given President Coolidge in 1924. The

Democratic vote for President exceeded that of 1924, but the Republican total was more than 150,000 greater than it had been that year. The heavy vote was achieved in spite of the absence of any election of senator or governor. Republican candidates for the United States House of Representatives gained six seats and retained another three, only two Democrats being reelected.

OFFICERS. Governor, Flem D. Sampson; Lieutenant-Governor, James Breathitt, Jr.; Secretary of State, Ella Lewis; Attorney-General, J. W. Cammack; Auditor, Clell Coleman; State Treasurer, Emma Guy Cromwell; Commissioner of Agriculture, Labor, and Statistics, Newton Bright; Superintendent of Public Instruction, W. C. Bell.

JUDICIARY. Court of Appeals Judges: William Rogers Clay (Chief Justice), Gus Thomas, D. A. McCandless, R. P. Deitzman, M. M. Logan. William H. Reese, S. S. Willis.

KENTUCKY, UNIVERSITY OF. A coeducational State institution of higher education at Lexington, Ky., founded in 1868. The enrollment in the autumn of 1928 was 2456, distributed as follows: Graduate school, 131; arts and science, 1057; agriculture, 221; engineering, 487; law, 77; education, 254; commerce, 229. There were 1309 students registered in the summer session in 1928. The faculty numbered 237. The productive funds amounted to \$184,075, and the income for the year was \$1,364,573. The library contained 85,757 volumes. President, Frank LeRond McVey, Ph.D., LL.D.

KENYA COLONY AND PROTECTORATE (formerly the EAST AFRICA PROTECTORATE). A British colony and protectorate in East Africa lying on the Indian Ocean between the Umba and Juba rivers and extending inland as far as Uganda; a Crown colony and protectorate since 1920. Area, 225,100 square miles; population in 1926 estimated at 2,736,517, including 12,529 Europeans, 30,583 Asiatics, and 10,557 Arabs; Jubaland has about 16,000 inhabitants. Jubaland was acquired from Italy by the treaty signed between Italy and Great Britain July 15, 1924, and cession took place on July 29, 1925. Nairobi is the capital and has a population of 32,864 inhabitants, of whom 3612 are European. The largest town is Mombasa, with a population of about 39,824 of whom 869 are Europeans. In 1925 there were 20 government schools in operation including 6 European, and over 900 mission and native schools. The agricultural products include rice, coconuts, cotton, simsim, groundnuts, cassava, and sugar cane in the low lying areas. In the highlands where the temperature is moderate and the rainfall good, maize, wheat, sisal, and other crops of lesser importance are grown.

According to latest estimates the merchantable forest extends over 4500 square miles, of which 316 square miles are tropical. The mineral resources consist of natron, diatomite, gold, graphite, marble, limestone, and manganese. They are not fully explored as yet, and only gold mining is carried on to any extent. There is a uniform customs tariff in Kenya, Uganda, and Tanganyika. Imports into Kenya and Uganda in 1926 totaled \$7,440,649 and exports, \$7,844,681. The chief import is cotton piece goods and the chief export raw cotton. The budget estimates for 1927 were revenue, \$2,588,255; expenditure, \$2,570,064; customs revenue (1926), \$1,150,593. The tonnage of vessels entered and cleared in 1926

was 3,108,792 tons. The Kenya and Uganda Railway is the chief means of communication and is owned by the State. It operates 961 miles of main line and branches, as well as steamer service on Lakes Victoria and Kioga, and a motor transport service. The colony is governed under the constitution of December, 1925, which provides for an executive and legislative council. Governor and Commander-in-Chief in 1928, Lieut-Col. Sir Edward W. M. Grigg.

KENYON COLLEGE. A college of arts and sciences for young men at Gambier, Ohio; established in 1824 by the Protestant Episcopal Church and connected with it. The enrollment is limited to 250. The number registered for the autumn term of 1928 was 253; and the faculty numbered 24 members, including the following appointments made during the year: Charles Rutenber, Ph.D., assistant professor of physics; C. L. Cottrell, Ph.D., assistant professor of chemistry; Dwight Packard, A.M., instructor in English; and R. J. Kutler, A.M., athletic director. The endowment funds amounted to \$1,624,000 and the income for the year was \$208,000. The library contained 45,000 volumes. President, William F. Peirce, L.H.D., D.D., LL.D.

KEOGH, KÉ'Ō, MARTIN JEROME. American jurist, died at New Rochelle, N. Y., October 24. He was born at Waterford, Ireland, in 1855, and after university studies in Dublin, he moved to the United States. After graduating from the law school of the New York University in 1875, he commenced law practice in New Rochelle, and formed a partnership with Charles G. Banks. He was an able trial lawyer and acquired a reputation in criminal cases in Westchester County. He participated in politics only once, when in 1886 he acted as a Democratic elector, voting for Grover Cleveland. Judge Keogh was elected Justice of the Supreme Court of New York in 1895, from the Second Judicial District. His career on the bench was so successful, that when his fourteen-year term expired, the various bar associations in the counties and cities under the jurisdiction of his court petitioned for his return, and the Democratic and Republican conventions united on his renomination. Being reelected, he started his second term in 1910, one of the first judges to be supported by both parties, and he served until his retirement, Jan. 1, 1923. Judge Keogh was unwilling to become involved in politics, but he was interested in civic reform in Westchester County, and was instrumental in the organization of The People's Forum, and the Legal Aid Society. He was elected an honorary member of the Association of the Bar of the City of New York, in 1888, and he was awarded the LL.D. degree from Manhattan College in 1903, and from New York University in 1906.

KING, (WILLIAM BENJAMIN) BASIL. American novelist, died at Cambridge, Mass., June 22. He was born at Charlottetown, Prince Edward Island, Feb. 26, 1859, and he was educated at King's College, Windsor, N. S. He entered the ministry of the Protestant Episcopal Church, and was rector of parishes at Halifax, N. S., and Cambridge, Mass., before devoting himself exclusively to writing, from 1900. Although critics found Mr. King's stories imbued with too much optimism and too much given to the "happy ending," many of them attained great popularity. In his later years he paid much attention to the hypothesis of the survival of life after bodily death, and he embodied his theories in

some of his stories and in a motion picture which he wrote, "Earthbound." His books were: *Griselda* (1900); *Let Not Man Put Asunder* (1901); *In the Garden of Charity* (1903); *The Steps of Honor* (1904); *The Giant's Strength* (1907); *The Inner Shrine* (1909); *The Wild Olive* (1910); *The Street Called Straight* (1912); *The Way Home* (1913); *The Letter of the Contract* (1914); *The Side of the Angels* (1916); *The Lifted Veil* (1917); *The High Heart* (1917); *The City of Comrades* (1919); *The Abolishing of Death* (1919); *The Thread of Flame* (1920); *The Empty Sack* (1921); *The Conquest of Fear* (1921); *The Dust Flower* (1922); *The Discovery of God* (1922); *The Happy Isles* (1923); *The High Fort* (1925); *Faith and Success* (1925); *The Spreading Dawn* (1927).

KIRKWOOD, KIRKWOOD, JOSEPH EDWARD. American botanist and educator, died at Flathead Lake, Mont. August 16. Born at Cedar Rapids, Iowa, Jan. 24, 1872, he was graduated from Pacific University, Forest Grove, Ore., in 1898, and, after continuing his studies at Princeton he received the Ph.D. degree from Columbia in 1903. He became an instructor in botany at Syracuse University in 1901, associate professor in 1904, and in 1907 he was given the full professorship. He left Syracuse University in the same year to become assistant botanist of the Continental Mexican Rubber Company, and in the following year he became investigator for the Desert Botany Laboratory of the Carnegie Institution in Tucson, Ariz. In 1909 Dr. Kirkwood joined the University of Montana faculty as assistant professor of botany and forestry, and in 1910 he was made professor and head of the department. In 1914 he became professor of botany.

KIWANIS INTERNATIONAL. Clubs made up of not more than two of the leaders in each business and profession, united for the rendering of civic and social service to the community. Each club enjoys autonomy but at the same time functions in direct connection with district and international administrations. There are twenty-nine geographical districts, each with a governor, in the United States and Canada. The first club was organized at Detroit, Mich., in January, 1915. The first national president was George F. Hixon, elected in May, 1916, and elected international president in 1917, the organization having spread into Canada. The name "Kiwaniis" is a word coined to express the constructive, unselfish work of Kiwanians. The motto of the organization, "We Build," is also an expression of its spirit. Its aims are to crystallize community sentiment for municipal improvements, to cultivate public opinion for purer politics, and to promote community coöperation in all good things. The international organization at the close of the year 1928 was made up of more than 1750 clubs, with an approximate membership of 102,000. O. Samuel Cummings, Kansas City, Mo., was the international president for 1928-1929; Henry C. Heinz, Atlanta, Ga., was the immediate past president; Fred. C. W. Parker, secretary; and Raymond M. Crossman, treasurer. The International headquarters' office is in the Federal Reserve Bank Building, 164 West Jackson Boulevard, Chicago, Ill.

KLABUND. Pen name of the German author, ALFRED HENSCHKE, who died at Davos, Switzerland, August 13. He was born Nov. 4, 1891, at Krossen, and after studying at Berlin, Munich,

and Lausanne, he traveled continuously and wrote more than forty books, including: *Morgenrot* (1913); *Klabunds Karussell* (1914); *Moreau* (1915); *Dumpe Trommel und beraushtes Gong* (1916); *Die Himmelsleiter* (1916); *Mohammed* (1917); *Dreiklang* (1919); *Das Blumenschiff* (1921); *Franziskus* (1921); *Spuk* (1922); *Pjotr* (1923); *Das Heisse Herz* (1923); *Der Kreidekreis* (1924); *Gedichte* (1926); and *Cromwell* (1926).

KNIGHTS OF COLUMBUS. A fraternal society for Roman Catholic men, organized under a special charter granted by the General Assembly of the State of Connecticut, Mar. 29, 1882. The Order is composed of a Supreme Council, a Board of Directors, and State and subordinate councils. On June 30, 1928, there were 61 State councils and two territorial jurisdictions. The 2530 subordinate councils had a membership of 661,684, of whom 242,681 were insurance members and 419,003 associate members. These two classes developed through deviation from one of the chief purposes of the organization, to urge Roman Catholic men to insure provision after death for those dependent upon them, but expansion in membership permitted others to join the associate class with certain restrictions as to their rights. By the step-rate plan of insurance adopted in 1902, every insured member pays the cost of his own insurance at his own age. The four principles of the Order, charity, unity, fraternity, and patriotism, emphasize to members the necessity of rendering service in time of illness, death, or distress, the gathering together of men for better citizenship, the value of mutual assistance, and loyalty to duly authorized civil government.

The society continued to offer to ex-service men evening courses in academic, commercial, and trade or technical subjects, free of charge, and conducted correspondence courses for ex-service men and other members of the Order; its programme of boy-guidance work continued to receive support, as well as the two years' course in boy-guidance work at Notre Dame University, under the supervision of a chair in boy-guidance established at the University by the Order. Other activities included the establishment of Circles of Columbian Squires, the junior order, and the campaign of education inaugurated in 1926 against the influence of Soviet Russia upon the philosophy of American life, including the distribution of 4,000,000 pamphlets, which also contained information upon Mexico; and lectures concerning activities in Mexico, which were delivered throughout the United States.

The Order publishes monthly *Columbia*, a magazine devoted to up-to-date fiction, verse, editorials, articles on business, sport, arts, literature, sociology, religion, and the ordinary interests of the ordinary man, which had a circulation in 1928 of more than 700,000. The headquarters of the Supreme Council are located at New Haven, Conn., and the officers for 1928 were: Martin H. Carmody, supreme knight; John F. Martin, deputy supreme knight; William J. McGinley, secretary; D. J. Callahan, treasurer; Edw. F. Fahey, M.D., physician; Luke E. Hart, advocate; the Rt. Rev. John J. McGinney, chaplain; David F. Supple, warden.

KNUDSEN, KNUDSEN, GUNNAR. Leader of the Norwegian Radical party and premier during the World War, died at Oslo, December 1. He was born near Arendal, in September, 1848, and

attended the Royal Frederick University, receiving a degree in engineering in 1869. He first worked as an engineer in Norway and England, and in 1872 became proprietor of a shipping concern. He was elected to the Storting in 1892, later becoming president of that legislative assembly. Knudsen served as minister of finance under King Oscar II in 1901, 1903, and 1905. After the separation of Norway and Sweden in June, 1905, King Haakon VII appointed him premier in 1908, a position which the Radical leader held for two years, returning to office 1913-20. He was chairman of the Statens Videnskabelige Forskningsfond.

KODACOLOR. See PHOTOGRAPHY.

KOESSLER, KARL KONRAD. American physician, died at Chicago, Ill., February 13. He was born at Vienna, Nov. 6, 1879, and was educated at the Imperial University of Vienna and the University of Chicago. Before going to the United States, Dr. Koessler was an assistant in the medical clinic of the Vienna General Hospital, and also did research work at the Pasteur Institute and the Clinic Wida, both in Paris. He was assistant clinical professor of medicine at the Rush Medical School, University of Chicago, and professor of pathology at the Sprague Memorial Institute. He was credited with inventing the liver treatment for pernicious anemia, and in recent years had given much time to the study of asthma and of Bright's disease; he died of the last-named ailment. He wrote many medical books in both English and German and was a member of numerous medical societies.

KOMAROV, MARSHAL MORITZ VON AUFFENBERG. See AUFFENBERG-KOMAROV, M. VON.

KONGO, BELGIAN, AND CONGO FREE STATE. See CONGO.

KOREA or CHOSEN. A peninsula of eastern Asia belonging to the Japanese Empire since the treaty between Japan and Korea, Aug. 22, 1910. Capital, Seoul.

AREA AND POPULATION. The area is given at 85,241 square miles; population, according to the census figures of Jan. 1, 1925, 19,519,927, as compared with 17,288,989 in 1920. The foreigners number slightly more than 35,600, the vast majority of whom are Chinese. At the end of 1925 the largest cities with their populations were: Seoul, 302,711 (77,811 Japanese); Pusan, 103,522 (39,756 Japanese); and P'yong-Yang, 109,285 (22,527 Japanese).

EDUCATION. In 1925 there were for the education of the Japanese 449 elementary schools with 54,137 pupils, 10 middle schools with 4635 pupils, one medical school with 280 students, one technical high school with 118 students, 21 girls' high schools with 5694 pupils, one commercial high school with 246 students, one special school for law with 152 pupils, and various kindergartens and private schools. For the education of the Koreans there were 1244 common schools with 368,585 pupils, 78 private common schools with 17,102 pupils, 23 higher common schools with 9189 students, besides various industrial schools, and a medical and technical college. On Mar. 31, 1926, there were 1931 schools of all kinds in Korea with 474,203 pupils, and a university at Seoul with 321 students (89 Koreans and 232 Japanese).

PRODUCTION, ETC. From time immemorial tilling the soil has been the principal occupation of the Korean people, and rice is the staple agricultural product, followed by barley, Italian millet,

soy beans, wheat, and red beans. Methods of agriculture preclude the use of mechanical devices, and as the native horse is too small for farm labor, the Korean's main beast of burden is his ox or cow. These animals plow his fields, haul his heavy loads, turn his mill, and as a final service are slaughtered for food or for their hides. As a result of the encouragement given by the Government to the breeding of cattle and the measures taken to prevent cattle diseases, the number of cattle in Korea gradually had increased from 900,000 in 1910, at the time of the annexation to Japan, to over 1,580,000 in 1927. Of the 1927 total, 259,663 were slaughtered and 43,086 exported. In 1927 the rice crop amounted to 84,998,445 bushels, in the previous year the barley production was 35,410,630 bushels; agricultural products also included 21,757,685 bushels of soy beans, 157,489,981 pounds of Upland American cotton, and 57,149,756 pounds of native cotton.

The principal native industrial products of Korea are textile fabrics, paper, pottery, metal ware, manufactured tobacco, brewed drinks, and leather. These industries are mostly carried on as subsidiary house industries. The chief mineral products are gold, silver, zinc, copper, lead, iron, tungsten ore, graphite, coal, quartz, and kaolin.

COMMERCE. Korea's total trade with Japan and foreign countries in 1927 was valued at 742,341,709 yen, an increase of 7,217,126 over the 1926 figure. Exports totaled 358,925,000 yen and imports, 383,417,000, against 362,955,000 and 372,170,000, respectively in 1926. An excess of imports over exports of 24,492,000 yen, accordingly, was recorded in 1927 as compared with 9,215,000 yen in the preceding year. Korea's foreign trade has shown a gradual growth proportionate to its industrial development, increasing from a total of 316,378,000 yen in 1918 to 742,342,000 in 1927.

Trade with Japan represented 81 per cent of Korea's total trade in 1927, amounting to 600,265,000 yen—a decline of 13,853,000 from the 1926 figure. Compared with figures for the previous year, exports to Japan declined 7,384,000 yen, while imports from that country showed an increase of 21,237,000 yen. Trade with other countries than Japan amounted to 142,077,000 yen, representing less than 20 per cent of Korea's total foreign trade, and 6,636,000 yen below the 1926 figure. China holds first place both in the export and import trade of Korea with countries other than Japan.

FINANCE. The finances of Korea form a special account in the budget of Japan. The 1926-27 budget showed revenues of 192,824,974 yen and expenditures of 192,825,154. The budget for 1927-28 balanced at 210,910,111 yen. The public debt on Mar. 31, 1927, was 16,877,430 yen.

COMMUNICATIONS. The shipping entered at the open ports in 1926 had a tonnage of 5,801,322 and those that cleared a tonnage of 5,550,152. There were 1821 miles of railways in 1927, which handled 22,452,363 passengers.

GOVERNMENT. Korea is considered an integral part of Japanese territory and is so governed. Governor-General in 1928, General Hanzo Yamashita (appointed in December, 1927).

KRECH, ALVIN WILLIAM. American financier, died at New York, May 3. Born at Hannibal, Mo., May 25, 1858, he received there a public-school education. His first business experience was gained with the Holly Flour Mills, of Milwaukee,

Wis., with which he remained from 1874 to 1888. He then entered railroad contracting, 1888-92, and this led to his connection, 1893-94, with the Union Pacific R. R., in the period of its insolvency. He served as secretary of the reorganization committee and in New York. He left the railroad to become an official of the Mercantile Trust Company of New York, 1894-1903. In the latter year Mr. Krech was elected president of the Equitable Trust Company of New York and held that office until he became chairman of the board in 1923. He was a director of the American Ice Company, the City Investing Company, the Federal Sugar Refining Company, the Manhattan Railway Company, the Norfolk & Southern, the Western Maryland, the Wabash, the Denver & Rio Grande, and other railroad and industrial corporations. He was active in philanthropic movements in New York, especially as treasurer-general and director of the Permanent Blind Relief Fund. Mr. Krech was decorated by the French Government as a Chevalier of the Legion of Honor, by that of Italy as Commander of the Crown of Italy, and by Rumania as an Officer of the Order of the Rumanian Crown.

KU KLUX KLAN. The decline of the Ku-Klux Klan, spoken of in preceding YEAR BOOKS, became more marked in 1928 when it took on all the appearances of a fraternal order. In February it was reported that the Klan, through its Emperor and Imperial Wizard, had doffed the mask, dropped some of the secret ceremonies, and taken a new name, that of Knights of the Green Forest. The following conjectures were advanced by newspaper commentators for the action: A falling treasury; a desire to defeat Governor Smith in the Democratic convention; compulsion by State and municipalities which were prohibiting the use of masks in public gatherings. The Klan, said Imperial Wizard Dr. Hiram W. Evans, was preparing "for newer and larger activities in our national life." Some observers insisted that the Klan was still a political power and that it would make its influence felt in November, particularly if Governor Smith was to be the Democratic nominee. Thus Stanley Frost, writing in *World's Work*, while agreeing that its numbers had dwindled, insisted that as a political power its force was to be reckoned with. He was bold enough to say: "I believe that the Klan can prevent Smith's nomination. . . ." His estimates of Klan members appeared more plausible than his prophecies. Mr. Frost put Klan membership at one-third of the figure of 1924 when the movement was at its apogee. Indiana and Colorado, particularly, appear to have lost heavily.

There is no question that the Klan played a rôle of importance in the presidential campaign following the nomination of Governor Smith by the Democratic party. It was one of the forces of intolerance that opposed Governor Smith because of his Catholic faith. The rural areas of the South and the border States were deluged with printed material in which Catholicism was denounced and the Democratic candidate was declared to be the agent of the Vatican. What was to be the effect of the more or less subversive campaign waged against Governor Smith by the Ku Klux Klan and other agencies could not be estimated as the year closed.

The year, too, saw the first denunciation of the Klan from a Federal court bench (April 13). This was at the conclusion of the Pittsburgh

trial (see preceding YEAR BOOK) in which the Klan sought an injunction against five former members to prevent them from doing business under the Klan name. On the other hand the "banished members" had filed a counter suit asking for the revocation of the Klan charter, the appointment of a receiver, and the accounting of \$15,000,000 collected in membership dues. One of the highlights of the trial was the presentation of a deposition made by D. C. Stephanson, imprisoned in an Indiana jail but at one time the head of the Klan in his State. In this, Stephanson violently attacked the order and particularly the Imperial Wizard. Judge W. H. S. Thomson brought the trial to an end by dismissing the counteraction and by throwing out the Klan's suit for an injunction because "this unlawful organization, so destructive of the rights and liberties of the people, has come into court with filthy hands and can get no assistance here." The court continued:

That the plaintiff organization, through its actual operations and teachings, has stirred up racial and religious prejudices, fomented disorder and encouraged riots and unlawful assemblies, which have resulted in flagrant breaches of the peace, defiance of the law, bloodshed and loss of life, and that such unlawful assemblies and riots have, in many instances, been brought about for the avowed purpose on the part of the officers in control of increasing the membership of the organization.

More lurid disclosures were made public in Indiana in a deposition filed with the State's attorney-general who was seeking to oust the Klan from the State. The testimony was presented by a former Klan cyclops who told how the Klan had stuffed ballot-boxes, used whisky to win elections, raided men on the Order's blacklist, and boycotted Catholic and Jewish business men. Pennsylvania and Indiana, however, were the only States where the doings of the Klan received extended public attention. In other States the soft veil of obscurity appears to have dropped over the Order.

NEW YORK KLAN LAW. It will be recalled that in 1923 New York State passed a law requiring all organizations except trade unions and fraternal orders, to give publicity to their regulations, oaths, and memberships. This was aimed at the Klan and it was hoped that by the unmasking of the order its effectiveness would be terminated. On November 19, the U. S. Supreme Court found the law constitutional and affirmed the decision of the New York Court of Appeals when it found one George C. Bryant guilty of a misdemeanor for becoming a member of the Klan when he knew that it was violating the law. The Supreme Court opinion was written by Mr. Justice Van Devanter. The opinion agreed with the lower courts that the statute was justified in drawing a distinction between the Klan and labor organizations and fraternal orders. It quoted with approval one of the lower courts when it said: "It is a matter of common knowledge that this organization functions largely at night, its members disguised by hoods and gowns and doing things calculated to strike terror into the minds of the people." On the other hand, of the fraternal orders which were excluded, the lower court said: "These organizations and their purposes are well-known, many of them having been in existence for many years." The Supreme Court opinion then concluded: "We think it plain that the action of the courts below in holding that there was a real and

substantial basis for the distinction made between the two sets of associations or orders was right and should not be disturbed." See **INDIANA**.

KURDISTAN, kōōr'dē-stān'. A more or less vague term applied to a region in eastern Asia Minor comprising a portion of Turkey and the northern section of the vilayet of Mosul in the new independent state of Irak (See **MESOPOTAMIA**). The inhabitants are Kurds, a seminomadic people related to the Persians in race and language. The population is estimated at 2,500,000. Shortly after the World War there was an attempt to create an independent Kurdistan. The movement was completely crushed by the failure of the Treaty of Sèvres, after which the remaining Kurds divided in political allegiance to the Turkish, Persian, and Mesopotamian governments.

KWANGCHOW-WAN, kwāng'chō'wān. A small territory on the coast of the Chinese province of Kwangtung, leased to France in 1898, and two small islands commanding the bay leased to her the following year. Area, about 190 square miles; population estimated at 205,000. In 1925 the imports were valued at 6,735,239 piastres and the exports at 5,844,992 piastres. The chief imports are cotton yarns, opium, and petroleum; the chief exports, straw sacks, swine, and mats. The port is free and is regularly visited by two French steamship companies. In 1925, 296 vessels of 130,000 tons entered. The local budget for 1927 balanced at 660,000 piastres. The administration is under the governor-general of French Indo-China.

KWANTUNG, kwān'tung', or **KWANTAO**. A territory at the southern part of the Liaotung Peninsula, leased to Japan by China, as a successor to Russia after the Russo-Japanese War. Area, about 538 square miles; population, Dec. 1, 1925, 1,089,678, of whom 846,523 were Chinese. The latest statistics on education showed 52 elementary schools with 22,168 pupils for the instruction of Japanese, and 128 schools with 22,709 pupils for the instruction of natives. The agricultural products include rice, tobacco, hemp, and various grains and vegetables. The fishing industry is of importance. There is an abundance of salt which is the chief manufactured product. Trade is mainly with Japan and China. Imports in 1924 were valued at 115,039,766 haikwan taels and exports at 171,259,261 haikwan taels. The seat of the administration and the chief port is Dairen, formerly Dalny. The estimated revenue and expenditure for 1926-27 balanced at 14,997,515 yen. The territory is under a Japanese governor-general.

LABOR. The reader is recommended to the following articles for discussions of various aspects of the history of labor during the year: **CHILD LABOR**; **COÖPERATION**; **LABOR ARBITRATION AND CONCILIATION**; **LABOR LEGISLATION**; **MINIMUM WAGE**; **OLD-AGE PENSIONS**; **STRIKES AND LOCKOUTS**; **UNEMPLOYMENT**; **WOMEN IN INDUSTRY**; **WORKMEN'S COMPENSATION**; and in articles on the respective countries. The following notes indicate other developments during the year.

INJUNCTIONS. The issuance of injunctions by equity courts became an important question before the public. Labor, particularly, was moved to demand legislative relief because of the use to which courts were increasingly putting the Sherman Anti-Trust Act and the Clayton Act. As a result of these laws, courts in equity, on the ground that labor unions were combinations "in

restraint of trade" were granting injunctions to restrain the calling of strikes. That labor could expect no relief from the U. S. Supreme Court was shown in the decision handed down in April, 1927 in the Bedford Cut Stone Co. case (274 U. S. 37). The Bedford Cut Stone Co. had declared a lockout and refused to deal with the men's union, obtaining an injunction to prevent the union's interference with its business. This was granted by the local court and upheld by the Supreme Court on the ground that the Sherman Anti-Trust Law and the Clayton Law made such action compulsory.

A minority opinion was signed by Justices Holmes, Brandeis, and Stone. The refusal of the courts to consider the factor of reasonableness prompted Senator Shipstead to introduce a bill to provide that "equity courts shall have jurisdiction to protect property when there is no remedy at law," where property was defined to mean something "tangible and transferable." A sub-committee of the Senate Judiciary Committee, holding hearings in the spring of the year, reported a substitute bill which provides: 1. That the individual worker shall have "full freedom of association, self-organization, and designation of representatives of his own choosing to negotiate the terms and conditions of his employment, and that he shall be free from interference, restraint, or coercion of employers of labor, or their agents, in the designation of such representatives or in self-organization or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection"; 2. That the "yellow dog" contract is to be unenforceable; 3. That no court of the United States shall enjoin any person in a labor dispute from doing singly or together, among other things, the following: ceasing to perform work, becoming a member of a labor union, paying strike benefits, giving publicity to the existence of a labor dispute, assembling peaceably to act in promotion of his interests in a labor dispute; 4. That no injunction is to be issued except after notice, a hearing, and finding that unlawful acts have been committed with irreparable injury to the complainant's property and that the complainant has no adequate remedy at law; 5. That no injunction is to be granted unless the complainant has made efforts to arbitrate; 6. That the defendants charged with contempt in the violation of injunctions are to be allowed trials by jury. The sub-committee responsible for the bill was made up of Senators Norris, Blaine, and Walsh (Montana). No action was taken in the spring session.

At a meeting in Washington. in the spring, of 125 labor leaders, it was decided to support such legislative proposals as offered labor relief. In pointing out the peril in the present situation, Matthew Woll, vice president of the A. F. of L., said: "We have cause to feel alarmed over the increasing number and character of court injunctions. During the shopmen's strike in 1922 more than 300 applications for injunctions were made and granted. During the year 1927 more than 600 injunctions were issued against labor." Mr. Woll showed that labor was being enjoined by court decree from soliciting men and women to join unions, from peaceful picketing, from using its funds to meet the legitimate expenses incidental to the carrying on of a strike, from peaceful assemblage, from exercising the right of free speech, from using public

highways, from advertising the fact that a strike exists in which labor was directly interested.

In the presidential campaign in the fall, Governor Smith attacked the indiscriminate use of the injunction. In fact, the Democratic party platform said: "Injunctions should not be granted in labor disputes except upon proof of threatened irreparable injury, and after notice and hearing; and the injunction should be confined to those which do directly threaten irreparable injury." The Republican platform was more cautiously worded. It said: "We believe that injunctions in labor disputes have in some instances been abused and have given rise to a serious question for legislation."

In January, the New York State Court of Appeals ruled that the employees of the Interborough Rapid Transit Co. were not violating their contract with the company by joining the street railway employees' union secretly. The suit was based on an injunction that the company had sought against the union to prevent it from organizing the subway men who, as a condition of employment, had to affiliate with the company union. In March the same court refused to issue an injunction requested by the Interborough against William Green, president of the American Federation of Labor, to restrain union organizers from continuing their activities among the subway men. The company contended that the employees had signed a two-year contract one of whose clauses was that they were not to affiliate with the street railway employees' union while in the subway's employ. It was pointed out by the defendants that the contract was inequitable in that the subway had the right to discharge while the contract bound the men. With this view the court agreed and denied the plaintiff the injunction it requested to prevent the continued unionization of its men.

MEXICO. President-elect Emilio Portes Gil indicated that his administration was planning the radical revision of the country's labor code when he summoned a conference of workers and employers to meet with him and labor experts, beginning November 15. As outlined roughly by Señor Gil, the new code was to contain the following provisions: 1. The establishment of a system of labor courts. The scheme calls for the setting up of tribunals in the plants themselves, with courts of appeal and central arbitration boards. There would also be a National Labor Council of three representatives of workers, three of employers, one representative from each

labor court, one representative from each of the Ministries of Industry, Finance, Agriculture, and the National Department of Accountancy. This Council would have charge of obligatory arbitration disputes of a general nature and would arrange agricultural credits, regulate the general scale of salaries, promote industry through conferences, and the like. 2. A corps of labor inspectors is to be created. 3. The right to strike is recognized. 4. The working day is to be fixed at eight hours and the week at six days, with four annual holidays as obligatory and also obligatory annual vacations with pay. 5. The creation of a government insurance organization with contributions from the Government, the workers, and the employers. 6. All able-bodied Mexicans must learn trades and work at least one year in the country. 7. Seventy per cent of the workers of every factory must be Mexicans and only Spanish-speaking persons will be allowed to occupy the posts of managers, superintendents, doctors, and foremen. 8. Saloons and gambling houses are banned in labor centres. 9. A minimum wage is to be established. 10. Employers will have to obtain the consent of the labor court before closing their businesses. Workers are to receive a month's notice.

ENGLISH CONFERENCE ON INDUSTRIAL RELATIONS. Late in 1927, largely as a result of the initiative of Lord Melchett (Sir Alfred Mond) there was formed in England a Conference on Industrial Relations made up of some of the larger industrialists and a number of the more conservative labor leaders. By mid-summer some ten meetings of the group had been held and on July 5th a report was issued. The report recognized that the existing trade-union organizations were the most effective representatives of labor operating and approved of the practice current among employers to take up with trade-union organizations questions of wages, hours, and other working conditions. The report placed the following stamp of approval on trade-union organization: "We further consider that negotiations between employers and workman are facilitated by workmen being members of an affiliated union. . . ." The report went on record as condemning the dismissal of workers for trade-union activities. Another significant recommendation was the creation of a National Industrial Council made up of representatives of the Trade Unions Congress and the employers' associations for the purpose of: holding regular meetings to consider the state of industrial pro-

PRODUCTION OF SELECTED COMMODITIES PER MAN-HOUR IN THE UNION OF SOCIALIST SOVIET REPUBLICS FROM OCTOBER 1, 1925, TO APRIL 30, 1927
[As used here, Russian ton = 2232 pounds; United States ton = 2000 pounds, long ton = 2240 pounds; case = 1000 small boxes; center = 220.46 pounds; cubic meter = 35,314 cubic feet]

Commodity	Total man-days worked (thousands)	Average hours worked per day	Production, in Russian measure			Production, in United States measure				
			Unit	Amount	Per man-hour	Unit	Amount	Per man-hour	Per man-day	
Coal	80,974	7.4	Ton	42,926,000	0.072	Ton	47,905,416	0.080	0.59

ress; to perfect a machinery for the setting up of conciliation boards; to set up a machinery for the conduct of continuous investigation into industrial problems. With regard to a policy on conciliation, the Conference went on record as opposing Compulsory arbitration. The Trade Unions Congress accepted the report and approved the continuance of the sittings though the left elements, who all along had opposed the meetings, sought to pass a resolution condemning the Conference. On September 6, at its annual meeting, the Trade Unions Congress by a vote of 3,075,000 to 566,000 decided to approve the continuance of the peace-in-industry movement or "Mondism."

LABOR PRODUCTIVITY IN RUSSIA. Previous issues of the YEAR BOOK have contained comments on the productivity of labor in the United States. The accompanying table shows the productivity of labor in Russia for a selected list of basic industries. The figures are for man-hours and production per man-hour for both Russia and the United States. It will be observed that production per man-hour is greater for the American worker in the following industries: coal, mineral oil, salt, cement, beet sugar, paper, and cardboard, in fact in all those industries in which the units of measurement are comparable. Only in pig iron does the Russian worker produce as much as the American worker. However, in no case is there any really marked difference, and when one considers the remarkable superiority of American machinery the wonder is that the Russian worker can do as well as he does.

LABOR, AMERICAN FEDERATION OF. The American Federation of Labor held its forty-eighth annual convention at New Orleans November 19-28. The executive committee's report showed a gain in membership over the year of 85,537, its dues-paying membership on Aug. 31, 1928 being 2,896,063 as compared with 2,810,526 in 1927 and 2,803,966 in 1926. The Federation high mark was reached in 1920 when its membership totaled 4,078,740. The executive committee announced that in the forthcoming year organized labor would strive to double its membership, paying particular attention to the automotive field which so far had successfully resisted all efforts at unionization. The report further asked the convention to indorse an amendment to the immigration law for the restriction of immigrants from Mexico, Central America, and South America, called upon President Green to appoint a commission to examine the status of adult educational movement, and spoke of progress being made in the attainment of the five-day week.

The report continued to breathe defiance toward the Communists. The convention itself heard addresses on the menace of those manufacturers who continued to regard organized labor as un-American, on the desirability of a universal draft in the event of war, on the Hoover scheme for a prosperity reserve fund to be used in public construction works during periods of unemployment, on why labor will not form a political party, on a shorter working day for labor, on the danger being presented to labor by unrestricted immigration from Mexico, and the like.

On November 23 Secretary of Labor Davis declared before the convention that "the long work day and the long work week in American industry are as dead as the dodo," and tried to dissipate the dread that labor was beginning to express about the too rapid mechanization of

industry. President Green indicated that the Federation's chief preoccupations continued to be a shorter working week and more pay, when he issued a statement in which he said: "Two major trends for which labor is responsible for watching are that hours of work be increasingly shortened in order that mechanical progress may raise standards of human welfare, and that wage increases shall correspond to increasing productivity."

President Green made the statement that already 514 local unions and 165,029 trade unionists were working a five-day week of forty hours. That labor was going to stand back of a high tariff wall was indicated when it was reported that President Green had given his approval to the formation of the American Wage-Earner's Protective Conference. This body, said to represent 250,000 trade unionists, issued a statement in which it called upon President-elect Hoover to summon a special session of Congress for the further revision of the tariff law upward. Matthew Woll, vice president of the A. F. of L., was elected president of the conference. Seventeen international unions were affiliated with the conference. Listening to the demands for the further restriction of alien labor that came from a variety of international unions including the maintenance-of-way union and the seaman's union, the convention passed a resolution calling for more rigid restrictions, took issue with the Supreme Court's ruling that Canadian workmen had a right to cross the frontier daily to work in American plants, and recommended that the executive council make a thorough study of the immigration question in order to propose further legislation that will "safeguard and promote the economic, industrial, social, and political well-being of all the people in the United States in general and of the wage earners in particular."

One storm cloud did break to disrupt the fair harmony of the proceedings, and this was in the debate on the status of the Brookwood Labor College. At its August meeting the executive council of the Federation had called upon trade unionists to withdraw their support from the college because it was teaching communist doctrines. Interestingly enough, it transpired that this action had been taken without giving the board of trustees of Brookwood a chance to be heard. The subject came before the convention on November 27, and was brought up in the discussion of a resolution asking for the creation of a national labor college. Brookwood College was attacked because its faculty taught communist doctrines, because it celebrated May first as labor day instead of the American holiday in September, and because pictures of Marx, Lenin, and Trotsky were decorated on the anniversary of the founding of the soviets. On the other hand, the college was defended by graduates who pointed out that as a school it was natural that all doctrines be discussed.

The whole debate became rather ridiculous when an attack was launched on Professor John Dewey because he was writing a series of favorable impressions of Soviet Russia for the *New Republic*. The convention went so far as to expunge from its records a tribute that had been made to the educator by its committee on education. On the last day of its sittings, the convention by resolution formally approved the action of the executive committee in issuing a ban

against Brookwood College. Though there was opposition from the floor on the call for a vote, only one dissenting vote was recorded.

Other resolutions passed by the convention were the following: relief from the abuse of injunctions through a better definition of the jurisdiction of the equity courts, though the substitute for the Shipstead Bill was opposed; approval of the Kellogg anti-war treaties; approval of the Boulder Dam project; opposition to the efforts of public utility corporations and real estate boards to "inject covert propaganda into the public schools and universities." All the officers of the Federation were reelected and the convention selected W. T. Rooney of the sheet metal workers and W. P. Clark of the glass workers as fraternal delegates to the British Trade Union Congress. J. B. Haggerty was chosen the delegate to the Canadian Trades Conference. Toronto was chosen to be the seat of the 1930 convention. See also UNEMPLOYMENT, TRADE UNIONISM, LABOR.

LABOR ARBITRATION AND CONCILIATION. In the United States excellent work was being done by the Federal Conciliation Service in the prevention of industrial disputes. In the annual report of the Secretary of Labor for the fiscal year 1927-28, there is to be found a complete record of the activities of the service. During the fiscal year ending June 30, 1928, 478 industrial disputes were handled by members of the Service: of this number 307 were settled by the commissioners; 53 cases were pending at the end of the year; 57 cases were not adjusted; and 61 cases were reported as unclassified. The department reported that these industrial disputes directly affected 205,151 workers and also had an indirect effect on another 146,877.

Some of the more important cases in which the Service played a leading rôle were the following: At *Larkspur, Pa.*, the conciliators settled a strike that involved 3000 anthracite coal miners and that threatened to bring an additional 20,000 miners into the dispute. The difference was over salaries. At *Bridgeport, Conn.*, the conciliators played an important part in the settlement of a carpenters strike in which 900 men were involved. Differences were due to a demand for a five-day week and an increase in pay of one dollar per day. A compromise was effected on the salary question and the other matter was put in abeyance. The strike had lasted from June 1 to July 5. A threatened strike of the telephone operators of *Staunton, Ill.* was averted through the work of one of the Service's conciliators. In November, 1927, a strike seemed imminent as the result of the discharge of two operators, but the good offices of the Service's representative resulted in the signing of an agreement covering general working conditions.

In the strike of the hosiery workers of the Allen-A Knitting Co. of *Kenosha, Wis.*, where some 1200 workers were employed, 300 organized knitters were locked out because of their refusal to operate two machines. The factory was picketed, non-union help was employed, the company obtained an injunction against the strikers which a jury trial refused to sustain, and feeling ran very high. A conciliator who had been on the spot from February 15 to March 1 withdrew because of the hostility of the two groups. He was recalled in May when it was reported that the company was willing to accept an open-shop arrangement. The conciliator found, however, that this meant the continued employ of the strike-

breakers to the total exclusion of the locked-out workers. At the end of the fiscal year the strike had not yet been settled.

In February 500 textile workers, members of the union, went on strike in the Parker Mills of *Warren, R. I.* because of an increase in hours from forty-eight to fifty-four and a wage cut of 10 per cent. This latter was due to the fact that the owners of the mills had similar plants in New Bedford where similar wage cuts had been put into effect. After the strike had been going on for three months, a conciliator was called in. As a result of this mediation, the following agreement was accepted: the strikers were to return on the conditions of their previous employment, but some adjustment was to be effected with regard to the wage cut. At the end of a two weeks' study it was found that changes in almost all the departments outside of the weave shop would make it possible to save the company at least 10 per cent on the production cost without necessitating a wage cut.

AMERICAN BAR ASSOCIATION. This organization, through the chairman of its committee on commerce, Julius Henry Cohen, announced in February that it was at work on the perfection of machinery for the elimination of industrial disputes. The plan, in brief, called for the passage of legislation by Congress providing for the settlement of industrial disputes "which are within the purview of Federal jurisdiction." The method to be employed was through contracts between employers and trade unions for the "adjustment of their relations through negotiation and arbitration" and that once such contracts were entered upon they were to be held binding. The plan went on to say further: "Parties cannot complain if contracts which they have entered into are declared binding and enforceable." Nothing, however, was heard of the plan during 1928.

AMERICAN RAILWAY EXPRESS. On October 22, U. S. Department of Labor mediators successfully averted a strike by American Railway Express employees that would have thrown 55,000 men out of work. On October 9 and 10 a number of the members of the Brotherhood of Railway and Steamship Clerks had indulged in an outlaw strike in New York City and the situation had taken on serious aspects when one of the officials of the American Railway Express demanded the names of the persons participating in the walk-out. This union officials had refused to grant. Mediation resulted in the rescinding of the strike call and the recognition of the union. The strike threatened to be serious in view of the fact that a large part of the food supplies of New York City were handled by the American Railway Express and the city never had more than a three-day surplus on hand.

WESTERN RAILROADS. On October 30, an emergency board headed by James R. Garfield reported to President Coolidge that the decision of the Railroad Board of Mediation was a just one and by so doing it underwrote proposed wage increases. This action headed off a strike of 66,000 employees of western railroads and for the first time in two years put the wages of men on the western roads on a level with those prevailing in the east and southeast. The permanent Mediation Board had placed before the trainmen three propositions from which they were to choose one. This the emergency board approved. The three propositions were the following: 1. An increase of 6½ per cent with no change in

working rules. 2. An increase of $7\frac{1}{2}$ per cent and the elimination of the rules against "double-heading." (The unions had certain rules against the use of double locomotives because this reduced the size of train crews.) 3. An increase of $7\frac{1}{2}$ per cent and the submission of a number of the working rules of the men to arbitration. The acceptance of any one of these propositions made the wage increase retroactive to May 1, 1928. It should be said that propositions No. 1 and No. 2 had been offered by the railroads, but that the men had insisted upon a $7\frac{1}{2}$ per cent increase without the abandonment of their working rules.

INDUSTRIAL COURT OF GREAT BRITAIN. This court, which was established in 1919, appeared to have had a successful history in the nine years of operation. The court, which is under the Minister of Labor, has no original jurisdiction but sits on cases only when they are referred by the Labor Minister, and he in turn must wait for the consent of both parties to the dispute. The Industrial Courts Act provides that the parties to an industrial dispute may seek arbitration through the Labor Minister, who, with their consent, has the privilege of referring the matter to one of three agencies—the industrial court, to one or more arbitrators, or to a board of arbitration made up of representatives of the employer, the workers, and an impartial chairman. The Industrial Court has received recognition as an arbitral agency in that a number of trade agreements between employers and trade unions name it as the arbitrator in the event of a labor dispute. The court handles the following types of disputes: basic wages, bonuses, overtime, night work, Sunday work, hours of work, leaves, etc. The court's procedure is of the simplest nature. Oaths are not required, laws of evidence are not strictly observed, and the like. Though the court has no means of enforcing its decisions, it has met with success in that both parties as a rule bind themselves to its findings. Out of a total of 1354 decisions handed down, only four were contested by one of the parties involved. There can be no appeal from the court's findings.

OTHER FOREIGN NOTES. In the spring *Poland* provided for the creation of industrial courts in former Austrian and Russian Poland, Prussian Poland already having such courts. The courts were to have jurisdiction in all matters involving disputes between employers and their workers and would pass on such matters as hours of work, holidays, work of women and children, etc., but their jurisdiction would not extend beyond disputes involving more than 5000 zloty. The president and the vice president of the court were to be appointed by the Minister of Justice. Each court was to be made up of a president, one representative of the employers selected from a special panel made up of employer association representatives and one labor representative chosen from a panel similarly constituted. There was to be no appeal in cases involving less than 200 zloty. Where the sum was greater appeal might be taken to the court of appeal which is to have final jurisdiction.

In 1926 there was established in *Germany* a system of labor courts for the purpose of passing on claims for damages of workers against employers or vice versa. In such suits neither side is permitted to engage counsel. In *Wirttemberg* 26 such courts were set up in July, 1927. From

that time until the end of the year, these courts were called upon to pass on 2778 cases. The sums involved appear to have been quite small. It is interesting to note that the length of time for settlement was less than one month in more than one-half of the cases.

In May the *Swedish* Parliament passed a law creating a labor court whose function it would be to arbitrate compulsorily all trade disputes arising out of collective agreements. The law prohibits strikes and lockouts during the life of such agreements. No appeals may be taken from the decisions of the court.

It will be recalled that by the *Italian* Labor Code passed in December, 1925, Fascist syndicates were established by which wage agreements were given the force of law, strikes and lockouts were outlawed, and a labor court was established for the adjudication of trade disputes. The first important decision of the labor court under the new code was promulgated early in the year when shipowners sought a general reduction in seamen's wages on the ground of a decline in the cost of living and a falling off in earnings in the industry. The men opposed the reduction on the grounds that they were still receiving less than British seamen and in this they were upheld by the labor court which ruled that wages were to remain the same until June, 1928, when they were to be subjected to review and that such reviews were to be taken every six months.

Late in 1927 there was established in *Mexico* a Federal Board of Arbitration and Conciliation for the settlement of disputes involving the Government or which affect persons in two or more States, as well as labor controversies in the following industries: mining, oil, textiles, and transportation and communications. The board was to be composed of an equal number of workers and employers as well as a nonpartisan member appointed by the Labor Ministry.

LABOR BANKS. See COOPERATION.

LABOR LEGISLATION. In 1928, the legislatures of nine States, two insular possessions, and the Federal Congress held regular sessions. In addition, some States held special sessions. Notable among new laws were the District of Columbia's Workmen's Compensation Act and the Child Labor Law; reenacted Porto-Rican workmen's compensation law; the Louisiana law regulating private employment agencies; the creation, in Massachusetts, of a public bequest commission and fund to aid aged citizens and of a Children's Bureau in Kentucky. Three States liberalized workmen's compensation laws. Two investigations of unemployment, by the Federal Government, were authorized. In New Jersey, important amendments were made to the law regulating private employment agencies.

Arkansas. (Special Session.) No labor legislation reported.

California. No labor legislation reported.

Illinois. (Special Session.) Levy of tax in certain cities for policemen's annuity fund regulated; tax for mothers' pension fund in certain countries, and for policemen's pension fund in certain cities, lowered.

Iowa. (Special Session.) No labor legislation.

Kentucky. Exhaust systems for polishing and grinding machinery required and regulated; law regulating certain mine engines repealed and reenacted; law entitles parents to sue for loss of child's wages; commission created to investigate workmen's compensation act; State teachers' retirement system established; law and amendments to existing law and code regarding policemen's and firemen's pensions enacted; Child Welfare Commission abolished and Kentucky Children's Bureau established instead, the duties of which include control and supervision of the administration of moth-

ers' aid, investigation of the needs of Kentucky children, and assistance in establishing county children's bureaus which are to administer mothers' aid and assist the children's bureau; appropriation for department of agriculture, labor and statistics and for infancy, maternity and child health raised.

Louisiana. Police juries enabled to make regulations for needy; law enacted providing for wage assignment for collection; laws enacted regulating payment of wages and exemption of certain wages from garnishment; mechanics' lien law enacted; amendment of labor unions' charters provided for; closing regulations for certain filling stations forbidden; law regulating private employment agencies enacted; law specifying requirements for mechanics employed on public works amended; workmen's compensation law amended; state board for blind created; certain firemen made eligible to pensions; retention of money collected from employees for physicians' fees regulated; commissioner of labor required to file financial statements.

Massachusetts. Commission appointed to study revision of license fees; law regulating payment of teachers' salaries amended; workmen's compensation law amended; limitation of amount on retirement systems' deposits removed; public bequest commission and fund created to aid aged citizens; provisions of State retirement law dealing with retirement for permanent disability amended; law providing for group life insurance amended.

Mississippi. Mechanics' lien law amended; contracts with employed laborers forbidden; study of teachers' retirement legislation directed; state commission for blind created. No labor legislation reported for special session.

New Jersey. Penalty and procedure for prosecuting violations of law requiring payment of wages every two weeks in lawful money changed; six-day law made applicable to certain policemen; amendments to law regulating private employment agencies include changes in procedure of prosecuting violations and provisions that applicants for licenses in addition to existing requirements including proof of good moral character, must also furnish proof of citizenship of the United States, that existing agencies are inadequate and premises for proposed agency suitable; grade requirement for age and schooling certificates raised; workmen's compensation law amended; vocational rehabilitation law extended and number of members on state rehabilitation commission increased; retirement law amended; group insurance for employees is authorized.

New York. Law regulating labor liens on public works amended; women pharmacists exempted from hour regulations; important changes in child labor law include provision that children under fourteen are not to engage in any occupation carried on for pecuniary gain; definition of "fireproof partition" amended; workmen's compensation law amended; joint legislative committee for study of aged poor continued with a doubled appropriation; state retirement law amended and extended to include many state employees; a violation of any rule or order of the department of labor made a misdemeanor; financial statements required of department heads; 1920 law creating commission to study child labor laws repealed; joint legislative committee for study of labor law administration continued and directed to cooperate with the commissioner appointed to investigate the department of labor.

North Dakota. (Special Session.) No laws enacted.

Porto Rico. Investigation of method of adapting Florida and North Carolina tobacco industry to Porto Rico authorized in order to combat unemployment; law requiring dispensaries in certain factories amended; workmen's compensation law repealed and reenacted; retirement law amended and pension fund for teachers created; system of local municipal governments created.

Rhode Island. Certain Sunday performances authorized; laws prohibiting night labor of children, specifying hours for women and children, and regulating employment of minors in street trades amended; law providing for care of dependent children amended; boiler inspection law amended and promulgation of more stringent boiler inspection rules urged; workmen's compensation law amended; investigation of old-age pensions directed; salary of deputy commissioner of labor raised.

South Carolina. Certain labor liens provided for.

Virginia. Assignment of certain workmen's wages prohibited; mechanics' lien law amended; workmen's compensation law amended; commissioner of labor's term of office lengthened.

Wisconsin. (Special Session.) No labor legislation reported.

United States. Secretary of Labor and Senate committee on education and labor directed to investigate unemployment; extra compensation for night work for postal employees provided for; certain salaries raised and salaries of customs employees classified; investigation of labor conditions in certain coal fields directed; detailed child labor law for District of Columbia enacted, the provisions of which include the exclusion of children under fourteen from gainful occupation, the

limitation of hours of minors under eighteen to eight a day or forty-eight a week and six days a week, and the prohibition of girls under eighteen and boys under sixteen from work between 7 P. M. and 7 A. M.; longshoremen's workmen's compensation act applied to private employees in the District of Columbia; sick leave for postal employees extended; \$100,000 added to bureau of labor statistics' budget for 1929; any action for death or injury sustained within a national park or other place subject to the exclusive jurisdiction of the United States within the exterior boundaries of any State, shall be governed by the laws of that State.

See WORKMEN'S COMPENSATION.

LABOR LEGISLATION, AMERICAN ASSOCIATION FOR. Founded in 1906, this membership organization of socially minded economists, lawyers, journalists, labor leaders, and employers had worked along scientific lines, fearlessly attacking needless industrial evils from the general welfare viewpoint. It continues its work as the American arm of the International Association for Social Progress formed by the fusion of the three international organizations for labor legislation, unemployment, and social insurance. See SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR.

Progress of the Association was recorded in its substantial quarterly, *American Labor Legislation Review*, the December, 1929, issue of which contained a convenient annual summary and index of all new labor laws enacted in the United States. One of the most important activities of the Association during 1928, resulted in the application of the Federal Longshoremen's and Harbor Workers' Compensation Act to private employees in the District of Columbia, which was approved on May 17, 1928. Other activities in the line of workmen's compensation resulted, in New Jersey, in raising the weekly maximum from \$17 to \$20 and the minimum from \$8 to \$10 and, in New York, in permitting the State fund to carry insurance under the Federal Longshoremen's Act.

The campaign in which the Association had been energetic for several years for rock-dusting coal mines to prevent great coal dust explosions resulted in encouraging increase in the number of coal companies which had voluntarily adopted rock-dusting. At the beginning of the Association's special campaign five years previously, only three mines could be discovered that had employed rock-dusting. At the close of 1928, the number of coal companies (many of them operating several mines each) which were officially on record as employing this means of preventing explosions had grown to 296.

Measures which the Association sponsored were adopted in several States and in Porto Rico. Of primary importance were amendments to the New Jersey law regulating private employment agencies, approved July 14, which require that applicants for a license to carry on an employment agency furnish proof of the need for the proposed agency, in addition to the existing requirements of suitability of premises and proof of good moral character. Other measures sponsored by the Association and adopted in some States were the establishment of old-age pensions and broadening of old-age pension laws, the strengthening of hour regulations and mine safety laws, and measures for the mitigation of unemployment.

The twenty-second annual meeting was in Chicago, Dec. 26-28, 1928, several sessions being held jointly with the American Statistical Association, the American Economic Association, the American Sociological Society, and the National

Community Center Association. The chief subjects of discussion were the newer developments of labor-law administration, unemployment as a problem of industry, problems of unemployment—unemployment insurance, public work as a prosperity reserve and the need for an adequate public employment service—social costs of accidents, illness, and old age, and the new industrial South. Among the speakers were: Sam A. Lewisoht, Sumner H. Slichter, Leo Wolman, John B. Andrews, Frank Dickinson, Mollie Ray Carrol, Thomas I. Parkinson, W. H. Cameron, Niles Carpenter, and Murray Latimer. The president in 1928 was Sam A. Lewisoht; the secretary, John B. Andrews. Headquarters were at 131 East 23rd Street, New York City. See LABOR LEGISLATION.

LABRADOR. A large peninsula in British North America, forming the easternmost part of the North American Continent; lying between the Atlantic Ocean and Hudson Bay. It includes the northeast portion of the Province of Quebec in Canada and a small strip along the northeast coast dependent upon Newfoundland. In 1927 the dispute which had raged for twenty-five years between Newfoundland and Quebec over the ownership of the interior of Labrador was settled by the Privy Council. The decision gave the entire watershed of Labrador which drained into the Atlantic Ocean to Newfoundland. Consult preceding YEAR BOOK under NEWFOUNDLAND. The population of Labrador in 1926 was 3977.

LABUAN. A small island off the northeastern coast of Borneo, included in the settlement of Singapore after Jan. 1, 1907. Area, 30 square miles; population, in 1926, 5641, mostly Malays from Borneo. Capital, Victoria, with a population of 1500. Revenue, 1926, \$153,355, expenditure, \$144,354; trade, \$6,250,000.

LACHMUND, CARL. An American pianist, died in Yonkers, N. Y., February 20. He was born in Booneville, Missouri, March 27, 1857. After studying at the Cologne Conservatory, where he was graduated in 1875, he continued his studies at Berlin under Kiel, Moszkowski, and Ph. Scharwenka. From 1881-84 he had the fortune of being one of the last personal pupils of Liszt. He made his first tour of the United States in 1880 and a second tour in 1887, after which he settled in New York, where he established his own conservatory. In 1896 he organized the Women's String Orchestra, which he conducted till 1908.

LACROSSE. Johns Hopkins University developed the strongest lacrosse twelve in the United States in 1928, triumphing over U. S. Naval Academy, U. S. Military Academy, University of Maryland, Rutgers, and the Mount Washington Club of Baltimore in the play-offs to decide which team should represent the United States in the international contests scheduled for Amsterdam, Holland. These contests were not a part of the Olympic Games (q.v.), however. Johns Hopkins met Canada and Great Britain, the result being a three-cornered tie, each team losing one game.

LADAK. See ALFALFA.

LAFAYETTE COLLEGE. An institution for the higher education of men at Easton, Pa., founded in 1826. The registration in September 1928 was 1076, and it was the policy of the trustees to restrict the enrollment to approximately 100. The faculty numbered 95. The productive funds amounted to \$2,800,000 on July 1,

1928, and the income for the previous year was \$500,000. The number of volumes in the library was 71,000, accessions for the year being 3240. In addition to approximately \$100,000 received as gifts during the year 1927-28, a gift of \$500,000 from John Markle for a mining engineering building and its endowment, and a gift of \$200,000 from Fred M. Kirby for a building for the department of government, were received. William Mather Lewis, A.M., LL.D., president.

LAMB, FREDERICK STYMETZ. American artist and city planner, died at Fort Bragg, Calif., July 9. He was born at New York, June 24, 1863. He studied at the Art Students' League, New York, under Sartain and Beckwith, and at the Beaux-Arts, Paris, under Lefebvre and Boulanger, and modeling under M. Millet. He became a member of the National Sculpture Society and of the National Society of Mural Painters and was chosen secretary of the National Arts Club. He was noted as a mural painter and designer of stained glass and also as a lecturer and writer on civic art and the improvement of the appearance of cities and towns. In these pursuits he was associated with his brother, Charles Rollinson Lamb. Public attention was first directed to Frederick S. Lamb as an artist of more than usual ability when he received honorable mention at the World's Exposition in Chicago in 1893. He received a gold medal at the Atlanta Exposition of 1895 and another at the Paris Exposition of 1900. He was a former president of the Architectural League of America, a former vice president of the Architectural League of New York, and a trustee of the American Scenic and Historic Preservation Society.

LANDS. PUBLIC. According to the report of the Secretary of the Interior for the fiscal year ended June 30, 1928, there were about 194,000,000 acres of unappropriated public land in the United States, exclusive of Alaska, this being an area slightly larger than that of New England and the Middle Atlantic States. During the fiscal year 1928, original entry was made and allowed on 3,726,421 acres of public and Indian lands as compared with 3,594,838 acres in 1927. Patents covering 2,477,867 acres were issued, including 8760 homestead entries involving 1,927,869 acres, and 206 stone and timber entries. Five new stock driveways covering 29,962 acres were created, and 29 modifications after investigation released 7031 acres from such driveways. Two town sites and 688 lot purchases were passed to patent, and 2278 contested cases were adjudicated. Restorations from power-site withdrawals and classifications numbered 62, and applications under the desert-land law were 3376, of which 719 were approved and 608 canceled.

Under the Carey Act, 639.33 acres were patented, 128,387.04 acres were canceled, which, with other actions, left a total area of 766,732.08 segregated and unpatented acres. Of the swamp land applications 46,069.76 acres were patented, and 65,543 acres canceled. Adjustment of eleven railroad grants was completed, 85,729.79 acres were certified or patented, and 44,840 acres of selections rejected under the railroad and wagon-road listings and selections. Of the 731 applications for leases considered, two permits and 40 leases were granted, and 85 potash permits covering 157,307.83 acres, and 14 sodium permits covering 21,421 acres were issued. Two coal entries covering 357.18 acres were approved for patent, 83 coal prospecting permits covering

100,468.63 acres, 37 coal leases covering 9,126.05 acres, eight coal licenses covering 320 acres, and three coal permits covering 100,468.63 acres were issued.

Total cash receipts for the fiscal year were \$6,710,454.84. \$515,687.83 coming from the Indian lands, and \$6,194,767.01 from the public lands. Of this \$4,677,277.16 were from bonuses, rentals, and royalties from the leasing of mineral rights on the public domain. The total receipts were distributed as follows: General fund, \$1,290,895.09; public-land States, \$1,845,742.48; Indian tribes, \$461,854.29; reclamation fund, \$3,111,962.98; and do not include \$67,293.88 from various miscellaneous sources. Total expenditures of the Land Office were \$2,190,197.57, \$430,000 of which was for field inspection work, where seven division inspectors and an average of 72 inspectors were employed. For surveys and resurveys, \$800,000 was appropriated, and a total number of 1,571,917 aggregate acres were surveyed and 1,365,771 aggregate acres were resurveyed during the fiscal year. These were large and small investigations including a section of the Coolidge Dam area in Arizona, original surveys and resurveys of land deemed valuable for oil, and the continuation of the surveys in cooperation with other Government departments.

In regard to the act of July 3, 1926, with reference to leasing lands in Alaska for fur farming, an amendment of Jan. 30, 1928, permitted leases to cover an entire island provided it contained not more than 30 square miles. Leases to towns and cities of land for airports were made under the law of May 25, 1928, which limited such fields to 640 contiguous acres, permitted all government departments or agencies operating aircraft to have unrestricted use of such airports, and allow the Government to assume control if necessary for military purposes. On June 30, 1928, there were 151 National forests with an area of 184,403,819 acres, as compared to 183,938,106 acres on June 30, 1927, and of this a little over 86 per cent was public land. Owing to the increasing use of public lands for stock grazing, it was recommended that more adequate control of the use of these lands be made in order to secure equal use for all and to prevent the destruction of forage growth because of overuse.

LANSING, ROBERT. American lawyer and secretary of state in President Wilson's cabinet during the World War, died at Washington, D. C., October 30. He was born at Watertown, N. Y., Oct. 17, 1864, and was graduated from Amherst College in 1886. Having studied law with his father, he was admitted to the bar in 1889, and after a year in Europe, he commenced practice at Watertown as a member of the firm, Lansing & Lansing, which continued until his father's death in 1907. Lansing married, in 1890, the daughter of John W. Foster, who had been Secretary of State under President Harrison, and through his father-in-law's influence he turned his attention to international law. He was employed as associate counsel for the United States in the Bering Sea Administration with Great Britain, 1892-93, and he also served as counsel for the Bering Sea Claims Commission, 1896-97. He was again engaged by the Government to act as solicitor and counsel before the Alaskan Boundary Tribunal which met in London, Sept. 3, 1903. President Taft appointed him legal adviser at the North Atlantic Coast Fisheries Ar-

bitration at The Hague, 1909-10, and he was the United States agent at the American and British claims arbitration, 1912-14. Besides associations with his own Government, he represented the Chinese Legation at Washington, and the Huerta régime of Mexico.

Lansing succeeded John Bassett Moore as counselor for the Department of State, on Mar. 20, 1914. His experience in international negotiations was particularly valuable to the then Secretary of State, William Jennings Bryan, in conducting the diplomatic correspondence necessary to maintain the United States's position of neutrality during the early months of the World War, and he aided the administration in the preparation of important diplomatic notes on neutral rights sent to Great Britain and Germany. Secretary Bryan resigned in 1915 and President Wilson appointed Lansing Secretary of State. On assuming the office at this time of unusual responsibility, he wrote a series of diplomatic notes to Germany over the submarine warfare, and at the same time was in controversy with England over the export blockade. During this period and later, Lansing's position as adviser to the President and a member of his cabinet was particularly delicate, because his views were often opposed to those of Mr. Wilson, who personally controlled the entire policy of the administration. It was the President's ideal that the United States should remain neutral throughout the War, and supervise its settlement by arbitration, without a military decision. Lansing was said to favor the United States joining the Allies as early as 1914. Their lines of thought were even more diverse during the peace negotiations in Paris, 1918-19, when Lansing accompanied the President as a member of the American Commission to Negotiate Peace. Besides disagreeing with the President on particular points covered in the Versailles Treaty, such as the Shantung settlement, Secretary Lansing objected to combining that embodiment of Wilson's highest aspiration, the League of Nations, with the Peace Treaty, on the ground that the U. S. Congress would not ratify a document which included the League. The President ceased to consult his Secretary of State, and later, during his illness in 1920, disturbed by the fact that Lansing several times had assembled the cabinet, he asked for and accepted the secretary's resignation, Lansing leaving the cabinet on February 13. Wilson's action, due in large measure to his condition of health, caused astonishment and failed of general approval, being regarded as unfair and lacking in appreciation. Lansing resumed the practice of law with the firm Lansing & Woolsey, in Washington, where he was engaged until his death. Lansing served as counsel for Chile during the Tacna-Arica Arbitration, 1923-25. He became trustee and vice president of the Carnegie Endowment for International Peace. Honorary degrees were conferred on him by Amherst and Colgate, 1915, by Princeton, 1917, by Columbia and Union, 1928, by the University of the State of New York, 1919, and by Kenyon, 1925. He was associate editor of the *American Journal of International Law*, and wrote, *Government, Its Origin, Growth, and Form in the United States* (with Gary M. Jones, 1902). He also wrote two books, not only as a record of the events in which he participated but also with the object of vindicating himself from charges of disloyalty to President Wilson, *The Peace Ne-*

gotiations (1921); and *The Big Four and Others of the Peace Conference* (1921).

LA TOMBELLE, FERNAND DE. A French organist and composer, died in Périgord, in August. He was born in Paris, Aug. 3, 1854. At the Conservatoire he studied organ under Guilmant and composition under Dubois. From 1885-98 he was assistant organist to Dubois at La Madeleine. He then became professor of theory at the Schola Cantorum. The last five years he lived in retirement at Périgord. His principal works are three oratorios, *Crua*, *L'Abbaye*, and *Jeanne d'Arc*; *Antar*, a symphonic poem; two ballets; two operettas; several orchestral suites, a great quantity of chamber music; choruses, and excellent pieces for the organ.

LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF. A religious body commonly known as the Mormon Church, existing chiefly in the United States. It was organized Apr. 6, 1830, at Fayette, N. Y., by Joseph Smith, whom his followers credit with having discovered, through a divine revelation, a set of plates, buried in a hill, from which by a special power received from God, he translated the text of the Book of Mormon, the special sacred book of the church. The Mormon articles of faith include belief in God, Jesus Christ, and the Holy Ghost, the punishment of men for their own sins, the atonement, divine authority, baptism, laying on of hands, prophecy, salvation for the dead, the Bible "as far as it is translated correctly," the common virtues, and obedience to constituted authorities. The membership of the church is chiefly in the Mountain States, owing to the early migrations of Mormons and their final settlement in Utah.

The administrative divisions of the church are known as the stake, ward, branch, and mission. A stake comprises wards and branches, and is directed by a presidency of three. A ward is frequently a part of a city, and is directed by a bishop and two counselors. The branch, similar to the ward, is directed by an elder. In 1928, the church consisted of 101 stakes, 939 wards, and 72 independent branches. The estimated membership was 640,000. Eleven missions in America had a membership of approximately 87,500; those in Europe 28,000; and those in the Pacific Islands, 14,000. The chief authorities of the church were: Heber J. Grant, president; Anthony W. Ivins, first counselor; Charles W. Nibley, second counselor; Rudger Clawson, president of the Quorum of the Twelve Apostles; and Reed Smoot, George Albert Smith, George F. Richards, Orson F. Whitney, David O. McKay, Joseph Fielding Smith, James E. Talmage, Stephen L. Richards, Richard R. Lyman, Melvin J. Ballard, and John A. Widtsoe, apostles, Hyrum C. Smith was presiding patriarch; Brigham H. Roberts, J. Golden Kimball, Rulon S. Wells, Joseph W. McMurrin, Charles H. Hart, Levi Edgar Young, Rey L. Pratt, Seven Presidents of Seventy; Sylvester Q. Cannon, presiding bishop; David A. Smith, first counselor; and John Wells, second counselor.

The church authorities reported 2173 missionaries at work in various countries, 906 being outside the United States. The Melchizedek Priest-

hood, a senior order, had 73,382 members, and the Aaronic Priesthood, a junior order, 72,899 members. The Church maintains seven temples which are devoted to sacred ordinances for the living and the dead, such as baptisms, endowments, and marriages. The Church maintains Brigham Young University (q.v.) at Provo, Utah, six junior colleges, two collegiate institutes, one high school, and 72 seminaries, small schools adjoining high schools and providing special religious instruction. The auxiliary bodies include a women's relief society numbering about 61,820, which cares for the poor and sick, Sunday schools with 257,967 pupils, including 26,250 officers and teachers. The two Mutual Improvement Associations, composed of young persons, had an enrollment of 101,444. The primary association had 106,993 children under 14. Religious classes had an enrollment of 59,574. The Church holds general conferences in the first week of April and of October of each year, at Salt Lake City, Utah, at which the work of the general authorities is reviewed.

LATTER-DAY SAINTS, REORGANIZED CHURCH OF JESUS CHRIST OF. After the death of Joseph Smith in 1844, several factions developed among the Latter-Day Saints. In 1852, in Wisconsin, some of these scattered congregations effected a partial reorganization, which was later completed under the name of the "Reorganized Church of Jesus Christ of Latter-Day Saints," and which claims to be the true continuation of that established by Joseph Smith. This claim has been successfully sustained in the Supreme Court. In 1860 these organizations were joined by Joseph Smith, the son of the prophet, who became presiding officer, a position which he held until his death in 1914, when his son, Frederick M. Smith, succeeded him. The Reorganized Church holds the same faith and religious practice which Smith established, but rejects as false and inconsistent with Smith's revelation the doctrine of polygamy. The membership as reported in 1928 was 103,174, including members throughout the United States and in Canada, Great Britain, Australia, Germany, Isle of Pines, Holland, Switzerland, Norway, Sweden, Palestine, South Sea Islands, Hawaii, and New Zealand. The organization in 1928 comprised 758 churches, 6732 ministers, 714 Sunday schools, and 37,841 scholars; and maintained Graceland College at Lamoni, Iowa, the Institute of Arts and Sciences, at Independence, Mo., homes for the aged, a sanatorium, and a powerful radio broadcasting station, at Independence, Mo. Its official periodical, the *Saints' Herald*, is issued weekly.

LATVIA. A Baltic state formed after the War from territories of the old Russian Empire. Capital, Riga.

AREA AND POPULATION. The total area is approximately 24,400 square miles, made up as follows: The former Province of Courland (about 10,435 square miles); the four southern districts of the Province of Livonia (about 7815 square miles); and three districts of the Province of Vitebsk (5292 square miles). According to the census of 1925, the population was 1,844,805, of whom 1,779,593 were Latvian citizens and 65,212 foreigners. The birth rate during 1926 was 21.96 per thousand and the death rate 14.73 per thousand. The chief cities with their populations at the census of 1925 are: Riga, 337,700; Libau, 60,762; Dvinsk, 40,640; and Mitau, 28,321.

EDUCATION. In 1926-27 there were 1921 elementary schools with 7403 teachers and 164,954 pupils. Most of these schools were supported by the State or municipal institutions. The State or municipal institutions also supported 70 of the secondary schools in the country, the remaining 52 being supported by private persons or societies. In these 122 secondary schools there were 22,066 pupils and 2350 teachers. According to law, every national minority has a right to its own school, which may employ its own language in instruction, and the State contributes to such institutions in proportion to the percentage of total inhabitants. The number of students in the Latvian University in 1927 was 6766 and the number of professors, 317.

PRODUCTION, ETC. The chief industry of Latvia is agriculture, although in recent years a large number of persons have been passing from agricultural to industrial life. The area and production of the principal crops in 1927 were as follows: Wheat, 145,000 acres, 2,636,000 bushels; rye, 633,000 acres, 10,189,000 bushels; barley, 458,000 acres, 5,975,000 bushels; oats, 754,000 acres, 12,205,000 bushels; potatoes, 211,000 acres, 26,358,000 bushels; flax and linseed combined, 156,000 acres, 46,965 pounds of flax and 655,000 bushels of linseed. In 1927 there were 967,000 cattle, 535,000 swine, 1,128,000 sheep, and 369,000 horses. On Dec. 31, 1926, there were 2732 industrial enterprises in Latvia employing 49,672 hands. The total value of industrial production in the same year was 306,872,000 lats (\$59,226,000). The chief industries are food, drink, and tobacco, woodworking, chemical, textile, metal working, and paper and printing. There are virtually no minerals in Latvia.

COMMERCE. In 1927 the unfavorable balance of Latvia's trade was much less than in the preceding four years. Imports were 6 per cent lower, owing to reduced receipts of textiles, machinery, and metals. The marked improvement in export trade, which increased in value 17 per cent over 1926, was owing largely to the more satisfactory market and price conditions for the leading items—lumber, butter, and flax—which made up roughly one-half of total exports. The exports in 1927 were valued at \$42,501,000 as compared with \$36,381,000 in 1926. The imports in 1927 were valued at \$47,384,000 as against \$50,241,000 in the preceding year.

FINANCE. The fiscal year 1926-27 closed with a surplus of government receipts over expenditures of 4,600,000 lats as compared with a surplus of 1,464,000 lats for 1925-26. The actual receipts were 5 per cent below estimates, and a further curtailment of expenditures for the ministries of War, Finance, and Education, featured the budget for 1927-28 which balanced at 159,097,000 lats. Preliminary returns showed increased revenues and further curtailed expenditures for 1927-28. The 1928-29 budget balanced at 160,552,000 lats. Latvia's State debt on Dec. 31, 1927, was 84,110,000 lats, of which 28,404,000 lats were due the United States.

COMMUNICATIONS. In 1927, 4041 vessels of 1,761,000 net registered tons entered the ports of Latvia and 4048 vessels of 1,760,000 tons cleared. All Latvian railways are State owned with the exception of two lines of minor importance, which are owned by a private company. The length of all State lines on Jan. 1, 1928, totaled 2707 kilometers. Operating revenues of the State railways during 1927 amounted to 34,473,931 lats, and

other revenues comprised 5,340,046 lats; operating expenses amounted to 34,857,482 lats, and other expenses amounted to 3,963,514 lats. Rolling stock in operation at the close of the year included 276 locomotives, 671 passenger cars, and 5682 freight cars. A newly constructed line of 1.435-meter-gauge and 15.4-kilometer length, between Sece and Selpils, was opened for traffic on November 15. A part of the new 1.524-meter gauge line between Libau and Gluda was opened for traffic on December 2. A line of 0.60-meter gauge between Engure and Mersrags (12.5 kilometers long) was opened for traffic on December 15, and one of 0.75-meter gauge between Sita and RugaĶi (21.4 kilometers in length) was opened on December 20.

GOVERNMENT. Under the constitution adopted by the constituent assembly, Feb. 15, 1922, executive power is vested in a president, elected by Parliament for three years; and legislative power in the Saeima, or Parliament, comprising 100 members elected for three years, by universal suffrage (men and women), equal, direct, and secret ballot, on the basis of proportional representation. President in 1928, Gustav Zemgalis (elected April 8, 1927); Prime Minister, P. Juraševski (appointed Jan. 23, 1928).

HISTORY. The Juraševski ministry, a Bourgeois and Agrarian coalition, represented a swing in Latvian political control from the Socialistic element, whose ministry fell on Dec. 13, 1927, to a more conservative and nationalistic element. At the general election held early in October to select the 100 members of the Saeima, there were over 2000 candidates representing more than 40 parties in the contest. After the election Premier Juraševski resigned, and the Socialists, blocked by a small group of Communist deputies, were unable to form a government, a task in which Cleminsh, an Agrarian, was finally successful. His cabinet, which received a 54-40 vote of confidence on December 1, was as follows: A. Balodis, Centrist, Foreign Affairs; Petrewits, Nationalist, Finance; Charles Ozols, Nationalist, Military Affairs; Laminsh, Agrarian, Interior; A. Alberings, Agrarian, Agriculture; Ozolins, Democratic-Centre, Communications; Zemels, New Peasant, Instruction; Rubulis, Letgalian, Public Welfare; and Dilstorich, German, Justice. On November 18, Latvia appropriately celebrated the tenth anniversary of her independence.

LEAD. The recoverable lead contained in ore mined in the United States in 1928 was about 627,300 short tons, as compared with an output of 655,420 tons in 1927, a decrease of nearly 6 per cent, according to the U. S. Bureau of Mines. The output of soft lead by mines of the Mississippi Valley and a small output from the Eastern States amounted to about 269,900 tons, and that of argentiferous lead by mines of the Western States amounted to about 356,100 tons. Corresponding figures for 1927 were 282,838 tons from the Mississippi Valley and the Eastern States, and 381,574 tons from the Western States. The largest output came from the southeastern Missouri district and amounted to about 193,400 tons, as compared with 196,251 tons in 1927. The output of Idaho came next and amounted to about 145,400 tons, compared with 151,019 tons in 1927. Utah ranked third with an output of about 143,-

400 tons, compared with 151,285 tons in 1927. In the Joplin district there was a decrease from 81,686 tons to 68,400 tons, 16 per cent. All of the important lead-producing States showed decreases in production in 1928. The price at Joplin of 80 per cent lead concentrates was \$85 a ton at the beginning of the year, where it remained through the week ended February 4. In the following week prices began to drop and the low for the year, \$72.50 a ton, was reached in the first week in March. Prices remained at \$72.50 a ton for five weeks and then advanced to \$82.50 in the first week in June. This price held for six weeks, then dropped to \$80 for the next seven weeks, but recovered to close the year at \$85.

The output of primary domestic desilverized lead in 1928, based on smelter and refinery returns, was about 345,000 tons; of soft lead about 226,000 tons, and of desilverized soft lead about 53,000 tons, making a total output from domestic ores of about 624,000 tons of refined lead, according to the U. S. Bureau of Mines. Corresponding figures in 1927 were 378,889 tons of desilverized lead, 233,944 tons of soft lead, and 55,487 tons of desilvered soft lead, making a total of 668,320 tons. The output of lead smelted and refined from foreign ore and bullion was about 156,000 tons, as compared with 128,210 tons in 1927. The total primary lead smelted or refined in the United States in 1928 was thus about 780,000 tons, as compared with a total of 796,530 tons in 1927—a decrease of about 2 per cent. The output of antimonial lead in 1928 was about 25,000 tons, as compared with 24,347 tons in 1927.

The imports of refined pig lead for eleven months amounted to 605 tons, of which 546 tons came from Mexico. The base bullion imported during the same period contained 114,836 tons of lead, almost wholly from Mexico. The exports of lead of foreign origin amounted to nearly 98,000 tons, as compared with 122,734 tons exported in the entire year 1927. Exports of lead of domestic origin amounted to 10,858 tons, as compared with 2533 tons exported in 1927. It was calculated that the new supply of lead made available for consumption in 1928 was about 653,000 tons, as compared with 663,412 tons in 1927.

According to figures published by the American Metal Market, the average quoted price of lead for prompt delivery at New York for the year was 6.3 cents a pound, as compared with an average selling price of 6.3 cents in 1927. The quotation at the beginning of the year was 6.5 cents and in the closing days of the year it was 6.5 cents. The following are the average monthly prices on lead for prompt delivery at New York, in cents a pound:

January	6.50	July	6.22
February	6.34	August	6.25
March	6.02	September	6.45
April	6.11	October	6.50
May	6.13	November	6.39
June	6.30	December	6.50

See METALLURGY.

LEADVILLE, FIFTIETH ANNIVERSARY. See CELEBRATIONS.

LEAGUE OF NATIONS. The League of Nations was ten years old on Jan. 10, 1928, and its celebration was the occasion for a considerable number of evaluating editorials in the European press.

In January the main interests of the League were not in Geneva, two being directly instigated

by the League and two outside it but of general world interest. First and most immediate was the development of the Polish-Lithuanian negotiations set under way at the December Council; second, the development of the security and arbitration problem with formal statements of policy issued by several governments and a preliminary meeting at Prague; third and outside the League but directly brought into relation with it, the Franco-American negotiations to outlaw war, and the Pan-American Conference at Havana.

The Polish-Lithuanian dispute, contained immediately disquieting elements. The month before, a resolution had been unanimously approved that a "state of war" which had existed between the two states ever since the seizure of Vilna was not in conformity with the League Covenant and the principles of peace, and that, therefore, the two states should negotiate for the resumption of normal relations. This resolution resolved the immediate crisis, but did not claim to settle the fundamental issue. To that end the two parties were left to their own good will, with League expert advice and help available, if desired. During January negotiations for a first meeting proceeded slowly and cautiously, a Polish diplomat even crossed the frontier to the Lithuanian capital, and the outline of discussions began to take form. It was evident, however, that agreement would come slowly and after considerable difficulty, though the situation was no longer so acute.

Two important international loans were further advanced during January. Final arrangements were made for the Greek loan of \$32,500,000 for issue on the various international markets at a very favorable rate, thus providing Greece with funds for the threefold purpose of completing the settlement of her million and a quarter refugees, of reorganizing her finances, and of balancing her budget. An incidental by-product of the agreement was the settlement of the long-dragging Greek war debt to the United States and the issuance of a new Governmental credit.

Portugal's request to the League for a stabilization loan of about \$60,000,000 was advanced the next step by the sending of a League technical commission to Lisbon to consult with the Government as to purpose, security, and terms. The Portuguese request was interesting as that of the first nation outside Eastern Europe to appeal to the League and as carrying the formal announcement of her Foreign Minister that such was the best method of international financing. Loans so issued in 1928 totaled nearly \$400,000,000 and included countries such as Austria, Hungary, Greece, Bulgaria, Esthonia and Dantzic.

The forty-ninth Session of the League opened on March 5, with Francisco J. Urrutia, of Colombia, in the chair. The question of the proposed transfer of the League headquarters was settled in favor of remaining at Geneva. The report of the special committee that had been studying the question of a new building on Lake Lemman was definitely approved, and the Secretary General was empowered to proceed with contracts which involve \$4,000,000. M. Briand insisted on a proper facade for the new building.

A committee of three was appointed by the Council to study the two hundred pages of documents submitted by General Tanczos, of Hungary, who appeared before the Council to testify in the matter of the arms shipment. The guns, said the General, were destined for Poland. Bills of lading

were produced from an Italian shipping firm in Verona, but were found by the Council to need further substantiation. General Tanczos insisted that the guns were destroyed by the Hungarian Government in the interests of peace. The Council finally decided upon an investigation, to take place on Hungarian soil. The actual settlement of the matter was postponed until the June session.

As a result of a stormy debate over the Hungarian landowners in Rumania. M. Titulescu, Foreign Minister for that country, resigned on March 14, as delegate to the League of Nations. He had expressed extreme dissatisfaction with the proposal of the Council that two neutral members be added to the committee that had already been sitting for almost a year in adjudication of the controversy, and that the decision of the committee be accepted by the June Council. His attitude was reprobated by a majority of the Council members.

The Security and Arbitration Committee adjourned until June, after adopting six model treaties. Great Britain was said to take the same position as at other sessions, that she would have nothing to do with these treaties, though she would not oppose their adoption by other states. A telegram was received by the Secretariat on March 6, from M. Litvinov, the Soviet delegate to the Disarmament Conference, saying that no really comprehensive programme of disarmament could be put into effect without the coöperation of Turkey, whose participation in the conference he proposed. The invitation was extended and was accepted by Turkey, Tewfik Rushdi Bey, Foreign Minister, serving as representative.

Upon the initiative of Señor Urrutia of Colombia, presiding officer, the Council approved a suggestion that a resolution and a letter be sent to Spain and Brazil urging their return to active participation in the work of the League of Nations. Under the rules of the League two years' notice of withdrawal must be given. That of Brazil expired in June, while Spain's expired in September. Spain responded favorably, Premier de Rivera in his letter of acceptance to the president of the Council said:

The Government trusts that the Assembly will determine the form and position to which Spain is entitled in order that her participation may be efficacious and useful in conformity with her special situation as a great neutral power during the late War and her ancient position of creator of civilized nations.

On May 8 Brazil replied to the appeal of the League and refused to cancel the resignation. However, it manifested a readiness to continue coöperating with the League.

The facts which preceded that decision are well known. The Government now responsible for the policy of Brazil, duly considering the subject both from the political and moral standpoint reviewing all documents in the case with the sole purpose of being loyal to the duties and responsibilities of this country, finds no determining factor for altering under such delicate circumstances a situation which had already been clearly defined, since the contingencies which brought it about are in no wise changed.

The note insisted that only by occupying a seat in the assembly, or council, could a country adequately coöperate with the League. Much speculation was aroused by the letter, as the coöperation of Brazil at conferences without membership paved the way for allowing resigned members to continue their coöperation with the League body.

The United States was deeply interested in much of the work of the League. The Government

signed the Convention on Import and Export Restrictions, the second League convention to bear an American signature; sent an expert to the meeting on Maritime Tonnage Measurements, but declined the invitation to the Arbitration and Security Committee. At the same time the U. S. State Department, in agreement with Congress, forwarded the sum of \$16,000 to cover its proportional share of the four general conferences recently attended by the United States on disarmament, economics, import and export restrictions and transit.

On June 4, the Council met for its fiftieth session. It had been anticipated that this would be a most important session, since it was expected that the question of the occupation of the Rhineland would come up. The absence of M. Briand and Dr. Stresemann, however, both of whom were suffering in health, rendered the work of the Council disappointingly unimportant. After a session lasting a whole week, the Council failed to make any decision, except on unimportant and routine matters. It did take up three questions—the Hungarian machine-gun affair, the Hungarian-Rumanian dispute, and the Polish-Lithuanian controversy—but on none of these questions did it come to any definite conclusion.

The Council had before it a long and detailed report of the Committee of Three consisting of representatives from Holland, Finland, and Chile, appointed at the preceding session, to look into the seizure of five carloads of machine-gun parts at the railway station of Szent-Gothard. The report in spite of its length and its wealth of detail was inconclusive and was subjected to strong criticism.

All the Little Entente Powers were represented at the council table, and they and the French representative pointed out several gaps in the committee's statement and in its conclusions. It apparently did think it strange that a consignment of machine-gun parts should be addressed to a firm in a town on the borders of Hungary and Czechoslovakia, the station being in one country and the part of the town where the firm was in the other, that firm having had no notification that this unusual cargo of goods was on the way. This firm was said to be charged with the duty of furthering the goods to Warsaw. The evidence clearly indicated that the load was intended to remain in Hungary, and the persons who were selected for censure in the report were the Austrian customs officials, who had discovered the contents of the trucks. Some of the evidence suggested that there might have been a whole series of consignments. Moreover, taking the total weight of the consignment as given in the waybill and as ascertained on the spot, there was a discrepancy of four tons. By a rapid calculation, M. Paul-Boncour estimated that this missing mass of machine-gun parts might be sufficient to arm several divisions of infantry. There had, in fact, been no effective investigation, he declared.

The Council's resolution on the report was vague. It stated that the importance of the case was proved by the nature of the debate, reminded members that an extraordinary meeting of members could be summoned by any of them at any time, and urged the speedy ratification by all states of the convention on the traffic in arms. Regret was expressed as to the gravity of the incident and the indifference of the Hungarian Gov-

ernment as to the destination of the material.

As to the question of the Hungarian optants in Transylvania, the Council once more had to be satisfied with urging the Rumanian and Hungarian governments to make reciprocal concessions and thus find a solution upon the basis of the recommendations made at earlier sessions. M. Titulescu, the Rumanian Minister for Foreign Affairs, announced that he was about to propose to Hungary that one member of the Council, he made it quite clear that he had in mind Sir Austen Chamberlain, should look into the individual cases of the dispossessed landowners, being assisted by two persons of his own choice. Acting on the basis of the Council resolutions, the Rumanian law of agrarian reform, and Article 250 of the Treaty of Trianon, he should then decide whether any additional compensation was due to the Hungarian optants; and, if the findings were to that effect, then the compensation would be paid by the Hungarian Government, which could recoup itself by deducting that amount from the reparations due from Hungary to Rumania, Count Apponyi, the Hungarian representative, put in a strong plea for the appointment of a judge to the Mixed Arbitral Tribunal in place of the one withdrawn by Rumania, that the Council might thus fulfill, as he contended, the obvious intention of the Treaty of Trianon. It was the plain duty of the Council, he urged, to reconstitute the court and insure its intangibility.

Sir Austen Chamberlain argued in reply that there were several ways of settling disputes, of which arbitration was only one. It was a means to an end, not an end in itself, as Count Apponyi sometimes seemed to suggest. Compromise and reciprocal concession were often better. Count Apponyi said that several attempts had already been made to settle the question by private negotiation and they had failed. He could not, therefore, feel very hopeful that any result would be reached. Sir Austen Chamberlain said he felt more optimistic than Count Apponyi, and there the matter rested.

The consideration of the Polish-Lithuanian question was enlivened by the communication by the Polish Foreign Minister of a note, which he had addressed to the Lithuanian Prime Minister, in reference to Article V, of the Lithuanian Constitution, proclaiming Vilna the capital of the Lithuanian Republic. He stated that the Polish Government regarded the insertion in the Constitution of the Lithuanian State of an amendment directed against the territorial integrity of Poland as a hollow manifestation, devoid of legal significance or practical effect. He went on to say:

I am forced to observe with displeasure that the promulgation of this amendment can only serve to impede and embitter present negotiations, of which the aim is to establish relations that will make possible between two neighboring States the good understanding on which peace depends, and must therefore be regarded as contrary to the resolution of the Council of the League adopted on December 10, 1927. I take the liberty of reminding you, in conclusion, that the Polish Government's obligation to respect the integrity of the Lithuanian Republic imposes a like obligation on the Lithuanian Government.

This reference to Vilna in the new draft of the country's constitution produced a poor impression at the Council. Sir Austen Chamberlain, in a press conference, warned Lithuania against actions of this sort. At the Council session he made a warm appeal to the Lithuanian Govern-

ment on the same subject declaring that the Lithuanian Prime Minister had solemnly undertaken before the Council in December to end the "state of war" with Poland; and Poland, on her side, had promised to respect the integrity of Lithuania. Six months had passed and no appreciable progress had been made. There had been committed by Lithuania an act of provocation quite contrary to the recommendations of the Council, and he begged M. Valdemaras to show a greater spirit of conciliation. He repeated his warning that the sympathy with a small nation always easily gained might be forfeited if Lithuania followed a course that no state could tolerate from another state. Every nation had need of sympathy; and Sir Austen adjured him to show a spirit of good will.

After argument and various suggestions a motion was passed, at the instance of Sir Austen, that the question should be placed on the agenda of the next session of the Council.

A statement was reported from Geneva on June 23 said to have been made by M. Walko, Hungarian Minister of Foreign Affairs, to the effect that his Government was unable to accept the Rumanian plan for the settlement of the claims of the Hungarian optants in Rumania. This plan called for the reimbursing of the Hungarian optants by reducing the payments from the Hungarian reparations due to Rumania. The matter was then ruled to be out of the League's control and left to settlement between the two parties concerned. Fear was felt that the matter would again be brought up before the League.

In the course of discussion in the Council of the League on the Albanian complaint against the Greek Government, M. Politis, the Greek authority on international law, stated that it was not the intention of the League minorities treaties to perpetuate the existence of minorities in the respective countries. He also wished the Council to make it impossible for minorities to lay their complaints directly on the table of the Council. On the other hand, a note was addressed to the Secretary General of the League by Dr. Wilfan, president of the National Minorities Congress, and Dr. Ammende, the secretary general, objecting to the appointment, to the post of Director of the Minorities Section of the League rumored as possible, a citizen of a country which itself has minorities.

On July 26, Lithuania sent a protest to the secretariat of the League complaining against Polish military maneuvers said to be held near the Lithuanian frontier. The note would be communicated to members of the Council, especially to Poland. The Polish Telegraphic Agency, however, announced the same day that the Polish Government had no intention of holding manoeuvres of the Polish Army around Vilna, except ordinary military manoeuvres. A warning, however, was subsequently sent to Poland by the German Foreign Minister.

Identical telegrams were sent on August 7 to the League by Great Britain, France, and Germany, giving notice that they would ask the Assembly to revive the temporary regulation of 1926, whereby a country elected to the Council can be declared eligible for reelection at the moment it is first chosen. The request was made on behalf of Spain, in order that that country since her return to the League, could enjoy virtual permanence on the Council.

The Council met for its fifty-first session on

August 29 in an atmosphere of optimism based primarily on the signing at Paris on the preceding Monday of the Kellogg-Briand anti-war treaty. Lord Cushendun, who replaced Sir Austen Chamberlain for England on the Council, declared the pact would lead to reduction of armament. While he was expressing this sentiment, delegates to the preliminary conference on private manufacture of arms were dolefully admitting supreme difficulties in the way of reaching an agreement on the text of a draft convention. It was said certain fundamental divergencies of views made it impossible to agree upon a single text and that another session would be necessary before convocation of the International Congress for Control of the Manufacture of Armaments can be thought of.

Hjalmar J. Procope, youthful Finnish Foreign Minister, was the council's new president. Two leading figures of previous sessions were missing—Sir Austen Chamberlain and Gustav Stresemann, both being ill. Premier MacKenzie King of Canada was one of the Canadian delegates. For the first time in the history of the League a woman was elected to an office in the Assembly which carried with it chairmanship functions. Mrs. Hinni Forchammer, president of the National Council of Danish Women, was unanimously chosen vice chairman of the Assembly Committee, which handles social and humanitarian questions. The jurisdiction of the committee includes such problems as traffic in opium, child welfare, and the protection of the interests of women. Mrs. Forchammer had been a member of the Danish delegation since the inception of the League and in 1920 was the first woman to address the Assembly from the floor.

As further evidence of the important rôle which women were playing in international political life, the League delegates appointed Mrs. Hainari, of Finland, official reporter to the Assembly on traffic in women and children, and then named Dame Edith Lyttleton, a British delegate, on the commission, which was to consider opium smoking in the Far East. On this question Great Britain had proposed the appointment of a special commission of experts to visit the Orient and study conditions on the spot.

On August 15, the League Secretariat officially received a request from the Minister of Foreign Affairs of Costa Rica as to its attitude on the Monroe Doctrine. The query came in response to a League recommendation urging that Costa Rica, which had withdrawn its membership in the League about four years previously, resume participation in its affairs, and the Minister explained that the attitude of the League on the Monroe Doctrine might affect his Government's action about reëntering. The Costa Rican Foreign Minister, Señor Castro, explained that as the Doctrine is mentioned in Article XXI of the League Covenant it has acquired an official international judicial value among the nations signing the Treaty of Versailles, but that nevertheless at various times in history statements and public opinion, in the absence of any uniform interpretation of the doctrine, have been divided regarding it. Against the background of Costa Rica's request there had been painted the picture of a Pan-American Union pitted against the League.

"Nothing in this Covenant shall be deemed to affect the validity of . . . regional understandings like the Monroe Doctrine for securing the

maintenance of peace." So reads Article XXI of the League Covenant. How does the league interpret the Monroe Doctrine, and what is the effect upon that doctrine of the circumstance that it had been mentioned in the Covenant?

To Costa Rica, asking these questions, the Council replied on September 1 that reference to the Monroe Doctrine in the League Covenant had not given the doctrine a sanction or validity it did not possess before. Moreover, since the Monroe Doctrine concerned only states which had accepted certain engagements among themselves, it was not for the League to define it at present. It was Colombia, Chile, and Cuba, whose representatives pressed the Council to return a specific answer to Costa Rica's inquiry; threatening, so it was said, that if the Council failed to respond, the question would be interjected into the debates of the Assembly itself, where embarrassing developments might ensue. By returning an answer which was alleged to have satisfied Costa Rica's three supporters at least temporarily, the League Council succeeded in avoiding a public discussion, which in view of its desire not to offend the United States, and in view of the well-known feelings of Colombia on the subject, might have proved somewhat embarrassing.

This was one phase of the Latin and Latin-American attitude toward the League. Spain had reconsidered her withdrawal. Upon Germany's admission to the League in 1926, Spain demanded a permanent seat on the Council as the mother of the seventeen members of the League of Spanish origin. Brazil, although of Portuguese extraction, made the same demand and for the same reason. When the other members did not see fit to accept these requests, both Spain and Brazil served the necessary two years' notice of withdrawal. Spain made a gracious affirmative reply to the invitation to return. Brazil, it was understood, would decline to return as long as there is no permanent Latin-American representative on the Council. Bound to the United States by ties of sympathy, as the Havana Conference showed, Brazil's decision might be influenced by the attitude of the United States toward the League.

Argentina also had shown signs of increasing sympathy. As early as July 1919 she informed the League of her adhesion to the Covenant, subject to the approval of her legislature—which so far had not been given. Argentina was nevertheless represented at the 1920 Assembly, but withdrew upon the failure of the Assembly to take to its bosom the Central Powers. Later however, she paid up her quota of League expenses and maintained a permanent representative at Geneva. In the autumn of 1927, the Government urged upon the Argentinian Congress the passage of a bill of adhesion to the League, which, however, failed of adoption before adjournment. Argentinian representatives had, nevertheless, attended the meetings of various League Commissions, and the representative at the recent meeting of the Security Commission made his presence known by a virtual repudiation of the Monroe Doctrine, which he declared was not a "regional understanding" and had not been explicitly approved by any Latin-American state. In view of Argentina's traditional opposition to Pan-American agreements, in contrast to international ones, and especially in view of her controversy with the United States at Havana, it was logical to believe that she would soon seek readmission.

The largest attendance of any of the annual

sessions of the League yet held was a feature of the Ninth Assembly, which sat from September 3 to September 26 under the presidency of M. Zahle of Denmark. Fifty nations were represented, including Spain; a fifty-first, Argentina, was represented by an observer; another, Costa Rica, signified its intention to return. In the same way, the importance of the delegates representing the various countries maintained the steady upward trend of recent years, with 6 Prime Ministers and 18 Foreign Ministers present. The German Chancellor, the Foreign Ministers of Great Britain and France, and the representatives of Italy and Japan entered into the first direct round-table discussions of the vital questions of the evacuation of the Rhineland and the future of the reparations problem. Progress was made, not only in the capital fact itself that at last the essential negotiations had begun but also in the clear statement of the points at issue and agreement on certain principles.

During the general debate occupying the first week of the Assembly, over a score of speakers rendered homage to the Kellogg-Briand pact and stressed its possibilities for the abolition of the dreaded war system. If the disarmament did not advance at the Ninth Assembly, progress was nevertheless made in connection with peaceful settlement. First of all, the three model multilateral treaties on arbitration and conciliation were welded together into one General Act which it was hoped might become a sort of world juridical charter. The document aimed to comprise all the most advanced methods of peaceful settlement, so arranged that each state may subscribe the various sections which conform to its views.

The Assembly further approved three treaties on non-aggression and mutual assistance, suggested that the Council offer its good offices to states desiring them, approved the German suggestions concerning a model treaty for strengthening the means of preventing war, further expedited the matter of financial assistance to states victims of aggression, and considered two alternative schemes for providing the League with a wireless station to assure communication in case of emergency.

WORLD COURT. Three important steps were taken in connection with the Permanent Court of International Justice which might have an indirect effect on America's relationship to the court. First, following the resignation of John Bassett Moore as a judge, the great majority of the national groups nominated Charles Evans Hughes to succeed him and the Assembly and the Council of the League overwhelmingly confirmed the choice. Second, in view of eight years' experience and of the renewal of the judges in 1930, the Assembly initiated steps to consider what, if any, revisions of the statutes experience had shown desirable. Third, the vexed question as to whether unanimity or majority was needed to ask an advisory opinion of the Court, practically the only obstacle to America's membership, was formally scheduled for consideration, though immediate action was not expected. Spain and Hungary signed the compulsory jurisdiction clause and the Assembly elaborated plans to secure its universal acceptance. Finally, in the fields of international law the Assembly definitely fixed the First Codification Conference for the Hague in 1930, unless postponement of the Disarmament Conference made it possible to advance it.

The fifty-third session of the League met December 10 in Lugano on the suggestion of Dr. Gustave Stresemann, German Foreign Minister, "for reasons concerning his health and the great value he attaches to meeting his colleagues." It was the first time in nine months that Briand, Chamberlain, and Stresemann had met together, and some progress appeared to have been made toward settling the important questions of Rhineland evacuation and reparation. Since the conclusion of the preliminary agreement between the six "great powers" at Geneva on Sept. 16, 1928, for the formation of commissions of experts to settle these two problems, there had been much maneuvering for position that had resulted in considerable bad feeling all around. The Germans maintained that there must be no official linking of evacuation and reparation; the French as consistently held that Germany must pay for early evacuation. There had been acrimonious discussion of the composition of the new body of reparation experts.

All three Foreign Ministers shortly before the Lugano meeting expressed themselves uncompromisingly in their respective parliaments. Sir Austen Chamberlain, in declaring in the House of Commons on December 3, that Germany had no legal right to demand freedom of the Rhineland until she had executed not merely her current reparation obligations but the whole of them, added that though this was the strict legal interpretation, as a matter of policy, the British Government would welcome early evacuation. At Lugano, the "Big Three" were reported according to the Foreign Policy Association to have told one another that their statements were "for home consumption only" and to have promised to refrain from similar remarks in the future.

While the Lugano conversations were in progress, it was announced from Paris semi-officially on December 11 that an agreement had been reached between France and Germany in regard to the composition of the Experts' Committee which would make a definite and complete settlement of reparation:

1. The two experts from each country will be independent financial authorities, and the governments will not be bound by their decisions.
2. The experts will be "designated by their governments" but those of the Allied States will be nominated by the Reparation Commission.
3. Allied and German delegates will participate on a footing of complete equality.
4. The United States will be invited to participate, the American delegates acting in a "private capacity."
5. The committee, meeting in Paris and later in Berlin if it desires, will fix the number of annuities Germany must pay. It will also establish a programme for commercialization of the German debt.
6. The committee will report to the Reparation Commission.

On December 13, a tentative agreement was reached at Lugano, according to which Briand promised Stresemann that the second zone of the Rhineland would be evacuated as soon as the experts have made their report. The French idea seemed to be then to evacuate the third zone progressively as the German reparation obligations were commercialized, but nothing had been decided.

Announcement was made that an accord between Great Britain and Italy had been reached as to the procedure for carrying out the agreement of settlement of the reparations problem and evacuation of the Rhineland. A threatened German-Polish riot in the last session of the

Council, when Dr. Stresemann rose to reply to a charge by M. Zaleski against the Germans in Silesia was averted by the good offices of M. Briand. Progress was also reported in the solution of the Polish-Lithuanian trouble inasmuch as the Lithuanian delegate consented to an examination by the League's Transit Committee of the situation created by the occupation of the Polish forces of the City of Vilna.

A gift of \$2,000,000 from Mr. John D. Rockefeller, Jr., was placed at the disposal of the League of Nations to be used for the construction or endowment of the library. It was an absolute gift with no conditions attached, an earnest of further benefactions, and a tribute to the progress of international peace.

The new librarian of the League was Dr. T. P. Sevensma of Holland. He had been librarian of the University of Amsterdam. The committee in charge of the library consisted of M. Scialoja (president) Representative of Italy on the Council; William Warner Bishop, librarian of the University of Michigan; Dr. Raymond B. Fosdick, former under-secretary general of the League of Nations; Dr. Hugo Kruss, director of the Prussian Staatsbibliothek in Berlin; M. de Maday, librarian of the International Labor Office, Geneva; Dr. P. Roland-Marcel, director of the Bibliotheque Nationale, Paris; Sir James Rennell Rodd, and Dr. Sevensma, librarian of the League. This committee decided to erect a building separate from the new Palace of Nations, already under way, to make the library as accessible to the public as possible. Two-fifths of the money donated was to be used in construction and the remainder retained as an endowment.

See ARBITRATION, INTERNATIONAL; KELLOGG TREATIES. For description of new buildings at Geneva, see ARCHITECTURE.

LEATHER. The output of American tanneries in 1928, as reported in the annual summary of the U. S. Bureau of Commerce, was the equivalent of 20,238,793 cattle hides including kip sides, as compared with 21,820,368 in 1927 and 21,496,486 in 1926. Some 70 per cent of the hides used in the American leather industry were domestic, while the balance, 6,155,698 valued at \$63,694,386, were imported, Argentina supplying the largest amount. The production of calf and whole kip skins in the United States in 1928 was 15,617,325, as compared with 16,986,711 in 1927, and 17,744,265 in 1926. The imports of kip and calf skins in 1928 were 6,974,951 valued

at \$16,104,535, or roughly 40 per cent of the American requirements. The American production of goat and kid skins in 1928 was 54,854,035 skins, as against 50,735,666 in 1927 and 49,775,646 in 1926. Of these, practically all, or 53,482,062 valued at \$41,740,335, were imported in 1928. These raw goat skins came from China, Brazil, India, and other foreign countries. The American production of leather from sheep and lamb skins in 1928 was 39,015,490 as compared with 36,061,673 in 1927, and 31,665,182 in 1926. Into this, leather which was used for gloves, garments, linings, millinery, and other purposes, in addition to 30 per cent from American slaughtering houses, went imports of 25,619,673 skins valued at \$20,730,983 in 1928.

PRODUCTION OF LEATHER IN THE MANUFACTURE OF BOOTS, SHOES, BELTING, ETC. IN OTHER PLANTS OF THE LEATHER-PRODUCING ESTABLISHMENTS, BY KIND AND VALUE, 1927

Kind	Tanned, curried, and finished, including tanned only	Curried and finished only
Aggregate value of leather	\$438,872,881	\$14,856,734
For sale:		
Total	365,143,889	11,614,117
Heavy leather	130,634,209	6,591,566
Upper leather	193,320,947	1,417,771
Glove leather	17,132,363	131,082
Fancy and miscellaneous leather	23,856,370	3,473,698
For consumption, in the manufacture of boots, shoes, belting, etc., in other plants of the leather-producing establishments:		
Total	73,728,992	3,242,617
Heavy leather	43,715,781	2,676,027
Upper leather	29,603,678	566,590
Glove leather	390,929
Fancy and miscellaneous leather	18,604

In 1928 the statistics from the Federal Meat Inspection of Slaughterhouses again indicated fewer cattle, calves, and goats slaughtered in the United States in the previous year, and but a slight increase in the number of sheep and of swine. See LIVESTOCK.

From the foregoing statements it is quite obvious that any revision of the tariff as respects both hides and manufactures of leather would have an important relation to this industry. Not only was it deemed necessary to protect the American tanner and the farmer, but at the same time foreign supplies of raw hides and skins were essential in many departments of the industry. During 1928, the United States imported leather manufactured goods valued at \$25,651,534, an increase of 18.4 per cent over the value of similar goods (\$21,657,420) imported during 1927. The value of the leather gloves imported constituted \$11,103,469 of this amount, leather boots and shoes (free of duty) \$3,254,224, leather slippers (free of duty), \$1,019,435, dutiable footwear \$316,193, bags, baskets, etc., \$3,508,918; and miscellaneous goods \$1,449,295.

EXPORTS. The exports of raw hide and skins from the United States in 1928 totaled 46,441,795 pounds valued at \$11,076,598, as against 63,992,499 pounds valued at \$11,475,652 in 1927. There was a decrease in both quantity and value of cattle hides, but a slight increase in value, though a decrease of quantity in calf, sheep, and goat skins, and other hides and skins ex-

PRODUCTION OF LEATHER, BY KINDS OF HIDES AND SKINS REPRESENTED

Kind	1928	1927
Cattle (including kip side) *	20,238,793	21,820,368
.....equivalent hides..	15,617,325	16,986,711
Calf and whole kip	54,854,035	50,735,666
Goat and kid	3,262,621	3,406,852
Cabretta	39,015,490	36,061,673
Sheep and lamb	859,139	887,910
Deer and elk	882,535	705,268
Kangaroo and wallaby	192,214	351,331
Seal	522,291	347,869
Pig and hog		

* The following procedure was used in the consolidation of production data: Sides of sole, harness, bag, case, and strap, skirting, collar, latigo, lace, upper, patent, glove, fancy, raw hide, and rough leather were added together and divided by 2. To this quantity was added the actual number of rough belting butts, upholstery grains, and machine-buffed hides. The figures include buffalo hides, of which 252,691 were reported as "wet in" during the year. Curried belting butts, wetting leather, buffings, and splits were excluded.

Includes skivers but excludes chamois and other fashers.

SUMMARY FOR THE LEATHER INDUSTRY
1927 AND 1928

	1927	1928	Per cent of in- crease or de- crease (—)
Number of establish- ments	494	532	- 7.1
Wage earners (av- erage number) ^a	53,047	53,043	(^b)
Wages ^c	\$68,057,322	\$66,762,077	1.9
Cost of materials, supplies, fuel, and purchased power, total ^c	\$331,883,142	\$306,633,977	8.2
Materials and sup- plies ^d	\$324,217,009	(^e)	...
Fuel and power ^e	\$7,666,133	(^e)	...
Value of products ^c	\$494,780,821	\$462,013,572	7.1
Value added by manufacture ^f ..	\$162,897,679	\$155,379,595	4.8
Horsepower	225,853	222,678	1.4

^a Not including salaried employees.^b Less than one-tenth of one per cent.^c The amount of manufacturers' profits cannot be calculated from the census figures, for the reason that no data are collected in regard to a number of items of expense, such as interest on investment, rent, depreciation, taxes, insurance, and advertising.^d Includes the cost of contract work, raw hides, tanning extracts, and tanned leather purchased or transferred from one plant to another for currying and finishing. Does not include the value of hides or leather tanned, curried, and finished as contract or custom work.^e Not reported separately.^f Value of products less cost of materials, shop supplies, fuel, and purchased power.

ported. The exports of leather in 1928 were valued at \$55,165,390, as compared with \$54,003,342 in 1927. Manufactures of leather exported from the United States in 1928 were valued at \$17,503,574, as compared with \$18,381,424 in 1927. See **BOOTS AND SHOES**.

CENSUS OF MANUFACTURES. The U. S. Department of Commerce announced that according to data collected at the biennial census of manufactures taken in 1928, the establishments engaged primarily in tanning, currying, and finishing leather in 1927 reported a total output valued at \$494,780,821, an increase of 7.1 per cent, as compared with \$462,013,572 for 1925, the last preceding census year. This classification covered tanneries manufacturing leather from hides and skins of all kinds, domestic and imported, and establishments engaged in currying and finishing leather.

LEAVITT, Iev'it, CHARLES WELLFORD. American civil and landscape engineer, died at Hartsdale, N. Y., April 22. He was born at Riverton, N. J., Mar. 13, 1871. He was graduated from the Cheltenham, Pa., Military Academy in 1888, and began his professional work as assistant engineer of the East Jersey Water Company. In 1890 he became assistant engineer and later chief engineer in charge of construction of the Caldwell Railway, which was later merged with the Erie R. R. He left the field of railway engineering for that of landscape engineering, engaging extensively in private practice.

LEAVITT, FRANK McDOWELL. American engineer and inventor, died August 6, at Scarsdale, N. Y. He was born at Athens, Ohio, Mar. 3, 1856, and was graduated from Stevens Institute of Technology in 1875. Two years later he became head draftsman for Bliss & Williams, of Brooklyn, and in 1881 he became master mechanic for the Texas-Mexican Railway. In the following year he became manager of the Graydon & Denton Manufacturing Company, of New Jersey.

He returned, as assistant superintendent in 1884, to the firm which was then the E. W. Bliss Company, and, becoming chief engineer, he remained with the Bliss Company until his death. Having introduced the Whitehead torpedo into the U. S. Navy in 1890, he invented and developed the Bliss-Leavitt torpedo. In 1890 he also established the United States Projectile Company, which manufactured ammunition. He also invented automatic machinery for making tin cans.

LEEWARD ISLANDS. A group of islands belonging to Great Britain in the West Indies; the most northerly group of the British Lesser Antilles, lying to the north of the Windward group and southeast of Porto Rico, comprising Antigua, Dominica, Montserrat, St. Kitts (with Nevis and Anguilla), and the British Virgin Islands. Total area, 715 square miles; population at the census of 1921, 122,242, as compared with 127,193 in 1911. The two largest islands with their area and population in 1921 were: Dominica, 305 square miles and 37,059 inhabitants; Antigua, 108 square miles, but with Barbuda and Redonda, 170 square miles, with a population of 29,767. The chief towns are Roseau (Dominica), 7000 inhabitants; St. John (Antigua), 9262 inhabitants; and Basseterre (St. Kitts), 7736 inhabitants. The British Virgin Islands comprise all those in the group which do not belong to the United States; area, 58 square miles; population (1921), 5082. The staple products in most of the islands are sugar and molasses. Cacao and onions are also grown. The culture of tobacco and cotton is successfully carried on in Dominica. On that island and Montserrat, lime juice and citrate of lime are important products. In 1926-27 the revenue was £289,393; expenditure, £259,037; public debt, £278,850; imports, £842,464; and exports, £662,492. The islands are divided into five presidencies under a central government, at the head of which is a governor, who is also commander-in-chief, a Federal executive council, and a Federal legislative council. Governor, Sir Eustace Fienness.

LEGION, AMERICAN. See **AMERICAN LEGION**.
LEGISLATION. See **AGRICULTURAL LEGISLATION**; **LABOR LEGISLATION**; paragraphs on **LEGISLATION** under the several States; and the article **UNITED STATES**.

LEHIGH UNIVERSITY. A non-sectarian institution for the higher education of men at Bethlehem, Pa., founded in 1866; composed of colleges of engineering, business administration, and arts and science. The enrollment for the autumn of 1928 was 1477, and for the summer session of that year there were 466 registered. The number of members in the faculty was 155. Productive endowment funds for the year amounted to \$5,123,112, and the income to \$1,125,158. There were 127,902 bound volumes and 51,307 pamphlets in the library. On June 9, the cornerstone of the new Packard Laboratory for the electrical and mechanical engineering departments was laid; and in September, construction was begun on a new library structure designed to increase the library facilities approximately four-fold. President, Charles Russ Richards, M.M.E., Eng.D., LL.D.

LEMONS. See **HORTICULTURE**.

LENNOX, CHARLES HENRY GORDON. See **RICHMOND AND GORDON, DUKE OF**.

LEPROSY. The literature of the past few years has been decidedly optimistic in regard to successful dealing with the problem of leprosy, but there is evidence that this attitude may have to be modified. Professor Olpp of Tübingen has expressed himself in both directions in an article in the *Klinische Wochenschrift* for Sept. 23, 1928. While he is encouraged by the great interest and activity manifested in this disease and the new remedies which promise great benefit, he was able to show that the leper population of the world had been absurdly underestimated. Thus the number of lepers in India had been conventionally fixed at about 100,000, but the recent canvass of Cochrane, medical adviser to the Mission to Lepers, had shown that the true figure was more than 1,000,000. In like manner Japan had been thought to have a leper population of 10,000, but a recent census, conducted by Sir L. Rogers, yielded a total of 102,585. If the African Continent is taken as an integer, the leper population runs to more than 525,000, Belgian Congo alone having 90,000. China rivals India in having a million lepers, while Russia has 150,000, and Latin America, 60,000. The only countries comparatively free are Europe (with certain States excepted), the Near East, and North America, to which might be added Oceania, where there are less than 5000. The total leper population of the world was placed at more than 3,000,000.

LEXICOGRAPHY. See PHILOLOGY, MODERN.
LIABILITY INSURANCE. See AUTOMOBILES; INSURANCE.

LIBERIA. A Negro republic on the west coast of Africa, reaching from the British colony of Sierra Leone on the west to the French Ivory Coast on the east, with about 350 miles of coast line, and extending inland at some points to a distance of 200 miles. Area, variously estimated at 35,000 to 43,000 square miles, and population at 2,000,000 to 2,500,000, most of whom live in the interior. They belong to about 40 tribes and speak as many languages, though they fall into the six main stocks of: Mandingos, who are Mohammedans; Gola, Kpwezi, Gissi, Kru, and Greboes. The civilized inhabitants, reported at about 50,000, live along the coast, speak English, and are industrious. Capital, Monrovia, with 6000 inhabitants (including Krutown). The ports of entry are Monrovia, Robertsport, Marshall, Grand Bassa, Buchanan, River Cess, Liberian Gene; Saywolu, Greenville, Nana Cru, Grand Cess, Sasstown, Harper, Kablake, Half Cavalla, and Webó.

PRODUCTION. Agriculture, mining, and industrial resources are comparatively undeveloped. Although the soil is very fertile, cultivation is backward. Cacao and cotton are produced in small quantities, but the staple product is native coffee. Other products include: Piassava fibre, palm oil, palm kernels, chillies, beniseed, anatto seed, rice, beeswax, and tortoise shell. The mineral resources include: Gold, copper, tin, zinc, monazite, lead, corundum, lignite, and iron. The last named is worked by natives. Some diamonds have been found.

COMMERCE. Trade statistics for Liberia are very meagre. In 1925 the value of imports was \$2,115,021 and of exports \$1,911,053. In 1927 the imports from the United Kingdom were valued \$186,313 and exports to the United Kingdom, \$61,106. The chief exports are coffee, cacao, palm

kernels, piassava fibre, palm oil, ivory, rubber, and camwood. The chief imports are rice, cottons, haberdashery, salt, provisions, arms and ammunition, hardware, tobacco, ready-made clothing, glass and earthenware, rum, gin, building timber, dried and preserved fish, and beads.

FINANCE. The budget for 1925-26 provided revenues of \$962,570 and expenditures of \$939,978. The public debt is slightly in excess of \$2,000,000.

COMMUNICATIONS. In 1928 there were no railways of any kind, and only about 250 miles of roads fit for motor traffic. Ox-carts are the chief means of conveyance, although the use of motors has commenced. A wireless station functions at Monrovia, and there is direct cable communication with Europe and America.

GOVERNMENT. The constitution is modeled after that of the United States. Under it executive power is vested in the President, who is assisted by a council of six ministers, and legislative power in the Congress made up of the Senate and House of Representatives. Qualifications for the franchise are Negro blood and ownership of land; although the natives are not disfranchised, they take no part in political affairs. The official language of the administration is English. President in 1928, Charles D. B. King (for the term 1928-1932); vice president, Allen N. Yancy.

HISTORY. The question of the Firestone rubber concession played a prominent part in Liberia's history during the year. As reported in the *Journal of Commerce* (New York) President King of Liberia came to the defense of the Firestone concession in his annual address before the Liberian Legislature on October 18, in which he declared that the most cordial relations exist between his Government and the company, and that American assistance in the financial administration of Liberian affairs was "not unsolicited." This statement of President King was undoubtedly occasioned by the charges made by Prof. Raymond L. Buell, of Harvard University, to the effect that Herbert Hoover's attack on the British rubber monopoly had inspired Firestone interests in seeking the Liberian concession and that the State Department had used measures falling little short of coercion in getting Liberia to accept the terms of the concession. These charges were denied by the State Department at the time, officials declaring that Mr. Hoover had nothing to do with the granting of the Firestone concession. Officials denied charges that the State Department had brought any pressure to bear on Liberia to accept the Firestone terms, and declared that the concession was not in any sense a monopoly, embracing only about 4 per cent of Liberian territory.

LIBRARY ASSOCIATION, AMERICAN. The official organization of librarians in the United States and Canada founded for the purpose of promoting library service and librarianship. In 1876 its membership was 103, and in 1928 it was over 11,000. The activities of the association are carried on by its officers; by its 66 voluntary committees engaged in studying the problems of book buying, book selection, cataloging, library work with the blind, and the foreign born, etc.: by its boards; by hundreds of volunteer workers; and by the members of the Headquarters staff, which numbered more than 60 in 1928, including the executive assistants to the A. L. A. Committee on Library Extension, the

Board on the Library and Adult Education, and the Board of Education for Librarianship.

The association published books and pamphlets on library work, buying lists for libraries, etc. Over 1,000,000 copies of A. L. A. publications were distributed during 1928. Most of these were sold. Important publications of the year were *Anniversaries and Holidays*, by Mary E. Hazeltine; *School Library Yearbook*, No. 2; *Public Library Administration*, by John Adams Lowe; *Code for Classifiers*, by W. L. Merrill, and *Periodicals for the Small Library*, by Frank K. Walter. The association also published seven *Reading with a Purpose* courses in 1928, each of which was written by a specialist. Each course consists of an essay, followed by a list of four or five books recommended to the reader in case he wishes to read further on the subject. Two periodicals are issued: the *Bulletin of the American Library Association*, a monthly publication which includes the conference *Proceedings* and the *Handbook*, and the *Booklist*, issued 10 times a year, as a guide to the selection and purchase of current books.

The fiftieth annual meeting of the association held in West Baden, Ind., May 28-June 2, was attended by 1200 members. The John Newbery Medal awarded annually by the Children's Librarians Section of the A. L. A. for the most distinguished children's book of the year written by an American author was given to Dhan Gopal Mukerji for his *Gay-Neck*. The usual meetings of librarians of children's, college, school, public, and hospital libraries were held. There were round tables on adult education, small libraries, library work with the blind and the foreign born, library extension, and religious books. The presence of six Mexican librarians appointed by the Secretary of Education of Mexico was the occasion for a discussion of Mexican libraries. These delegates, meeting with members of the A. L. A. boards and committees, passed resolutions providing for an exchange of publications, library personnel, and bibliographical information, the translation into Spanish of American works on library practice and the publication by the Ministry of Education of Mexico of a monthly list of all government and private publications printed in Mexico. Both before and after the conference the delegates visited a number of representative libraries.

LIBRARY PROGRESS. Progress was made during the year in the school library movements, particularly in the South where new standards for high-school libraries were adopted by the Association of Colleges and Secondary Schools of the Southern States. These standards state that "books should be procured in proportion to the size of the enrollment, that adequate quarters and equipment should be provided, that librarians familiar with the purposes of the curriculum and trained in library technique should be employed and that appropriations for new acquisitions should be made a regular part of the school budget." The standards must be complied with within three years by all of the schools on the accredited list of the Association of Colleges and Secondary Schools of the Southern States.

Circulation figures for the year were not available at the time this article was written, but a questionnaire sent by the association to a number of representative libraries revealed a considerable increase over former years. A report from the Chicago Library, for example, showed that

there was an increase of nearly 900,000 items for the first nine months of 1928 over the corresponding months in 1927. The number of county libraries established in the rural districts during the year was encouraging. They were fifteen in number, making a total of 265 in existence in the United States at the end of the year. A demonstration of a county library system which was retarded because of the Mississippi floods was continued by means of a grant of \$35,000 from the Carnegie Corporation.

The library schools already in existence before 1928 were either not able to accommodate the number of students wishing to make librarianship their profession or were not so situated geographically as to be easily accessible to students in certain parts of this country; therefore, in 1928 six new schools were established. There were nearly 1000 students registered for the school year 1927-28 in the 15 library schools accredited by the American Library Association Board of Education for Librarianship. A notable event of the year was the opening of the University of Chicago Library School, the first library school in the country to be devoted exclusively to graduate work in library science.

Libraries have been coöperating with other educational agencies in the adult education movement. Twenty-five of the larger libraries have established adult education departments, or have a "reader's adviser" whose work it is to become acquainted with the individual reader's book problems and, if necessary, to compile lists of books specifically for him. The American Library Association for the past few years has been publishing a series of reading courses, *Reading with a Purpose* (see under LIBRARY ASSOCIATION, AMERICAN above.)

A notable and highly useful bibliography was finished during 1927 and distributed in 1928. Its title is the *Union List of Serials in the Libraries of the United States and Canada*. The work includes an entry for over 75,000 titles of serials and locates holdings in over 225 American libraries. It was edited under the care of a committee of the American Library Association and involved nearly six years of labor. Sixteen copies of the *List* were printed, some on rag stock, some on sulphite stock, and sent to libraries in various parts of the country to be used and then returned, and the paper was to be tested for its wearing quality.

A number of American librarians were in foreign countries for professional reasons during the year: W. W. Bishop, librarian of the University of Michigan Library, J. C. M. Hanson, of the University of Chicago Libraries, and Charles Martel, chief of the Cataloging Division of the Library of Congress, at the request of Vatican Library authorities and by means of a grant from the Carnegie Endowment for International Peace spent several months at the Vatican Library studying the catalogue and making suggestions for its enlargement and revision and conferring about the Vatican collection of printed books and incunabula. Milton Ferguson, of the California State Library, and S. A. Pitt, of the Glasgow, Scotland, Library, were sent to South Africa to make a survey of library conditions for the Carnegie Corporation of New York.

A number of large sums of money were either given or voted for libraries and library work in 1928, including: \$1,100,000 worth of stock which was voted to help complete the Central Library

Building in Brooklyn; a municipal loan of \$3,000,000 for a new central building for the Enoch Pratt Free Library at Baltimore; a bequest from Payne Whitney of over \$6,000,000 to the New York Public Library; a fund of \$500,000 pledged by the trustees of Lehigh University for the building of an addition to the University Library; the gift of a cultural reading room the A. F. Morrison Memorial Library made to the University of California; a gift of their residence by Mr. and Mrs. Samuel Rauh to be used as a branch of the Indianapolis Public Library; and \$50,000 given by the Hon. David A. Boody for the benefit of employees of the Brooklyn Public Library. A grant of \$25,000 was made through the A. L. A. Committee on Library Extension by the Carnegie Corporation for library relief in the districts suffering losses from the floods along the Mississippi Valley and in Vermont.

New buildings either begun or completed during the year were the Knox College Library in Galesburg, Illinois, completed at a cost of \$200,000; the Montiel Regional Branch in Detroit, completed at a cost of over \$230,000; the Electra C. Doren Branch of the Dayton, Ohio, Public Library; the Public Library of Bloomfield, New Jersey; the Queens Borough Public Library in New York under construction at a cost of over \$1,000,000; the Pullman Branch of the Public Library in Chicago, Illinois; the Sterling Memorial Library at Yale University; the California State Library; the Richland Parish Library, Louisiana (county library); the Warren Free Public Library, Warren, Maine, completed at a cost of \$20,000; the Cortland, New York, Free Library; the Jones Library in Amherst, Massachusetts; and the Hoyt Library in Kingston, Pennsylvania.

Among the libraries which were making plans to begin work on new buildings were the Richmond, Virginia, Public Library, the Enoch Pratt Free Library, and the Cincinnati, Ohio, Public Library.

LIBYA. The name of a former Italian colony on the north coast of Africa. In 1919 for administrative and military purposes, it was divided into Cyrenaica and Tripolitania. See articles under these titles.

LICHNOWSKY, KARL MAX VON, PRINCE. Former German diplomat and ambassador of the German Emperor at the Court of St. James's at the outbreak of the World War, died on his estate near Breslau, Silesia, February 27. He was born at Kreuzenort, Silesia, Mar. 8, 1860. Lichnowsky held a commission in the Prussian Hussars of the Guard before entering the German foreign service in 1884. He served for about twenty years at various embassies and legations in Europe and his promotion was rapid, for at 34 he was counselor of embassy and at 39 he held the rank of minister. In 1904, after the death of his father, he retired from the diplomatic service, but in 1912 he was appointed ambassador to London. There he worked for the establishment of more friendly relations between Germany and Great Britain. In the days immediately preceding the beginning of hostilities, at the beginning of August, 1914, he endeavored, by every means within his power, to avert the War, and on its outbreak left London and went into retirement in Germany. It was currently asserted that the Berlin Foreign Office made of him little more than a figurehead, and that the real

ambassador was Herr von Kühlmann, officially counselor of embassy. In his retirement Lichnowsky wrote his account of the origin of the War; it was not intended for publication, but extracts appeared in a Swedish newspaper in March, 1918, and shortly afterward were published in book form. In this he brought serious charges against Germany. The book made a great sensation and provoked anger in Germany. Feeling ran high against the author and he was expelled from the upper house of the Prussian Diet. He found it advisable to leave his Silesian estate and live in Switzerland until after the downfall of the German Empire and the establishment of the Republic. Ludendorff urged that proceedings be taken against Lichnowsky, but nothing was done. Not long before his death Lichnowsky completed *Heading for the Abyss* (London, Constable, 1928) a work which commanded much attention from historians of the World War and from critics. It gives his opinions of the events which led up to the War.

LIFE INSURANCE. See **INSURANCE.**

LIGHTHOUSES. U. S. LIGHTHOUSE SERVICE.

Radiobeacons. This important and useful aid to navigation, to name which a new word had been coined, began in 1925 on Lake Huron and by 1928 embraced 55 radiobeacon broadcasting stations in the United States. Four times each day, regardless of weather conditions, they send signals which can be used by ships equipped with the simple receiving coil, or radio compass, to check up on their position. During fog, snowstorms, or thick weather the signal is continuous. A wave length near 1000 meters was first used so as to prevent interference with ordinary broadcasting, but since late in 1927 the lengths have been varied between 950 and 1050 at different stations and the signals have also been varied so as to make identification of the sending station, usually a lighthouse or lightship, a simple matter.

LIGHTHOUSES. The importance of lights for Great Lakes navigation is illustrated by the fact that several new lighthouses and beacons were put in service on the Great Lakes in 1928.

Lansing Shoals, Michigan. Lightship No. 98 at the northern end of Lake Michigan was replaced by a primary light- and flag-signal station which was placed in service on Oct. 6, 1928. A similar project was under way at Poe Reef, Michigan. The Lansing Shoals light was built by filling caissons, made on shore and towed into position, with concrete and protecting them from undermining with rip rap fill on the outside. A concrete slab 74 by 74 ft. and 8 ft. thick over the caissons finishes the base for a concrete building and tower built over a steel frame. The total cost was about \$200,000.

Martin Reef Lighthouse, Lake Huron. By the construction of a lighthouse to replace a lightship, the U. S. Lighthouse Service reduced annual expenses and established a fixed light not subject to storms, and especially the ice conditions, which often made it impossible, in early spring or late fall, to maintain a ship on the Martin Reef at the northern end of Lake Huron, eight miles off shore. The tower, 25 ft. square and over 70 ft. high, is founded on a heavy concrete base the top of which is 18 ft. above water and 64 ft. square in plan. The timber crib on which the base rests in about 6 ft. of water was built on shore and towed into position.

The lighthouse was completed at a cost of \$112,000.

AIRWAYS LIGHTING. Progress was made on this new problem and about 2450 miles of airways were lighted during the fiscal year 1927-28, and 520 aids to air navigation established. The total had become 5877 miles lighted and 1275 lights in operation. A new 24-inch revolving beacon light giving a 12,000-candle-power fan-shaped zenith light extending in a vertical plane from the main beam and providing a short range light for planes maneuvering for landings was developed. Special flashing beacons, illuminated wind cones, which show wind direction at night, field boundary markers and lights, a weather-signaling system, and ceiling-height indicators were in use and indicate the interesting trend of this important development.

TUBBATAHA REEF. The romance of the isolated "keeper of the light" is well illustrated in this station on a small island of the Sulu Sea, 90 miles from Palawan Island, the nearest large land mass of the Philippines. A group of structures consisting of concrete houses for the little colony of three keepers, two boatmen and their families, a diminutive power plant for the radio, cisterns for fresh water, and a storehouse for oil, with, 120 feet above, at the top of a slender steel tower, a third-order light, mark this station. It took the builders 12 days to land men and material on the reef; they were overcome by extreme heat during the day and extreme cold at night, and with tropical storms at intervals, which required a sea wall to protect this precarious foothold of man in the midst of water. Since May 11 the new light has served and will continue to serve shipping between Hong Kong, Manila, and Australia. Philippine lighthouse affairs are not under the U. S. Lighthouse Service but are managed by the Philippine Government.

FRENCH LIGHTHOUSE SERVICE. One of the most interesting developments in lighthouse work in recent years was the evolution of electric lighting

in French works. The French Lighthouse Service has long been noted for its excellence and its installations are watched with interest. The systematic application of electricity in lighthouse work in France dates from 1882, when it was proposed to electrify no less than 46 of the leading lights along a seaboard of 1600 miles. It was hoped that these lights, at intervals of 35 miles, would each have their luminous ranges cutting each other so that an observer would nowhere be out of range. The number, for reasons of economy, was later reduced to six and in 1928 14 were so operated. The first installations consisted in arc lights operated by alternating current dynamos driven by steam engines of 12 to 18 horse power. More recently, from 1922 to date, the development has been characterized by the introduction of high-candle-power incandescent lamps running up to 5000 and 10,000 watts. The plan of using outside, local sources of supply, with the lighthouse electric generating plants simply standing by in case of any interruption or failure of the outside current, has also been followed wherever possible.

The most interesting feature in the lighting development, however, was the introduction of the so-called lightning flash, or *feux éclair*, system. By rapid rotation of the revolving drum, made possible largely by the clever use of a mercury-bearing support for the apparatus, flashes of $\frac{1}{10}$ second in duration at first at intervals of 10 seconds were secured and the intensity of the flashes was increased from 1 to $5\frac{1}{2}$ million candle power. Later developments reduced the interval to five seconds and increased the intensity to 25 million candle power. An interesting summary in *Engineering* (London, July 6, 1928) calls attention to the fact that this lightning flash system cannot be used in England, where a flash duration of as much as five seconds is used, due to the heavier atmospheric conditions prevailing on the English coast and the need for both a longer period for perception as well as

UNITED STATES LIGHTHOUSE SERVICE—SUMMARY OF AIDS TO NAVIGATION AND CHANGES DURING FISCAL YEAR

Class	1928				Total, June 30—	
	Estab- lished	Discon- tinued	In- crease	De- crease	1927	1928

Aids to air navigation	755	1,263

* Gas buoys with whistles and bells are counted only once in the grand total.

† Not included in further statistics of this report. The number of aids shown includes beacon lights, radio-beacon stations, and radio communication stations only. There were also 3593 boundary lights and 727 obstruction lights in operation June 30, 1928.

intensive illumination of the nearer sea rather than the overhead long-distance flashes to the horizon used satisfactorily in French practice because of better weather conditions on the French coast.

FIRST AFRICAN RADIOBEACON. Spain established a radiobeacon at Cape Tres Forcas, Morocco. Although this is the first radiobeacon on the African coast, it was expected that another would be installed at the internationally maintained light-house at Cape Spartel, south of the entrance to the Mediterranean.

LIGNITE. See **COAL.**

LIMA, MANOEL DE OLIVEIRA. Former Brazilian diplomat, historian, and publicist of international note, died at Washington, D. C., March 24. He was born at Pernambuco, Brazil, Dec. 25, 1867, and was graduated from the Faculty of Letters and Philosophy, Lisbon, Portugal. His diplomatic career began in 1890. From 1896 to 1900 he was first secretary to the Brazilian Embassy in Washington, and he served also in various countries of Europe and South America, and in Japan. He was visiting professor at Harvard University, 1915-16, and lectured at other American and European universities. From 1923 until his death he was professor of international law at the Catholic University, Washington, and he donated to the university his library of 40,000 volumes. He was a member of the academies of letters of Brazil, Portugal, and Spain, and of many other learned societies. His writings included various historical works in French, Spanish, and Portuguese.

LINCOLNSHIRE, FIRST MARQUIS OF. (CHARLES ROBERT WYNN-CARRINGTON). English statesman, died at High Wycombe, England, June 13. Born May 16, 1843, he was educated at Eton and at Trinity College, Cambridge (1861), and after a short period of service in the Royal Horse Guards entered Parliament as member for High Wycombe, 1865-68. In the latter year he went to the House of Lords, on inheriting the title of Baron Carrington. His course in Parliament was marked by hearty support of Liberal measures. He was especially interested in the nationalization of the church lands, to provide small holdings for workers. He was captain of the Royal Bodyguard, 1881-85; Governor of New South Wales, 1885-90; Lord Chamberlain of the Household, 1892-95; President of the Board of Agriculture, 1905-11, and Lord Privy Seal, 1911. From 1915 to 1923 he was lord lieutenant of Buckinghamshire. In 1895 Lord Carrington was advanced in peerage, as Earl Carrington and Viscount Wendover, and in 1912 he became the first Marquis of Lincolnshire. He was joint hereditary lord great chamberlain of England. He was made a Knight of the Garter in 1906 and was also the possessor of the Grand Cross of the Order of St. Michael and St. George.

LIONS CLUBS, INTERNATIONAL ASSOCIATION OF. An organization of business men's clubs united in one association for the purpose of promoting good government and good citizenship, encouraging efficiency, and promoting high ethical standards in business and in the professions. In 1917 the Business Circle of Chicago is-

sued a call to approximately 150 business organizations, inviting them to send representatives to a meeting in Chicago on June 7. More than 20 delegates, representing 50 clubs, attended this meeting and voted to form the Association of Lions Clubs with the understanding that each club was to retain its own name. Additional Lions Clubs have been organized by choosing one man from each business or profession in the community.

On June 30, 1928, the total number of clubs was 1458 and membership, 60,859. At the 1928 convention, held July 10-13 in Des Moines, Iowa, the following officers for 1928-29 were elected: President, Ben A. Ruffin, 1005 Times Dispatch Building, Richmond, Va.; immediate past president, Irving L. Camp, Johnstown, Pa.; vice presidents (in order), Ray L. Riley, Sacramento, Calif.; Earle W. Hodges, New York City, and Julien C. Hyer, Fort Worth, Texas. Melvin Jones, Chicago, was secretary general. Louisville, Ky., was selected as the next convention city. International headquarters are in the McCormick Building, 332 South Michigan Avenue, Chicago, Illinois. *The Lion* is the official magazine of the Association.

LITERATURE, ENGLISH AND AMERICAN. During 1928 the book-club movement in America, noted in the 1928 YEAR BOOK, continued to spread. Not only was there an addition to the organizations selecting from the whole field of literature but there were also organized clubs specializing in books of poetry, religion, and crime. The Book League of America, the new organization in the general field, undertook to distribute twelve new books a year in magazine format, and subscribers were allowed no choice. But at the same time the subscriber was permitted to choose during the year a certain number of books from a list of established classics. How successful this variation of the book-club scheme would be it was impossible to say at the close of 1928.

Publishers and booksellers seemed to believe that the various book clubs had done their business good; at least, very little complaint was heard from them, although an association of American booksellers tried to compete with the book clubs by announcing a monthly recommendation of its own. On the whole, the movement seemed to have had a healthy influence on both the trade and the art of publishing. The level of books selected by all the clubs generally was high, and some worthy books would certainly not have received the attention they deserved without the support of the book club.

A notable tendency in American publishing, though now of some years' growth, should also be spoken of. That is the obvious desire of many publishers to produce striking examples of book-making, in typography, illustration, page design, dust cover, binding, etc. In this the university presses have undoubtedly led the way. Also the American Library Association's practice of selecting the fifty best-made books of the previous year has stimulated the practice. Even reviewers often comment upon a book's make-up. Undoubtedly, this tendency is a reverberation of the contemporary craze for collecting modern books in first editions, a fad which may have its elements of falsity and puffery, but which in this respect, at least, brings good with it.

FICTION. Though the general level of attainment was not undistinguished, there was no

STEPHEN VINCENT BENÉT

Winner of Nobel Prize in Literature for 1928
THREE AUTHORS PROMINENT IN 1928

THORNTON WILDER

outstanding novel during 1928, no great popular success, not even a remarkable *succès d'estime*. One grand achievement, however, was finished by John Galsworthy's *Swan Song*, the last of the six novels and four short stories which make up the *Forsyte Saga*. Soames Forsyte, one of literature's most vital figures, is dead. To many people he has been, and to many more he undoubtedly will be, the great exemplar of the late Victorian era. Virginia Woolf's *Orlando* was a fantastic study of English life and literature from Elizabeth's time to our own, centred about a person who changed sex during the passage of time. Aldous Huxley mixed philosophy and fiction in *Point Counter Point*, as did Wyndham Lewis, though more wildly and bewilderingly, in *The Childermass*, part 1. *The Strange Case of Miss Annie Spragg*, by Louis Bromfield, is a mixture of abnormal psychology, mystery, and anti-religion. Cornelia James Cannon's *Red Rust* is a powerful study of the Western farmer's struggle for livelihood.

There were many fine novels of fantasy, such as *The Bishop's Wife*, by Robert Nathan; *Mr. Hodge and Mr. Hazard*, by Elinor Wylie; *Mr. Weston's Good Wine*, by T. F. Powys; *In the Beginning*, by Norman Douglas; *Jingling in the Wind*, by Elizabeth Madox Roberts; and *Mandrake Over the Water Carrier*, by Edward Sackville-West. Also, there was the most interesting group of historical novels in some years: "H. D.'s" *Hedylus* and Gertrude Atherton's *Vengeful Gods*, were about ancient Greece; *The Empress of Hearts*, by E. Barrington, about Marie Antoinette; *With Malice Toward None*, about Lincoln, by Honoré Willse Morrow; *King Akhnaton*, by Simeon Strunsky, which, with three books revising the Bible stories—Elmer Davis' *Giantkiller* (David) Ernest Sutherland Bates' *The Friend of Jesus* (Judas) and Murray Sheeham's *Eden*—carried satirical implications for contemporary life. Then there were Esther Forbes' *A Mirror for Witches*; Donn Byrne's *Crusade*; Eric P. Kelly's *A Trumpeter of Krakow*; Ford Madox Ford's *A Little Less Than Gods*; Louis Forgnone's *The Men of Silence*; Manfred Gottfried's *Prelude to Battle* which stood out from the rank and file.

Satirical novels included: Edith Wharton's *The Children*; H. G. Wells' *Mr. Blettsworthy on Rampole Island*; Anne Parrish's *All Kneeling*; Nelson Antrim Crawford's *A Man of Learning*; Isa Glenn's *Southern Charm*; McCready Huston's *Dear Senator*. Among romantic novels were: S. Fowler Wright's *Deluge*; Donn Byrne's *Destiny Bay*; Dale Collins' *Vanity Under the Sun*.

The great bulk of the year's work in fiction was of course in the plain old realistic tradition. Such novels as *Wintersmoon*, by Hugh Walpole; *Iron and Smoke*, by Sheila Kaye-Smith; *Bright Metal*, by T. S. Stripling; *Claire Ambler*, by Booth Tarkington; *Home to Harlem*, by Claude McKay, and *Scarlet Sister Mary*, by Julia Peterkin, both about Negro life; *Bad Girl*, by Viña Delmar; *The Bonney Family*, by Ruth Suckow; *An Artist in the Family and The Coming of the Lord*, by Sarah Gertrude Millin; *The Father*, a \$25,000 prize novel, by Katherine Holland Brown; *The Road to Heaven*, by Thomas Beer; *The Happy Mountain*, by Maristan Chapman; *The Ring Fence*, by Eden Phillpotts; *A Brood of Ducklings*, by Frank Swinnerton; *When I Grow Rich*, by Ethel Sidgwick; *A Man Can Build a House*, by Nathalie Sedgwick Colby; *The Way It*

Was with Them, by Peador O'Donnell, were perhaps outstanding.

Novels more definitely psychological were: *Daisy and Daphne*, by Rose Macaulay; *Farewell to Youth*, by Storm Jameson; *The Island Within*, by Ludwig Lewisohn; *Meat*, by Wilbur Daniel Steele; *Cranmer Paul*, by Rolf Bennett; *Dead Lovers are Faithful Lovers*, by Frances Newman; *The Withered Root*, by Rhys Davies; and *Her Knight Comes Riding*, by John V. A. Weaver. From the hundreds of mystery and detective stories the following might be selected: *The Greene Murder Case*, by S. S. Van Dine; *Mystery of the Blue Train*, by Agatha Christie; *The Dawson Pedigree*, by Dorothy Sayers; *How the Old Woman Got Home*, by M. P. Shiel; and *Cursed Be the Treasure*, by H. B. Drake.

Other important novels, harder to fit into categories, were: Upton Sinclair's *Boston*, about Sacco and Vanzetti; *This Side Idolatry*, by C. E. Bechhofer-Roberts, about Dickens; Djuna Barnes' lusty *Ryder*; Michael Arlen's *Lily Christine*; Trader Horn's *Harold the Webbed*, or *the Young Vikings*, edited by Ethelreda Lewis; *Show Girl*, by J. P. McEvoy; *But Gentlemen Marry Brunettes*, by Anita Loos; Stark Young's *The Torch Flare*; Clemence Dane's *The Babyons*; Liam O'Flaherty's *The Assassin*; Norman Davey's *Judgment Day*; Margot Asquith's *Octavia*; E. M. Delafield's *The Way Things Are*.

Among volumes of short stories, James Stephens' *Etched in Moonlight* stood out for beauty, sadness, and humor. Other good volumes were: *A Quartette of Comedies*, by H. G. Wells; *The Silver Thorn*, by Hugh Walpole; *Goodbye, Wisconsin*, by Glenway Wescott; *Quiet Cities*, by Joseph Hergesheimer; *Action*, by C. E. Montague; *Silver Circus*, by A. E. Coppard; *Black Sparta*, ancient life, by Naomi Mitchison; *Costumes by Eros*, by Conrad Aiken; *The Woman Who Rode Away*, by D. H. Lawrence; *Wide Fields*, by Paul Green; *The Crime of Dr. Garine*, by Boris Sokoloff; *The House with the Echo*, by T. F. Powys.

Interesting translated fiction included: Arnold Zweig's *The Case of Sergeant Grischa*; Sigrid Undset's *The Ape*, by Arthur G. Chater; Marcel Proust's *Cities of the Plain*, by C. K. Scott-Moncrief; Felix Salten's *Bambi*; Knut Hamsun's *The Women at the Pump*; Andreas Haukland's *The Norns are Spinning*; Lady Murasaki's *Blue Trousers*, the fourth and last volume of *The Tale of Genji*, by Arthur Wales; Julian Green's *The Closed Garden*, by Henry Longan Stuart; Fritz von Unruh's *The Way of Sacrifice*; Stefan Zeromski's *Ashes*, by Helen Zand; Arthur Schnitzler's *Theresa*; Hermann Sudermann's *The Mad Professor*.

POETRY. 1928 was an exceptionally fine and rich year in poetry, perhaps the best since the War. Thomas Hardy's posthumous volume, *Winter Words*, was full of deep vitality. Stephen Vincent Benet's *John Brown's Body* was a panoramic portrayal of the Civil War. Elinor Wylie showed her delicate charm in *Trivial Breath*. Robert Frost's *West-Running Brook* was pure song. Edna St. Vincent Millay showed progress in *The Buck in the Snow*. W. B. Drayton Henderson aspired greatly in an astronomical epic, *The New Argonautica*. W. B. Yeats showed himself growing gracefully older in *The Tower*. John Masefield continued with Arthurian themes in *Midsummer Night*. Among other noteworthy volumes were: Carl Sandburg's *Good Morning, America*; Hum-

bert Wolfe's *Cursory Rhymes*; Dorothy Parker's *Sunset Gun*; Samuel Hoffenstein's *Poems in Praise of Practically Nothing*; Archibald MacLeish's *The Hamlet of A. Macleish*; Robinson Jeffers' *Caudor and Other Poems*; Joseph Moncure March's *The Set-Up and The Wild Party*; Leonard Bacon's *The Legend of Quincibald*; William Ellery Leonard's *A Son of Earth*; Sylvia Townsend Warner's *Time Importuned*; Alexander Laing's *Fool's Errand*; Edmund Blunden's *Retreat*; Louis Untermeyer's *Burning Bush*; Robert Hillyer's *The Seventh Hill*; Nathalia Crane's *Venus Invisible*; Don Marquis's *Love Sonnets of a Cave Man*; Edgar Lee Masters' *Jack Kelso*; Clinch Calkins' *Poems*; Lee Wilson Dodd's *The Great Enlightenment*; Theodore Maynard's *Exile*; James Whaler's *Hale's Pond*; Abbie Huston Evans' *Outcrop*; Sherard Vines' *Triforium*; Charles Malam's *Spring Flooding*.

DRAMA. The event of the year, perhaps, because it was twenty-four years late, was the publication of Sir James M. Barrie's *Peter Pan*. The charm of this famous play was at last caught in book covers. Very different and very modern was Eugene O'Neill's nine-act *Strange Interlude*, but perhaps these two plays alone made 1928 noteworthy. But there were many more: *His Majesty*, by Harley Granville Barker; *The Ivory Door*, by A. A. Milne; *Porgy*, by Dorothy and DuBose Heyward; *The Front Page*, by Ben Hecht and Charles MacArthur; *Coquette*, by George Abbott and Ann Preston Bridgers; *Behold the Bridegroom*, by George Kelly; *The Silver Tassie*, by Sean O'Casey; *The Sacred Flame*, by W. Somerset Maugham; *The Royal Family*, by George S. Kaufman and Edna Ferber; *Mr. Moneybags*, by Channing Pollock; *The Queen's Husband*, by Robert E. Sherwood; *Three Last Plays*, by Lady Gregory; *Plays*, by Lennox Robinson; *The Return of the Soldier*, by John Van Druten; *Three Plays*, by H. R. Lenormand; *The Phantom Lover*, by George Kaiser; *Mr. Prohack*, by Arnold Bennett and Edward Knoblock; *Maya*, by Simon Gantillon, translated by Ernest Boyd; *The Plays of Noel Coward*; *Olympia*, by Ferenc Molnar, translated by Sidney Howard; *Kentucky Mountain Fantasies*, by Percy Mackaye; *Four Plays*, by Serafin and Joaquin Alvarez-Quintero, translated by Helen and Harley Granville Barker; *The Patriot*, by Alfred Neumann, translated by Ashley Dukes; *All at Sea*, by Osbert and Sacheverell Sitwell; *The One-Act Plays of Luigi Pirandello*; and a collection, *Fifty More Contemporary One-Act Plays*, by Frank Shay.

ESSAYS. The appearance of a new volume from Max Beerbohm is always important, as was *A Variety of Things*, in 1928. A number of collections were primarily sociological in intention, such as: *Whither Mankind?* edited by Charles A. Beard; *The Great American Band Wagon*, by Charles Merz; *The Man Who Knew Coolidge*, by Sinclair Lewis; *Strange Bedfellows*, by Silas Bent; *The Inquiring Mind*, by Zechariah Chafee, Jr.; *On Doing the Right Thing*, by Albert Jay Nock; *Paris Salons, Cafés, Studios*, by Sisley Huddleston; *The Post-War Mind of Germany*, by C. H. Herford; *The Star Spangled Manner*, by Beverley Nichols; *Portage, Wisconsin*, by Zona Gale. Humorous essays included: *20,000 Leagues Under the Sea*, or *David Copperfield*, by Robert Benchley; *Short Circuits*, by Stephen Leacock; *The Unintentional Charm of Men*, by Frances Lester Warner; *Mrs. Fisher, or the Future of Humor*, by

Robert Graves; *A Conversation with an Angel*, by Hilaire Belloc; *Meaning No Offense*, by John Riddell.

Primarily literary were: *The Hogarth Essays*; *Some Modern Poets and Other Essays*, by Edward Davison; *Spirit of Delight*, by George McLean Harper; *The Delight of Great Books*, by John Erskine; *A London Bookman*, by Frank Swinnerston. Among biographical essays were: Philip Guedalla's *Bonnet and Shawl and Portraits of the New Century*, by E. T. Raymond. Noteworthy philosophical essays were: Bertrand Russell's *Skeptical Essays*; Montague Summers' *Essays in Petto*. Other essay books were: Rudyard Kipling's *A Book of Words*; Samuel McChord Crothers' *The Thought-Broker*; David McCord's *Strababout*; Walter S. Hinchman's *Pedestrian Papers*; H. W. Nevins's *Last Changes, Last Chances*.

CRITICISM AND THE HISTORY OF LITERATURE. The general works in this field were of great quantity and high quality, as is shown by: *American Criticism*, by Norman Foerster; *For Lancelet Andrevos: Essays on Style and Order*, by T. S. Eliot; *Pomona, or the Future of English*, by Basil de Selincourt; *The Strange Necessity*, by Rebecca West; *Modern English in the Making*, by George H. McKnight; *The Demon of the Absolute*, by Paul Elmer More; *Tools and the Man*, by Helen D. Lockwood; *Beauty and the Beast*, by Joseph Gordon MacLeod; *Medieval Rhetoric and Poetic*, by Charles Sears Baldwin; *Destinations*, by Gorham B. Munson; *Contemporary American Authors*, edited by J. C. Squire; *Spokesmen*, by T. K. Whipple; *English Prose Style*, by Herbert Read.

Concerned with fiction and novelists were: Van Meter Ames' *Aesthetics of the Novel*; Edwin Muir's *The Structure of the Novel*; Hoxie Neale Fairchild's *The Noble Savage, a Study in Romantic Naturalism*; J. D. Beresford's *Writing Aloud*; Samuel C. Chew's *Thomas Hardy*; G. K. Chesterton's *Robert Louis Stevenson*; John Caruthers' *Scheherazade, or the Future of the Novel*. About poetry: W. P. Ker's *Form and Style in Poetry*; H. J. C. Grierson's *Lyrical Poetry from Blake to Hardy*; George H. W. Rylands' *Words and Poetry*; Humbert Wolfe's *Dialogues and Monologues*; W. W. Lawrence's *Beowulf and Epic Tradition*. Dealing with drama and the theatre: Ashley Dukes' *The World to Play With*; Sheldon Cheney's *Stage Decoration*; Alexander Woollcott's *Going to Pieces*; F. Melian Stawell and G. Lowes Dickinson's *Goethe and Faust*. Shakespeare is considered in: Allardyce Nicoll's *Studies in Shakespeare*; Hubert Griffiths' *Iconoclastes, or the Future of Shakespeare*; David Nichol Smith's *Shakespeare in the Eighteenth Century*. Also, Harold Nicolson published *The Development of English Biography*.

During 1928, the great *Oxford English Dictionary* was completed, after more than forty years of effort.

BIOGRAPHY AND AUTOBIOGRAPHY. The vogue for picturesque Americans in biography continued during 1928, as is shown by: Richard J. Walsh and Milton S. Salisbury's *The Making of Bufalo Bill*; Ross Santee's *Cowboy*; Stanley Vestal's *Kit Carson*; Herbert R. Mayes' *Alger*; Harold Kellock's *Houdini* and Parson Weems of the *Cherry Tree*; Allan Nevins' *Fremont*; Emalie Sachs' *The Terrible Siren*, (Victoria Woodhull); Don Seitz' *The James Gordon Bennetts*; and among autobiographies: Isadora Duncan's *My Life*; Chief Buffalo Child Long Lance's *Long*

Lance; and Hilda Rose's *The Stump Farm*. Among biographies of American political figures Albert J. Beveridge's *Abraham Lincoln* was a remarkable achievement. Others were: volumes iii and iv of *The Intimate Papers of Colonel House*, edited by Charles Seymour; William Allen White's *Masks in a Pageant*; Burton J. Hendrick's *The Training of an American: the Earlier Life and Letters of Walter Hines Page, 1855-1913*; *This Man Adams*, by Samuel McCoy; Robert W. Winston's *Andrew Johnson, Plebeian and Patriot*; Honoré Willis Morrow's *Mary Todd Lincoln*; and James Benjamin Wilbur's *Ira Allen, Founder of Vermont*.

Biographies of American literary figures almost disappeared, but there were: *The Letters of William Roscoe Thayer*, edited by Charles Downer Hazen; *Upton Sinclair*, by Floyd Dell; and *May Alcott*, by Caroline Ticknor. Also, among autobiographies: Booth Tarkington's *The World Does Move*; Hamlin Garland's *Back Trailers from the Middle Border*; and Gamaliel Bradford's *Life and I*.

But the biographical event of the year was English, the publication of Lytton Strachey's *Elizabeth and Essex*. The volume builds higher the already tremendous edifice of its author's reputation. About other English political personages: the Earl of Oxford and Asquith's *Memories and Reflections 1852-1927*; Lord Beaverbrook's *Politicians and the War, 1914-1916*; "Ephesian's" Winston Churchill; volume iii of the second series of the *Letters of Queen Victoria*, edited by George Earle Buckle; Nellie M. Waterson's *Mary II, Queen of England*; James Sykes' *Mary Anne Disraeli*; volume iii of the Earl of Ronaldshay's *Life of Lord Curzon*; W. H. Edwards' *The Tragedy of Edward VII*; John Drinkwater's *Charles James Fox*; B. M. Ward's *The Seventeenth Earl of Oxford*, the latest candidate for Shakespeare's honors; Oliver Brett's *Wellington*; T. M. Healy's *Letters and Leaders of My Day*; Llewelyn Powys' *Henry Hudson*.

English literary persons were dealt with in: the delightful *Early Life of Thomas Hardy*, by Florence Emily Hardy; *Anthony Trollope*, by Hugh Walpole; *Dr. Arnold of Rugby*, by Arnold Whitridge; *The Skull of Swift*, by Shane Leslie; *The Brownings*, by Osbert Burdett; *The Life and Private History of Emily Jane Brontë*, by Romer Wilson; *The Last Twelve Years of Joseph Conrad*, by Richard Curle; *William Cowper*, by Hugh I'Anson Fausset; *Recollections of Rossetti*, by Sir Hall Caine; *Rossetti: His Life and Works*, by Evelyn Waugh; *Havelock Ellis: Philosopher of Love*, by Houston Peterson; *Charles Dickens*, by Ralph Straus; *Sir Thomas Malory*, by Edward Hicks; *Carlyle: His Rise and Fall*, by Norwood Young; *Matthew Arnold*, by Hugh Kingsmill; *The Story of Gilbert and Sullivan*, by Isaac Goldberg; and *Naked Truth*, by Clare Sheridan.

About French people: Matthew Josephson's *Zola and His Time*; Henry Dwight Sedgwick's *Lafayette*; Joseph Delteil's *Lafayette*; translated by Jacques Le Clerc; D. B. Wyndham Lewis' *François Villon*; Dmitri Merezhkovski's *Napoleon the Man*, translated by Catherine Zvegintzov; *The Memoirs of Raymond Poincaré, 1913-1914*, translated by Sir George Arthur; T. Lucas-Dubreton's *The Fourth Musketeer, the Life of Alexandre Dumas*, translated by Maida Castel-hun Darnton; Maurice Paleologue's *The Tragical Empress, Eugénie*, translated by Hamish Miles;

R. G. Anderson's *Those Quarrelsome Bonapartes*. Other Continentals and more remote: Emil Ludwig's *Goethe*, translated by Ethel Colburn Mayne; *The Memoirs of Prince Max of Baden*, translated by W. M. Calder and C. W. H. Sutton; *The Letters of the Empress Frederick* edited by Sir Frederick Ponsonby; *The Rise and Reign of the House of Rothschild*, and *Maximilian and Charlotte of Mexico*, by Count Egon Corti; *The Modern Plutarch*, by John Cournos; *Bach*, by Charles Sanford Terry; *Schubert*, by Newman Flower; *Lenin: Thirty Years of Russia*, by Valeriu Marcu, translated by E. W. Dicks; *Rasputin*, by René Filop-Müller; *The Intimate Life of the Last Tsarina*, by Princess Catherine Radziwill; *The Discoverer* (Columbus) by André de Hevesy; *Heading for the Abyss*, by Prince Lichnowsky; *Sir Peter-Paul Rubens*, by Anthony Bertram; *Catullus and Horace*, by Tenney Frank; *My Autobiography*, by Benito Mussolini; *Leonardo the Florentine*, by Rachel Annand Taylor; *Niccolo Machiavelli, the Florentine*, by Giuseppe Prezzolini; *Asoka*, by Radhakamud Mookerji; *My War Memoirs*, by Dr. Eduard Benes, translated by Paul Selver; *The Turkish Ordeal*, by Halide Edib; *Tolstoy*, by Hugh I'Anson Fausset; and *Alexander*, by Konrad Bercovici.

Mention should also be made of a supplementary volume to the *Dictionary of National Biography*, covering personages dying 1912-1921; and the first volume of the *Dictionary of American Biography* (Abbe-Barrymore) under the editorship of Allen Johnson.

THE FINE ARTS. General works in this field included: Kenneth Clark's *The Gothic Revival*; G. G. Coulton's *Art and the Reformation*; Walter Pach's *Ananias, or the False Artist*; Paul T. Frankl's *New Dimensions*; Joseph Pijoan's *History of Art*, translated by Ralph L. Roys. About architecture were: G. H. Edgell's *The American Architecture of Today*; Fiske Kimball's *American Architecture*; *Examples of Modern French Architecture*, edited by Howard Robertson and F. R. Yerbury; *A Book of Towers and Other Buildings of Southern Europe*, by Richard Wyndham and Sacheverell Sitwell. Mr. Sitwell also published *German Baroque Art*. Other art books were: Franz Boas' *Primitive Art*; Wilhelm Worringer's *Egyptian Art*; Sir Thomas W. Arnold's *Painting in Islam*; Wilhelm Hausenstein's *Fra Angelico*, translated by Agnes Blake; Percy H. Osmond's *Paolo Veronese*; S. C. Kaines Smith's *An Outline History of Painting in Europe to the End of the 19th Century*; C. Reginald Grundy's *English Art in the 18th Century*; Douglas Percy Bliss' *A History of Wood Engraving*; *The Brothers of Giovanni della Robbia*, by Allan Marquand; *The People's Album of London Statues*, by Osbert Sitwell and Nina Hamnett; and *Meryon*, by Loys Delteil, translated by G. J. Renier.

RELIGION. Perhaps the American presidential election brought forth *Catholicism and the Modern Mind*, by Michael Williams, *Catholicism and the American Mind*, by Winfred Ernest Garrison, and *Catholicism and Christianity*, by Cecil John Cadoux. Certainly events in England resulted in the publication of Sir William Joynson-Hicks' *The Prayer Book Crisis*; and *The Conversations at Malines, 1921-1925*. Other religious books, less topical, were: *Christ and Society*, by Charles Gore; *The Religion of Jesus*, by Walter E. Bundy; *Confusion of Tongues*, by Charles W. Ferguson; *Christianity in Science*, by Frederick D.

Leete; *The Agony of Christianity*, by Miguel de Unamuno; *Studies in Early Christianity*, edited by Shirley Jackson Case; *Current Christian Thinking*, by Gerald Birney Smith; *The Story of the Ten Commandments*, by C. H. Moehlman; *The Son of Man*, by Emil Ludwig; *Our Fathers' Faith and Ours*, by David S. Schaff; *Science and the Religious Life*, by Carl Rahn; *Eutychus, or the Future of the Pulpit*, by Winifred Holtby; *Does Civilization Need Religion?* by Reinhold Niebuhr; *The Graphic Bible*, by Lewis Browne; *Confessions of a Puzzled Parson*, by Charles Fiske; *A New God for America*, by Herbert Parrish; *The Paganism in Our Christianity*, by Arthur Weigall; *The Gospel for Asia*, by Kenneth Saunders; *Methodism*, by W. Bardsley Brash; *Religions Past and Present*, by Bertram C. A. Windle; *From Abraham to Christ*, by Vernon F. Storr.

SOCIOLOGY. General sociological works included: Roland B. Dixon's *The Building of Cultures*; Pitirim Sorokin's *Contemporary Sociological Theories*; Clive Bell's *Civilization*; Harry Elmer Barnes' *Living in the Twentieth Century*; Edward Alsworth Ross' *World Drift*; J. S. MacKenzie's *Fundamental Problems of Life*; Edward R. Lewis' *America: Nation of Confusion*; Walter B. Pitkin's *Twilight of the American Mind*; *Recent Gains in American Civilization*, edited by Kirby Page; *Freedom in the Modern World*, edited by Horace M. Kallen. Dealing with sex and the family: Mary Burt Messer's *The Family in the Making*; Norman Haire's *Hymen, or the Future of Marriage*; Samuel D. Schmalhausen's *Why We Misbehave*; Willystine Goodsell's *Problems of the Family*; Charles W. Margold's *Sex Freedom and Social Control*; Margaret Mead's *Coming of Age in Samoa*. About crime: Max A. Schlapp and Edward H. Smith's *The New Criminology*; George Godwin's *Cain, or the Future of Crime*; Herbert Asbury's *The Gangs of New York*. Others: Henry Pratt Fairchild's *The Foundations of Social Life*; Salvador de Madariaga's *Englishmen, Frenchmen, Spaniards*; Julien Benda's *The Treason of the Intellectuals*, translated by Richard Aldington; Morris L. Ernst and William Seagle's *To the Pure*; E. Haldeman-Julius' *The First Hundred Million*; Gilbert Seldes' *The Stammering Century*; C. E. M. Joad's *Diogenes, or the Future of Leisure*; Albert Londres' *The Road to Buenos Aires*; Louis I. Dublin's *Health and Wealth*; Ruth S. Cavan's *Suicide*; Howard W. Odum's *Rainbow Round My Shoulder*; *The American Negro*, by Melville J. Herskovits; *High-Pressure Politics: the Story of the Anti-Saloon League*, by Peter Odegard; *Lady Godiva: the Future of Nakedness*, by John Langdon Davies; *Stentor: the Future of the Press*, by David Ockhan; *The Next Chapter*, by André Maurois.

EDUCATION. The most curious work in this field is probably the *Diary of a Communist Schoolboy*, by N. Ogniov, translated by Alexander Werth. General works included: Alfred Zimmermann's *Learning and Leadership*; Joseph A. Leighton's *Individuality and Education*; dealing with universities and colleges: Max McConn's *College or Kindergarten*; R. H. Edwards, J. M. Artman, and Galen M. Fisher's *Undergraduates*; Robert Cooley Angell's *The Campus*; Charles Franklin Thwing's *The American and the German University*; *The Effective College*, edited by Robert Lincoln Kelly; Robert C. Brooks' *Reading for Honors at Swarthmore*; Sidney Cox's

The Teaching of English. Concerned with younger students; Gwendoline Watts' *The Children's Kingdom*; Mary H. Lewis' *An Adventure with Children*; J. Howard Whitehouse's *Creative Education at an English School*; David Seabury's *Growing into Life*; Blanche C. Weil's *The Behavior of Young Children of the Same Family*; Mary Buell Sayles' *The Problem Child at Home*.

POLITICS AND INTERNATIONAL. Most striking was the number of works on India during 1928, apparently called forth by Katherine Mayo's *Mother India* of 1927; such as: *Unhappy India*, by Lajpat Rai; *Father India*, by C. S. Ranga Iyer; and *A Son of Mother India Answers*, by Dhau Gopal Mukerji. The following dealt with other nations: Raymond Leslie Buell's *Europe*, and *The Native Problem in Africa*; Marguerite Harrison's *Asia Reborn*; L. Richmond Wheeler's *The Modern Malay*; Grace Ellison's *Turkey Today*; Max Eastman's translation of Leon Trotsky's *The Real Situation in Russia*; Dorothy Thompson's *The New Russia*; Ernest Gruening's *Mexico and Its Heritage*; George H. Danton's *Germany Ten Years After*; John Spencer Bassett's *The League of Nations*.

General works on politics included: *The Pragmatic Revolt in Politics*, by W. Y. Elliott; *The Way of Peace*, by Viscount Cecil; *Imperialism and Civilization*, by Leonard Woolf; *Constructive Citizenship*, by L. P. Jacks; *Back of War*, by Henry Kittredge Norton; *Archon, or the Future of Government*, by Hamilton Fyfe; *Paradoxes of Legal Science*, by Benjamin N. Cardozo; *The Freedom of the Seas*, by J. M. Kenworthy and George Young. Referring especially to America were: Charles Evans Hughes' *Our Relations to the Nations of the Western Hemisphere*, and *The Supreme Court of the United States*; Clarence H. Haring's *South America Looks at the United States*; Leonard D. White's *The City Manager*.

ECONOMICS. The most picturesque contribution to this field came from George Bernard Shaw, who gave to humanity "his last will and testament" in *The Intelligent Woman's Guide to Socialism and Capitalism*. Economic histories included: C. R. Fay's *Great Britain from Adam Smith to the Present Day*; Sir William Ashley's *The Bread of Our Forefathers*; Richard Ehrenberg's *Capital and Finance in the Age of the Renaissance*, translated by H. M. Lucas; Charles Wright and C. Ernest Fayle's *A History of Lloyd's*. Other important economic works were: *The Road to Plenty*, by William T. Foster and Waddill Catchings; *Business the Civilizer*, by Earnest Elmo Calkins; *The New Industrial Revolution*, by Walter Meakin; *Contemporary Economic Thought*, by Paul T. Homan; *Wages in Practice and Theory*, by J. W. F. Rowe; *The Principles of Wages*, by Willem L. Valk; *A Theory of the Labor Movement*, by Selig Perlman; *Representative Industries in the United States*, edited by H. T. Warshaw; *History of Manufactures in the United States*, by Victor S. Clark; *Capital Stock without Par Value*, by John R. Wildman; *Government Ownership and Operation of Railroads*, by Walter M. W. Splawn.

HISTORY. The year was notable for the work done on the origins and results of the World War, such as Sidney B. Fay's *The Origins of the World War*; Pierre Renouvin's *The Immediate Origins of the War*, translated by Theodore Carswell Hume; volume iv of the British

Official History of the Great War, by General Sir James E. Edmunds; volume iv of the *British History of the Great War Based on Official Documents*, by Sir Henry Newbolt; volume iii of *British Documents on the Origins of the War*, edited by G. P. Gooch and Harold Temperley; Karl Frederick Nowak's *Versailles*, translated by Norman Thomas and E. W. Dickes; David Hunter Miller's *The Drafting of the Covenant*; Florence Wilson's *The Origins of the League Covenant*; *A Short History of the World, 1918-1928*, by C. Delisle Burns; *The Fall of the Russian Empire*, by Edmund A. Walsh.

Dealing with more remote history were: Geoffrey Parsons' *The Stream of History*; volume iii of Hilaire Belloc's *History of England* and his *How the Reformation Happened*; James Westfall Thompson's *The Economic and Social History of the Middle Ages* and his *Feudal Germany*; volume ii of Edward Raymond Turner's *The Privy Council of England*; Esme Wingfield-Stratford's *The History of British Civilization*; *Chivalry*, edited by E. Prestage; *Black Democracy*, by H. P. Davis, and *Black Majesty*, by John W. Vandercook, both about Haiti; *American and French Culture 1750-1848*, by Howard Mumford Jones; *Rum, Romance, and Rebellion*, by Charles William Taussig; Victor Chapot's *The Roman World*, translated by E. A. Parker; *Bunker Hill*, by Harold Murdock; *The Taking of Ticonderoga in 1775*, by Allen French; *Macedonian Imperialism and the Hellenization of the East*, by Pierre Jouguet, translated by M. R. Dobie; volume iii of the *Cambridge History of India*, edited by Sir Wolsley Haig; Alfred Bertholet's *The History of Hebrew Civilization*, translated by A. K. Dallas; *In Quest of the Western Ocean*, by Nellis M. Crouse; *The True Adventure of Columbus*, by Marius André; *The Transition from Aristocracy*, by O. F. Christie; *The Struggle for Catholic Emancipation, 1750-1829*, by Denis Gwynn; Albert Mathiez' *The French Revolution*, translated by Catherine Alison Phillips; Carl Wittke's *A History of Canada*; *The Trial of the Templars*, by Edward J. Martin; *The Last Years of a Frontier*, the English and Scottish border 1558-1603 by D. L. W. Tough; and dealing with the future in its own magnificent fashion. Oswald Spengler's *The Decline of the West*, volume ii, translated by Charles F. Atkinson.

SCIENCE. The biologists are always more anxious than other scientists to be understood by the general public, and during 1928, as usual, they produced a number of popular books. Among these were: *Hunger Fighters*, by Paul de Kruif, about discoverers in plant biology, especially grains; *Creation by Evolution*, edited by Frances Mason; *Modern Biology*, by J. T. Cunningham; *Noah's Cargo*, by George Jennison; *Galatea, or the Future of Darwinism*, by W. Russell Brain; *The Biology of Insects*, by George H. Carpenter; *Foibles of Insects and Men*, by William Morton Wheeler; *The Rate of Living*, by Raymond Pearl; *Our Prehistoric Ancestors*, by Herdman Fitzgerald Cleland; *In Search of Our Ancestors*, by Mary E. Boyle; and *Physiology*, by V. H. Mottram. But the astronomers also did very well; for examples: *The Sun, the Stars, and the Universe*, by W. M. Smart; *Eos: or the Wider Aspects of Cosmogony*, by J. H. Jeans; *A Guide to the Constellations*, by Samuel G. Barton and William H. Barton; *Possible Worlds*, by J. B. S.

Haldane; *This Puzzling Planet*, by Edwin Tenney Brewster.

The physicists produced, among others: *The Nature of the Physical World*, by A. S. Eddington; *The Rise of Modern Physics*, by Henry Crew; and *Æolus, or the Future of the Flying Machine*, by Oliver Stewart. Among general works in science were: H. M. Parschley's *Science and Good Behavior*, applying science to ethics; *Galileo, or the Tyranny of Science*, and *The Bases of Modern Science*, by J. W. N. Sullivan; *From Magic to Science*, by Charles Singer, who also wrote *A Short History of Medicine*. In addition, E. E. Free and Travis Hoke published *Weather*.

TRAVEL AND THE OUTDOORS. The year 1928 was noteworthy for the number of recitals of aeronautic experience, such as: *Twenty Hours, Forty Minutes*, by Amelia Earhart; *The Three Musketeers of the Air*, by Capt. Hermann Koehl, Maj. James Fitzmaurice, and Baron Guenther von Huenefeld; *Flying the Arctic*, by Capt. H. G. Wilkins; and *Skyward*, by Commander Richard E. Byrd. Other books for the armchair traveler, not guide books, include: *Persian Pictures*, by Gertrude Bell; *Beneath Tropic Seas*, by William Beebe; *Deserts Idle*, by Michael H. Mason; *Slaves of the Sun*, by Ferdinand Ossendowski; *Tigers, Gold, and Witch Doctors*, by Bassett Digby; *The People of the Twilight* (Eskimos) by Diamond Jeness; *The Land of the Frozen Tide*, (about the Arctic), by Louise Rourke; *A-rafting on the Mississippi*, by Charles Edward Russell; *The Voyage of the Norman D*, by Barbara Newhall Follett; *Santander*, by E. Allison Peers; *Incredible Siberia*, by Junius B. Woods; *Opals and Gold*, by R. M. Macdonald; *Condemned to Devil's Island*, by Blair Niles; *An Indian Journey*, by Waldemar Bonsles; *Europe*, by Count Hermann Keyserling; *Mid-Pacific*, by James Norman Hall; *The Central Americans*, by Arthur Ruhl; *Safari*, by Martin Johnson; *Present-Day Russia*, by Ivy Lee; *The America of Today*, by J. A. Spender; *Worlds Within Worlds*, by Stella Benson; *The Desert Road to Turkestan*, by Owen Lattimore.

Books of outdoor life and sport included: John Tunis' *Sports, Heroics, and Hysteries*; G. S. Sandilands' *Atalanta, or the Future of Sport*; Lacoste on *Tennis*; *The Perfect Ship*, by Weston Martyr; *Trails of the Hunted*, by James L. Clark; Claude E. Benson's *Mountaineering Ventures*; F. R. Burnham's *Scouting on Two Continents*; the anonymous *Memoirs of a Fox-Hunting Man*, supposed to be by Siegfried Sassoon; and *The Evolution of Trout and Trout-Fishing in America*, by Charles Z. Southard.

See also PHILOLOGY, MODERN.

LITHUANIA. One of the new states formed out of the territory of the Russian Empire after the War. Capital, Kovno, although the Lithuanians claim Vilna as the capital of their country.

AREA AND POPULATION. The eastern boundary of the country was defined in a treaty with Russia, July 12, 1920; on the north the boundaries nearly coincide with the former boundary between Courland and Kovno; on the south they are still undetermined. The area, based on 1914 figures, is 31,652 square miles; population, Jan. 1, 1927, 2,254,668. On Feb. 16, 1923, the Council of Ambassadors transferred the Memel district with a population of 170,000 to Lithuania. Just a month later they gave Vilna to Poland. Lithuania, however, continued to claim this district

and to consider Vilna the Lithuanian capital. Important cities are Kovno, 94,405; Grodno, 61,600; Memel, 36,041; Suvalki, 31,600; and Shavli, 21,878.

EDUCATION. In 1927 there were 2320 primary schools with 3281 teachers and 122,000 pupils, and 120 secondary schools with 22,194 pupils. The University of Kovno which was opened in 1922 had in 1927, 258 professors and teachers and over 4000 students.

PRODUCTION, ETC. Lithuania is an agricultural country and preponderantly rural in character. The resources consist chiefly of agricultural produce and timber. The acreage and production of the principal crops in 1927 were: Wheat, 297,000 acres, 5,273,000 bushels; rye, 1,240,000 acres, 21,188,000 bushels; barley, 487,000 acres, 8,630,000 bushels; oats, 766,000 acres, 16,741,000 bushels; potatoes, 343,000 acres, 46,443,000 bushels; linseed and flax combined, 208,000 acres, 1,405,000 bushels of linseed and hempseed, and 74,956 pounds of flax and hemp. In 1926 there were 1,396,000 cattle, 1,441,000 swine, 1,573,000 sheep, and 535,000 horses. The output of cut timber in 1927 was 52,184,500 (cubic feet); the output of matches, 64,900,000 boxes. There were approximately 7300 industrial enterprises, of which only 75 employed 50 or more workmen.

COMMERCE. Lithuania's foreign trade was active during 1927, but the results were not as satisfactory as in the previous year, though market conditions for certain leading items such as flax and lumber improved. Imports during 1927 increased to 265,694,000 lits from 240,760,000 lits in 1926, and exports declined from 253,300,000 lits in 1926 to 245,929,000 lits in 1927. There was an unfavorable balance for the year of 19,765,000 lits as against an export surplus of 12,539,000 lits in 1926. Imports from the United States were valued at 14,503,000 lits in 1927 and exports to the United States at 4,379,000 lits. Similar figures for 1926 were 1,622,000 lits and 2,083,000 lits, respectively.

FINANCE. The actual receipts for the 1927 budget were 269,360,000 lits as against estimated revenues of 242,245,000 lits; the actual expenditures were 230,903,000 lits as against estimated expenditures of 237,964,000 lits. In each case the actual results were more favorable than the estimated. The latest available complete statement of Lithuania's debt was that of Jan. 1, 1926, when it totaled 90,251,000 lits.

COMMUNICATIONS. All railways in Lithuania are owned and operated by the State, and at the close of 1926 comprised 1954 kilometers of line. See preceding YEAR BOOK.

GOVERNMENT. According to the constitution of May 26, 1928, executive power is in the President of the Republic, elected for seven years, who acts through a responsible ministry; and legislative power is in a diet elected for five years by universal, equal, direct, and secret suffrage. President in 1928, Antanas Smetona; Prime Minister, Prof. Augustinas Valdemaras.

HISTORY. Contrary to all expectations, the love feast between Lithuania and Poland at the December, 1927, meeting of the League of Nations did not solve the thorny problem of Vilna. No sooner had the delegates arrived home than the old hatreds flamed forth anew and Lithuania and Poland were at odds again. One thing, however, that the Geneva conferences did accomplish, probably, was the fact that the two quarreling countries were virtually told to settle their dis-

pute without recourse to war. Relations between the two countries remained strained throughout the entire year, and, had it not been for the warning of the western powers, they might have broken altogether. For an account of the rise of the Vilna question, consult preceding YEAR BOOKS.

A meeting of representatives of the two countries held in Germany in April, accomplished nothing in the way of a settlement but at least left a chance for future negotiations. One thing which held up the disputants was the demand on the part of Lithuania for an indemnity of \$10,000,000 for damages because of the occupation of Vilna by Poland. When Poland suggested counter claims, the meetings were called off, and the Lithuanian press and politicians gayly spoke of going to war to retrieve the lost city, which was declared to be the capital of the country in the new constitution proclaimed on May 26. The Lithuanian premier declared publicly that he had been promised the support of Soviet Russia in case of war with Poland. Whether this was true or just to frighten Poland no one can tell because the premier's statement was vigorously denied at Moscow.

The year came to a close with the Vilna problem much further away from settlement than it had ever been before, Lithuania refusing to carry on the normal economic relations with Poland.

LIVER DIET IN ANÆMIA. See FOOD AND NUTRITION.

LIVESTOCK. The year 1928 was unusually favorable for practically all branches of the livestock industry in the United States, particularly for cattle and sheep. The numbers of cattle on farms showed a steady decrease from the high point in 1918 to a low point in 1928, when the estimate was given as 55,696,000, a decrease of approximately 22 per cent in this period. The number of sheep was on the increase, but prices were well maintained. Hogs showed a distinct improvement after reaching a low point in the cycle of prices early in the year, and indications are for a more favorable season next year. Range conditions were not unfavorable, and all sections were free from serious droughts. Feed supplies were better than average. These conditions all indicated a better stabilized industry than had existed at any time since the War.

The decrease in the supply of beef was reflected in the per capita consumption of beef, which, estimated from the total slaughter under Federal supervision, was maintained quite uniformly from month to month at about 0.4 pounds less than the consumption in the corresponding month of 1927. On the other hand, there was a similar increase in the per capita consumption of pork, the price of which was relatively low. The total meat production, as shown in the following table for the numbers of animals slaughtered and the weights of the dressed meats killed under Federal Inspection during 1927 and 1928, together with the three-year average for 1925, 1926, and 1927, indicates that the total available supply of meat was quite comparable in the two years, the decrease of approximately 400,000,000 pounds of beef being offset by a like increase in pork.

The pig survey of the United States Department of Agriculture, as of June 1, 1929, indicated a decrease of about 4,000,000 in the pigs farrowed in the spring as compared with the previous year, and the numbers of sows to be bred for fall far-

MEAT SLAUGHTERED AND STORED UNDER FEDERAL INSPECTION IN THE UNITED STATES IN 1928, WITH COMPARISONS

	<i>Cattle</i>	<i>Calves</i>	<i>Hogs</i>	<i>Sheep and Lambs</i>
Number slaughtered:				
1928	8,467,308	4,679,922	49,795,408	13,488,171
1927	9,520,104	4,875,907	43,633,460	12,883,039
3-year average	9,851,096	5,127,019	42,437,512	12,614,970
Total dressed weight of slaughtered animals:				
1928—lbs.	4,265,056,261	461,951,557	8,579,288,117	522,549,279
1927—lbs.	4,784,563,209	492,562,528	7,730,761,143	501,745,612
3-year average—lbs.	4,983,140,146	521,311,554	7,442,001,766	489,983,293
In storage on December 31:				
1928—lbs.	53,796,000 ^b		833,641,000 ^c	3,148,000
1927—lbs.	59,065,000 ^d		772,783,000 ^e	2,625,000
3-year average—lbs.	67,859,000 ^f		724,353,000 ^g	2,326,000

^a Average for 1925, 1926, and 1927.

^b 36,357,000 lbs. fresh, and 17,439,000 lbs. cured beef.

^c 203,558,000 lbs. fresh, 539,896,000 lbs. cured pork, and 140,687,000 lbs. lard.

^d 37,767,000 lbs. fresh, and 21,298,000 lbs. cured beef.

^e 160,799,000 lbs. fresh, 509,063,000 lbs. cured pork, and 102,926,000 lbs. lard.

^f 44,048,000 lbs. fresh, and 23,811,000 lbs. cured beef.

^g 132,437,000 lbs. fresh, 489,975,000 lbs. cured pork, and 101,941,000 lbs. lard.

rowing also indicated some reduction. There seems no doubt that the increased pork production would have suffered more heavily from lowered prices had the beef situation not been so acute. There were heavy slaughtering of pork in practically all the European countries and there was indication of increased future production of bacon in Russia. Indications in Europe were for a lowered production of pork for 1929 because of the reduced number of hogs at the close of the year, resulting from the heavy slaughtering. Potential hog production was reduced about 10 per cent in Denmark, 5 per cent in England, 2 per cent in Germany, and 20 per cent in The Netherlands, as compared with the preceding year, and European demand, particularly for lard, therefore would probably increase during the coming year. With the existing prices of feed, a more favorable outlook for pork production in the United States was indicated.

The numbers of sheep have been on the increase since the low point in 1922, but the demand for breeding stock and meat animals had also increased though at a slower rate. With the depression in cattle, many cattlemen switched to sheep and it was possible that switching back might result in a lack of demand for animals for restocking purposes. Drought conditions in Australia, however, affected the principal wool-growing areas and considerable difficulty was experienced with lambing. Favorable prospects were predicted for the South American countries, and climatic conditions were favorable in South Africa.

Because of the scarcity and relatively high beef prices, the imports of the United States of beef and veal were heavier than at any time since 1916. Over 52,000,000 pounds were imported in the first ten months of 1928, as compared with 32,000,000 pounds in the corresponding period of 1927. Approximately 38,000,000 pounds of this beef came from Canada, and 8,000,000 pounds from New Zealand, with 2,000,000 pounds coming from Australia.

Reports indicated that the number of beef cattle in Argentina declined and slaughter was less during the first part of 1928 than for the corresponding period of 1927; likewise the numbers of cattle in Australia were also reduced, the exports being about equal to those of the preceding year, which were little more than half the beef exports for 1926. On the other hand, the production of beef cattle is recovering in European countries and the demand for imported beef is not so great.

Conditions in the poultry industry were more favorable than in 1927; the prices for both poultry and eggs averaged higher in 1928. The higher prices were reflected in increased imports of frozen and dried eggs, which, during the first ten months of 1927, amounted to approximately 3,600,000 pounds, and during the corresponding period of 1928, amounted to 12,800,000 pounds. It was reported that a total of 5000 short tons of frozen and dried eggs were shipped from China to the United States, while but 1250 short tons were imported from this source in 1927.

RESEARCH. For a number of years there had been considerable interest, not only in the United States but also in several other countries, particularly Australia and Canada, in the study of factors affecting the grade and quality of meat. During the past year 20 of the Agricultural Experiment Stations were cooperating with several bureaus of the United States Department of Agriculture in studying the effects of breed, age, sex, grade, grass versus grain feeding, various types of feed, and other factors, on the quality and palatability of meat. Approximately 850 experimental cattle, and 700 lambs were fed in these tests, the animals in most cases being graded prior to the experiment with subsequent grading on the hoof, and records of the slaughter data, carcass grades, toughness of particular cuts, and final tests of the palatability of the cooked meat by experienced committees. Over 1200 hogs were employed in the studies of the soft-pork problem.

Australia was particularly interested in the quality of frozen meats, and considerable money was expended by the Research Council in efforts to place a better product upon the English market. Canada and several States along the Canadian border were particularly interested in studies of the relation of type and breed of swine, as well as different methods of feeding, to the production of Wiltshire and Cumberland sides, and the desirability of these products when shipped to the English market, especially with reference to their ability to compete with cured pork from Denmark.

In line with the interest in the quality of meat, the United States Department of Agriculture considerably extended its grading and stamping service for meat products, including practically all the better cuts in commercial plants requesting that such service be granted.

Fundamental research in nutrition showed an increasing tendency toward refinement in technique and measurements. The respiration calo-

rimeter at the Institute of Animal Nutrition of the Pennsylvania State Experiment Station has long been recognized as outstanding equipment. Several of the other State experiment stations installed respiration chambers for the larger animals, without calorimeter control, particularly at New Hampshire, Illinois, and Missouri. An indication of the delicacy of the respiration calorimeter at Pennsylvania is shown by the fact that any change in position of a fasting animal results in a disturbance in the carbon dioxide given off for a period of over one hour after the movement occurs. Further than this, an animal while standing has been found to require definitely more energy than the same animal would require when lying down. Recent work with the respiration chamber at the New Hampshire Station indicated that steers might be carried for three or four months on extremely low rations without affecting their health or ability to reach market condition on subsequent liberal feed, demonstrating an ability to slow down or accelerate vital activities in accordance with the available food supply.

During the year 1928 several new journals for the publication of results of experimental work in animal husbandry appeared, or attention was called to their proposed appearance, as follows: *Journal of Nutrition*, *International Review of Poultry Science*, *Journal of Animal Breeding*, and *Journal of the Central Bureau for Animal Husbandry and Dairying in India*.

CHANGES IN PERSONNEL. The more important changes in personnel during the year included the retirement on July 1, of H. H. Wing, professor of animal husbandry, at Cornell University for 40 years. Professor Wing was succeeded by F. B. Morrison, director of the New York State Agricultural Experiment Stations. Prof. F. G. King was appointed head of the animal husbandry department at Purdue University, to succeed Prof. J. H. Skinner, who was made director of the Indiana Agricultural Experiment Station. Paul Gerlaugh, extension specialist in animal husbandry, at Ohio State University, was appointed head of the animal husbandry department, of the Ohio Agricultural Experiment Station at Wooster. Will C. Barnes, of the U. S. Department of Agriculture, and a popular writer on range and livestock problems, retired from the Department service July 1. M. G. Snell, of Iowa State University, was appointed assistant professor of animal husbandry at Louisiana University, to succeed Prof. E. L. Jordan, who resigned. Dr. L. C. Dunn, geneticist in poultry husbandry, at the Connecticut Storrs Agricultural Experiment Station, accepted a position as professor of zoology at Columbia University, on September 1. He was succeeded by Dr. Walter Landauer, of the same station. Prof. T. B. Charles, of the poultry husbandry department at the Pennsylvania State College and Experiment Station, was appointed professor of poultry husbandry at the New Hampshire State College. He was succeeded by Prof. E. M. Funk, from the University of Missouri.

Gordan H. True, professor of animal husbandry at the University of California since 1913, died on June 5. He was widely known for his work in animal husbandry and was selected by the American Society of Animal Production for distinguished honor, at its annual dinner in 1927. Prof. C. R. Nobles, of the Virginia Agricultural Experiment Station, died August 13.

BIBLIOGRAPHY. Among the more important

recent livestock publications are A. W. Sampson, *Livestock Husbandry on Range and Pasture* (New York, 1928); I. C. Kronacher, *Allgemeine Tierzucht* (Berlin, 1928, 3d. ed., rev.); R. A. Clemen, *By-products in the Packing Industry* (Chicago, 1927); J. E. Platt, *The Thoroughbred Race Horse: Its Breeding and Early Management* (London, 1927); C. E. Cowley, *Classing the Clip; A handbook on wool classing* (Sydney, 1928); W. Zorn, *Schweinezucht* (Stuttgart, 1927); L. M. Hurd, *Practical Poultry Farming* (New York, 1928); J. H. Crum, *The Crumazone Method of Intensive Poultry Culture for the Commercial Farm* (New York, 1928); H. F. Carter, *A Manual of Management for Duck Keepers* (Fair Oak, Hants, Eng. 1928); F. G. Ashbrook, *Fur Farming for Profit* (New York, 1928).

LIVING, COST OF. See STATISTICS.

LI YUAN-HUNG, 18 yüo-än-hung. Chinese statesman, died at Tientsin, China, June 3. He was born in the Province of Hupeh in 1864. He was trained originally as a naval officer, and took part in the war with Japan, 1894-95. Later he was transferred to the army and, having studied military science in Japan, took part in the modernization of the Chinese forces. When the great revolution took place in the autumn of 1911, Li Yuan-hung was opposed at first to the change, but soon became convinced of its desirability, and joined the Sun Yat-sen movement. He was successful as a military leader against the Manchus, and also displayed skill as a diplomat. When the Manchus were deposed, Feb. 7, 1912, he had been elected to the vice presidency of the new Chinese Republic and he remained in that office until the death of Yuan Shih-kai, who had been elected President in 1913, elevated him to the Presidency. Under Li Yuan-hung the Parliament was restored, having been suppressed by Yuan Shih-kai, and resumed its work of framing a constitution for China. In March, 1917, China broke off relations with Germany. A dispute between Li Yuan-hung and his Prime Minister, Tuan Chih-jui, over the questions of the constitution and the method of declaring war on Germany brought about the Manchu *coup* of General Chang-hsun, which restored the old régime for twelve days, Li Yuan-hung losing the Presidency. Thereafter, until June, 1922, he remained in retirement; in that month, when the war of the generals was devastating China, President Hsu Shih-chang retired and was succeeded by Li Yuan-hung, with the support of the members of the old Republican party, backed by General Wu. He was opposed by Sun Yat-sen, head of the Cantonese Government, and only retained the Presidency until June 13, 1923, when, under pressure by the militarists, he was compelled to flee from Peking to Tientsin. Thereafter he lived in retirement in the British concession at Tientsin.

LOEWENSTEIN, ALFRED. Belgian financier, died while crossing the English Channel in an airplane, July 4, by a fall from the plane. His body was found floating in the Channel several days later. There was considerable controversy over the cause of the fall as it was attributed to both accident and design, and suicide was mentioned. Captain Loewenstein was a specta-

lar figure in the world of finance, and was sometimes called a rival of Sir Basil Zaharoff for the title of "The Mystery Man of Europe." He was born in 1879 and began his financial operations in a small way at Brussels, on the stock exchange of that city. He was active before the World War, in the promotion of companies and the sale of securities, but did not acquire an international reputation until after the close of the fighting. He obtained his military title by service in the Belgian Army, and his contributions to the Allied cause won for him a Companionship of the Order of the Bath in Great Britain. Captain Loewenstein's interests were numerous, varied, and large, but his principal activities were in the fields of hydro-electric development and artificial silk, in which he was a prominent and world-wide figure. A short time before his death he was credited with a grandiose scheme to gain control of the Bank of Brussels, but his plans were frustrated. His fortune was very great. He offered to lend \$10,000,000 to Belgium to assist in the financial stabilization of that country and also made a similar offer to the French Government. These offers brought forth many inquiries as to the nature of the man who had made them. His ostentatious manner of life, including the maintenance of airplanes at various points in Europe to enable him to travel most quickly from one country to another, was frequently the subject of newspaper comment. This was especially marked when he visited the United States in the Spring of 1928.

LOGIC. See **PHILOSOPHY.**

LORENTZ, Ló'rěnts, HENDRIK ANTOON. Dutch physicist and co-winner of the Nobel Prize for physics in 1902, died at Haarlem, February 4. He was born at Arnheim, July 18, 1853, and, having been graduated from the University of Leyden in 1876, he returned two years later as professor of theoretical physics, extending the researches of James Clerk-Maxwell's on the relation between light and electricity. Lorentz advanced the electron theory that magnetism and light are the result of the interaction of electric charges which form the ultimate connection between ether and ponderable matter. His work in electro-dynamics, which was done approximately between 1895-1902, was the starting point of the modern theory of relativity, and Albert Einstein was, at one time, his pupil. Lorentz also contributed to the study of thermo-dynamics, radiation, and theory of gases. Lorentz tried to encourage coöperation between scientists in different countries and he frequently was the leader at various conferences of physicists in Europe, being especially fitted for such a position by his rapid grasp and clear exposition of points under discussion. He spoke several languages and often lectured at foreign universities, including Columbia, in New York City, in 1906, at the Collège de France in 1912 and 1913, and at several universities in England where he acted as one of the exchange professors of the Anglo-Batavian Society in 1923. He attended the International Research Council in 1919 and was the second chairman of the Committee of Intellectual Co-operation of the League of Nations. He shared the Nobel Prize in physics with his pupil, Zeeman, in 1902, and, in 1905, he was made foreign member of the Royal Society of Great Britain, receiving the Rumford Medal three years later. He was given also the Society's Copley Medal in 1918, and the honorary degree of D.Sc. from the

University of Cambridge in 1923. He was made a foreign associate of the National Academy of Sciences of the United States in 1906. Besides numerous important articles on the development of physics and contributions to journals of learned societies, Lorentz wrote: *La Théorie électromagnétique de Maxwell* (1892); *Versuch einer Theorie der electrischen und optischen Erscheinungen in bewegten Körpern* (1895); *A Textbook of Differential and Integral Calculus* (1882); *A Textbook of Physics* (1888-90); *Zichtbare en onzichtbare bewegingen* (1901); *Abhandlungen über theoretische Physik* (1907); and *The Theory of Electrons* (1909).

LOS ANGELES FLOOD CONTROL. See **DAMS.**

LOUISIANA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,798,509. The estimated population on July 1, 1928, was 1,950,000. The capital is Baton Rouge.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1927 and 1928.

Crop	Year	Acreage	Prod. bu.	Value
Cotton	1928	1,985,000	685,000 ^a	\$61,308,000
	1927	1,542,000	548,000 ^a	52,608,000
Rice	1928	484,000	18,392,000	16,553,000
	1927	500,000	20,000,000	17,400,000
Corn	1928	1,242,000	21,114,000	19,847,000
	1927	1,161,000	20,318,000	18,286,000
Potatoes	1928	41,000	2,870,000	2,870,000
	1927	41,000	2,665,000	4,397,000
Sweet potatoes	1928	74,000	6,660,000	5,661,000
	1927	99,000	9,702,000	6,791,000
Hay	1928	315,000	449,000 ^b	6,354,000
	1927	296,000	374,000 ^b	5,097,000
Sugar cane	1928	73,000	2,244,000 ^b
	1927	73,000	962,000 ^b

^a bales, ^b tons.

MINERAL PRODUCTION. Petroleum, which made up more than half the State's total mineral production of 1926, yielded 21,061,000 barrels in 1927, as against 23,201,000 in 1926; the product was valued, for 1927, at \$38,700,000 (estimated) and, for 1926, at \$38,200,000. Natural gas produced was, in quantity, 157,423,000 M cubic feet in 1926, the year of latest record, and in 1925, 152,620,000 M; in value, \$8,768,000 for 1926 and for 1925, \$8,125,000. Gasoline was derived from natural gas to the quantity of 43,557,000 gallons in 1926, and the product in 1927 was higher, being 46,200,000 gallons; by value, it was, for 1926, \$3,692,000; for 1927, \$2,472,000. Sulphur is produced in the State from one important mine, but this mine was shut down in 1924, thereafter shipping from stock on hand. The salt output of the State was 520,400 short tons in 1926 and 500,350 in 1925; in value, \$2,457,875 for 1926, and for 1925, \$2,218,265. Sand and gravel produced in 1926 had a value of \$1,784,315. The total value of the State's mineral production in 1926 was \$62,203,543; in 1925 it was \$60,503,891.

FINANCE. State expenditures in the year ended Dec. 31, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$19,663,230 (of which \$5,420,558 was aid for local education); for conducting public service enterprises, \$58,382; for interest on debt, \$723,400; for permanent improvements, \$8,981,123; total, \$29,426,135 (of which \$10,812,821 was for highways, \$3,469,605 being for maintenance and

\$7,343,216 for construction). Revenue was \$28,126,095. Of this, property and special taxes formed 35.9 per cent; departmental earnings and charges for services of State officers, 4.4 per cent; license sales, including severance tax, tobacco tax, and gasoline tax, 41.5 per cent. Assessed valuation of property was \$1,724,954,042; State taxation thereon, \$9,918,486. Net funded State debt on Dec. 31, 1927, was \$16,459,287. Of outstanding debt \$2,498,000 was for highways.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 4789.91. There were built in 1928, 32 miles of additional second track.

EDUCATION. A movement to render the office of parish superintendent elective by popular vote was defeated in the State Legislature. For the academic year 1927-28 the school-age population of the State was placed at 394,456 white, 255,740 colored. There were registered in the public schools 269,648 white and 145,833 colored pupils. Of these, 226,533 whites and 141,263 colored were in the elementary schools; in the high schools were 43,115 whites and 4570 colored. Expenditures for education was \$16,175,601.46, exclusive of outlay. Salaries of teachers averaged: white, \$971.20; colored, \$303.88.

CHARITIES AND CORRECTIONS. A State Board of Charities and Corrections in 1928 exercised supervision over State institutions, without wielding administrative powers. It was composed of six members, with the Governor as chairman ex-officio. The chief charitable and penal institutions were: Charity Hospital, New Orleans; Charity Hospital, Shreveport; Central Louisiana Hospital (insane), Pineville; East Louisiana Hospital, Jackson; State Colony and Training School for Feeble-Minded, Alexandria; State School for Deaf, Baton Rouge; State School for Blind, Baton Rouge; State School for Blind Negroes, Baton Rouge; Soldiers' Home of Louisiana, New Orleans; State Penitentiary, Baton Rouge; Louisiana (correctional) Training Institute, Monroe. The State Penitentiary had 1743 prisoners on Jan. 1, 1928; the mental patients in State hospitals numbered 3673; the inmates of the State Colony and Training School, the institution for the feeble-minded and epileptics, numbered 256.

LEGISLATION. The State legislature met in regular session May 14, and adjourned July 12. It passed resolutions embodying 19 amendments to the State Constitution, subject to popular approval at the November election. Chief among these were the provision of a \$30,000,000 bond issue for the cost of paving main highways, with an increase in the gasoline tax to meet resulting charges; the authorization of the Highway Commission to construct toll bridges to be paid for out of collections; authorization to levee boards to lay a quarter-mill tax to pay for property, land, and highways to be destroyed for the purpose of levee sites, thus furnishing coöperation in the Federal scheme of flood relief; empowering the Legislature to organize navigation and river improvement districts, with resources to be obtained from a one-mill tax for ten years; authorizing the levee board of the Parish of New Orleans to issue \$15,000,000 of bonds for completing Lake Pontchartrain improvements; permitting judges on reaching the retirement age to serve until the next subsequent congressional election, in order to end the need of special elections to fill their places.

An act was passed to end the term of the president of the State board of health, Dr. Oscar Dowling, and to enable the governor to name his successor for a term of four years; and the disposal of about \$500,000 a year of funds was removed from the hands of this board. The State tobacco tax was repealed. A bill providing for work to eradicate the cattle tick was enacted. There was passed an act to license makers of small personal loans in amounts of less than \$150 and to restrict interest on such loans to a maximum of 3½ per cent a month. Provision was made for State purchase of textbooks for pupils in public and private schools. A code of criminal procedure, the first recodification of the State criminal law since 1805, eliminating many antiquated provisions and designed to provide speedier administration of justice, was adopted. The Legislature passed a measure designed to put the severance taxes of the State on a quantity basis. A malt tax of 10 cents a can was enacted, and an act for arbitrating business disputes was passed.

POLITICAL AND OTHER EVENTS. At the State primary elections of January 17, Huey P. Long was elected Democratic candidate and was duly elected Governor. He was inaugurated May 21, and sponsored policies which were reflected in chief part in the laws passed by the Legislature. The State supreme court, in a decision of March 12, upheld the administration of Conservation Commissioner Irion, and reversed a lower court decision of 1927 removing him from office. Penalties imposed specifically on second offenders against the criminal law, by a decision of the State supreme court rendered January 18, could be enforced only where the offender had repeated his violation of the statute that had been broken in the first instance. Work on the superstructures of the Chef Menteur and Rigolets bridges, being built under the authority of the State highway commission, started in the latter part of the year. The Fuqua Memorial Hospital, a part of the Central Louisiana Hospital for the Insane at Pineville, was opened May 9. The Intracoastal Canal Association worked to obtain rights of way for a projected waterway in the area between the courses of the Calcasieu and Mermontau rivers, some \$7,000,000 having been appropriated by Congress in 1927 for intracoastal canal work in Louisiana. The State department of conservation, jointly with a fur company, engaged in the capture of muskrats and their release in the hundreds of thousands of acres of muskrat lands in St. Bernard and Plaquemines parishes that had been flooded out by the opening of the Caernarvon crevasse in 1927.

New Orleans became the terminus of an air mail line from New York via the Atlantic and Gulf States on May 1. Efforts of outside interests to obtain a franchise to introduce natural gas into the city led to a contest between these and the existing interests providing artificial gas.

ELECTION. Of the Southern Democratic States, Louisiana was one of those in which the peculiarities of the Hoover-Smith presidential campaign had least effect. The State not only remained in the Democratic column, its abiding place in every presidential year subsequent to 1876, but gave the Democratic National ticket a majority not far removed from that of the Democratic ticket of 1924. The 1928 vote for President was: Smith (Dem.), 164,655; Hoover (Rep.), 51,160. The entire delegation of the State in the House

of Representatives, all Democratic, was reelected. The proposal for an amendment of the gasoline tax law, relating to an issue of \$30,000,000 of highway bonds of the State, was reported to have been carried.

OFFICERS. Governor, Huey P. Long; Lieutenant-Governor Paul N. Cyr; Secretary of State, J. J. Bailey; Treasurer, H. B. Conner; Auditor, L. B. Bayard, Jr.; Attorney-General, Percy Saint; Superintendent of Education, T. H. Harris.

JUDICIARY. Supreme Court: Charles A. O'Neill, Chief Justice; Associate Justices; Ben C. Dawkins, Winston Overton, John St. Paul, Wynne G. Rogers, John R. Land, H. F. Brunot.

LUGANO CONFERENCE. See LEAGUE OF NATIONS.

LUMBERING. See FORESTRY.

LUMMIS, CHARLES FLETCHER. American author, and archaeologist, died at Los Angeles, Calif., November 25. Born at Lynn, Mass., Mar. 1, 1859, he attended Harvard with the class of 1881. He edited a newspaper in Cincinnati, O., 1882-84, and then moved to Los Angeles, walking the 3507 miles for pleasure. After working as city editor of the *Los Angeles Times*, 1885-87, his health failed, and he lost his eyesight. In order to recuperate, he lived in New Mexico for five years, studying the Indian languages, and customs, and the archaeology of the country. He traveled extensively in the United States, and in Central and South America, mostly on foot and on horseback. Returning to Los Angeles, he founded the *Out West Magazine*, in 1894, in place of *The Land of Sunshine* on which he had formerly worked. He edited that periodical until 1909, also being librarian of the Los Angeles public library, from June 1, 1905, until Apr. 1, 1910. Mr. Lummis was active in promoting the welfare of the Indians. Besides aiding in the foundation of the Southwest Society of the Archaeological Institute of America, 1903, and serving as its secretary, he assisted in the incorporation of the Institute, 1906. He was also instrumental in founding the Southwest Museum, in 1907, with its "Lummis Carocal Tower," to which he presented a valuable library, and Spanish-American collection. He was a corresponding member of the Royal Academy of Spain, and of the Spanish Royal Academy of History, and he was knighted in 1915 by the King of Spain for his historical researches. He belonged to the American National Institute of Arts and Letters, as well as to numerous other scientific and literary societies. Among his most important books are the following: *A New Mexico David* (1891); *A Tramp Across the Continent* (1892); *The Spanish Pioneers* (1894); *The Man Who Married the Moon, and Other Pueblo Indian Folk Stories* (1894); *The Gold Fish of Grand Chimú* (1896); *The Enchanted Burro* (1897); *The Awakening of a Nation* (1898); *My Friend Will* (1911); *Spanish Songs of Old California* (1923, 2d book, 1928); and *Mesa, Cañon and Pueblo* (1925).

LUTHER, FLAVEL SWEETEN. American educator, died at Pasadena, Calif., January 4. He was born at Brooklyn, Conn., Mar. 26, 1850, and was graduated from Trinity College, Hartford, Conn., in 1870. For two years he taught at West Troy, N. Y., in the meantime being ordained a deacon in the Protestant Episcopal Church. From 1876 to 1881 he was professor of mathematics at Ra-

cine College. He then taught at Gambier, Ohio, 1881-82, and held the chair of mathematics at Kenyon College, 1882-83, before going to Trinity College as Seabury professor of mathematics and astronomy. From 1904 until 1919, when he retired, he was president of the College. He was also interested in politics and served four years, from 1907 to 1911, as a member of the State Senate of Connecticut. Trinity College conferred on him the honorary degree of Ph.D. in 1896 and that of LL.D. in 1904. He was also a Doctor of Laws of Tufts College (1905) and of Wesleyan University (1906). Dr. Luther's presidency of Trinity was marked by the expression of ideas that were considered novel or revolutionary by many. He was specially conspicuous for his advocacy of the establishment of industrial or trade schools and for his opposition to schools under ecclesiastical control.

LUTHERAN CHURCH. A denomination made up of groups of religious bodies holding in doctrine to the unaltered Augsburg Confession and to Luther's Small Catechism. Its membership is chiefly in Germany, northern Europe, the United States, and Canada. During 1928 final arrangements were made for the Lutheran World Convention, to meet at Copenhagen, Denmark, during the last two weeks of June, 1929, for the purpose of modifying the preparation necessary for membership to Lutheran churches throughout the world. Delegates of the church visited various reformation countries, making particular effort to reestablish Lutheran doctrines in Russia, where the church continued to support Leningrad Seminary.

In the United States during 1928, the church also worked toward unification. The Iowa, the Joint Ohio, and the Buffalo synods planned a merger, and six synods accepted the Jubilee Catechism. Extensive building programmes were drafted.

Educational work was conspicuous within the individual groups. The Augustana Synod raised \$1,500,000 to support the college in Rock Island, and a new women's hall was occupied in the fall term. The Musical Temple was completed at Bethany College, which had become a musical centre at Lindsborg, Kansas. Delegates at the Minnesota conference raised approximately \$650,000 for charities. Besides the 1418 students who were preparing for the ministry at the various Lutheran colleges of the Missouri Synod, 698 students were enrolled during the year in theological seminaries, and 684 persons were preparing to teach in the Christian day schools. A substantial endowment fund was provided for Valparaiso University, Indiana.

The Iowa Synod established an institution at Williston, Ohio, to provide for the feeble-minded, cripples, and epileptics of all denominations, which will care for the helpless in the central States, corresponding to a similar Lutheran institution in the Far West. The synod admitted the Lutheran Deaconess Motherhouse, of Milwaukee, Wis., into affiliation. The Joint Ohio Synod arranged for the centralization of its mission work in India, and authorized a \$50,000 building fund for a mission high school. Representatives of the synod convened in 1928, and resolved to establish fellowship with the Norwegian Lutheran Church. That organization dedicated a church under Dr. J. A. O. Stub in Minneapolis, April 1, which seated about 3000 persons, and cost \$500,000. A second church, costing \$350,000, was dedicated

under Dr. Martin Anderson at Chicago, November 11. The Slovak Synod published a new edition of the hymn book, *Tranoscius*, containing more than 1000 hymns. The synod opened a new mission field in Canada.

The general growth of the church during the year is indicated by the following statistics of the *Year Book of the United Lutheran Church in America*, for the United States and Canada: Pastors, 11,234; congregations, 16,686; baptized members, 4,210,509; confirmed members, 2,728,629; communing members, 2,269,422; Sunday schools, 11,671; officers and teachers, 125,497; scholars, 1,447,538; value of church property, \$324,690,605; congregational expenses, \$45,467,848; congregational benevolences, \$11,969,677; and congregational expenditures, \$57,262,521.

In America, outside of the United States and Canada, there were 3889 congregations with 481 pastors, 311,468 baptized members, 202,953 confirmed, and 189,376 communing members. In the 2003 Sunday schools there were 155,735 pupils, and 5297 officers and teachers. The church property was valued at \$5,965,787, and the congregational expenses were \$306,333, the benevolences \$108,120, and the expenditures \$414,453. It was estimated that there were, in 1928, 70,000 Lutheran churches in the world, with 49,000 pastors, and a baptized membership of 81,023,180.

LUXEMBURG, lüks'em-bürg. A small state of western Europe, bounded by Germany, France, and Belgium; neutralized by the Treaty of London, 1867; occupied by the Germans during the War; restored to independence after the armistice. Area, 999 square miles; population, according to the census of 1922, 260,767, as compared with 263,824, Dec. 1, 1916. The great majority of the population is Roman Catholic. Luxembourg is a country of small landowners and of farmers tilling their own holdings. The total area of land devoted to agriculture was about 394,000 acres in 1926. The principal foodstuffs raised in the grand duchy are potatoes and cereal grains, including rye, wheat, barley, and oats. The cultivation of oats covers the largest area of land and is followed in importance by potatoes. The leading industry of the State, however, is mining and the production of iron and steel. The mineral resources of Luxembourg include comparatively extensive iron-ore mines, as well as slate, lime, dolomite, quartzite, and stone beds. The production of pig iron which in 1913 was some 2,510,000 gross tons, in 1926 had reached 2,520,000 tons and for 1927 was estimated at 2,660,000 tons. In 1927 the production of steel ingots and castings which had amounted to 2,210,000 tons in 1926 was estimated at 1,420,000 tons. Brick, printing, leather, and glove industries are also relatively important. Separate figures on foreign trade have not been available since the economic union in 1922 with Belgium. The budget estimates for 1928 were: Revenue, 270,249,192 francs; expenditure, 261,335,689 francs. The public debt on Dec. 31, 1926, amounted to 459,000,609 francs. In 1925 there were 342 miles of railways. Under the constitution, as amended in 1919, sovereign power rests in the nation and the representatives are elected on the basis of universal suffrage and proportional representation. The Grand Duchess in 1928 was Charlotte Aldegonde, born Jan. 23, 1896, who succeeded to the throne, Jan. 9, 1919. The Minister of State and President of the Government was M. Bech (appointed July, 1926). The other members of

the cabinet were: Director-General of Justice and Home Affairs, N. Dumont; Public Works, Trade, and Industry, M. Clemang; Finance and Social Welfare, M. Dupong.

LYNCHINGS. At the end of the year it was announced by Tuskegee Institute that lynchings were fewer in 1928 than during any of the four preceding years. In 1928 eight Negroes and one Mexican were lynched as compared with 16 lynchings in 1927, 30 in 1926, 17 in 1925, and 16 in 1924. The nine lynchings of the year occurred in the following States: three were in Mississippi, two were in Louisiana, two were in Texas, one was in Missouri, and one was in New Mexico. On Dec. 31, 1928, word came from Parchman, Miss., that the Negro slayer of a prison keeper had been captured and burned to death by a mob, his body having been tied to logs and soaked with gasoline.

MACAO, makä'ô. An island at the mouth of the Canton River, in China, which with the two adjacent islands of Taipa and Colôane, constitute a province of Portugal. Area, 4 square miles, population, according to the census of 1920, 83,984, of whom 3816 were Portuguese and the remainder for the most part Chinese. The trade is chiefly in transit and is mainly in the hands of the Chinese. In 1926-27 the revenue was estimated at 3,029,210 escudos and the expenditure at 3,321,742 escudos. The city of Macao is divided into two parts, inhabited respectively by Chinese and non-Chinese, each under its own administration.

MCCORMICK, SAMUEL BLACK. American educator, died at Pittsburgh, Pa., April 18. He was born in Westmoreland County, Pennsylvania, May 6, 1858. He was graduated from Washington and Jefferson College in 1880. After teaching for a short time at the Canonsburg, Pa., Academy, he returned to Washington and Jefferson as a professor (1881-82). He was admitted to the bar of Pennsylvania in 1882 and practiced law at Pittsburgh, 1882-83, and at Denver, Colo., 1883-87. He had turned his attention to theology, and in 1890, after three years' study at the Western Theological Seminary, Pittsburgh, he was ordained in the Presbyterian ministry. He was pastor of the Central Church, Allegheny, Pa., 1890-94, and of the First Church of Omaha, Nebr., 1894-97. In the latter year he became president of Coe College, Iowa, and in 1904 he was chosen as chancellor of the Western University of Pennsylvania, now the University of Pittsburgh. In 1924 he became chancellor emeritus. Under his care, the university underwent a transformation and expansion, as well as a change of name. When he took charge it was an institution little known except locally and had 800 students. When he retired the student body had grown to 10,000, and the university had assumed a place among the foremost educational institutions of the United States.

MCCUTCHEON, ma'küch'ün, GEORGE BARR. American novelist, died suddenly at New York, October 23. He was born in Tippecanoe County, Ind., July 26, 1866, and attended Purdue University, where he was one of a group of talented young men, including his brother, John Tinney McCutcheon, the cartoonist, Booth Tarkington, and George Ade. After leaving college, McCutcheon started work as a reporter on the *Lafayette Journal* in 1889, and he was made city editor of the *Lafayette Courier* in 1893. While with

that newspaper, he wrote *Graustark* (1901), a romantic tale of a Balkan Kingdom of that name. The book was immediately so successful that hundreds of readers inquired for the actual road to McCutcheon's imaginary country. Giving up journalism he moved to Chicago, and after establishing his reputation with two successful but less important novels, he wrote *Brewster's Millions* (1903), which he published under the pen name, "Richard Greaves," in order to prove, as he did, that the book would be popular without the prestige of his name. From that time until his death, McCutcheon published at least one book a year, and, writing romantic stories in the day of realistic novels, he became a popular leader in a school of adventuresome and entertaining fiction in the United States. McCutcheon, resided in New York from 1911 and collected paintings and rare books. As president of the Authors' League of America, 1924-25, he tried unsuccessfully to secure Federal legislation which would extend the copyright term on writing and musical composition by fifty years. McCutcheon considered *Beverly of Graustark* (1904), the best of his many books. All were well received and several were popular enough to be dramatized; they include: *The Husbands of Edith* (1908); *The Rose in the Ring* (1910); *What's His Name?* (1911); *Mary Midthorne* (1911); *Her Weight in Gold* (1912); *The Hollow of her Hand* (1912); *A Fool and his Money* (1913); *The Prince of Graustark* (1914); *Mr. Bingle* (1915); *From the House Tops* (1916); *The Light that Lies* (1917); *The City of Masks* (1918); *Sherry* (1919); *Anderson Crow, Detective* (1920); *Quill's Window* (1921); *Yolopp* (1922); *Oliver October* (1923); *East of the Setting Sun* (1924); *Romeo in Moon Village* (1925); *Kindling and Ashes* (1926); *The Inn of the Hawk and Raven* (1927); and McCutcheon was writing another novel when he died.

MACDONALD, CHARLES. American civil engineer and bridge contractor, died at Gananoque, Ont., July 8. He was born at Gananoque, Jan. 26, 1837. He studied at Queen's University, Kingston, Ont., and then, desiring to become an engineer, worked for a time at surveying on the Grand Trunk Railway. In 1857 he was graduated from Rensselaer Polytechnic Institute, Troy, N. Y. He then returned to the Grand Trunk, on extension work, and from 1863 to 1868 was placed in charge of surveys and construction for the Philadelphia & Reading R. R. He was captured by the Confederates at Gettysburg, but was soon released. While engaged on the Reading, he began his real life work, as a bridge builder, by taking part in the construction of a bridge over the Schuylkill River. This done, he entered into partnership with A. B. Burton, an experienced bridge constructor. In 1866 Macdonald and Burton obtained the contract for building all the bridges between Hoboken, N. J., and Dover, N. J., on what is now part of the Delaware & Lackawanna R. R. They constructed several large bridges. The Delaware Bridge Company was organized, with Macdonald as president, and erected, among other bridges, the one over the Susquehanna River, at Harrisburg, Pa., for the Pennsylvania R. R. In 1884 the company was merged with others in the Union Bridge Company, which built many notable long-span bridges, including the Poughkeepsie, N. Y., bridge over the Hudson River, the Merchants' Bridge at St. Louis, Mo., and the Hawkesbury Bridge in Australia.

The contract for the last-named structure was won in a world-wide competition. Difficulties with the foundation led Macdonald to go to Australia on a half-day's notice, and he brought the work to a successful conclusion. In 1900, all the other partners having withdrawn, Macdonald merged the Union Bridge Company with the American Bridge Company, which in turn became one of the constituent parts of the United States steel Corporation. Soon after this absorption he retired. Mr. Macdonald was president of the American Society of Civil Engineers, 1908-09, and a member of the Canadian Society of Civil Engineers and the Institute of Mining Engineers. Queen's University made him an LL.D. in 1894, and Rensselaer Polytechnic Institute and Stevens Institute honored him by election as trustee.

MCGILL UNIVERSITY. A coeducational institution of higher education at Montreal, Quebec, Canada; founded in 1821. The enrollment for the autumn session of 1928 was 2875; distributed as follows: Arts, 1064; applied science, 297; medicine, 476; commerce, 225; graduate school, 154; music, 144; dentistry, 40; law, 82; physical education, 42; pharmacy, 22; social workers, 29; graduate nurses, 50; library school, 18; and Macdonald College (agriculture and household science), 232. The registration in the French Summer School of 1928 was 193. The number of members on the teaching staff was 473. Among the appointments to the faculty during the year were the following: James Bertram Collip, to be professor of bio-chemistry and chairman of the department; John Beattie, to be assistant professor of anatomy; Percy Ellwood Corbett, to be dean of the faculty of law; Frank R. Scott, assistant professor of constitutional and federal law; A. Grant Fleming, professor of public health and preventive medicine and director of the department; Wilder G. Penfield, clinical professor of neurological surgery; Boris P. Babkin, research professor of physiology; and N. J. Berrill, assistant professor of zoology. The productive funds of the University amounted to \$18,153,446 and the income for the year to \$2,046,688. The library contained 273,633 volumes. Principal, Sir Arthur William Currie, G.C.M.G., K.C.B., LL.D.

MCGIVNEY, PATRICK J. American Roman Catholic clergyman and Supreme Chaplain of the Knights of Columbus, died at Paris, France, May 8. He was born at Waterbury, Conn. He was one of three brothers to enter the Roman Catholic priesthood; one was the late Rev. Michael J. McGivney, a founder of the Knights of Columbus. After graduating from Niagara University in 1887, he studied philosophy at the same institution, and then studied theology at the Grand Seminary, Montreal, Que., and at St. John's, Brighton, Mass. He was ordained a priest in 1892, and served as pastor of churches at Middletown, New Canaan, and Bridgeport, Conn. From 1913 he was pastor of St. Charles's Church, Bridgeport. Niagara University conferred on him the degree of LL.D., and he was raised to the rank of domestic prelate by Pope Pius XI, in recognition of his work as Supreme Chaplain of the Knights of Columbus. He held the office for many years and was active in war work during the World War.

MCGRAW, JAMES J. American banker and politician, died at Hot Springs, Ark., March 3. He was born at Leavenworth, Kans., Aug. 21, 1874. He settled at Tulsa, Okla., in 1920, and

from 1921 until his death was president of the Exchange National Bank of Tulsa. He was also president of the McGraw-Baughman-Bearly Lumber Company. Mr. McGraw served as Republican National committeeman from Oklahoma, 1916-20. The position of first assistant postmaster general was offered to him by President Harding, but he declined it. During the World War he was in charge of all the disbursements of the Knights of Columbus in France, and he was decorated with the ribbon of the French Legion of Honor and the Belgian Order of St. George.

MACLEOD, MALCOLM HUGH. American engineer and railway builder, died at Toronto, Ont., February 8. He was born on the Isle of Skye, Scotland, July 13, 1857, and was educated at the public schools of Franklin, Pa., and of New York. In 1878 he joined the engineering staff of the Canadian Pacific as an axeman. He advanced until he became chief engineer of the Crow's Nest division, in 1898. In 1900 he was made chief engineer of the Canadian Northern, and was appointed general manager and chief engineer in 1907. Prior to the amalgamation of the Canadian Northern and Grand Trunk Railways, in 1923, Mr. MacLeod was appointed vice president of the Canadian Northern in charge of construction, and after the amalgamation he became advisory engineer to the executive. During his service with the Canadian Northern, more than 4000 miles of line were constructed, and he was credited with laying out more railway mileage than any other man in the world. He prepared the original plans for the Toronto Railway viaduct.

McNARY-HAUGEN BILL. See AGRICULTURAL LEGISLATION; also UNITED STATES, under Congress.

McNARY-WOODRUFF LAW. See FORESTRY.

McSWEENEY-McNARY LAW. See FORESTRY.

MADAGASCAR. An Island belonging to France lying off the southeast coast of Africa, from which it is separated by the Mozambique Channel, about 240 miles wide at its narrowest point. The island, whose area is estimated at 241,094 square miles, has over 3000 miles of coast, and is 980 miles long with a greatest breadth of 360 miles. The population, according to the census of 1926 (including the Mayotte and Comoro Islands), was 3,621,342, of whom 3,591,943 were Malagasy, 18,040 were French, and 11,359 foreigners. The most numerous tribes of the Malagasy are the Hova or Merina, which are the most industrious and enterprising, and whose language is the prevailing dialect. Capital, Antananarivo, in the centre of the island with a population in 1926 of 70,847. Other large towns are: Tamatave, with a population in 1926 of 15,022; and Diego Suarez, with 8604. The former is the principal port on the east coast and the latter in the north. Education is compulsory from 8 to 14 years of age. On Sept. 15, 1925, there were 991 official schools for European and native children, with 90,833 pupils and 1739 teachers, and 517 private schools, with 49,750 pupils and 1144 teachers.

PRODUCTION, ETC. Cattle breeding and agriculture are the chief occupations of the natives of Madagascar. In 1926 there were 3,334,000 acres of land under cultivation. The forests contain valuable woods and gums; resins, dyewoods, and textile plants abound. In 1925 there were 7,659,000 cattle, 386,000 swine, 116,000 sheep, 63,000

goats, and 2900 horses. The acreage and production of the principal crops in 1927-28 were as follows: Corn, 201,000 acres, 4,166,000 bushels; rice, 1,483,000 acres, 51,440,000 bushels; potatoes, 54,000 acres, 4,078,000 bushels; tobacco, 16,000 acres, 22,046,000 pounds; coffee, 45,000 acres, 9,250,000 pounds. Local manufacturing industries are relatively small, including rice milling, sugar grinding, meat packing, and the manufacture of straw hats, simple textiles, mats, lace, etc. The graphite mines are important and gold mining is also carried on. Considerable quantities of mica, corundum, and some iron, copper, and other minerals have been found.

COMMERCE. According to preliminary statistics the total imports in 1927 were valued at \$22,650,000 and total exports at \$14,701,000. These figures compare with imports of \$19,201,000 in 1926 and exports of \$17,362,000. The largest import item is cotton goods.

FINANCE. The budgetary estimates for 1927 aggregated 289,991,138 francs for the receipts and the same amount for expenditures. The local revenue is derived chiefly from direct and indirect taxation, customs, post offices, and markets.

COMMUNICATIONS. In 1926, entrances in foreign and coastwise trade combined totaled 5773 vessels of 2,521,000 net registered tons, discharging 198,513 metric tons of cargo; clearances, 6000 vessels of 2,545,000 tons, taking cargo of 277,890 metric tons. The Madagascar Government Railways were built and are entirely operated by the colonial government. The length of line in operation in July, 1927, totaled 429 miles, of which 324 miles were main lines and 105 miles branches. The rolling stock in operation comprised 65 locomotives, 46 passenger cars, and 426 freight cars. Due to excessive cost of fuel, the Government planned to electrify a large part of the line.

GOVERNMENT. The colony is under a governor-general aided by a consultative council of administration. Governor-general in 1928, Marcel Oliver (appointed Jan. 11, 1924). Dependent upon Madagascar are the small islands of Nossi Be, Diego Suarez, Ste. Marie, and the Comoro group.

See also ANTHROPOLOGY under *Old-World Ethnography*.

MADDEN, MARTIN BARNABY. American politician, member of the National House of Representatives from Illinois, died at Washington, D. C., April 27. Born at Darlington, England, Mar. 20, 1855, he was taken to the United States at the age of four. His parents settled on a farm at Lemont, Ill. When ten years old he was apprenticed to a stonemason and he remained in that business, rising in time to become president of the Western Stone Company, president of the Quarry Owners' Association of America, and vice president of the Builders' and Traders' Exchange of Chicago, Ill. He entered political life in 1889 as a member of the Chicago City Council and retained that office until 1897. He was the Republican candidate for United States Senator from Illinois in 1897, but was defeated. In 1905 he was elected to the National House of Representatives from the First Illinois District and was reelected at each biennial election. He concerned himself chiefly with financial matters and was chairman of the House Committee on Appropriations.

MAENTWROG DAMS, WALES. See DAMS.

MAINE. POPULATION. According to the Fourteenth Census, the population of the State on

Jan. 1, 1920, was 768,014. The estimated population on July 1, 1928, was 795,000. The capital is Augusta.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Potatoes	1928	172,000	37,840,000	\$15,136,000
	1927	161,000	37,852,000	31,749,000
Hay	1928	1,248,000	1,597,000 ^a	18,165,000
	1927	1,260,000	1,538,000 ^a	19,482,000
Oats	1928	120,000	4,200,000	2,940,000
	1927	124,000	4,588,000	3,120,000

^a tons.

MINERAL PRODUCTIONS. A slackening in the production of stone and of sand and gravel in 1926 was approximately offset by an increase in the output of lime and that of crude feldspar. Stone remained the leading mineral product, the quantity quarried in 1926 being 311,830 short tons, and that in 1925, 361,570; the value, for 1926, \$2,360,593 and for 1925, \$2,870,442. The production of lime was 128,120 tons in 1926, and declined to about 116,000 tons for 1927; in value, \$1,615,776 for 1926 and for 1927, \$1,364,000 (estimated). Producers of slate sold a total of \$549,952 in 1927, as against \$662,184 in 1926. Feldspar production of 1926 had a total value of \$306,695. Clay and its products, mica, and silica were produced in minor amounts. The total mineral production of the State was, for 1926, \$5,785,619; for 1925, \$5,838,718.

FINANCE. State expenditures in the year ended June 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$11,133,604 (of which \$2,179,063 was aid to local education); for conducting public service enterprises, \$142,802; for interest on debt, \$826,208; for permanent improvements, \$8,006,992; total, \$20,109,606 (of which \$10,396,000 was for highways, \$2,677,875 being for maintenance and \$7,718,125 for construction). Revenues were \$17,419,442. Of this, property and special taxes formed 39.4 per cent; departmental earnings and charges for officials' services, 7.9 per cent; sales of licenses and the tax on gasoline, 42.9 per cent. Property valuation was \$724,938,295; State taxation thereon, \$4,879,722. Net State funded debt on June 30, 1927, was \$21,567,699.

TRANSPORTATION. The number of miles of railroad line under operation in the State on Jan. 1, 1928, was 2198.45. There was no increase in the total of railroad line in 1928.

EDUCATION. A general drive in the public schools, according to Commissioner of Education Thomas, writing in the *Journal* of the National Education Association, was carried on for the better teaching of reading and for strengthening the taste for literature. The State promoted the improvement of the appearance of rural schools by coöperating in the embellishment of certain schools selected for demonstration purposes. The school-age population of the academic year 1927-28, as reported by the State Department of Education, was 244,872. There were enrolled in the public schools in that year 160,904 pupils. Of these, 134,760 were in the elementary schools and 26,144 in high schools. Expenditures for public school education totaled \$11,026,642. The yearly salaries of elementary teachers averaged \$879.87; those of high-school teachers, \$1517.74.

CHARITIES AND CORRECTIONS. The State De-

partment of Public Welfare, as operating in 1928, was a central supervisory body of five nominated members, serving on per-diem compensation, and concerning itself with some 51 welfare institutions deriving support entirely or partly from the State. There were, under a board of hospital trustees, three State hospitals, at Augusta, Bangor, and West Pownal, for the insane. Under a separate board were three tuberculosis sanatoria, at Hebron, Fairfield, and Presque Isle. The State Prison, at Thomaston, the State Reformatory, for Women, at Skowhegan, and the State Reformatory for Men, at South Windham, were likewise under separate trustee boards. Other institutions were the State School for Girls, Hallowell; the State School for Boys, South Portland; Maine School for the Deaf, Portland; Maine General Hospital, Portland; Maine Institution for the Blind, Portland; Bath Military and Naval Orphan Asylum. Prisoners in the three State penal institutions on Jan. 1, 1928, numbered 384; mental patients in the three State hospitals, 1960; feeble-minded and epileptics in the Pownal State School, 683.

POLITICAL AND OTHER EVENTS. The State development commission, created by act of the legislature in 1927, largely in the original intent of advertising the advantages offered by the State, developed in 1928 much broader activities. It employed an appropriation of \$100,000 to institute a survey of the economic and social life of Maine, with a view to informing inhabitants of the opportunities offered. Flood control, water power, and farm crop diversification were among the topics studied; the University of Maine coöperated in a study of the educational situation. Reports were sought on measures taken in other States and in foreign countries where similar problems existed. The first of what was designed to be a series of annual State economic conferences was held at Bangor May 18-19. The governor and council voted May 12 the transfer of \$10,000,000 from surplus State funds for use, in addition to funds previously authorized, in carrying out a large State road-building programme. Early in the summer a bridge over the Kennebec River at Bath was put into service, replacing the ferry. Orr's and Bailey's islands were connected by bridge and causeway.

ELECTION. In the National election of November 6, the popular vote of the State gave the Republican candidates, Hoover and Curtis, a majority of more than two to one. The Republican and the Democratic totals were each about 40,000 higher than the corresponding totals in the National election of 1924. At the State election on September 10, were elected a Governor, other State officers, one United States Senator, four Representatives, and a legislature. The Republican ticket won in all cases. William Tudor Gardiner was elected Governor, defeating E. C. Moran, Jr., Democrat. Frederick Hale, Republican, was reelected United States Senator, over Herbert E. Holmes, Democrat, the vote being: Hale, 145,501; Holmes, 63,429. Four Republicans were elected to the House of Representatives. The Democrats lost their single seat in the State Senate, and in the Assembly their seats were cut down to 16, from 22. The presidential vote was: Hoover (Rep.), 179,923; Smith (Dem.), 81,179.

OFFICERS. Governor, R. O. Brewster; Secretary of State, Edgar C. Smith; Treasurer, William S. Owen; Auditor, E. D. Hayford; Attor-

ney-General, Raymond Fellows; Commissioner of Education, Augustus O. Thomas; Adjutant-General, James W. Hanson; Chairman Public Utilities Commission, Charles E. Gurney.

JUDICIARY. Supreme Judicial Court; Chief Justice, Scott Wilson; Associate Justices, Warren C. Philbrook, Charles J. Dunn, Luere B. Deasy, Guy H. Sturgis, Charles P. Barnes, Norman L. Bassett, and William R. Pattangall.

MAINE, UNIVERSITY OF. A coeducational State institution of higher education at Orono, Maine, founded in 1865. The enrollment for the college year 1928-29 was 1390 and for the summer session of 1928, 315. There were 224 members of the faculty in the autumn of 1928, divided as follows: Teaching and administration, 150; agricultural extension service, 48; and experiment station, 26. The productive funds of the University amounted to \$866,823, and the income for the year to \$933,349. The library contained 87,799 volumes. Rogers Hall, the building of dairy manufactures, named for Dr. Lore A. Rogers, '96, bacteriologist of Washington, D. C., was completed for occupancy during the year and a horticultural building was nearing completion. President, Harold Sherburne Boardman, C.E., D.Eng., LL.D.

MALINOVSKI. See BOGDANOFF, ALEXANDER ALEXANDROVITCH.

MALLINCKRODT, EDWARD. American chemist and manufacturer, died at St. Louis, Mo., February 1. He was born at St. Louis, Jan. 21, 1845, and was educated at public and private schools, later studying chemistry in Germany. In 1867 he became a member of the firm of G. Mallinckrodt & Company, manufacturers of chemicals. In 1882 the firm was succeeded by the Mallinckrodt Chemical Works, Inc., and Mr. Mallinckrodt became president. He held the office for many years, until he became chairman of the board of directors. He was also president of the National Ammonia Company. He was noted for his philanthropy and gave more than \$1,000,000 to scientific education and to hospitals. His largest single gift was \$500,000 to Harvard University for a building to house the department of chemistry.

MALTA. An island in the Mediterranean Sea, forming, with the adjacent islands of Gozo and Comino, a British colony, lying 58 miles south of Italy and 180 miles from the African coast. Area of the island of Malta, 95 square miles; total area with Gozo and Comino, 122 square miles. Population, according to the census of Apr. 24, 1921, 224,680; civil population, Jan. 1, 1927, 227,440. Valletta is the chief town and port. There were 117 public schools with 23,608 pupils at the beginning of the school year 1926-27; a university with six faculties and 87 students; a lyceum for boys with 375 students; two secondary schools; and 25 technical manual schools. Farming is the principal occupation and the chief products include wheat, potatoes, onions, barley, tomatoes, forage, cotton, grapes, and other fruits. The value of agricultural produce in 1926-27 was £898,414. Stock-raising and fisheries are also of importance. The manufactures include lace, cotton, cigarettes, and filigree. The imports

normally exceed exports, although invisible items of trade such as tourist money, the importance of the island to the British Navy, and as a port of call for merchant steamers, and money sent home by emigrants tend to balance the imports and exports. The imports in 1926 were valued at £4,539,057 and the exports at £1,357,348. Most of the imports come from Great Britain and British possessions. The revenue in 1926-27 was £912,977 and the expenditure, £825,106. Executive power is in the governor and commander-in-chief and legislative power in a legislature of two chambers. Governor and Commander-in-chief in 1928, Gen. Sir John Du Cane (appointed Mar. 16, 1927); Prime Minister, Police, and Posts, Sir G. Strickland; Health, R. V. Galea; Education, A. Bartolo; Justice, A. Parnis; Industry and Commerce, W. Salomone; Public Works, E. P. Vassallo; Treasury, Col. A. Samut.

MALTA (UNDULANT) FEVER. This disease which had gained a foothold in the United States is known to have spread to such an extent that a government survey may be required. Miss Evans of the U. S. Public Health Service Hygienic Laboratory, who has been studying the disease, contracted it herself and hence was unable to make her report in person to the American Public Health Association. As has long been known, Malta fever in man is the same affection as infectious abortion in cattle or at least is due to the same microorganism; and it is possible that a certain amount of abortion in women may be of this origin. It is known that mankind contracts the disease from the milk of milch animals, but where there is infectious abortion in cattle we do not necessarily or usually find undulant fever in mankind. Diagnosis of the disease in the latter is very difficult at first, but the peculiar long course with its many relapses is highly suggestive in the later history and a diagnostic skin test is now being developed.

ABORTUS-MELITENSIS INFECTIONS. This is the title of a paper by Dr. Huddleson of Michigan State College which appears in *Certified Milk* for October, 1928. There are two types of disease each of which is due to the genus of microorganisms known as the *Brucella*. The *Br. melitensis* is responsible for Malta or undulant fever of mankind, known to be endemic in the Southwest of the United States; while the *Br. abortus* is held responsible for infectious abortion in cattle, which is discussed under VETERINARY MEDICINE. Malta fever is usually transmitted by the milk of milch animals which are suffering at the time with mastitis. If the animal should chance to be pregnant, it aborts. But the incidence of infectious abortion differs in occurring in cattle and hogs without any notable transmission to man. In rare instances cases of human transmission have occurred in cowherds, etc. The organism in this case is not distinct from *Br. melitensis*, but several sub-species are known to exist, termed the bovine and porcine strains. The *Br. melitensis* appears to be quite pathogenic to both mankind and the goat; while the other forms which are highly pathogenic respectively to the bovines and pigs are not very pathogenic to man.

MAMMALS. See ZOÖLOGY.

MAMMOTH, SIBERIAN. See GEOLOGY.

MAN, PRIMITIVE. See ANTHROPOLOGY.

MANCHURIA, man-chōō-rē-ā. A vast region in Asia, lying between the Province of Chihli in China proper and the Amur River, extending

eastward from the Hingan Mountains to Korea and the Usuri River; divided into the three provinces of Feng-tien, Kirin, and Heilungkiang. The total area is estimated at about 265,000 square miles and the population estimates vary from slightly under 6,000,000 to almost 30,000,000. A census completed by the research office of the South Manchuria Railway Co. in 1927 reported the population of Manchuria as 27,490,000. This is probably as nearly correct a figure as can be ascertained. Capital, Mukden, with a population of about 250,000. Other important cities are Newchwang, 65,600; Yingkow, 60,000; An-tung, 74,600; and Chang-chun, 80,000.

The soil of Manchuria generally is of almost exhaustless fertility and it possesses immense potential resources in agriculture, timber, and mineral wealth. In 1920 the total production of north Manchuria alone was estimated at a value of \$320,000,000. Soya beans, wheat, millet, and kaoliang are the principal crops raised, but the cultivation of sugar beets and the breeding of livestock are of growing importance. While industrially undeveloped, there are in larger cities modern flour mills, bean-oil mills, soap works, sugar refineries, sawmills, distilleries, breweries, glass factories, and tanneries. Although the population of Manchuria constitutes but 6 per cent of the population of China, in 1925 Manchuria's total trade constituted 30 per cent of the total Chinese trade.

The number of immigrants who entered Manchuria from other sections of China during the fiscal year ending Mar. 31, 1928, were estimated at about 1,500,000 while the combined import and export trade of Manchuria during the period amounted to 662,000,000 haikwan taels, or an increase of 15,000,000 taels over the total for the previous year and double the value of the trade ten years ago. Manchurian railways carried 2,000,000 tons more cargo than in the fiscal year ended Mar. 31, 1927. The president of the South Manchuria Railway reported that for the fiscal year ended Mar. 31, 1928, the gross receipts of the company from all its activities amounted to 230,000,000 yen and expenditures to 194,000,000 yen leaving a profit of 36,000,000 yen as compared with 34,000,000 yen the previous year. Revenues from railway services were 113,000,000 yen and operating expenses 39,000,000, or an increase of 5,300,000 in revenue and a decrease of 6,800,000 in operating expenses as compared with figures for the preceding year. The company's gross receipts from other items than railway services amounted to 117,000,000 yen as against expenditures of 154,000,000, or a net loss of 37,000,000 yen.

For the adherence of the Manchurian Government to the new Nationalist régime in China, consult the historical section of the article, CHINA.

MANDATES. See LEAGUE OF NATIONS.

MANGANESE. The domestic shipments of manganese ore containing 35 per cent and more of metallic manganese in 1928, totaled approximately 45,000 long tons, valued at \$1,197,000, according to preliminary figures compiled by the U. S. Bureau of Mines. The 1927 shipments amounted to 44,741 tons, valued at \$1,151,918. The shipments of metallurgical ore amounted to 30,000 tons, valued at \$561,000, while those of 1927 were 27,730 tons, valued at \$446,781. The shipments of chemical ore in 1928 amounted to 15,000 tons, valued at \$636,000, while those of

1927 were 17,011 tons, valued at \$705,137. The plant owned by the Domestic Manganese and Development Co. was put in operation during March and treated rhodochrosite ore from the Emma mine at Butte, Mont., operated by the Anaconda Copper Mining Co. It produced 11,118 tons of calcined and nodulized material containing 56.45 per cent manganese. This quantity was derived from 18,000 to 19,000 tons of crude carbonate ore. Arkansas' shipments of high-grade ore increased from 2605 tons in 1927 to 3800 tons in 1928. There was a large increase in shipments of high-grade ore from Georgia, and a large decrease in shipments from Idaho. No high-grade shipments were reported for Nevada in 1928.

There was a record production of steel in 1928, estimated at 51,400,000 tons of ingots and castings, and a consequent demand for ferromanganese and in turn for manganese ore. The estimated production of ferromanganese in 1928 was given in the *Iron Trade Review* of Jan. 3, 1929, as 316,000 tons, compared with 294,991 tons in 1927, and second only to the outputs of 1918 and 1926. The domestic production of manganese ore, however, was little changed in 1928, and imports decreased from 622,067 tons of ore in 1927 to approximately 420,000 tons for the entire year. At the rate of manganese-ore consumption per ton of ferromanganese produced, reported by ferromanganese producers in 1927, the domestic production of ferromanganese in 1928 required approximately 632,000 tons of manganese ore. Assuming that the amount of manganese ore imported for chemical uses was offset by the quantity of metallurgical manganese ore produced in the United States in 1928, approximately 420,000 tons of ore was available for metallurgical uses in 1928, 212,000 tons less than was required by the producers of ferromanganese. Most of this tonnage was accounted for by the decrease in the quantity of manganese ore in bonded warehouse, officially reported as 183,477 tons of manganese content on Dec. 31, 1927, and 96,918 tons on Oct. 31, 1928, a decrease of 86,559 tons of manganese content, equivalent to at least 173,000 tons of manganese ore. The remainder of the ore required, between 35,000 and 40,000 tons, must, therefore, have been drawn from stocks at the plants of consuming companies.

The shipments of domestic ore containing from 10 to 35 per cent of manganese (ferruginous manganese ore) in 1928 were 87,000 tons, valued at approximately \$391,000, as compared with 148,291 tons, valued at \$673,921 in 1927. The domestic shipments of ore containing from 5 to 10 per cent of manganese (manganiferous iron ore) in 1928 were 1,090,000 tons, valued at \$2,640,000, as compared with 1,310,127 tons, valued at \$3,270,460, in 1927. The decrease in shipments of ferruginous manganese ore was contributed to mainly by Colorado, Georgia, Michigan, and New Mexico. The apparent decrease in shipments of manganiferous iron ore was due to the falling below 5 per cent manganese content of ore in Wisconsin that contained over 5 per cent in 1927. Shipments from Minnesota, 1,029,000 tons in 1928, showed an increase over the 934,599 tons shipped in 1927.

MANITOBA, mǎn't-tō'bǎ. The most eastern of the Prairie Provinces of Canada, situated west of the Province of Ontario and Hudson Bay and east of the Province of Saskatchewan, extending from the American boundary north to latitude 60°. Area, 251,832 square miles; population, ac-

cording to the census of 1921, 610,188; 1926, 639,056. Capital, Winnipeg, with a population in 1921 of 179,087 (Greater Winnipeg, 230,000); Brandon, 15,359; St. Boniface, 12,821; Portage la Prairie, 6748. The movement of population in 1926 was: Births, 14,627; deaths, 5317; marriages, 4496. In 1926 there were 4067 teachers and 148,279 pupils in the 3956 public class rooms. There are 42 high schools, 9 junior high schools, 11 collegiate departments, and 13 collegiate institutes. For higher education there is the University of Manitoba at Winnipeg, with 2458 students enrolled for the full courses.

The estimated area of arable land in Manitoba is 25,000,000 acres of which about 30 per cent is under cultivation. In 1925 the mineral output, consisting mainly of building material and gypsum, was valued at \$2,276,759. Other important resources are forest and fisheries. In August, 1926, there were 682 grain elevators in Manitoba with a capacity of 25,430,000 bushels. The revenue in 1927 was \$11,238,570 and the expenditure, \$10,531,929. The total funded debt on Apr. 30, 1926, \$72,882,803. The railway mileage was 4610 miles in 1927.

The government consists of a lieutenant-governor appointed by the governor-general of Canada and a legislative assembly consisting of 55 members elected for five years. Women have the right to vote and are eligible to election to parliament. Manitoba is represented in the Dominion Parliament by six members in the Senate and 17 in the House of Commons. Lieutenant-Governor in 1928, Theodore A. Burrows; Premier, President of the Council, Treasurer, Telephones and Telegraphs, John Bracken; Education, R. A. Hoey; Agriculture, Immigration, and Railways, A. Prefontaine; Lands Commissioner and Provincial Secretary, A. Prefontaine; Health and Public Welfare, Edward W. Montgomery; Public Works, W. R. Clubb; Attorney-General, W. J. Major; Municipal Commissioner, D. L. McLeod. As a result of the elections of August, 1927, the party grouping was as follows: Progressive (Government), 29; Conservative, 16; Liberal, 7; Labor, 3; Independent, 1.

MANNERS, JOHN HARTLEY. Anglo-American playwright, died at New York, December 19. Born at London, Aug. 10, 1870, he first appeared on the stage in *The Squire of Dames*, at Melbourne, Australia, Feb. 19, 1898, and thereafter played in London and the United States until 1905. Having acted in England in his own play, *The Crossways*, he brought the company to New York in 1902, where he remained until his death. Mr. Manners gave up the stage for writing, and on Dec. 20, 1912, his comedy, *Peg o' My Heart*, in which his wife, Laurette Taylor, starred, opened on Broadway, proving one of the most popular plays produced in a number of years; it ran until May 30, 1914, and was frequently revived, and played in many languages, and in 1924 there appeared a successful musical comedy version, *Peg o' My Dreams*. Among Mr. Manners's earliest work was the dialogue for *Sweet Nell of Old Drury* (1900), and he wrote, or collaborated in, about 30 other plays, including: *A Queen's Messenger*; *As Once in May*; *The Girl in Waiting*; *Zira*; *The House Next Door*; *the Woman Intervenes*; *A Marriage of Reason*; *The Panorama of Youth*; *The Day of Dupes*; *Just as Well*; *The Harp of Life*; *Barbaraza*; *The Money Moon*; *The Patriot*; *The Prince of Bohemia*; *The Majesty of Birth*; *Ganton & Co.*; *The Girl and the*

Wizard; *All Clear*; *Out There*; *God of My Faith*; *God's Outcast*; *Wreckage*; *Happiness*; *The Wooing of Eve*; *Hate with a Will to Victory*; *One Night in Rome*; and the last of Mr. Manners's plays to be produced, *The National Anthem*, which appeared Jan. 23, 1923.

MANSFIELD, SAMUEL MATHER. American soldier and engineer, died at Boston, Mass., February 18. He was born at Middletown, Conn., Sept. 23, 1839, and was graduated from the U. S. Military Academy in 1862. He was commissioned in the Army as a second lieutenant in the Engineer Corps, and served in the Civil War in the Twenty-fourth Connecticut Infantry, winning promotion for gallantry. He was an expert engineer, and after the war was assigned by the War Department to important works, especially in connection with fortifications and lighthouse construction. In 1885 and 1887 he was president of the commission which determined the boundary line between the Indian Territory and Texas, and in 1898-99 he was president of the California Commission to Regulate Hydraulic Mining. In 1906, three years after his retirement from the U. S. Army with the rank of brigadier general, he was appointed chairman of the Massachusetts Harbor and Land Commission. He also served as president of the Yosemite National Park Commission in 1899.

MANTELL, ROBERT BRUCE. American actor, died at Atlantic Highlands, N. J., June 27. He was born at Irvine, Scotland, Feb. 7, 1854. His parents intended him for the law, but he made so little progress in his studies that they decided on a commercial career for him and apprenticed him to a wine merchant. During his apprenticeship he happened to take part in some amateur theatrical performances, and, meeting with unexpected success, developed a desire to become an actor. His parents opposed him in this, and at the age of twenty he left home and took passage for Boston. Failing to obtain an engagement there, he returned to England in two weeks. He joined a theatrical company under the management of Richard Edgar and made his debut Oct. 21, 1876, at Rochdale, Lancashire, as the sergeant in *Arrah-na-Pogue*. His next important rôle was Father Doolan in *The Shaughran*. He toured the English provinces with Charles Matthews, Barry Sullivan, and Dion Boucicault until 1878, when he returned to America and played juvenile rôles in the company of Mme. Modjeska. His first appearance in London was in July, 1880, at Saddlers Wells Theatre. He visited America again in 1882, touring the country in *Romany Rye*, in which he appeared as Jack Hearn. In 1883 he played in *Fedora* with Fanny Davenport. Later he became a star and appeared at the head of his own company in a large repertory of classical and romantic plays, including *Hamlet*, *Richard III*, *Othello*, *Macbeth*, *Romeo and Juliet*, *The Corsican Brothers*, *The Lady of Lyons*, and *Richelieu*. In his later years he confined himself almost exclusively to Shakespearean rôles. He appeared in New York in revivals of *King Lear* and *Macbeth* in 1905 and in 1911, and had a successful season in 1915 in repertory. In January, 1909, William Winter, the famous critic, called Mr. Mantell "the best tragic actor on the American stage." After 1915 Mr. Mantell appeared also in motion pictures, without, however, relinquishing his work on the stage.

MARCH, FRANCIS ANDREW, JR. American educator, died at Easton, Pa., February 28. He was born at Easton, Mar. 2, 1863, the son of the late Prof. Francis Andrew March, famous philologist, and a brother of Gen. Peyton C. March, chief of staff of the U. S. Army during the World War, of Alden March, of the *New York Times* staff; and of Prof. John Lewis March, of Union College. Professor March was graduated from Lafayette College in 1881, and from 1882 until his death was a member of the teaching staff of the college, successively as tutor in modern languages, 1882-84; adjunct professor of English literature, 1884-91; professor of the same subject, 1891-1905; and professor of the English language, from 1905 until his death. He was editor-in-chief of the *Thesaurus Dictionary of the English Language*, as his father had been; he having been associated with his father in the preparation of that monumental work. He was active in civic work and was mayor of Easton, 1903-05. He wrote: *History of the World War* (1918); (with R. J. Beamish) *America in the World War* (1919); *Athletics at Lafayette College* (1926).

MARIE, mǎ'rĕ. Dowager Empress of Russia and widow of Czar Alexander III, died at her birthplace, Copenhagen, October 13. She was born Nov. 26, 1847, the second daughter of King Christian IX and Queen Louise of Denmark, and she married Czar Alexander III, Nov. 9, 1863, having her name changed from Marie Sophia Frederica Dagmar, to Maria Feodorovna, when she entered the Greek church. Her elder sister became Queen Alexandra of England, and one of her brothers was the late King George of Greece. Empress Marie advised the Czar to liberalize the government, but she could not overcome the court's opposition, and her husband's fear of assassination. When her son, Nicholas II, ascended the throne after his father's death, Nov. 1, 1894, the Empress Dowager again desired to institute democratic reforms, even before the revolution of 1905, recommending that the Czar should grant the people a constitution. She was living in Denmark when the Bolsheviks slaughtered the Russian royal family in 1918, and, refusing to believe in the tragedy, she waited in Copenhagen until her death, expecting Nicholas II to escape and join her.

MARIETTA COLLEGE. A non-sectarian, co-educational college at Marietta, Ohio, founded in 1835. The autumn term of 1928 had a total registration of 393 students, of whom 239 were men and 154 were women. The faculty numbered 37, three new members having been added in 1928. The productive funds amounted to \$1,264,811, and the income for the year to \$147,534. The library contained approximately 94,365 volumes. The new Betsey Mills Club containing a fully equipped women's gymnasium with swimming pool was the centre for the physical education work of the young women of the College, and a Field House for men, to cost \$200,000, was under construction during the year. The Alumni contributed \$6246 to the current expenses of the College, through the Marietta Fund. President, Edward Smith Parsons, A.M., L.H.D.

MARQUETTE UNIVERSITY. A coeducational institution of higher learning, under Roman Catholic direction, at Milwaukee, Wisconsin, organized as a college in 1881 and chartered as a university in 1907. It comprises the following colleges and schools, for which registration of regular students in the autumn of 1928 is also given: Graduate school, 185; liberal arts, 941; business administration, 323; dentistry, 164; applied science and engineering, 495; journalism, 148; law, 237; medicine, 360; music, 34; speech, 2 (with 1055 students enrolled in speech courses from other schools and colleges); and nursing. In addition, there were 280 students in night courses in business administration, 22 in dental hygiene, 426 in the high school, 167 in the music academy, 85 in nursing courses, and 328 in teachers' courses, making a grand total of 4233 in the University. The registration for the 1928 summer session was 796. The faculty in the autumn numbered 379 members. Endowment funds amounted to \$2,623,241, and the income for the year to \$1,130,606, from the following sources: Endowment income, \$148,897; tuition, \$750,292; from private benefactions for increase of plant, \$12,066; for increase of endowment, \$34,042; for current expenses, \$5279; miscellaneous, \$180,029. The University also had the services of Jesuit instructors and administrative officers who received no compensation other than maintenance, the value of their services over the cost of their maintenance in 1926-27 being estimated at \$119,500. The library contained 47,700 volumes. President, the Rev. William M. Magee, S.J., A.M., LL.D.

MARRIAGE AND DIVORCE. That the so-called low marriage rate and high divorce rate were not alarming manifestations of the decline of modern American life was ably demonstrated by Dr. I. M. Rubinow, in a review of the subject in *Current History* for November. Dr. Rubinow cited the following figures to prove that the marriage rate was steadily going up:

Five-year period	Marriage rate per thousand
1892-1896.....	8.92
1897-1901.....	9.12
1902-1906.....	10.07
1907-1911.....	10.14
1912-1916.....	10.47
1917-1921.....	10.90
1922-1926.....	10.46

Not only were people getting married in greater numbers but they were staying married. In 1890, of the total male population, 34.9 per cent were married; in 1900, 36 per cent; in 1910, 38 per cent; in 1920, 40.5 per cent. For females, the figures were: 1890, 36.4 per cent; 1900, 37.1 per cent; 1910, 39.6 per cent; 1920, 41.3 per cent. It must not be forgotten that the female and male populations contain large numbers of persons of unmarriageable age. Dr. Rubinow believes, and quite plausibly, that an index should be calculated not on the basis of the whole population but on the number of persons of marriageable age, and this he puts at 25

TABLE I—MARRIAGES IN THE UNITED STATES 1926-27

^a A minus sign denotes decrease.

years. Thus examined, the figures show that the proportion of married men increased from 72 per cent in 1900 to 74 per cent in 1920. As for the women, the proportions were 70 per cent in 1900 and 71 per cent in 1920. Similarly, the proportion of married men and women between the ages of 20 and 25 has increased. For men, the figure was 21.6 per cent in 1900 and 28 per cent in 1920. For women, the figure was 46.6 per cent in 1900 and 52.3 per cent in 1920. In the field of divorce, Dr. Rubinow's original examinations leave much to be heartened us. He points out that divorces have increased from 27,919 in 1887 to 330,853 in 1926 and that the rates have increased from 47 per 100,000 population in the earlier year to 152 in the later.

He further points out that 5.5 divorces took place in 1887 for every 100 marriages performed and that by 1926 the ratio was 15 divorces per 100 marriages. But this does not mean that one out of every six marriages is dissolved. What, in fact, is the probability of a marriage going on

the rocks? There are no statistics, of course, so the writer resorts to estimates. Marriages are terminated in the following ways: by death, by divorce, or annulment. In 1924, 619,000 married people died and 171,000 divorces took place. In other words, three and one-half marriages were dissolved by death as against one by divorce, or two out of every nine marriages ended in the divorce courts. Says the author: "The true probability of divorce being the conclusion of the happy marriage was, therefore, not one in seven but one in four and a half. And that proportion is constantly rising. It was one in seven in 1910-20 and one in nine in 1900-10." But divorce is a status. How do the figures of those who obtain divorces compare with those who keep them? During the period 1890-1919 about 4,000,000 persons were divorced while in 1919 only about 510,000 persons were recorded as having the status of divorced people. What happened to the 3,500,000? Dr. Rubinow makes this computation for the decade 1910-19:

Number of divorced persons in the beginning of the period	341,000
Number of persons receiving divorce during the period	2,112,000
Total	2,453,000
Approximate number of deaths	150,000
Remaining alive	2,303,000
Number of persons remaining divorced at the end of period	510,000
What became of the balance?	1,793,000

The balance must have married again. These are the proportions: 17 per cent remained divorced, 6 per cent died, and 77 per cent remarried. In other words, Dr. Rubinow concludes, marriage as an institution is not breaking down, but people are getting divorced to remarry, i.e., they are seeking the severance of the original ties because the original marriage was unsuccessful for personal reasons.

CONTRARY VIEWS. On the other hand, alarm was being felt in other quarters at the continued belief that the marriage tie was not so much a sacrament as a means of finding personal happiness. At the Race Betterment Conference, held at Battle Creek, Mich., January 4, Dr. A. S. Warthin, a physician, said that a proper marriage should last at least 25 years "for the child needs the care and counsel of its parents for that length of time." The quadrennial meeting of the Federal Council of the Churches of Christ in America seemed to feel the same way when, in Rochester on December 7, it ordered the printing of a study of marriage called "Ideals of Love and Marriage." This report attacked the companionate marriage as being anti-social. Said the report: "The sex instinct is not to be set free but to be held under control. Marriage should set out to be permanent. Companionate is a noble word, but all that it connotes of comradeship exists between every man and every

woman who are well mated. The word is so rich in meaning that it should not be degraded by being fastened to any form of trial marriage, but increasingly associated with permanent and successful marriage."

STATISTICS. The U. S. Cens. & Bureau announced that there were 1,201,94 marriages performed in the United States during the year 1927, as compared with 1,202,574 in 1926. These figures represent a decrease of 1880 marriages, or about one-fifth of one per cent. During the same time there were 192,037 divorces granted in the United States, as compared with 180,853 in 1926, representing an increase of 11,184, or 6.2 per cent. There were 4252 marriages annulled in 1927, as compared with 3825 in 1926. On the basis of population estimates, the number of marriages per 1000 was 10.12 in 1927, as against 10.27 in 1926, and the number of divorces per 1000 was 1.62 in 1927, as against 1.54 in 1926. While the net decreases in the number of marriages performed in the United States as a whole was 0.2 per cent, the relative change in the different States ranged from a decrease of 25.4 per cent in Florida to an increase of 95.3 per cent in Nevada. The increases in Nevada and Arizona were due largely to a change in the marriage law of California, effective July 29, 1927, requiring three days' notice to be given before the issuance of a license. The rate of marriages per 1000 of the population, which represents an average of rates in the individual States, ranged from 4.7 in Delaware and 5.8 in Wisconsin to 16.6 in Mississippi and 31.0 in Nevada. In general, the changes in the number of marriages per 1000 of the population, as shown in the accompanying table, form a more satisfactory index of the trend with regard to marriage in the several States than does the actual number of marriages, because they take account of differences in the rate of increase in the general population.

The changes in the various States as regards the number of divorces compared with the year 1926, ranged from decreases of 35.3 per cent in Vermont and 19.3 per cent in Delaware to increases of 52.1 per cent in the District of Columbia and 91.3 per cent in Nevada. Changes in the laws governing divorces, effective in 1927, were responsible for the figures shown by Vermont and Nevada. In the case of the former, divorces do not become final for six months after the granting of the decree; in the latter, the residence requirement was modified from six to three months. The increase reported by the District of Columbia was due directly to the number of cases held over from 1926. The ratio of divorces per 1000 of the population in the individual States in 1927 ranged from 0.27 in the District of Columbia and 0.44 in New York to 3.50 in Oregon and 25.23 in Nevada. In the accompanying tables from the U. S. Census, the figures for 1927 are preliminary and subject to correction.

MARSHALL, JOHN, CHIEF JUSTICE, ANNIVERSARY. See CELEBRATIONS.

MARTINIQUE, mār'tēnk'. One of the Lesser Antilles group of the West Indies, forming a colony of France. Area, 385 square miles; population, according to the census of 1926, 244,482. Capital and chief port. Fort-de-France, with a population of 40,000. Sugar, rum, cacao, coffee, tobacco, pineapples, and bananas are the chief

products of the Colony. Total imports in 1927 reached \$8,333,000 as compared with \$7,237,000 in 1926. France supplied 56 per cent of the imports in 1927 and the United States, 29 per cent. Imports from the United States were principally coal, flour, lumber, meats, lubricating oil, and automobiles. Exports in 1927 were valued at \$8,991,000 as compared with \$7,197,000 in 1926. The export trade is confined to France and French colonies. Exports of sugar and rum constituted nearly 90 per cent of the value of all exports. The budget for 1926 balanced at 56,146,218 francs. The colony is administered by a governor and a general council, and an elected municipal council; it sends one Senator and two Deputies to the French Parliament.

The tropical hurricane which swept over the French West Indies on Sept. 12, 1928, was the worst in the history of the islands. Martinique fortunately lay south of the central path of the hurricane and, consequently, did not receive the full force of the storm. Loss of life was exceedingly small, but the material damage sustained cannot be estimated. The chief damage was to the fruit and cacao trees and the cane fields. It was expected that the damage to the cane fields would reduce the crop during the refining season beginning in January, 1929, to a point considerably below the average of 40,000 metric tons.

MARYLAND. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,449,661. The estimated population on July 1, 1928, was 1,616,000. The capital is Annapolis.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1928	530,000	19,345,000	\$17,024,000
	1927	515,000	22,660,000	18,128,000
Wheat	1928	530,000	8,745,000	11,106,000
	1927	525,000	9,188,000	11,669,000
Hay	1928	433,000	759,000 ^a	10,239,000
	1927	446,000	737,000 ^a	11,344,000
Tobacco	1928	31,000	21,700,000 ^b	3,906,000
	1927	32,000	26,176,000	6,020,000
Potatoes	1928	47,000	5,405,000	2,702,000
	1927	43,000	5,246,000	5,508,000
Sweet potatoes	1928	10,000	1,500,000	1,200,000
	1927	11,000	1,584,000	1,109,000

^a tons, ^b pounds.

MINERAL PRODUCTION. Coal mining in Alleghany and Garrett counties continued to produce more than one-fourth of the yearly mineral output of the State. The coal production fell to 2,814,842 net tons for 1927, from 3,078,353 tons for 1926; in value, \$5,817,000 for 1927 and for 1926, \$6,800,000. The by-product coke ovens of the State produced in 1927, 1,077,000 short tons of coke; in 1926, 1,120,610 tons. Clay products, second to coal in importance, had a value, for 1926, the latest recorded year, of \$6,073,247; for 1925, of \$2,868,452 exclusive of pottery produced in 1925. The 1926 total included pottery, to a total value of \$3,179,387. Sand and gravel were produced in 1926 to a value of \$3,115,454; in 1925, \$3,500,130. There were quarried in 1926, 1,432,290 short tons of stone; in 1925, 1,136,880; in value, \$2,177,102 for 1926 and for 1925, \$1,853,881. Pig iron production rose to 845,564 long tons for 1927, from 791,637 for 1926. Lime production was somewhat over half a mil-

lion dollars in value, for 1926 as for 1925. The total value of the State's mineral products, duplications eliminated, was for 1926, \$24,066,996; for 1925, \$21,557,810.

FINANCE. State expenditures in the year ending September 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of departments, \$18,109,070 (of which \$3,512,036 was aid to local education); for conducting public service enterprises, \$143,333; for interest on debt, \$1,417,686; for permanent improvements, \$5,133,780; total, \$24,803,869 (of which \$7,793,891 was for highways, \$3,398,224 being for maintenance and \$3,895,667 for construction). Revenues were \$24,439,916; of this, property and special taxes formed 30.4 per cent; departmental earnings, 16.1 per cent; licenses, including gasoline tax, 40.4 per cent. Assessed property valuation was \$2,348,840,482; State taxation thereon, \$5,906,464. Net State indebtedness on September 30, 1927, was \$23,872,776.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 1446.47. There were built in 1928, 9 miles of additional first track.

EDUCATION. The State system of retirement for teachers, enacted in 1927, as reported by State Superintendent Cook in the *Journal* of the National Education Association, passed successfully through the academic year 1927-28, which was the first year of its application. The estimated school-age population (from 5 to 17 years) in that year was estimated at 388,462, of which the colored element was 68,945. There were enrolled in the public schools 270,900 pupils, 220,413 being white and 50,487 colored. Those enrolled in elementary schools numbered 234,008; those in high schools, 36,892, of whom 3289 were colored. Expenditures for public-school education in the year were: current, \$16,912,730.75; outlay, \$6,505,422.89. Salaries of teachers averaged: white, \$1477 per annum; colored, \$1062; all, \$1408.

CHARITIES AND CORRECTIONS. The Department of Charities and Corrections, as operating in 1928, was the central agency of the State with regard to institutions for the care or custody of persons. It supervised institutions, public and private, investigated applications for State aid, and administered certain of the laws as to the placement of children. In addition to a large number of State-aided institutions, there were the following institutions entirely supported by State appropriations: Maryland Penitentiary, Baltimore; House of Correction, Jessups; Crownsville State Hospital, Crownsville; Eastern Shore State Hospital, Cambridge; Rosewood State Training School, Owings Mills; Spring Grove State Hospital, Catonsville; Springfield State Hospital, Sykesville; Maryland Tuberculosis Sanatorium, Henryton and Mt. Wilson (two branches); Maryland School for the Deaf, Frederick; Maryland Training School for Boys, Loch Raven; Montrose School for Girls, Woodensburg. There were 2095 prisoners in State penal institutions on Jan. 1, 1928.

POLITICAL AND OTHER EVENTS. Financial irregularities among the employees of the State road commission, first discovered in the cases of four who pleaded guilty and received prison sentences in April, were subjected to investigation. Shortages and misappropriations said to be likely to run to several hundred thousand dollars were discovered. An act passed by the State general

assembly of 1927, requiring oyster packers and carriers to render to the conservation commission 10 per cent of the shells of oysters used, was contested and was sustained by decision of the State court of appeals April 19. The shells were sought by the state for planting purposes. The widening of the Washington Boulevard between Baltimore and Washington to 40 feet was started at the beginning of July. The inadequacy of Baltimore Harbor for the accommodation of vessels drawing 30 feet or more was made the basis of demands made of the Army engineers in March for deeper channels and anchorages. An appropriation of \$1,500,000 previously authorized by the legislature to provide Baltimore with an airport was maintained by some of the city authorities to be insufficient, and an expenditure of from \$3,000,000 to \$4,000,000 was proposed in July. Fort McHenry, memorable for its part in the second war with England, was restored to its condition of that period, for a celebration held on Defenders' Day, September 12. The Pennsylvania Railroad broached to the city council in May a plan for the construction of an elevated structure and lateral tunnel at a cost of \$22,000,000 to carry its traffic through the city.

ELECTION. The State cast on November 6 a vote far in excess of any in its previous record. The increase was divided between the two National tickets, but the Republican obtained the greater share. In consequence, while Smith and Robinson (Democratic) received a popular vote approximately that of Harding in 1920, the Republican candidates, Hoover and Curtis, won the State by an ample margin. The presidential vote was: Hoover (Rep.), 301,479; Smith (Dem.), 223,626. Senator William Cabell Bruce, Democrat, was defeated for reelection, his Republican opponent, Phillips Lee Goldsborough, being elected for the ensuing regular term. Four Democrats and two Republicans were elected to the House of Representatives.

OFFICERS. Governor, Albert C. Ritchie; Secretary of State, David C. Winebrenner, 3d; Treasurer, J. M. Dennis; Auditor, L. M. Milbourne; Comptroller, William S. Gordy, Jr.; Attorney-General, T. H. Robinson; Superintendent of Schools, Albert S. Cook.

JUDICIARY. Court of Appeals: Chief Judge, Carroll T. Bond; Associate Judges, John R. Pattison, T. Scott Offutt, Wm. H. Adkins, Francis N. Parke, Hammond Urner, W. M. Digges, D. Lindley Sloan.

MARYLAND, UNIVERSITY OF. A coeducational, State institution of higher learning at College Park and Baltimore, Md., founded in 1807. The enrollment for the autumn term of 1928 was 3391, distributed as follows: Agriculture, 140; arts and sciences, 573; dentistry, 383; education, 141; engineering, 260; graduate school, 85; home economics, 51; pharmacy, 368; law, 251; medicine, 411; and nursing, 102. The enrollment for the 1928 summer school, at College Park, was 626. The faculty in 1928 numbered 445. The total income from appropriations and other receipts amounted to \$2,344,660. The library contained 52,473 volumes. During the year many improvements were made in roads and walks and in landscaping the campus. President, Raymond A. Pearson, M.S., D.Agr., LL.D.

MASSACHUSETTS. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,852,356. The population by the State census of 1925 was 4,144,205.

The estimated population on July 1, 1928, was 4,290,000. The capital is Boston.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1928	472,000	732,000 ^a	\$13,889,000
	1927	479,000	687,000 ^a	14,341,000
Potatoes	1928	15,000	1,620,000	1,458,000
	1927	14,000	1,400,000	2,170,000
Tobacco	1928	7,600	9,462,000 ^b	3,225,000
	1927	7,100	8,683,000 ^b	3,099,000
Corn	1928	45,000	1,890,000	2,457,000
	1927	46,000	1,886,000	2,263,000
Cranberries	1928	13,900	325,000 ^c	4,875,000
	1927	13,900	370,000 ^c	4,625,000

^a tons, ^b pounds, ^c barrels.

MINERAL PRODUCTION. Stone continued much the most important mineral product. In 1926 it yielded 2,089,340 short tons, exclusive of red sandstone production, as compared with 2,209,560 in 1925; in value, the production was: 1926, \$6,216,793; 1925, \$6,640,333. Clay products rose to a total of \$3,971,586 for 1926, from \$3,739,164 for 1925. The sand and gravel production was: 1926, 2,969,172 short tons; 1925, 3,349,091. In value, it was \$3,276,787 for 1926 and for 1925, \$3,116,323. Of lime there were sold by producers in 1927, 181,000 short tons (estimated), and in 1926, 202,065; in value, \$2,322,000 (estimated) in 1926 and in 1925, \$2,653,746. The Total value of the State's mineral products, duplications eliminated, was \$16,786,577 for 1926; for 1925, \$16,831,529.

FINANCES. State expenditures in the year ending November 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of departments, \$40,695,503 (of which \$2,445,048 was for local education); for conducting public service enterprises, \$183,994; for interest on debt, \$1,610,420; for permanent improvements, \$7,084,660; total, \$49,574,577 (of which \$12,403,325 was for highways, \$7,430,036 being for maintenance and \$4,973,289 for construction). Revenues were \$60,146,822; of these, property and special taxes formed 51.2 per cent; departmental earnings, 6.6 per cent; sale of licenses, 26 per cent. Assessed property valuation was \$7,076,313,505; State taxation thereon, \$12,000,000. Net State indebtedness on Nov. 30, 1927, was \$22,103,085.

TRANSPORTATION. The total number of miles of railroad line under operation in the State on Jan. 1, 1928, was 2018.65. There were built in 1928, 8.65 miles of additional second track.

EDUCATION. In connection with the educational system of the State, the preliminary work was carried out for the erection of a new plant for the Massachusetts School of Art, reported to be the only art school in the United States supported wholly by State funds. The building, according to report in the *Journal* of the National Education Association, was to supply provision for the training of teachers in the fine and industrial arts. Over \$15,000,000 was spent in the State during the year 1928 for improving public-school buildings. The school population of the State for the academic year 1927-28 was placed at 691,683. There were enrolled in the public schools 736,177 pupils, of whom 596,220 were in the elementary schools and 139,957 in the high schools. Expenditure for public-school education

totalled \$66,961,521.83. Yearly salaries of teachers averaged \$1857.70 (estimated).

CHARITIES AND CORRECTIONS. The central institutional control of the State in 1928 was carried on by a Department of Public Welfare, headed by Richard K. Conant, Commissioner, and by an advisory board of six members. The department had divisions for the specialized handling of matters for aid and relief, of child guardianship and of juvenile training. It administered mothers' aid, aid to persons without legal settlement, care to dependent, neglected, and delinquent children, supervision of housing and town planning, and supervised private charitable corporations and boarding homes for infants. State institutions under its care with their inmate populations of Dec. 1, 1928, were: State Infirmary, Tewksbury, 2635; Massachusetts Hospital School, Canton, 279; Lyman School for Boys, Westborough, 521; Industrial School for Girls, Lancaster, 306; Industrial School for Boys, Shirley, 302. Another administrative branch, the Department of Mental Diseases, supervised the State insane hospitals, situated at Worcester, Taunton, Northampton, Danvers, Westborough, Medfield, Palmer, and Boston; likewise, the Waltham, Wrentham, Grafton, and Belchertown State schools. The Department of Public Health had supervision of the State sanatoria at Rutland, North Reading, Lakeville, and Westfield, and of the Norfolk State Hospital.

Under the Commissioner of Correction were the State Prison at Charlestown; Massachusetts Reformatory, Concord Junction; Reformatory for Women, Framingham; Prison Camp and Hospital, West Rutland; State Farm, Bridgewater. Prisoners in the three State penal institutions on Jan. 1, 1928, numbered 1866.

LEGISLATION. The Massachusetts General Court convened January 4 and remained in session until July 25, holding the fourth longest sitting in its history. Its business was prolonged by two matters, the investigation of the affairs of the office of the State attorney-general and the effort to find a solution of the problem regarding the disposal of the Boston elevated railway. The investigation of Attorney-General Reading arose out of a charge that he had, while holding his office, secretly accepted a fee from the Decimo Club, Inc., an enterprise of a fraternal and coöperative character, of which he had earlier undertaken an investigation. It was asserted that he had worked to discourage legal proceedings against the association in New York. The State house of representatives voted Reading's impeachment June 6, whereupon he immediately presented his resignation. The proceedings were then dropped, save that later in the session, upon report that Reading intended to present himself as a candidate for governor, the House resolved that in case he should do so the Governor be requested to call a special session of the Legislature to proceed with impeachment and trial.

With regard to the Boston elevated railway a number of proposals were offered, but no provision for the disposal of the system was adopted. A bill was passed at the close of the session to provide for the construction of a subway line. This measure, known as the Governor Square Bill, authorized construction of an extension of the existing Boylston Street subway, at a cost of some \$5,000,000 to be met half by the Boston Elevated and half by the city of Boston, subject to approval by the city. Another enact-

ment provided for the building of a vehicular tunnel to East Boston. Public control of the Eastern Massachusetts Street Railway was extended. There was enacted a preferential primary bill providing blanks on the primary ballots of the April, 1928, election only, for the expression of voters' presidential preferences. A measure was passed imposing a sale tax on gasoline at the rate of 2 cents a gallon. Building laws affecting Boston were amended by an act requiring that buildings higher than 155 feet be terraced, according to rules relating to their height and volume. Salaries of various State employees were increased in the yearly aggregate of \$455,000. The law authorizing cities and towns to incur debt was amended in various respects. By resolution, the special commission investigating and revising tax laws was continued; a survey of investment trusts was provided. A measure to require the Civil Service Commission to present reasons for failure to confirm appointments by the Mayor of Boston was vetoed. The Governor vetoed also a bill to permit the sale of provisions on Sundays. A proposal for a state-wide referendum on prohibition was defeated in the House.

POLITICAL AND OTHER EVENTS. The Cape Cod Canal went into the possession of the United States Government on March 31, and tolls for passage of vessels were discontinued. A movement was started in the State to organize the celebration in 1930 of the tercentenary of the establishment of the Massachusetts Bay Colony, with a view to attracting visitors from all parts of the Country. Fire on April 15 destroyed the Back Bay station of the New York, New Haven & Hartford Railroad. Mayor Nichols of Boston appointed in April a committee of seven, including President Lowell of Harvard, to make a survey of the school system and offer recommendations as to any deficiencies found in it.

Industrial troubles at New Bedford started when, on April 9, the textile mills there declared a general reduction of 10 per cent in wages, effective April 16. A strike of about 30,000 cotton mill operatives started on the date when the cut went into effect. Work ceased in 56 mills. Efforts were made by the employers after a time to reopen some of the mills, but this was opposed both by organized picketers and by attacks on some of those who sought to return to work. The police acted to prevent mass picketing. Twenty-nine arrests were made June 30; nevertheless a concerted effort to open the mills on July 9 completely failed in the face of numerous pickets. Supported by a court decision that mass picketing was illegal, the police set out on June 30 to break it up. They encountered opposition, but no formidable resistance and made more than 250 arrests. A mob later surrounded police headquarters and made a riotous demonstration. National Guardsmen, previously ordered under arms in their armory, were called out and drove away the mob without bloodshed. Of the prisoners, six men and one woman were sentenced to six months imprisonment, several to three months, and 205 men and women to two months each.

On the night of February 2, fire destroyed a great part of the business section of Fall River. The estimated loss was \$7,000,000 or upward. The city of Springfield undertook the work of bringing a municipal water supply to the city by means of a tunnel through Cobble Mountain, conveying part of the flow of Little River.

ELECTION. The State ran counter to its record and to the tendency even in many Democratic States by giving a small plurality for Smith and Robinson, the Democratic National candidates, over Hoover and Curtis, Republican. It likewise reelected to the United States Senate David I. Walsh, Democrat, who defeated Benjamin Loring Young, Republican. The partisan proportions of the State delegation to the House of Representatives remained unchanged, at 13 Republicans and 3 Democrats, the incumbents in most cases being reelected. In the election of State officers, however, Lieutenant-Governor Frank G. Allen, Republican, received a moderate plurality over the Democratic candidate, Charles H. Cole. The election results were influenced by the high proportion of persons of Roman Catholic faith among the population, particularly in the industrial centres populated largely by French Canadian and Portuguese elements. The vote for Hoover was nevertheless greater than that for the Republican presidential candidate in 1924 or in 1920. A referendum petition was submitted on the Eighteenth Amendment in 36 of the 40 State senatorial districts. It proposed that the State senator in each case be instructed to vote for memorializing Congress for the repeal of the amendment. The vote was reported as 414,512 in favor, 283,223 against the proposal. A referendum on a law to permit public sports on Sundays likewise gave a favorable majority. The presidential vote was: Smith (Dem.), 792,758; Hoover (Rep.), 775,566.

OFFICERS. Governor, Alvan T. Fuller; Lieutenant-Governor, F. G. Allen; Secretary of the Commonwealth, Frederic W. Cook; Treasurer, W. S. Youngman; Auditor, A. B. Cook; Attorney-General, Arthur K. Reading; Commissioner of Education, Payson Smith; Commissioner of Public Welfare, Richard K. Conant.

JUDICIARY. Supreme Judicial Court: Chief Justice, Arthur Prentice Rugg; Associate Justices: Henry King Braley, John Crawford Crosby, Edward Peter Pierce, James Bernard Carroll, William C. Waite, George A. Sanderson.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY. A non-sectarian institution for technical education at Cambridge, Mass., founded in 1861. The enrollment for the autumn of 1928 was 2868, including 412 graduate and 45 unclassified students. For the summer session the registration was 1414. There were 215 members on the faculty, and 272 others on the staff of the Institute. The productive funds amounted to \$29,800,000, and the income for the year to \$3,050,000 from various sources, as follows: funds, \$1,658,000; student fees, \$897,000; miscellaneous, \$495,000. The book value of land and buildings in Boston and Cambridge was \$13,453,000. The library contained 260,000 volumes. An infirmary, two dormitories, and the Guggenheim Aeronautical Building were completed in 1928. President, Samuel Wesley Stratton, D.Eng., D.Sc., Ph.D., LL.D.

MATERNITY PROTECTION. The annual report of the U. S. Children's Bureau for the fiscal year ending June 30, 1928, indicated the following status of the maternity and infancy act: During the year 45 States and the Territory of Hawaii were cooperating with the Federal Government for the perfection of measures to safeguard the lives of mothers and children. The legislatures of the States of Connecticut, Massachusetts, and Illinois had never accepted the

provisions of the act. For 1923, 1924, 1925, 1926, 1927, and 1928 the maximum amount available for distribution among the States was \$1,190,000 yearly; the following were the amounts accepted by the States and Hawaii for the years indicated: 1923—\$716,333; 1924—\$877,122; 1925—\$932,754; 1926—\$947,959; 1927—\$977,866; 1928—\$919,075. The 1928 appropriations are not available to the States until the middle of 1929.

During the fiscal year 1928, 7341 prenatal and child-health conferences, 2002 prenatal conferences, and 18,839 child-health conferences were held in the States cooperating with the Federal Government. In addition more than a half-million home visits were made by the visiting nurses on the staffs of the administrations in charge of the service; and 150,000 expectant mothers were reached by personal contact or through correspondence. It is interesting to record that each year sees a number of counties taking on the work that had its initiation in the Federal and States programmes. At the end of the fiscal year the roll of counties doing this work was 162. In 1928, 103 combined prenatal and child-health centres, 190 child-health centres, and 17 prenatal centres were opened.

The report of the Children's Bureau recorded the assistance that had been given particular States for the meeting of their peculiar problems. For example, a Negro physician on the Bureau's staff spent a year in two Southern States assisting Negro midwives; the Bureau's consultant in obstetrics gave a graduate course in obstetrics in one State and the specialist in pediatrics did similarly in another; Bureau agents helped enroll four States into the birth-registration area of the United States. Maternity mortality studies were being carried on in the following States: Kentucky, Virginia, Michigan, Maryland, Nebraska, Minnesota, Oregon, Washington, Rhode Island, Wisconsin, Alabama, and New Hampshire. Another activity of this government bureau made possible by the Sheppard-Towner Act was the holding annually of conferences of State directors interested in maternity and infancy work. The fifth annual conference of this type was held in April, 1928. There were present the representatives from 46 States.

INFANT AND MATERNAL MORTALITY. In the year 1927, the birth-registration area saw the lowest infant mortality rate in its history. In that year 1,849,902 babies were born and 119,093 babies died, making a rate of 65 deaths per 1000 live births as compared with 73.3 for the birth-registration area in 1926. Oregon had the particularly low rate of 47.5 and Washington's rate was 49.8. It should be noted, however, that New Zealand's low rate of 39 in 1927 was a mark that the States had still to aim at.

The Bureau also reported that the maternal death rate over the period 1921-26 had moved downward. For the birth-registration area the rate was 68.2 per every 10,000 live births. In 1926, the rate of deaths was 65.6. The urban rate in 1921 was 77.1 and in 1926 it was 73.9. The rural rate in 1921 was 59.4 and in 1926 it was 56.7. It may be noted that the rates have decreased despite a tendency to scrutinize more carefully all death certificates of women of child-bearing age.

The report cited has this significant statement to make with regard to the effect of the Sheppard-Towner Act on decreasing maternal mortality:

"A comparison of maternal mortality rates for the period 1917 to 1921, exclusive of 1918 (because of the influenza epidemic), with the period 1922 to 1926 in States that were in the birth-registration area in 1917 shows a decrease in maternal mortality in every one of these States that had cooperated under the maternity and infancy act for four years or longer. A majority of the States had greater reductions in the rural areas than in the urban areas. Utah had a decrease of maternal mortality in rural areas of 35.9 per cent; Maryland, Michigan, Indiana, Washington, New York, and Minnesota had decreases of 20 to 26 per cent."

EUROPE. The French law of 1913, allowing mothers to quit their jobs for four weeks precedent to childbirth and for four weeks following without affecting the status of their contractual relations with their employers, was amended in January, 1928, to make the periods before and after childbirth 12 weeks. In Germany a new code was passed in July, 1927, which covers the status of expectant mothers under sickness insurance law. Mothers are permitted to break labor contracts, without penalty, six weeks prior to childbirth and for six weeks after the confinement. The post-natal period may be extended another six weeks on the certification of a physician. Nursing mothers may take off one hour a day during the first six months at full pay.

MATHEWS, JOSEPH McDOWELL. American surgeon, died at Los Angeles, December 2. Born at Newcastle, Ky., in May, 1847, he was graduated from the medical school of the University of Louisville in 1867. Practicing at Louisville, he became professor of surgery at the city's hospital college of medicine. Besides being president of the American Medical Association, 1898-99, he was, at one time, head of the Kentucky State Board of Health, the Mississippi Valley Medical Association, and the State Medical Society. Dr. Mathews, who received the honorary LL.D. degree from Waynesburg College, Pa., wrote several medical books, including: *Mathews on Diseases of the Rectum, Anus, and Sigmoid Flexure* (1893; 3d ed. 1903); and *How to Succeed in the Practice of Medicine* (1902).

MAUNDER, maun'dér, EDWARD WALTER. English astronomer, died at Greenwich, England, March 21. He was born at London, Apr. 12, 1851, and after attending the University College School and King's College, London, he became assistant at the Royal Observatory, Greenwich, Nov. 6, 1873, and superintendent of the solar department, where he remained until 1913, returning for three years during the World War. He was elected Fellow of the Royal Astronomical Society, in 1875, and served as a member of its council, 1885-89, and 1891-92, becoming its secretary in 1892 and vice president in 1897. During his long service in the solar and spectroscopic department he photographed the sun almost daily, in order to locate and measure the spots and faculae. He demonstrated the theory that magnetic storms are coincident with the appearance of sun spots, and the importance of his deductions ranks with previous work done on the solar surface. Maunder was largely responsible for the foundation of the British Astronomical Association in 1890 and contributed to its rapidly acquired fame, serving as its president, 1894-96. He supplemented his observations at the Greenwich Observatory with six expeditions to

view solar eclipses, going to the West Indies, 1886, Lapland, 1896, India, 1898, Algiers, 1900, Mauritius, 1901, and Labrador, 1905. Besides writing papers on the solar origin of magnetic storms, Maunder edited several astronomical publications, particularly the *Observatory* (1881-87); the *Journal and Memoirs of the British Astronomical Association*, (1892-97); and the *Astronomical Department of Knowledge* (1895-1904). He also wrote a number of books of general interest, including: *Royal Observatory, Greenwich, its History and Work; Astronomy without a Telescope* (1902); and *The Astronomy of the Bible* (1908).

MAURITANIA. A French colony in French West Africa, consisting of eight districts; having the status of a colony since Jan. 1, 1921. Area, 347,400 square miles; native population, 287,338, mostly Moorish Mohammedans; European population, about 800. The budget for 1927 was 11,725,800 francs. The colony is under a lieutenant governor, subject to the Governor General of French West Africa. See FRENCH WEST AFRICA.

MAURITIUS, ma-rish'yūs. An island possession of Great Britain in the Indian Ocean situated 500 miles east of Madagascar, and with its dependencies of Rodrigues, Diego Garcia, the St. Brandon group of six islands, and other small islands, forms a colony of the British Crown. Area of Mauritius, about 720 square miles; population, according to the census of 1921, 385,074. The estimated population at the end of 1926 was 398,236. Capital, Port Louis, with a population of 53,663 in 1926 (including suburbs). In recent years the greater part of Port Louis has passed from the hands of the Europeans to Asiatic or Chinese hands. The movement of population in 1926 was: Birth rate, 41.8 per thousand (exclusive of Indians); death-rate, 25.4 per thousand (also exclusive of Indians). Primary education is free but not compulsory. At the end of 1926 there were 57 government schools, 94 aided schools, and 3 technical schools. The average attendance in government schools in 1926 was 10,469, in aided schools, 14,202, more than three-fourths of whom were in Roman Catholic schools. In 1926 the exports were valued at £2,532,749 and the imports at £3,373,076. The staple exports are sugar, aloe fibre, and coconut oil. The principal participants in the foreign trade are the United Kingdom, the British possessions, France, and the islands of Réunion and Madagascar. The registered shipping on Jan. 1, 1927, listed 22 vessels of 5989 tons. Vessels entered in 1926, 187 of 508,555 tons; vessels cleared, 194 of 541,120 tons, the greater part of each being British. Railway mileage, 144, of which 24 miles are narrow gauge. There is cable connection with Australia, South Africa, and the islands of Madagascar, Zanzibar, and Réunion. The colony is under a governor aided by an executive council and a council of government, the latter having a minority of elected members. Governor in 1928, Sir Herbert James Read.

MAVER, WILLIAM, JR. American electrical engineer, died at Jersey City, N. J., August 8. Born at Forfar, Scotland, Oct. 12, 1851, he was taken to Canada when he was six years old, and was educated at private schools. He took part in the Fenian raid campaign, 1865-66, and he later became a fifer in the Fifth Royal Regiment of Montreal. After moving to New York, he was an electrical expert for the Western Union Tele-

graph Company from 1880 until 1884. For the next three years he was electrical engineer for the Baltimore & Ohio Telegraph Company but in 1888 he returned to the Western Union Company. He was electrical engineer for the Safety Insulated Wire & Cable Company from 1889 to 1890 and electrician for the Consolidated Telegraph and Electrical Subway Company of New York from 1889 until 1896, being also electrical engineer for the New York Heat, Light and Power Company from 1893 until 1897. Mr. Maver was often employed as an expert adviser in patent litigations. He was proprietor of the Maver Publishing Company, a fellow of the American Institute of Electrical Engineers, a member of the New York Electrical Society, an honorary member of the Association of Railway Telegraph Superintendents, and a member of the Old-Time Telegraphers' Association. Beside numerous articles on electrical subjects, Mr. Maver wrote: *The Quadruple and Other Articles on Telegraphy* (1884); *Practical Systems of Electrical Telegraphy* (1888); *American Telegraphy and Encyclopædia of the Telegraph* (1892, revised ed. 1912); *Maver's Wireless Telegraphy and Telephony* (1903, 4th ed. 1910); and *Progress in Wireless Telegraphy* (1905).

MAXWELL, JONATHAN DIXON. American inventor and automobile manufacturer, died at Chestertown, Md., March 8, at the age of sixty-three. He entered the automobile business through the medium of the bicycle, being, when he first became interested in motors, the proprietor of a small bicycle repair shop at Kokomo, Ind. His partner was Elmer Apperson. These two men, with Elwood Haynes, built the machine which is regarded as the predecessor of the modern American automobile; it is now in the Smithsonian Institution at Washington, D. C. At one time Maxwell lived at Montreal, P. Q., where he invented one of the first farm tractors driven by a motor. Later he established a factory at Tarrytown, N. Y., for the making of an automobile bearing his name. In 1905 Henry Ford visited Tarrytown in an attempt to interest Maxwell in a combination to control the field of the low-priced car. The attempt failed, but Ford and Maxwell remained close friends. For some years the latter was vice president of the United States Motors Company, and he retired from the automobile field when that company was dissolved. The remaining years of his life were passed on his farm near Chestertown, Md.

MAYOTTE (mā-yōt') AND COM'ORO ISLANDS. An archipelago belonging to France and administered by the Governor-General of Madagascar. Total area, about 790 square miles; population in 1921, 109,860; in 1925, 119,305. The area of Mayotte is 140 square miles, and the population (1925) about 12,674. Vanilla is one of the chief products; others are sugar, cacao, aloes, and perfumes. The chief imports are cotton fabrics, metals, and rice; the principal exports, hides, sugar, copra, and vanilla. The islands are in the Mozambique Channel, midway between Africa and the northern end of Madagascar.

MEAD, WILLIAM RUTHERFORD. American architect, died at Paris, June 20. He was born at Brattleboro, Vt., Aug. 20, 1846. He entered Norwich College in 1861, remaining until 1863, when he went to Amherst College, from which he was graduated in 1867. He studied architecture under Russell Sturgis in New York, after which he

spent nearly two years in foreign travel and study. He began the independent practice of architecture in 1872 in partnership with the late Charles F. McKim, in New York. Two years later W. B. Bigelow joined them, but this connection was severed in 1878; and in 1879, with the addition of the late Stanford White, the firm assumed the name of McKim, Mead & White, one of the foremost associations in the history of American architecture. The hand and influence of Mr. Mead are traceable in the works of this distinguished firm, although he never assumed supreme control of any of them. Among the monuments to their skill are the Boston Public Library; the library and other buildings of Columbia University, New York; the Morgan Library, New York; the Agricultural Building at the World's Columbian Exposition, Chicago, 1893; the great scheme for the improvement of Washington, D. C. (in conjunction with D. H. Burnham and F. L. Olmsted, Jr.); the Pennsylvania Railroad station, New York; the old Madison Square Garden (now demolished) and the Washington Arch, New York; the Century, Metropolitan, University, and other clubs, New York, and the Library and Hall of Fame of New York University. The firm also designed the War College building, Washington, D. C.; the New York Postoffice building, and many other notable structures, and planned the alterations in the White House, the executive mansion at Washington. Mr. Mead retired from practice in 1920. He was considered one of the greatest classicists ever to practice in America, with especial skill in and love for the Italian Renaissance. In 1922 he was made a knight commander of the Order of the Crown of Italy, in recognition of his work in introducing Roman and Italian Renaissance architectural styles in America. He was a fellow of the American Institute of Architects, a member of the American Academy of Arts and Letters and president of the American Academy in Rome. In 1902 he received the degree of LL.D. from Amherst College; he was elected to the National Academy of Design in 1910, and he received the gold medal of honor of the National Institute of Arts and Letters.

MEASLES. A brief summary of the status of progress in the knowledge of this affection is given by H. Deicher in an article on the movement of epidemic diseases (*Deutsche medizinische Wochenschrift*, Nov. 9). Efforts to reveal the exciting cause have of late receded into the background. It has been shown of late that either the serum of convalescents from measles, or, this failing, any adult blood serum, has preventive qualities; but since these announcements, progress seems to be at a standstill. To narrate the alleged but unsubstantiated claims may be mentioned the cocci believed by Caronia to be the exciter of the disease, the cell inclusions of Lipschutz (found only in apes infected with human measles), anerobic organisms cultivated from measles blood, green streptococci found by American authors, etc., etc. Degkwitz alleged that he could cultivate measles virus outside the body although without any success at isolation. In another direction it has been found that measles, like quite a few infectious diseases (including vaccinia) can sometimes be followed by encephalitis. The author himself had seen a case, and in general the ability of measles to cause serious nervous complications must now be recognized. He believes firmly that these complications will

subside shortly, that they are transitory and not an appanage of the disease.

MEAT. See LIVESTOCK.

MECHANICAL ENGINEERS, AMERICAN SOCIETY OF. An organization founded in 1880 and incorporated in 1881 under the laws of the State of New York, with the following objects: To promote the arts and sciences, to encourage original research, to foster engineering education, to advance the standards of engineering, to promote the intercourse of engineers among themselves and with allied technologists, and, in coöperation with other engineering societies, to broaden the usefulness of the engineering profession. Considerable progress was made in standardization of mechanical engineering during the year, 25 projects being sponsored by the Society under the direction of various committees, many of which completed standards and safety codes. Two new projects for which the Society accepted sole or joint sponsorship in 1927-28 were: Speeds of driven machines, and screw threads for small hose couplings; and 154 committees were at work on the standards projects sponsored by the Society which involved the work of 657 committee-men, of whom 296 were members of the Society. Research committees numbering 24, with a personnel of 315 members, were at work on researches on projects in engineering and industry. Over 400 meetings were held during the year throughout the country in the various geographical groups, in addition to the annual and spring meetings and regional meetings. There were 69 local sections and 10 professional divisions, caring for the different phases of mechanical engineering.

The publications of the society included: *Mechanical Engineering*, the journal; *Transactions*, containing the year's papers of specialized interest and issued quarterly on the basis of registration in the professional divisions; the *Record and Index* of all papers presented at authorized meetings, committee proceedings, the presidential address, etc.; *The Engineering Index* to the technical press of the world; *Condensed Catalogues of Mechanical Equipment*; the *A. S. M. E. News*, the semi-monthly newspaper; and the *Membership List* of the Society. The 1928 meeting was held at the headquarters in New York on December 3-7. In November, 1928, the membership was 19,085. Officers for 1928-29 were: President, Elmer A. Sperry; vice presidents, John H. Lawrence, E. A. Muller, Newell Sanders, Paul Wright, Robert L. Daugherty, William Elmer, and Charles E. Gorton; past presidents, Fred R. Low, W. F. Durand, W. L. Abbott, C. M. Schwab, and Alex Dow; managers, Paul Doty, Ralph E. Flanders, Conrad N. Lauer, Frederick H. Dorner, William A. Hanley, Luther B. McMillan, Charles M. Allen, Robert M. Gates, and Ely C. Hutchinson. Headquarters are located in the Engineering Societies Building, 29 West 39th Street, New York.

MEDICAL ASSOCIATION, AMERICAN. A union of the constituent, or State and Territorial, medical associations, founded in 1847, "to promote the science and art of medicine and the betterment of public health." The legislative powers of the association are vested in a House of Delegates which is empowered to transact all business not provided for in the by-laws and

elects the general officers, and the board of nine trustees. Members of the association must be members of constituent associations, and these members in good standing constitute the Scientific Assembly of the American Medical Association, which meets annually to present and discuss subjects pertaining to the science and art of medicine. This assembly is divided into 16 sections, each having its own officers who serve for a year. Some of the sections are practice and medicine; survey, general and abdominal; preventive and industrial medicine and public health; radiology; nervous and mental diseases; pathology and physiology; and disease of children. The annual convention in 1928 met in Minneapolis, Minn., on June 11, with an attendance of about 6000. At this meeting eight scientific sections were in session and leading authorities and investigators in the field of medical science announced and discussed the latest discoveries and methods in treating the sick. The scientific exhibit, an outstanding feature of the convention and the largest of its kind ever assembled, in charge of Dr. V. C. Myers, professor of biochemistry at Western Reserve University, Cleveland, Ohio, showed the laboratory methods used by physicians in diagnosis. An exhibit on diseases of children showed studies on vitamins and milk as applied to infant feeding; and plastic surgery was illustrated with models, photographs, and artificial parts from civil and military practice. The membership of the association in 1928 totaled 96,490. The annual convention for 1929 was scheduled for Portland, Oregon, July 8 to 12. Officers for 1928-29 were: President, William S. Thayer, Baltimore; president-elect, Malcolm L. Harris, Chicago; vice president, W. A. Jones, Minneapolis, Minn.; secretary and general manager, Olin West, Chicago; treasurer, Austin A. Hayden, Chicago; and editor, Morris Fishbein, Chicago. The official publication is the *Journal of the American Medical Association*. The headquarters of the Association are at 535 North Dearborn Street, Chicago, Ill.

MEDICAL CENTRE. See ARCHITECTURE.

MEDICAL PROGRESS. In accordance with the usual plan of the YEAR BOOK, articles in this field refer in the first place to the great social maladies which destroy, cripple, or incapacitate large numbers of people and call for concerted private and government efforts to abate them. These are naturally subdivided into acute transmissible epidemic diseases such as BUBONIC PLAGUE, SMALL POX, YELLOW FEVER, TYPHOID FEVER, DENGUE, INFLUENZA, etc., etc; severe endemic acute diseases such as PNEUMONIA, and ACUTE RHEUMATISM; such chronic infections as SYPHILIS, TUBERCULOSIS, MALARIA, LEPROSY, etc. and diathetic or nutritional affections such as DIABETES, CANCER, GOITER, PELLAGRA, RICKETS, and the like. All such affections count their victims by thousands. Other diseases are of interest because they are comparatively new and unknown or because of unusual death rate. Of new diseases there are in addition to ENCEPHALITIS or sleeping sickness, TULAREMIA and MALTA FEVER. Chronic affections localized in special organs comprise ANÆMIA, HEART DISEASE, GALLSTONE DISEASE, INSANITY, EPILEPSY, AND MENTAL DEFECT, all of large incidence. In addition there are scattering articles which cannot be brought under any special rubric and which vary from year to year. Here belong such startling innovations as INSULIN and VITAMINS.

MENINGITIS. Epidemic or cerebrospinal meningitis is known to be particularly deadly to nurslings and very young children in general, the mortality reaching 80 to 90 per cent, and none of the remedies which appear able to modify the disease in older subjects proved of any value in this group. Even the apparent success in the older groups may be attributed, in part at least, to a relatively milder type of infection prevalent in more recent years. Dr. Mader of Frankfurt am Main, has obtained, however, a perfect outcome in a series of five children with ages varying from six months to four years and this result is attributable solely to a chance infection with measles. In this series death was imminent not only from the acute symptoms of the early stage of the disease, but also from the chronic stage which followed this period. The first child was not attacked by measles until the 13th week of the disease, and the second on the 47th day; but, in the remaining three, measles supervened on the 10th, 11th, and 13th days. In both types of case the intercurrent action of the measles infection prevailed over the original disease and the children all made good recoveries. Just at present it is impossible to explain the *modus operandi* of these cures, but the author was inclined to attribute the good result to the extensive eruption of the measles (see *Deutsche medizinische Wochenschrift*, Nov. 9, 1928).

MENTAL DEFECTIVES. In May, Dr. W. Timme of New York announced before the American Association for the Study of the Feeble-minded that he had secured remarkable improvement in the special type of mentally defective known as Mongolism through feeding the patients on pituitary substance, especially the anterior lobe in combination with hypodermic injections of extracts of the same and ordinary thyroid feeding. After ten years' experience in this field, he had brought these subjects to such a level of mental efficiency that they could no longer be spoken of as idiots. One patient attained a normal intellectual quotient, while some who originally were idiots unable to dress themselves, eat properly or converse learned arithmetic up to multiplication with three or more figures and long division; to write letters and even to do oral arithmetic. It must not be understood that all of these subjects are susceptible to such improvement, for some have not responded to the treatment. But when it is considered that textbooks uniformly speak of these cases as hopeless the significance of Dr. Timme's report can be appreciated.

MEREDITH, EDWIN THOMAS. American editor, publisher, and public official, died at Des Moines, Iowa, June 17. He was born at Avoca, Iowa, Dec. 23, 1876. He was educated at Highland Park College, Des Moines. His father was a successful farmer and also publisher of a weekly agricultural paper called *The Farmers' Tribune*. The younger Meredith, after leaving college, conducted the paper with much success until 1902; then he transformed it into a monthly, *Successful Farming*, which attained a very large circulation. He interested himself also in banking, becoming a director of the Iowa Trust and Savings Bank and the Chicago Federal Reserve Bank, and in politics. He was the unsuccessful

Democratic candidate for United States Senator in 1914 and for Governor of Iowa in 1916. He was appointed a member of the board of excess profits advisers by Secretary McAdoo in 1917, and a member of the Industrial Conference by President Wilson in 1919. From January, 1920, to March 4, 1921, he was Secretary of Agriculture in the cabinet of President Wilson. He was considered as a possible Democratic candidate for President in 1924 and 1928. Mr. Meredith was a member of the Advertising Club of America, of which he had been president, and was also a director of the Chamber of Commerce of the United States.

MERRILL, WILLIAM BRADFORD. American journalist and newspaper manager, died at New York, November 26. He was born at Salisbury, N. H., Feb. 27, 1861, and attended the Boston Latin School, 1874-76, continuing his studies in Paris, 1876-78. On his return to the United States he took a position, in 1879, as a reporter of *The Philadelphia North American*. He transferred to *The Philadelphia Press*, as staff correspondent in the same year, subsequently becoming telegraph editor, 1880, dramatic and Sunday editor, 1881, and managing editor, 1886. His success was such that in 1891 he was made managing editor of *The New York Press*. He accepted an offer of a similar place on *The World* in 1896, later serving as business manager, 1901-07. William Randolph Hearst made him manager of the *New York American* in 1908, and in 1917 placed him at the head of all the Hearst papers. Mr. Merrill was forced by ill health to resign in 1927. He wrote, *Guide to Railways of the United States* (1881).

MESOPOTAMIA, IRAK or IRAQ. A territory under British mandate in Asia. It comprises the region on the Tigris and Euphrates rivers between Persia and Northern Arabia; formerly consisting of the vilayets of Bagdad, Basra, and Mosul in the Turkish Empire; conquered by British and Indian troops during the World War and recognized afterward as an independent state to be placed under a mandatory power, in this case Great Britain. On Dec. 14, 1927, a treaty was signed between Great Britain and Irak (ratified in 1928), by which the former undertook to recognize the latter as an independent State.

AREA AND POPULATION. The area is given at 143,250 square miles; population, according to the census of 1920, 2,849,282, distributed as follows among the respective divisions: Bagdad, 1,360,304; Basra, 785,000; Mosul, 703,378. The inhabitants are mainly Mohammedan and are divided among the two Mohammedan sects as follows: Shiites, 1,494,015; Sunnites, 1,146,685. The Jews in 1920 numbered 87,488 and the Christians, 78,792. The chief seaport is Basra on the Persian Gulf.

EDUCATION. In 1926 there were 22,607 pupils in 247 government schools, with 877 teachers, and (1925) 12,900 pupils in 45 private schools. There are secondary schools at Bagdad and Mosul with 577 pupils, and six intermediate schools at other places with 87 pupils. The education budget for the year 1926-27 amounted to 2,524,000 rupees.

PRODUCTION. The soil of the country is rich, but there are vast areas which can only be cultivated if irrigated. The natural oil resources have not as yet been fully investigated, but rich deposits are believed to exist. The growth of cotton is be-

ing stimulated, and 3000 bales were brought to the ginneries in 1926. Other crops cultivated are wheat, barley, oats, linseed, and flax. The date crop is important.

COMMERCE. No later figures for commerce were available than those for 1925-26 when exports totaled 50,293,783 rupees and imports 107,040,626 rupees. Mesopotamia's chief commercial importance is as a medium for transit trade to and from Persia.

FINANCE. The estimated revenue in 1926-27 was 55,171,900 rupees and the estimated expenditure, 54,962,620 rupees.

COMMUNICATIONS. The total route mileage of railways open on Mar. 31, 1926, was 811 miles. There were also 194 miles of siding, making a total of 1005 miles. Railway earnings in the year 1925-26 were 9,499,995 rupees and expenses 8,920,974 rupees.

GOVERNMENT. The organic law passed by the constituent assembly in June, 1924, provides for a limited monarchy and a responsible government. The legislative body consists of a senate of 20 nominated "elder Statesmen," and the lower house of 88 elected deputies. King in 1928, Faisal; Premier and Minister of Foreign Affairs, Abdul Mohsen Es Saadun (appointed in January, 1928).

HISTORY. Early in the year the parliament was dissolved and new elections ordered to attempt to get a workable majority for the new Prime Minister, Abdul Moshen Es Saadun, who succeeded Jafar Pasha. Jafar Pasha resigned because he was unable to get his conscript army bill through and also because of dissatisfaction with the financial situation. The elections in May returned 70 of the 88 candidates who promised to support the Government. No other items of interest were reported in the press during the year.

METABOLISM STUDIES. See FOOD AND NUTRITION.

METALLURGY. Improvements in the metallurgy of zinc were a feature of the year 1928, a considerable advance being made both in the retorting process, already long established, and in the electrolytic process, of more recent development. Copper metallurgy proceeded along familiar lines, with most of the reduction plants operating at capacity toward the end of the year. Lead smelters were giving increased attention to sintering, and the Harris process of refining had had intensive development. The gold and silver plants reported little that was new in the way of technology, though several new plants and extensions had been made. In ore dressing, more attention was paid to crushing machinery and to proper sizing of particles. The flotation process of concentration continues to dominate the field, with increased application to ores of every character, and to refinements for the purpose of securing higher recoveries and more nearly automatic control.

ORE DRESSING. The Symons cone crusher continued to displace other machines for crushing ore between 10 inches and $\frac{1}{2}$ inch, a field in which rolls were formerly generally accepted, though disk crushers also found favor. The large capacity of the cone crusher and its wide range of size between feed and product, make it a superior machine. Furthermore, it is generally considered to give a smaller proportion of unduly fine material than most other machines that have been used for the purpose. Jaw or gyratory

crushers continued to be used for primary breakers, preferably with heavy duty manganese steel-apron feeders where direct feeding from the bins is not possible. An excellent example of such practice was to be seen at the New Cornelia mill at Ajo., where an 8-foot conveyor, 72 feet long, operating at a speed of 9- to 10-feet per minute, handled 900 tons an hour, feeding a 54-inch gyratory crusher for reducing the ore to 6 inches.

Ball mills had been pretty well standardized, though each year sees a few new ideas emanate from the Patent Office. Compartment mills had been designed, in which fairly coarse grinding is done in one end of the mill, the product then passing a grate to the other end where conditions are such as to promote fine grinding. Such mills had been put on the market but had not been generally accepted. Special forms of liners also were devised, such as were used in the Williamson ball mill, and the Straub rib-cone mill, which, in trial installations, had given favorable results. The Williamson installation at the Inspiration concentrator, in Arizona, gave a ball consumption of 1.2 pounds of balls per ton of ore ground, and a power consumption of $7\frac{1}{4}$ kilowatt-hours per ton, both lower than standard practice.

Marked attention was being paid to short-circuiting material that was already ground sufficiently fine, so that the entire mill tonnage does not pass through every crushing or grinding machine. The Hayden, Ariz., concentrator of the Nevada Consolidated Company had been a leader in this investigation; there, it was a maxim that no fine crushing should be done in the coarse-crushing department, and no coarse grinding in the fine-crushing department. The Salt Lake City station of the U. S. Bureau of Mines, had recently done a great deal of laboratory experimentation in this same field, the results having been published, in part. The truth of the Rittinger theory of the ratio of work required in particle reduction had been confirmed. It was found that the work required to grind ore from 100 to 200 mesh was greater than that required to break it in the mine and crush and grind it down to 100 mesh, so it was evident that steps should be taken to avoid excessively fine grinding wherever possible. Some ores have their valuable minerals so intimately associated that the finest grinding is necessary, but even when this condition obtains it is often possible to concentrate the valuable minerals in a fairly coarse condition, and then to grind the concentrate before making the final separation by selective flotation or other means.

Proper screening and classifying equipment is, of course, necessary for close control with these ends in view. Many excellent vibrating screens were being offered, displacing trommels used for finer sizing. For wet sizing, the ordinary forms of drag classifiers were quite widely supplemented by apparatus of the bowl type, especially where a considerable percentage sufficiently fine for flotation could be extracted from a roll- or cone-crusher product. The bowl classifier was particularly well suited to the separation of coarse sand and primary slime. No advantage is gained, however, by using the bowl type for secondary classification in closed circuit with ball mills.

Jigs and tables were not in general use in modern concentration plants, straight flotation being the process generally employed except where there was a marked difference in specific gravity, where there is no great loss in slimed products,

or where oxidized ores are treated, as cassiterite.

Even for tin ore, however, flotation was applied indirectly in Bolivia, for floating the impurity, pyrite, and thus improving the grade of the cassiterite concentrate. The U. S. Bureau of Mines was also doing some investigational work in the floating of some non-metallics, such as limestone, flourspar, and phosphate. Lead oxides were being successfully floated at the Warren, Ariz., mill of the Phelps Dodge Corporation, though but little publicity had been given to the work. Over 90 per cent of the lead is recovered on some oxidized ores, which are previously sulphidized by treatment with a solution of sodium sulphide.

Various forms of potassium or sodium xanthate continued to be the favorite reagents for selective flotation, generally used in connection with pine oil, in a circuit made alkaline with lime. The alkalinity is closely adjusted and controlled. Several flotation machines were popular, the Fahrenwald being one of the newer mechanically agitated types that had had an important application during the last year on the amygdaloid native-copper ores of Michigan, heretofore thought not to be amenable to flotation. In the Southwest, the jet, or free-air type of machine, as exemplified by the Forrester, Hunt, and Southwestern Engineering machines, had proved popular, for they were cheap in first cost as well as in operation, using very low pressure air, and their metallurgical efficiency seemed to be satisfactory, though generally no better than the older machines.

Flotation litigation was not so active, though differences between the three interests just mentioned may have to be settled in the courts. The most important of the Minerals Separation patents have now expired. Minerals Separations' soluble frothing agent patent was upheld in the suit against Magma, by the Federal District Court in Maine, but the decision was reversed in the middle of January, 1929, by the Court of Appeals. The Metals Recovery suit against Anaconda, for the use of xanthate, went against the appellant.

HYDROMETALLURGY. New construction and expansions of old facilities for the production of electrolytic zinc in North America was a feature of 1928. The Consolidated plant at Trail, B. C., was being enlarged to an expected capacity of 375 tons daily in 1929; the Anaconda plant at Great Falls, Mont., turned out about 335 tons a day, and the new plant at Anaconda, completed in 1928 at a cost of about \$2,000,000, had a capacity of 165 tons; the Sullivan plant, completed in 1928, would produce 50 tons daily, and was to be enlarged to twice or thrice that; and the Evans-Wallower plant, at St. Louis, which was to be completed in 1929, was to be of 50 tons' capacity. The Sullivan and Evans-Wallower plants followed the designs of U. C. Tainton; in his process, the return electrolyte used for leaching carries 28 to 30 per cent of free sulphuric acid, and the electrolysis is carried out at a current density of 100 amperes per square foot, each of these amounts being about three times as great as in ordinary electrolytic zinc practice. Ordinary commercial aluminum sheet is used for the cathodes. An unusual feature of the product is its high purity, average assays being slightly above 99.99 per cent zinc, whereas other grades of electrolytic zinc are between 99.90 and 99.95 per cent. Though this may seem a small differ-

ence, the purer product seems much more adaptable to fine rolling and die-casting work, and to certain stamping processes, so that an effort has been made to obtain a higher price for it. The increased purity is obtained by using a special anode, composed of 99 per cent lead and 1 per cent of other material, instead of a pure lead anode. This prevents disintegration of the anode by lowering the discharge potential of oxygen at a lead peroxide surface.

In copper leaching, more attention was being given to particle size, and with some ores it seemed likely that separate treatment, by percolation, of the sand and slime might be advisable. On others, all fine grinding, with subsequent agitation to dissolve the copper, might be found desirable. Careful sampling and testing are necessary before deciding on the proper method to adopt.

A new heap leaching and cementation operation of the Utah Copper Company began in March, 1928. Natural surface water is used as the lixiviant, percolating through dumps containing sulphide ore varying from 0.3 to 1 per cent of copper. Detinned iron scrap is used for precipitation, about $1\frac{1}{4}$ pounds being required for each pound of cement copper produced. About 97½ per cent of the copper in solution is thus recovered, in a product averaging about 87 per cent copper. The process makes a very successful method of treating the waste dumps that have been accumulating at various points in Bingham Canyon for years. The Phelps Dodge Corporation also had been adding to its heap-leaching operations at Warren, Ariz. and the Inspiration Company, further north in the same State, had carried on experimental work of the same nature.

Another important vat-leaching plant went into operation during 1928, that of the Andes Copper Company, at Potrerillos, Chile, the practice closely following that developed at Ajo and Inspiration. The copper-bearing solution was treated with a little limestone before being sent to the cell-house, with the object of precipitating ferric iron and arsenic, the precipitate being subsequently removed by a battery of Moore filters with a loss of only one-half of one per cent of copper in the filter cake. Some percolation troubles developed owing to the presence of amorphous fine material in the ore. The leaching process in use at the Bwana M'Kubwa property in Africa, in which ammonia is used, had not been an unqualified success, but the metallurgical problem there is expected to be solved satisfactorily in time.

A new copper refinery was under construction at El Paso, to have a capacity of 100,000 tons a year. This was to be operated by the Nichols Copper Company, and would treat the copper produced in the Southwest by the Phelps Dodge, Calumet & Arizona, and New Cornelia companies. It was expected to be in operation by 1930. The multiple process was to be used rather than the series process which had been successful at the Nichols refinery at Laurel Hill, Long Island, N. Y.

In the treatment of gold and silver ores, progress largely was confined to the construction of new plants following well recognized methods of treatment by the cyanide process. Two new plants were built in eastern Canada—the 350-ton Coni-anrum mill in the Porcupine district of Ontario, and the 100-ton Siscoe plant at Amos, P. Q. The recognized Canadian practice was followed, of grinding in cyanide solution in two stages, thick-

ening of the resultant pulp, agitation, decantation, and filtration of the residue in continuous filters. The Merrill-Crowe precipitation process for clarified pregnant solution was in general use at most or all of the newer plants.

The attempt of the Porcupine Paymaster, in Ontario, to mine gold ore assaying between \$2.50 and \$3 a ton, concentrating it and cyaniding the concentrate had not been successful. The first 500-ton unit of the three-unit plant was started in the spring of 1928, but a change in management occurred, and it was understood that an attempt will be made to mine higher-grade ore. At the end of the year the concentrator was not in operation.

The United Eastern Company was treating accumulated tailings at some of the older Mexican plants where the patio process was originally used, and the Lucky Tiger-Combination Company had been rather successful in adapting the Caron-Clevenger process to a refractory ore at the El Favor mine, about 75 miles from Guadalajara. In Africa, the 1000-ton mill of Ariston Gold began operations in 1928.

The Achotla unit of the American Metal Company, in Mexico, was successfully using salt roasting of an argento-jarosite ore, preliminary to cyanide treatment, all other methods of treating that ore having been failures. Roasting was done in Holt-Dern furnaces, the calcine then being washed with water and acids to remove base metals and cyanicides, after which the residue is cyanided.

PYROMETALLURGY. Little new had occurred in copper smelting, the usual procedure being to roast in multiple-hearth furnaces for the purpose of removing excess sulphur, drying the charge, and affording hot material for the succeeding operation; smelting the roasted concentrate in reverberatory furnaces fired with either oil or powdered coal depending upon which is the cheaper on a heat-unit basis; and converting the 30 to 40 per cent matte thereby produced, in basic-lined converters, preferably in large units such as are provided by the 13 x 30-foot Peirce-Smith type.

Some of the smelters were omitting the roasting step, owing to the fact that selective flotation had provided a high-grade concentrate that does not require sulphur elimination. Such, for example, were the Cananea and International smelters. However, more fuel was required for smelting and the furnace had less capacity; also it was troublesome to feed wet material. On the other hand, there was no expense for roasting and no trouble from magnetite in the furnace. The Carson side-feeding patents had been upheld in a suit against Anaconda decided by the Court of Appeals on May 28, the U. S. Supreme Court denying a review of the case on October 22. The Federal District Court, at Tucson, Ariz., decided, on November 19, that the Calumet & Arizona and Phelps Dodge smelters also were infringers. The American Smelting & Refining Company has submitted an accounting for past infringements, as directed by the courts. Reverberatory practice was divided between side and centre feeding, with excellent metallurgical results secured by either method. An important smelter addition was under construction at Copper Cliff, Ontario, by the International Nickel Company.

Lead smelters were receiving high-grade lead concentrates low in active slag-forming material but relatively high in zinc. For such material,

double sintering was generally practiced, the product from the primary sintering machines being finely crushed. Improvements have been made in these sintering machines, the width being increased to 63-inches, giving them a capacity as high as 350-tons a day. Blast-furnace capacity at most smelters was more than adequate, with the high-grade material received. Practice in this department showed little change, sintering being the most important branch of lead smelting nowadays. Blast-furnace gases are usually diverted through a bag house to precipitate the fume, and roaster gases to a Cottrell electrolytic precipitator. Practice is divided for sinter gases.

In the Parkes process of refining, the capacity of softeners was increased, and liquation of crust from the desilverizing kettles was practiced at Kellogg, Idaho. Several refineries had adopted the Betterton dezincing process whereby the zinc is removed by chlorine gas in the form of zinc chloride, with disposal or regeneration of the by-products to advantage. Further improvements were made in the Harris process, and a new plant of 12,000 tons monthly capacity, using this process, was nearing completion at Monterey, Mexico.

Most of the American zinc-retorting plants were being modernized by the installation of improved means for drying the concentrate received, substituting multiple-hearth roasting furnaces for the old Hegelers, installing sintering machines of the Dwight & Lloyd type for nodulizing the fine material, and providing Cottrell precipitators, or other means, for catching the fume. The Waelz process was of increased importance as a means of burning zinc out of low-grade ores and residues.

Continuously operated vertical retorts were developed to a commercial success by the New Jersey Zinc Company at its Palmerton, Pa., plant. The capacity of these retorts is much greater than those of the ordinary form. The charge is customarily in the form of briquettes.

METEOROLOGY. Complete daily weather maps of the entire northern hemisphere for the first four months of 1925, prepared by C. L. Mitchell, of the U. S. Weather Bureau, from all available data for that period, including the meteorological observations taken by Sverdrup on the S. S. *Maude* off the Siberian coast, have shown that during the colder months the principal region for the development of cyclones is apparently to the southwest of Japan, mainly over the China Sea, while among the principal regions of dissipation is western Siberia. Outbursts of polar air from the Arctic, leading to anticyclones, often of very great magnitude, are most frequent southeastward over the Mackenzie Basin, and in the vicinity of Nova Zembla. A study of the progress of cyclones and anticyclones as shown on these maps has led to an improved system of making weather forecasts for the United States a week in advance.

It has long been known that in the free atmosphere the motion of air in the majority of cases approximates quite closely to the steady state characterized by the so-called "geostrophic" wind. Brunt and Douglas have shown, however, that when the distribution of pressure is changing, there is present, in addition to the geostrophic wind blowing along the isobars, a component flowing from rising, towards fall, pressure, and that under some conditions the effects of this

latter component are quite important. The tendency to rain in regions of maximum pressure fall, and to fine weather in regions of maximum rise, for example, may be attributed to the vertical motions accompanying the convergence and the divergence, respectively, of this additional component of the wind.

METEOROLOGICAL PHYSICS. The aurora still presents a number of interesting problems, the solution of which may shed a great deal of light on conditions existing in the high atmosphere. In the ordinary polar aurora, the gases of the upper air are caused to emit the characteristic auroral radiations through the energy supplied by the impact of electrons coming from the sun. The so-called "negative" bands of nitrogen, due to ionized nitrogen molecules, so prominent in the auroral spectrum, require for their excitation an amount of energy equivalent to that possessed by electrons which have fallen through a potential difference of twenty volts; the "positive" bands, due to the normal nitrogen molecule, faintly present in the aurora, require less energy, but the line spectrum, totally absent, requires considerably more. Hence the electrons which excite the auroral radiation must strike the upper atmosphere with about twenty volts energy.

The famous green line, on the other hand, is emitted during a transition of the dissociated oxygen atom between the two "metastable" states. As Campbell, Rayleigh, Slipher, and others have shown, the whole night sky is always glowing faintly with this green light; the green glow of the night sky probably is not due to electrons from the sun, and it has been suggested that ultra-violet solar radiation is responsible—molecular oxygen is dissociated into atoms, transformed to ozone, and then turned back to molecular oxygen again under the action of short wave lengths. A red line in the auroral spectrum photographed at the Lowell Observatory on July 7, 1928, is considered by Kaplan to be a positive nitrogen band.

TORNADOES AND HURRICANES IN 1928. Tornadoes, windstorms, and hail caused \$4,000,000 property damage, and the loss of thirteen lives, in Wisconsin, Minnesota, and Iowa during August. Twenty-five people were killed, one hundred injured, and \$2,500,000 damage wrought by tornadoes in Iowa, Illinois, Nebraska, and South Dakota in September.

Great loss of life, damage to property, and destruction of crops were caused by hurricanes in the West Indies and United States during the year. Two of these tropical storms swept in from the West Indies over Florida, Georgia, and South Carolina in August, accompanied by high winds and torrential rains. In September, one of the greatest hurricanes on record appeared; the force of this storm, the most destructive since the Galveston hurricane of 1900, was felt during September 10 to 20, over Martinique and Guadeloupe, the Virgin Islands, Porto Rico, the southern Bahamas, central Florida, and northward up the Atlantic coast to New Jersey and beyond, before it finally merged with an extra-tropical cyclone. The loss of life exceeded 3000, of which nearly 2000 occurred in Florida, principally on account of the flood caused in Lake Okeechobee; \$50,000,000 damage was done in Porto Rico, \$25,000,000 in Florida, and many millions over the rest of the path. The wind reached 160 miles an hour at San Juan and at Lake Okeechobee, and was probably 200

miles an hour close to the centre; the barometer reading at West Palm Beach, 27.43 inches, was the lowest sea-level pressure ever recorded in the United States during a hurricane; and the heaviest rainfall on record occurred in Porto Rico.

NECROLOGY. Charles Chree, authority on atmospheric electricity, terrestrial magnetism, and allied subjects, August 12; Finn Malmgren, lost on the *Italia* polar expedition. See biographical sketches.

BIBLIOGRAPHY. The important works of the year in Meteorology included: Sir Napier Shaw, *Manual of Meteorology*, vol. ii (Cambridge, England); A. Angot, *Traité élémentaire de météorologie*, 4th ed. Paris; D. Brunt, *Meteorology* (London); W. J. Humphreys, *Physics of the Air*, 2d ed. (New York); R. Duncan, *Air Navigation and Meteorology* (New York); C. E. P. Brooks and J. METEORS. See ASTRONOMY.

METHODIST CONNECTION OF AMERICA, WESLEYAN. A branch of the Methodist Episcopal Church, organized May 31, 1843, at Utica, N. Y.; the outgrowth of controversy over what was termed "liberty of testimony and freedom of discussion," and also a protest against the exercise of ecclesiastical authority. The purpose of the new organization was a church that should be anti-slavery and non-episcopal. In doctrine, the church is in accord with the Methodist bodies generally. In 1928 the branch comprised 23 annual Conferences, including a mission Conference in India and Africa. Its General Conference meets quadrennially and convened in June, 1927, at which time the use of tobacco in any form, its growth, sale, or manufacture, was made a test of full membership. Statistics for 1928 gave 666 ministers; 21,000 members; 675 churches; 521 Sunday schools; 3442 Sunday-school teachers and officers; and 30,124 scholars. Among the colleges maintained by the church were: Central College, Central, S. C.; Houghton College, Houghton, N. Y.; Marion College, Marion, Ind.; and Miltonvale College, Miltonvale, Kans. *The Wesleyan Methodist* (weekly), Syracuse, N. Y., is the official organ of the church. A large printing plant is maintained at Syracuse and all the literature of the church is printed there. Headquarters are at 330 East Onondaga Street, Syracuse, N. Y.

METHODIST EPISCOPAL CHURCH. Methodism in its widest signification and intention was a "revival of Christian earnestness, simplicity and power." John Wesley (1703-91) had no intention of establishing a new church. His effort was to revive pure and undefiled religion. He taught the doctrines of the Church of England, and "faithfully urged the people to attend its ordinances, to be present at its public assemblies, and be interested in its prosperity." Had the authorities of the Church of England accepted some of Wesley's plans in place of driving him away from them, things might have worked out differently. He sent two of his workers to America in 1769, Richard Boardman and Joseph Pilmoor. These men were followed in 1771 by a man who was destined to be the great leader of the infant church, Francis Asbury. The first Conference was held in Philadelphia in 1773 at which were present 10 preachers, who reported

1170 members. The work grew until 1784, at which time there was organized in Baltimore, at the "Christmas Conference," the Methodist Episcopal Church.

The governing body is the General Conference that meets once in four years, composed of an equal number of ministerial and lay delegates. They make all the rules and regulations. The Annual Conference meets once a year, presided over by a bishop, when all pastoral changes are considered and reports of the local churches gathered and compiled. There is a church conference called the Quarterly Conference, that administers all the matters that pertain to the work of the local church. There were in the United States in 1928, a total of 160 annual conferences and missions.

The quadrennial session of the General Conference which convened at Kansas City, Mo., in May, 1928, was attended by a forward-looking body of more than 800 delegates, and was a most successful meeting. Among the important steps taken by the Conference was its action in conferring upon Central Conferences in foreign fields the right to elect their own bishops from their own territory, presumably natives who had become Christians. Another step indicative of the progressive spirit of the Conference was its resolution urging an organic union with the Methodist Episcopal Church, South, the Presbyterian, and the Congregational churches. Although union was not effected between the Southern and Northern branches of the Church, close relations exist between these two bodies and formal union was forecast for a not very distant date.

The organization of the World Service (the benevolence programme of the Church) was somewhat simplified in its management and at the close of its fiscal year, ending October 31, it reported a remarkably successful year, having raised approximately \$2,000,000 in the last day or two of the year, a notable achievement not attained since the close of the Centenary campaign.

The Methodists have long had missions that have grown into Annual Conferences, in Mexico, South America, Europe, Africa, southern and eastern Asia, the Philippines, and the islands of many seas. This work is carried on by the Board of Foreign Missions. They received during 1928 a total of \$3,927,000. The Board of Home Missions and Church Extension looked after weak churches in new and growing communities in the United States, where church buildings were needed, and ministers had to be supported, and it also cared for the religious work among many foreign-language groups. During 1928 a total of \$2,903,609 was expended on this work, not including \$475,500 appropriated for the liquidation of debt. There were two Women's Missionary Societies: The Foreign and the Home, which reported receipts for the year amounting to \$5,525,310.

The educational system administered by the Board of Education included 46 colleges and universities; 30 secondary or preparatory schools; and 43 professional and graduate schools. Among the colored people, they maintained 17 schools, of which 10 were colleges, 4 secondary, and 3 professional schools. The attendance of the Church schools amounted to 71,859, besides those in professional schools; the faculty numbered 4000; property was valued at \$81,000,000, and the endowment amounted to \$74,000,000. The

Church also had 77 hospitals; 44 homes for the aged; 43 homes for children; 60 deaconesses' homes; and 27 homes for business girls and young men. The value of these was \$58,885,754. There were 28,966 church buildings worth \$436,187,008; 16,292 parsonages, valued at \$64,893,243; and 33,994 Sunday schools with an enrollment of 4,559,001; the Epworth League, the young people's society of the Church, had a membership of 619,760.

The membership of the Methodist Episcopal Church for 1927 was 5,236,754. The statistics of general Methodism in all branches, as reported from London, were: Ministers, 59,824; lay preachers, 93,081; church members, 11,869,388; Sunday schools, 79,372; officers and teachers, 1,023,673; scholars, 10,086,907; churches, 105,596.

520; and Epworth Leagues to the number of 1192 with a membership of 36,923. The amount raised during the year for educational purposes was \$336,920; for Sunday schools, more than \$300,000; and for salaries of pastors, bishops, and general officers, \$1,369,800. The Church in co-operation with the Methodist Episcopal Church, South, maintains "Bethlehem Houses," social service centres, in Birmingham, Ala., Chattanooga, Tenn., Augusta, Ga., and Nashville, Tenn. The following periodicals are published by the Church: *Christian Index*, *Western Index*, *The Index Herald*, and *Colored Methodist*. The headquarters are at Jackson, Tenn.

METHODIST EPISCOPAL CHURCH, SOUTH. A separate branch of the Methodist Episcopal Church formed in 1845 over the question of

^b These figures include the Solomon Islands Mission with 64 lay preachers, 4,791 members, 41 Sunday schools, 1384 scholars, and 122 churches and preaching places.

^c Methodism is also represented in several European countries by Conferences and Missions affiliated to the Methodist Episcopal Church of America, and their membership is included in the figures given above. The latest returns available are: Austria, 1042 members; Bulgaria, 757; Denmark, 4201; Finland, 2254; France, 1094; Germany (North), 23,200; Germany (South), 18,054; Hungary, 692; Italy, 3860; Jugo-Slavia, 1298; Norway, 7567; Russia (and Baltic Mission), 2168; Sweden, 16,475; Switzerland, 11,938.

METHODIST EPISCOPAL CHURCH, COLORED. Several churches of the Methodist faith and form, composed of colored members. One of these, the Colored Methodist Episcopal Church, formed in 1870 as an offshoot of the Methodist Episcopal Church, South, effected the separation from that body of its remaining colored membership. Its quadrennial general conference was held at Kansas City, Mo., May, 1926, when it reported 10 bishops (one retired). It sponsored 14 schools and a hospital at Memphis, Tenn., and maintained missions in Trinidad, and the British West Indies. In 1928 there were 3636 traveling clergymen and 2192 local clergy; churches numbered 4342, with 470,208 members; there were 3142 Sunday schools with an enrollment of 278,-

slavery. Figures for 1928 show that there were 55 conferences and missions, of which 42 were in the United States and 13 in foreign countries.

The executive body is the College of Bishops, which in 1928 had 13 members who hold office for life. The denomination sponsors 248 educational institutions, including 32 universities and colleges, 21 academies, and 46 mission schools. The report for 1928 showed 8321 traveling preachers, 4891 local preachers, and 2,631,570 members; there were 17,403 churches which had a valuation of over \$160,000,000; and 6649 parsonages, with a valuation of \$26,496,223. Sunday schools numbered 16,346, and Sunday-school scholars, 2,014,788; Epworth Leagues, 9168 with 263,884 members. The contributions for all purposes for

1927 amounted to \$43,026,473. The important periodicals of the denomination are the *Methodist Quarterly Review*, and the *Christian Advocate*. The headquarters of the Church are in Nashville, Tenn. The secretary of the last General Conference was A. F. Watkins.

METHODISTS, CONGREGATIONAL. A group of Methodists organized at Forsyth, Ga., in May, 1852, for the purpose of securing a more democratic form of church government. Statistics for 1928 report 145 churches; 125 ministers; 9691 members; 80 Sunday schools and 4807 scholars.

METHODISTS, WESLEYAN METHODIST. The principal branch of the Methodist denomination in Great Britain and Ireland, founded at the University of Oxford in 1739 by John and Charles Wesley, and holding its first Conference at London in 1744. This is the mother church of the denomination and is composed of five divisions: Great Britain; Ireland; Foreign Missions; French Conference; and South African Conference. The Wesleyans are governed by the Conference, by the Synods, and by Quarterly Meetings of the ministers and lay officers of each circuit, the latter being subordinate to the Conference which has the supreme legislative and judicial power. Statistics for all the divisions in 1928 were: Ministers, 3861; lay preachers, 36,882; church members and probationers, 1,020,128; Sunday schools, 11,710; Sunday-school scholars, 1,436,595; churches, etc., 19,291. In Great Britain alone the churches numbered 8620, members, 520,373, lay preachers, 19,082, and ministers, 2540. In 1928 the officers were: Pres. designate (1929), the Rev. Dr. William Frederick Lofthouse, Endcliffe Cottage, Friary Road, Handsworth, Birmingham, England; secretary of the Conference, the Rev. Robert Bond, 107 Palace Road, Tulse Hill, London, S. W. 2. See also article on **METHODIST CONNECTION OF AMERICA, WESLEYAN**.

PRIMITIVE METHODIST CHURCH. Commonly known as the "Camp Meeting Methodist," organized in Staffordshire in 1810, the American church being organized in 1844, as a result of the evangelization movement in the early part of the nineteenth century, by Hugh Bourne, one of the leaders and founders of the movement in England. The Primitive Methodists in Great Britain and Ireland for 1928 numbered 4353 chapels, 1090 ministers, 13,284 lay preachers, 222,744 members, and 386,412 Sunday-school scholars. The Church maintains a publishing house at Holborn Hall, Clerkenwell Road, London, E. C., 1. Next to the Wesleyans this is the most numerous and most democratic of the denominations which have arisen out of the Methodist movement. The American branch of the Church reported 87 churches, 87 ministers, 12,061 members, 87 Sunday schools with 16,807 scholars in 1928, and the sum of \$383,154 raised for all purposes. The last General Conference, which meets quadrennially, was held in September, 1925, at Kenanee, Ill.

UNITED METHODIST CHURCH. Formed in England in 1907 by the union of three denominations of Methodists which had hitherto been separate from, and independent of, each other: The Methodist New Connexion; the Bible Christians; and the United Methodist Free Churches. In 1928 there were 2208 churches, 545 ministers, 4724 lay preachers, a church membership of 146,802, and 2062 Sunday schools with 37,777 teachers and officers and 237,269 scholars. Publishing

House, 12 Farrington Avenue, London, E. C., 4. See **METHODIST EPISCOPAL CHURCH**.

WESLEYAN REFORM UNION. One of the smaller divisions of the denomination. It separated in 1850 from the Wesleyan Methodists and organized as a separate body in 1859. The adherents are mostly in the Midland counties. In Great Britain and Ireland in 1928 there were 222 chapels, 26 ministers, 471 lay preachers, 10,875 members, and 24,982 Sunday-school scholars.

INDEPENDENT METHODIST CHURCHES. These churches were founded in 1796, and united with other societies in 1806. The title was changed twice, but in 1898 the old name was resumed. In 1928 there were 166 churches with 10,825 members and probationers and 392 ministers; 167 Sunday schools with 24,512 scholars, and 3216 officers and teachers. The annual meeting was held in June, 1928.

AUSTRALASIAN METHODIST CHURCH. Methodism in Australia dates from 1812, the first conference being held in 1855. In 1928 there were 4849 churches; 1242 ministers; 5689 lay preachers; 181,832 members; and 3574 Sunday schools, with an enrollment of 195,877. Publishing houses were maintained in Sidney, Melbourne, Adelaide, Brisbane, and Perth.

Other branches of the denomination include the New Zealand Methodist Church and the Japanese Methodist Church, for statistics of which, see **METHODIST EPISCOPAL CHURCH**. Also see **CANADA, THE UNITED CHURCH OF**.

In Great Britain a scheme for the reunion of the Wesleyan Methodists, the Primitive and the United Methodist churches was approved by all three Conferences. In the case of the Wesleyan Methodists, the plan was referred to the Provincial Synod for further consideration and approval. To secure the adoption of this scheme it would be necessary to have an Enabling Bill passed in Parliament. This was considered probable and it was anticipated that a United Conference would meet in 1933 for the first time.

MEXICO. A federal republic lying between the United States and Central America. Capital, Mexico City.

AREA AND POPULATION. The area of the Republic, which is divided into 28 states, one Federal district, and two territories is 767,189 square miles. The population, according to the census of 1921, was 14,234,799 of whom 6,974,213 were males and 7,287,586 females. The prevailing religion is Roman Catholic, but according to the new constitution of 1917, the church is separated from the state, and there is toleration of all other religions. No ecclesiastical body can acquire landed property. Mexico City, the capital of the Republic, had a population of 615,367, of whom 23,668 were foreigners, at the census of 1921. Other large cities are Guadalajara, 119,468; Monterey, 73,528; San Luis Potosi, 68,022; and Merida, 62,447.

The reported immigration in 1927 was 67,970 and the emigration 56,534, but there is a considerable movement across the northern boundary which is not fully reported.

EDUCATION. Early in the year, the Secretary of Education made public the following statistics

on the status of the schools throughout the Republic in October, 1927. These returns were declared to be somewhat incomplete because of the lack of full response to inquiries. Total number of schools, 15,479, divided as follows: Kindergartens, 378; rural schools, 10,136; other elementary schools, 4467; secondary and preparatory schools, 67; normal schools, 65; professional schools, 57; schools of fine arts, 23; and technical, industrial, commercial, and vocational schools, 278. Schools supported by the Federal Government were attended by 252,988 boys and 161,276 girls, while in those supported by the state and municipalities there were 402,616 boys and 348,525 girls. Pupils in private schools numbered 17,298. The total for the nation was therefore 1,183,333. Up to July 31, 1928, the university enrollment was 9379.

AGRICULTURE. There are about 30,028,000 acres of cultivated land in Mexico (about 6 per cent of the total area), 120,440,000 acres of pasture, and 43,993,000 acres of forests. In 1927 about 8,020,000 acres were cultivated with corn, 1,227,000 acres with wheat, and 306,000 with cotton. In 1926 there were 5,121,000 cattle, 2,693,000 swine, 2,381,000 sheep, 4,899,000 goats, 964,000 horses, 622,000 mules, and 732,000 asses. The production of the principal crops in 1927 was as follows: Wheat, 11,519,000 bushels; barley, 4,302,000 bushels; corn, 81,165,000 bushels; rice, 3,410,000 bushels; beans, 7,153,000 bushels; coffee, 60,295 pounds; cotton, 74,567 pounds. The sugar production in 1926 was 194,700 metric tons. It was estimated that 5887 carloads of perishable vegetables were shipped to the United States during the 1927-28 season as compared with 6289 carloads during the 1926-27 season.

In his message to Congress on Sept. 1, 1928, the President of Mexico described the work realized during the previous year in the development of agriculture throughout the country. During the period covered by the message, efforts for the extension of agricultural education, propaganda, and experimentation took visible form in the founding of new schools, and the giving to others of lands, buildings, and adequate equipment; a systematic study of the most important agricultural zones of the country was initiated with the object of making a soil map of the country; and measures were taken for the protection of agriculture against plant and animal plagues and diseases, for the conservation and rational development of natural resources, and the distribution of water. Studies and work on irrigation projects were continued energetically. Various of these projects were expected to be completed during 1928, among them the Calles, the Rio Mante, and Don Martin projects, which will permit the irrigation of 118,000 hectares.

* Metallic content of ore extracted.

MINING AND PETROLEUM. The value of the principal minerals produced in 1927, exclusive of

crude petroleum, was \$152,199,000 as compared with \$162,937,000 in 1926.

Petroleum production amounted to 64,121,000 barrels during 1927, 29 per cent less than in 1926. In 1921, the highest point ever reached, 198,398,000 barrels were produced. The great decline was owing to the encroachment of salt water and to the decreased drilling resulting from the refusal of the Government to grant permits to the oil companies that had not complied with the law. See preceding YEAR BOOK. The permits issued in 1927 numbered 804, as compared with 1622 in 1926. During 1927, 204 wells, with an initial capacity of 384,000 barrels were brought in, as compared with 318 wells of 1,107,000 barrels in 1926. In October, 1928, it was estimated, on the basis of statistics for the first six months of that year, that the total production for 1928 would show a decline of at least 12,000,000 barrels, or about 20 per cent, from that for 1927.

Mexico is not an important manufacturing country, but several industries, such as the manufacture of textiles (mostly of cotton), shoes, iron and steel, tobacco products, beer, flour, paper, cement, pottery, and other products of lesser importance, had developed to some extent, certain of them as a result of a protective tariff. Mexican industries have only the domestic trade for a market, not having, as yet, been able to compete successfully in foreign markets.

COMMERCE. During 1928 total imports amounted to 346,588,000 pesos, a decrease of 9 per cent from 1926. Exports amounted to 624,364,000 pesos, likewise a decline of 9 per cent. According to United States statistics, imports from Mexico aggregated \$137,815,000 and exports amounted to \$109,152,000 in 1927. In 1926 imports from Mexico were \$169,306,000 and exports \$134,994,000. American imports, therefore, suffered a decrease of 18.6 per cent and exports declined 19.1 per cent. In the same period, the United Kingdom reported exports to Mexico dropped 20.8 per cent, and imports from that country 8.6 per cent, while German exports fell off 2 per cent, imports increasing 57.3 per cent.

FINANCE. For the year 1928, revenues were estimated at 290,000,000 pesos and expenditures at 289,000,000 pesos. The estimates for 1927, after revision, placed total receipts at 334,300,000 pesos and expenditures at 326,000,000 pesos, of which 216,900,000 pesos were for administrative expenditures, and 70,000,000 pesos for the service of the public debt, and most of the rest for public works. Despite subsequent reduction of expenditures in the face of declining revenues, a deficit of about 6,000,000 pesos resulted at the end of the first half of the year and a further deficit of about 19,000,000 pesos was forecast for the second half. The decline in government revenues was attributed to the drop in petroleum production and in foreign trade. The Secretary of the Treasury made an announcement revealing the impossibility of meeting interest on the public debt in 1928.

COMMUNICATIONS. The following items regarding the activities of the Department of Communications and Public Works form part of President Calles' annual message to Congress, read on Sept. 1, 1928:

During the past year the postal service in Mexico was carried on through 655 offices, 51 branch offices, 2160 agencies, 118 offices on trains, 17 transfer offices, 978 places for sale of stamps, and over 2342 land, 30 sea,

24 lake, and 1 air route, a total distance of 81,487 kilometers (kilometer equals 0.62 mile). The receipts from the service were 12,674,044.67 pesos and the expenditures 11,017,106.34 pesos, leaving a balance of 1,656,938.33 pesos. A system of postal savings was begun on February 5, 1928, and counted as deposits on June 30 the sum of 475,232 pesos, an amount which will undoubtedly increase in the near future, since beginning August 1, 1928, 2 per cent interest is being paid on accounts.

The national telegraph service through its 513 telegraph, 1 telephone, and 144 telegraphic offices, and 24 radiotelegraphic stations, handled during the year 5,588,213 messages, totaling 136,809,516 words, or an increase of 6,255,934 words over those of the previous year. The receipts of this branch of the service reached 5,371,899 pesos, being greater by 80,696.49 pesos than those of the preceding year, while the expenses, 6,699,830.13 pesos, were 70,806.67 pesos less. The value of money orders sent by telegraph amounted to 69,884,911.87 pesos, increasing 9,634,764.29 pesos over the previous year.

From the 23,237.4 kilometers of national railways, of which 22,881.5 kilometers were in use during the year, receipts of 176,189,604.90 pesos were reported; expenditures amounted to 162,931,441.21 pesos and the net income, therefore, to 13,258,163.39 pesos, or 1,322,263.64 pesos more than that of the year previous. A total of 126 kilometers of new line was constructed during the year and the stretch on the Mexican Railway between Córdoba and Paso del Macho was electrified.

The postal, express, and passenger service by airplane between Tuxpan and Tampico to Mexico City covered 351,276 kilometers in 2631 flying hours, transporting more than 1800 passengers and 5334 kilograms of mail in 1900 regular and 328 special flights from its inauguration on April 15, 1928, to the end of August. The Department of Civil Aeronautics has granted permits for aviation schools in Mexico City, Guadalajara, Nuevo León, and the northern district of Southern California, and registered 15 airplanes which make daily flights for recreational purposes.

Railway construction in Mexico, according to the *Railway Age* (New York) revived during 1928. The National Railways of Mexico completed three short extensions, totaling 18 miles, while construction was prosecuted on three major projects: the Mexico-Tampico short line, 333 miles; a line from Tampico to Vera Cruz, 313 miles, and a line from Calles to Guerrero, 78 miles. In addition, two new lines were being located and a number of others were projected. This road also carried on the construction of large repair shops at Monterey, in the state of Nuevo León during the year. The Kansas City, Mexico & Orient completed a 40-mile extension in Chihuahua which carried its line to Ojinaga on the Rio Grande at the International Boundary.

GOVERNMENT. Under the constitution of 1917, executive power is vested in the President, elected by direct popular vote for four years and ineligible for reelection; legislative power in the Congress consisting of the House of Representatives elected for two years by universal suffrage, and the Senate, comprising two members from each State, elected in the same manner. President in 1928, Plutarco Elias Calles (elected July 6, 1924; assumed office Nov. 30, 1924). For the change in the presidency during 1928, see below.

HISTORY

SITUATION AT THE BEGINNING OF THE YEAR. As noted in the preceding YEAR BOOK there were several pressing problems in Mexican affairs during 1927. By the close of that year the oil problem was well on its way to being settled. Most observers gave great credit to Ambassador Morrow for his skillful handling of the vexatious problem. The following amendments were passed by the Mexican Congress late in December, 1927, and promulgated by President Calles early in 1928.

Article 14. The following rights shall be confirmed without cost and by the issuance of confirmatory concessions: (1) Those arising from lands on which works of petroleum exploitation were begun prior to May 1, 1917. (2) Those arising from contracts executed prior to May 1, 1917, by the surface owner or by his successors in interest, for the express purpose of petroleum exploitation. The confirmation of these rights shall be granted without limitation of time whenever they should run in favor of the surface owner; and for the terms stipulated in the contracts in the case of rights originating from contracts executed by the surface owners or their successors in interest. (3) Those pipeline and refinery operators who may be working at the present time under concessions or authorizations issued by the Department of Industry, Commerce, and Labor, and in so far as refers to the said concessions or authorizations.

Article 15. A period of a year, reckoned from the day following publication of these amendments to the same day, inclusive, of the following year, is hereby granted, within which the interested parties may apply for the confirmation of the rights to which the foregoing article refers, and which have not been the object of confirmatory applications within the period allowed by this law in its original terms. This period having elapsed, said rights shall be considered as renounced, and the rights whose confirmation has not been applied for shall have no effect whatever against the Federal Government.

The promulgation of this law ended the long dispute between foreign oil companies and the Mexican Government over the retroactive provisions of the famous constitution of 1917. It confirmed all the claims made by the companies that their previous contracts were inviolable. Of course, the weight of the diplomatic department of the United States Government was thrown in on the side of the oil companies to uphold the tenet of law which the American Republic has always maintained, namely, that a state may not pass a law impairing the obligations of a contract. The effect on the oil industry was doubtful. Production during 1928 fell to a new low level, and in many quarters it was believed that Mexico would never regain her place among the oil-producing countries of the world.

Another matter of passing interest which was settled in the early months of the year was the question of the Mexican documents published in the Hearst newspapers. See preceding YEAR BOOK. A special committee of the U. S. Senate declared them to be absolute forgeries and absolved all United States officials of any shady dealing with the Mexican Government. Senator Robinson bitterly attacked Mr. Hearst for publishing the documents without first taking some pains to discover whether they were above suspicion.

The struggle between the Church and State went on apace in the early part of the year. Reports were current in the press to the effect that the Government was taking stern measures to close up any schools operating under Catholic auspices in defiance of the country's laws. Various acts of brigandage were laid at the doors of Catholic conspirators and arrests and deportations were common occurrences. There seemed to be a feeling, however, that the Calles government planned to compromise the religious issue and to reestablish friendly relations with the Church if it could be done without danger to the successful elevation of the State to a position of first rank.

OBREGON. General Alvaro Obregon was elected President of the Mexican Republic at the general elections held on July 1. He was the only candidate, inasmuch as two other prominent candidates had been assassinated, namely, Francisco Serrano and Arnulfo Gomez. General Obregon had served as President of the Republic from

GENERAL ALVARO OBREGON
President-Elect. Assassinated July 17, 1928

EMILIO PORTES GIL
Elected Provisional President

MEXICO

1920 to 1924, and was known as the leader of the agrarian element of the labor movement. Less than three weeks after his election, General Obregon was assassinated (July 17) by a young student, José de León Toral. (See OBREGON, ALVARO.) The motives for the act were confused because of the attempt to prove complicity on the part of the church and the trade-union element of Mexican labor under the leadership of Louis N. Morones, a bitter opponent of Obregon and the agrarian element in the labor movement. The conflict between the agrarians and the labor element had been going on for years. During the Calles régime, the Obregon agrarians were opposed to the labor forces under the leadership of the President. For the first two years of his administration, President Calles was an out-and-out opponent of Obregon, but as the latter's strength grew, Calles completely capitulated to the agrarian leader. This brought about a sharp split between Calles and Morones, the actual head of the laborites. It was thought in some quarters that Ambassador Morrow was instrumental in patching up a peace between Calles and Obregon. Feeling against Morones ran so high that he was virtually forced from the Calles government.

The death of Obregon left the schism between the peasants and the agrarians wide open and the only strong man appearing on the scene was President Calles, who had a well-disciplined army at his back. He reiterated again and again that he desired to retire as soon as his term of office was up. Undoubtedly, revolution could not very well occur while he still held the reins of power, but the pressing question was "After Calles, what?" He stated in his address to Congress on September 1 that he was not a candidate for the provisional presidency and that he would never again be a candidate for office. He strongly advised Congress to go about the problem of selecting a provisional president with great care and caution.

On September 25, the Mexican Congress elected Emilio Portes Gil, a civilian, and apparently the choice of President Calles. In his election, the Obregon bloc which controlled Congress split apart and many agrarians went over to the labor group under President Calles. Señor Gil was elected for the term Dec. 1, 1928, to Feb. 5, 1930. A constitutional president was to be elected in November, 1929, to hold office until 1934. Portes Gil was comparatively young, a man of 37, a lawyer by profession, and served as Governor of the State of Tamaulipas before being called to President Calles' cabinet as Minister of the Interior.

In the meantime the prosecution of the assassin of General Obregon was proceeding in an orderly fashion. From statements that he made from time to time, it was quite evident that his deed had been inspired by the fanaticism of his religion. On trial with him was a Roman Catholic nun, Mother Superior Maria Concepcion, who was accused as the "intellectual" leader behind the plot. After a trial held early in November, José Toral was sentenced to death by a firing squad and Mother Superior Maria Concepcion to twenty years' imprisonment.

On November 30, Portes Gil was officially sworn in as Provisional President of the Republic. His cabinet as announced on that day was as follows: Interior, P. O. Rubio; War and Marine, General Amaro; Foreign Affairs, General Estrada; Industry, Commerce, and Labor, J. M.

P. Casauranc; Agriculture, M. Gomez; Communications, I. S. Mejorada; Finance, L. M. de Oca; Education, E. Padilla; Attorney-General, E. Medina.

MEYER-WALDECK, mî'ér-vâl'dĕk, ALFRED. German naval officer, died at Bad Kissingen, August 26. He was born at Petersburg, Nov. 27, 1864. Entering the German Navy, he became captain-lieutenant in 1897, and from 1900 until 1901 he was first officer on the cruiser, *Geier*, in the Baltic Sea. In 1908 he became chief of staff at Kiaochow, a German protectorate on the Shantung peninsula. The following year he was made captain, and in 1911 he was appointed governor of the protectorate in China. On Aug. 19, 1914, at the beginning of the World War, Japan demanded that Germany surrender Kiaochow, but Captain Meyer-Waldeck held Tsingtau, a city in the Kiaochow territory, until November 7, when he was forced to capitulate and fall prisoner to the Japanese.

MICHELSON-MORLEY EXPERIMENT. See PHYSICS.

MICHIGAN. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,668,412. The estimated population on July 1, 1928, was 4,591,000. The capital is Lansing.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1928	2,870,000	4,327,000 *	\$50,013,000
	1927	3,078,000	4,801,000 *	52,632,000
	1928	1,461,000	51,135,000	42,953,000
Corn	1927	1,418,000	38,995,000	33,146,000
	1928	887,000	14,202,000	18,164,000
Wheat	1927	897,000	19,270,000	23,124,000
	1928	1,633,000	58,461,000	25,138,000
Oats	1927	1,617,000	54,170,000	26,002,000
	1928	306,000	35,802,000	14,321,000
Potatoes	1927	289,000	23,120,000	20,808,000
	1928	538,000	5,918,000	26,335,000

	1928	270,000	8,100,000	5,670,000
Barley	1927	186,000	5,301,000	4,029,000
	1928	182,000	2,866,000	2,200,000
Rye	1927	178,000	2,617,000	2,329,000
	1928

* tons.

MINERAL PRODUCTION. Iron ore continued to rank as the leading mineral product, but the shipments of iron ore fell off somewhat, being 14,532,831 long tons for 1927, as against 16,699,984 for 1926; in value, \$37,135,364 for 1927 and for 1926, \$43,932,982. There were shipped from blast furnaces in the State 626,532 long tons of pig iron in 1927, and in 1926, 638,282; in value, \$12,527,993 in 1927 and in 1926, \$13,180,113. Connected with the coal and iron industries was the production of 1,923,000 short tons of coke in 1927, as against 1,826,638 tons, having a value of \$12,713,083, in 1926. The coal output of the State remained small in relation to its coke and smelting operations. It was 756,763 net tons in 1927, and in 1926, 686,707; in value, \$3,262,000 for 1927 and for 1926, \$2,829,000. Second to coal production, in value, was that of copper. There were mined in 1927, 166,146,437 pounds of recoverable copper, as compared with 175,381,565 in 1926. Value of copper mined was: 1927, \$21,765,183; 1926, \$24,553,419. Cement production again increased, to 13,965,241 barrels for 1927, from 12,037,400 for 1926; cement shipments totaled \$20,858,202 for 1927, and for 1926,

\$19,499,788. There was a large production of salt; in quantity, 2,271,460 short tons in 1927 and 2,260,320 in 1926; in value, \$7,551,552 for 1927 and for 1926, \$7,594,418. Clay products were: 1926, \$7,362,007; 1925, \$7,396,071. Stone output was: 1926, \$6,715,429; 1925, \$6,671,804. The total value of the State's mineral products, duplications eliminated, was \$130,860,609 for 1926; for 1925, \$122,212,254.

FINANCE. State expenditures in the year ended June 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$52,610,366 (of which \$16,473,879 was aid to local education); for conducting public services, \$107,503; for interest on debt, \$4,310,218; for permanent improvements, \$20,993,112; total, \$78,021,199 (of which \$22,658,709 was for highways, \$6,918,611 being for maintenance and \$15,740,098 for construction). Revenues were \$77,455,784. Of this, property and special taxes formed 49.5 per cent, departmental earnings and charges for officials' services 8.7 per cent, and sales of licenses and gasoline tax proceeds 32.7 per cent. Property valuation was \$8,106,019,642; State taxation thereon, \$29,334,245. Net State funded debt on June 30, 1927, was \$74,909,093. There were outstanding \$50,000,000 of highway bonds.

TRANSPORTATION. The number of miles of railroad line under operation in the State on Jan. 1, 1928, was 8260.77. There were built in 1928, 2.19 miles of additional first track and 9.64 of second track.

EDUCATION. The life teaching certificate, according to State Superintendent Pearce, writing in the *Journal* of the National Education Association, ceased to be granted save to students who had completed three years of work above high school, in one of the four State teachers' colleges. The school-age population for 1927 was placed at 1,247,932. There were enrolled in the public schools of the State 880,442 pupils, and in the parochial and private schools, 145,219. The enrollment in elementary schools was 716,458; in high schools, 128,165. Expenditures of the year for education totaled \$80,853,940. Salaries of teachers averaged \$212 a month for men and \$158 a month for women.

CHARITIES AND CORRECTIONS. The State Welfare Department includes the State Welfare Commission with powers of parole over the inmates of certain institutions, duty of inspection of jails, maternity hospitals, and children's boarding homes, and control over probation officers and county agents. It included, also, four commissions in charge of groups of State institutions. The State institutions of care and custody included State hospitals at Kalamazoo, Pontiac, Traverse City, Newberry, and Ionia; Michigan Home and Training School, Lapeer; State Prison, Jackson; Michigan Reformatory, Ionia; Branch Prison, Marquette; Boys' Vocational School (correctional), Lansing; Girl's Training School (correctional), Lansing; schools for the deaf and for the blind, Lansing; Employment Institution for the Blind, Saginaw; State Public School, Coldwater. The 5 State hospitals for mental diseases had on Jan. 1, 1928, 7937 patients.

POLITICAL AND OTHER EVENTS. Woodbridge N. Ferris, Senator from Michigan, died March 23. Governor Green appointed Arthur H. Vandenberg, Republican, of Grand Rapids, on March 31 to fill his place. The State brought quo warranto proceedings against the Michigan Bell

Telephone Company, in an effort to obtain the submission of the parent company, the American Telephone and Telegraph, to the jurisdiction of the State public service commission. In the first seven months of the operation of the law for life imprisonment of fourth offenders, only four sentences of this sort were passed. An effort was made in the spring to obtain the resentence of some 70 prisoners under the act. The cornerstone of the Women's League Building was laid at the University of Michigan at Ann Arbor, March 29. Steps were taken in the course of the year to form a merger of the Chrysler Corporation and the Dodge Brothers Corporation into a single great motor vehicle producing organization. Patrolling the Detroit River to guard against liquor smugglers led to a shooting episode which occasioned protest on the part of the Canadian Government in April. Efforts at Detroit to apply alcoholic tests upon persons accused of drunken driving were refused attention in May in the Recorder's Court of that city. The Wayne County Board of Supervisors authorized May 21 the purchase from the United States of Fort Wayne, with a surrounding tract of 86 acres, at a price of \$2,459,354, for use as a park. A plan, supported by necessary legislation, for the widening of Woodward Avenue, Detroit, to a breadth of 204 feet, with removal and replacement of the Grand Trunk Railway tracks to supply the necessary space, was declared valid by the State Supreme Court July 24. At a special election on April 2, Detroit voters approved an issue of \$30,000,000 of bonds for sewer construction. Municipal reports of the profitable operation of the city's motor-bus system were controverted in June by the consulting engineer of the Detroit Street Railway, who alleged that municipal operation was conducted at a loss of \$260,492 in 1927.

ELECTION. The vote of November 6 rendered, as usual in recent presidential years, a Republican majority of more than 2 to 1 for the Republican National ticket. The Republican majority was below that of 1924, however, while the total vote was above those of 1920 and 1924. Fred W. Green, Republican, was reelected governor, defeating W. A. Comstock, the Democratic candidate. A. H. Vandenberg, Republican and Senator by interim appointment, was elected to the United States Senate both for the unexpired term and for the regular term to follow. The State's 13 members of the House of Representatives, all Republican, were reelected. The referendum vote of the State was favorable to an excess condemnation amendment, to a proposal to raise the legislators' salary, and to a legislative districting law. A proposal in the city of Detroit, sponsored by Mayor Lodge and calling for the expenditure of \$20,000,000 for a city and county building, was defeated; the voters of the city approved a bond issue of \$5,000,000 for a municipal landing field at Lynch and French roads.

The presidential vote of the State was: Hoover (Rep.), 965,396; Smith (Dem.), 396,762.

OFFICERS. Governor, Fred W. Green; Lieutenant-Governor, Luren D. Dickinson; Secretary of State, John S. Haggerty; Treasurer, Frank D. McKay; Auditor, Oramel B. Fuller; Attorney-General, William W. Potter; Superintendent of Public Instruction, Webster H. Pearce.

JUDICIARY. Supreme Court: Chief Justice, Nelson Sharpe; Associate Justices, Howard Wiest, George M. Clark, John E. Bird, John S. McDon-

ald, Richard C. Flannigan, Walter H. North, Grant Fellows.

MICHIGAN, UNIVERSITY OF. A State institution for the higher education of men and women at Ann Arbor, Mich., founded in 1837. The University, made up of ten colleges and schools, admits graduates of accredited high schools to the college of literature, science, and arts, to the colleges of engineering, architecture, and pharmacy, and to the training school for nurses, as well as to the special programme for dental hygienists and the curriculum in physical education. In 1927-28 the enrollment was 13,593, of whom approximately 35 per cent were women, while 64 per cent were inhabitants of the State of Michigan, and the remaining 36 per cent, with the exception of 280 foreign students, were from all parts of the United States. Of the total enrollment, in the regular and summer sessions, 6370 were in the college of literature, science, and arts; 1974 in the colleges of engineering and architecture; 944 in the medical school; 118 in the school of business administration; 251 in the nurses' training school; and 2096 in the graduate school. The registration in the 1928 summer session was 3505. The teaching staff was composed of 742 members. The University libraries contained 681,025 volumes. For current expenses, the State appropriated \$4,600,000, while about \$4,000,000 was derived from other sources. A new building for intramural sports was begun during the year and, with the exception of a few minor items, was completed by the end of the year. President, Clarence Cook Little, Sc.D., LL.D.

MIDDLEBURY COLLEGE. A coeducational, non-sectarian college at Middlebury, Vt., founded in 1800. For the autumn term of 1928 a total of 620 students were registered as under-graduates, and 6 as graduates, of whom 289 were women and 337 men. The enrollment in the special summer schools of French, Spanish, and English, conducted by the college, amounted to 517. There were 59 members on the faculty, including administrative officers and those on leave of absence. The productive funds of the College amounted to \$3,330,598 in 1927-28, and the income to \$299,783. The library contained 60,000 volumes. Gifts to the College amounted to \$126,219. President, Paul D. Moody, D.D.

MIDDLE CONGO. See FRENCH EQUATORIAL AFRICA.

MIGRATION OF BIRDS. See ZOOLOGY.

MILES, BASIL. American diplomat and economist, died at Washington, D. C., June 14. He was born at Philadelphia, Pa., June 20, 1877, and was educated at the University of Pennsylvania and Balliol College, Oxford. After a brief business experience, he became (1899-1902) master of St. Mark's School, Southboro, Mass., at which he had prepared for college. From 1902 to 1905 he was again at Balliol, preparing a course of study on the economic results of the American Revolution. His first diplomatic post was that of secretary to the American Ambassador G. von L. Meyer, at St. Petersburg, 1905-07; at the same time he held the post of third secretary of the embassy. From 1907 to 1908 he was third secretary at Berlin. From that city he was called to Washington to become supervisor of foreign mails at the Post Office Department. After three years in charge of the Washington office of the United States Chamber of Commerce, 1913-1916, in which period he was also editor of

The Nation's Business, he reentered the diplomatic service as a special representative of the United States, with the rank of minister, and was sent to Russia to take charge of German and Austrian prisoners in that country. When America entered the World War, in April, 1917, Mr. Miles made a visit to Siberia to report on conditions there. Following that mission, he returned to Russia to become secretary of the Root Commission, and then formed in the State Department at Washington, for the first time, a division of Russian affairs, of which he was made chief. He was executive secretary of the Washington Conference of Armaments, and secretary of the American delegation, 1921-22. From the latter year until his death he was American administrative commissioner to the International Chamber of Commerce.

MILITARY PROGRESS. GENERAL. In the YEAR BOOK for 1927 there were discussed the articles of "F. F.," an unannounced author contributing his thoughts on "Danger Zones" to American service journals. While political and economic conditions were the bases of his arguments, the conclusions were military and naval in every sense of the words and danger zones often are likely to result in wars. His articles continued to attract attention and especially interesting were those on the Balkans which seriously menace the peace of the world, and Italy's aspirations under Mussolini.

Macedonia is, to quote the author, the main centre of Balkan woes. Turkish misrule and tyranny have implanted greed, deceit, distrust, and violence as common characteristics of the people. The only effective law is the law of force. Turkey has sought to retain possession of this province, Serbia, latterly Jugo-Slavia, Bulgaria, and Greece have each tried to seize parts of the disputed ground. Even Rumania has taken an active interest in these efforts to divide Macedonia.

The unchecked acts of terrorism committed by Bulgar-Macedonian *comitadjis* were an active threat to Balkan peace. The *comitadjis* are an active band of professional cut-throats. Instead of acting in large armed bands, they were sending out agents singly or in twos or threes from Bulgaria to execute the desired assassinations in Greece and Jugo-Slavia. The Bulgarian Government claimed to be powerless to stop those outrages. The reason was apparent. Macedonia is important because it controls the main north and south line of communications that serves the whole Balkan peninsula. It is a first class international highway. Fear of Italy is the only thing that the Balkan States have in common. Italy's thrust into Albania had alarmed these States and revived the rivalries of the great European powers.

This brings to attention Italy. Exactly what share of the world Mussolini would eventually demand for Italy no one knew. His policy was largely the result of dissatisfaction with settlements made at the end of the World War. Italy expanded her territory to the north and northeast in conformity with the 1915 Treaty of London, under which she entered the War, but received no part of the German Colonies when they were divided among the Allies. Italy's population was 40,000,000 and the annual increase so large that the surplus was constantly overflowing her boundaries. Mussolini's only remedy was to secure territory which would accommodate the

emigrants and still keep them under Italian sovereignty.

This accounts for his aggressive foreign policy, and how-it works was to be seen in Albania which had become practically an Italian Protectorate in spite of the League of Nations' guarantee of its independence.

The economic development of Albania was proceeding apace with Italian *military* engineers in charge. Control of Albania gave Italy control of the Adriatic and nullifies the strategic value of Jugo-Slavian seaports. Albania provided Italy with an almost impregnable base for land operations on the Balkan peninsula.

Any one of a dozen major problems in the Balkans may cause spontaneous combustion which would invite Russian and Turkish participation, with France and Great Britain inevitably brought into the conflict.

These articles of "F. F." are well worth serious study.

A survey of the military expenditures and the armed forces of the principal countries of the world prepared for the Foreign Policy Association reveals a general increase in man power and military expenditures over 1913. This survey shows that in 1928, ten years after the war to end wars, 6,011,300 men were serving in the active forces of the fifty-two principal countries of the world, while 27,285,000 were enrolled in the trained reserves and subject to military service in case of war.

In Western Europe, where Germany and her former Allies had been virtually disarmed under the peace treaties, the vast majority of countries had increased their man power far above the 1913 level.

While the regular army of Germany had been reduced to 100,000, the Entente Powers had increased their armies from 1,446,500 to 1,810,000 and the six new states carved out of Austria-Hungary and Russia had placed 474,000 men in active service. Italy shows the most striking increase, with 346,900 men under arms in 1928, as against 250,000 in 1913. The Belgian Army had increased from 42,000 in 1913 to 71,000; Rumania from 95,000 to 266,000; Greece from 25,000 to 79,600; Jugo-Slavia from 32,000 to 142,000, and Portugal from 30,000 to 34,900. The British Forces not including the Native Indian Army numbered in 1913, 253,000, in 1928, 212,000; the French had a strength of 720,000 in 1913 as compared with 666,900 in 1928.

The question whether or not reserves should be limited by the League disarmament conference split the Preparatory Commission. France, whose reserves in 1913 were 3,280,000 and in 1928, 5,000,000 opposed limiting reserves. Germany, Austria, Hungary, and Bulgaria had not been permitted to organize reserve forces.

While all of the former European neutrals, except Spain, had reduced their standing armies below pre-war strength, they had more than trebled their reserves. Norway from 80,000 to 315,000; Denmark from 56,000 to 150,000; Netherlands from 145,000 to 341,000; Spain from 235,000 to 1,853,000; Switzerland from 252,000 to 309,000, and Sweden from 400,000 to 720,000.

In South America, Brazil raised her standing army from 21,000 to 46,000; the Argentine, from 21,500 to 33,700; Chile, from 28,000 to 46,000; Bolivia, from 3000 to 8000; Colombia, from 6000 to 9900, and Mexico, from 31,000 to 76,000. The

United States, from 89,000 in 1913 to 136,000 in 1928. Japan reduced her active army from 250,000 in 1913 to 210,000 in 1928, but increased her reserves from 950,000 to 2,038,000.

Military expenditures showed a similar increase over pre-war outlays, corresponding closely to the growth of armed forces. There had been a total reduction in the Central Powers of \$200,000,000, while the European Allies had increased their total by \$188,000,000.

MECHANIZED EQUIPMENT. In the way of military progress during 1928, air and mechanized equipment exhibited the greatest development, and in the latter case, tanks. Recent European developments in the matter of tanks leads to the following summary by Maj. Ralph E. Jones, Infantry Instructor, Tank School, Fort Leonard Wood, Maryland.

Czechoslovakia has the KH-50, an 8-ton tank that uses wheels on the road and caterpillar tracks across country with a wheel speed of 20 miles per hour and a caterpillar speed of 8 miles per hour. A skilled crew can change from wheels to tracks or the reverse in three minutes, but it cannot do this from the inside. Each tank carries a radio set.

Sweden. The M-21 is a 9½-ton tank that has a speed of 13 miles per hour, with a radio set.

Russia has the light French Renault, light Russian Renault, medium tank A, heavy tank Mark V (star), heavy tank Mark VII. Their 80-ton tank with speed of 6 miles per hour and armor plate from .6 to 1.6 inches, carrying two 76-mm. guns and four machine guns, is an interesting development. In Russia all armored detachments are under the supervision of the Chief of Artillery.

Italy has the Fiat type 3000 (light) and the Fiat-type 2000 (heavy) tanks. The light tank is a 5-ton, 2-man tank with a maximum speed of about 14 miles per hour. The heavy one is much the same as our (I. E. U. S.) Mark VIII as to weight and speed. The Italians use as a carrier for their light tank, a trailer with a low floor. Their tank organization is tentative with a personnel of about 1200, officers being drawn from the various branches of the army.

France. The French have a very light and fast experimental Renault, Mark V (star), 2-C type, Schneider heavy (experimental) 180-ton tank. The Renault tank, improved, is still the main light French tank. There are on hand about 3000. They have less than 100 of the Mark V (star) tanks, these being replaced by the 2-C type. This type is the heaviest tank in service anywhere. Ten have been built. They weigh from 68 to 74 tons, have a speed of six miles per hour and carry one gun (either 75 or 155 mm.) and four machine guns. Its maximum armor thickness is about 2 inches.

Artillery fire at very close range and with special ammunition would probably be necessary to stop this tank. It may be transported by rail by means of special equipment. It uses two stroboscopes, one forward and one at the rear. Its transmission is electric. There is also in construction a Schneider tank to weigh about 180 tons. It is fairly obvious that French thought is chiefly concerned with stabilized warfare situations. France seems to have introduced a 10-tire motor vehicle, an excellent cross-country vehicle which has 10 over-size tires, eight of which transmit power from the engine. In front there are two single wheels for steering. In the back one pair receives the power but is connected to another pair by chain, all four being power connected. Since each of these four wheels is double width and has two tires, there are eight driving tires. A rather important development, this.

France has twelve tank regiments of two battalions of three companies each. A French regiment has two complete sets of tanks. The war set is kept in first-class condition and is habitually in storage. It is used for only two weeks of annual manœuvres. The other set is used for daily instruction. In the event of war, reservists, already assigned would man the latter set. French tanks are a part of the Infantry, one tank regiment of light tanks being an organic part of an army corps.

England. Strange to say, to date England is the leader in tank development. England's inclination is primarily toward open warfare. That is the only place in the world where any real effort has been made to develop a mechanized force (including tanks) for offensive action. She has discarded all wartime tanks. The company and battalion are equipped with radio tanks.

Fast six-wheeled trucks are used in conjunction with the mechanized force with a speed of 45 miles per hour.

In organization, the British policy is not to have the tanks subordinate to any other arm. The Royal Tank Corps concentrates on the idea of an independent mechanized force which will screen, make flank raids and similar manoeuvres, but little thought is put upon their use with infantry.

In her experiments England has tried the Al-man machine-gun tank, wheel-and-track type, weighing about 2½ tons with track speed of 20 miles per hour, wheel speed 30 miles.

A 5-ton 2-man type with a maximum speed of more than 30 miles per hour is another development. Several models of tanks weighing from 10 to 10½ tons, most armed with one 3-pounder gun and several machine guns. In some types one or two machine guns mounted on top for anti-aircraft use.

One of these 12½-ton wheel-and-track type has a track speed of 20 miles per hour and wheel speed of 30 miles per hour. There is a 40- to 50-ton tank with armor to resist .50 calibre armor-piercing ammunition. It is armed with one semi-automatic 3-pounder and four machine guns with a 15-mile speed per hour and a crushing radius of 200 miles on one fill. In this type, the change either way can be made in about two minutes, the crew remaining inside.

United States. Contrasted with this, in the United States but little or nothing definite has been done since the World War to develop vehicles or organization for motor-driven armored combat. In December, 1927, the Tank Board received from the Ordnance Department for test a 23-ton tank. It is well armored, carries a 6-pounder gun and two machine guns. It requires a crew of three men. Its road speed is 10 miles per hour and cross-country speed 5 miles.

The Secretary of War, in his annual report, stated that in plans for modernizing the military service by motorization and mechanization in order to give greater mobility to troops:

One regiment of infantry has been completely motorized as an experimental unit. The cavalry units of the Regular Army have undergone a complete reorganization, which has served to reduce overhead, increase fire power and introduce anti-tank and anti-aircraft defenses without adverse effect upon the all-important cavalry characteristics of mobility. An armored car unit, the first in the history of the regular establishment, has been introduced.

The first armored-car troop of cavalry became a part of the 1st Cavalry Division at Fort Bliss, Texas, when six speedy automobiles, four of a light type and two heavily armored, became part of the equipment of the armored-car troop. Its duties are "to extend the horizon of cavalry and to broaden the scope and facility of its reconnaissance." Fifty or sixty miles is all the troop can do in a day. This organization, authorized in February, 1928, is a part of the general scheme of mechanization and the first test of a mechanized war force in its 2000-mile journey from Fort Leonard Wood, Md., to Fort Bliss, Tex. This force combined units of infantry, including tanks, air corps, field artillery, engineers, coast artillery, anti-aircraft, chemical warfare, ordnance, and an armored-troop ammunition train and medical detachments.

Notwithstanding this American development, progress was pitifully behind hand, running true to form as a national policy where preparation for defense is concerned.

The light car is only slightly armored, built to do cross-country work, carry a crew of three, a driver and two gunners, and mount two guns, the rear gun being an anti-aircraft mount.

In the general scheme of mechanization, trucks will be used to transport cavalry from a base to a point of attack. Troop F, 5th Cavalry, marched from Marfa, Tex., to Fort Clarke, Tex., 300 miles, when men and horses, on arriving at destination, detrucked and were fit and ready to go into action.

GREAT BRITAIN. Great Britain according to a press dispatch had made Gibraltar one of the most powerful fortresses of the world. Gigantic guns of the latest and most deadly pattern had been placed along the edge of the great "Rock" replacing those of smaller calibre formerly at sea level. The most elaborate system of range finding was installed, and it was possible for the big guns to fire straight into the continent of Africa, 14 miles away. Miles of space had been reclaimed from the sea for huge new docks, shipways, wharves, and jetties. There is an enclosed harbor of 440 acres where an entire fleet may anchor. It is the most formidable sea fortress ever known.

The question whether cavalry had ceased to be of value in the light of advances in modern inventions seemed to be answered, if not affirmatively, rather convincingly, by Field Marshal Viscount Allenby. The functions of the cavalry arm, distant reconnaissance and tactical reconnaissance, have been effected, for the air forces now take care of the former and mechanized means the latter, for tanks, armored cars, and the like have proved their value, but notwithstanding their asset value in regard to fire power, mobility, invulnerability, and endurance, which are real and great—

Their claim to have superseded cavalry cannot be accepted. The work of contact and linking up of units on wide battle fronts will still fall to the cavalry; the eyes of this arm are not hooded; it has clearer vision than the purblind armored car, its mentality is more alert. The more vulnerable the machine, the blinder the crew. The mounted man of today is strong in fire power. He has, moreover, the assistance of mechanized vehicles to carry ammunition and warlike stores, thus increasing his mobility.

This portrayal of cavalry and its uses must be welcome news to this honored branch of the service, coming as it does from this distinguished leader and soldier.

The British Army estimates for the year 1929 were £41,000,000 for the regular army, territorial army, and reserves, these being lowered by 25,000 men. Sir Laming Worthington-Evans, the War Minister, stated that the army was nothing more than an empire police force. He spoke of the anti-war treaty as "a great step forward," and if nations renounce war as a policy, why should they not reduce armaments. He served as War Minister in 1921 and since 1924 in that portfolio. During the World War, he served as major.

IRELAND. In 1928 the army of the Irish Free State was about 8500 strong and was an alert and well-trained force. The cost of the army was about \$10,000,000 annually. Its final strength was to be about 5000, a skeleton that might be expanded quickly in time of need by drawing on the reserves and the new force volunteers that were to be enrolled. A college for training officers on American lines was to be established at Carragh once the headquarters of the British Cavalry formerly garrisoning the land.

CANADA. Canada's army had an actual strength of 329 officers and 3189 others in the fiscal year 1927-28. It was known as the Permanent Active Militia. Of the non-permanent militia, the volunteer forces under the control of the central Government, 27,603 were trained during the year, and of these, 7134 went to camps and the rest were trained at local headquarters. The Royal Canadian Air Force, a permanent

body, had 95 officers and 375 airmen—Major General H. C. Thacker commanded. The main objective was to maintain sufficient unity of organization to permit of the rapid mobilization of a fully equipped first line of defense in time of need. The formation of civilian air clubs, which would be auxiliaries to the Royal Canadian Air Force in military as well as peace duties was a new governmental plan getting under way and promising success. The Government supplies a plane or planes and instruction according to active membership in the club, its willingness to provide an airport and requisite amounts for upkeep. The cost of the Army and Navy for the fiscal year 1927-28 was \$15,077,573. The air corps had 670 fliers.

SPAIN. A ministry of war was created with General Burgente as its chief, November 3, as a part of the reorganization of the Spanish Government.

FRANCE. The Council of Ministers heeded the impressive arguments of M. Laurent Eynac, the newly appointed French Secretary of Air, and despite the war and navy arguments to the contrary, the following eight branches of the air service were given to him; military aviation, general service of naval aeronautics, bureau of colonial aviation, civil aviation including technical and industrial offices, administration of air lines and the meteorological bureaus, aviation stock and supplies, general inspection of aeronautics, technical inspection of aeronautics, and, finally, of creating an independent air army for national defense of which he was to be the chief.

The Associated Press quoted General Guillaumat, Commander-in-Chief of the French Rhine Army, under whose direction were the fall maneuvers, as saying that:

The difficulty in the employment of cavalry divisions lies in the great variety of elements of which they are made up, some mounted, others on foot, yet others on wheels, with the complication of automobiles and caterpillar tractors. Extensive cavalry action in future warfare will undoubtedly prevail, but the complete ignorance on this branch of the service because of the character of the war of the trenches, will have to be overcome.

The signing of the treaty for the outlawry of war (see KELLOGG-TREATIES) found three million men under arms on the Continent of Europe. In 1914 the total of peace effectives was close to four and one-half million men, so that the 1928 status represented a reduction of one-third. In detail, Germany had reduced her standing army from 800,000 to 100,000, not voluntarily it is true; Austro-Hungary, from 425,000 to less than 210,000; Russia, from 1,300,000 to an estimated strength of 540,000; while France had reduced her army from 850,000 strong in her home and colonial army to about 700,000.

A report of the League of Nations showed a notable decline in budgetary proportions in the matter of expenditures on armaments, viz: Belgium 10 per cent, France from 35 per cent to 16 per cent, Italy from 31 per cent to 18 per cent; but the proportionate reduction was only due to the enormous increase in National expenditures. Comparative figures did little to bring out the radical change in the nature of the armament problem during the previous 10 years.

From the *Armaments Year Book* for 1927-28 issued by the League of Nations toward the end of the year, it may be ascertained that the annual expenditures on preparation for war were, for

armies, \$2,400,000,000 and navies, \$1,100,000,000. The number of soldiers serving their whole time with the colors was about 5,500,000, representing standing armies. Comparing with the population of the world, taken as 1,800,000,000, this means 1 soldier to every 300 civilians. In the United States of America, this ratio is 1 soldier to 800 civilians; for Latin-America, 1 to 360; Canada, with its 9,000,000 citizens, has 3500 permanent troops; Panama's National defense consists of "a general, and two majors, and the outlay of a military band"; Japan's ratio is 200,000 troops to 60,000,000 civilians, or 1 to 300.

It may be broadly stated that throughout the entire English-speaking world and its dependencies, whether American or British, this military ratio is a minimum. In Latin-America the ratio is higher than this minimum. In the Far East it is still higher, while in Europe it reaches its maximum. The problem of Armaments involves much more than the arithmetic of armies and navies. There is what France calls "potential," the animal, vegetable, and mineral reserves of the various countries, the length of their coast lines, density of population, development of their railways, and other imponderable factors, including diplomatic commitments. Hence, it is maintained by certain authorities that the problem of limiting armaments by treaty is practically insoluble and the real question is whether public opinion accepts such demurrers as final.

AVIATION. The main lines of American development since the Armistice of 1918 and especially in 1928 have been increased speed of all types of aircraft, engines of increased reliability, refinement in aircraft design, improvement in photographic equipment, radio communication, armament, instruments, parachutes, methods of laying smoke and gas, increase in tactical and operating efficiency, attainment of standard efficiency in new pilots through better methods of training and inspection, improvement in design of airdromes, including technical buildings. Radio enables the control of flights of planes, and the sending and receiving of messages at distances up to 500 miles.

The attack plane, A2, is a two-seater, weighs 4400 pounds, cruises at about 115 miles an hour, has a maximum speed of 140 miles and a ceiling of 18,000 feet. Six machine guns and 250 pounds of small bombs are its armament. The A3 flies at low altitude and is devised principally for protection of ground troops and for attack against enemy material and personnel.

The observation plane is a two-seater, weighs 4200 pounds, has a cruising speed of 110 miles per hour and a high speed of 140. Its ceiling is 18,000 feet. The bombing, LB-5, or pirate, has a total weight with armament and crew of 12,000 pounds, two liberty motors, 2000 pounds of bombs, machine guns fore and aft, ceiling about 10,000 feet, a cruising speed of 85 miles per hour, and high speed of 110 miles.

Flying training has been extended and systematized with the result "it is believed that the training system which has been developed in the Army Air Corps is 'second to none in the world'" (Report of Secretary of War for fiscal year 1928). The number of aircraft hours flown increased from 150,319 in 1925 to 182,903 in 1928, an indication of the enlarged activities of the Air Corps. To form the first increment of the

Air force of 1248 non-commissioned officers and privates, the Regular Army had to be reduced in all its branches except medical, signal, and air. Another increment in the air service was to be due the ensuing fiscal year.

For the training of troops, the U. S. War Department expected to publish *Notes on Infantry Protection Against Aircraft*, the subject being of intense moment to the Infantry and, according to the *Infantry Journal*, it was to receive priority of study and experimentation by the Infantry Board, the Department of Experimentation, and Academic Board of the Infantry School.

The most noteworthy change in the tactics employed by air attack was the development of mass tactics in attacks against ground troops. The basic method of attack by single airplanes remained unchanged. The planes dive at ground targets, discharging machine-gun fire from frontal guns while in the dive, drop 25-pound fragmentation bombs from low altitudes while overhead, and cover their retreat with fire from rear machine guns. The attack planes carry from six to eight machine guns and 10 small bombs.

The Infantry Division has 176 machine guns, 144 in the Infantry brigades and 32 in the Artillery brigade. A squadron of 25 attack airplanes has 200 machine guns, showing that the actual number of machine guns per squadron is greater than that of the division.

Extracts from the teachings of the Air Corps Tactical School shed light on recent developments—

Daylight attacks on columns are normally made in formation, the size of which varies from the 3-plane unit to a full squadron of 25 airplanes. Ordinarily the smallest formation that will be sent out will be the six-plane flight. A nine-plane formation may be employed when the target requires more strength than a flight of less than a squadron. The squadron formation may consist of two 9-plane formations or three 6-plane flights. The 6-plane flight is the basic formation for making attacks proper. The 9-plane formation is the largest force that will attack as a formation. A squadron or group attack takes the form of simultaneous or successive flight attacks on the objective.

The question of night attacks by airplanes brought out discussion as to whether they were worth while. That successive attacks by individual planes during the hours of darkness constitute the most effective night attacks is admitted. Whether these will secure delaying and harassing effects on material and personnel of a column is not satisfactorily determined. These methods are particularly applicable to the all-night harassment of bivouac areas where the moral effect and the breaking up of the rest of troops is more desirable than material damage.

During the year, 3833 applicants for air training were received by the Army for the fiscal year ending June 30, 1928, as against 1063 the year before. Of this number only 506 were able to qualify.

There were less than 700 reserve officers capable of flying with tactical units without further tactical training at a school. Practically \$40,000 was expended during the year for flying pay of enlisted men on regular duty and for sergeant instructors of National Guard and Organized Reserves (Report of Maj. Gen. Féchét, Chief of Air Corps).

RADIO. The commercial value of traffic handled over the U. S. Army radio net in the fiscal year for the various Federal governmental departments was \$284,228. Since 1923 there had been a steady increase in the traffic yearly, it being

for that year \$65,701.61. The actual cost of sending this traffic in 1927-28 was \$43,340.95. The War Department, of course, was the heaviest user, the value of its traffic being \$211,615.85. The Veterans Bureau, Commerce Department, Labor Department, Agricultural Department, Department of Justice, and Navy all made use of the service.

The Signal Corps completed the new receiver for use with aircraft radio sets, superseding standard receivers in use. It is considerably lighter in weight, occupies much less space, is rugged, and receives continuous wave signals. A joint development of the Signal and Air Corps was the double voltage direct engine-driven generator for use in aircraft, eliminating the necessity of supplying a dynamotor with each radio set and effecting a saving in weight and cost and increasing the dependability of operation. A new type of insulated field wire used by soldiers in the field was lighter and less bulky and promised to have strength and transmission qualities that were satisfactory. The design and construction of three test models of a wire-laying cross-country car and that of a horse-drawn reel cart were accomplished during the year. These with the developments in the sphere of fire control equipment, indicated satisfactory solutions.

Notwithstanding all the improvements in motorization and mechanization, the horse was still a very important factor in the military organization. During the year there was one animal to every 3.3 men. During the Civil War the proportion was 1 to 3.75 men.

SCHOOLS. The missions of the Command and General Staff School announced by the War Department were as follows: First: To train officers in the tactics and technique of the associated arms; the operations of large units to include the corps; the functions of commanders, staff, and services of large units to include the corps and corps area general-staff duty as pertains to the zone of the interior.

Second: To teach military history, including methods of historical research of tactical principles.

Third: To prepare instruction material for the command and general-staff course in Army Correspondence Schools.

Beginning the school year 1928-29, the course of the Command and General Staff School was to be two years instead of one.

During the fiscal year ending June 30, 1928, Germany paid \$13,637,866 towards reducing the total claim of the United States of \$233,141,247 for reimbursement cost of maintaining the Army of Occupation. The balance due the United States on that date was \$210,582,775. It is interesting to note that in the matter of 300,000 wartime contracts entered into between April 6, 1927, and Nov. 12, 1918, \$5,077,886 had been recovered, \$20,767,103 cancelled, \$15,662,325 referred to General Accounting Office, and \$28,615,195 to the Department of Justice.

On June 30, 1928, the actual strength of the Active Army of the United States was 134,505, exclusive of nurses, contract surgeons, and West Point cadets. There were 699 Army nurses, 33 contract surgeons, and 878 cadets or a total of 136,115 in the service. Of this number there were 12,112 commissioned officers on duty and 121,185 enlisted men, this including Philippine Scouts. The distribution of troops was as follows: 96,366 in the United States, 14,083 in the

Hawaiian Islands, 1282 in Porto Rico, 11,343 in Philippine Islands, 989 in China, and 7 in Europe in the graves service.

Less than one-third of the commissioned officers were West Point graduates, namely, 3544. The sources of appointment were as follows:

Civil Life	3,428	Enlisted Men, Reserve Corps ...	205
West Point.....	3,544	Enlisted Men, National Guard ...	271
Enlisted Men, Regular Army ...	1,119	Volunteer Officers	43
Officers, National Army	253	Volunteer Enlisted Men	16
Enlisted Men, National Army ...	275	Officers, National Guard	331
Officers, Reserve Corps	2,184	Balance scattered	

The strength of the Organized Reserves on June 30 was 120,288. The enlisted reserve corps was 5464. There were 90,765 officers of National Guard holding commissions in Reserve Corps. The net increase in Reserve Officers during the year was 4810.

Speaking of the National Guard, the Secretary of War said in his annual report, "It has attained the highest plane of military effectiveness in the peacetime history of this element of our national defense forces . . . it is now more highly organized, more completely equipped, and more thoroughly trained than at any time in the past; its standards have never been higher." Of the National Guard Air Corps, 23,991 flying hours resulted in only three fatalities. New training planes had completely replaced the old JN planes of wooden construction.

ORDNANCE. At the tenth meeting of the Army Ordnance Association at Aberdeen Proving Ground on October 4, an anti-aircraft 3-inch gun mounted on a moving truck demonstrated its ability to compute and hold its own range, ascertaining the height of the approaching airplane through sound waves. It was expected to be developed into one of the most useful of defensive weapons against aircraft. The new tank, T-1, 7½ tons, had attained a speed of 18 miles across country and 22 miles on public highways. The aim in the evolution of the tank has been to develop speed, the gas engine making this possible. There were four of this type and they cost about \$100,000. Their cruising radius is 80 miles. The crew, a driver and a gunner, is protected against the service rifle at all ranges. In the all-around fire turret are mounted a 37-mm. gun and a 0.30-calibre machine gun. The mechanical control is simple, the engine of commercial type. A comparative test of the cumbersome slow-moving tanks of the World War period and the 7½-ton craft produced by the United States was made during July on a practice march from Fort Leonard Wood and Upper Marlboro in Maryland, a distance of 22 miles. Two hundred and fifty tanks were in column. The 7½-ton tank averaged better than 10 miles per hour. The British and French tanks constructed during the World War are now regarded as obsolete.

In the development of anti-aircraft guns, including a 3-inch gun and mobile mount, and a new 105-mm. gun and carriage designed for joint use in defense operations a marked advance was made by the ordnance branch of the Army. Improved mounts were developed for anti-aircraft guns. For the mobile mount of the 3-inch gun, stability, mobility, and manoeuvring ability were achieved. The carriage is stable under all

conditions of firing, may be replaced from the traveling position in readiness to fire in about 15 minutes, and is so light in weight it can be towed across country by a standard four-wheel drive truck. The gun is 50 calibres in length and is made of an outer tube and inner removable liner. This liner represents a marked advance in gun construction as it does away with the necessity for sending a worn-out gun to an arsenal for retubing. The cost of a liner is a small fraction of the cost of a new gun, and it can be installed at the firing front in a few minutes by battery personnel using simple hand tools. The gun fires a standard 3-inch projectile at a muzzle velocity of 2600 feet per second. The vertical range is about 5000 yards and the maximum horizontal range, 11,000 yards.

CUBA. The Cuban Army in 1928 celebrated the twentieth anniversary of its organization. Although the Guardia Rural, a State constabulary, was organized at the establishment of the Cuban Republic and in 1928 was still the largest component part of the military establishment, a regular army was provided for the island in 1908. The Ejército Permanente was formed that year with a general-staff corps, an infantry brigade, a coast-artillery corps, a field-artillery arm, and a machine-gun corps. In 1928 it included 1616 officers and 12,187 enlisted men, enlistments being voluntary. Organized as Cavalry, the Guardia Rural includes 168 officers and 6320 enlisted men of the entire military force. The highest permanent commission is that of colonel. The Chief of Staff selected from colonels, holds the temporary rank of Major General, while the Adjutant General and Quartermaster General hold the grade of Brigadier General.

Promotion by selection modified begins in lower grades. The island is divided into eight military districts with a colonel in command, corresponding generally with provinces of the island. The Province of Havana, containing 25 municipalities, is covered by three military districts.

ITALY. General Francisco de Pinedo, Italy's long-distance flier, was made head of the Italian Aeronautical General Staff. He holds the distinction of having twice crossed the Atlantic in flight. According to a press report in the *New York Times* in late August, the annual manoeuvres of the Italian Army demonstrated that Mussolini had at his disposal a more efficient fighting machine than had existed at any time in the history of the Kingdom. A new tactical code containing all the lessons learned in the last war concerning the use of large units in battle, elaborated by the general staff, was used for the first time. In addition, Fascist voluntary militia made their appearance side by side with the regular army. This was a regular feature in the Italian Army, it being intended that in actual war each division of the army shall comprise four battalions of Fascist militia to be employed as shock troops.

In mechanical devices, a new instrument for throwing hand grenades to a maximum range of 200 yards from ordinary rifles was in evidence. Italy's War Department Budget provided for an increase of 41,500,000 lire (\$2,075,000) for 1929-30.

GERMANY. The French Army of Occupation numbered about 48,000 concentrated at Mayence, Coblenz, and in smaller towns. A British force of 6250 held the Weisbaden Bridge head and

approximately 6000 Belgians the strip of territory on Dutch and Belgian boundaries near Aix-la-Chapelle. Mayence was French general headquarters.

RUSSIA. Not much comes out of Russia regarding the Red Army. The anniversary of the Bolshevik Revolution was celebrated on Nov. 7, 1928, by a military parade. A foreign military expert was quoted as follows: "The Red Army leaders do not share the obsession of some Western soldiers that the next war will be a siege war like the last. Should the Soviet be involved in conflict, it would be a war of rapid movement across sweeping plains where cavalry and light artillery would play a bigger rôle than the huge howitzers." The Soviet Budget for army and navy was 840,700,000 rubles, this military expenditure being an increase of 13.2 per cent over the previous year.

MINERALOGY. The advance of mineralogy during 1928 is represented by tendencies rather than by definite and startling discoveries. In this way, the science, as compared with other sciences, may be placed with regard to its progress, in that transition period of its development when observational research is being superseded by theoretical interpretation of data. The growing knowledge regarding the arrangement of atoms in natural substances led to an increasing tendency toward the utilization of these natural substances in industrial development, and to link these data with recent advances in our knowledge of physical forces. Such has been the volume of research in the field of crystal structure that we are led to believe that future utilization of the results of mineralogical research will be along this line rather than along that of chemical adaptation.

The new mineral species which were added to the science during 1928 form a fairly long list, comparing favorably in this respect with those reported in previous years. An extensive fire, which occurred in a mine of pyritic ore at Jerome, Arizona, resulted in the deposition by hot gases of a number of chemical products of a semi-artificial nature. Several of these have been studied and named, and because of the involuntary and widespread circumstances accompanying their formation, they are here included among the new minerals. They are: *Guildite*, a chestnut-brown, hydrous iron-copper sulphate forming in monoclinic crystals and named in honor of Prof. F. N. Guild of the University of Arizona. *Butlerite*, named in honor of Prof. G. M. Butler of the University of Arizona, is a hydrous ferric sulphate, that forms very small orange-yellow orthorhombic crystals. *Jeromite*, named from the mining locality, is a sulphide and selenide of arsenic, which was observed as black fused globules. *Louderbackite*, named in honor of Prof. G. D. Louderback of the University of California, is a hydrous sulphate of ferrous and ferric iron, forming in pale chest-

nut-brown crystalline crusts. *Rogersite*, named in honor of Prof. A. F. Rogers of Stanford University, is a hydrous ferric sulphate which differs slightly in composition from butlerite. It was found in fibrous aggregates of monoclinic crystals. *Ransomite*, named in honor of Prof. L. L. Ransome of the California Institute of Technology, is a hydrous sulphate of copper and ferric iron occurring in sky-blue orthorhombic crystals.

Argentina furnished two new species, *bodenbenderite* and *klockmannite*. The first of these is a silicate and titanate of manganese, yttrium, aluminum and calcium, occurring in flesh-red isometric crystals. It was found in the Sierra de Cordoba and was named in honor of Prof. Wilhelm Bodenbender of Argentina. *Klockmannite* is a new copper selenide which has been found in Sierra de Umango, Argentina, and also in the Harz district of Germany. It occurs as metallic slate-blue, granular masses, and was named in honor of Prof. F. H. Klockmann.

Franklin, N. J., a locality long famous for the number of rare and unusual minerals that have been found in its zinc mines, contributed two species to the number discovered in 1928. *Larsenite*, named in honor of Prof. E. S. Larsen of Harvard University, is a lead and zinc silicate occurring in colorless orthorhombic prisms. A white, massive mineral, having the same composition as larsenite but with some of the lead replaced by calcium, has been named *calcium-larsenite*.

Two new vanadates were discovered in Bull Pen Canyon, Colorado, and named in honor of Dr. C. S. Ross of the U. S. Geological Survey. Of these *rossite* is a hydrated vanadate of calcium and *metarossite* is a partially dehydrated product of *rossite*.

A new member of the isomorphous group of iron phosphates which is headed by jarosite was found in southern Utah and named *ammonio-jarosite*, because the potash, present in normal jarosite, is in this mineral replaced by ammonium oxide. It occurs in nodules of an ochre-yellow color.

A new hydrated calcium, magnesium, and iron phosphate, occurring in concentric layers in nodules of phosphorite from British Columbia, was named *Collinsite*, after Dr. W. H. Collins, Director of the Geological Survey of the Dominion of Canada.

Slavikite, named in honor of Prof. F. Slavik of Prague, is a new hydrated sulphate of sodium and ferric iron, which occurs in small greenish-yellow rhombohedral crystals on weathered shales from Bohemia.

Sursassite is a new manganese and aluminium silicate occurring in copper-red fibrous aggregates at Oberhalstein, Switzerland. The name is derived from Sursass, an antique dialect name for the locality.

A new hydrated oxide of tungsten and thorium, related to tungstite, has been named *thorotungstite*. It occurs in masses of small, yellow crystals at Perak, Malay Peninsula.

See CHEMISTRY, under *Mineralogical Chemistry*.

MINERAL PRODUCTION OF THE UNITED STATES. The total value of mineral production in the United States in 1928 was estimated at approximately \$5,400,000,000 by the U. S. Bureau of Mines. This was a decrease of approximately 2 per cent of the total value

Stones do.....	124,496,360	188,308,590	135,200,000	197,200,000
Sulphur long tons..	2,072,657	37,300,000	2,072,109	38,300,000
Sulphuric acid (60° Baumé) from copper and zinc smelters short tons..	1,068,449	8,274,242	1,041,399	8,240,388
Talc and soapstone ^f do.....	181,568	2,110,994	192,316	2,234,724
Total value of nonmetallic products (approximate)		\$4,802,180,000		\$4,294,000,000
SUMMARY				
Total value of metallic products		1,402,920,000		1,217,000,000
Total value of nonmetallic products (exclusive of mineral fuels)		1,261,200,000		1,210,000,000
Total value of mineral fuels		3,540,980,000		3,084,000,000
Total value of "unspecified" (metallic and non-metallic) products (partly estimated)		7,600,000		9,000,000
Grand total approximate value of mineral products		\$6,212,700,000		\$5,520,000,000

^a Canvass discontinued after 1915. Value of iron ore sold for paint included under last item ("Unspecified").
^m Sublimed blue lead, sublimed white lead, leaded zinc oxide, and zinc oxide.

^f K₂O content.

^f Figures represent talc only. Value of soapstone is included in total value of nonmetallic products; Bureau of Mines not at liberty to publish figures.

^u Includes for 1927 the value of bismuth, cadmium sulphide and other cadmium compounds, chats (\$618,000), columbite (\$378), flint lining for tube mills and pebbles for grinding (\$46,856), iron ore sold for magnets, iron ore sold for paint (\$132,007), lithium minerals (\$59,656), natural magnesium chloride, natural magnesium sulphate, calcareous marl (\$180,166), greensand marl (\$166,998), molybdenum (\$1,858,786), selenium, silica sand, and sandstone (finely ground), sodium salts (carbonate, bicarbonate, sulphate, and trona) from natural sources (\$1,422,234), tellurium, zircon (\$864,600), and an estimate of the value of miscellaneous mineral products, statistics for which are not collected annually by the Bureau of Mines.

of mineral products in 1927 and was due almost entirely to a decrease in the total value of mineral fuels. Of these, the quantity and value of coal decreased; the quantity of petroleum produced changed little, but the value decreased, and the quantity and value of natural gas and natural gasoline increased as compared with 1927. The total value of metallic products showed an increase due to increase in quantity and unit value of copper and an increase in the quantity of iron produced. Decreases were shown for gold, silver, lead, and zinc. The total value of non-metallic mineral products showed approximately no change. Decreases for some of these products were offset by increases for others.

The following figures give the estimated total value of metallic mineral products, non-metallic mineral products other than fuels, and of mineral fuels produced in the United States in 1928:

ESTIMATED VALUE OF MINERAL PRODUCTS OF THE UNITED STATES, 1928

Metallic	\$1,260,000,000
Non-metallic (other than fuels)	1,240,000,000
Mineral fuels	2,900,000,000
Total	\$5,400,000,000

These estimates were subject to revision and replacement by precise figures as soon as the Bureau of Mines could complete the canvass of industries just begun to obtain accurate statistics for the year 1928, based on communications sent to every mining, quarrying, and well operating company, soliciting a report on the output of each mineral commodity by each establishment.

Mineral production in the United States in 1927 suffered a decline as compared with the marked prosperity and the high levels of productivity established in 1925 and the higher

levels maintained in the following year. Statistics for 1927 show a diminished rate of output for most of the products and a general decline in unit value as compared with the previous year. Estimates of the U. S. Bureau of Mines placed the total value of all products at \$5,520,000 in 1927, or 11 per cent less than the corresponding value of \$6,212,700,000 for 1926, and 3 per cent less than that of 1925. The decrease in the mineral fuels groups amounted to about 13 per cent. The production of bituminous and anthracite coal showed a decrease, and their total value decreased in somewhat larger ratio, the industry being marked by depression and an almost total cessation in some fields for part of the year. Petroleum and natural gas, on the other hand, showed an increase in amount, as a result of the development of new pools in Oklahoma and Texas, although there was a marked decline in total value of petroleum produced. The decrease in the value of metals produced was especially marked, particularly in the case of the major metals as iron (both ore and pig), copper, lead, zinc, silver, and gold; the only increase being a moderate one in aluminum. The decline in output was accompanied by a general decline in prices, except for a few minor metals; In the production of lead and zinc only a moderate decrease was reported, in spite of a large drop in price; while mercury and cadmium production reported noteworthy increases. The decline in value of output of the nonmetallic mineral industries, in contrast to the metallic and fuel-producing industries, was moderate, and even here the generally lower prices offset the increase in quantity of output of many of the nonmetallic products. The output of stone (crushed stone), cement, sand and gravel, and asphalt, reflected the demands of the paving and building industries in the gains made, while the output of pigment materials, fuller's earth, potassium salts, common salt and its co-products calcium chloride and bromine, and talc and soapstone, was greater than in 1926. Among the products showing moderate to marked decreases were such important industrial minerals and chemical materials as clay, fluorspar, feldspar, glass sand, lime, magnesite, mica, phosphate rock, and silica. For a detailed discussion of the more important minerals and their production in 1927, see such articles as ALUMINUM, COAL, COPPER, GOLD, IRON, SILVER, etc., also tables, pages 460 to 461.

MINIMUM WAGE. MASSACHUSETTS. During the year 1927, the Massachusetts Minimum Wage Commission promulgated two decrees, one affecting women employed in the jewelry trades and the other for women in toys, games, and sporting goods. With regard to the former: all experienced female workers, with at least six months' experience in the occupation, who were 20 years and over, were to receive a minimum weekly wage rate of \$14.40. The minimum rate for all other women employed in the industry was to be \$12. With regard to workers in toys, games, and sporting goods trades: all experienced females, who had been in the trade for at least one year, and who were 18 years or over, were to receive \$13.50 as a weekly minimum. Learners and apprentices were to receive \$12. All others were to receive at least \$10.50 a week. It is known, of course, that this commission has only the power to recommend and the only weapon it may employ in enforcing its decrees is public

opinion. But the commission has been uniformly successful in enlisting the aid of the public. Whether this is due to the respect it has gained or because the minimum wages set have been very low, it is not possible to say.

In January, the Massachusetts Department of Labor and Industries created a board for the determination of a minimum wage for women employed in the manufacture of electrical supplies and equipment, following a salary investigation made by the minimum wage commission in 1925-26. This industry was the twentieth for which wage boards had been set up.

It is interesting, at this point, to review the history of the Massachusetts law which was passed in July, 1913. As a result of an investigation into the wages of women in laundries, cotton mills, retail stores, etc., there was set up the minimum wage commission of three persons for the purpose of investigating wages of women in industries where it was believed women were receiving below the minimum necessary for subsistence. The commission creates a wage board if it believes that women are being underpaid. On the board are to sit an equal number of representatives of the employers and the workers. Wage agreements, reached by these boards, are sent back to the commission which enters a decree recommending the scale determined upon to all the employers in the State in the particular industry. In 1928 there were in effect wage decrees for 20 industries employing 90,000 women and girls—one-fifth of all those gainfully employed in the State. Minimum wages range from \$13 weekly for workers in candy factories to \$15 for women employed in men's clothing and raincoat factories. The rate for those employed in retail stores is \$14 for girls 19 years old and with a year's experience.

With the entering of a wage decree the commission is compelled to inspect the books of employers to see whether compliance is taking place. In the event that it is not and the employer cannot be induced to accept the wage scale of the decree, the commission by law is required to publish the names of recalcitrant employers. Miss Ethel M. Johnson in discussing this situation in the *Survey* of August 15 reported that wage decrees covering the following industries had been accepted by the majority of the employers: laundries, retail stores, paper-box factories. She went on to say: "The successful enforcement of the law depends upon public opinion, aroused by publicity and education. . . . The direct purpose of the minimum wage law is to protect working women and girls from being exploited by wages inadequate for decent, healthful living. It has resulted in improved wage conditions for many. . . . Through the work of the wage boards, it has helped to bring about better understanding and consequently better relations between employers and employees."

NEW YORK. Late in November, Governor-elect Roosevelt indicated that he was giving considerable study to the enactment of "fair wage" legislation for this State. After conferences with the head of the Consumers League of New York, Mr. Roosevelt announced that he believed that the idea of a fair wage for women might be put into effect without the necessity for resorting to special enactments, the Department of Labor already having sufficient authority. Mr. Roosevelt's statement was as follows:

When the original minimum wage law was declared unconstitutional, there was a dictum which seemed to indicate that the purpose sought could be obtained constitutionally through fair wage legislation. The word "fair" applying, of course, not only to the employee but also to the employer. The labor laws of the State of New York are undoubtedly more advanced and more practical in operation than those of any other State and the principal question at the present time seems to be whether the fair wage objective can be best obtained by constitutional legislation or administrative action by the State Department of Labor under the existing law. The Consumers League and other organizations are now studying this phase of the question and when I get back to New York I hope to confer with the organizations. I am seeking to have the fair wage objective obtained with the least possible trouble.

BIBLIOGRAPHY. While discussion in the United States on this subject was practically at a standstill because of the Supreme Court decision in the District of Columbia case, the same cannot be said for foreign commentators. *A Study of the Minimum Wage* by J. H. Richardson (New York, 1928), for example, is based on the very rich materials collected by the League of Nations' Labor Office. The author's thesis is as follows: There should be set up in each country, or in regions of each country, a minimum wage which will depend upon the capacity of industry to pay. By industry, the author does not mean the individual shop but the industry as a whole and he is quite willing to see the incompetents in a particular process eliminated. Mr. Richardson recognizes the administrative difficulties attending the success of such laws, but he is sanguine that they are not insuperable. He refuses, too, to base the minimum on so-called cost of living scales, but would base it on the prevailing rate being paid to unskilled workers in a particular industry, with the stipulation that as production rises the minimum is to rise as well. The Women's Bureau of the U. S. Department of Labor announced the publication of its bulletin, *The Development of Minimum Wage Laws in the United States*, but it had not issued from the press by the end of the year.

MINING AND METALLURGICAL ENGINEERS, AMERICAN INSTITUTE OF. An organization founded in 1871 and incorporated under the laws of New York State in 1905, "to promote the arts and sciences connected with the economic production of the useful minerals and metals and the welfare of those employed in these industries." It is made up of 27 local sections and has 38 affiliated societies at colleges throughout the country. There are four classes of membership: members, men who have been practicing engineers for at least six years; associates, men interested in or connected with mining, geology, metallurgy, or chemistry, but not practicing engineers; junior associates, students in engineering schools; and honorary members, those elected by unanimous vote of the board of directors. On Jan. 1, 1928, there were 8438 members, distributed as follows: honorary, 19; members, 6469; associates, 950; junior associates, 1004. The income for 1927 was \$188,984.61. In addition to the monthly meetings of the local sections, the annual meeting, a four-day convention, is held on the third Tuesday in February, in New York City, and regional meetings are held in various important mining or metallurgical centres in the United States or abroad. The Institute publishes *Transactions*, an annual containing the best papers of the year on mining

and metallurgical subjects; *Mining and Metallurgy*, a monthly bulletin; the *Year Book* which constitutes a "Who's Who" in the profession; *Technical Publications*, a series of individual technical pamphlets; and special volumes from time to time. In connection with three other societies, the Institute maintains the Engineering Societies Library and an employment bureau. The headquarters are at the Engineering Societies Building, 29 West 39th Street, New York.

MINNESOTA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,387,125. The estimated population on July 1, 1928, was 2,722,000. The capital is St. Paul.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1928	4,089,000	143,115,000	\$88,781,000
	1927	4,172,000	127,246,000	81,437,000
	1928	4,256,000	6,558,000 *	62,590,000
Hay	1927	4,338,000	7,906,000 *	63,241,000
	1928	4,089,000	153,338,000	53,668,000
Oats	1927	4,350,000	116,580,000	46,632,000
	1928	1,599,000	23,955,000	22,948,000
Wheat	1927	1,763,000	20,925,000	22,949,000
	1928	2,000,000	60,000,000	30,000,000
Barley	1927	1,460,000	43,800,000	28,470,000
	1928	354,000	38,940,000	11,682,000
Potatoes	1927	328,000	33,128,000	19,877,000
	1928	726,000	5,518,000	11,312,000
Flaxseed	1927	757,000	7,343,000	14,099,000
	1928	402,000	5,950,000	5,058,000
Rye	1927	383,000	7,009,000	5,958,000

* tons.

MINERAL PRODUCTION. The State continued to furnish the greater part of the iron ore produced in the United States and to derive from this item all but a small part of its own total production of minerals. Less iron was mined, however, in 1927 than in either of the two years immediately preceding. There were mined 35,563,177 long tons in 1927 and in 1926, 40,961,361; the total of 1927 had a value of \$87,935,099, and that of 1926 a value of \$103,715,621. The production of pig iron within the State remained relatively small, 287,813 long tons for 1927, as against 292,658 for 1926. Coke production rose slightly at 633,000 short tons (1927) from 619,905 valued at \$6,014,738 in 1926. All was from by-product ovens. Stone was quarried to the quantity of 682,800 short tons in 1926, as against 753,740 in 1925; in value, \$3,746,392 for 1926 and for 1925, \$3,784,252. The clay products attained a total of \$1,852,566 for 1926 and \$1,764,860 for 1925. The yearly total value of the sand and gravel production was around \$2,000,000, as was likewise the output of manganiferous ore. The total value of the State's mineral products, duplications eliminated, was \$118,361,306 for 1926; for 1925, \$110,252,956.

FINANCE. State expenditures in the year ended June 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$36,700,222 (of which \$11,099,620 was aid to local education); for interest on debt, \$3,859,640; for permanent improvements, \$12,575,914; total, \$53,135,776 (of which \$15,599,746 was for highways, \$4,871,094 being for maintenance and

\$10,728,652 for construction). Revenues were \$63,766,540. Of this, property and special taxes formed 24.6 per cent, departmental earnings and charges for officials' services 7.9 per cent, and sales of licenses and a tax on gasoline 49.5 per cent. Property valuation was \$2,365,019,180; State taxation thereon, \$10,719,860. Net State funded debt on June 30, 1927, was \$11,715,348. This total did not include road bonds issued by counties, on which the State was obligated to meet charges.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 8826.82. There were built in 1928, 3.53 miles of additional first track and 6.99 miles of second track.

EDUCATION. The elementary school curriculum of the State, according to Commissioner of Education McConnell, writing in the *Journal* of the National Education Association, was revised and enlarged. There were enrolled in the public schools of the State in the academic year 1927-28, 552,794 pupils, of whom 463,288 were in the elementary schools and 89,506 in the high schools. Expenditure for public-school education in that year was \$53,152,364. Teachers' salaries averaged \$1283 a year.

CHARITIES AND CORRECTIONS. Wide powers of central control over State institutions were vested in the State Board of Control as functioning in 1928. Besides controlling the 18 institutions for the various classes of defectives, sick, and delinquents, it supervised certain of the county institutions and operated a number of prison industries, appointed county child welfare boards, exercised legal guardianship over committed children, and established the paternity of illegitimates. The State institutions, with the numbers of inmates on June 30, 1928, were: Asylums and mental hospitals at Anoka, 1029; Hastings, 992; Willmar, 689; Fergus Falls, 1699; Rochester, 1459; St. Peter Hospital, 1524; Asylum for Dangerous Insane, 152; School for Feeble-Minded, 1979; Home School for Girls, 266; Colony for Epileptics, 167; State Training School, 328; Reformatory, 843; Reformatory for Women, 77; State Prison, 1228; Hospital for Inebriates, 14; School for the Blind, 88; School for the Deaf, 270; State Public School, 417; Sanatorium for Consumptives, 216; Hospital for Crippled Children, 250.

POLITICAL AND OTHER EVENTS. An independent audit of the books of the State, authorized by the legislature in 1927, resulted in a report, published in March, 1928, finding lack of co-operation between the State auditor's office and the Department of Administration and Finance. Definition of responsibilities and modernization of accounting methods were recommended. There followed in July a decision of the State Supreme court adverse to the Department of Administration and Finance, denying its authority as superior over that of the regents in the affairs of the University of Minnesota. The decision was regarded as a reverse for the plans of Governor Christianson for centralizing authority. Numerous ore leases of lands of the university, executed by authority of the State Department of Administration and Finance, were rendered of doubtful validity by the decision. The State trunk highway system as described in constitutional amendments was declared in a decision of the State supreme court not to include streets of first class cities, which consequently could not

benefit from State funds for such highways. Proceedings were brought by the State attorney-general against conductors of greyhound races operating in Minnesota.

As in the case of Michigan, sentencing judges in Minnesota inclined to impose sentences less severe than those provided by the Legislature of 1927 for repeating criminal offenders, and many convicts were brought back from prison for resentence. A report issued in March by the State railroad and warehouse commission, covering motor-bus operations in 1927, indicated to what extent motor-bus transportation had grown. It showed that motor buses had traveled 16,283,126 miles in the year, carrying 12,351,612 passengers, and had made a gross revenue of \$4,731,386. The chief company, the Northland Transportation Company, a subsidiary of the Great Northern Railroad, furnished nearly half the totals of mileage and of revenue. The name of the Minnesota National Forest was changed to Chipewewa National Forest. The Northern States Power Company completed in July a 30,000 horsepower hydro-electric generating station at Chipewewa Falls. The development of power dams along the watercourses forming part of the boundary between Minnesota and Ontario led to continued legal difficulties and political dispute. Governor Christianson in March declared himself opposed to the construction of new dams by private interests. While projects relating to these waters went to the Federal Power Commission for approval, the State Government prepared an engineers' report on the subject to lay before that body.

The City Comptroller of St. Paul made a special report March 22 on the financial condition of the city, prompted by a legal opinion of bankers' counsel that the city had exceeded its bonded debt limit; he stated that the bonded debt was \$19,982,438, and was about \$7,000,000 below the legal limit. A charter amendment submitted by the St. Paul charter commission, to empower the city government to buy, own, and operate street car and motor-bus lines, was submitted to a popular referendum vote on May 1. It was defeated by a small margin. Laurence C. Hodgson was reelected mayor of the city on the same date.

Litigation to determine the debt margin of the city of Minneapolis was decided by the State supreme court June 1 in the city's favor, the decision sustaining the city's contention that certain bonds were exempt from the legal limitation. It resulted that the city had a debt margin of \$1,733,000, and that it could proceed with a number of projects involving debt increase. Proposed charter amendments to provide restricting of the city and centralized control of ward funds for street maintenance were defeated by popular vote June 18. A reorganization of the Southern Minnesota Joint Stock Land Bank was completed March 30.

ELECTIONS. While the greater part of what had been the Progressive vote of 1924 in the State went on November 6 to the Democratic National ticket, the vote for the Republican National candidates, Hoover and Curtis, was the greater by an ample majority. The State's presidential vote was: Hoover (Rep.), 560,977; Smith (Dem.), 396,451. Theodore Christianson, Republican, was reelected Governor. Henrik Shipstead, the only Farmer-Labor member of the United States Senate, was reelected by what was de-

scribed as the largest majority ever polled in the State. He obtained 665,169 votes; his opponent, 342,992. His success was the more remarkable for his being opposed by a nominee of the otherwise successful Republican party, Arthur E. Nelson. Republican candidates were successful in the election of United State Representatives. A constitutional amendment to require the diversion of one-third of the State gasoline tax receipts to the State highway and bridge fund was approved by popular referendum. The voters of the city of St. Paul approved the issue of \$7,577,000 for public improvements, including the completion of the municipal airport.

OFFICERS. Governor, Theodore Christianson; Lieutenant-Governor, W. I. Nolan; Secretary of State, Mike Holm; State Treasurer, Julius A. Schmahl; Auditor, Ray P. Chase; Attorney-General, Albert F. Pratt; Commissioner of Education, James M. McConnell.

JUDICIARY. Supreme Court: Chief Justice. Samuel B. Wilson; Associate Justices: Homer B. Dibel, Andrew Holt, Clifford L. Hilton, Royal A. Stone.

MINNESOTA, UNIVERSITY OF. A coeducational State institution for higher learning at Minneapolis, Minn., founded in 1851. The 1928 autumn registration was 11,815, and there were, in addition, 6041 in the summer session. The university staff on a full-time basis, including professors, associate professors, assistant professors, and instructors, numbered 657. The endowment amounted to \$9,245,417, including a permanent fund of \$3,914,887, and lands and buildings in trust, \$1,590,837. Income from these funds, together with that of service enterprises and revolving funds and intercollegiate athletics, amounted to \$2,908,606; while student fees and miscellaneous income amounted to \$1,686,862; State appropriations for maintenance, building, and special purposes for 1927-28 were \$4,637,902, and Federal aid, \$293,634. The library contained 525,000 volumes. Minnesota Hospital and Home for Crippled Children, constructed at a cost of \$851,000, was dedicated on November 10, by Wm. H. Eustis, who had contributed \$350,000 toward its construction; construction was begun on the Memorial Auditorium, to cost \$1,000,000, and for which \$800,000 was available; and contracts were to be let for the construction of university dormitories at a cost of \$250,000. President of the University, Lotus Delta Coffman, Ph.D., LL.D.

MIRON, SALVADOR DIÁZ, Mexican poet, died at Vera Cruz, Mex., June 12, at the age of seventy-three. He was born at Vera Cruz. Miron was considered by many critics the leading poet of Mexico, and some writers rated him as the greatest in the Spanish-speaking countries and compared him with the late Jean Richepin, of France. He wrote with meticulous care and left only one authorized work, *Lascas*. His poetry is distinguished by elegance of diction and great refinement of thought. He was an accomplished orator and took part in politics as a member of the Chamber of Deputies and a leader of revolutionary movements. He was also esteemed as a critic and philosopher and was deeply interested in mathematics and geography.

MISSISSIPPI. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,790,618. Owing to a de-

crease between 1910 and 1920 no later estimates have been made. Capital, Jackson.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Cotton	1928	8,994,000	1,470,000 ^a	\$135,975,000
	1927	3,340,000	1,355,000 ^a	138,888,000
Corn	1928	1,765,000	22,945,000	23,404,000
	1927	1,918,000	34,140,000	31,750,000
Hay	1928	486,000	601,000 ^b	8,995,000
	1927	526,000	631,000 ^b	9,328,000
Potatoes	1928	15,000	1,330,000	1,596,000
	1927	12,000	936,000	1,544,000
Sweet potatoes	1928	55,000	6,050,000	5,445,000
	1927	69,000	7,728,000	6,182,000

^a bales, ^b tons.

MINERAL PRODUCTION. The total value of the State's mineral products was \$1,882,986 for 1926; for 1925, \$2,171,945. Clay products furnished \$1,006,661 of the 1926 total and \$1,050,241 of that of 1925. The remainder was made up chiefly of sand and gravel, of which the 1926 output was \$871,638, and the 1925 production \$1,120,709. Mineral waters and stone were produced in minor amounts.

FINANCE. State expenditures in the year ended Sept. 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$12,233,817 (of which \$3,988,337 was aid to local education); for interest on debt, \$790,168; for permanent improvements, \$5,557,599; total, \$18,581,584 (of which \$5,637,927 was for highways, \$1,692,015 being for maintenance and \$3,945,912 for construction). Revenues were \$16,394,641. Of this, property and special taxes formed 40.7 per cent; departmental earnings and charges for officials' services, 9.4 per cent; sales of licenses and a tax on gasoline, 27.6 per cent. Property valuation was \$724,107,850; State taxation thereon, \$4,344,647. Net funded State debt on June 30, 1927, was \$17,142,853.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 4265.87. There was no additional building of railroads in 1928.

EDUCATION. The Legislature of 1928, in increasing the State equalization fund disbursement by \$1,000,000, did much toward remedying the inequality of educational opportunity in different sections. An eight-month minimum school term was provided. The school-age population of the academic year 1927-28 was placed at 848,509. There were enrolled 577,834 public-school pupils, of whom 530,451 were in elementary schools and 47,382 in high schools. Current expenditures of public schools were about \$15,000,000.

CHARITIES AND CORRECTIONS. The State had no single central agency for institution control. Institutions were under separate boards of trustees. State institutions were: Beauvoir Soldiers' Home, Gulfport; State Insane Hospital, Jackson; East Mississippi Insane Hospital, Meridian; State Charity Hospital, Jackson; South Mississippi Charity Hospital, Laurel; Vicksburg Charity Hospital, Vicksburg; State Charity Hospital, Natchez; Mattie Hersee Hospital, Meridian; Colony for the Feeble-Minded, Ellisville; Deaf and Dumb Institute, Jackson; Blind Institute, Jackson. Patients in State insane hospitals on Jan. 1, 1928, numbered 2990.

LEGISLATION. The State Legislature convened in regular biennial session January 3, and adjourned April 27 after a session marked by much conflict of views. Appropriations were passed to a total expected to exceed \$26,000,000 for the biennium, but failure to adopt a consistent revenue programme left the State government with only about \$10,000,000 of revenue in sight for the period. The Senate rejected a general 1 per cent sales tax and an increase of 6 mills in the ad valorem levy, while Governor Bilbo refused his approval to a tobacco tax. A measure to resume the \$1 a day pension of Confederate veterans, which had been interrupted, and graduated pensions to veterans' widows, was passed, with an accompanying 2-mill ad valorem tax. The Governor vetoed a \$4,000,000 measure for flood relief in the form of an appropriation to the delta rehabilitation commission. A law was enacted bringing Mississippi into conformity with the 21 other States granting reciprocal exemption from death taxes; it was made retroactively retroactive to July 1, 1925. A project of Governor Bilbo to create a State printing plant for the production of school textbooks was defeated. Appropriations of \$1,700,000 for permanent improvements at the University of Mississippi and of \$3,475,000 for 17 other State institutions were made.

POLITICAL AND OTHER EVENTS. Investigation of the disposal of patronage in the postal service, conducted by Republican organization leaders in the State, led to the indictment of E. L. Patton, a colored Republican of Jackson, July 14, on charges involving the purchase and sale of public office. Plans of the Harrison and Jackson county supervisors for a bridge between Biloxi and Ocean Springs were approved in January by the U. S. War Department. Forrest County entered upon a large programme of road construction, the voters approving a county bond issue of \$1,000,000 for paving, at an election on July 3. A sea wall extending from Henderson Point to the eastern border of Biloxi was completed in May, at a cost of \$3,475,000. The increase in dairy farming in the State was visible in the coming of several large dairy and cheese companies into the State.

ELECTION. The State was one of the six of the Southern group that remained in the Democratic column at the National election of November 6. The majority for the Democratic presidential candidate, Governor Smith, was somewhat less than had been that for Davis in 1924. H. D. Stephens, Democrat, was reelected to the United States Senate and eight Democrats were elected to the House of Representatives, of whom six were reelected. The presidential vote of the State was reported as: Smith (Dem.), 124,539; Hoover (Rep.), 26,889.

OFFICERS (inaugurated Jan. 16-17, 1928): Governor, Theo. G. Bilbo; Lieutenant-Governor, Bidwell Adam; Secretary of State, Walker Wood; Attorney-General, Rush H. Knox; Treasurer, Webb Walley; Auditor, C. C. White; Superintendent of Education, W. F. Bond.

JUDICIARY. Supreme Court: Chief Justice, Sydney Smith; Associate Justices: W. D. Anderson, James G. McGowan, George H. Ethridge, John B. Holden, and W. H. Cook.

MISSISSIPPI, UNIVERSITY OF. A coeducational, State institution of higher education at University, Miss., founded in 1848. The total enrollment for the autumn of 1928 was 1121;

for the summer session of 1928, the enrollment was 309. The University consisted of the following colleges and schools: College of liberal arts, school of law, school of engineering, school of medicine, school of pharmacy, and school of commerce and business administration. There was also a school of education, the students of which, however, counted their education courses toward a degree in one of the other schools. The faculty numbered 64, exclusive of fellows and student assistants. There were approximately 40,000 volumes in the library. The productive funds amounted to \$190,000 from State appropriation; \$98,000 from student fees; and \$52,000 from other sources. A special appropriation of \$1,600,000 was made by the 1928 legislature for the construction of new buildings and other permanent improvements. Chancellor, Alfred Hume, C.E., D.Sc.

MISSISSIPPI RIVER FLOOD CONTROL. See FLOODS.

MISSOURI. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,404,055. The estimated population on July 1, 1928, was 3,523,000. The capital is Jefferson City.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1928	6,260,000	181,540,000	\$132,524,000
	1927	5,796,000	168,084	126,063
Hay	1928	3,442,000	4,340,000	45,360,000
	1927	3,683,000	5,373,000	52,559,000
Wheat	1928	1,511,000	19,194,000	23,188,000
	1927	1,568,000	15,700,000	19,146,000
Oats	1928	1,606,000	44,968,000	18,887,000
	1927	1,565,000	26,605,000	12,504,000
Cotton	1928	349,000	146,000	13,140,000
	1927	291,000	115,000	11,778,000
Potatoes	1928	85,000	10,285,000	6,171,000
	1927	68,000	5,644,000	6,491,000
Sweet potatoes	1928	11,000	1,155,000	1,213,000
	1927	12,000	1,344,000	1,613,000

^a tons, ^b bales.

MINERAL PRODUCTION. Lead, of which the State was the greatest producer in the Union, contributed more than one-third of the entire value of the mineral output of the State for 1926. A decline in 1927 brought the total lead production of Missouri down to 198,760 short tons for that year, from 207,012 for 1926; in value, the product was \$25,043,760 for 1927 and for 1926, \$33,121,920. There were produced 6,778,384 barrels of cement in 1927, as against 7,653,111 in 1926. Cement shipments of 1927 had a value of \$11,117,047; those of 1926, \$12,917,342. There were mined in 1927, 3,064,343 tons of coal; in 1926, 3,008,495 tons. Coal mined had a value of \$8,698,000 for 1927, and for 1926, \$8,951,000. In addition to lead, the ores mined in the State produced considerable zinc and some silver and copper. The zinc production was, for 1927, 18,737 short tons; for 1926, 26,018 short tons. The value of zinc produced was: for 1927, \$2,398,336; for 1926, \$3,902,700. Clay products were valued at \$17,618,931 for 1926, the latest recorded year, and at \$17,521,866 for 1925. In 1927 were produced 274,000 tons of lime, as against 263,467 in 1926; in value, \$2,295,000 (estimated) for 1927 and \$2,218,943 for 1926. There was a large production of stone; in 1926, 3,093,000 tons and in 1925, 2,796,510; in value, \$6,012,013 for 1926 and \$5,662,835 for 1925. Barite was produced in

1926 to the value of \$946,595. The total value of the State's mineral products, duplications excluded, was \$90,003,537 for 1926; for 1925, \$92,548,473.

FINANCE. State expenditures in the year ended Dec. 31, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$23,892,125 (of which \$5,497,348 was for local education); for interest on debt, \$3,297,765; for permanent improvements, \$19,601,528; total, \$46,791,418 (of which \$19,994,908 was for highways, \$1,411,950 being for maintenance and \$18,582,958 for construction). Revenue was \$42,771,958. Of this, property and special taxes formed 32.1 per cent; departmental earnings and charges for services of State officers, 15.4 per cent; sales of licenses and taxation of gasoline, 41.1 per cent. Assessed valuation of property was \$4,967,319,670; State taxation thereon, \$6,457,516. Net funded State debt on Dec. 31, 1927, was \$69,958,464. Of outstanding bonds \$50,000,000 were for highways.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 8017.60. There were built in 1928, 19.16 miles of second track and 0.2 mile of third track.

EDUCATION. The five State teachers' colleges were accredited in 1928 as standard four-year colleges by the American Association of Colleges and Universities. The school-age population of the State in the academic year 1927-28 was placed at 918,400. There were enrolled in the public schools 672,790 pupils. Of these, 205,770 were in rural schools, 342,287 in elementary schools within high-school districts, and 124,733 in high schools. Public-school expenditures of the year totaled \$52,495,170.14, including \$13,065,083.03 for building. Teachers' salaries averaged, for men, \$667, and for women, \$611 a year, in rural districts; in other districts, \$1419 for men and \$894 for women.

CHARITIES AND CORRECTIONS. The institutions of the State include four State hospitals, the Missouri Colony for the Feeble-Minded and Epileptic, Missouri State Sanatorium, Confederate Home, State Federal Soldiers' Home, State Penitentiary, Reformatory, Industrial Home for Girls, Industrial Home for Negro Girls. Prisoners in the State Penitentiary on Jan. 1, 1928, numbered 3624, and formed 103 to the 100,000 of the population.

POLITICAL AND OTHER EVENTS. A Missouri statute of 1919, rendering directors of any State bank personally liable for losses resulting from the non-payment of deposits made in such bank after it had ceased to be solvent, was sustained March 17, by the State supreme court in a decision in favor of a depositor. The law resembled that of Kansas, sustained by the U. S. Supreme Court in May. The Missouri Supreme Court in July forfeited the charter of one of the dog racing associations that had roused opposition in several States as gambling organizations. The renewal of the wage contest in the Missouri coal fields in the spring was followed by some violence, particularly the ambushing of a group of non-union miners of the Western Coal and Mining Company near Minden June 29. An Appellate Court decision of May 1, was adverse to the custom of members of the Justice Court in Jackson County, who had deserted the districts in which they were supposed to hold court, and had established offices in the Kansas City business dis-

tricts; it was held that these so-called jack-rabbit justices had thus ceased to furnish service to their localities and had in part duplicated the functions of the county courts. State Attorney-General North Todd Gentry was appointed to the State Supreme Court bench June 21, succeeding Walter W. Graves, deceased, and was himself succeeded as Attorney-General by Stratton Shar-tel.

The investigation of the Federal Trade Commission into propaganda of large public utility companies (see UNITED STATES: *Administration*) elicited evidence that 690 public high schools in Missouri had been induced to make use of booklets issued by a power publicity organization. As a means to advance a State highway building programme involving the construction of some 7640 miles of roads, an initiative petition was circulated early in the year, proposing a constitutional amendment to authorize the issue of \$75,000,000 of State bonds. The proposal was to come before the voters at the general election in November. A State park in the Ozark region, the Sam A. Baker State Park, was dedicated July 16. At Louisiana, Mo., a steel highway bridge across the Mississippi River was opened June 9.

At St. Louis a great public building, the Civil Court House, facing the Memorial Plaza, was brought to completion early in the year. Voters of St. Louis County on June 26 approved by a slight margin over the necessary two-thirds majority a proposal to issue \$10,000,000 of bonds for road purposes. On the proposal to improve Lambert Field as a municipal airport at a cost of \$2,000,000 to be met by bond issue, a popular vote was held in the city of St. Louis August 7, and resulted favorably. The city board of aldermen granted the Illinois Traction system, July 13, a franchise to transport freight through city streets for 50 years, in connection with the system's proposal to build a \$5,000,000 terminal with subway and elevated connections on High Street between Morgan Street and Lucas Avenue. The aldermen by ordinance of June 26 sought to provide for the municipal licensing and regulation of all service cars, including compulsory liability insurance.

The tax imposed by Kansas City, Mo., on cigarettes sold within the city limits was upheld by the State Supreme Court April 9. A set of twelve separate proposals for city and county bond issues came to a popular vote May 8; all were defeated save four. Those which passed were issues for a municipal wharf, for improvements to Swope Park, for the County Hospital and for the county highway system. Defeated proposals for trafficways, waterworks, and an airport were again submitted to popular vote on August 7. A water tunnel under the Missouri River to deliver water to the city was completed in April. A natural gas franchise granted to the Industrial Gas Company in 1927 was accepted by that company in March, but was contested by the Doherty interests, already established there as in certain other Missouri and Kansas cities.

ELECTION. The Republican National candidates, Hoover and Curtis, carried the State at the election of November 6 receiving 834,080 votes. Smith and Robinson, on the Democratic ticket, obtained 602,532, their total being of about the size obtained by Coolidge in 1924. As in most other States, the aggregate number of ballots cast far exceeded all previous record. The

vote was locally divided, the city of St. Louis giving Smith a plurality reported at 14,514, while the greater part of the rural districts favored Hoover. The outgoing United States Senator, James A. Reed, Democrat, having declined to run again, Charles M. Hay became the Democratic candidate. He was defeated by Roscoe C. Patterson, Republican, of Kansas City. The Republicans increased by five the number of their seats in the State's delegation of Representatives. For Governor, Henry S. Caulfield, Republican, defeated Francis M. Wilson, Democrat, and Republicans were elected to the majority of the State offices. A proposed constitutional amendment to authorize the issue of \$75,000,000 of highway bonds was approved by popular vote. A proposal to provide higher salaries for legislators was defeated at this election.

OFFICERS. Governor, Sam A. Baker; Lieutenant-Governor, Phil A. Bennett; Secretary of State, Charles U. Becker; Auditor, L. D. Thompson; Treasurer, C. Eugene Stephens; Attorney-General, North T. Gentry (succeeded June 21, by Stratton Shartel); Superintendent of Public Schools, Charles A. Lee.

JUDICIARY. Supreme Court: Chief Justice, John Turner White; Associate Justices: North Todd Gentry, who on June 21 succeeded Walter W. Graves (who died); Frank E. Atwood, Ernest S. Gantt, William S. Ragland, Robert F. Walker, David E. Blair.

MISSOURI, UNIVERSITY OF. A State institution of higher education at Columbia and Rolla, Mo., founded in 1830. The enrollment for the first semester of 1928-29 at Columbia and Rolla was 4439, of whom 3116 were men and 1323 women. This enrollment was distributed as follows: Agriculture, 292; arts and science, 1176; business and public administration, 192; education, 397; engineering, 429; mines, 495; fine arts, 128; graduate, 298; journalism, 307; law, 148; medicine, 79; short course in agriculture, 35. The total enrollment for the summer session was 2169, of whom 929 were men and 1240 women. The total annual enrollment of all classes of students, including those in correspondence and extension courses, was more than 8500. There were 400 members on the faculty. The endowment of the University was approximately \$2,500,000, and the total income from all sources a little over \$3,500,000. The libraries contained approximately 326,000 volumes. President, Stratton Duluth Brooks, LL.D.

MODERATION LEAGUE. See **PROHIBITION.**

MOLLUSCA. See **ZOOLOGY.**

MONACO, mōn'a-kō. A principality on the Mediterranean coast, surrounded on the land sides by the French Department of Alps Maritimes. Area, eight square miles: population, according to the census of 1923, 22,153. It is chiefly known for its gambling resort, Monte Carlo (population in 1923, 9428). Other towns are Monaco (2020) and La Condamine (10,705). Under the constitution of Jan. 7, 1911, the Government consists of the prince assisted by a council of state and a National Council elected by universal suffrage. The ruler in 1928 was Prince Louis II, born July 12, 1870, who succeeded his father, Prince Albert, June 26, 1922.

A tempest in a teapot was brewed in this small principality in the last month of the year. The National Council of 24 members resigned on December 15 and the Communal Council re-

signed on December 26, thus leaving the people of the country without any representatives. The trouble started because the councils felt that the directors of the Monte Carlo Casino were assuming too much control over the affairs of state. Prince Louis, the reigning sovereign, was securely resting in his château in France and conducted all negotiations through his son Prince Pierre. A committee of six, three from each council, was appointed near the close of the year to iron out the difficulties. The question of what control and influence the gambling syndicate should have over the tiny country was thus postponed until the close of the winter season.

MONEY. The table on page 469 from the annual report of the director of the United States Mint shows the distribution of the stock of money in the United States on June 30, 1927, Oct. 31, 1920, June 30, 1914, and Jan. 1, 1879.

MONEY RATES. See **FINANCIAL REVIEW.**

MONGOLIA. A vast and indefinite tract of territory lying to the west of Manchuria. Area, about 1,875,000 square miles, although some authorities place it as low as 1,367,000 square miles. Population, variously estimated at 750,000 to 2,000,000. Capital and chief town, Urga. It is inhabited by nomadic Mongol and Kalmuk tribes, but latterly the Chinese have immigrated in considerable numbers. The chief occupation is stock raising and the principal exports are furs, skins, hides, horns, and wool. The soil is naturally fertile but needs irrigation to be productive. Gold, iron, copper, silver, and tin are found, but are not worked extensively. Since 1917 there has been a motor-car freight service across the Gobi Desert. The trip takes three days and is only feasible in the summer.

MONTAGUE, CHARLES EDWARD. English author and editor, died at Manchester, England, May 28. He was born Jan. 1, 1867. He was educated at the City of London School and at Balliol College, Oxford. Immediately after leaving the university, in 1890, Mr. Montague accepted a post with the Manchester *Guardian*, and by 1896 he had risen to become chief leader writer. He remained with the newspaper until 1925, when he retired to devote his entire time to the writing of novels. In the meantime, 1915-19, he had served with great bravery in the War, being mentioned in dispatches three times. He was wounded and thereafter served as a staff officer and press censor. His first book, *A Hind Let Loose* (1910), is a political and social fantasy, as is his last book, *Right Off the Map* (1927). He published also *Dramatic Values* (1911), a volume of theatrical criticisms; *The Morning's War* (1913); *Disenchantment* (1922); *Fiery Particles* (1923); *The Right Place* (1924); and *Rough Justice* (1926).

MONTANA. **POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 548,889. The capital is Helena.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

^a Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agency of the Federal Reserve Bank at Atlanta.
^b Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.
^c Population of continental United States (estimated) June 30, 1928, 118,364,000; June 30, 1927, 116,943,000; Oct. 31, 1920, 107,491,000; June 30, 1914, 99,027,000;
Jan. 1, 1879, 48,231,000.
^d Does not include gold bullion or foreign coin other than that held by the Treasury, Federal reserve banks, and Federal reserve agents. Gold held by Federal reserve banks under earmark for foreign account is excluded, and gold held abroad for Federal reserve banks is included.
^e These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.
^f The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.
^g This total includes \$20,404,511 of notes in process of redemption, \$149,700,062 of gold deposited for redemption of Federal reserve notes, \$5,362,953 deposited for redemption of National bank notes, \$2430 deposited for retirement of additional circulation (Act of May 30, 1908), and \$6,444,671 deposited as a reserve against postal savings deposits.
^h Revised figures.

ⁱ Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$156,039,088 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for retirement of all outstanding Federal reserve bank notes. National bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national bank notes secured by Government bonds.

^a tons.

MINERAL PRODUCTION. In the mining of copper, which yields not far from half of the yearly mineral total of the State, as to value, Montana in 1927 as in 1926 held third place among the States, being outdone by Arizona and Utah. The Montana production of copper fell again in 1927, to 223,492,639 pounds, from 255,372,862 pounds in 1926. About 99 per cent of the 1927 output came from Silver Bow County. The production of zinc, on the other hand, increased. It was 160,461,803 pounds for 1927, as against 147,401,507 pounds for 1926. Lead production decreased to 35,898,315 pounds for 1927, from 42,306,193 for 1926. Gold output was 53,541 fine ounces for 1927, as against 60,504 for 1926. The amount of silver produced in 1927 was 11,200,007 fine ounces; in 1926, 12,769,092. The combined total value of the year's production of these five metals was, for 1927, \$49,265,925; for 1926, \$59,410,453. Coal mines of the State somewhat increased production to 2,966,638 net tons for 1927, from 2,797,760 for 1926; in value, to \$6,973,000 for 1927, from \$6,883,000 for 1926. The amount of petroleum produced in 1927 was 5,048,000 barrels, that in 1926, 7,727,000; the total value was, for 1927, \$7,400,000 (estimated) and for 1926, \$10,170,000. Manganese ore production for 1926 decreased to 23,607 short tons for 1926, from 76,188 for 1925. Among the less important minerals arsenious oxide, natural gas, and stone were produced in 1926 in quantities not greatly changed. The total value of the State's mineral products was \$79,762,630 for 1926; for 1925, \$79,261,284.

The estimated 1928 production of gold attained a value of \$1,296,000; that of silver was 10,726,000 ounces, in value, \$6,275,000; copper, 248,571,000 pounds, \$36,291,000; lead, 32,662,000 pounds, \$1,993,000; zinc, 170,000,000 pounds, \$10,200,000. The 1928 production of all five metals was, in value, about \$56,055,000.

FINANCE. State expenditures in the year ending June 30, 1927, as reported by the U. S. Department of Commerce, were: for departmental maintenance and operation, \$5,927,691 (of which \$1,318,661 was for local education); for interest on debt, \$427,971; for permanent improvements, \$1,840,264; total, \$8,195,926 (of which \$1,535,279 was for highways, \$281,646 being for maintenance and \$1,253,633 for construction). Revenues were \$8,779,813. Of this, property and special taxes formed 29.3 per cent; departmental earnings and charges for officials' services, 7.3 per cent; sale of licenses and taxes on gasoline, 25.9 per cent. Property valuation was \$435,510,159; taxation thereon by the State, \$1,946,-

032. Net funded State debt on June 30, 1927, was \$4,751,148, or \$6.74 per capita. In 1926 the per capita debt was \$7.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 5094.43. There were built in 1928, 163.04 miles of additional first track.

EDUCATION. The State distribution to needy school districts in 1928, as given by State Superintendent Trumper in the *Journal* of the National Educational Association, was over \$350,000, and rendered possible the general establishment of a nine-month term. The school-age population of the academic year 1927-28 was placed at 152,383 (from 6 to 21 years of age). There were enrolled in public schools 117,972 pupils, of whom 95,740 were in elementary and 22,232 in high schools. Expenditure for public-school education totaled \$14,130,703.04. Salaries of teachers averaged \$1112.

CHARITIES AND CORRECTIONS. State governmental branches operating in the welfare field in 1928 were the Board of Education, Board of Pardons, Board of Prison Commissioners, Board of Commissioners for the Insane, Veterans' Welfare Commission, and Board of Charities and Reforms. Under the Board of Education were the State School for the Deaf, Blind, and Feeble-Minded, State Industrial School, State Orphans' Home, and State Vocational School for Girls. Other State institutions were: State Prison, Deer Lodge; State Hospital for the Insane, Warm Springs; State Tuberculosis Sanitarium, and State Soldiers' Home, Columbia Falls. Inmates of the State Prison on Jan. 1, 1928, numbered 471.

POLITICAL AND OTHER EVENTS. A fire in the city of Helena July 16 caused damage estimated at \$1,500,000, destroying several buildings in the business district. The Montana tax levied by the County of Yellowstone on capital stock of the National Bank of Billings was invalidated by the United States Supreme Court April 9, on the ground that it exceeded the rate of taxation for State banks. An air mail service and passenger line connecting Great Falls with Salt Lake City, Utah, began operation August 1.

ELECTION. The vote of the State in the election of November 6 was peculiarly distributed between the parties. The voters gave Hoover and Curtis, the Republican National candidates, a substantial majority over Smith and Robinson. They reelected to the United States Senate a Democrat, Burton K. Wheeler, over Joseph M. Dixon, Republican, John E. Erickson, Democrat, was reelected governor, defeating Wellington Rankin, Republican. One Democrat and one Republican were reelected to the House of Representatives. The voters defeated a referendum for the adoption of a State law for prohibition enforcement identical in its provisions with the Volstead law. The popular vote for President was: Hoover (Rep.), 113,300; Smith (Dem.), 78,578.

OFFICERS. Governor, J. E. Erickson; Lieutenant-Governor, W. S. McCormack; Secretary of State, William Powers; Treasurer, W. E. Harmon; Auditor, George P. Porter; Attorney-General, L. A. Foot; Superintendent of Public Instruction, May Trumper.

JUDICIARY. Supreme Court: Chief Justice, Lew L. Callaway; Associate Justices; John A. Matthews, Albert J. Galen, Albert P. Stark, and Henry L. Myers.

MONTANA, STATE UNIVERSITY OF. A State institution for the higher education of men and women at Missoula, Mont., founded in 1895. The enrollment for the autumn of 1928 was 1455, of whom 804 were men, and 651 women, distributed among the various schools as follows: Arts and sciences, 983; business administration, 69; forestry, 88; journalism, 136; law, 50; music, 22; pharmacy, 62; music specials, 32; and unclassified, 13. In the summer session 498 students were registered, of whom 120 were men and 378 were women. The faculty had 96 members. The productive funds and income for the year amounted to \$472,532. There were about 145,000 volumes in the library, including government documents. President, Charles H. Clapp, Ph.D.

MONTENEGRO, mōn'tā-nā'grō. An integral part of the State of Jugo-Slavia. Before the War it was a Balkan kingdom, bounded by Serbia on the east. Albania on the south. Dalmatia on the west, and Herzegovina on the west and north, with an area of 5603 square miles and a population of 436,789 on Jan. 1, 1917. After Dec. 1, 1918, its status was indeterminate until 1921 when it became an integral part of Jugo-Slavia. The area in 1921 was placed at only 3733 square miles, and the population according to the census of that year, 199,857. Capital, Cetinje, with a population of 5500. See JUGO-SLAVIA.

MOON. See ASTRONOMY; GEOLOGY; PHYSICS.

MONTSERRAT, mōnt'sē-rāt'. One of the presidencies of the Leeward Islands. See LEEWARD ISLANDS.

MORAVIANS. A religious denomination comprising, in the United States, three branches: The Moravian Church (Unitas Fratrum); the Evangelical Union of Bohemian and Moravian Brethren in North America; and the Independent Bohemian and Moravian Brethren Churches. It was formed in Bohemia in 1457 under the leadership of John Huss and Jerome of Prague, and opposed the efforts of Austria and the Roman Catholic authorities to suppress it. At the beginning of the Reformation, it had more than 400 churches. In 1741 Moravians settling at Bethlehem, Pennsylvania, founded the first Moravian Church in the United States. The doctrine is evangelical, without a creed peculiar to itself, and in its polity the denomination follows a modification of the episcopacy, having a ministry of three orders: bishops, presbyters, and deacons.

THE UNITAS FRATRUM, the largest branch, is organized in two coördinate provinces: the Northern, with a provincial synod meeting every fifth year (a meeting of the Northern Province was to be held in 1930); and the Southern, of which the provincial synod meets every third year. The church maintains the following five educational institutions: Linden Hall, Lititz, Pa.; Moravian College and Theological Seminary, and Moravian Seminary and College for Women, Bethlehem, Pa.; Nazareth Hall, Nazareth, Pa.; and Salem Academy and College for Women, Winston-Salem, N. C. Missionary workers are maintained in southern California and Alaska, and in Nicaragua, the West Indies, Jamaica, Labrador, Surinam, South America, the Himalayas, and Unyanwesi, Central Africa. The official periodical, *The Moravian*, is published weekly at Bethlehem, Pa. On Jan. 1, 1928, there were: 131 churches; 159 ministers; 26,394 communicant members, although the actual membership was estimated at 36,516; and 123 Sunday schools with 21,534 scholars.

THE EVANGELICAL UNION OF BOHEMIAN AND MORAVIAN BRETHREN IN NORTH AMERICA, of which the first congregation was organized in 1864, at Wesley, Tex., is under the direction of a synod which meets each year on July 6, the day of the death of John Huss. In 1926 (the latest year for which figures were available) this denomination reported 34 churches in North America with 5241 members and 24 Sunday schools, with an enrollment of 1708; total expenditures were \$12,023; and value of church property \$76,700.

THE INDEPENDENT BOHEMIAN AND MORAVIAN BRETHREN CHURCHES were founded in 1858 in College Township, Iowa. In 1926 there were three churches with one minister and 356 members, and three Sunday schools with 381 scholars.

MORA Y DEL RIO, THE MOST REV. JOSÉ. Mexican Roman Catholic prelate, died at San Antonio, Tex., April 22. He was born at Pajuarari, Mex., Feb. 24, 1854, and studied at Zamora, Mex., and at Rome. He was ordained to the priesthood in 1877. Sixteen years later he was elevated to the bishopric of Tehuantepec, and he later became Bishop of Leon. In 1908 he was consecrated as Archbishop of Mexico and head of the Church in the Republic. He was noted for his liberal views in religion and in economics, and while Bishop of Leon, about 1907, established what were then known as "agricultural congresses," designed to ameliorate the condition of the peons. Age and physical infirmities prevented Archbishop Mora from taking the active lead in opposition to the Government when the Church and the State were at odds, but in 1926 he was arrested on a charge of criticizing the Government, the charge being dismissed when he repudiated an interview supposed to have been given by him. In 1927 the archbishop and five other leading prelates of the Roman Catholic Church in Mexico were taken from their homes and placed on a train going to the American border, and thereafter he made his home at San Antonio, Tex. He was considered for elevation to the cardinalate in 1924 and 1926.

MORGAN, JAMES APPLETON. American lawyer and Shakespearean scholar, died August 15, at New York. He was born at Portland, Me., Oct. 2, 1845, and was graduated from Racine College, Wisconsin, in 1867 and from the Columbia Law School in 1869. Having been associate counsel for the Erie Railway and the Northern Pacific Railroad from 1875 until 1885, he retired from practice to write and to study early Shakespearean editions. He became president of the New York and Palisade Railroad Company, and of the Shakespeare Press Publishing Company. Mr. Morgan believed that before the Shakespearean folios were printed in 1623 the plays had been altered by Shakespeare and by actors and managers to suit various productions. To illustrate this theory he published the *Bankside Shakespeare* (1888-1892). He founded the Shakespeare Society of New York in 1885, and was its president for forty years. He arranged for the Poe cottage on upper Manhattan to be preserved, and he erected tablets to identify other Poe residences. He wrote: *Macaronic Poetry* (1870); *The Law of Literature* (1874); *Legal Maxims* (1877); *The Shakespearean Myth* (1880); *Shakespeare in Fact and Criticism* (1884); *A Study in the Warwickshire Dialect* (1884); *Shakespeare's Pronunciation as Deduced from the Puns in the Plays* (1884); *Shakespearean Commentators* (1885); *Digesta*

Shakespeareana (1887); *The People and the Railways* (1888); *The Society and the Fad* (1890). Besides the *Bankside Shakespeare*, he was editor of the following books: *Addison on Contracts* (1875); *Best on the Principles of Evidence* (1876); *Forsyth on Trial by Jury* (1876); *The Bankside Restoration Shakespeare* (1905-1908); *Genealogical History of the Family of Morgan from A. D. 605 to present times* (1880); *Mrs. Shakespeare's Second Marriage* (1925); and *The Transference of 16 non-Quarto Plays to the First Folio* (1925).

MORMONS. See LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF.

MOROCCO. The largest of the Barbary States, occupying the northwestern corner of the continent of Africa; bounded on the west by the Atlantic Ocean, on the north by the Mediterranean Sea, on the east by Algeria, and on the south by the Sahara Desert and the Spanish colony of Rio de Oro. From an administrative and political point of view, Morocco is divided into three zones: First and most important, the French protectorate, including approximately 85 per cent of both area and population, with Fez as the political capital and Casablanca as the leading port and commercial centre; second, the Spanish protectorate, a narrow strip of land extending for about 300 miles from the Atlantic Ocean along the Mediterranean with Ceuta, Melilla and Tetuan as the principal localities; and third, the international Tangier zone ruled in accordance with the terms of the Paris convention of Dec. 18, 1923, between France, Great Britain, and Spain. The latest estimate of the total area places it at 218,525 square miles, of which the area claimed by Spain for her zone in the north was 8000 square miles; for her southern zone, 9500 square miles; and for Ifni on the west coast, 800 square miles. In 1921, the area effectively held by the French was estimated at 92,664 square miles.

A census of the French zone taken in March, 1926, puts the population at 4,016,882 native Moslems, 107,552 native Jews, and 104,712 foreigners, making a total of 4,229,146. That of the Spanish zone may be put at something under 1,000,000 and that of the Tangier zone at about 80,000. The largest towns in the French zone with their populations according to the census of 1926 are Marrakesh, 149,263; Casablanca, 106,608; and Fez, 81,172. In the Spanish zone the largest town is Tetuan with a population of 24,000. The population of Tangier is approximately 60,000. The chief languages are French, Spanish, Arabic, and Berber dialects. According to the latest available statistics, there were in the French zone 199 schools; in the secondary schools there were 188 teachers and 2822 pupils; in the high schools, 26 teachers and 417 pupils; in the primary schools, 645 teachers and 23,327 pupils; in the professional schools, 79 teachers and 1029 pupils. There are Moslem schools at Rabat and Fez and a research institute for the study of the Arabic and Berber languages at Rabat.

PRODUCTION. The most important industry is agriculture. The principal crops are cereals, especially wheat and barley, beans and chick-peas, canary-seed, cumin and coriander, linseed, olives, grapes and other fruits, and especially almonds. Stock raising is an increasing industry. In 1926 there were in the French Zone, 1,932,840 cattle, 9,248,462 sheep, 3,037,731 goats, 58,911

pigs, 190,251 horses, 562,835 asses, and 117,917 camels. Although no coal is found in Morocco, the rich mineral resources include phosphates, the output of which in 1927 was 1,183,469 tons, iron ore, gold, silver, tin, copper, and petroleum. The phosphate mines are exploited by the Government and under its monopoly.

COMMERCE. No later figures for commerce were available than those given in the preceding YEAR BOOK, when, in 1926, exports were valued at 710,555,155 francs and imports at 1,692,268,000 francs.

FINANCE. The estimated revenue for the French Zone according to the budget for 1928 was 631,374,610 francs and the estimated expenditure 631,374,081 francs. The budget for the Spanish Zone for the same year provided revenues of 55,913,441 pesetas and expenditures of 59,913,441 pesetas. In the Tangier Zone the revenue for 1927 was 27,000,000 francs and the expenditure 22,000,000 francs.

COMMUNICATIONS. In 1926, 1723 vessels of 2,061,302 tons entered the ports of the French Zone and 1599 of 1,169,405 tons entered the ports of the Tangier Zone. There are approximately 1100 miles of railway in Morocco.

GOVERNMENT. The Tangier Zone is permanently neutralized and demilitarized and is governed by an international control organization. The French Zone constitutes a protectorate, under a French and native administration. The highest local authority is the French Resident General. The office of Sultan continues, but the Sultan is obliged to follow the advice of the French Resident General in all matters. The position of War Minister is held by the officer commanding the French troops in Morocco. The Spanish Zone is virtually governed by the Spanish High Commissioner. Sultan in 1928, Sidi Mohammed, succeeded his father Moulay Youssef, Nov. 18, 1927. French Resident General, Theodore Steeg (appointed Oct. 11, 1925); Spanish High Commissioner, General Sanjurjo.

MOSHER, mō'zhēr, ELIZA MARIA. American physician, died at New York, October 16. She was born at Poplar Ridge, Cayuga County, N. Y., Oct. 2, 1846, and after her graduation from the medical school of the University of Michigan in 1875, did post-graduate work at London and Paris. Being at this time one of the few women in her profession, she was the first to receive the position of resident physician at the women's reformatory of Massachusetts. After serving in that capacity, 1877-79, she was made superintendent, in 1881. Dr. Mosher next acted as associate professor of physiology and as resident physician, at Vassar College, 1883-86. She returned to the University of Michigan ten years later, as dean of women and professor of hygiene and home economics, resigning in 1902, in order to undertake private practice, in which she continued until her death. She also lectured on hygiene at Adelphi College, Brooklyn, 1903-06, and during the World War she worked with the American Women's Hospitals. She was one of the founders of the American Posture League, and was honorary president of the Medical Women's National Association. For nineteen years she served on the milk committee of the Medical Society of Kings County. She was the

American representative at the International Congress of Medical Women, at Geneva, in 1923. Dr. Mosher wrote numerous medical articles and a popular book, *Health and Happiness* (1911).

MOUNT HOLYOKE COLLEGE. An institution for the higher education of women at South Hadley, Mass., founded in 1837. The registration for the autumn session of 1928 was 1030, distributed as follows: Graduate students, 23; seniors, 234; juniors, 207; sophomores, 271; freshmen, 295. The faculty, including professors, associate professors, assistant professors, instructors, and chief administrative officers, numbered 124, and there were 74 assistants, readers, graduate assisting fellows, curators, and secretaries. New appointments for the year 1928-29 included: Mrs. Alice Browne Frame, acting dean of residence; Harriet Newhall, executive secretary of the board of admission and assistant to the president; Grace M. Bacon (returned from a three-year leave of absence), associate professor of German; Mrs. Martha Brown Fincke, assistant professor of music; and Helen Wolcott, instructor in history and literature. The productive funds of the College for 1927-28 amounted to \$3,965,681, and the income to \$1,203,152. There were 104,000 volumes in the library. During the year the College acquired two small houses in the village one of which was converted into a residence for graduate students and assistants, and the other for freshmen; while a building ("Playshop") to serve the purposes of the English course as a laboratory in the production of original plays, was under construction. President, Mary Emma Woolley, A.M., Litt.D., L.H.D., LL.D.

MOVING PICTURES. The talking pictures, introduced to the public in 1926, had established their economic position in the United States in 1928, and by the end of the year provision had been made for wiring 1000 motion-picture theatres. They stood, therefore, a fertile field for both scientists and artists, for the new method was still as imperfect as were moving pictures in the first few years of their existence. The best sound productions of the year were those with Vitaphone music projected by discs synchronizing with the action of the film, and with only a few words, as *The Patriot*, and the Fox Movietone news reels, in which the sound was recorded simultaneously with the picture, and was inseparable from it. The music, as developed, had a mechanical tone, and was inferior to many of the larger moving-picture orchestras, but better than the music usually provided by smaller houses. The dialogue was more difficult to handle as the mechanism still was imperfect, while players who photograph well do not always speak effectively and pleasantly. Furthermore,

since motion-picture audiences do not sanction the freedom of expression accorded the stage, it was a delicate undertaking to crystallize the impression on the screen with spoken word without either offending tradition, or resorting to laughable platitudes. The first attempt with dialogue in a feature picture was *Tenderloin*, which was followed on July 7 by an all-talking picture, *The Lights of New York*. Both were considered by critics as far from successful, but were interesting as demonstrations of what could be done. Al Jolson in *The Singing Fool*, opening September 19, proved more successful.

Although the Movietone and Vitaphone were the leading processes of sound production in 1928, there were 49 non-synchronous, and 38 synchronous methods, including the Biophone, Cinephone, Phonofilm, and Sonora-Bristolphone. It was settled on October 24 that distributors could sell discs of any competent organization to houses which had been wired for the use of the Vitaphone and interchangeability was secured among the several disc systems.

Sound pictures during the year attracted the public, and producers recognized their permanence to the extent of \$5,000,000 alternations in the buildings of Hollywood by July 22, but the "silent drama" was by no means obliterated in 1928. Many proprietors of unwired houses went on a buying strike, and groups of musicians, about 100,000 of whom were put out of work, organized in protest against mechanical music.

Approximately 3000 short films of all types were released during the year, and about 820 features. Two hundred of these were imported, compared with 75 in 1927. Germany led with 83 films and England sent 37. Producers in Europe did not encourage talking pictures because the expense of wiring was so great, and they regarded them as an unproven experiment; there were only 20 houses wired in England, and two in Paris.

The film exports from the United States dropped to 222,122,586 feet in 1928, from 232,104,883 feet in 1927, the 10,082,297-foot decrease being due to quota legislation in other countries limiting the amount of American imports, and to the improvement of production in such countries. The English quota limiting American productions remained in force during the year, and after considerable controversy the French Government also fixed a quota for American films. In spite of this general decrease in American exports, a few countries, France, Germany, Spain, Brazil, and several with less important markets, used more American films in 1928 than in the previous year. Latin America remained the greatest quantity consumer, and films exported to Europe continued to bring the greatest revenue to the American industry, Great Britain alone paying \$1,440,036 in 1928.

In the raw-film trade, the United States increased its exports of sensitized but not exposed film during 1928 from 49,511,961 feet in 1927, to 75,015,238 feet. There was a corresponding decrease of sensitized film imports, 261,754,948 feet in 1928, and 278,013,054 in 1927. Negative imports were increased, however, 2,576,065 feet entering the United States in 1928, and 2,283,473 feet in 1927. There was a similar increase of positive film imports, 5,243,457 feet in 1928, compared with 3,834,343 feet in 1927. See PHOTOGRAPHY for mechanical and scientific developments.

MOWBRAY, HENRY SIDMONS. American decorative and figure painter, died at Washington, Conn., January 13. He was born Aug. 5, 1858, at Alexandria, Egypt, of English parents, who brought him to America in the following year. He was appointed to the United States Military Academy and studied there one year, but abandoned a military career for art. In 1878 he went to Paris, where he studied under Bonnat. He began his work as an illustrator and a painter of subtly refined subjects and portraits, such as "A Lady in Black" (Buffalo Academy), "Idle Hours" (National Gallery, Washington, D. C.), and "Le Destin." In later years he confined himself to decorative painting, in which he displayed artistic intuition, restraint, elegance of composition and draftsmanship, and warmth of tone. In the adaptations of Pinturicchio's frescoes in the Borgia Apartments of the Vatican which Mowbray made for the library of the University Club, New York, he thoroughly grasped the Italian master's style, and his original lunettes are no less admirable than the copied panels. Other fine decorations include the frieze, "Development of Law," in the Appellate Court, New York; mural paintings in the Congressional Library, Washington, the Federal Court, Cleveland, Ohio, the library of J. Pierpont Morgan, New York, and the private residences of C. P. Huntington and F. W. Vanderbilt, New York, and Larz Anderson, Washington. He received the Clark Prize of the National Academy in 1888, was elected a National Academician in 1891, and received a gold medal at the Pan-American Exposition, Buffalo, N. Y., in 1901. He was the first director of the American Academy at Rome, in 1903. After 1878 he made his home at New York and at Washington, Conn., where he executed mural paintings.

MOZAMBIQUE. See PORTUGUESE EAST AFRICA.

MUNICIPAL GOVERNMENT. About 400 municipalities, mostly in the United States, had adopted the city manager form of government by the close of 1928. Of these, 16 were in Canada and two were in New Zealand. In addition, a manager for the City of Dublin, Irish Free State, was under consideration during the year, in accordance with recommendations made by a committee appointed by the general government. A detailed tabulation of manager cities, including variations from standard type, date in effect, and name and salary of manager, corrected to March 10, 1928, was given in *Public Management* (Lawrence, Kan.) for March, 1928, in accordance with its yearly custom. The detailed list was accompanied by a spot map and by summaries showing the number of cities in which the plan went into effect, and by years from 1908 on. The same journal for September, 1928, includes a summary up to September 1 without details. The latest summary indicates that deducting the 11 cities that have abandoned the plan, there were 390 manager cities on Sept. 1, 1928, of which 15 were in Canada and two in New Zealand.

In November, the manager plan was adopted by Fall River, Mass., by a popular vote of 15,009 for to 14,345 against. The estimated population of Fall River was about 125,000. The new plan was to be effective Jan. 1, 1929. Stimulus for the adoption of the plan was said to have been given by the conflagration in February, 1928, which destroyed the central part of the

city. Other cities that adopted the manager plan in November were Portsmouth, Ohio, and Lexington, Covington, and Owensboro, Ky. There were large majorities for the plan in Lexington and Covington, and a slender majority in Owensboro. Early in the year, Tampa, Fla., voted to change back from the manager to the mayor-and-council plan, while on April 24 Cleveland, Ohio, voted against giving up the manager plan and proportional representation for election of the members of the council, the vote being about 44,000 to 41,000. Abandonment of the manager plan at Cleveland was also defeated in November, 1927, by a majority of 6400 in a total vote of 164,000.

Toledo, Ohio, voted against adoption of a council-manager charter in November. Two plans were submitted: (1) A small council to be chosen by proportional representation, recommended by one of the 15 members of the charter commission; defeated by about 60,000 to 35,000 votes. (2) For a council of 11 members, 10 chosen by wards and one at large, recommended by the five other members of the charter commission; defeated by a vote of about 57,000 to 27,000.

The Rhode Island Legislature of 1928, as did that of 1927, failed to grant a council-manager charter to Newport in accordance with a large popular majority approving such a charter at the November election in 1926 (see 1928 YEAR BOOK). The voters of Pennsylvania, at the November election, approved an amendment to the State constitution authorizing the creation of the Metropolitan City of Pittsburgh to be composed of the entire area comprising Allegheny County, under "a federal system which preserves the independence of the units in local matters but provides for coöperation in obtaining service of common benefit." One of the arguments for the proposal was that if adopted it would make Greater Pittsburgh the fourth city of the country. Work on drafting a charter to put the plan into effect was in progress at the close of 1928 with the expectancy that the charter bill would be introduced in the State Legislature the following February.

BIBLIOGRAPHY. New books of importance issued during the year were: Griffith, *The Modern Development of City Government in the United Kingdom and the United States* (London and New York); Maxwell, *Contemporary Municipal Government in Germany* (Baltimore); National Municipal League Committee on Municipal Programme, *A Model City Charter* (New York); Thompson, *Urbanization: Its Effect on Government and Society* (New York); White, *The City Manager* (Chicago).

See also CITY PLANNING, GARBAGE, MUNICIPAL OWNERSHIP, ROADS, SEWERAGE, WATER WORKS.

MUNICIPAL LEAGUE, NATIONAL. An organization to promote efficient and democratic government in city, county, state, and nation; founded in 1894 and incorporated in 1923. It has committees of experts at work studying, from practices in different parts of the United States, sound principles of government methods and government administration. These committees submit reports which are approved by the League and distributed where they will have most effect. The active committees in 1928 were as follows: Committee on Government for Regional Areas; Committee on Municipal Budget Law; Committee on Revising Model City Charter; and Committee on Election Administration. Re-

cent publications included a model municipal bond law; a model system of election registration; and a monograph, *The Merit System in Government*.

The thirty-fourth annual meeting of the League was held in Cincinnati, Ohio, October 16 and 17. Joint sessions held with the Governmental Research Association and the National Association of Civic Secretaries had a large attendance. Topics of discussion included: The Negro and Public Affairs; Measurement Standards in Government; What is the City Government's Responsibility in Housing?; Proportional Representation and Democracy in Election; Selling the Work of Government to the Public.

Among the speakers on the programme of the annual meeting were: Alfred Bettman, Cincinnati, Ohio; Robert T. Lansdale, Council of Social Agencies, Montclair, N. J.; Ralph Johnson Bunche, Howard University, Washington, D. C.; Charles A. Beard, New Milford, Conn.; Clarence E. Ridley, New York Bureau of Municipal Research; Max Hirsch, Cincinnati; Lent D. Upson, Detroit Bureau of Governmental Research; William C. Beyer, Philadelphia Bureau of Municipal Research; Louis Brownlow, Fair Lawn, N. J.; S. J. Herman, Michigan Housing Association; Richard S. Childs, president, National Municipal League; Arthur Collins, Financial Adviser to Local Authorities of England; Stephen B. Story, City Manager, Rochester, N. Y. The officers of the League in 1928 were: Richard S. Childs, president; Carl H. Pforzheimer, treasurer; Russell Forbes, secretary; G. R. Howe, assistant secretary; H. W. Dodds, editor of National Municipal Review. Headquarters are at 261 Broadway, New York.

MUNICIPAL OWNERSHIP. On Dec. 1, 1928, the East Bay Municipal District took over the entire property of the East Bay Water Company supplying Oakland, Berkeley, Alameda, and six other California municipalities. The purchase price was about \$34,000,000. This covers 42,000 acres of land, nearly 140 miles of water pipe, pumping and filtration plants, and reservoirs. The district for several years past had been engaged in bringing in a gravity water supply from an impounding reservoir through an aqueduct nearly 100 miles long. Early in the year the voters of San Francisco approved the purchase by the city of the property of the Spring Valley Water Company for some \$40,000,000. Four previous votes on this purchase all failed to give the necessary legal majority, although there was each time an actual majority (see 1927 YEAR BOOK). At the close of 1928, the city was making plans for a bond issue to cover the purchase price, with the hope of taking over the property on February 1. Like the district across the bay, San Francisco was constructing works for a gravity water supply. The Hetch Hetchy impounding reservoir was already completed and also a portion of the Hetch Hetchy aqueduct. Condemnation proceedings were under way on behalf of the cities of Paterson, Passaic and Clifton, N. J., for the property of the Passaic Consolidated Water Company. When this and the San Francisco purchases have been completed, there will remain in the United States only six cities of more than 100,000 population supplied by private water companies. The city council of one of these, New Haven, Conn., decided in 1928 not to exercise its purchase option and renewed its contract with the New Haven Water Com-

pany for another 25 years. Bridgeport, Conn., Scranton, and Wilkes-Barre, Pa., and Indianapolis, Ind., all cities of over 100,000 inhabitants, are supplied by private companies. Ypsilanti, Mich., voted not to sell its gas works.

During the year, Montreal, P. Q., completed the purchase of the waterworks of the Montreal Water and Power Company (see 1927 YEAR BOOK).

MURDER. See CRIME.

MURRAY, SIR JOHN. British publisher and head of the John Murray publishing house in England, died at Brighton, November 30. Born at London, in 1851, he was graduated from Magdalen College, Oxford, and received the Ph.D. degree from the University of Athens. The publishing firm was established in 1768, and he was the fourth John Murray at its head. He was president of the Publishers' Association, 1898-99. In 1908 Sir John became high sheriff of the County of London. Besides being honored with the Ordre Royal du Saveur, of Greece, and the Ordre de la Couronne, of Belgium, he was created Commander of the Royal Victorian Order in 1913, and Knight Commander of the Royal Victorian Order in 1926. He wrote, *Memoirs of John Murray III*, and edited, among other books, *Gibbon's Autobiography* and *Byron's Correspondence* (1922).

MUSIC. GENERAL NEWS. The outstanding event in the world of music was the universal observance of the centenary of Schubert's death. See SCHUBERT CENTENARY.

Ever since the nineties of the last century, when Richard Strauss rose to the dominant position which he has rightfully occupied since then, the première of a new work from his pen has been a musical event of international importance. During the year 1928, musicians from all parts of the world gathered in Dresden and in Vienna to hear the master's latest opera, *Die ägyptische Helena*, and a new choral work, *Die Tageszeiten*, the latter written especially for the Schubert celebration. The opera was heard for the first time at Dresden, June 6, with Rethberg and Taucher in the principal rôles, under the direction of Fritz Busch. As a matter of course, the performance was well nigh flawless in all details, and the outward success overwhelming. Critical opinion, on the whole, was favorable and to the effect that the composer, while offering nothing unexpected or startling, had risen once more to the heights of his earlier symphonic poems. The première itself was timed so that it opened the series of festival performances, lasting throughout the month of June, which were arranged to commemorate the semi-centenary of the opening of the present opera house.

Inasmuch as almost all the operas of Strauss had their première at Dresden, it was fitting that, besides five repetitions of *Die ägyptische Helena*, the festival included *Elektra*, *Der Rosenkavalier*, *Die Frau ohne Schatten*, and *Intermezzo*. Neither were two former principal conductors of the institution forgotten, Weber (1817-26) and Wagner (1843-48), the former represented by *Der Freischütz*, and the latter by

Der fliegende Holländer, *Tannhäuser*, and *Die Meistersinger*, of which the first two had their première in Dresden (1843, 1845).

On June 11, Vienna celebrated the birthday of Richard Strauss by the local première of *Die ägyptische Helena*, with Jeritz and Graarud as principals, under the personal direction of the composer. As a foregone conclusion, enthusiasm ran riot. For a critical estimate of the work, see below the American première under *Opera*.

In Lübeck, Karl Eggert discovered the novel on which Weber wrote his early opera, *Peter Schmoll* (Augsburg, 1803), reconstructed the lost libretto, and, in March, brought out the work at the local opera house with considerable success.

Under the general supervision of Siegfried Wagner, the annual Bayreuth Festival took place from July 19 to August 19. The repertory was identical with that of the preceding year, three complete cycles of the *Ring des Nibelungen*, the first and second conducted by Franz von Hoesslin, the third by Siegfried Wagner, five performances of *Tristan und Isolde*, under Karl Elmendorff, and five performances of *Parsifal*, under Karl Muck. As usual, the house was sold out for every performance and soloists, orchestra, and chorus combined to achieve the customary high level of excellence.

At Zoppot, on the Baltic Sea, five performances of *Parsifal*, attended by large audiences, were given in the open forest. The conductors were Max von Schillings and Karl Tutein.

In Leipzig, an Internationale Bruckner-Gesellschaft was founded, with Max Auer as president and Franz Schalk, Karl Muck, Siegmund von Hausegger, and Friedrich Klose as honorary presidents.

Following the example of the Moscow Persinians, an orchestra without conductor, founded in 1922, a number of Leipzig musicians banded themselves together and, in May, presented an all-Beethoven programme (*Egmont, Eroica, Violin-concerto*) with Gustav Havemann as soloist. Three weeks later the same programme was repeated in Berlin. As to the value of the experimental critical opinions differed widely in both cities.

In Berlin, Hermann Gura organized the Deutsche Gastspieloper, a complete operatic company under the general direction of Richard Falk. The object was to give a certain number of performances of standard works in every German city that did not support its own municipal theatre.

Nina Grieg, the widow of the great Norwegian master, presented to the Public Library at Bergen the complete correspondence between herself and husband, on the condition that the sealed packages containing the letters were not to be opened till after her death.

After having been completely remodeled, the famous Costanzi Theatre at Rome was reopened on February 27 with a gorgeous production, under Marinuzzi, of Boito's *Nerone*, which on that occasion had its Roman première. The name of the institution was also changed to Teatro Reale dell'Opera. By order of the Minister of Public Instruction, the Italian Government bought Carvalhaes' famous collection of 38,000 opera librettos and presented it to the library of Santa Cecilia in Rome. In November, Milan heard the first complete performance of

Bach's *Mass in B minor*. This much-belated première was given by the Berliner Singakademie, under its regular conductor Georg Schumann.

An event unique in the annals of opera is to be recorded about the Staatsoper of Vienna. At the invitation of the management of the Grand Opéra, the Vienna company gave in Paris, in May, a series of guest performances of *Die Walküre*, *Tristan und Isolde*, *Rosenkavalier*, and *Tosca*, creating a veritable furore. Before leaving the hospitable French capital, each of the principals was made a chevalier of the Legion of Honor and an invitation had been extended to repeat the visit in the coming spring. As the year was drawing to a close, the management of the Vienna company announced that they had accepted not only this invitation from Paris but similar invitations from La Scala in Milan, the Royal Operas of Stockholm and of Copenhagen, and the Staatsoper of Berlin.

With the beginning of its fifth season in the autumn, the Curtis Institute of Music, in Philadelphia, abolished all tuition fees. Thereafter, students were to be admitted only on the results of regular entrance examinations. The increase of the endowment fund to \$12,500,000 by Mrs. Bok made free tuition possible.

John Erskine, chairman of the Board of Directors, was elected president of the Juillard Foundation, of New York. To the numerous scholarships already established, fifteen opera scholarships were added to enable American students to gain practical experience in Germany. Because of the remarkable success of Deems Taylor's opera, *The King's Henchman*, produced at the Metropolitan Opera House, the Foundation awarded \$5000 to the composer to enable him to devote a greater part of his time to composition.

In New York there was established the Schubert Memorial, whose object is to secure for talented young executants a début under the most favorable conditions. A number of well-known patrons of music organized themselves, with Mrs. Ernest Hutcheson as chairman, and issued an appeal for voluntary contributions which met with prompt and generous response. Ossip Gabrilowitsch was elected president, with an advisory board consisting of famous conductors, Bodanzky, Damrosch, Kussevitzy, Mengelberg, Schelling, and Stock, with Stokowski as chairman. Aspirants under 30 years of age may present themselves before the board in April. As a minimum requirement, they must have a repertory of four concertos (or arias) with orchestra and two complete recital programmes, each occupying one hour. Of the applicants, the most talented four will be chosen, two to appear at each of the two annual concerts to be given in Carnegie Hall in December and January. For the first of these concerts, which took place on December 5, 80 performers of the Philharmonic Symphony Orchestra, under the direction of Willem Mengelberg, were engaged. The fortunate débutantes were Muriel Kerr, pianist, and Sadah Shuchari, violinist.

In the wake of the Schubert Prize Competition sponsored by the Columbia Phonograph Company (see YEAR BOOK, 1927; also SCHUBERT CENTENARY), there followed a veritable flood of competitions offering prizes from \$100 to \$25,000 for all kinds of compositions from symphonies to jazz. The Victor Talking Machine Company of

ferred \$25,000 for a symphony by an American composer (native-born or naturalized), and two prizes of \$10,000 and \$5000 for a popular piece for a jazz band. These latter were awarded, in December, to Thomas Griselle, of Mount Vernon, for *Two American Sketches*, and to Rube Bloom, of Brooklyn, for *The Song of the Bayou*. The judges of the symphonic competition, which closes May 28, 1929, are Stokowski, Ganz, Stock, and Samaroff.

A \$3000 prize for a symphony offered by *Musical America* was awarded to Ernest Bloch for a work entitled *America*. The prize carried with it a guarantee for performance by seven of the great symphony orchestras of the country, the New York Philharmonic-Symphony, Philadelphia, Chicago, Boston, Cincinnati, Los Angeles, and San Francisco orchestras, each of which produced the work on December 20. The judges were Stokowski, Stock, Kussevisky, Hertz, and Damrosch, and 92 scores were submitted.

Two prizes of \$6000 and \$4000 for chamber music, open to composers of all nations, were offered by the Musical Fund Society of Philadelphia. Six hundred and forty-three scores were received. The judges were Mengelberg, Reiner, Stock, Laciari, and Combs. The first prize was evenly divided between Bela Bartok (Hungary) and Alfredo Casella (Italy), the second between H. Waldo Warner (England) and Carlo Jachino (Italy).

Besides these competitions just mentioned, there were announced some two dozen or more of lesser importance in the United States alone. Some years ago the value of such prizes began to be seriously questioned in various quarters, because of the inferior quality of the prize-winning scores. As a matter of fact, these critics seemed to have a rather strong argument in their favor, when they point out that not a single one of the world's great masterpieces of music ever carried off a prize, and, conversely, that, with the solitary exception of Mascagni's *Cavalleria Rusticana*, no prize work has so far found its way into the standard operatic or concert repertory.

These considerations were very largely responsible for the withdrawal of the prizes given formerly by the Berkshire and the North Shore festivals. On the other hand, it has been argued that, if awards are withheld on the ground of insufficient merit, neither competitors nor public are inclined to accept such decisions as fair, and that there may spring up a general feeling of distrust of the good faith of those offering prizes. Under these circumstances, the courage of the jury rejecting all the 21 cantatas sent in for the \$1000 prize announced by the New York Society of the Friends of Music was to be highly commended. The judges in this case were Bodanzky, Mengelberg, Goldmark, Friedberg, and Schelling.

Professor Leon Theremin, of Moscow, who during the preceding year had created a sensation in Europe by demonstrating his invention of producing music from ether waves (see *YEAR BOOK*, 1927), gave his first public demonstration in the United States at the Metropolitan Opera House on January 31. By moving his hands before two antennæ, each standing in a field of electro-magnetic waves, he produced the blast of a steam siren, the typical radio howl, and real musical tones imitating the timbre of various

musical instruments. The inventor then played Schubert's *Ave Maria* and an étude by Scriabin, but only the melody, without harmonic accompaniment. There could be no question regarding the beauty of the tone quality, but there were frequent deviations from pitch, which latter defect, undoubtedly, must be ascribed to the inventor's insufficient skill as a musical performer. From a purely scientific standpoint, the invention was truly remarkable, but it seemed to be still in the experimental stage as far as its use as a musical means of expression is concerned.

While Professor Theremin was giving demonstrations in the United States, two French inventors, each independently of the other, experimenting in the same field, exhibited the result of their labors in Paris, in August. Neither inventor was a scientist by profession, Maurice Martenot being a cellist and René Bertrand a sculptor. The following is a brief summary of a report of the demonstration by Henri Prunières, one of the foremost of French musicologists. Both inventions employ a much simpler apparatus than Theremin's for the generation of electro-magnetic waves. In Martenot's instrument, the pitch is controlled by a wire over a graduated scale, and thus correct intonation is made possible for less skilled performers. Being a virtuoso on the cello, M. Martenot was able to give a really artistic performance on his new instrument, producing wonderful legato and staccato effects, as well as executing with wonderful precision tremolos, trills, and various other embellishments. The instrument is capable of yielding a great variety of orchestral timbres and the tone quality is always beautiful.

Bertrand's instrument, known as the Dynaphone, was considered distinctly inferior in the quality of its tone, which is always shrill, and incapable of varying the timbre, which resembles that of the saxophone. However, it possesses one great advantage. The inventor has succeeded in eliminating interference, so that it is possible to play several Dynaphones simultaneously in the same room. Honegger, who was present at the demonstration, was so much impressed, that he immediately wrote a little ballet, *Roses de Métal*, for a small Dynaphone orchestra. Upon its production at the Petit Scène, five weeks later, it was remarked that even in that short time the inventor had succeeded in improving the tone quality to some extent.

ARTISTS. On January 12, Vladimir Horowitz made his American début playing Tchaikovsky's piano concerto in B-flat minor with the New York Philharmonic Orchestra. At the same concert, Sir Thomas Beecham made his American début as conductor, and the tremendous ovation he received after his first number placed any newcomer in a very difficult position. The conductor's great reputation had preceded him, the pianist came unknown and unheralded, yet, after the first movement, Mr. Horowitz had electrified his hearers, and at the conclusion of the concerto the prolonged applause of the audience left no room for doubt that the young Russian had come and conquered. Of all the newcomers of the year, he scored the greatest success. His subsequent appearances in New York and other cities, whether with orchestra or in recital, were repetitions of his initial triumph. Although still in his early twenties, his interpretation is that of a master, combining brilliance with depth. His technic is stupendous, his octave playing

reaching the limits of possible speed but never displayed for its own sake.

Other débutants who left a favorable impression were Luigi Franchetti (March 17), Rita Neve (October 18), Ruth Redefer (October 28), Thalia Cavadias (November 15), Vladimir Drozdov (November 21), Maleva Harvey and Muriel Kerr (December 5), and Victor Labunski (December 11). It is scarcely necessary to comment on the numerous concerts given by established favorites, excepting the case of Rudolf Ganz, whose return as a concert pianist, after his resignation as conductor of the St. Louis Symphony Orchestra, was greeted by large and enthusiastic audiences in the principal cities of the country.

Not a whit behind the pianists in their activity were the violinists. In spite of many tempting offers the parents of Yehudi Menuhin (see *YEAR BOOK*, 1927), adhered to their resolution of not exploiting their wonder-child. After another year of serious study under his teacher, Louis Persinger, the boy was heard again in San Francisco (December 5) and New York (December 27), and again he held his auditors spell-bound. But this time he had put aside his three-quarter-size violin and played on a magnificent Guarnerius, valued at \$35,000, loaned to him from the famous Wurlitzer Collection. On November 15, Mr. Persinger introduced in San Francisco the second of his violin-prodigies, Ruggiero Ricci, 8 years old. According to critical reports, the boy played the Mendelssohn concerto with wonderful tone, dazzling technic, incisive rhythm, and, considering his tender years, admirable understanding.

From Chicago came the report that, on February 26, Giulia Bustabo, a girl of 10, created a sensation at her début with the Civic Orchestra, under Frederick Stock, when she played the Wieniawski concerto in F# minor. In Boston, Ruth Posselt, a former wonder-child, introduced herself as a full-fledged artist in a superb rendition of the Tchaikovsky violin-concerto with the People's Symphony Orchestra, under Emanuel Ondricek. Other fine violinists who made their début during the year were Henri Temianka (January 23), Minna Krokowsky (February 17), Leo Stokov (March 26), and Sadah Shuchari (December 5).

On October 23, New York had the first opportunity of hearing the renowned conductor of the Boston Symphony Orchestra as soloist on the double-bass. On that occasion, Mr. Kussevitzy played his own concerto in A minor for double-bass and orchestra, and was assisted in the other numbers by Henri Casadesus (*viole d'amour*) and Pierre Luboschutz (piano). New York concurred in the verdict passed long ago by European critics, that Kussevitzy was the greatest living master of his instrument.

Unusual attention was attracted by the remarkable performances of two artists who introduced an instrument entirely unknown in serious concerts, the guitar. Andrés Segovia, a Spaniard, scored an instantaneous success at his début in New York (January 8) by his masterly rendition not only of national folk songs and dances but also by his arrangements of familiar pieces of the classic masters. His success in other cities was equally emphatic. Still more surprising was the exhibition given by the Italian, Pasquale Taraffo (New York, December 23), who played an instrument greatly improved by

his ingenuity. By increasing the dimensions of the ordinary guitar and adding several strings, he obtained not only a wider range, especially in the lower register, but also a mellower tone and more volume. This instrument he handled with real virtuosity.

CHAMBER MUSIC. The third Washington Festival of Chamber Music was held from April 27 to 29. The first concert was devoted to the world-première of Stravinsky's *Apollo Musagetes*, a ballet commissioned by the Library of Congress. It was performed by the string section of the Philadelphia Orchestra, directed by Hans Kindler, and proved a dull score with plenty of reminiscences from Haydn, Beethoven, Brahms, and Strauss. The second day introduced the celebrated Rosé String Quartet of Vienna (Arnold Rosé, Paul Fischer, Anton Rusitzka, Anton Walter), which on this occasion made its American début with Franco Alfano's cacophonous, disjointed string quartet, after which a string quartet by John A. Carpenter sounded almost like a masterpiece merely for its avoidance of ultra-modernistic effects. At the third concert, the Société des Instruments Anciens, of Paris, performed only compositions of the older masters. The fourth concert brought forth a new violin-sonata, in C, by Casella, and another work commissioned for the festival, Pierné's *Sonata da Camera*, neither work proving of particular value. The fifth concert consisted exclusively of works for chamber orchestra, older masters being represented by Muffat, Handel, and Haydn. Then followed a rapid *Spielmusik* by Hindemith and an exceedingly complex and enigmatic score by Respighi, *Trittico Botticelliano*, supposedly a musical commentary on three of the great painter's masterpieces. At the conclusion of the festival, Mrs. Elizabeth S. Coolidge once more offered a \$1000 prize for a composition for woodwind with horn or piano and the Library of Congress added a \$500 prize for a suite for two pianos. The first competition was open to composers of any nationality, the second only to American citizens. Both works were to be produced at the festival of the coming year.

Although the Berkshire Festival was transferred in 1924 to Washington, Mrs. Coolidge decided to celebrate the tenth anniversary of the first Berkshire Festival by a special festival held at South Mountain from September 19 to 21. The organizations which took part were the original Berkshire String Quartet (Hugo Kortschak, Jacques Gordon, Clarence Evans, Emeran Stoebner), which opened the first festival, the South Mountain String Quartet (William Kroll, Karl Kraeuter, Conrad Held, Willem Willeke), also founded by Mrs. Coolidge, and the Elshuco Trio (William Kroll, Willem Willeke, and Aurelio Giorni), also founded by Mrs. Coolidge and named after her [Elizabeth Shurtleff Coolidge].

Besides these artists, all intimately connected with former festivals, there participated also the Gordon String Quartet of Chicago (Jacques Gordon, Walter Hancock, Clarence Evans, Richard Wagner) and the famous Roth Quartet of Budapest (Feri Roth, Jenő Antal, Ferenc Molnar, Albert van Doorn), which latter on this occasion made its American début. Of the many new works presented, only one, Martinu's *Quintet* (with two violas), left anything resembling a definite impression. A violin sonata, by G. S. Smith, and Sextet in F, by Max Reger were

simply dull, while Schönberg's *String Quartet*, dedicated to Mrs. Coolidge, Malipiero's *Sonata a tre*, and Salzedo's suite, *Pentacle*, were typical futuristic effusions.

On January 15, Maurice Ravel made his American début as pianist in New York at a concert arranged by the Pro Musica Association. With the assistance of the Hart House String Quartet, he gave a programme of his own chamber-music compositions and proved himself an admirable ensemble player. As a composer, he needed no introduction, for he has long been esteemed also in the United States as the most important French composer since Debussy. His reception on this occasion, as well as on his later appearances, was most enthusiastic.

An unusually interesting concert was that given by the Beethoven Association of New York, February 13, when the programme, under the direction of Thaddeus Rich, was executed on valuable old Italian instruments from the collection of Rodman Wanamaker (see YEAR BOOK, 1926).

In Baltimore, the new Peabody String Quartet (Frank Gittleson, Orlando Apreda, Bart Wirtz, Herbert Bangs) gave its initial concert on January 29. The Dubinsky String Quartet (David Dubinsky, Jacob Simkin, Samuel Rosen, Benjamin Gusikov), all members of the Philadelphia Orchestra, began its career on January 18.

The International Society for Contemporary Music organized a Chicago branch, which gave its first concert on February 8.

All lovers of chamber music were dismayed at the unexpected announcement that at the end of the 1928-29 season the famous Flonzaley Quartet would be disbanded. Consequently, every concert of their farewell season was made the occasion of a tremendous ovation.

FESTIVALS. The 32d annual Maine Festival at Bangor (May 1-3) was the first under the direction of another conductor than William R. Chapman, the original founder. After the latter's resignation, in 1927, the officers of the Association offered the conductorship to Adelbert Sprague, professor of music at the University of Maine and conductor of the Bangor Symphony Orchestra. A new chorus of 550 voices was recruited from 15 cities and villages and, in order to utilize the forces of the music department of the university, the time of the festival was changed from October to May. The programme of the first festival conducted by Mr. Sprague also marked a radical departure from the scheme followed by his predecessor. Instead of popular programmes featuring famous artists, this year's festival presented really great works, Brahms' *Schicksalslied* and *Second Symphony*, Franck's *Psalm 150*, and excerpts from the later works of Wagner.

The 22d Bach Festival at Bethlehem (May 11, 12), under Dr. John F. Wollé, brought as a novelty Bach's *Concerto for two pianos*, in C, played by Ruth Becker and Earle Laros. The second day, as customary, was devoted to the *Mass in B minor*.

The 4th annual Westchester Country Festival at White Plains (May 17-19), under Albert Stoessel, offered Mendelssohn's *Elijah*, sung by a chorus of 2000 voices, as the principal number.

The 8th annual Harrisburg Festival (May 14-17), under Ward-Stevens, marked a milestone in the history of the organization, when, for the first time it had the cooperation of a

full symphony orchestra. At the first concert, devoted exclusively to Mozart, the master's *Mass in C minor* had its American première. At the second concert, Henry Hadley conducted the world-première of his *Mirtil in Arcadia*, which had won the Philadelphia Sesquicentennial Prize. At the last concert, Saint-Saëns' *Samson and Dalilah* was given in concert-form.

The 35th annual Ann Arbor Festival (May 15-19), under Earl V. Moore, assisted by the Chicago Symphony Orchestra, began with the inauguration of the magnificent new organ in the Hill Auditorium. Palmer Christian, the university organist, performed Delamarter's *First Concerto for Organ and Orchestra*, the composer conducting the orchestra. The other important works were Pierné's *St. Francis of Assisi* and Verdi's *Aida* in concert form.

The 20th annual North Shore Festival, at Evanston (May 24-6), under Peter Lutkin, attracted a smaller audience than the festival of the preceding year, in spite of the fact that Verdi's great *Requiem* was the principal work.

At the 28th festival of the Northwestern Sängerbund, held in Milwaukee (June 14-16), William Boeppler conducted a male chorus of 1000 voices, and Otto Singenberger, a children's chorus of 3000.

The 69th annual Worcester Festival took place under the direction of Albert Stoessel (October 3-5). The high points were Purcell's *Dido and Æneas* and Saint-Saëns' *Samson and Delilah*, while a novelty by Harold F. Darke, a motet, *Ring out, Ye Crystal Spheres*, made little impression.

ORCHESTRAS. Shortly after the resignation of Walter Damrosch, as permanent conductor of the New York Symphony Orchestra, came the unexpected announcement of the dissolution of the famous organization, which was just completing its fiftieth season. The last concert took place on April 1, under the direction of Fernandez Arbos. The final number, conducted by Damrosch, was the Adagio from Beethoven's *Ninth Symphony*. The last concerts from January to April were directed by Fritz Busch, Oscar Fried, and Fernandez Arbos, the latter making his American début on March 22. On February 10, Damrosch, as guest, conducted a special concert under rather unusual circumstances. As the orchestra was then actually completing the fiftieth season of its activity, it seemed natural to observe the semi-centenary, but, unfortunately, on the exact date (the first concert was given November 9, 1878), the orchestra would have ceased to exist. The anniversary of the death of its founder, Dr. Leopold Damrosch (Feb. 15, 1885), suggested the idea of making the concert a joint semi-centennial and memorial occasion. A new difficulty arose, when it was found that no suitable hall was available for that particular day, and thus, of necessity, February 10 was chosen. The programme consisted of Dr. L. Damrosch's *Festival Overture* and selections from his cantata *Sulamith* and Beethoven's *Fifth Symphony*, the latter having been performed at the society's first concert.

In May, at a joint meeting of the board of directors of the New York Philharmonic Society and the Symphony Society, the amalgamation of the two famous organizations was ratified, the new body to be known as the Philharmonic-Symphony Orchestra. Harry Harkness Flagler was chosen president and Clarence. H. Mackay

chairman of the board of directors, which was increased to 28 members by the election of six directors of the Symphony Society. The orchestra itself was increased but slightly by the addition of a few players from the Symphony Orchestra, no changes being made at the first desks.

The 1928 concert season was lengthened from 23 to 28 weeks, out-of-town engagements were reduced considerably, and the two pension funds were consolidated. Two regular conductors were appointed, Willem Mengelberg, in charge of the first half, and Arturo Toscanini, in charge of the second half of the season, and the policy of inviting distinguished guest-conductors was retained. The last season of the old Philharmonic Orchestra (the eighty-sixth) was directed by William Mengelberg (January 1-8). Sir Thomas Beecham (January 12-15), Bernardino Molinari (January 17-22), and Arturo Toscanini (January 26-April 1).

Comment on the familiar art of Mengelberg and Toscanini is quite superfluous. Both newcomers aroused tremendous enthusiasm. The new Philharmonic-Symphony began its fall season on October 4, under Mengelberg, while Damrosch was guest-conductor in November and December. The season brought forth an unusual number of novelties, the poor quality of which caused much unfavorable comment.

It seems to have become a regular policy of the Boston Symphony Orchestra to invite every season two guest-conductors. This year the guests were Maurice Ravel, who made his American debut as conductor in a programme of his own works on January 12, and Sir Thomas Beecham, who directed the concerts of January 19 and 20. Both made a deep impression. All the other concerts were under the direction of the regular conductor, Sergei Kussevitzy, who continued his practice of the preceding year of dividing his programmes evenly between works of the masters and the futurists.

After a year's leave of absence, Leopold Stokowski resumed the conductorship of the Philadelphia Symphony Orchestra in the fall. During his absence, the concerts were directed by Fritz Reiner, Ossip Gabrilowitsch, Pierre Monteux, and Willem Mengelberg.

Since the resignation of Rudolf Ganz, the St. Louis Symphony Orchestra continued the policy of engaging guest-conductors. The concerts of the year were directed by Bernardino Molinari, Carl Schuricht, Ethel Leginska, and Emil Oberhoffer.

On the occasion of the tenth anniversary of the foundation of the Cleveland Symphony Orchestra, Nikolai Sokolov, conductor, Mr. and Mrs. John L. Severance donated to the directors a million dollars on condition that another million and a half be raised by popular subscription. It was believed that this sum would suffice to erect a fine hall and establish a permanent endowment fund for defraying the annual deficit.

The People's Symphony Orchestra, of Boston, began its fall season under its new permanent conductor, Theophil Wendt, who made his American debut on November 3.

In spite of the protests and vigorous opposition of the Sabbath Association, the Pittsburgh Orchestral Association gave four symphony concerts (February 26, April 22, December 7, 8). At the first two concerts, Richard Hagemann and Eugene Goossens, respectively, directed a heterogeneous body of instrumentalists assembled for the occasion, while for the last concerts the

Cleveland Symphony Orchestra, under Nikolai Sokolov, was engaged.

Shortly after the conclusion of its first season of seven concerts, the Beethoven Symphony Orchestra, of New York, Georges Zaslawsky, conductor, issued the prospectus of its second season, announcing an imposing array of famous soloists, two distinguished guest-conductors, and more than 100 concerts to be given in New York and on tour. As a matter of history, the ambitious scheme collapsed after only one concert had been given in New York (October 11).

In Chicago a new organization, the Skalski Symphony Orchestra, under André Skalski, made its debut on November 21, creating a very favorable impression.

After the dissolution of the New York Symphony Orchestra, the majority of the players formed the American Symphonic Ensemble, with Paul Stassevitch as concertmaster, to prove that regular symphony concerts can be given without a conductor. For the first season they announced three concerts, the first of which took place on November 3 with a Beethoven programme (*Eroica* and *Violin concerto*, Max Rosen, soloist). The results, remarkable under the circumstances, were not such as to create a general demand for the abolition of the conductor. While the tonal balance was surprisingly good, the attack lacked precision, ritardandos and accelerandos showed uncertainty, and rigid adherence to the tempo established at the beginning of each movement produced a certain monotony. These shortcomings were less evident in the concerto, because here the soloist, to a certain extent, took the place of the conductor. However, the experiment will be watched with interest, especially when less familiar or new works are performed.

NOVELTIES. The following list includes the more important novelties heard during the year: Boston Symphony Orchestra, under Kussevitzy: I. Stravinsky, *Edipus Rex*, a two-act operatorio without scenery or action, with the assistance of the Harvard Glee Club, Matzenauer, Hackett, and Gange (February 24); Walton, *Sinfonia concertante* (March 18); Lopatnikov, *Scherzo* (April 27); Z. Kodaly, Suite from *Hary Janos* (October 12); J. Ibert, *Féerie* (October 26); E. Bloch, *America, an Epic Rhapsody* (December, 20).—New York Philharmonic Orchestra, under Toscanini: M. Ravel, *Daphné et Chloé*, Suite No. 2 (February 16); I. Pizzetti, *La pisanella* (March 4); F. Busoni, *Rondo Arlequin* (March 15); under Mengelberg: B. Wagenaar, *Symphony No. 1* (October 7); E. Whithorne, *Fata Morgana*, symphonic poem (October 11); G. F. Handel, Suite from *Alcina* (October 11); S. Bucharoff, *Two Tone Poems* (November 1); G. Cassado, *Rapsodia Catalonia* (November 11); K. Atterberg, *Symphony No. 6*, in C (November 21); O. Respighi, *Toccata* for piano and orchestra (the composer at the piano, November 28); A. Tansman, *La Nuit Kurde*, suite (December 27); R. Strauss, *Die Tageszeiten* for male chorus and orchestra (December 27); under Beecham: G. F. Handel, Overture to *Teseo*, Musette from *Pastor Fido* and Bourrée from *Rodrigo* (January 12); under Damrosch: G. Gershwin, *An American in Paris* (December 13); E. Bloch, *America, an Epic Rhapsody* (December 20).

New York Symphony Orchestra, under Damrosch: G. Holst, *Edgdon Heath*, symphonic poem (February 12).—Beethoven Symphony Orches-

tra, under Zaslavsky: P. James, *Overture to a Comedy* (January 13); E. Berckman, *Au bord de l'étoile matutin* (February 17); G. Liebling, Introduction to the opera *The Children of Truth* (March 9); H. Johnson, *Hindu Sketches* (April 13).—San Francisco Symphony Orchestra, under Hertz: F. Warnke, *A New Symphony in an Older Style* (March 2); E. Bloch, *America, an Epic Rhapsody* (December 20).—Philadelphia Symphony Orchestra, under Monteux: W. Pijper, *Symphony* (February 17); under Stokowski: A. Roussel, *Concert pour petit orchestre* (October 5); L. Knipper, *Legend of a Plaster God* (October 12); Szostakowicz, *Symphony*, op. 10 (October 12); A. Roussel, *Concerto for piano and orchestra* (Lucie Caffaret at the piano, November 16); under Gabrilowitsch: E. Bloch, *America, an Epic Rhapsody* (December 20); E. Korngold, *Suite from Much Ado about Nothing* (December 21).—Chicago Symphony Orchestra, under Stock: A. Noelle, *Suite for Strings and Kettle drums* (March 23); M. La Violette, *Penetrella*, tone poem for strings (November 30); E. Bloch, *America, an Epic Rhapsody* (December 20).—Cleveland Symphony Orchestra, under Sokolov: F. Schubert, *Symphony in E* (November 22).—Seattle Symphony Orchestra, under Krueger: E. Potjes, *Intermezzo from the opera, Le Coffret de Salomé* (January 31).

OPERA. At the Metropolitan Opera House in New York, 197 performances were given from a repertory of 52 operas by 30 composers. According to nationality, these were divided as follows: Italian, 23 works by 12 composers totaled 97 performances; German, 15 works by six composers totaled 51 performances; French, 10 works by eight composers totaled 32 performances; Russian, two works by two composers had eight performances (in French); one Bohemian opera was given twice (in German) and one American opera five times. Wagner, represented by nine works, stood first with 34 performances. Next came Puccini with 33 performances of seven works, while Verdi fell behind with only 21 performances of six works.

The first novelty was Alfano's *Madonna Imperia* (February 8), under Serafin, with Mueller, Wolfe, and Jagel in the principal rôles. The dull, colorless score, devoid of characterization and climaxes, left the audience apathetic. A real success was Puccini's *La Rondine* (March 10), under Bellezza, with Bori, Fleischer, Gigli, Tokatyan, and Ludikar. The natural, spontaneous melodies, heightened by masterly instrumentation, made an immediate appeal. Less fortunate was the choice of Respighi's *Campana Sommersa* (November 24), under Serafin, with Rethberg, Guilford, Marinelli, and De Luca. The text, following closely Hauptmann's play, offers excellent opportunities for musical treatment, which the composer failed to utilize. The music does not differentiate the human and the fairy elements. The orchestra, instead of interpreting, merely supports the voice. The melodies, often pleasing, lack distinction. There are frequent suggestions of Puccini and Strauss.

The novelty most eagerly awaited, because of the fame of the composer, was Richard Strauss' *Die ägyptische Helena* (November 6), produced on a lavish scale, under Bodanzky, with Jeritzka, Fleischer, Telva, Laubenthal, and Whitehill. For more than three decades every Strauss première has been a brilliant outward success and this, his ninth opera, was no exception. Sov-

ereign craftsmanship, an unflinching instinct for dramatic characterization, and the magical splendor of the orchestration naturally carry away the superficial listener. However, a closer examination of the score discloses the fact that these admirable qualities cannot compensate for the lack of real inventive power, spontaneity and genuine inspiration. The fundamental defect, one that foredooms the work to failure, is the absurd and unintelligible text by Hugo von Hofmannsthal. In spite of this handicap, Strauss has succeeded in writing passages of haunting beauty, but these invariably are reminiscent of the composer's own symphonic masterpieces of his earlier years.

Of the new artists, a German soprano, Gertrude Kappel, received a veritable and well-merited ovation on the occasion of her début as Isolde (*Tristan und Isolde*, January 16). The other singers, all valuable acquisitions to the company, were Grace Moore (as Mimi in *La Bohème*, February 7), Grace Devine (as the Musician in *Manon Lescaut*, November 1), Aida Doninelli (as Priestess in *Aida*, November 2), Jane Carroll (as Da-ud in *Die ägyptische Helena*, November 6), Clara Jacobo (as Leonora in *Trovatore*, November 8), Pearl Besuner (as Siebel in *Faust*, December 1).

The Chicago Civic Opera gave in its home town 95 performances of 39 operas by 27 composers. According to nationality, these were distributed as follows: Italian, 19 works by 10 composers totaled 45 performances; French, 10 works by nine composers totaled 29 performances; German, eight works by six composers totaled 16 performances. Russia and America were represented each by one work. In the opening opera of the season, *Carmen* (October 31) three new singers made their début, Maria Olaszewska in the title-rôle, Alice Mock as Micaëla and Ada Paggi as Mercedes. The other débutantes were Marian Claire (as Mimi in *La Bohème*, November 1), Eva Turner (as Aida, November 3), Hilda Burke (as Aida, November 10) and Coe Glade as Amneris on the same night, Margherita Salvi (as Rosina in *Il Barbiere di Siviglia*, December 6), Frieda Leider (as Brünnhilde in *Die Walküre*, December 8). Of these, the latter recognized in Germany as one of the greatest of the younger generation of Wagner interpreters, aroused boundless enthusiasm and thus created a general demand for the inclusion of more of the master's works in the repertory. The season resulted in a heavy deficit of \$450,000 which swallowed up 90 per cent of the guarantee fund. In spite of this, the company acquired a new site for a permanent opera house and construction was begun toward the end of the year. No novelties were produced.

From modest beginnings, the Philadelphia Civic Opera Company advanced step by step to more ambitious undertakings, reaching their culmination with a splendid production of *Die Walküre* (February 23), under Alexander Smallens with Florence Austral singing Brünnhilde as guest. On November 1, they gave the American première of Richard Strauss' *Ariadne auf Naxos*.

The outstanding productions of the Pennsylvania Grand Opera Company, of Philadelphia, were the American première of Mussorgsky's *Chovantchina* (April 18) and a revival of Rubinstein's *Der Dämon* (November 7), both under Fabian Sevitzyk.

Another American première was Vaughan Williams' *Hugh the Drover* (February 21) by the Washington National Opera Company. More important was the celebration of the tenth anniversary of its foundation by a two weeks' operatic festival (in February), the outstanding features of which were the productions of *Tristan und Isolde* and *Die Walküre*, under Ernst Knoch, with Gadski, Alsen, and Knote as guests.

During the summer season at Ravinia Park, Chicago, 72 performances were given from a repertory of 28 operas, among them two local premières, Rabaud's *Marouf* (August 1) and Ravel's *L'Heure espagnol* (August 17). A new feature was the introduction of Sunday afternoon symphony concerts by the Chicago Symphony Orchestra, under Eric Delamarter.

San Francisco and Los Angeles enjoyed a short season of grand opera (September 15–October 15), under the direction of Gaetano Merola, with a company of principals from the Metropolitan and Chicago companies.

At Smith College, Northampton, Mass., Professor Werner Josten, with artists recruited from the faculty and students of the college, gave the American premières of Monteverdi's *Combattimento di Tancredi e Clorinda* and Handel's *Xerxes* (May 12).

BIOGRAPHY. C. S. Terry, *Bach: A Biography* (Oxford), scholarly, appreciatively critical and authoritative. W. Fischer, *Beethoven als Mensch* (Ratisbon), a sane account of the master as a real human being. A. Göllerich, *Anton Bruckner*, vol. ii, completed by Max Auer (Ratisbon), very detailed, accurate as to facts, but panegyric. W. Ponder, *Clara Butt: Her Life Story* (London), a personal tribute rather than a strict biography. F. Howes, *William Byrd* (London), the first exhaustive biography, with a full account of musical conditions of the period. D. Caruso and T. Goddard, *Wings of Song: The Story of Caruso* (New York), an interesting record of the man in his home and among his friends. R. H. Hull, *Delius* (London), a brief sketch. I. Goldberg, *The Story of Gilbert and Sullivan* (New York), a popular account of their life and work. A. F. Steiner, *Friedrich Hegar: Sein Leben und sein Wirken* (Zurich), the first detailed biography. N. Rimski-Korsakov, *Chronik meines Lebens*, translated by O. von Riesemann (Stuttgart), a valuable contribution to an important period of Russian musical history. G. Radiciotti, *Gioachino Rossini*, vols. ii and iii (Tivoli) cover the years 1823–63, the result of original research, superseding all previous biographies. N. Flower, *Franz Schubert: The Man and His Circle* (New York), rather uncritical, but valuable for an exhaustive bibliography. K. Kobald, *Franz Schubert und seine Zeit* (Vienna), contains numerous letters and gives a vivid sketch of musical Vienna of that period. C. Whitaker-Wilson, *Franz Schubert: Man and Composer* (New York), a popular and interesting presentation. V. Basch, *La Vie douloureuse de Schumann* (Paris), written from the viewpoint of a pessimist. M. Lawton, Schumann-Heink, *The Last of the Titans* (New York), uncritical, but full of human interest.

J. Wolgast, *Karl Straube: Eine Würdigung seiner Musikerpersönlichkeit* (Leipzig), a worthy tribute to a great artist.

HISTORY. E. J. Dent, *Foundations of English Opera* (London), a valuable study of the period 1650–1700, concluding with the works of Purcell. G. T. Edwards, *Music and Musicians of Maine* (Portland), only of local interest. N. F. Findeisen, *The Outlines of the History of Music in Russia from the Earliest Times to the End of the 18th Century* (Moscow and London, vol. i), in Russian and English, treats of the music of the Scythians, Sarmatians, Volga Bulgars, and folk songs of the heathen Slavs. The work, by far the most important history of Russian music, is the result of 40 years of unceasing, painstaking research on the part of Russia's foremost musicologist. To appear in seven volumes. C. Gray, *The History of Music* (London), stresses the influence of music in the development of civilization, but advances startling, generally disparaging, estimates of great masters. J. Jeannin, *Rythm grégorien* (Lyons), a scholarly, but not convincing, attack upon the researches of Dom Mocquereau. G. R. Hayes, *Musical Instruments and their Music* (1500–1750, Oxford). L. de Laurencie, *Les Luthistes* (Paris). A. Lorenz, *Abendländische Musikgeschichte im Rhythmus der Generationen* (Berlin), conceives the development of music as influenced by alternating periods of polyphony and homophony. A. Machabey, *Histoire et Evolution des Formules musicales du 1er au 15me siècle de l'ère chrétienne* (Paris), an attempt to prove that the major mode originated and was developed in France before 1450. S. Mackinlay, *Origin and Development of Light Opera* (Philadelphia), a history from the earliest times to the present day. M. Pincherle, *Feuilletons d'histoire du Violon* (Paris), a valuable collection of essays on great violinists. V. Riesemann, *Geschichte der russischen Musik* (Leipzig), an amplification rather than a translation of L. Sabanieiev's work. V. Uspensky and V. Belaiev, *Turcoman Music* (Moscow), a collection of 115 pieces, with historical notes and technical analysis, very important as a pioneer work in an entirely unknown field of music. R. Van Aerde, *Les ancêtres flamands de Beethoven* (Malines), establishes on the strength of authentic documents that the composer's grandfather was a native of Malines.

CRITICISM, AESTHETICS. W. Bardas, *Zur Psychologie der Klaviertechnik* (Berlin). E. Blom, *The Limitations of Music* (London), attempts to establish fixed boundaries, beyond which music, as an art, cannot go. R. Capell, *Schubert's Songs* (London), excellent analyses of the individual songs, with much valuable information regarding the minor poets of the texts. A. Cœuroy, *Panorama de la musique contemporaine* (Paris), observations from the viewpoint of an admirer of modernistic tendencies. T. F. Dunhill, *Sullivan's Comic Operas: A Critical Appreciation* (London), a sympathetic study. K. G. Fellerer, *Die Deklamationsrhythmik in der vokalen Polyphonie des 16 Jahrhunderts* (Düsseldorf), a study of the relations between word stress and musical accent. R. Imhofer, *Grundriss der musikalischen Ästhetik* (Leipzig), an exposition of recognized fundamental principles. H. John, *Goethe und die Musik* (Langensalza), based on the poet's correspondence with Zelter. R. Josz, *Essai d'une théorie de l'évolution de l'art*

musical (Paris), J. Redfield, *Music: A Science and an Art* (New York), an investigation of the physical basis of scales and musical instruments leading to revolutionary, and rather startling, conclusions. M. Schoen, *The Beautiful in Music* (London), a brief manual of aesthetics. C. Scott, *The Influence of Music on History and Morals* (London), mainly an analysis of Plato's ideas of music.

THEORY. R. Eidenberg, *Dur- und Moll-Problem und Erweiterung der Tonalität* (Zurich). G. Gildenstein, *Theorie der Tonart* (Stuttgart). P. Klebs, *Von der Melodie und dem Aufbau der musikalischen Formen* (Kassel). H. Klotz, *Neue Harmoniewissenschaft. Die Überwindung der dualistischen Theorie* (Leipzig). C. Koehlin, *Traité de l'Harmonie*, vol. i. (Paris).

CORRESPONDENCE. S. A. Dianin, *Borodin's Letters*, vol. i. (Moscow) contains 186 letters from 1857-71, very valuable for new information regarding Russian music of that period. G. Adami, *Giacomo Puccini: Epistolario* (Milan), interesting letters to his publishers and librettists. H. Werner, *Hugo Wolf und der Wiener akademische Wagnerverein* (Ratisbon), contains many hitherto unpublished letters.

NATIONAL ACADEMY OF DESIGN. See ART EXHIBITIONS.

NATIONAL ACADEMY OF SCIENCES. A body of American scientists incorporated by Act of Congress approved by President Lincoln in 1863, for the purpose of investigating, examining, experimenting, and reporting upon any subject of science or art, when called upon by any department of the Government, the actual expense of such investigations, examinations, experiments, and reports, to be paid from appropriations made for the purpose without compensation for any services to the Government. The membership is limited to 250 active members, and 50 foreign associates. New members are elected by the Academy on nominations from its 10 sections: Mathematics, astronomy, physics, engineering, chemistry, geology and palæontology, botany, zoölogy and anatomy, physiology and pathology, anthropology and psychology. Nine new members were elected in April, 1928, as follows: John August Anderson, William Mansfield Clark, Arthur Keith, Charles Franklin Kettering, Alfred Kroeber, Rudolph Ruedemann, Philip Anderson Shaffer, George Malcolm Stratton, and Lewis Madison Terman. One additional foreign associate was elected: Sir Robert A. Hadfield, London, England.

The Academy holds two meetings each year: The annual meeting, held in Washington beginning the fourth Monday in April; and the autumn meeting, held at a place and on dates decided upon by the Council of the Academy. The 1928 autumn meeting was held in November, at Schenectady, N. Y. These meetings are devoted to the transaction of business and the presentation of scientific papers by Academicians or persons introduced by them.

The Academy has trust funds which grant money for the furtherance of research investigations and other trust funds which provide for

gold medals in recognition of outstanding scientific work. At the meeting in April, 1928, the Henry Draper Medal was awarded to William Hammond Wright, a member of the Academy, for his researches on Nebulæ, new stars, and planetary atmospheres. The Agassiz Medal for Oceanography was awarded to Vagn Walfrid Ekman, of the University of Lund, Sweden, in recognition of his work in physical oceanography. The Public Welfare Medal was awarded to Dr. Charles V. Chapin of the Department of health, Providence, R. I., for his contributions to public health and work in the administrative control of disease. The Mary Clark Thompson Medal and accompanying honorarium of \$250 were awarded to Dr. James Perrin Smith, a member of the Academy, in recognition of his accomplishment in palæontology of Triassic.

The Academy publishes a series of memoirs, consisting of monographs by academicians and others, and reports of investigations conducted for the Government; also *Biographical Memoirs* of the deceased members. *Proceedings*, issued monthly, is devoted to condensed reports of the most recent scientific discoveries. The officers in 1928 were: T. H. Morgan, president; Frederick E. Wright, vice president; R. A. Millikan, foreign secretary; David White, home secretary, Joseph S. Ames, treasurer. The headquarters are at B and 21st Streets, Washington, D. C.

NATIONAL BANKS. See BANKS AND BANKING.

NATIONAL CIVIC FEDERATION, THE. An educational movement, organized in 1900, seeking the solution of some of the great problems related to social and industrial progress, providing especially for the discussion of questions of national import, aiding in the crystallization of the most enlightened public opinion and promoting legislation when desirable. The executive committee represents the public, employers, and wage-earners, and various other committees and departments are organized to conduct the activities of the Federation.

The Department of Industrial Relations, with William D. Baldwin as chairman, has for its general purpose the seeking of a *modus vivendi* between employers and wage-earners, to the end that such friction and misunderstanding as exist between them may be reduced to a minimum. While not organized solely to deal with problems of capital and labor, the Federation, since its inception, has sought to bring together employers and wage-earners for the discussion of questions responsible for bitterness between the two great forces which logically should be working together. The Department on Active Citizenship, with John Hays Hammond as chairman, continued its campaign to interest citizens in participating actively in their political party organizations, not only in enrolling and voting at primaries and elections, but by aiding in the selection of reputable and efficient candidates. To that end, the Department called a conference in April, 1928, attended by representatives of more than thirty national organizations, who were urged to call upon their local units, numbering more than 200,000, with a membership of more than 10,000,000 adult citizens, to observe their civic duty at primaries and elections. The department also extended its programme in an effort to interest the 7,000,000 men and women who cast their first presidential votes in 1928.

The Industrial Welfare Department, with Charles L. Edgar as chairman, which is an educational movement to secure improvements in working and living conditions of wage-earners voluntarily by employers, advocated a proposal for retirement annuities designed to provide economic security for the wage-working population against destitution in old age and issued a practical guide for an economically sound solution of the old-age-pension problem. It also made an exhaustive report upon the extent of old-age dependency, and turned its attention to studying efforts for the prevention and relief of destitution in old age. The Committee on Subversive Activities carried on its programme of opposition to recognition of the Soviet Government and upheld the policy of the Wilson, Harding, and Coolidge administrations against such recognition.

The Woman's Department, with Miss Maude Wetmore as chairman, through its committee on education, studied the intimate relation of chemistry to human lives; made a survey of illiteracy among adults and a constructive inquiry into the place in curricula of public-school systems given to the human-service quality of scientific research; the department also considered a re-codification of the naturalization laws and endorsed restrictive legislation. It made a survey of American almshouses in four leading States and issued a comprehensive report upon conditions found and made recommendations which aimed to bring about improvements in this type of institution, which it pronounced an absolute social necessity. Its findings included the following: Intelligently organized outdoor relief would minimize the problem; specialized institutions for the care and treatment of certain pathological conditions would divert phases of it into other channels, although there would inevitably remain an element which, while not requiring specialized treatment, must have some sort of custodial care; and State old-age pensions would not alter this aspect of indigency because of the patent incapacity of that element for meeting its own needs.

The Executive Council of the Federation for 1928 included the following: Elihu Root, honorary president; Matthew Woll, acting president; Samuel McRoberts, treasurer; W. N. Doak, secretary, Ralph M. Easley, chairman executive council; Miss Maude Wetmore, chairman woman's department; Charles L. Edgar, chairman welfare department; Conde B. Pallen, chairman department on subversive activities; Archibald E. Stevenson, chairman committee on free speech; John Hays Hammond, chairman department on active citizenship; William D. Baldwin, chairman department on industrial relations; Marcus M. Marks, chairman industrial round-table department; Jeremiah W. Jenks, chairman department on current economics; Gertrude Beeks Easley, secretary executive council; Mrs. Coffin Van Rensselaer, executive secretary; and Peter J. Brady, secretary department on active citizenship. The headquarters are in the Metropolitan Tower, East 23rd Street, New York.

NATIONAL DEFENSE. See **MILITARY PROGRESS**; **NAVAL PROGRESS**.

NATIONAL EDUCATION ASSOCIATION OF THE UNITED STATES. An organization of persons actively engaged in educational work and others interested in education; organized at Philadelphia, Aug. 26, 1857, under the name

of the National Teachers' Association, and on June 30, 1907, incorporated by Congress under its present name. In July, 1920, at the annual meeting, the association was reorganized and provision was made for a representative assembly composed of delegates from State and local education associations. The other governing bodies are a board of directors; an executive committee of five; a board of trustees; departmental organizations; standing and special committees; and a staff at headquarters which is held responsible for carrying out the decisions of the governing bodies. In 1928 there were 18 departments, each having its own officers, and more than 20 committees actively at work on professional problems. Two conventions are held annually. The summer meeting serves as a clearing house for educational ideas and reviews the progress of the year in education. At this time, in addition to the general sessions, meetings of the representative assembly, the departments of the association, and a number of allied organizations are held. In 1928 this meeting was held at Minneapolis, Minnesota, July 1-6, with an estimated total attendance of more than 10,000. The 1929 summer convention was scheduled to meet in Atlanta, Georgia, the first week in July. The department of superintendence holds a winter convention the last week in February of each year. The 1928 meeting was in Boston, Mass.; that for 1929 was to be held in Cleveland. The department was planning to complete in 1929 a two years' study of the articulation of the units of American education. Material used in this study was gathered from schools and colleges in every section of the United States.

The chief objective of the association is to secure from the American public a broader recognition of education and, through a legislative programme, to provide for increased educational opportunities for American children. The association advocates a Department of Education with a secretary in the President's cabinet; a competent, well-trained teacher in every public school position in the United States; increased facilities for teacher training; continued investigation of educational problems as the basis for revised educational standards and methods; and active assistance to State and local affiliated associations in securing needed legislation and in promoting the interests of such associations.

The association's monthly *Journal*, established in 1921, supports the policies and programmes of the association, aims to reflect the activities of professional organizations, and gives special consideration to new movements in education of national and international interest. The association publishes an annual volume of *Proceedings* and numerous reports on its activities. *Research Bulletins* containing statistical information on educational subjects are issued regularly. The finances of the association are embodied in two funds, the current and the permanent, the latter amounting to \$433,828.60 on May 31, 1928, the receipts for the year ending on that date having been \$439,842.93. The enrollment on Jan. 1, 1928, was 181,350. The headquarters of the association are maintained at 1201 Sixteenth Street, Northwest, Washington, D. C. Officers elected for 1928-29 were: President, Uel W. Lamkin, Maryville, Mo., secretary, J. W. Crabtree, Washington; and treasurer, Henry Lester Smith, Bloomington, Ind.

NATIONAL SAFETY COUNCIL. An international, non-profit coöperative association of more than 4000 members, companies, and individuals located in the United States and abroad. Formed as a result of a safety congress held in Milwaukee in 1912 under the auspices of the Association of Iron and Steel Electrical Engineers, it functions for the prevention of accidents in factories, in the streets, air, schools, and homes, as well as for the health, sanitation, and general welfare of the public at large. There were 59 local councils throughout the United States in 1928, and intensive safety work was carried on in hundreds of local plants, embracing approximately 150 different lines of modern industry, which resulted in bringing industrial safety work directly to nearly 10,000,000 workers. In addition to this work, a campaign was carried on in the schools, the homes, and other public places, and among municipal officers in charge of safety on the public thoroughfares.

The educational division of the council, located in New York, receives financial support from the National Bureau of Casualty and Surety Underwriters and maintains a trained staff who devote their entire time to serving the schools of the nation and teaching accident prevention fundamentals. The council maintains a large publication service which includes four monthly publications; the *National Safety News*, for industry; *Public Safety* for public officials, police chiefs, etc.; *Safety Education* for the schools; and the *Safe Worker*, which is distributed each month to thousands of workers throughout the country. Other features of the publication service are the industrial practices pamphlets issued annually; the intensive work carried on by the 28 different sections represented in the industrial divisions, where new ideas, new plans, and new practices are exchanged between members; the annual safety calendar, 650,000 of which were distributed during 1928; and forty different two-color posters, designed, printed, and distributed each month.

The activities of the council are supported from income supplied by members and, in the industrial division, all pay dues proportionate to their size. The annual income amounted to approximately \$600,000 in 1928. The council also receives financial contributions from the Rockefeller Foundation in addition to its list of paid memberships. The Seventeenth Annual Safety Congress was held in New York in October, with an attendance of approximately 6000 delegates. Officers for 1929 were elected as follows: President, Henry A. Reninger, Allentown, Pa.; managing director, W. H. Cameron, Chicago; treasurer, G. T. Hellmuth, Chicago; vice presidents; for public relations, Charles E. Hill, New York; for local councils, George Opp, Detroit; for public safety, Miller McClintock, Cambridge, Mass.; for health, Professor C. E. A. Winslow, New Haven, Conn.; for membership, A. M. Tode, New York; for engineering, George Sanford, Schenectady, N. Y.; for finance, C. E. Pettibone, Boston; for education, Albert W. Whitney, New York; for industrial safety, E. W. Beck, New York. The executive offices are in charge of William H. Cameron, managing director, 108 East Ohio St., Chicago, Ill.

NAVAL PROGRESS. One of the most important matters concerning naval progress during the year 1928 was the Anglo-French Naval

Agreement. For some weeks the terms of the agreement were not made public. In September, the League of Nations Assembly and Council instructed its Preparatory Commission for a Disarmament Conference to keep in touch with the progress of negotiations between the chief naval powers in order to call that committee together at the earliest favorable opportunity. France and England thereupon agreed to present their agreement to the United States Government and ask its opinion upon it as a basis for further discussion of naval armament limitation. This was done. After receipt of the agreement and suitable study, the United States sent identical replies to both nations rejecting the Anglo-French scheme. A summary of the Anglo-French proposals as given in the United States note is as follows:

"The limitations which the Disarmament Conference will have to determine will deal with four classes of men-of-war.

"(1) Capital ships, i.e., ships of over 10,000 tons or with guns of more than 8-inch calibre.

"(2) Aircraft carriers of over 10,000 tons.

"(3) Surface vessels of or below 10,000 tons armed with guns of more than 6-inch, and up to 8-inch, calibre.

"(4) Ocean-going submarines over 600 tons."

The American note called attention to the fact that the Washington Treaty regulated the first two classes and that all the Preparatory Commission would have to consider would be cruisers of 10,000 tons or less armed with guns of 6-inch to 8-inch calibre. It restates the position of the United States which has held and still holds that effective limitation of naval armament should apply to all classes of combatant vessels; while the 1928 proposals provided no limitation on 6-inch-gun cruisers, or destroyers, or submarines of 600 tons or less, although these vessels were certainly of high offensive value, especially to any nation possessing well-distributed naval bases in various parts of the world—the unrestricted cruisers alone constituting the greater part of the world's fighting ships. Moreover, the limitation of the larger cruisers carrying guns of over 6-inch calibre would add enormously to the comparative offensive power of a nation which possesses a large tonnage of merchant vessels suitable to serve as auxiliary cruisers in time of war.

The note referred to the British proposals in the conference of 1927 limiting the larger cruisers and placing the limit so high as to be no limitation at all. It said that the old proposals were "now presented in a new and even more objectionable form" and, as it proposes a limit to those cruisers which the United States needs, while frankly removing the limit on cruisers which she does not need in any great number, "it is even more unacceptable" than the British proposals of 1927. As regards 600-ton submarines, they are formidable combatant vessels. They carry the same torpedoes as the larger ones and can mount 5-inch guns.

Much that has been said concerning class three applies with equal or greater force to class four. The United States would be willing, in conjunction with all nations of the world, to abolish submarines. Otherwise, their total tonnage should be given a reasonable limit. The note concludes with expressing the willingness of the United States to coöperate with all naval powers for real limitation and suggests as a

basis the scheme formerly proposed by France, by which nations may "vary the percentage of tonnage in classes within the total tonnage" allotted and so provide for their particular requirements.

A full review of the acts of the Naval Conference at Gexena in 1927 is given in the YEAR BOOK for 1927 at the beginning of the article on NAVAL PROGRESS.

The development and incidents in the navies of the world during 1928 and the general condition of the important navies at the end of the year are given in the following sections.

NAVIES OF THE WORLD IN 1928

ARGENTINA. The appropriation for new construction of the programme of 1926 was, as stated in the YEAR BOOK of 1927, 75,000,000 pesos (1 peso = \$0.424) which was to be spread over 10 years. According to later information, 35,000,000 pesos was to be spent in the first three years, 20,000,000 in the second three years, and 20,000,000 in the last four. The two cruisers *Admirante Brown* and *Veinticinco de Maio*, described in the 1927 YEAR BOOK, were building at the yards of Orlando, Leghorn, and Odero, Sestri Ponente. The displacement had been fixed at 6800 standard tons. Three destroyer leaders of 1800 tons were under construction at the yard of J. S. White & Co., Cowes, England; one, the *Mendoza*, was launched on July 18, 1928. These vessels were to have a length over all of 335 feet and a molded breadth of 31.75 feet. The armament was to consist of five 4.7-inch guns, three anti-aircraft guns (one 3-inch, two 0.4-inch), and six 21-inch torpedo tubes on triple mounts. Three submarines were ordered in Italy at the Tosi works, Taranto. They were to be similar to the Italian boats of the *Goffredo Mameli* type. The length is 213.25 feet and beam, 21.25 feet; displacement when submerged, 990 tons—when on the surface, 780 tons; corresponding speeds, 9 and 17 knots; motive power, two Diesel 8-cylinder engines of 3000 h.p.; armament, one 3-inch gun, and six 21-inch torpedo tubes. The gunboat, *San Juan*, designed especially for surveying duty, was completed at the works of Hawthorn, Leslie, & Co., Hebburn-on-Tyne, England, during the spring of 1928, and a sister boat was then under construction. These vessels have a length of 200 feet and a displacement of 760 tons; horse power, 760; speed, 12 knots; and a steaming radius of 4000 miles.

AUSTRALIA. The two 10,000-ton cruisers, *Australia* and *Canberra*, were completed in England early in 1928. The submarines, *Orcay* and *Oxley*, were completed several months earlier but were held at Malta for eight months on their way to Australia in order to repair defects which developed in their machinery. The only naval vessel of importance under construction for the Australian Government at the end of 1928 was the aircraft carrier, *Albatross*, which was completing at the Cockatoo Island dock yard where it was launched on Feb. 23, 1928. It was to be ready for service in January, 1929. It is driven by turbines of 12,000 h.p.; designed speed, 20 knots; armament, four 4.7-inch guns; complement, 400 officers and men.

BRAZIL. The large submarine ordered in Spezia, Italy, in 1926, was launched in July, 1927, and named *Humayta*. Its dimensions are: length, 282 feet; beam, 25.5 feet; displacements, submerged and surface, 1884 and 1390 tons; corresponding speeds, 9.5 and 18.5 knots; arma-

ment, one 4-inch anti-aircraft gun and six 21-inch torpedo tubes. It has a tube aft for mine laying and is fitted for carrying 16 mines. It is similar in general design to the *Balilla* class of the Italian Navy.

CANADA. The head of the Canadian Navy is the Director of the Naval Service, one of the branches of the Ministry of National Defense. The Personnel of the navy in 1928 consisted of 70 officers and 500 men in the active force; 70 officers and 430 men in the naval reserve; and 70 officers and 830 men in the naval volunteer reserve. Seven officers and 26 petty officers and men were lent by the British Navy. Some changes in the figures were in contemplation in order to man the two new destroyers under construction in England; part of the changes consists in the addition of 10 extra officers and 150 petty officers and men to the active force. The new destroyers were designed to replace the destroyers, *Patriot* and *Patrician*, of 1004 tons, which were more than 23 years old. In the meantime, the Admiralty proposed to lend the destroyers, *Torbay* and *Toreador*, of 1075 tons, and of slightly later type.

CHILE. All of the six new destroyers referred to in the YEAR BOOK for 1927 had been launched: *Serrano*, Jan. 25, 1928; *Ovella*, March 8; *Riquelme*, May 31; *Hyatt*, July 21; *Capitan O'Brien*, October 2; *Videla*, October 16. The displacement is 1090 standard tons and 1430 tons at full load; the length is 300 feet over all; beam, 29 feet; draught at full load, about 12.7 feet. The armament consists of three 4.7-inch guns, one 3-inch anti-aircraft gun, six 21-inch torpedo tubes on triple mounts, a Y-gun for depth charges, and a mining equipment. The trials of the *Serrano* were completed and the contract speed of 35 knots slightly exceeded. Modernization of the battleship, *Almirante Latorre* (completed 1914), was contemplated.

FRANCE. The naval budget for 1929 as submitted to Parliament was 2,960,111,513 francs (about \$113,000,000), 500 millions more than the amount appropriated for 1928. Of this sum, 125 millions was designed for the commencement of work on the vessels of the 1929 programme, which are as follows: one light cruiser of 10,000 tons; six destroyer leaders of 2800 (or more) tons; six cruising submarines similar to those laid down in 1927-28 (displacements 1570-2000 tons); one submarine mine layer; two gunboats of about 750 tons; two oil fuel ships. Modernization of the battleships of 23,000 tons was to be completed by the work in progress on the *Jean Bart* and the *Paris*.

The most important change in the French Navy during the year 1928 concerned naval aviation. For three or four years, apparently, French Army and civil aviation had been deteriorating. During this time, great efforts were made to enlarge and improve naval aviation and these efforts were beginning to bear fruit. But political and civil criticism of the general condition of military, naval, and civil aviation led to the sudden passing of a law establishing an air ministry to control all air forces. The final argument of the supporters of the bill was that the greater part of the aviation records once held by French aviators had been lost to those of other nations—largely Italians—of which the French were very jealous. The new Air Ministry had not yet been fully organized and its effect upon naval aviation could not be measured but, judging from British experience, it was not likely to

he satisfactory. The allotment to naval aviation in the budget for 1929 was about 60 per cent greater than that appropriated for 1928. Four new squadrons were to be organized, new bases and regional depots built, and the supply of equipment for war service largely increased.

The authorized personnel of the navy is given in full detail in NAVAL PROGRESS in the YEAR BOOK for 1927. The budget of the year authorized an increase of one vice admiral, one rear admiral, two captains, seven commanders, and 500 enlisted men. The anticipated enlisted force of 57,500 was to be divided as follows: On cruising vessels, 40,100; on shore duty, on harbor vessels, in schools, etc., 11,100; in aviation, 6300. During 1928, much attention was directed to naval schools, particularly to the new naval academy under construction and reorganization at Brest, to schools for line and engineer officers, and to schools and instruction for officers of the reserve.

WARSHIPS BUILDING FOR FRANCE

Name	Jan. 1, 1929	Condition
Light cruisers:		
<i>Suffren</i>	10,000	Nearly complete
<i>Colbert</i>	10,000	Laid down Apr. 2, '28
<i>Louvois</i>	10,000	Laid down June, '28
<i>C-3</i>	10,000	Laid down Sept., '28
<i>C-4</i>	10,000	Authorized
Aircraft tender:		
<i>Comdt. Teste</i>	10,000	Laid down Aug., '27
Mine layer:		
<i>Pluton</i>	5,600	Laid down Apr., '27
Subm. depot ship:		
<i>Jules Verne</i>	6,000	Laid down 1928
Schoolship:		
	6,600	Ordered 1928
Gunboats:		
1	750	Building
2	750	Authorized
Destroyer Leaders:		
3 of <i>Lion</i> class	2,690	Launched 1928
3 of <i>Vanben</i> class	2,780	Laid down 1927
<i>D-4</i> to <i>D-9</i>	2,780	Ordered 1928
<i>D-10</i> to <i>D-15</i>	2,900	Authorized
2 of <i>Basque</i> class	1,495	Nearly complete
4 of <i>Forbin</i> class	1,600	2 launched; 2 bldg.
Fuel Ships:		
<i>Mekong</i>	15,500	Launched Aug. 31, '28
<i>Niger</i>	15,500	Building
Submarines:		
<i>Surcouf</i>	3250/—	Laid down July, '27
6 of <i>Pascal</i> class	1530/2000	4 launched; 2 bldg.
6 of <i>Monge</i> class	1570/2000	All building
6 of new class	About same	Authorized
3 of <i>Saphir</i> class	980/625	2 launched; 1 bldg.
4 of <i>Diane</i> class	790/625	Laid down 1927
4 of new class	About same	Authorized

The vessels completed in 1928 consisted of two light cruisers of 10,000 tons, two or three destroyer leaders of 2600 tons, seven destroyers of 1460 to 1495 tons, fuel ship of 9900 tons, four or five small submarines of about 600 tons, and one gunboat.

GERMANY. The naval budget had been increasing for many years. In 1924, the amount was 104,200,000 marks (1 mark = 23.8 cents); in 1928 the budget had expanded to 210,000,000 marks. According to statements in the British and French press, the budget was so drawn that no one could tell precisely what it meant. About one-half the appropriations are "provisional," which means that they may be applied to any other purpose than that for which they are voted. Furthermore, it appears that the allotments are excessive. Thus, the estimated cost of one of the new 10,000-ton ships is 80 million marks (\$19,040,000), at least three times the cost in France; the cost of the nine 6-inch and three 3.4-inch guns of the cruiser, *Karlsruhe*, is set at 14,500,-

000 marks (\$3,451,000). While the cost in France, according to French estimates, would be less than \$800,000.

The organization of the German Navy seemed to be planned for building, maintaining, and operating a great force such as was possessed before the World War. The naval general staff is composed of 17 sections, each headed by an officer of rank and having several juniors. The bureaus into which the navy department is divided are maintained on a similar scale. The excessive proportion of officers and senior petty officers (4979) to that of the remainder of the enlisted force (9035) was noted in the YEAR BOOK for 1927 as a probable indication that the Government was planning for a comparatively large navy when the treaty restrictions were removed or sufficiently modified. Late reports indicated a reduction of the number of officers and officials on the active list. It was said that while the others had been transferred to the reserve, many of them are actively employed. In view of the foregoing remarks, the use to which the surplus of the "provisional" appropriations were to be put was the cause of much comment in England and France.

The active list of officers for the navy in the executive branch consists of one admiral, three vice admirals, eight rear admirals, 39 captains, 24 commanders, 85 lieutenant commanders, 164 lieutenants, and 200 junior lieutenants and ensigns; the list of engineer officers comprises one rear admiral, four captains, four commanders, 19 lieutenant commanders, 44 lieutenants, 55 junior lieutenants, and 27 ensigns. The medical corps had four officers of a grade corresponding to rear admiral. The members of the pay, construction, and legal departments are officials and not officers. All officers, officials, and enlisted men are volunteers; the term of service of enlisted men is 12 years.

The vessels under construction for the German Navy consisted of one new-type, armored cruiser of 10,000 tons, the light cruisers, *Konigsberg*, *Koln*, and "*E*" of 6000 tons, and the destroyers *Illis*, *Wolf*, *Tiger*, *Luchs*, *Jaguar*, and *Leopard*—all of 800 tons. The light cruiser, *Karlsruhe*, 6000 tons, was reported as having been completed late in 1928; and the *Konigsberg* should be ready early in 1929. The *Koln* was launched May 20, 1928, and was to be completed in 1929; cruiser "*E*" was on the docks at Kiel. The destroyers, *Illis* and *Wolf*, launched in October, 1927, were undergoing their trials and were reported as practically complete. The other four destroyers were to be completed early in 1929. A torpedo boat of about 200 tons should have been completed, but, as it was of a more or less experimental type, the work might be delayed. The new "*Ship A*" is of a new type. According to semi-official reports, she was to be of the cruiser class and possess considerable armor protection; would be superior in offense and defense to all cruisers of 10,000 tons so far designed; and have sufficient speed to escape contact with more powerful ships. The armament was to consist of six 11-inch Krupp guns of a new type (range of over 39,000 yards) and several anti-aircraft guns and torpedo tubes. The propelling machinery would consist of Diesel engines of special type and great power; the anticipated speed had not been disclosed.

GREAT BRITAIN. The British naval budget for 1928-29 amounted to £57,300,000, a reduction of

£700,000 from the figures for 1927-28. The budget provides for a personnel of 100,986, a reduction of 1289; the fleet will absorb 85,700, 3850 will be at schools or under instruction, and 10,450 are allotted to the marines. An increase of £18,000 is given to naval aviation; this brings the expenditure for aviation to nearly £1,100,000, exclusive of the sums supplied by the Air Ministry. Of the aviators, 107 naval officers are air pilots and 23 are under instruction; 65 naval officers are observers and 11 are under instruction.

The building programme provides for the construction of two light cruisers, one submarine depot ship, one destroyer leader, eight destroyers, six submarines, one river gunboat, and four sloops (cruising gunboats). One light cruiser and one submarine were to be built in the dockyards; the other vessels were to be given out to contract. Friction between the Royal Air Force and the Royal Navy, over matters connected with naval aviation, continued and served to further indicate the absurdity and inefficiency of the existing state of affairs. Aside from the in-

efficiency produced in the Naval Air Arm, and therefore in the navy, the fact that the system was carried out with so little friction was a tribute to the tact and good sense of the officers involved and not to any admirable qualities of the system itself.

Five light cruisers of 10,000 tons were completed in 1928—the *Australia* and *Canberra*, for Australia, and the *Kent*, *Cornwall*, and *Suffolk* for the Royal Navy. The other vessels of importance completed during the year were the aircraft carrier, *Courageous*, and three river gunboats.

GREECE. The Minister of Marine presented to the council of the Ministry the naval programme for 1929. It consists of four light cruisers and a number of smaller vessels. A credit of 72 million drachmas (1 drachma = 1.3 cents) was asked for their construction. During 1928, five submarines were completed for the Greek Navy, viz: the *Katsonis*, 605/775 tons, which was delayed in delivery until the Spring of 1928; the *Glafrkos*, *Triton*, *Proteus*, and *Nereus* are sister boats with displacements of 730 tons on the surface and 930 tons when submerged; corresponding speeds, 14 and 9.5 knots; armament, one 4-inch gun, eight torpedo tubes of 21.65 inches calibre; complement, four officers and 45 men; length over all, 226.3 feet; beam, 18.7 feet. Three periscopes are fitted and observations can be made when the boat is submerged to a depth of 40 feet below the surface.

INDIA. The Royal Indian Navy, which was being developed from the former Royal Indian Marine, was beset by many difficulties—the chief of which was the caste system of the Hindus, while religious troubles were not unlikely in the near future.

ITALY. The naval budget for 1928-29 (July 1, 1928, to June 30, 1929) provided for the expenditure of 1,151,782,030 lire (1 lira = 5.263 cents). This includes some funds for non-naval purposes. The allotted expenditure for the navy proper is 1,020,949,000 lire. The principal items in lire are: Pay of officers, 66,812,000; pay of petty officers, 70,300,000; pay of other enlisted men, 118,965,000; coast and maritime defense, 30,780,000; semaphore and radio services, 30,780,000; automobile service, 600,000; hydrographic service, 950,000; operation of ships, 136,800,000; factories, fortifications, hydraulic works, 36,360,000; navy yard expenses, 38,102,000; maintenance of ships, 137,000,000; new naval construction, 379,730,000; miscellaneous services, 1,550,000.

The expenses of naval aviation did not appear in the naval budget but were borne by the Air Ministry which includes military, naval, and civil aviation. The new building programme for 1928-29 provided for the laying down, during that fiscal year, of two light cruisers of 10,000 tons, four destroyers of the *Nembo* type, and four submarines of moderate cruising radius. According to the latest available information, the table on page 489 gives the names, displacement, and progress of construction of vessels building or authorized.

JAPAN. The naval budget for 1929-30, submitted to the Japanese Diet provided as follows: (1) Naval construction, 88,000,000 yen, covering expenditure on the light cruisers, *Atago*, *Takao*, *Maya*, and *Chokai* (all of 10,000 tons), one aircraft carrier of 5000 tons, two mine sweepers, one submarine salvage vessel, 14 destroyers

of 1700 tons, four submarines of large type, and two river gunboats (many of the foregoing not commenced). (2) Public works of navy yards and stations, 9,200,000 yen. This was pursuant to the provisions of the special programme of 1921-1933 to repair and improve facilities at navy yards and stations—total estimated expenditure in 12 years, 154,000,000 yen. (3) Maintenance of new ships, 12,000,000 yen. (4) Construction of two new airplane squadrons, 3,000,000 yen. (5) Construction of airplanes and apparatus to prepare battleships, battle cruisers, and light cruisers to carry and operate airplanes, 6,500,000 yen. (6) Repair and modernization of ships, 4,000,000 yen. (7). Naval manœuvres and experiments, 1,000,000 yen. (8). Propaganda, 100,000 yen. The propaganda is designed to oppose communistic ideas in factories, navy yards, schools, etc. Of the 14 new destroyers of 1700 tons, at least 10 had not been laid down on Oct. 15, 1928; these boats were to have a speed of 34 knots and carry six 4.7-inch guns, two small anti-aircraft guns, and nine torpedo tubes in triple mounts.

Much attention continued to be paid to aviation. Two new airplane squadrons were provided for in the budget, as were planes, catapults, etc., for all capital ships and cruisers. Some of these planes, at least, were to be fitted to land on the deck of aircraft carriers. Small planes, like those of the U. S. Navy, were under consideration for submarines. The construction of a new rigid airship to replace the *N-3* was under considera-

tion. The loss of *N-3* was believed to be due to excessive weakness and this defect was to be avoided in the new design.

The Government presented a new naval programme to the Diet which provides for the construction of 40 vessels (light cruisers, destroyer leaders, destroyers, submarines, and auxiliary vessels) to be completed in five years at a total cost of 200,000,000 yen, the work to begin in 1929-30. This programme was independent of the former one which was to be completed in 1931 and provided for 23 vessels. The Japanese Government was looking forward to the day when the restrictions of the Washington Conference shall have expired by limitation and was planning to have all necessary subsidiary craft completed by that time so that, if necessary, available funds could be devoted to the building of capital ships.

The aircraft carrier, *Kaga*, 26,900 tons, was scheduled to be completed about Feb. 1, 1929; the maximum trial speed was 28.5 knots. The light cruiser, *Furutaka*, 7100 tons, launched in 1925, proved in service to be too weak in the hull and was to be repaired and strengthened. Similar work it was thought might be necessary in the case of her sister ship, the *Kako*.

According to the latest available information, the names, numbers, tonnage, and condition of the vessels under construction, or authorized, for the Japanese Navy are as given in the following table.

VESSELS BUILDING FOR JAPAN

Name	Tons	Jan. 1, 1929	Condition
Aircraft carriers:			
<i>Kaga</i>	26,900		Compl. Feb. 1, 1929

3 or more ..	1150/1750 (approx.)		Building

The figures for submarines were considered doubtful but probable. The reports were conflicting and incomplete.

JUGO-SLAVIA. The only vessels building for the navy were two submarines of 630/780 tons that were similar to the boats of the French *Ariadne* type; they were under construction at St. Nazaire, France, and were nearly completed at the end of the year.

THE NETHERLANDS. The amount of the naval budget for 1928 was 40,500,000 florins (1 florin = 40.2 cents), of which 10,700,000 florins was for new construction. During the year, very important changes in the government were made. The ministries of War and Marine were consolidated and form the Ministry of Defense. The naval general staff was to continue as before; the

Minister of Marine became Secretary General of the Marine. Of the two navy yards, that of Willemsoord was retained, the other closed. The vessels building for the navy at the end of 1928 were four destroyers of 1620 tons—the *Van Galen*, *Witte de Wit*, *Vannes*, and *Bankert*. Four others of the same class—the *Evertsen*, *De Ruijter*, *Piet Hein*, and *Kortenaer*—were completed in 1928. These vessels have a length of 322 feet over all; beam, 31.25 feet; draft, 9.75 feet; armament, four 4.7-inch guns, two 3-inch anti-aircraft guns, six 21-inch-torpedo tubes, a bomb thrower, and 24 mines; speed, 34 knots at deep load; complement, 126 officers and men. A seaplane is included in the equipment. A submarine of about 600 tons (surface displacement) has been reported as under construction, but the report is not definitely confirmed.

NORWAY. The Minister of Defense asked a credit of 1,567,000 crowns (1 crown = 26.8 cents) for the completion of the two small submarines, *R-5* and *R-6*, the only vessels under construction for the Norwegian Navy in 1928. He also recommended the building of a destroyer of about 1000 tons for which the estimated cost was 6,500,000 crowns.

PERU. The new submarines, *R-3* and *R-4* (submerged displacement, 682 tons), described in the YEAR BOOK for 1927, were completed by the Submarine Boat Corporation at New London, Conn., in 1928. Two similar boats, *R-5* and *R-6*, also building at New London, were complete or nearly so, at the end of the year.

POLAND. The navy of Poland was undergoing steady development. Much of the expenditure was concerned with the improvement of the port of Gdynia which had been extended, deepened, furnished with docks and a navy yard, and otherwise prepared for the use of the navy and of maritime commerce. The projected fleet was to consist of two light cruisers, 12 destroyers, and 12 submarines. The destroyers, *Burza* and *Wicher*, and the submarines, *Rys*, *Zbik*, and *Wilk*, described in the YEAR BOOK for 1927, were building in France and nearly completed at the end of the year. A number of French naval officers were serving as instructors on the schoolship, *Baltic* (ex-French cruiser, *Desaix*), of 7600 tons and in advisory capacities. The river fleet had been reinforced by new gunboats and armed motor boats; and the navigability of the Vistula was being steadily improved.

PORTUGAL. On account of the many disturbances in China, the Government had decided to establish a naval base in Indo-China.

RUSSIA. The efficiency of the Russian fleet still remained at a low ebb and must always continue to do so unless the Soviet Government can find some method to secure real discipline and permanent naval ranks and promotion, a result which actual communism renders impossible. Nevertheless, the general conditions of naval affairs was said to be improved to a considerable extent, largely due to better instruction of officers and men and a larger control by ex-officers of the Imperial Navy. The personnel in 1928 consisted of 23,650 men, of which only 10,120 were serving on board ship (605 on submarines). Of 530 officers, 130 were ex-officers of the Imperial Navy. The principal force, the Baltic Fleet, consists of a high sea squadron and a coast defense squadron. The former comprises three battleships (*Marat* class—24,000 tons), 12 destroyers, and 8 to 10 submarines. The Baltic

Fleet was commanded by Admiral Wittorow.

SPAIN. During the Spring of 1928, the Government published a new construction programme that was much discussed in the Spanish press. The principal controversy concerned the most important item, three 10,000-ton light cruisers, that were estimated to cost 240,000,000 pesetas. The opponents declared that two 25,000-ton battleships, each carrying six 16-inch guns, could be built for the same amount of money. The final decision was for the cruisers and the programme was approved for the following vessels and estimated costs:

Vessels	Pesetas
3 light cruisers of 10,000 tons	268,500,000
3 destroyer leaders of the <i>Churrua</i> type	47,380,000
12 submarines of type C	144,000,000
2 fuel-oil carriers	11,000,000
3 gunboats	3,900,000
Various small vessels	12,000,000
Total cost in pesetas (1 peseta = 16.25 cents)	486,780,000

There were under construction for the Spanish Navy: the light cruiser, *Miguel Cervantes*, 7850 tons, launched May 19, 1928; 3 destroyer leaders of 1650 tons, the *Lepanto*, *José Luis Díez*, and *Almirante Ferrandiz*; 4 submarines of the C class (915/1290 tons), *C-3*, *C-4*, *C-5*, and *C-6*. The 7800-ton cruiser, *Almirante Cervera* was completed in 1928; also submarines, *C-1* and *C-2*. Two destroyer leaders of the *Lepanto* class were to be laid down to replace the two sold to Argentina. The budget would not be seriously affected as the cost was to be almost wholly defrayed by the proceeds of the sale.

SWEDEN. The budget for 1928 carried an item of a little more than 9 million crowns (1 crown = 26.8 cents) for new construction. This includes the first allotments on the 5-year programme described in the YEAR BOOK for 1927. In considering the programme, the Swedish Parliament omitted, at least temporarily, the building of a new battleship of the *Gustav V* type. The remainder of the programme was approved and consists of one aircraft carrier of 5500 tons, two destroyers of improved *Nordenskjöld* type, one first-class submarine of improved *Gripen* type, two submarine mine layers of 200 tons surface displacement, and four vedette boats. The budget allotted one-half million crowns for aviation and one and one-half millions for coast defense. The first-class submarine, to which was given the name of *Ulven*, was laid down at the Karlskrona Navy Yard in 1928. The surface tonnage is in excess of 600. One or more of the other vessels were to be, or had been, laid down in the fiscal year 1928-29.

The building of the destroyers was delayed until further experience was had with the boats of the *Nordenskjöld* type previously completed. The aircraft carrier is also a mine layer and torpedo transport. The displacement will be 5500 tons; length, 472 feet; beam, 48.5 feet; speed, 28.5 knots; armaments: six 6-inch guns in pairs in 3 turrets, six 3-inch anti-aircraft guns on twin mounts, four machine guns, 25 torpedo tubes, 100 torpedoes, and a supply of mines. She will be fitted with two catapults and two cranes for lifting seaplanes and will carry eight airplanes.

TURKEY. The Department of the Navy was one of the two divisions of the Ministry of the National Defense. It was presided over by the Under-Secretary of State for the Navy, who had recently reorganized it, dividing it into six bu-

reaus: 1. Cabinet of the Under-Secretary. 2. Bureau of Ships. 3. Bureau of Armaments. 4. Office of Pay and Pensions. 5. Office of Supply (provisions, fuel, clothing). 6. Office of Medicine. The naval general staff was consolidated with that of the army—the whole to be called the Grand General Staff. The chief of the naval staff was called the Naval Assistant to the Chief of the Grand General Staff. The office of the Naval General Staff was continued and divided in three parts, Instruction, Operation, and Technical Affairs, and was presided over by a naval council.

Many economies were being effected. The naval bases of Smyrna and Samsoun were abolished and the naval arsenal on the Golden Horn was ceded to the Ministry of National Economy. The new Turkish naval programme included one light cruiser, one aircraft carrier, and several submarines. The two submarines ordered in Holland, the *Birindji* and *Ikindji*, of 500 tons surface displacement, were completed in May, 1928, and arrived in Turkey two or three weeks later.

UNITED STATES. The naval appropriation bill for 1928–29 provided for an expenditure of \$363,737,017.69. The estimated personnel for 1929 is shown in the following table:

Officers, active	8,745
Midshipmen at the Naval Academy	1,746
Officers, retired	1,690
Enlisted men	83,250
Enlisted men, retired	1,498
Nurses	525
Total	97,454

The number of line officers in service on June 30, 1928, was 5437. The authorized maximum, under previous legislation, is 5499. The aviation programme would eventually require 916 officer aviators upon the basis of the existing theory of supplying aviation personnel. On Jan. 1, 1928, 458 line officers were employed as aviators and observers. In addition to these, 22 officers were in training and 96 others were engaged in aviation ground duties. The number of officers and men employed in aviation—afloat and ashore—at the end of the fiscal year 1927–28, was 8580; the estimate for 1928–29 is 9806.

The naval reserve, owing to recent legislation, was undergoing reorganization in 1927. Cruises of 15 days were given during 1928. The fleet reserve, having approximately 900 officers and 4500 men in 149 divisions, was also given 15-day cruises. The sum of \$45,308 was allotted for the pay of officers of the merchant marine naval reserve. The development of this branch was the principal feature of reserve work in 1928. On Aug. 15, 1928, nearly 1500 commissions were mailed to merchant-marine officers who, having made application for commissions, had fulfilled all prescribed requirements. The officers represent over 100 shipping lines and more than 600 vessels of the American merchant marine.

Transferred reservists (enlisted men transferred to the fleet naval reserve after 16 or 20 years' naval service) formed the most important part of the reserve and the number was constantly increasing. The cost of this part of the reserve is a charge upon "Pay of the Navy" and for 1930 it was estimated at somewhat over 10 millions.

The Navy maintains reserve officers' training corps (R.O.T.C.) units at the following universities: Harvard, Yale, Georgia Institute of Technology, Northwestern University, University of

Washington, and University of California. During the fiscal year of 1928–29 there will be three classes under instruction at each of these schools and they will have a total enrollment of 830 students.

The Marine Corps section of the bill provided for an average of 1176 commissioned officers, commissioned warrant officers, and warrant officers, and of 18,000 enlisted men. The work of the Marines in Nicaragua, practically completed at the end of the year, was highly praised by Nicaraguans and Americans alike. Similar approval was given to their work in China and Haiti.

The allotment for aviation, which includes charge for the third year of the 5-year programme, was \$31,315,000. The bill authorized contracts for new planes and other aircraft and accessories to the value of \$16,385,000; and provides \$9,480,000 for the year's obligations on existing contracts. The 5-year programme, authorized on June 24, 1926, is planned to provide the Navy with 1000 "useful airplanes." The development to the end of 1928 was as follows:

Year	On hand	Deliveries	Wastage	Left
1926	351	256	139	468
1927	468	419	182	705
1928	705	270	175	750
1929	750	271	238	783

The contract for the construction of two rigid airships for the Navy was signed on Oct. 6, 1928. The contractor was the Goodyear Zeppelin Corporation. The tenders were: for one ship, including design, \$5,375,000; for both ships, \$7,825,000. These ships, ZRS-4 and ZRS-5, will greatly exceed in size, power, and strength, all airships completed or building. See AERONAUTICS.

Pursuant to authorization by Congress, a contract was made in 1927 for the construction of a "metal-clad" (duralumin) airship at a cost of \$300,000. This is an experimental type of ship and, if it proves to be satisfactory during extended trials, larger ships will be constructed. If a large metal-clad ship is found to be practicable, the saving in construction and upkeep over large ships of existing types is expected to be considerable.

The development of the *P* type (gunpowder propulsion) of catapult was being continued. The first quarterdeck turntable model of this type was placed on the *Colorado* in 1927. The fixed type of catapult, which was mounted on a turret, was giving full satisfaction and the number in the fleet had been increased. New anti-aircraft guns with special fire-control gear, that were supplied to various battleships in 1927, were a great advance on former types of guns and mounts. New types of airplanes were developed during the year, especially a satisfactory training plane. The experimental fighting and bombing planes developed in 1927 were being produced in quantity. The performance of these planes was regarded as very satisfactory.

The submarine, *S-4*, that was sunk off the tip of Cape Cod in December, 1927, by the Coast Guard cutter *Paulding* (ex-Navy destroyer), was raised on Mar. 17, 1928, and taken to the Boston Navy Yard where it was repaired and was being used to test safety devices.

A bill to provide for the repair and alteration of the battleships, *Pennsylvania* and *Arizona*, at a total cost of \$14,800,000 was before Congress at the end of the year. The changes contemplated include new boilers, new masts, new anti-aircraft batteries, new fire-control systems,

increased elevation of the turret guns, increased protection against submarine and aircraft attack, and other items of lesser importance. By a vote of 287 to 58, the House of Representatives passed the new naval construction bill which authorized the building of 15 light cruisers of 10,000 tons and one airplane carrier of 13,800 tons; total estimated cost, \$274,000,000; this bill at the end of the year awaited action by the Senate.

Five cruisers were planned to be laid down in 1930, five in 1931, and five in 1932; the aircraft carrier was to be laid down in 1930; all were to be completed in six years. The bill as originally introduced contemplated a 5-year building programme that included 25 cruisers of 10,000 tons, 5 aircraft carriers, 9 destroyer leaders, and 32 submarines and involved an estimated expenditure of \$740,000,000. Pacifists and the ill-informed press—mostly in the smaller cities and towns—opposed the programme actively. The result of this opposition led the naval committee of the House to report the reduced programme that was contained in the bill as passed. A list of the vessels under construction for the Navy is given in the subjoined table. The river gunboats, which were building in China for service on the Chinese rivers, had been completed—the *Guam* in 1927, and others in 1928. The mine-laying-fleet submarine, *V-4*, was practically completed by the end of March, 1928, and was commissioned on April 2, but the failure of contractors to supply certain fittings delayed the date of her readiness for service until the end of June.

VESSELS BUILDING FOR THE UNITED STATES

Dec. 31, 1928

Name	Tons	Where building	Probable date of completion
Cruisers:			
<i>Pensacola</i> ...	10,000	New York Yard	Feb., 1930
<i>Salt Lake City</i> ...	10,000	Camden, N. J.	do
<i>Northampton</i> ...	10,000	Fore River, Mass.	June, 1930
<i>Chester</i> ...	10,000	Camden, N. J.	do
<i>CL-28</i> ...	10,000	Puget Sd. Yard	March, 1931
<i>Chicago</i> ...	10,000	Mare I. Yard	do
<i>Houston</i> ...	10,000	Newport News	June, 1930
<i>Augusta</i> ...	10,000	do	March, 1931
Fleet submarines:			
<i>V-5</i> ...	*3,000	do	June, 1929
<i>V-6</i> ...	*3,000	Mare I. Yard	Sept., 1929

* Approximate surface displacement according to reports; no official details announced.

URUGUAY. The Government proposed the construction of 2 light cruisers, 1 destroyer leader, 3 destroyers, and 1 squadron of airplanes. The establishment of a naval dockyard, with a dry dock and shops adequate for the repair of vessels of the navy, was also under consideration. The cost of the new vessels was estimated at 6,000,000 pesos (1 peso = \$1.0342). This sum was to be derived in part by proceeds of the sale of the old cruiser, *Montevideo*; the remainder was to be borrowed.

NAVIES. See NAVAL PROGRESS.

NEBRASKA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,296,372. The estimated population on July 1, 1928, was 1,408,000. The capital is Lincoln.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1928	8,937,000	212,701,000	\$151,018,000
Wheat	1928	3,672,000	69,919,000	65,498,000
	1927	3,630,000	73,826,000	80,852,000
Hay	1928	4,458,000	5,877,000 *	52,202,000

Crop	Year	Acreage	Prod. bu.	Value
Oats	1927	4,783,000	7,201,000 *	54,485,000
	1928	2,392,000	78,936,000	29,996,000
	1927	2,441,000	69,813,000	27,925,000
Potatoes	1928	105,000	10,080,000	5,040,000
	1927	84,000	8,904,000	6,678,000
Sugar beets	1928	88,000	1,023,000 *	8,241,000
	1927	82,000	1,036,000 *	7,149,000
Barley	1928	430,000	14,018,000	4,167,000
	1927	246,000	7,577,000	2,684,000
Rye	1928	249,000	3,486,000	3,165,000
	1927	274,000	4,110,000	

* tons.

MINERAL PRODUCTION. The total value of the mineral products of the State was \$3,322,460 for 1926; for 1925, it was \$3,358,585. The clay products and the output of sand and gravel, each somewhat over a million dollars in 1926, formed the chief part of the total. While without important minerals as to total values produced, Nebraska ranked second of the States in the production of pumice.

FINANCE. State expenditures in the year ended June 30, 1927, as reported by the U. S. Department of Commerce, were: for departmental maintenance and operation, \$10,974,948 (of which \$1,314,251 was for local education); interest on debt, \$37,462; permanent improvements, \$9,208,833; total, \$20,221,243 (of which \$8,195,355 was for highways, \$1,586,749 being for maintenance and \$6,608,606 for construction). Revenues were \$17,286,726. Of this, property and special taxes formed 37.4 per cent, departmental earnings and charges for officials' services 10.4 per cent, sales of licenses and taxation of gasoline 29.4 per cent. Property valuation was \$3,321,741,538; State taxation thereon, \$5,849,739. State funded debt was nil.

TRANSPORTATION. The total number of miles of railroad line under operation in the State on Jan. 1, 1928, was 6174.38. No additional building in 1928 was reported.

EDUCATION. The year 1928, as noted by State Superintendent Taylor in the *Journal* of the National Education Association, was marked by the establishment of a State-wide programme of character education, and the plan of parent-teacher demonstrations in the rural districts was widely carried out. The school-age population (from 5 to 21 years) of the State in the academic year 1926-27 was placed at 414,975. There were enrolled in the public schools 317,221 pupils, of whom 118,900 were in rural schools, 198,321 in graded schools, and 61,457 in high schools. The total expenditure for public-school education was \$30,903,155.60.

CHARITIES AND CORRECTIONS. The Department of Public Welfare exercised important powers, particularly with regard to child care. This body, however, did not have charge of the State institutions, which were under the authority of a separate Board of Control, Institutions under this board, with their populations as reported July 1, 1927, were: Nebraska Institution for the Feeble-Minded, Beatrice, 827 inmates; Girls' Training School, Geneva, 227; Nebraska Soldiers' and Sailors' Home, Burkett, 253; Hastings State Hospital, Ingleside, 1356; State Industrial School, Kearney, 213; Hospital for Tuberculous, Kearney, 95; Lincoln State Hospital, 1118; Orthopedic Hospital, Lincoln, 106; State Penitentiary, Lincoln, 701; Nebraska Industrial Home, Milford, 83; Soldiers' and Sailors' Home, Milford, 98; Nebraska School for the Blind, Nebraska City, 48 (on June 1); Norfolk State Hospital, 877; Nebraska School for the Deaf, Omaha, 190 (June 1); State Reformatory for Women, York, 52; Nebraska Home for De-

pendent Children, Lincoln, 101; State Reformatory for Men, Lincoln, 253. A furniture manufactory was operated at the Penitentiary. Admittances to the three State penal institutions in 1926, according to the United States Department of Commerce, numbered 495.

POLITICAL AND OTHER EVENTS. Because of the demands made upon the State bank-deposit guarantee fund, Nebraska early in the year abandoned its long-continued practice of paying depositors as soon as the State took control of affairs of a bank that had failed, and proceeded to liquidate the bank's assets first, as in ordinary receivership liquidations. This imposed an indeterminate delay in payments from the State guarantee fund. In March a movement was started at Lincoln to have the State guarantee by law, out of its own funds, 5 per cent of deposits in failing banks. It was then estimated that the affairs of 63 banks were in the hands of the guarantee fund commission, and that when it endeavored to liquidate depositors' claims in full the fund might have on its hands a deficit of some million dollars, unless relieved by State aid. Unpaid deposit claims July 1, 1928, were \$24,650,000. The effort of Nebraska to establish the valued fire insurance policy system was supported by a decision in the United States Circuit Court of Appeals. It was held that where the insured had paid premiums on a \$5000 policy the insurer could not discharge obligation by a \$2500 total loss payment on the ground that the property had been overinsured. Companies were held responsible for valuations as written in policies. It was testified at the Federal Trade Commission's investigation of public utility workings that an agent of the National Electric Light Association had promoted the introduction of 4000 textbooks into schools of the State.

ELECTION. The presidential campaign in Nebraska was intensified by the action of Senator George W. Norris, who in October declared himself in favor of Governor Smith, the Democratic candidate, on account of Smith's more acceptable views on the means to relieve the situation of the farming industry. The greater number of the voters of the State, nevertheless, as in other normally Republican agricultural States, continued to favor the Republican ticket. The majority for Hoover and Curtis, Republican National candidates, was numerically not far from that of 1924 for Coolidge and Dawes. Robert B. Howell, Republican, was reelected United States Senator. In the State's delegation of Representatives, the Republican party made some gain. Arthur J. Weaver, Republican, was elected governor. The popular vote for President was: Hoover (Rep.), 345,745; Smith (Dem.), 197,959.

OFFICERS. Governor, Adam McMullen; Lieutenant-Governor, George A. Williams; Secretary of State, Frank Marsh; Treasurer, W. M. Stebbins; Auditor, L. B. Johnson; Attorney-General, O. S. Spillman; Superintendent of Public Instruction, C. W. Taylor.

JUDICIARY. Supreme Court: Chief Justice, Charles A. Goss; Associate Justices; William B. Rose; James R. Dean; W. H. Thompson; George A. Eberly; Edward E. Good; George A. Day.

NEBRASKA, UNIVERSITY OF. A State institution of higher education at Lincoln, Nebr., founded in 1869. The enrollment for the autumn term of 1928 was 6484 of whom 2700 were women. The enrollment was distributed as follows: Agriculture, 562; arts and sciences, 1986; business administration, 672; dentistry, 96; engineering,

694; graduate, 346; law, 169; medicine, 309; nursing, 102; pharmacy, 117; teachers, 1466. Included in arts and sciences and teachers college were 508 students of the school of fine arts and 182 of the school of journalism. There were 3320 students registered in the summer sessions of 1928, of whom 1047 were men and 2273 were women. The faculty numbered 360 in the autumn of 1928. The total income for the year was \$4,135,390. The library contained 223,885 volumes. New buildings added to the physical plant were Andrews Hall, housing the College of Dentistry and the departments of English, classics, and Germanic languages, on the city campus; a nursery school, a service building, and departmental greenhouses, on the agricultural college campus; dormitories at Nebraska Agricultural School at Curtis; and a new residence and barns at the Agronomy Farm. An additional gift of \$10,000 for the development of the University Museum was made by the Hon. C. H. Morrill. The Chancellor was Edgar A. Burnett, D.Sc.

NEBULÆ. See **ASTRONOMY**; **PHYSICS**.

NECROLOGY. The following list contains the names of notable persons who died in 1928. Articles will be found in this volume, in their alphabetical order, on those whose names are given below without other text.

Abbe, Robert.

Abbott, Brig. Gen. Frederic Vaughan.

Adams, Cyrus Cornelius.

Adams, Granger. American soldier, died at Fort Royal, Va., March 27. He was born at Williamson, N. Y., Sept. 28, 1852, and was graduated from the U. S. Military Academy in 1876 and from the Artillery School in 1882. He advanced in the artillery branch of the Army through the various grades, and became a brigadier general, July 1, 1916, being recognized as one of the leading artillery experts in the United States. In 1910 he was appointed president of the Field Artillery Board. He was retired in 1916, after 44 years' active service.

Adams, Samuel Shugert. American physician and educator, died at Washington, D. C., February 12. He was born at Washington, July 12, 1853, and was graduated from the University of West Virginia in 1875, and from the medical school of Georgetown University, Georgetown, D. C., in 1879. For thirty years Dr. Adams was chief of the department of medicine of the Georgetown medical school. He was a member of the American Pediatric Society, of which he was secretary for many years, and of the Association of American Physicians.

Adams, Walter Booth. American pharmacologist and educator, died at Beirut, Syria, July 9. He was born at Constantinople, N. Y., Feb. 1, 1864, and was a graduate of New York University and the medical school of the same institution. Immediately after receiving his medical degree in 1890 he was appointed to the staff of the medical school of the American University at Beirut, and he served there, as professor of chemistry, materia medica, and therapeutics, until his death. He wrote magazine articles and several books dealing with dermatology.

Alvord, Clarence Walworth.

Ames, Joseph Bushnell. American author and official of the Boy Scouts, died at Morristown, N. J., June 20. He was born at Titusville, Pa., Aug. 9, 1878, and was graduated from Stevens Institute of Technology in 1897. He was employed by the Lidgerwood Manufacturing Company, 1901-03, and by the Public Service Gas Company of Jersey City, N. J., 1904-09, before devoting himself to the writing of stories and to Boy Scout work. He was a member of the national council of the Boy Scouts of America. He wrote, besides short stories and magazine articles: *The Treasure of the Canyon* (1907); *Pete, Cowpuncher* (1908); *Under Boy Scout Colors* (1917); *The Mystery of Ram Island* (1918); *Curly of the Oircle Bar* (1919); *Shoe-Bar Stratton* (1922); *The Lone Hand* (1926); and other books published under his own name; also *Moran of Saddle Butte* (1924); and *The Valley of Missing Men* (1925), published under the pen name of "Lynn Gannison."

Amundsen, Roald.

Andrews, Brig. Gen. George.

Armstrong, Edward.

Artinistall, Samuel George.

Asquith, Herbert Henry, First Earl of Oxford and Asquith.

Auburtin, Victor. German author and journalist, died June 29. He was born at Berlin, Sept. 5, 1870, and attended the gymnasium, and the universities of Bonn, Berlin, and Tübingen. He was an editor of the Berlin *Borsenzeitung*, and later transferred to the Berlin *Tageblatt*, as Paris correspondent. He was arrested in France for disseminating German war propaganda, and for three years he was imprisoned in Corsica. After his release he was a correspondent at Berne and at Madrid. At the time of his death he was editor of the Berlin *Tageblatt*. Auburtin wrote several books, including: *Goldene Kette; Eing der Wahrheit; Deutsche Erde; Onyschale; Deutsche Kunst Stirbt; Was ich in Frankreich Erlebte* (translated into French); and *Ein Glas mit Goldfischen* (translated into Spanish).

Auffenberg-Komarow, Marshal Moritz Freiherr von.

Aulard, François-Victor-Alphonse.

Aumonier, Stacy. English author, died at Clarens, Montreux, December 21. Born in 1887, he first worked as a decorative designer and landscape painter, exhibiting at the Royal Academy, the Royal Institute, and the International Exhibition. He then became, in 1908, a successful monologist, imitating characters with humor and accuracy. At the outbreak of the World War, 1914, he joined the Army Pay Corps, and later drew charts at the Ministry of National Service. Having first published short stories in 1913, he contributed to various magazines in England and America, and published several collections of stories, the most popular being *The Baby Grand* (1926). Others were: *Three Bars Interval; The Love-a-duck; Miss Bracegirdle and Others; Odd Fish; and Overheard*. Mr. Aumonier also wrote the following novels: *Olga Bardel; Just Outside; The Querris; One after Another; and Heartbeat* (1922). His one-act play, *A Nice Thing*, was produced in 1920 at the Comedy Theatre.

Ayscough, John. See Bickerstaffe-Drew, F. B. D.

Bakmeteff, George S.

Baldwin, Bird Thomas.

Ballou, Charles Clarendon. American soldier, colonel in the U. S. Army, and major general in the National Army in the World War, died at Spokane, Wash., July 23. He was born in Orange Township, New York, June 13, 1862, and was graduated from the U. S. Military Academy in 1886, from the Infantry and Cavalry School in 1898, the Field Officers' School in 1916, and the War College in 1917. He served in the Spanish-American War and in the Philippine insurrection, and was a colonel in the regular army at the time of the entrance of the United States into the World War, April, 1917. He was commissioned brigadier general in the National Army in August, 1917, and major general in November. Besides being commander in France of the Ninety-second Division, one of the two National Army divisions composed of colored troops, General Ballou also commanded the Sixth Army Corps. He took part in the battle of the Argonne and that on the Moselle River, and in trench fighting in the Saint-Dié sector. He received the French Croix de Guerre, with palm, and the rank of officer of the Legion of Honor.

Baltzell, Winton James.

Bang, Mrs. Nina.

Barkany, Marie. German actress, died at Berlin, Germany, July 26. She was born at Kaschau, Hungary, Mar. 2, 1862. She was educated at the Ursuline Convent at Kaschau, and then went to Vienna to develop her knowledge of German and to study bookkeeping, to aid her father. There her attention was turned to acting, and after a brief period of training she made her appearance, with great success, at Frankfort-on-the-Main. Her next success was won at Hamburg, and she then became one of the players at the Royal Theatre in Berlin. As head of her own company she appeared in all the principal German cities and in European capitals, including Paris, and she made a tour of the United States with Joseph Kainz. She was noted principally for her portrayals of tragic parts. Among the rôles which she assumed were those of Mary Stuart, Fédora, Tosca, and Magda. She was one of the favorite actresses of the late Emperor Francis Joseph of Austria-Hungary. Several of the German states and the French Republic bestowed decorations on the actress.

Barker, Henry Stiles. American educator and jurist, died, at Jeffersonville, Ind., April 23. He was born at Newstead, Ky., July 22, 1850. He was admitted to the bar of the State of Kentucky in 1874, and practiced law at Louisville, serving as city attorney from 1888 to 1896. After sitting on the bench of the circuit court of Jefferson County, Kentucky, and on that of the court of appeals of the State, he became president of the State University of Kentucky in 1911. He retired in 1917.

Barondess, Joseph. American labor leader, died at New York, June 19. He was born at Kamenetz-Podolsk, Russia, July 3, 1867, and after emigration to America in 1888 continued his studies at the New York University Law School. His first work in America was done as a laborer in a clothing "sweatshop," and for

many years he devoted himself to the cause of the amelioration of the workers in such places and in others. He was active also in Zionism and other Hebrew causes.

Barrett, Thomas Augustine. See Stuart, Leslie.

Barron, Clarence Walker.

Barth, Hans. German author, died March 15. He was born at Stuttgart, Sept. 29, 1862. Besides being a special correspondent of the Berlin *Tageblatt*, he wrote poetry, fiction, and history. Among his works are the following: *Cripiet* (2d ed., 1896); *Unter Südlichem Himmel* (1893); *Römische Allotria; Vadekum für Italienbummler* (1897); *Türke, wehre dich* (1898); *Le Droit du Croissant* (1898); *Est Est Est, Italien Schenkführer* (1900); *Leo XIII, Lebensbild eines modernen Papstes* (1903); *Scirocco, Künstler-Drama* (1905); *Roma Aeterna* (1908); *Ostria, Kunatgeschichtlicher Führer durch Italiens Schenken von Verona bis Capri* (1908 and 1910); *Ostria, Guido spirituale delle osterie* (1908 and 1923); *Die heulende Wölfin Römische Xenien* (1917); *Römische Asche neue Xenien* (1919); and *Epigrammi Romani di un Barbaro* (1926).

Bartholomé, Paul Albert.

Barton, Robert McKinney. American jurist and administrator, died at Tampa, Fla., April 5. He was born at Greenville, Tenn., Nov. 26, 1851. He studied at the University of Virginia, and was admitted to the bar of Tennessee in 1874, beginning his practice at Chattanooga. He was a United States Commissioner, alderman of Chattanooga, member of the State Senate and judge of the court of chancery appeals (later the court of civil appeals), before his appointment as member of the U. S. Railway Labor Board in 1920. Soon after his appointment he was elected chairman of the board. He retired in 1923.

Bashford, Herbert.

Bassett, John Spencer.

Battistini, Mattia.

Bayes, Nora (Dora Goldberg). American actress, died at Brooklyn, N. Y., March 19. She was born at Los Angeles, Calif., in 1880. She made her first professional appearance in 1899 at Chicago, and her first New York debut in 1907. She was a popular favorite in vaudeville and on the musical comedy stage, and appeared with success in England as well as in America.

Beban, George. American actor, died at Los Angeles, Calif., October 5. He was born at San Francisco, Calif., in 1873, where he started singing in minstrels when he was eight years old, while he attended public school. He later became star in *The American Idea*, and he played in *The Sign of the Rose* for six years. Becoming a film actor he specialized in Italian character rôles, and starred in a number of motion pictures. He also became connected with producing, retiring in 1926.

Beckwith, The Rt. Rev. Charles Minnegerode.

Beebe, The Rev. Dr. Robert Case. American medical missionary in China for the Methodist Episcopal Church, died at Clifton Springs, N. Y., March 13. He was born at Hartford, Ohio, Mar. 16, 1855, and he was educated at Oberlin College and the medical department of Western Reserve University. He was ordained by the North Ohio Conference, and in 1882 went to China as builder and superintendent of a medical mission. He was president of the Chinese Medical Association, 1899-1902, and helped to found the Rockefeller Foundation medical centres at Peking and Shanghai. In 1902 he received from the Emperor of China the Order of the Double Dragon.

Beecher, William C. American lawyer, died at Whitefield, N. H., September 18. He was born at Brooklyn, Jan. 26, 1849, the son of the preacher, Henry Ward Beecher, and after being graduated from Yale in 1872, he joined an expedition sent to study fossils in the West. He entered the Columbia Law School in 1878, and after practicing for several years in New York City, he was appointed Assistant District Attorney for New York County. He later became counsel for various reform societies, being also at one time president of the Brooklyn Excise League, and a member of the legal staff of the Long Island Railroad. He was appointed in 1880 judge advocate on the staff of the Third Brigade, N. G. N. Y., with the rank of major, later being made colonel. He retired from practice in 1925.

Behan, William James. American sugar planter, died at New Orleans, La., May 4. He was born at New Orleans, Sept. 25, 1840, and served through the Civil War in the Confederate Army. In 1905 he was commander-in-chief of the United Confederate Veterans. He was mayor of New Orleans, 1882-84, and a member of the Louisiana State Senate, 1888-92.

Beiro, Francisco. Argentinean statesman and vice president-elect of the Argentine Republic, died at Buenos Aires, July 22. He was at one time minister of the interior, but resigned that post in 1922 to engage in a duel with a deputy who had attacked him in the Chamber of Deputies.

FOUR PROMINENT MEN WHO DIED IN 1928

Bello, João. Portuguese statesman, died January 2. He was born in 1877. After serving in Portuguese East Africa for 29 years, he entered the cabinet as minister of the colonies and made a good record as an administrator.

Bellet, Hugh Hale Leigh.

Benét, Mrs. William Rose. See Wylie, Elinor.

Bennett, Floyd.

Beringer, George M. American pharmacist and editor, died at Collingswood, N. J., June 23. He was born at Philadelphia, Feb. 3, 1860. He was graduated from the Philadelphia College of Pharmacy in 1880, and practiced as a pharmacist at Philadelphia and Camden, N. J. He was president of the American Pharmaceutical Association, 1914, and of the National Pharmaceutical Service Association, 1917-19. He edited the *American Journal of Pharmacy*, 1917-21. In 1924 he received the Remington honor medal for his services to his profession.

Berry, Henry Seymour. See Buckland, Lord.

Berry, John Bennington.

Berry, William H. American politician and manufacturer, died at Chester, Pa., June 19. He was born at Edwardsville, Ill., in 1852, and was a machinist in early life. He invented and manufactured several successful mechanical devices. After he took office as state treasurer of Pennsylvania, in May, 1906, he exposed the frauds in connection with the building of the state capitol at Harrisburg, Pa. In 1910 he was an unsuccessful Democratic candidate for Governor of Pennsylvania, and from 1913 to 1922 he was collector of the port of Philadelphia.

Berwind, John E. American coal operator and philanthropist, died at New York, May 23. He was born at Philadelphia, Sept. 9, 1854. When a young man he, with his brothers, Edward J. and Harry A. Berwind, organized a coal company which became a leader in the business and controlled much of the soft-coal-mining industry of Pennsylvania. Mr. Berwind also acquired extensive shipping interests and was a director and official of numerous large corporations. For some years before his death his philanthropies, especially in New York City and Porto Rico, engaged much of his time and attention.

Betts, James A. American jurist, died at Kingston, N. Y., May 6. He was born at Broadalbin, N. Y., Mar. 18, 1853, and was graduated from the New York State Normal School, Albany, in 1875. He was admitted to the bar in 1880 and practiced law at Kingston, N. Y. He was secretary of the New York State Civil Service Commission, 1883-84; surrogate of Ulster County, N. Y., 1892-98; justice of the supreme court of New York, 1898-1912, and associate justice of the appellate division of the same court, 1910-12.

Bickerstaffe-Drew, The Rt. Rev. Mgr. Count Francis Browning Drew.

Bishop, Joseph Bucklin.

Bishop, William Henry. American author, died at Brooklyn, Conn., September 26. He was born at Hartford, Conn., Jan. 7, 1847, and was graduated from Yale in 1867. Having been editor and proprietor of the *Milwaukee Commercial Times* until 1877, he returned to Yale as instructor in modern languages from 1893-1902. He was appointed United States consul at Genoa the following year, and in 1905 he was transferred to Palermo, where he remained until his resignation from the Consular service in 1910. He was a member of the National Institute of Arts and Letters, having written numerous books, including: *Petmold* (1879); *The House of a Merchant Prince* (1882); *Olney Susan and Other Stories* (1884); *Old Mexico and Her Lost Provinces* (1884); *The Golden Justice* (1887); *The Brown Stone Boy and Other Queer People* (1888); reprinted in 1902 as *Queer People*; *A House Hunter in Europe* (1893); *Writing to Rosina* (1894); *The Yellow Snake* (1902, reprinted as *Tons of Treasure*, 1902); and *Anti-Babel* (1919).

Bixby, Brig. Gen. William Herbert.

Blasco Ibañez, Vicente.

Bleibtreu, Carl.

Blinn, Holbrook.

Bloomfield, Maurice.

Bloomington, Emanuel Watson. American lawyer, merchant, and public official, died at New York, February 6. He was born at Rome, N. Y., Nov. 25, 1852. He was graduated from the law school of Columbia University in 1877, and practiced law for several years before becoming associated with the retail business conducted by his brothers in New York. In 1905 he withdrew from the firm to devote his time to the law and civic affairs. He was president of the board of managers of the Society for Reformation of Juvenile Delinquents and vice chairman of the New York State Bridge and Tunnel Commission.

Blue, Victor.

Blythe, Coralie. English actress, died at Monmouth Beach, N. J., July 24. She was born in England in

1880, and was the wife of Lawrence Grossmith, English actor, and sister of the late Vernon Castle, dancer. She made her first appearance at the Lyceum Theatre, London, in pantomime, and later achieved success, in England and America, in musical comedy rôles. She made her first appearance in the United States in 1915. Among the plays in which she had parts were *The Girl in the Train*, *The Joy Ride Lady*, *Nobody Home*, *The Circus Girl*, *A Gayety Girl*, *The Silver Slipper*, *The Toreador*, *The Girl Behind the Counter*, and *Havana*.

Boeppler, William. An American choral conductor, died in Chicago, December 11. He was born in Germany, in 1863, and studied in Bonn and Leipzig. In 1895 he came to Milwaukee, where he founded the A Cappella Choir and the Wisconsin Conservatory of Music, conducting both until his death, even after his removal to Chicago, in 1904, where he organized the Singverein and the Bach Chorus.

Bogdanoff, Alexander Alexandrovitch.

Bohnke, Emil.

Bokanowski, Maurice.

Bone, John Rainford.

Boosey, Philip Harold (Philip Cunningham). English actor died January 10. He was born Aug. 12, 1865. He made his first stage appearance in 1885 as a minor member of Sir Henry Irving's company. Among the famous actors and actresses with whom he was associated, in England and in America, were Ellen Terry, Lillie Langtry, Cora Urquhart Potter, and Mr. and Mrs. Kendal.

Bornstein, Chayyim Yechiel. Hebrew scholar, died at Wilmington, Del., March 29. He was born at Kosnitz, Poland, 1845, and became one of the first of the modern Hebrew writers in Eastern Europe, maintaining his influential place among scholars until his death. He pursued extensive historical researches, in spite of blindness toward the end of his life, becoming an authority on the Jewish calendar, and his numerous articles on the subject were translated into several languages. He himself translated *Hamlet* into the prose of the Hebrew Bible.

Boy-Ed, Ida.

Bradford, Edward Green. American jurist, died at Wilmington, Del., March 30. He was born at Wilmington, Mar. 12, 1848. He was graduated from Yale in 1868, was admitted to the bar in 1870, and became United States district judge for the District of Delaware in 1897. He retired from the bench in 1918.

Brennan, George E.

Brewer, Sir Alfred Herbert.

Bridgman, Frederic Arthur.

Brockdorff-Rantzau, Count Ulrich von.

Bronson, Walter Cochrane.

Brown, Arthur Lewis. American jurist, died at Providence, R. I., June 10. He was born at Providence, Nov. 28, 1854. He was graduated from Brown University in 1876 and from the law department of Boston University in 1878. After practicing at Providence from 1878 to 1896, he was appointed U. S. district judge for the District of Rhode Island, and remained on the bench of that court for thirty years, retiring in June, 1927. Brown University conferred on him the degree of LL.D. in 1907. In November, 1919, Judge Brown's ruling that the prohibition enforcement act would probably be held unconstitutional, ultimately, attracted widespread notice.

Brown, David E. Canadian-American railway official and financial expert, died at Montreal, P. Q., January 12. He was born at New York in 1872. After business experience in other fields, he entered the employ of the Erie R. R. in 1896. President Roosevelt in 1906 appointed Mr. Brown as one of the twelve members of the accounting board of the United States Interstate Commerce Commission. He supervised all examinations for the board. He resigned from the commission to join the Treasury Department of the United States Government. Mr. Brown's connection with Canadian affairs began in 1926, when he was appointed by the Dominion Government to take charge of the financial accounting studies necessary in the Grand Trunk arbitration. The following year he made a study of the accounts of the Canadian Government Railway. Later he joined the Canadian National Railways' staff and became chief assistant to the financial vice president of the system.

Brown, Sedley. American actor and manager, died at Los Angeles, Calif., September 18. He was born at Boston, Mass., Feb. 29, 1856, and educated at Exeter, N. H. He changed his name to W. H. Sedley. He first appeared on the stage at Booth's Theatre, New York, in 1874, and after numerous engagements with prominent actors of his day, including Fanny Davenport and Edwin Booth, he became a partner with Gustav Frohman in a dramatic agency. He then devoted himself to productions, managing various theatres throughout the United States; and,

being particularly interested in stock companies, he was one of the first to establish permanent repertories. He also wrote several plays, among the most important of which are *The Minister* (1888); and *A Navajo's Love* (1904).

Brownell, William Crary.
Brownrigg, The Rt. Rev. Abraham. Roman Catholic Bishop of Ossory, died at Kilkenny, Ireland, October 1. Born in Kildavin, County Carlow, Dec. 23, 1836, he attended St. Peter's College, Wexford, and Maynooth College, and, after courses in philosophy, scripture, and theology, he was ordained in 1861. He was appointed professor at St. Peter's College in the same year, and five years later he joined the diocesan missionary community at Enniscorthy, becoming rector in 1876. He was made Bishop of Ossory in 1884, where he remained until his death.

Buckland, Lord.
Bulkley, Lucius Duncan.
Bunts, Frank Emory. American surgeon, and educator, died at Cleveland, Ohio, November 28. He was born at Youngstown, Ohio, June 3, 1861, and after being graduated from the U. S. Naval Academy in 1881, he remained in the service until 1883. He then resigned, to study medicine, and in 1886 was graduated from the Western Reserve Medical College. He returned to that institution in 1893 as professor of surgery, holding that appointment until his death. He was also chief of the staff at the Charity Hospital of Cleveland, a director of the clinic foundation, and of the Cleveland Trust Company. During the Spanish-American War, 1898, Dr. Bunts served as major and surgeon in the First Ohio Volunteer Cavalry, and during the World War, 1914-18, he became a lieutenant-colonel in the American medical corps, and commandant of Hospital No. 9 of the British Expeditionary Force.

Burnet, John.
Burnham, Claude George. American railway official, died at Kenilworth, Ill., June 22. He was born at Peterboro, England, June 20, 1879, and was brought to St. Paul, Minn., when he was young. He was educated at the public schools of St. Paul. He began his railroad work in the freight department of the Great Northern Railway Co., in 1895, and in 1902 entered the foreign freight department of the Chicago, Burlington & Quincy R. R. He advanced through various grades until he became executive vice president of the system before he was forty years old.

Burns, Louis Henry. American jurist, died at New Orleans, La., June 9. He was born at New Orleans, May 11, 1878. After graduation from Tulane University in 1904 he was admitted to the bar of Louisiana, in the same year. From 1911 to 1913 he was assistant U. S. attorney for the Eastern District of Louisiana, and from 1911 to 1925 he was U. S. attorney for the same district. In the latter year he became U. S. district judge for the district. His rulings against the Federal machinery for the enforcement of the prohibition act attracted considerable attention throughout the United States.

Burt, Henry Jackson. American civil engineer, died at Wheaton, Ill., July 28. He was born in February, 1873, at Urbana, Ill., and was graduated from the University of Illinois in 1896. He was employed by various engineering companies until 1900, when he became, for a year, assistant professor of civil engineering at Iowa State College. He returned to structural designing, and planned a number of important buildings in Chicago. During the World War, serving as major in the Quartermaster's Department, he was in charge of emergency construction plans in the United States Army. Besides being a member of the American Society of Civil Engineers, Mr. Burt was president of the Western Society of Engineers in 1917.

Butler, Frank Hedges. English sportsman and author, died in England, November 27. Born Dec. 17, 1855, he became one of the earliest motor enthusiasts, being the first honorary treasurer of the Royal Automobile Club, 1897-1902. He aided in the foundation of the Royal Aero Club in 1901, winning the balloon races in 1906 and 1907. Mr. Butler held the English record for the longest one-man balloon ascent, in 1902, and the world's record for the longest channel sea trip, from London to Caen, Normandy, in 1905. He was awarded the commemorative medal of the French Aero Club in that year. Mr. Butler was also interested in music and was one of the founders of the Lyric Club Orchestra, 1889, and of the Imperial Institute Orchestral Society, 1894, of which he became chairman. Mr. Butler, who traveled extensively, wrote: *Five Thousand Miles in a Balloon* (1907); *Across Lapland with Reindeer and Skis* (1917); *Fifty Years of Travel, by Land, Water, and Air* (1920); *Round the World* (1925); and *Wine and the Wine Lands of the World* (1926).

Butler, Thomas S.
Byrne, Donn.

Cadorna, Marshal Count Luigi.

Calderon, Manuel de la Vega. Cuban diplomat, died at Washington, D. C., July 17 at the age of fifty-two. He was the first secretary of the Cuban legation at Washington after its establishment in 1902, and he remained at Washington 14 years. Then he was for two years minister to Norway, and for nine years minister to Argentina. He retired from the diplomatic service in 1927 and removed to Washington for the purpose of educating his two daughters in the United States.

Calvert, The Rev. John Betts.

Cambie, Henry J. Canadian engineer and a pioneer in railroad location and construction in the Dominion died at Vancouver, B. C., April 23. He was born at Tipperary, Ireland, in 1837, and went to Canada when he was 15 years old. He entered the office of Walter Shanley, then directing the engineering work on the Toronto & Guelph Ry., which was afterward absorbed by the Grand Trunk. Thereafter, for seventy years, Mr. Cambie was engaged in railroad construction and planning in Canada. He was largely instrumental in the selection of Vancouver as a terminal port for the Canadian Pacific.

Cameron, Sir Hector Clare. Scotch surgeon, died at Glasgow, November 22. Born at Demerara, British Guiana, Sept. 30, 1843, he attended the universities at St. Andrews, Edinburgh, and Glasgow. He was at one time president of the Glasgow faculty of physicians and surgeons, representing that body at the general medical council. At the time of his death, he was professor emeritus of clinical surgery at Glasgow, having been dean of the faculties in 1921. The University of St. Andrews conferred on him the LL.D. degree in 1911, and the Glasgow University honored him similarly in 1912. He was knighted in 1900 and created a Commander of the Order of the British Empire in 1918. Sir Hector, who was an authority on children's diseases, wrote *The Nervous Child*.

Capet, Lucien.

Carnock, Lord (Arthur Nicolson). British diplomat, died at London, November 5. Born at Carnock, Sept. 19, 1849, Arthur Nicolson succeeded to the eleventh baronetcy. He attended Rugby and Brasenose College, Oxford. Entering the Foreign Office in 1870, he became assistant private secretary to Earl Granville in 1872, and in 1874 he was appointed third secretary to the Embassy at Berlin. Continuing in the diplomatic service after various posts, Lord Carnock was consul-general at Budapest, 1888-93; secretary of the Embassy at Constantinople, 1894; agent in Bulgaria, 1894-95; and Minister in Morocco, 1895-1904. He was then appointed ambassador extraordinary and plenipotentiary at Madrid, 1904-05, and from 1905-10 he served as British Ambassador to Russia. On his return to England in 1910, he became permanent under-secretary for foreign affairs. Retiring in 1916, he was created First Baron of Carnock.

Carracido, José Rodríguez. Spanish educator, scientist, and statesman, died at Madrid, January 3. He was former rector of the University of Madrid, president of the Academia de Ciencias Exactas of Madrid, and one of the leaders of the central group of the Liberal Party of Spain.

Carranza, Emilio.

Carstairs, Charles S. American art expert, died at London, England, July 9. He was born at Philadelphia, Pa., in 1865. He was chairman of the board of M. Knoedler & Co., of New York, Paris, and London, art dealers, and was one of the chief buyers of art objects for the collections of Henry Clay Frick, Joseph E. Widener, A. M. Byers, and others. Shortly before his death he purchased at the Holford sale in London a remarkable group of paintings including three Rembrandts, for \$1,000,000.

Carter, Orrin Nelson. American jurist, died at Glendale, Calif., August 17. Born in Jefferson County, N. Y., Jan. 22, 1854, he was graduated from Wheaton College, Ill., in 1877, and admitted to the bar in 1880. He served as superintendent of schools in Grundy County, Ill., 1882-84, and as state's attorney 1884-88. Moving to Chicago, he became attorney for the Sanitary District in 1892. He was made judge of Cook County two years later, acting as Republican chairman of the charter convention of Chicago 1905-06. He was appointed justice of the supreme court of Illinois in 1906, remaining on the bench until his retirement in 1924. Judge Carter received the LL.D. degree from Wheaton College in 1899, and from Northwestern University, in 1925.

Carton, Richard Claude.

Cartwright, Sir Fairfax Leighton.

Caruson, Guglielmo.

Castro, Alvaro de. Portuguese statesman, died at Coimbra, Portugal, June 29. Dr. de Castro, after serving in various cabinets, formed a short-lived ministry in November, 1920. Three years later he again

formed a cabinet, which lasted until June, 1924. He was accused of anti-Government activities in 1926 and was exiled at Paris for many months, returning to Portugal shortly before his death.

Cave, Viscount George.

Chamberlain, George Earle.

Chamberlin, Thomas Chrowder.

Chance, Sir Arthur. Irish surgeon, died July 26. He was born June 15, 1859, and was educated at University College, Dublin. He held appointments as surgeon in several hospitals in Ireland and in the ministry of pensions in Ireland, South region, before becoming president of the Royal College of Surgeons in Ireland, 1904-06. He was a member of the council of the College. He was surgeon in ordinary to the lord lieutenant of Ireland, 1892-95 and 1906-15. Sir James, who was knighted in 1905, served in the World War as colonel in the Army Medical Service and as inspector of the special military surgical hospitals, Irish command, 1917-20. He was one of the members of the first General Nursing Council for Ireland, 1919-24. He wrote: *Operative Treatment of Enlarged Prostate; The Surgical Treatment of Empyema; Cholelithotomy*, in the *Dublin Medical Journal*, and other treatises on various phases of surgery.

Chandler, Theophilus Parsons. American architect, died at Radnor, Penn., August 16, at the age of eighty-two. He specialized in ecclesiastical architecture, and his work was highly regarded in Philadelphia. He was instrumental in organizing the School of Architecture at the University of Pennsylvania, and he later became its first director.

Channell, The Rt. Hon. Sir Arthur Moseley. English jurist, died at Falmouth, October 4. He was born at London, Nov. 13, 1838, and was graduated with honors from Trinity College, Cambridge, in 1861. He was called to the bar by the Inner Temple two years later, becoming Queen's Counsel in 1865. He represented his Inn on the Incorporated Council of Law Reporting, and he served on the Council of Legal Education, 1888-97, being elected vice chairman of the General Council of the Bar in 1895. His appointment as Judge of the Queen's Bench Division of the High Courts, in 1897, was approved by his colleagues, and during his 15 years on the bench, he tried a number of important cases. Being sworn a member of the Privy Council on his resignation from the High Court in 1914, he was elected to the Judiciary Committee in 1916, retaining the position until 1921. Judge Channell acted on the King's Bench Division in that year in order to help dispose of cases too long on trial. His greatest service, however, was his work in connection with the trial of Prize appeal cases arising from the World War. After he had left the bench, Judge Channell became a director of the Legal and General Life Assurance Society. He was knighted in 1897.

Chapman, William L. American, director and secretary of the Merritt & Chapman Derrick & Wrecking Company, and director of the Merritt, Chapman & Scott Corporation, died at Daytona Beach, Fla., March 28. He was born at Brooklyn, N. Y., in 1866. His father and his brothers were pioneers in the business of marine salvage, and Mr. Chapman was recognized as an authority on the subject. Among the large undertakings with which he was connected was the righting of the steamship *St. Paul*, which had overturned in the North River, New York.

Charles, Sir James Thomas Walter.

Chavasse, The Right Rev. Francis James. English ecclesiastic, former Anglican bishop of Liverpool, died at Oxford, England, March 11. He was born Sept. 27, 1846, and was educated at Oxford. After serving as curate, vicar, and rector, he became, in 1889, principal of Wyckliffe Hall, Oxford. In the following year he was raised to the episcopate as bishop of Liverpool. He resigned in 1923. He was closely identified with the planning and building of the new Liverpool Cathedral.

Cherryman, Rex. American actor, died aboard the steamship, *De Grasse*, August 10, at the age of thirty. Born at Grand Rapids, Mich., the son of Myrtle Koon Cherryman, a dramatic reader, he attended Colgate University and the University of Michigan. After acting in various stock companies, he went to Los Angeles to take part in the moving pictures. Leaving the screen, he joined the Virginia Throat Players in Pasadena, and was later employed by Tom Wilkes, the western producer. He appeared in *Topsy* and *Eva* in Chicago in 1924, and the following year came to Broadway in *The Valley of Discontent*. He then acted in *Down Stream*, *The Noose*, and *Madame X*, and received a leading part in *The Trial of Mary Dugan*, which, opening in October, 1927, ran for ten months.

Choate, Joseph Kittredge. American engineer, died at San Francisco, Calif., June 19. He was born at Salem, Mass., Aug. 22, 1858, and was educated at the University of Colorado as a civil engineer. From 1873 to

1879 he was in the service of the City of New York. He then entered the railroad field, and was at first supervisor and assistant engineer with the Pennsylvania R. R., then principal assistant engineer in charge of construction with the Erie R. R., and from 1884 to 1896 superintendent of the Union Pacific. In the latter year Mr. Choate became connected with the J. G. White Management Corporation as vice president, retaining the position until his death. He was engaged in the management of scores of public utilities, as director or otherwise.

Chree, Charles.

Clark, William Heermans. American editor and newspaper publisher, died at Miami, Fla., March 12. He was born at Lyons, N. Y., Aug. 12, 1848. He was educated at Hamilton College and Union College, and was admitted to the bar in 1869. He practiced law until 1876, and then became interested in newspaper publication. He was the publisher of the *Standard*, Cortland, N. Y., and the *Sun*, Norwich, N. Y. He was a member of the New York State Assembly in 1875, president of the New York State Press Association in 1890 and president of the New York Associated Dailies in 1902.

Clarke, Samuel Fessenden. American naturalist and educator, died at Williamstown, Mass., August 1. He was born at Geneva, Ill., June 4, 1851. He was graduated from the Sheffield Scientific School, Yale University, 1878, and received a Ph.D. from Johns Hopkins University in 1879 and an A.M. from Williams College in 1891. He served as assistant to the U. S. Fish Commission (1874-75), was a fellow at Johns Hopkins (1879-81), lectured at Smith College, and in 1881 became professor of natural history at Williams College. He remained in that chair for thirty-five years, retiring in 1916 from active work and becoming professor emeritus. Professor Clarke was a fellow of the American Association for the Advancement of Science, a member and former president of the American Society of Naturalists, a member of the American Society of Zoologists and the American Breeders' Association, and a trustee of the Marine Biological Laboratory at Woods Hole, Mass. He wrote several treatises on hydroids and the American alligator. The Samuel Fessenden Clarke Wild Flower Prize, offered annually at many Summer camps for boys and girls, was named for him.

Clement, Edmond.

Cliffe, Adam C. American jurist, died at Sycamore, Ill., June 12. He was born at Sycamore, June 25, 1869. He was graduated in law at Northwestern University, and was admitted to the bar in 1897. He was a member of the Illinois House of Representatives and the Illinois Senate, and was circuit judge of the sixteenth judicial district of Illinois from 1920 to 1923, when he resigned to become U. S. district judge for the Northern District of Illinois.

Clifford, Edward Preston. Vice president of the Bell Telephone Laboratories, died at his birthplace, New York, December 16, at the age of fifty-three. Having attended public schools in that city, he was employed, in 1892, as office boy in the Western Electric Company, continued with that organization and in 1917 he became manager of the eastern district. During the World War, Mr. Clifford was made office manager, in New York, July 1, 1918, and was promoted to commercial manager the following year. When the Bell Telephone Laboratories was incorporated, 1925, Mr. Clifford was made vice president.

Clifton, Charles.

Coats, William Hodge. Scotch manufacturer, died at Paisley, Scotland, August 21. He was born at Glasgow, 1866, and he attended Marlborough College, continuing his studies on the Continent. He became chairman of J. & P. Coats Ltd., a thread firm which has its central offices at Ferguslie, Scotland, where it was founded, with a twelve-horse-power engine, by James Coats in 1824.

Cobb, Calvin. American journalist, died at Boise, Idaho, November 7. Born at Cleveland, Ohio, July 15, 1853, he moved to Chicago when a child, and there worked in his father's publishing house. Later employed as a cattle buyer, he went to Idaho in 1887, and two years afterwards purchased the Idaho *Daily Statesman*, which he published until his death. His forceful editorial page soon brought the paper into prominence. It was responsible for a number of local improvements in Boise, particularly for having the main line of the Union Pacific Railroad Company run through the city. Mr. Cobb was at one time vice president of the Associated Press.

Cohen, Alfred J. See Dale, Alan.

Coleman, Charles Cary. American painter, died in Italy, December 5. Born at Buffalo, N. Y., in 1840; he went to Europe in 1859 to study art, returning to serve in the Union Army during the Civil War. He again went to Italy in 1866, residing in Capri, until his death, but frequently revisiting the United States,

and also painting in London, Paris, and Rome. Elected an associate National Academician in 1881, he was also an honorary member of the Buffalo Fine Arts Academy, of the Albright Gallery, and an associate member of the Newspaper Artists' Association. His work won the bronze medal at the Chicago exposition in 1893, and the silver medal at the Buffalo exposition in 1901. Besides his many pictures of Capri, and his eight *Songs of Vesuvius*, painted in pastels and oils from across the Bay of Naples, he became known for his *Troubadour*, and *Nuremberg Towers*, 1876; *Bronze Towers of St. Mark's*, 1877; and *Venice, Ancient and Modern*, 1881.

Colston, Edward. American lawyer, died at Hot Springs, Va., September 20. He was born in Berkeley County, Va., Apr. 22, 1844, and during the Civil War he fought in the Confederate Army, with the army of northern Virginia. Being wounded and unable to return to the war, he attended Washington and Lee University, and was graduated in law in 1867. He started practice at Cincinnati, Ohio, in 1870, and in 1887 he became counsel for the Cincinnati, New Orleans & Texas Pacific Railway.

Colvin, George.

Compton, Katherine. See Carton, Richard Claude.

Conboy, Mrs. Sara Agnes.

Cook, Sir Theodore Andrea. English author, journalist, and sportsman, died at London, September 16. He was born at Exmouth, Devonshire, Mar. 28, 1867, and after attending King Alfred's grammar school, and Carr's school, he entered Radley. He went to Wadham College, Oxford, rowing on the Oxford crew of 1889. As Captain of the English fencing team, he competed at Paris in 1903, and at the Olympic Games at Athens in 1906. He became assistant editor of the *St. James' Gazette* in 1898, and two years later he was made editor. He left in 1901, however, to work on the staff of the *Daily Telegraph*, and in 1910 he received the editorship of *Field*, which he held until his death. He was knighted in 1916 for war services, particularly in connection with the Belgian Atrocities Commission. He wrote extensively on sport, history, and painting.

Coolbrith, Ina Donna.

Coolidge, Archibald Cary.

Coplin, William Michael Late.

Cordova, Gonzalo S. Former President of Ecuador, died April 14. Dr. Cordova became President of Ecuador in September, 1924, having been elected in the preceding January to succeed José Luis Tamayo. In July, 1925, his administration was ousted by a military junta, after a bloodless revolution, and soon thereafter he fled from Ecuador with his family and made his home in Peru.

Corson, Oscar Taylor.

Coudenhove, Count Max von. Austrian statesman, died at Seehof, near Kissingen, Bavaria, July 5. He was born at Vienna, Dec. 27, 1865. He was the last Governor of Bohemia (now Czechoslovakia), under the Hapsburg dynasty, in 1915-18, having been previously Governor of Austrian Silesia. He was a brother of the late Count Karl von Coudenhove, Austrian statesman, who was also Governor of Bohemia, 1896-1911.

Coulter, John Merle.

Count, The Rev. Dr. Ernest. An American missionary of the Methodist Episcopal Church, died at Brooklyn, N. Y., September 28. He was born at Ellenville, N. Y., Dec. 5, 1861, and was educated at Williams College, Drew Theological Seminary, and New York University, being ordained in 1885. He went to Italy four years later, as pastor of a Methodist Episcopal Church in Florence, and professor of the theological school of that city; he also became superintendent of a Methodist publishing firm in Rome. Returning to the United States in 1893, he was assigned to churches in New York, or vicinity. After 1905 he was superintendent of missionaries in Bulgaria, receiving recognition from the British Red Cross for his work during the Balkan War.

Courtney, William Leonard.

Covington, Harry Franklin.

Cozens, Frederick Schiller. American artist, died at Livingston, New York, August 29. He was born at New York in 1856, and after being graduated from Rensselaer Polytechnic Institute, he served the *New York Herald*, as an artist of yachting events, having practical knowledge of the sport. His painting, which he continued all his life, included many pictures of international yacht races.

Crane, Frank.

Crane, Michael Joseph. American Roman Catholic bishop, died at Philadelphia, December 26. Born at Ashland, Pa., Sept. 8, 1863, he entered St. Charles Seminary, Overbrook, Pa., in 1880, and attended the Catholic University of America, 1889-90. He was ordained priest in 1889 and was successively assigned to parishes in Downingtown and Reading, Pa. Ap-

pointed pastor of St. Francis de Sales' Church, Philadelphia, in 1903, he was made vicar general and consultant to the Archdiocese of Philadelphia in 1919, on Sept. 19, 1921, was consecrated bishop of Curium, and auxiliary bishop of Philadelphia.

Crane, William Henry.

Cratty, Mabel. American secretary of the national board of the Young Women's Christian Association, died at New York, February 27, at the age of 60. She was born at Bellaire, Ohio, and was educated at Ohio Wesleyan University. After teaching at Wheeling, W. Va., and Kent and Delaware, Ohio, in 1900 she became principal of the Delaware high school. From 1904 to 1906 she was associate general secretary of the American committee of the Young Women's Christian Association, from 1906 to 1909 executive secretary of the home department of the national board, and from 1906 general secretary of the national board. Ohio Wesleyan University conferred on her the degree of LL.D. in 1922.

Critchett, Richard Claude. See Carton, Richard Claude.

Crookshank, E. M. English bacteriologist, died at East Grinstead, England, in July, at the age of 68. He studied under Lord Lister, and in 1882 was selected for special work in surgery on the staff of Sir James Hanbury, principal medical officer of the British expedition to Egypt. He was present at the battle of Tel-el-Kebir, and won the medal and the Khedive's star for his services. In 1886 he was appointed professor of bacteriology at King's College, and he founded there the first laboratory in England for research and instruction in bacteriology and comparative pathology. In his later years he devoted much time to research in veterinary and agricultural science.

Cross, Charles Wilson. Canadian statesman, died at Calgary, Alta., June 2. He was born at Madoc, Ont., Nov. 30, 1872, and was educated at Upper Canada College, Toronto University, and Osgood Hall, Toronto. He was prominent as a Liberal in the public affairs of Alberta for many years, and was the first attorney-general of the province. He was also a former member of the Dominion House of Commons.

Cunningham, Philip. See Boosey, P. H.

Curel, Viscount François de.

Currier, Frank J. American actor, died at Beverly Hills, Calif., April 22. He was born at Norwich, Conn., Sept. 4, 1857, and went on the stage when very young. He was a member of the companies of many celebrated players, Edwin Booth, Margaret Anglin, Helena Modjeska, Maude Adams, and others, and after 35 years on the legitimate stage went into the films.

Daeschner, Emil.

Dale, Alan.

Dal Piaz, John-Henri. French transportation expert and chairman of the French Line of steamships, died at Paris, June 18. He was born at Paris, Feb. 26, 1865. He was educated for the legal profession but left it in 1888 for the shipping business. In 1898 he became general secretary of the French Line. In 1909 a director, and in 1920 he succeeded the late Pellerin de Latouche as chairman of the board of directors. He was largely instrumental in opening up the Sahara Desert region to auto traffic. The French Republic conferred on M. Dal Piaz the rank of grand officer of the Legion of Honor.

Daly, Charles Frederick. American automobile manufacturer and former railway official, died at New York, January 6. He was born at Canton, Ill., July 6, 1865, and began to work for the Chicago, Burlington & Quincy R. R., at 13. He advanced in position, with several lines, in the passenger departments, until in 1905 he was appointed passenger traffic manager of the Lake Shore & Michigan Southern Ry., and of the Lake Erie & Western and Michigan Central. In the following year he became passenger traffic manager of the New York Central system, and a vice president. He remained with the New York Central until 1920, leaving the system to become vice president and a director of Durant Motors, Inc. From 1924 to 1926 he was also president of the Liberty National Bank, of New York.

Dalziel, Lord Davidson.

Darwin, Sir Horace. English scientist, died at Cambridge, September 22. He was born at Down, Kent, May 13, 1851, the son of Charles Robert Darwin. After being graduated from Trinity College, Cambridge, he served as an apprentice in an engineering firm, and invented a klinostat which measured the effect of gravitation on plants. Moving to Cambridge, Sir Horace worked with A. G. Dew-Smith, who was engaged in manufacturing instruments for medical research. Together, they formed, in 1895, an organization which developed into the Cambridge Scientific Instrument Company. He was elected mayor of Cambridge in 1896, serving one term. Mr. Asquith appointed him, in 1909, to the advisory committee of aeronautics, to recommend to the Government the research necessary for the

development of aviation. During the World War, he was especially able in adapting his ideas to the conditions of warfare, and in cooperating with other engineers in the design of instruments. Sir Horace was made chairman of the air inventions committee in 1917. He was knighted the following year.

Davies, Arthur B.

Davies, David Charles.

Davila, Fausto. Minister of Foreign Relations of Honduras, died at his birthplace, Tegucigalpa, Honduras, September 27. Born in 1855, he was graduated in law at the National University of Honduras, and having practiced for several years, he became judge of the Civil Court, and was later appointed justice of the Supreme Court. He was made secretary to President Corgan, 1888, and to President Sierra, 1900-04, and he served as a delegate to the Pan-American Conference at Rio de Janeiro, 1906, at Washington, 1916, and at Havana, 1928. When President Lopez Gutierrez's dictatorship was overthrown in 1924, Davila acted as provisional president for a few months, until he was selected confidential agent to the United States. He became Minister of Foreign Relations the following year, and he held that position until his death, being active in negotiations with the United States to settle boundary disputes between Honduras and Guatemala.

Davis, Henry William Carless.

Davis, Sir Mortimer Barnett.

Dawson, Sir Horace.

Dawson, William James.

Day, William A.

Dean, Bashford.

De Friese, Lafayette Hoyt. American lawyer and authority on international law, died at San Francisco, Calif., June 17. He was born in Alabama in 1852, and was graduated from Harvard in 1876, after having studied previously at the University of California. In 1879 he was admitted to the bar in New York, and four years later went to London, where he made his home during the remainder of his life. He represented banking houses in many important cases involving international relations, and practiced law in the United States as well as in England.

Delany, Henry Beard.

De Lima, Elias.

del Preto, Major Carlo. Italian aviator, was killed at Rio de Janeiro, August 16, when his airplane fell during a trial flight. He navigated the *Santa Maria II*, with Commander De Pinedo, on the flight round the world in 1927. Major del Preto established an endurance record for Italy, with Major Ferrarin, and the two aviators also made a non stop trip from Rome to Brazil breaking all speed and long distance records.

del Rio, J. Mora y. See Mora y del Rio, J.

Denny, Sir Cecil Edward. Former superintendent of the Northwest Mounted Police of Canada, died at Edmonton, Alberta, August 21. He was born in England on Dec. 14, 1850, and was educated at Cheltenham College as well as in France and Germany. Moving to Canada, he joined the Northwest Mounted Police at its original foundation in 1874, later becoming captain and inspector. He also was connected with the Indian Department, being in charge of the Western Plain Indians during the Riel Rebellion of 1885. Settling as a farmer near Athabaska, he was made archivist to the Alberta government. He succeeded to the baronetcy in 1921 on the death of his half-brother. Captain Denny published two books: *The Riders of the Plains* and *The Birth of Western Canada*.

Denton, James Edgar. American engineer and educator, died at Maplewood, N. J., July 22. He was born at Piermont, N. Y., in 1855. He was graduated from Stevens Institute of Technology in 1875, and in the following year became an instructor there. He retained a place on the staff of the institute until his death, attaining, in 1898, the chair of professor of mechanical engineering. While teaching at Stevens he practiced as a mechanical engineer. Among his works was supervision of the construction of about three miles of the new Croton Aqueduct tunnel for New York City. He engaged in the manufacture of machinery also. In 1893 he was a member of the jury of awards at the World's Columbian Exposition at Chicago.

Denton, Oliver.

Depew, Chauncey Mitchell.

de Robeck, Sir John Michael.

Dessewffy, Aurel, Count. Hungarian statesman, died March 28. He was born in 1845. He was formerly the president of the upper house of the Hungarian Parliament.

Desticker, Pierre-Henri.

Deutsch, Felix.

Devoy, John.

Diaz, Marshal Armando.

Dickey, James Edward.

Dickinson, Jacob McGavock.

Dicksee, Sir Francis Bernard.

Dickson, Lydia. American actress, died at Hollywood, Calif., April 2. She was born in 1878. She originated the rôle of the featured comedienne in Hoyt's *A Texas Steer*, and played on the road for several years with Raymond Hitchcock in *The Old Soak*. For two seasons she acted in the films.

Diller, Joseph Silas. American geologist, died November 13. Born at Plainfield, Pa., Aug. 27, 1850, he was graduated from the Lawrence Scientific School, Harvard, in 1879, continuing his studies at Harvard and Heidelberg. After accompanying the Assos expedition, 1881-83, he joined the U. S. Geological Survey in the latter year, remaining with that organization until his death. Besides having been at one time vice president of the Geological Society of America, and of Section E of the American Association for the Advancement of Science, Mr. Diller was once president of the Geological Society of Washington, and secretary of the Washington Academy of Sciences.

Ditrichstein, Leo.

Dix, John Alden.

Djéjal Bey. Turkish diplomat and former consul general at New York City, died at New York, January 13. He was fifty-six years old, and had served as first secretary of the Turkish legation at Washington, 1896-04. In 1906 he held a similar position at London. He had been also consul general in Persia, India, and Hungary.

Donn-Byrne, Brian Oswald. See Byrne, Donn.

Donnelly, Dorothy Agnes.

Donohue, Charles D. American jurist, justice of the Supreme Court of New York State, died at New York March 5. He was born at New York, in 1880, and was graduated from the College of the City of New York and the New York Law School. He was admitted to the bar in 1905. In 1912 he was elected to the Assembly, the lower house of the New York State Legislature, and in 1923 he was elected justice of the State Supreme Court.

Dooley, Johnny (John D. Dool). American actor, player of rôles in musical comedies and in vaudeville, died at Yonkers, N. Y., June 7. He was born at Glasgow, Scotland, in 1887. After working at various occupations he followed his brother, William Dooley, also a well-known comedian, to the stage, and was successful in several popular shows in New York and elsewhere. He was a brother of Ray Dooley, comedienne and moving picture actress.

Doulcet, Jean.

Drouhin, Maurice. French aviator, was killed at Paris, August 8, after the monoplane which he was to have piloted across the Atlantic crashed during its fourth trial flight over the Orly Flying Field. M. Drouhin was born in 1891.

Duncan, George Martin. American educator, professor emeritus of logic and metaphysics at Yale University, died at Hackensack, N. J., July 27. He was born at Haledon, N. J., Nov. 26, 1857. He was graduated from New York University in 1881, and studied as a graduate fellow in divinity and philosophy at Yale University. He attended the Universities of Jena, Leipzig, Berlin, and Paris until 1888. In that year he returned to Yale as instructor in mental and moral philosophy, becoming assistant professor of that subject (1891-94) and professor (1894-1904). Then, from 1904 to 1923 he was professor of logic and metaphysics; in the latter year he became professor emeritus, after 35 years of service at the university. He was chairman of the section on logic of the World Congress of Arts and Sciences held in connection with the exposition at St. Louis, 1904, and he was chairman of the meeting which organized the American Philosophical Association. He was a member of other learned societies. In 1901 New York University conferred the degree of LL.D. on him. Dr. Duncan was the translator from Latin and French of *The Philosophical Works of Leibnitz* (with notes, 1890 and 1908), on which he was engaged for almost 20 years; he was also a contributor to the *Memoirs of President Porter* (1893) and to philosophical and psychological journals.

Duncan, James.

du Pont, Philip Francis. Retired American manufacturer, died at Wilmington, Del., May 17, at the age of forty-nine. He was born at Louisville, Ky. Mr. du Pont was a former member of E. I. du Pont de Nemours & Co., but had not been engaged actively in business for a decade before his death.

du Pont, William. Retired American manufacturer, died near Brunswick, Ga., January 20. He was born near Wilmington, Del., Aug. 21, 1854. He was graduated from the Massachusetts Institute of Technology. In 1876 he entered the business of E. I. du Pont de Nemours & Co., and became head of various interests conducted under that name and others. He retired from business in 1892, and thereafter devoted much attention to the breeding of Jersey cattle and Per-

cheron and hackney horses. He was the inventor of a dynamite-mixing machine.

Durbin, Winfield Taylor. American governor and business man, died at Anderson, Ind., December 18. Born at Lawrenceburg, Ind., May 4, 1847, he attended public schools and during the Civil War, 1864-68, joined the Sixteenth Indiana Volunteer Infantry later transferring to the 139th Infantry. He also served in Cuba, at the time of the Spanish-American War, 1898. Mr. Durbin moved to Indianapolis in 1869, and in 1879 moved to Anderson, becoming associated with fuel supply, electric traction, and manufacturing companies in addition to being a banker. He was chairman of the executive board of the Republican State Committee of Indiana, and belonged to the Republican National Committee, and the executive board, 1896-1900. Mr. Durbin was elected Governor of Indiana on his return from Cuba, being in office 1901-05. He ran again, unsuccessfully in 1912.

Dwight, John Wilbur.

Eadie, Dennis.

Eastman, Crystal. See Fuller, Crystal Eastman.

Edwards, Walter Atlee. American naval officer, died at Washington, D. C., January 15. He was forty-one years old. He was former executive officer of the Presidential yacht, *Mayflower*. In 1922 Lieutenant Commander Edwards was in command of the U. S. S. *Bainbridge*, at Constantinople, and saved the lives of 482 men aboard the French military transport, *Vinh-Long*, when that vessel was destroyed by fire. For this action he received the Congressional Medal of Honor and was made a member of the French Legion of Honor.

Egbert, William Grant.

Eglin, William Charles Lawson.

Eidlitz, Otto Marc. American builder, died October 30. Born in New York City Sept. 18, 1860, he attended the College of the City of New York, 1875-77, and was graduated in engineering at Cornell University in 1881. After working in his father's contracting company, he returned to Cornell for a short time and received the C.E. degree in 1890. When his father died two years later, he became senior partner of the firm, which was later incorporated as "Marc Eidlitz & Son." In 1900 he was appointed tenement house commissioner by Governor Roosevelt and Governor Hughes placed him on a commission in 1909, to investigate the unemployment problem, the questions of employers' liability, and safety appliances. During the controversy between eastern railroads and the Brotherhood of Locomotive Engineers in 1912, Mr. Eidlitz served on the arbitration board. After the United States entered the World War, he was appointed chairman of the committee on housing for industrial war workers, Oct. 18, 1917, becoming director of the housing and transportation bureau of the Department of Labor, Mar. 18, 1918, and president of the U. S. Housing Corporation, July 2, 1918. These agencies functioned in the extension construction of dwellings and other buildings. Mr. Eidlitz resumed private business Mar. 1, 1919. In New York City he was an active member of the Building Trades Employers' Association, having been chairman of its board of governors, 1903-05, and also was president of the Mason Builders' Association of New York, 1900-04. Among the many important buildings which his firm constructed are the Metropolitan Opera House and the American Telephone and Telegraph Building in New York City, and the Harkness Memorial Quadrangle of Yale University in New Haven, Conn.

Elliott, Howard.

Elliott, Sarah Barnwell.

Elliott, Walter.

Emmanuel, Prince, of Montenegro, died at Cambes-Bains, France, April 5. He was born at Cetinje, Montenegro, May 28, 1912 (old style); June 10, 1912 (new style). He was the son of Prince Danilo of Montenegro, who abdicated the throne of that country in 1921 in favor of his eldest son, Michael, former King of Montenegro, and brother of the late Prince Emmanuel.

Emmons, Robert W., 2d., American banker and yachtsman, died at Monument Beach, Mass., April 18. He was born at Boston, Mass., in 1872, and after his graduation from Harvard in 1895 entered the banking business in Boston. He was one of the best-known yachtsmen in the United States, and acted as managing director of the cup defender, *Resolute*, in the races with Sir Thomas Lipton's *Shamrock IV* for the America's Cup, in 1920. His own best-known yacht during his racing career was the *Avenger*, a 75-foot overall cutter with which he won the King's Cup in 1907. Mr. Emmons served in the American navy in the World War.

Eno, Henry Lane. American psychologist and philanthropist, died at Somerset, England, September 10. He was graduated from Yale in 1894, and for many years he engaged in research work in connec-

tion with the psychological department of Princeton University, to which he presented Eno Hall, to house a psychological laboratory.

Erroll, Victor Alexander Sereld Hay, Earl of.

Eustis, William Henry. American lawyer, philanthropist, and politician, died at Minneapolis, Minn., November 29. He was born at Oxbow, N. Y., July 17, 1845, and was graduated from the Wesleyan University, Conn., in 1873, and from the Columbia law school the following year. After practicing at Saratoga Springs, he moved to Minneapolis in 1881, where he aided in the foundation of the North American Telegraph Company, of which he later became a director and secretary. He was elected mayor in 1892, also serving as a delegate at the Republican National Convention in that year. He ran unsuccessfully for mayor in 1898. In 1902 he was sent to the Hawaiian Islands as Special U. S. Commissioner. Mr. Eustis, who had been crippled at the age of fifteen while working on a farm, created, in 1923, a \$2,000,000 trust fund for the establishment of the Minneapolis Hospital and Home for Crippled Children.

Eversley, First Baron of Old Ford.

Eyre, Lincoln.

Fairfax, Sir James Oswald. Australian newspaper proprietor, died at Sydney, N. S. W., July 18. He was born at Sydney, Apr. 26, 1863, and was educated at the Sydney grammar school and at Balliol College, Oxford. He was called to the bar of the Inner Temple in 1886. In the following year he joined the staff of the Sydney *Morning Herald*, of which his father had been one of the managers. Subsequently he became a partner in the firm of John Fairfax & Son, owners of the newspaper. He was also one of the proprietors of the Sydney *Mail*. He took a leading part in the Imperial Press Conference in 1909, out of which grew the Empire Press Union. During the World War he was active for the Red Cross in Australia and was chairman of the Society in New South Wales. For his services in this connection, he was made a Companion of the Order of the British Empire, and in 1926 he was promoted to Knight Commander of the order, in recognition of his work as chairman of the Australian section of the Empire Press Union, especially on the occasion of the conference in 1925.

Fayolle, Gen. Marie Emile.

Feafey, Thomas Healy. American educator, died at Canandaigua, N. Y., June 19. He was born at Stevington, England, Feb. 19, 1844, and was brought to America as a boy. He was graduated from Union College in 1863, and served in the Union army in the Civil War. In August, 1865, he became a partner with his father in a shoe manufactory at Albany, N. Y. The father died in 1880, and the son sold the business to engage in scientific study abroad, at Zurich, Heidelberg, Darmstadt, and Paris. In 1887 he became professor of applied physics at Vanderbilt University.

Federer, Heinrich. Swiss author, died April 29. Born at Brienz, Oct. 7, 1866, he moved to Zurich, and there produced his popular comedy, *Lachweiler Geschichten* (1911). His writings include the novels: *Berge und Menschen* (1911); *Jungfer Therese* (1913); *Papst und Kaiser im Dorf* (1924); and *Regina Lob* (1925). He also wrote: *Unser Herrgott und der Schweizer* (1915); *Umriss der Geschichten* (1921); and *Wander- und Wundergeschichten vom Süden* (1924).

Ferrata, Giuseppe.

Ferris, Woodbridge Nathan.

Ffolliott, Gladys. Irish actress, died at London, February 1. She was born in Ireland. Miss Ffolliott was prominent on the British stage from the early 80's until a short time before her death, and appeared in support of such prominent players as Marie Tempest and Mrs. Patrick Campbell. She made her only visit to America in 1926.

Fibiger, Johannes.

Findeisen, Nikolai Feodorovitch.

Fine, Henry Buchard.

Fitchett, William Henry.

Fitzgerald, Edward. See Foy, Eddie.

Flannigan, Richard Charles. American jurist, judge at the Michigan Supreme Court, died at Chicago, Ill., February 17. He was born at Ontonagon, Mich., Dec. 12, 1857, and studied law at the University of Michigan. He was admitted to the bar in 1879, was prosecuting attorney of Menominee County, Michigan, 1881-82 and 1885-86. He was mayor of Norway, Mich., in 1891. From 1909 until his death he sat on the bench of the Supreme Court of the State. He was a Knight of the Papal Order of St. Gregory. Judge Flannigan presided over the Roosevelt libel suit trial, in 1913, when the former President sued George A. Newett, editor, of Ishpeming, Mich., for libel for saying that Mr. Roosevelt was a hard drinker. Newett retracted his statement, and Judge Flannigan fixed the nominal damages at six cents.

Fleischer-Edel, Katharina. A German dramatic

soprano, died in Dresden, in July. She was born in Mühlheim, in 1875. From 1894-7 she was a member of the Dresden Hofoper, and from 1898 until her death of the Stadttheatre in Hamburg. During the season of 1906-7 she sang the Wagner rôles at the Metropolitan Opera House.

Fleming, James Wheeler. American banker and public official, died at Troy, N. Y., April 27. He was born at Troy, Feb. 15, 1867. He was educated at the Troy Academy and the Rensselaer Polytechnic Institute. He was a banker by profession, and vice president of the Manufacturers' National Bank of Troy and director of the national bank of Lake Placid, N. Y., the Bank of Ausable Forks, N. Y., and the Troy Gas Company. He was conservation commissioner of the State of New York, 1911-13. He became mayor of Troy in 1920, serving until 1923, when he became comptroller of the State of New York. He was defeated for reelection in 1924.

Fletcher, Admiral Frank Friday.

Flood, William Henry Grattan.

Florez, Emilio Conde. Venezuelan scientist, died February 24. He was president of the Academy of Venezuela. Shortly before his death he returned from a visit to Europe, where he had been honored by scientific organizations.

Flynn, William James. Former chief of the U. S. Secret Service, died at Larchmont, N. Y., October 14. He was born at New York, Nov. 18, 1867, and after attending public schools he played professional baseball, and worked as a plumber and a keeper in Ludlow Street Jail, New York, before entering the Secret Service of the U. S. Treasury Department in 1897. Having proved successful at tracking down counterfeiters and moonshiners in Pennsylvania, he was soon stationed in New York City, at the head of the eastern division of the service. He became second deputy commissioner of the New York Police Department in 1910, and was given the task of reorganizing the detective bureau, but resigned as he was not satisfied with conditions under which he worked. Flynn returned to the U. S. Secret Service as chief in 1912, resigning five years later. He afterward served for several months at the head of the secret service of the U. S. Railroad Administration, and as director of the bureau of investigation, in the Department of Justice, from July 1, 1919, until August, 1921.

Folger, William Mayhew.

Ford, James B. American yachtsman and capitalist, died at New York, March 29, at the age of 84. Born at New Brunswick, N. J., he was educated at the Peekskill, N. Y., Military Academy. Mr. Ford was first vice president of the United States Rubber Company, vice president and director of the Atlantic Coast Lumber Company, and a director of numerous other large business organizations. He was one of the most prominent yachtsmen of America, and was commodore of the Larchmont, N. Y., Yacht Club from 1915 until his death.

Ford, James Lauren.

Foster, James Calvin. American, commander-in-chief of the United Confederate Veterans in 1927, died at Houston, Tex., August 2. He was born at Rich Hill (now Whitestone), S. C., July 24, 1847, and was 16 when he enlisted in the Confederate Army. He fought in the opposition to Sherman's march through Georgia. After the Civil War he was engaged in business in South Carolina, Arkansas, and Texas. He was commander of the Trans-Mississippi Department of the United Confederate Veterans before his election as commander-in-chief.

Fox, Monsignor John F. American Roman Catholic priest, died at the convent of St. Mary's Cathedral of Trenton, N. J., December 25. Born at New Brunswick, N. J., June 7, 1858; he attended St. Bonaventure's College and Seminary, Allegany, N. Y., St. Charles Seminary, Maryland, and Seton Hall, South Orange, N. J., and was ordained priest July 7, 1881. After serving at St. Joseph's Church, Jersey City, and the Immaculate Conception Church, Camden, N. J., Monsignor Fox was appointed pastor of St. Joseph's Church, Bound Brook, being soon transferred to a church in Sea Bright, where he proved active in extending the parish. He was next made the first pastor of St. Joseph's Church, Trenton, 1893, and in 1895 was assigned to a similar post at St. Mary's Cathedral and made vicar general of the Roman Catholic Diocese of Trenton, positions which he held until his death. Pope Pius X made him monsignor in 1904, and he became a prothonotary of Pope Benedict XV in 1919.

Foy, Eddie (Edward Fitzgerald). American comedian, died at Kansas City, Mo., February 16. He was born at New York, Mar. 9, 1857, and danced in the street for pennies as a small boy. His stage debut was made at Chicago in 1869. After years of hardship, Foy won recognition as a skillful dancer and pantomimist, and for 40 years he was one of the favorites of the American public as a performer on

the musical comedy stage and in vaudeville. He was on the stage of the Iroquois Theatre, Chicago, on Dec. 30, 1903, when the fire broke out which took 574 lives, and his heroism in endeavoring to check the panic was highly commended. He appeared in vaudeville and in *That Casey Girl* with his seven children, being billed as "Eddie Foy and the Seven Little Foyes." He wrote a book of reminiscences, *Clowning Through Life*.

Frampton, Sir George James.

Francica-Nava, di Bontifé, Cardinal Guiseppe. Archbishop of Catania, Italy, died at Rome, December 7. Born at Catania, July 23, 1846, he was created a cardinal by Pope Leo XIII in 1899.

Freas, Thomas Bruce.

Frederick II, William Louis Leopold Augustus.

Frost, Arthur Burdett.

Frothingham, Louis Adams.

Fuller, Crystal Eastman.

Fuller, Loie.

Furneaux, The Rev. Dr. William Mordaunt. English clergyman, former Dean of Winchester, died at New Milton, England, April 10. He was born July 29, 1848. He was educated at Marlborough and at Corpus Christi College, Oxford. He was assistant master at Clifton, 1873, and at Marlborough, 1874-82; and head master at Repton to 1900. Then he became canon of Southwell, and in 1903 dean of Winchester, retiring in 1919. Dr. Furneaux was known throughout England for his untiring efforts for the restoration of Winchester Cathedral. He wrote *Commentary on the Acts of the Apostles* (a scholarly work in which he showed his readiness to take a fresh line of interpretation); *The Book of Psalms*, and *Introduction to the Lessons of the Lectionary*.

Gaidner, William Henry Temple.

Gallivan, James Ambrose.

Gardner, Washington.

Gaston, Jean. French diplomat, minister to Uruguay, died at Montevideo, Uruguay, June 30.

Gemünder, August M. American maker of violins, died at New York, March 22. He was born at New York, May 4, 1862. After attendance at the New York public schools, at the age of 16 he became an apprentice to his father, August Gemünder, a famous violin maker who had learned his trade under Vuillaume and was a member of the second generation of the family to follow that pursuit. In 1895 the elder Gemünder died, and August M. Gemünder became head of the firm.

Getz, John. American authority on art, died at New York, June 2. He was widely known in American and European art circles as an adviser and writer on art matters, and had served on many committees in connection with important loan exhibits, notably by the Academy of Design and the American Fine Arts Society. He was connected with Herter Bros. and M. S. Bing. At the time of his death Mr. Getz was engaged in the production of an encyclopedic work on Chinese art. He had written many magazine articles, catalogues, handbooks, and brochures on the subject. He had charge of the decorative art exhibit from the United States at the Paris Exposition, 1900.

Ghysens, Albert Leopold. Belgian-Canadian engineer, died at Montreal, P. Q., June 23, at the age of seventy-six. Born at Brussels, Belgium, he received his training in engineering at the Brussels Industrial School, and after filling important positions in Belgium went to Canada in 1895. There he was engineer in charge of the construction of the Georgian Bay Canal and also of the Transcontinental Railway. After the World War, M. Ghysens supervised the reconstruction of the fort at Malines, Belgium, destroyed in the fighting. For this work he received from the King of the Belgians the rank of chevalier of the Order of Leopold. Later he became chief engineer of the city of Verdun, P. Q., and retired in 1923.

Gibbs, Winifred Stuart. American home economist, died at New York, February 8. She was born at New York, Oct. 6, 1871. She was educated at the Chicago high schools, the University of Rochester, and the Rochester Mechanics Institute. She founded the economy department of the New York Association for Improving the Condition of the Poor, and trained home economics students at Teachers College, New York. She also advised workers in this field in other cities. In 1909 she was a delegate to the Brussels congress which considered questions of home education. Miss Gibbs was editor of *The American Food Journal* and an authority on matters of food and nutrition. She wrote: *Minimum Cost of Education*; *The Children's Book of Food Verses*.

Giesting, Frank A. American engineer and commander of a U. S. engineer regiment, in the World War, died at New York, April 25, at the age of forty-five. He was born at San Francisco, Calif. At the outbreak of the Spanish-American War he left his studies at the University of California to enlist for services in the

Philippines. When the war ended he returned to the University and was graduated in 1906 as a civil engineer. He spent several years in railroad and tunnel construction work in Mexico and South America, and later was employed by the Aluminum Company of America and the Vanadium Company. In 1917 he was commissioned as major in the Three Hundred and Second Engineers, Seventy-seventh Division, and shortly before the close of the World War was promoted to the command of the regiment.

Gilbert, Henry.

Giles, Bertram. British consular official, died at Weybridge, England, March 26. He was the son of H. A. Giles, professor of Chinese at Cambridge University, and was born at Hankow, China, Sept. 24, 1874. After studying at Liège, Belgium, Feldkirch, Austria, and Aberdeen, Scotland, he became student interpreter in China in 1894. He served in consular capacities at various places, and in 1922 became consul general at Tsinan. He was senior British delegate on the Joint Commission for the rendition of Wei-hai-wei in 1923, and in 1923-24 consul general at Canton. While he was serving as British consul general at Nanking in 1927, Mr. Giles and his wife were subjected to serious maltreatment at the hands of Cantonese soldiers.

Giolitti, Giovanni.

Glenarthur, Matthew Arthur. First Baron Glenarthur. Scotch business man, died at Mauchline, Ayrshire, September 23. He was born Mar. 9, 1852, and educated at Glasgow University, later becoming a member of the Royal Company of Archers, the King's Scotch bodyguard. He was chairman of Arthur & Co., Ltd. and the Lochgelly Iron & Coal Co. Having been chairman of the West of Scotland Liberal Unionist Association from 1893-1912, he became a member of the executive committee of the National Unionist Association, 1912-18, and the Scottish Unionist Association, and from 1914-18 he was president of the Glasgow Unionist Association. He was created a baronet in 1903 and a baron in 1918. He acted as chairman of the Glasgow & South-Western Railway from 1920-22.

Gloss, Anna J. American missionary, died at Pasadena, Calif., February 23. Dr. Gloss was said to have been the first medical missionary to take up work in China. She developed at Peking the first medical-missionary hospital, now known as the Union Medical College. She returned to the United States in 1913 to take up Methodist missionary work as a lecturer.

Goddard, Pliny Earle.

Goethals, George Washington.

Goff, Harold. American journalist, died at Salt Lake City, Utah, October 4. He was born at West Jordan, Utah, June 13, 1884, and commenced work as a reporter when he was 14 years old. He was graduated from the State normal school in 1902. Continuing his journalism on various Salt Lake City papers, he taught school for several years, and became instructor in English and oral expression at the University of Utah, 1909-13, being graduated from that university in 1917, and later taking graduate courses at Columbia and the University of Chicago. He had become associated with *The Desert News*, of Salt Lake City, in 1913, and was made editor-in-chief and manager in 1922. He was a member of the Board of Regents of the University of Utah.

Gold, Ebert Habberton. American manufacturer, died at Holland, Mich., November 3, at the age of 60. Born at Cornwall, Conn., he attended schools at Englewood, N. J., and spent one year at Stevens Institute of Technology. Employed by the Edward E. Gold & Company, a heating company, in 1891, he was made its Western manager, with headquarters at Chicago. Under his supervision the company installed steam heat in the cars of many of the Western railroads. Having invented a vapor system of heating, Mr. Gold founded the Chicago Car Heating Company in 1903. He designed many other heating devices, taking out 80 patents, the first in 1888. He was president of the Vapor Car Heating Company of Chicago, and of the Vapor Car Heating Company of Canada, Ltd., and a director of many companies in addition to serving as chairman of the board of the United States Light and Heat Corporation.

Goldberg, Dora. See Bayes, Nora.

González de la Puente y Patron, Ricardo. See Puente, y Patron Ricardo González de la.

Goodchild, The Rev. Frank Marsden.

Gooding, Frank R.

Gordon, Captain Victor.

Gordon-Lennox, Charles Henry. See Richmond and Gordon, Duke of.

Goss, William Freeman Myrick.

Gosse, Sir Edmund William.

Gould, Horace Pierson. American dentist, died at Lakehurst, N. J., April 4, at the age of 53. He was graduated in 1895 from the New York College of Dentistry, and later served on the faculty of the college. Dr. Gould was also a member of the staff of the Kings

County Hospital, Brooklyn, N. Y. He was president of the Brooklyn Dental Society and a former president of the New York State Dental Society.

Graham, W. T. Canadian clergyman of the Baptist denomination, died at Beamsville, Ont., March 20. He was connected with McMaster University, Toronto, Ont., and was pastor of the First Baptist Church of Toronto for 18 years. He was pastor of the Beamsville Baptist Church for six months before his death. He was president of the Baptist Convention of Ontario and Quebec, 1926-27.

Granger, Maude. American actress, died at New York, August 17, at the age of seventy-seven. Born at Middletown, Conn., she was christened Anna Brainard, but later assumed the stage name of Maude Granger. She moved to New York City when she was eighteen, and first appeared in *A Woman's Heart*, at the Union Square Theatre. After several other engagements she played the leading part in *Led Astray*, during the illness of Rose Eytng. She then starred in a number of popular plays, and toward the middle of her career she acted in Shakespearean repertoires. Returning to current drama, she was successful in various plays, including *The Shulamite*, *Lincoln*, *The Love Leash*, *The Eternal Feminine*, *Nancy Stair*, *The Rule of Three*, *The First Year*, *Green Stockings*, *Pollyanna*, and she was the old nurse in *Rackety-Packety House*. While playing in *Pigs* at Chicago in 1925, Miss Granger became ill, and was forced to retire two years later.

Grant, MacCallum. Canadian statesman, former Lieutenant-Governor of Nova Scotia, died at Halifax, N. S., February 23, at the age of eighty-two. He was born in Hants County, Nova Scotia. He was educated at Newport, N. S., and commenced his business career in 1873. He held the office of lieutenant-governor from 1916 to 1925. Mr. Grant was head of the export and brokerage firm of Grant, Oxley & Co., Halifax, was a director of the Bank of Nova Scotia, and was active in the philanthropies of the province.

Graves, Charles Alfred. American professor of law, died at Charlottesville, Va., November 10. Born in Albermarle County, Va., Oct. 20, 1850, he was graduated from Washington College (now Washington and Lee University) in 1869, and from the law school of that institution in 1873. He remained as professor of law until 1899. He was then appointed to the law faculty of the University of Virginia, where he taught until his retirement in 1927. Mr. Graves received the LL.D. degree from Davidson College, N. C., in 1894, and from Washington and Lee University in 1911. Besides aiding in the foundation of the *Virginia Law Register*, in 1895, and serving as its associate editor, 1895-97, he wrote: *Summary of Personal Property* (1893); and *Notes on Real Property* (1912).

Graves, Col. Charles Hinman.

Graves, Waller W. American jurist, died at Jefferson City, Mo., June 17, 1928. He was born in Lafayette County, Missouri, Dec. 17, 1860, and was educated at the State University of Missouri. He was admitted to the bar of his State in 1885. His first political office was that of city attorney of Butler, Mo., 1892-94. He became judge of the Twenty-ninth judicial circuit of Missouri in 1898, and remained on the bench of that court until 1904. In 1906 he became one of the justices of the State Supreme Court.

Greville, Leopold Guy Francis Maynard. See Warwick, Earl of.

Griffis, Rev. William Elliot.

Gromer, Samuel David.

Gruener, Gustav. American educator, died at Providence, R. I., December 5. Born at New Haven, Conn., Mar. 30, 1863, he was graduated from Yale in 1884. He remained at the university as instructor in German, 1885-87. After studying in Europe for two years, he returned to Yale, serving as tutor in German, 1889-92, and assistant professor, 1892-97. He received the Ph.D. degree in 1896. In 1897 he was appointed professor, being head of the department at the time of his death. Washington College conferred the Litt.D. degree on Dr. Gruener in 1909. Besides editing several German textbooks and novels, he contributed articles on German literature to technical periodicals.

Guerrero, Maria. (Maria Guerrero de Diaz de Mendoza.)

Guerry, Rt. Rev. William Alexander.

Gulick, Mrs. Charlotte Vetter.

Gumpfenberg, Hanns, Freiherr von.

Gutierrez, J. F. Mexican congressman and labor leader, died March 5. Señor Gutierrez went to Rome in 1925 as labor attaché of the Mexican Embassy. In October, 1926, he attended the annual convention of the American Federation of Labor at Detroit, Mich., as one of the two Mexican delegates. He was a strong opponent of interference by the United States in the affairs of Mexico and the rest of Latin America.

Guy, William Evans.

Guyot, Yves.

Haig, Earl (Douglas Haig).

Haldane, Rt. Hon. Richard Burdon.

Hale, William Gardner.

Hall, James Parker.

Hamilton, Lord Frederic Spencer.

Hamilton, Hamilton.

Hanford, Franklin. Rear admiral, U. S. Navy, retired, died at Scottsville, N. Y., February 8. He was born at Chili, N. Y., Nov. 4, 1844. He was graduated from the U. S. Naval Academy in 1866, and retired as a rear admiral in 1903, after 40 years' service. He saw service on many stations and in many ships. From 1881 to 1884 he was on the *Pensacola*, as navigating officer, when that vessel circumnavigated the globe and took observations for the study of compass variations.

Hardy, Thomas.

Harrison, Austin.

Harrison, Jane Ellen. English archaeologist and Hellenist, died at London, April 15. She was born in Yorkshire, Sept. 9, 1850. She studied at Newnham (Cambridge) and at the British Museum, visiting also the museums of Berlin, Munich, Rome, and Athens. After 1882 she lectured at the British Museum, South Kensington Museum, Cambridge, and Oxford. She received the honorary degrees of Litt.D. (Durham) and LL.D. (Aberdeen). Besides various papers in the learned periodicals, she wrote: *Myths of the Odyssey* (1882); *Introductory Studies in Greek Art* (1885); (with Mrs. A. W. Verrall) *Mythology and Monuments of Ancient Athens* (1890); (with D. S. MacColl) *Greek Vase-Painting* (1894); *Prolegomena to the Study of Greek Religion* (1903; 2d ed., 1908); *The Religion of Ancient Greece* (1906); *Primitive Athens as Described by Thucydides* (1906); *Themis, a Study of the Social Origins of Greek Religion* (1912); *Ancient Art and Ritual* (1913); *Alpha and Omega* (1915); *Russia and the Russian Verb* (1915); *Aspects Aorists and the Classical Tripos* (1919); *Epitome to the Study of Greek Religion* (1921); (with Hope Mirrlees) *Life of Arch-priest Avvakum* (translated from the Russian) (1925); *Reminiscences of a Student's Life* (1925); (with Hope Mirrlees) *The Book of the Bear* (translated from the Russian).

Harrison, Leon. American rabbi, died suddenly at New York, September 1. Born at Liverpool, England, Aug. 13, 1866, he was taken to the United States while a child, and was graduated with honors from Columbia University in 1886. Having also attended Emanuel Theological Seminary, he was ordained Rabbi, and assigned to the Temple Israel, Brooklyn, returning to Columbia to study philosophy for three years. He was made Rabbi of the Temple Israel, St. Louis, in 1891, and remained there until his death, assembling congregations of Jews and Christians to his Sunday morning lectures.

Harrison, Orlando. American horticulturist, died at Berlin, Md., March 25. He was sixty-one years old. He was the joint proprietor, with his brother, of a large business inherited from his father, and he was president of the American Association of Nurserymen. He was elected a member of the Maryland Legislature in 1914 and retained his membership until his death.

Hart, Max. American clothing manufacturer, died at Chicago, February 22. He was born at Eppelsheim, Germany, June 15, 1853, and was taken to America at an early age. He lived in Chicago after 1858. He was one of the founders and vice president of the large clothing manufacturing firm of Hart, Schaffner & Marx. Mr. Hart was instrumental in establishing the Hart, Schaffner and Marx Prizes in economics, awarded annually for essays on subjects in economics or commerce.

Hartzell, The Rev. Joseph Crane.

Harvey, George Brinton McClellan.

Hastings, Basil Macdonald. English author and dramatist, died at London, February 21. He was born at London, Sept. 20, 1881. He was educated at Stonyhurst and was a member of the British War Office staff for eight years. Then he was assistant editor of the *Bystander* for three years. During the World War he served in the King's Royal Rifle Corps and later in the Royal Air Force. He was the founder of the *Fledgling*, subsequently *Roosters and Fledglings*, the Royal Air Force journal. Hastings published a long list of plays, the most successful of which was *The New Sin*, produced in 1912. He wrote stories also. He collaborated with authors in the production of plays from novels, notably *Victory*, by Joseph Conrad, *If Winter Comes*, by A. S. M. Hutchinson, and *Bad Rock* and *The Angel in the House*, by Eden Philpotts.

Hatzfeldt, Princess Clara de Wildenberg. Widow of the Prussian Prince, Paul Hatzfeldt, died in England, December 18. Born Clara Louisa Prentice, at Sacramento, Calif., in 1861, she was adopted by her uncle, Collis P. Huntington, of New York, in 1864, and her name changed to Clara Elizabeth Huntington. After attending boarding schools in the United States, she traveled in Europe frequently, and on Oct. 28, 1889,

married Prince Paul Hatzfeldt. They lived in castle Schonstein, on the Rhine, and in England.

Haven, The Rev. Dr. William Ingraham. American clergyman and general secretary of the American Bible Society, died at Summit, N. J., June 6. He was born at Westfield, Mass., Jan. 30, 1856, and was educated at Wesleyan University, Drew Theological Seminary, and Boston University, receiving the degree of S.T.D. from the last-named institution in 1881. He was professor of Latin and Greek at Clafin University, Orangeburgh, S. C., 1877-78, and was ordained in the Methodist Episcopal Ministry in 1881. He occupied pulpits at Boston, Newton Center, and Brookline, Mass., until 1899, and in that year became vice president of the Epworth League, of which organization he was one of the founders. He held various other high offices in his church, and from Jan. 1, 1899, until his death was general secretary of the American Bible Society. In that time the distribution of Bibles in various languages by the society increased from 1,000,000 copies annually to more than 10,000,000.

Hay, Mary Garrett.

Hayes, Edward Cary.

Haywood, William Dudley.

Hearn, Clint Calvin. American army officer, died at Atlanta, Ga., February 11. He was born at Weston, Tex., Mar. 29, 1866, and was graduated from the U. S. Military Academy in 1890. He studied subsequently at the artillery school, 1894, the school of submarine defense, 1908, the Army War College, 1912, and the General Staff College, 1920. After serving through the various grades he reached the rank of colonel in 1917, and in August of the same year was promoted to brigadier general, serving as such in the World War. He was retired in May, 1926.

Hederstierna, Carl Fredrik Vilhelm. Swedish politician, died at Stockholm, November 20. Born in 1861, he held various government positions, being made minister without portfolio in 1906. He was elected to Parliament in 1918, and Herr Trygger, the newly created conservative premier, appointed him minister for foreign affairs in 1923. Hederstierna was forced to resign, however, when his suggestion that Sweden and Finland should form an alliance for mutual defense, was universally criticized as overdefiant of Russia. He was chief governor of Stockholm at the time of his death.

Heermans, Forbes. American author and journalist, died September 18, at Syracuse, N. Y., where he was born Oct. 25, 1856. After attending the Syracuse public schools he was graduated from Cornell in 1878. He started his newspaper work in 1800, and since then has written numerous books. His writings include: *Thirteen Stories of the Far West* (1887); *Love by Induction, and Other Plays* (1889); *The Silent Witness*, drama (1890); *The Rancho of the Twelve Apostles* (1892); *Between Two Foes*, drama (1899); *Down the Santa Fe Trail*, a four-act drama; *Twin Star* (1907); *Beacon Island* (1907); *Buena Ventura* (1911); *Tales of West and East* (1922); and *The Greenwood Expedition*.

Hellig, Sterling. American journalist in France, died at Neuilly, France, March 28. He was born at Philadelphia, Mar. 8, 1864, and studied privately, later taking the law course at the University of Pennsylvania. He was admitted to the bar of Pennsylvania in 1885. He accompanied the U. S. Treasury Commission on its tour of France, Spain, and Portugal in 1891, and remained abroad at the end of the tour. From that time until his death, he acted as foreign correspondent for various American newspapers. He received from the French Government the silver medal of *La Reconnaissance Française* for his services to the cause of the Allies.

Hein, Silvio. An American composer of popular music, died at Saranac Lake, N. Y., December 19. He was born in New York, in 1879, and studied in Trieste and Vienna. He wrote numerous popular songs and about 20 musical comedies, of which the most successful were *The Yankee Girl*, *When Dreams Come True*, *A Matinee Idol*, and *The Girls from Home*.

Henschke, Alfred. See Klabund.

Herreid, Charles N. American politician and former Governor of South Dakota, died at Aberdeen, S. D., July 6. He was born in Dane County, Wisconsin, Oct. 20, 1857, and was educated at Galesville (Wis.) University and the law school of the University of Wisconsin, graduating from the latter institution in 1882. He removed from Wisconsin to South Dakota in 1883. He was state's attorney and judge of a county court, and was elected as a Republican to the office of lieutenant-governor, 1892-94 and 1894-96. He was Governor from 1900 to 1904. During the World War he served as Federal Food Administrator for his State.

Hibben, Paxton.

Hickey, James Burke. American soldier, died at New York, January 19. He was born in Maryland,

May 8, 1848. He was appointed to the U. S. Military Academy in 1867, after having seen service in the Navy in the Civil War. He was graduated in 1871 and was assigned to the cavalry. At the time of the Spanish-American War he was a major and U. S. military attaché in Peru, and was relieved to join his regiment in Cuba. He was promoted to a colonelcy in 1908, and was retired in 1909 with the rank of brigadier general, after forty years' service.

Hilsner, Leopold. Accused man in a "ritual murder" case at Polna, Bohemia, in 1899, died at Vienna, January 11. He was born in 1877. On Apr. 1, 1899, at Polna, a young woman, Agnes Hruza, was found murdered, and Hilsner was accused. At the trial the public prosecutor intimated that a "ritual murder," in conformity with alleged Jewish religious practices, had taken place. Hilsner was first convicted, then released when the verdict was set aside, and finally convicted and sentenced to life imprisonment on a charge of complicity. He served 17 years and was pardoned by Emperor Francis Joseph.

Hinitz, The Rev. Frederick William.

Hinsch, Charles Arthur. American banker, died at his birthplace, Cincinnati, Ohio, December 18. Born Oct. 22, 1865, he was employed in various banks in Cincinnati, became president of Fifth National Bank in 1897. He was made president of the Fifty-Third National Bank in 1908, retaining that position through the bank's extensive absorption of other concerns. As president of the Union Trust Company, in 1919. Mr. Hinsch maintained an affiliation with the National Bank, and when the two merged, as the Fifty-Third Union Trust Company, in February, 1927, he was made president of the combined organization, a position which he held until his death. Besides serving as treasurer of the Cincinnati Chamber of Commerce, 1897, as president of the Ohio Bankers' Association, 1904, and of the Cincinnati Clearing House, 1913, he was vice president of the American Bankers' Association in 1916 and president the following year.

Hirkup, Thomas. English clergyman, secretary of the Wesleyan Methodist Conference, died May 8. He was prominent in church circles in the discussion of the proposed union of the three Methodist churches, the Wesleyan, the Primitive, and the United Methodist.

Hisa, Princess.

Hoag, Ella Whittaker. American Christian Science worker, died at Boston, Mass., October 23, at the age of seventy-eight. She was born at Toledo, Ohio, and before marriage her name was Ella Whittaker. After spending a year in the household of Mary Baker Eddy, Mrs. Hoag became a member of the board of lectureship at the First Church of Christ Scientist, at Boston, in 1918. She subsequently was made associate editor of the *Christian Science Journal*, and of the *Christian Science Sentinel*, positions which she held until her death.

Hodson, Sir James W. B.

Hoffman, Frank Sargent. American educator, died at Schenectady, N. Y., December 21. Born at Sheboygan Falls, Wis., Feb. 9, 1852, he was graduated from Amherst in 1876. After studying at Yale and in Germany, 1882-83 he served as instructor in philosophy at Wesleyan University, 1883-85. In the latter year he was appointed professor of philosophy at Union College, where he remained until his retirement in 1918. Knox College conferred on him the LL.D. degree in 1914. Dr. Hoffman, contributed to many periodicals, and wrote: *The Sphere of the State* (1894, 1898); *The Sphere of Science* (1898); *Psychology and Common Life* (1904, 1907); and *The Sphere of Religion* (1908).

Hogge, James Myles. Scotch sociologist and politician, died at Hammersmith, England, October 27. He was born at Edinburgh, Apr. 19, 1873, and was graduated from the University of Edinburgh. Giving up his intention of becoming a teacher, he entered the ministry of the United Free Church of Scotland. After assisting the Rev. Dr. Cameron at the College Street Church in Edinburgh for several months, he resigned, in order to do settlement work in that city. He later moved to York and became a member of the City Council, investigating social conditions with B. Seebohm Rowntree, Joseph Rowntree, and Arthur Sherwell. He was elected as a Liberal to the House of Commons by East Edinburgh in 1912, and during his twelve years in Parliament he was particularly active in advocating temperance, insurance, and other reforms. Mr. Hogge served as joint chief whip of the Independent Liberal party, 1918-22. Besides assisting in the foundation of the Young Scots' Society, he was president of the National Federation of Discharged Sailors and Soldiers, 1919-20. He returned to politics with an appointment under the Chief Liberal Whip, Sir Robert Hutchison, in 1928. Hogge's writings include: *War Pensions and Allowances*; *Betting and Gambling*; *The Facts of Gambling*; *Licensing in Scandinavia*; *Aims and Achievements of Liberalism*; *Scotland Insured*; *Scots Home Rule*; *Pensions and*

Separate Allowances; and *A Book of Consolation*.

Hogue, Charles D. American Roman Catholic clergyman and educator, died at Baltimore, Md., March 6, at the age of sixty-five. Born at Cleveland, Ohio, he studied at St. Charles Seminary, near Baltimore, Md., then at St. Mary's Seminary, Baltimore, the Sulpician Seminary at Paris, and Trinity College, Dublin, Ireland; he was ordained at the last named institution in 1890. After a year at the Sulpician Solitude, near Paris, he returned to St. Charles Seminary, where most of the remainder of his life was passed. For a few years he was stationed at St. Patrick's Sulpician Seminary, Menlo Park, Calif., and from 1918 to 1925 he was president of St. Charles.

Holguin, Gen. Jorge.

Holland, Frank P. American editor and publisher, died at Dallas, Tex., January 18. He was born at Galveston, Tex., Sept. 22, 1852. His first editorial connection was with *Texas Stiftings*, Austin, Tex. He established *Texas Farm and Ranch* at Dallas in 1882, and was also the publisher of *Holland's Magazine*. He was mayor of Dallas, 1895-97, and declined reelection. Mr. Holland was prominent in many civic movements in the Southwestern section of the United States and issued the first call for the national conference on marketing and rural credits which met at Chicago in 1913. He was the first president of the Texas Editorial Association and was elected honorary president for life.

Holmes, William Rapley. American actor, died at Strathroy, Ont., January 12, at the age of fifty-nine. He was on the stage with traveling companies for many years, until success came to him as a member of the company supporting Nat Goodwin and Maxine Elliott in *An American Citizen*, *Nathan Hale*, and *When We Were Twenty-one*, in America and England. His greatest hit was made in the part of Joe Horne, the big, old, comfort-loving trader in *Rain*. Some of the plays in which he appeared, besides those already named, were *Miss Millions*, *The Right Girl*, *Arizona*, *The Squaw Man*, *The Virginian*, and *Hawthorne of the U. S. A.*

Hopkins, William Alonzo.

Hopwood, Avery.

Hopwood, Eric Clark. American editor, died at Cleveland, Ohio, March 18. He was born at North Eaton, Ohio, Feb. 7, 1877, and was educated at Adelbert College, Western Reserve University, graduating in 1901. He was principal of the Middletown, Ohio, high school, 1901-02, before joining the staff of the *Cleveland Plain Dealer* as police reporter. He rose through various grades to become editor of the newspaper in 1920. He served for several years as secretary of the American Society of Newspaper Editors and was its president at the time of his death.

Horne, John. Scotch geologist, died May 30. He was born at Campsie, Scotland, Jan. 1, 1848. After graduating from the University of Glasgow, he entered the service of the Geological Survey of Scotland, in 1867, and he remained in that service until he retired in 1911, having become assistant director in 1901. He first attracted the notice of scientists in 1879, when, with his colleague Benjamin Neeve Peach (with whom he was closely associated), he presented to the Geological Society a paper on the glaciation of the Shetland Isles. Of the official papers that Horne and Peach prepared together, the best known is *The Silurian Rocks of Britain*; vol. 4, *Scotland*, with notes by Sir Jethro Teall (1899). Dr. Horne was the recipient of many academic honors in Scotland, England, the United States, and other countries; they included the Murchison Medal and the Wollaston Medal.

Houghton, Arthur Amory. American manufacturer, died at New York, April 19. He was born at Brooklyn, N. Y., Dec. 20, 1866, and was educated at St. Paul's School, Concord, N. H. Mr. Houghton was a former president of the Corning Glass Company, Corning, N. Y., a business founded by his grandfather. He served as a Presidential elector on the Republican ticket and as alderman and member of the board of public works of Corning. He was a brother of Alanson B. Houghton, United States ambassador to Great Britain.

Howard, Sir Ebenezer. English town planner and founder of the "garden-city" movement in England, died at Welwyn Garden City, England, May 1. He was born at London, Jan. 29, 1850. He was educated at private schools and studied stenography. After working as private secretary to Dr. Joseph Parker, the well-known preacher, and in a solicitor's office, he went to America for his health in 1872, and worked in Nebraska and in Chicago. In 1877 he returned to England and joined the staff of Gurney & Sons, official reporters to the Houses of Parliament. He afterward became partner of William Treadwell, and remained in active stenographic practice until 1920. For many years before he founded the Garden City Association in 1899 he was interested in projects of social reform, especially in the solution of the two problems of the overcrowded city and the depopulated country. In 1898 he wrote *Tomorrow, a Peaceful Path to Real Reform* (republished in later editions as *Garden Cities of Tomorrow*). He

saw the realization of his plans in Letchworth, Welwyn and other "garden cities." His services in helping to solve the overpopulation problem in Great Britain were rewarded by the King by membership in the Order of the British Empire in 1924 and a knighthood in 1927. He was the president of the International Federation for Housing and Town Planning.

Howard, Keble. See Bell, John.

Howard, Ralph Hills.

Hoy, William E. First chief of the American Grave Registration Service in Europe, died at Oberhofen, Switzerland, January 20. He was educated in Europe and lived in France for many years. Until two years before his death he was associated with the Bedford Petroleum Company. He served in the British Army in South Africa in the Boer War as a member of Paget's Horse and received the Queen's Medal with three clasps. During the World War he organized an ambulance service for the French Army at Lyons, and when the United States entered the War he became a captain rising to the rank of lieutenant-colonel. He organized the Graves Registration Service, and later was placed in charge of octroi matters. He was said to have saved more than \$30,000,000 for the governments of Great Britain and the United States. He received the Distinguished Service Cross from Great Britain and the rank of chevalier of the Legion of Honor from France.

Hughitt, Marvin.

Hull, Arthur Eaglefield.

Hull, John Albert Tiffin. American politician, member of the U. S. House of Representatives, 1891-1911, died at Clarendon, Va., September 26. He was born at Sabina, Ohio, May 1, 1841, and was graduated from the Cincinnati Law School in 1862. He entered the Union Army, as first lieutenant in the Twenty-third Infantry in July of that year, and after having been promoted to captain, he was wounded and was discharged in October, 1863. Becoming a resident of Des Moines, Iowa, he was elected secretary of the Iowa Senate in 1872, and was reelected to each succeeding term until 1898, when he became secretary of state, and he was elected lieutenant-governor in 1885. He was seated in the Fifty-second Federal Congress in 1891, as representative of the Seventh Iowa District, being successively returned to his seat through the Sixty-first Congress. Mr. Hull acted as chairman of the congressional committee on military affairs, 1899-1911, and of the executive committee of the Republican congressional committee in 1898 and 1900.

Humphrey, Alexander Pope. American lawyer, died August 19, at Glenview, Ky., where he was born Jan. 26, 1848. After being graduated from Centre College in 1866, he studied law at the University of Virginia, and was admitted to the bar at Louisville in 1868, where he continued to practice, becoming solicitor for the Southern R. R. Co., and vice president and counsel for the Kentucky & Indiana Terminal R. R. Co. He was elected president of the American Bar Association for three successive years, and he was also president of the State Bar Association of Kentucky, and of the Louisville Bar Association. He was a trustee of the endowment fund of the University of Virginia.

Humphrey, Richard Lewis. American engineer, died at Philadelphia, November 2. He was born at Marblehead, Mass., Oct. 19, 1869, and was graduated from the Central high school of Philadelphia in 1888, and from the engineering department of the University of Pennsylvania in 1891. In 1892 he became associated with the Philadelphia Municipal Testing Laboratory and remained in the city's employ until 1899, when he was made general manager of the Buckhorn Portland Cement Company. He resigned in 1903 in order to become a consulting engineer specializing in testing and inspection. He was engaged for that purpose by the Pennsylvania Railroad Company, and the United States Geological Survey, as well as by various other organizations. At the St. Louis Exposition in 1904, Mr. Humphrey supervised the engineering work of the Portland cement exhibit and of the model testing laboratory of the cement manufacturers' association. During the World War he directed the building materials division of the Council of National Defense. He assisted in the organization of the American Society for Testing Materials, serving as its first secretary, and he was a director of the American Society of Civil Engineers. He also was elected first president of the American Concrete Institute, receiving its Wason Medal for two papers in 1924.

Humphreys, Milton Wylie.

Hunt, Elizabeth. American actress, died at Bay Shore, N. Y., April 18. Miss Hunt began her stage career at the age of twelve at the Boston Theatre, and later appeared at the Boston Museum for many years. Among the plays in which she acted were *The Cog*, *The Red Cockade*, *Little Corinne*, *Master Man*, *The Goat Song*, and *Blossom Time*. Her last appearance was in *New York Exchange*, in 1927.

Hutton, Levi W. American capitalist and philanthropist, died at Spokane, Wash., November 3. He was born at Fairfield, Iowa, Oct. 22, 1860, and attended district schools until he was eighteen. He then traveled in the West, going to Portland, Ore., in 1879, and later found work on a steamboat on Lake Pend Oreille, Idaho. Becoming a locomotive fireman on the Northern Pacific Railway, in 1883, he was advanced to engineer, and transferred to the Coeur d'Alene district of Idaho in 1887. He perceived the mining possibilities of the country and invested in the Hercules lead-silver mines, which yielded about \$19,000,000. Moving to Spokane, Mr. Hutton increased his fortune by further investment and speculations. Having acquired sufficient means, he satisfied his childhood ambition to provide for orphans by founding and endowing the Hutton Settlement near Spokane, in 1917. The institution comprised three hundred acres, including a motel farm, and was so arranged that the children could live in small groups, and attend public schools in order that they might associate with families in the neighborhood.

Ibañez, Vicente Blasco. See Blasco Ibañez, Vicente.

Ingersoll, Robert Hawley. American watch manufacturer, died at Denver, Colo., September 4. He was born at Delta, Mich., Dec. 26, 1859, and, moving to New York City in 1879, he at first manufactured rubber stamps and later engaged in the mail-order business. He decided in 1892 to try the experiment of manufacturing a "dollar watch," and his success made his name a household word in the United States. He was president and general manager of Robert H. Ingersoll & Brother, until the Waterbury Clock Company acquired control of his firm.

Izbicki, Joseph. See Michalewicz, B.

Jacques, Gen. Baron Alphonse de Dixmude.

Janacek, Leos.

Jaramillo, Edmund. Director of the School of Medicine of Santiago University, died at Santiago, Chile, September 26.

Jayne, Joseph Lee. Rear Admiral, N. S. Navy, died at Newport, R. I., November 25. Born at Brandon, Miss., May 30, 1863, he was graduated from the U. S. Naval Academy in 1882. Commissioned ensign on July 1, 1884, he rose through the successive grades and on Oct. 15, 1917, was made rear admiral. During the Spanish-American War, 1898, he commanded the torpedo boat, *Rodgers*, in the blockade along the Cuban coast. His subsequent commands included the cruisers, *Colorado* and *New York*. Admiral Jayne served as superintendent of the naval observatory from Oct. 16, 1911, until 1914, when he was on sea duty. When the United States entered the World War, Admiral Jayne was placed in charge of the naval air station at Pensacola, Fla., from April until October 29 of 1917. He commanded the *Mississippi* until Jan. 31, 1918, and from February 1 until September 13, he commanded Division 3 of Battleship Force 1 of the Atlantic Fleet. After the War, 1918-20, he commanded the Twelfth Naval District and retired in May, 1921.

Jehin, Leon-Noel-Joseph.

Jennings, Sidney Johnston.

Jodak. See Gumpenberg, Hanns Freiherr von.

Johns, Frank T. American politician, candidate for President of the United States in 1924 and in 1928 of the Socialist Labor party, died at Bend, Ore., May 20. He was drowned while trying to rescue a boy who had fallen into the Deschutes River. He was born at Sunbury, Pa., Feb. 23, 1889. In 1905 his family removed to the West, and he was educated at the high school, Spokane, Wash. After working on a ranch and as a carpenter, he became a letter carrier at Spokane. In 1915 he joined the Socialist Labor party. His political activities led to his dismissal from the postal service in 1920, and subsequently he worked at various trades.

Johnson, David Bancroft. American educator, died at Rock Hill, S. C., December 26. Born at La Grange, Tenn., Jan. 10, 1856, he was graduated from the University of Tennessee in 1877, receiving the A.M. degree in 1880. After an extensive educative experience, he saw need for a teachers' training school in South Carolina, and in 1886 led in the organization of Winthrop College, serving as president of the institution until his death. In addition to being president of the State Teachers' Association, 1884-88, Dr. Johnson was active in the National Educational Association, being president of the department of rural and agricultural education, 1909, of the normal school department, 1911, and of the national committee on normal school statistics, 1915-16. He was also president of the Southern Educational Association, in 1910. South Carolina College conferred on him the LL.D. degree in 1905, and the Presbyterian College of Clinton, S. C., honored him similarly in 1924.

Johnson, Rt. Rev. Joseph Horsfall. American Protestant Episcopal bishop died, May 16. Born at Schenectady, N. Y., June 7, 1847, he was graduated from Wil-

Iiams College in 1870, and from the General Theological Seminary in 1873. Entering the Protestant Episcopal ministry as deacon in the latter year, he was made priest in 1874. His first charge was at Holy Trinity Church, Highland, N. Y., 1873-79, and he subsequently served as rector at Trinity Church, Bristol, R. I., 1879-81, St. Peter's, Westchester, N. Y., 1881-86, and at Christ Church, Detroit, 1886-96. He was consecrated Bishop of Los Angeles in 1896. Bishop Johnson was awarded the D.D. degree by Nashotah House, Wis., in 1895, and that of S.D.T. by the General Theological Seminary in 1908.

Johnston, William Dawson.

Jones, Benjamin Franklin, Jr. American steel manufacturer, died at Pittsburgh, Pa., January 1. He was born at Pittsburgh, Apr. 21, 1868. He was the son of Benjamin Franklin Jones, founder of the firm of Jones & Laughlin, Ltd., extensive steel manufacturers, which became the Jones & Laughlin Steel Corporation, the second largest independent steel company in the United States. The younger Jones was graduated from Princeton in the class of 1891, and entered the business then, being made manager in the same year. In 1899 he became secretary and in 1900 president. When the firm was reorganized in 1902 as the Jones & Laughlin Steel Corporation, he became the president, continuing until 1923. After that year until his death he was chairman of the board of directors. He had other extensive business interests, and was noted as a philanthropist and as an art collector. He was a Republican and was chairman of the electoral college of Pennsylvania in 1908.

Jones, Herschell V. American editor and publisher, died at Minneapolis, Minn., May 24. He was born at Jefferson, N. Y., Aug. 30, 1861. He was educated at the Delaware Literary Institute, Franklin, N. Y. After publishing the *Jefferson, N. Y., Courier*, he removed in 1885 to Minneapolis and began work for the *Minneapolis Journal* as a reporter. He filled various positions before buying the newspaper. He was a member of the board of directors of the Associated Press in 1908. Mr. Jones was known as a collector of rare books and works of art.

Justo, Juan. Argentinian statesman, founder of the Socialist party in that South American Republic, died at Los Cardales, Argentina, January 8. He was sixty-three years old. He was a physician by profession, but devoted much of his time to finance and to the conduct of the newspaper, *La Vanguardia*, which he founded. He was famed as an orator and held the office of Senator.

Katte, Edwin Britton.

Keane, Rt. Rev. Patrick J. American Roman Catholic bishop, died at Sacramento, Calif., September 1. He was ordained into the Roman Catholic priesthood June 20, 1895, and was consecrated titular Bishop of Samaria, Dec. 14, 1920. On Mar. 17, 1922, he was appointed to the Diocese of Sacramento, where he remained until his death.

Keating, The Most Rev. Frederick William. English Roman Catholic prelate, archbishop of Liverpool, died Feb. 7. He was born at Birmingham, England, in 1859. He was educated at St. Chad's Grammar School, Birmingham; Sedgley Park; the Benedictine College at Douai, France, and Olton Seminary. He was ordained in 1882, and became administrator of St. Chad's Cathedral, Birmingham, in 1898. He was appointed to the see of Northampton in 1907 and was elevated to the archbishopric of Liverpool in 1921.

Kelly, Howard G.

Kenly, John Reese. American railway official, died at Wilmington, N. C., March 1. He was born at Baltimore, Md., Jan. 21, 1847. After serving in the Confederate Army in the Civil War, he entered railroad work in 1868 as a flagman with a surveying crew on the Pittsburgh & Connellsville R. R. He left that road to enter the employ of the Richmond & Petersburg R. R., the nucleus of the present Atlantic Coast Line R. R. system. He became successively superintendent, superintendent of transportation, assistant general manager, vice president, and in 1913, president.

Kenly, Colonel William Lacy.

Kennedy, John Russell. British journalist, died at Tokio, Japan, January 16. He was born at Bray, Ireland, Nov. 15, 1861, and was educated at Trinity College, Dublin. He became, in succession, soldier, war correspondent, and editor. He entered the service of the Associated Press in 1899 in London and became night manager. In 1907 he went to Japan as chief of the Far Eastern bureau, and in 1914 he became foreign director and adviser of the International News Agency of Japan. He held that post until 1923. He was once managing director of the Japan Times Publishing Company. He served as correspondent in war campaigns in Egypt and China. The Japanese Government decorated Mr. Kennedy with the Order of the Sacred Treasure, third class.

Kent, William. American politician and former mem-

ber of the national House of Representatives, died at San Rafael, Calif., March 13. He was born at Chicago, Mar. 29, 1849, and was graduated from Yale in 1887. He made his home in Chicago for twenty years, looking after his father's business interests there, in real estate and cattle. He was active in politics and philanthropy in Chicago, serving as founder and president of the Municipal Voters' League and as alderman. The family home had been in California since 1871, and in 1907 Mr. Kent removed there. In 1911 he was elected to Congress as an insurgent Republican and he was reelected as an independent in 1912 and 1914. He was one of the founders of the Progressive party. President Wilson appointed him to a place on the United States Tariff Commission in 1917. Mr. Kent was president of the Golconda Cattle Company of Nevada and the Kent-Jordan Company of North Carolina, and had other extensive business interests. He was credited with owning 1,000,000 acres in Mexico and large tracts in California. He presented Muir Woods, a scenic spot in Marin County, California, to the Government.

Keogh, Martin Jerome.

Kerr, John Brown. American soldier, brigadier-general, U. S. A., retired, died at Washington, D. C., February 27. He was born in Fayette County, Kentucky, Mar. 12, 1847, and was graduated from the U. S. Military Academy in 1866. He was assigned to the cavalry, and was on Western frontier duty, including fighting with the Indians, for 18 years. He received the Congressional Medal of Honor for bravery in an engagement with the Sioux, Jan. 31, 1891. In the Spanish-American War he was twice cited for gallantry in action and was wounded at San Juan Hill. He served in the Philippines as chief of staff, 1903-04. After acting as U. S. representative at the Paris Exposition of 1900 and as military attaché at Berlin, he reached the rank of brigadier-general in 1908. He was retired in 1909, after forty years' service.

King, William Benjamin Basil.

Kinsolving, Rt. Rev. George Herbert. American Protestant Episcopal Bishop of Texas, died at Austin, Tex., October 23. Born in Bedford County, Va., Apr. 28, 1849, he attended the University of Virginia, 1867-69, and was graduated from the Protestant Episcopal Theological Seminary, Va., in 1874. Made deacon in the year of his graduation and priest in 1875, he served as assistant at Christ Church, Baltimore, 1874-75, and as rector of St. Mark's, Baltimore, 1875-78, of St. John's, Cincinnati, 1878-81, and of the Church of the Epiphany, Philadelphia, 1881-92. Elected Assistant Bishop of Texas, 1892, he succeeded to the bishopric, July 11, 1893. The University of the South conferred on Bishop Kinsolving the D.D. degree, and Griswold College awarded him the S.T.D. degree in 1892.

Kirkwood, Joseph Edward.

Kittle, Charles Morgan. American merchant and former railroad executive, died at Chicago, Ill., January 2. He was born at Elkins, W. Va., Oct. 9, 1880. He left school at 14 and became a water boy for a railroad section gang; he was a station clerk for the West Virginia Central & Pittsburgh R. R., then in station and yard service for various other roads. In 1900 he became connected with the Illinois Central R. R. Co., in the maintenance-of-way and other departments; from 1910 to 1912 he was general freight claim agent of the same road and the Yazoo & Mississippi Valley; in 1912-16, assistant to the president of the same roads; in 1916-18, vice president; in 1918-20, during Federal control, Federal manager of the same roads and the Gulf & Ship Island R. R., the Mississippi Central R. R., and the New Orleans Great Northern. From 1920 to 1924 Mr. Kittle was senior vice president of the Illinois Central & Mississippi Valley R. Rs. In the latter year he left railroad service to become president of Sears, Roebuck & Company.

Klabund.

Kneass, Strickland Landis. American mechanical engineer, and inventor, died near Berwyn, Pa., November 25. He was born at Philadelphia, Jan. 7, 1861, and was graduated from Rugby Academy in 1876, and from Rensselaer Polytechnic Institute in 1880. Employed by William Sellers & Company, of Philadelphia, in 1888, he remained with that concern until his death, becoming manager of the injector department in 1895 and vice president in 1926. He devised numerous instruments in connection with steam power, that considered the most valuable being his injector for locomotive boilers. Mr. Kneass was awarded a diploma by the Chicago Exposition in 1893, and by the St. Louis Exposition in 1904. The Franklin Institute, of which he was a member, conferred on him the John Scott Medal in 1900 and in 1926. He frequently contributed to technical journals and wrote *Practice and Theory of the Injector*.

Knudsen, Gunnar.

Koessler, Karl Konrad.

Komarov, M. von Auffenberg-. See Auffenberg-Komarov, M. von.

Kraenzlein, Alvin C. American athlete, died at Wilkes-Barre, Pa., January 6. He was born at Milwaukee, Wis., Dec. 22, 1877. He studied dentistry at the University of Pennsylvania but never practiced, preferring to devote his time to coaching athletes and physical training. In this occupation he utilized the experience gained when he was the greatest all-around athlete in America, in his college days and later. For ten years he had few equals in athletic sports and held six amateur world's records in hurdle races and broad jumping. In the 1900 Olympic games at Paris he was one of the outstanding competitors, winning four firsts, in the 60-meter dash, the 110- and 200-meter hurdles, and the broad jump. His record of 23 3-5 seconds for the 220-yard low hurdles stood for 26 years.

Kreoh, Alvin William.

Kroeh, Charles Frederick. American educator, died at Orange, N. J., February 3. He was born at Darmstadt, Germany, Mar. 28, 1846, and was taken to America when very young. He was educated at the Central High School, Philadelphia, and after a brief experience in journalism became instructor in French and German at Lehigh University, 1868-71. In the latter year he became professor of modern languages at Stevens Institute, as a member of the original faculty of the institution. He taught at Stevens 55 years, retiring in 1927, and received the honorary degree of D.Sc. from Stevens in 1921. Dr. Kroeh was the author of many books on the teaching and study of languages. He made beekeeping his hobby and wrote scientific articles on apiculture.

Lachmund, Carl.

Lai, Cardinal Gaetano di. A cardinal of the Roman Catholic Church, died in Italy, October 24. Born at Malo, Italy, July 30, 1858, he was graduated from the Seminary of Vincenza and ordained into the Catholic priesthood in 1876. He was appointed under-secretary of the Congress of the Council in 1886, subsequently becoming its secretary. A student of canon law, he also was a member of a certificate commission. Pope Pius X appointed him cardinal in 1907, and he was made secretary of the Consistorial Congregation in 1908, serving until his death. He became Bishop of Sabina and Poggio Mirteto several years later. Cardinal Lai was chosen to open the holy door in St. Paul's Cathedral on Christmas Eve, 1924, and he was given the honor of closing it the following year.

Lamb, Frederick Stymetz.

La Mothe, John Dominique. American Protestant Episcopal missionary bishop, died at Baltimore, Md., October 25. Born at Ramsey, Isle of Man, June 8, 1868, he attended King William's College, Isle of Man, 1884-85, before going to the United States where he worked for a time on a Western ranch. He was graduated from the Theological Seminary in Virginia, in 1894. Ordained into the Protestant Episcopal ministry, he became rector of St. Paul's Church, Hamilton, Va., and in 1901 he was assistant at the Church of the Epiphany, Washington, D. C. He became rector of Christ's Church, St. Joseph, Mo., in 1903, and two years later he returned to the Church of the Epiphany as associate rector. He was rector of St. Paul's Church, New Orleans, La., 1907-1916, and in the latter year went to the Church of the Ascension, Baltimore, Md. He was consecrated Bishop, June 29, 1921, and placed at the head of the church mission in Honolulu. He had returned to the United States to attend a conference at Washington, at the time of his death.

Landstrum, Oscar Monroe. American politician, died at Helena, Mont., June 20. He was born at Galesburg, Ill., was graduated from Knox College and received a medical degree from the College of Physicians and Surgeons, Chicago, in 1894. After practicing medicine in Chicago for a short time he went to Helena, Mont., where he became editor of the *Montana Daily Record*. He was elected twice to the State House of Representatives, and served from 1903 to 1905. He was leader of the Montana delegation to the Republican national convention in 1912, was nominated by the Republicans of the State for United States Senator in 1918, and soon thereafter became Montana member of the Republican National Committee.

Lansing, Robert.

Lanza, Gaetano. American mathematician, engineer, and educator, died at Philadelphia, Pa., March 21. He was born at Boston, Mass., Sept. 26, 1848, and was educated at the University of Virginia as an engineer. He was an assistant instructor in mathematics there, 1870-72. He then went to the Massachusetts Institute of Technology as instructor and assistant professor of theoretical and applied mechanics, and remained as a member of the institute staff until 1911, when he be-

came professor emeritus. After 1875 he was professor of theoretical and applied mathematics, and after 1883 head of the department of mechanical engineering. At various times he was active as a consulting engineer. In 1906-11 he served as president of the Mathematical and Physical Club, and he held memberships in a large number of American and foreign mathematical and engineering societies. He was created in 1907 a Knight of the Order of Saints Maurice and Lazarus of Italy. Besides numerous papers and pamphlets, Professor Lanza wrote *Applied Mechanics* (1885; 9th ed., 1905) and *Dynamics of Machinery* (1911).

Larde, Jorge. Salvadorean scientist and director of the Seismological Institute at Tonacatepeque, Salvador, died July 24. He was a distinguished professor and writer and published many scientific works.

Larned, (William) Trowbridge. American editor and author, died at Elizabeth, N. J., February 10, at the age of sixty-two. He was born at St. Louis, Mo., and studied at Georgetown University and under private tutors. He contributed verses, essays, short stories, etc., to newspapers and magazines, and was employed by various publications as editor. From 1907 to 1910 he wrote "The Literary Zoo" for *Life*. He adapted Molnar's *The Devil* for George Arliss. He wrote several volumes of fairy tales and folklore. For a time Mr. Larned, as a young man, was a fence rider, cowboy, and rancher in several Western States.

La Tombelle, Fernand.

Lawrence, Seabury. American journalist, died at New York, August 21. He was born at Tarrytown, N. Y., Oct. 26, 1879, and for fifteen years he worked as a reporter on *The Evening Sun*, writing ship news for ten years, and also contributing the "Sun Dial" column and professional baseball articles. With the changed ownership of the *Sun*, Mr. Lawrence became sports writer on the New York *Evening Post* and he later became yachting and hockey editor of the New York *Times*, remaining with that paper until his death.

Lazard, Michel. French banker, died at Paris, July 9, at the age of sixty. He was a member of the well-known Paris banking firm of Lazard Frères, which has American affiliations. In recent years, when the franc fluctuated widely, M. Lazard aided the French Government in its financial operations. He was known also as a sportsman, deeply interested in the turf.

Lazenby, Maurice. American physician and surgeon, died at Baltimore, Md., September 17. He was born in 1877 and he was graduated from Johns Hopkins University, 1899, and from Johns Hopkins Medical School, 1903. Specializing in obstetrics and gynecology, he was a member of the staff of the Hospital for Women of Maryland, the Maryland General Hospital, and the Church Home and Infirmary.

Leavenworth, Francis Preserved. American astronomer and educator, died at St. Paul, Minn., November 13. He was born at Mount Vernon, Ind., Sept. 3, 1858, and was graduated from the Indiana University in 1880. He was on the staff of the Cincinnati Observatory, 1880-82, and then becoming assistant at the McCormick Observatory of the University of Virginia, he remained there until 1887. He then was appointed director of the Haverford College Observatory. Joining the faculty of the University of Minnesota in 1892, he served as assistant professor of astronomy until 1897, and as professor, 1897-1927. On his retirement in 1927, he was made professor emeritus. Mr. Leavenworth was a fellow of the Royal Astronomical Society of England, and he belonged to the Astronomical and Astro-physical Society of America. He wrote: *Double Star Observations* (1888); *Proceedings of the Haverford College Observatory* (1891); *Parallax Lal.*, 1196 (1892); and he compiled, *Photographs of Eros for Solar Parallax* (1902).

Leavitt, Charles Wellford.

Leavitt, Frank McDowell.

Leguía, Dr. German y Martinez. Peruvian statesman, died at Lima, Peru, November 21. Besides being at one time judge of the supreme court, he held numerous political offices. As minister of foreign affairs in 1911, he negotiated boundary and peace agreements with Ecuador and Bolivia. He was prime minister in 1919 and 1921, during the presidency of Augusto B. Leguía. Charged with attempting to overthrow his cousin's government in 1923, he and his sons were arrested and deported, but were later allowed to return to Peru.

Lennox, Charles Henry Gordon. See Richmond and Gordon, Duke of.

Lewis, James Henry. American actor, died at Pawtucket, R. I., November 1, at the age of seventy-eight. Born in New York, he moved to Rhode Island when a child, and there commenced his stage career by playing in amateur performances. Returning to New York, he acted for more than fifty years, appearing with Edwin Booth, Mrs. Thomas Whiffen, David Warfield, William Hodge, and other prominent stage people.

Lichnowsky, Prince Karl Max von.

Lima, Jaime de Magalhães. Portuguese journalist and patriot, died in Portugal, December 8. Born in Brazil, 1859, he worked for the establishment of the Portuguese Republic, visiting foreign countries to foster public approval. He also urged the abolition of the monarchy through the newspaper, *O Século*, of which he was editor-in-chief. After the Republic was proclaimed, Oct. 5, 1910, Lima became minister of instruction, and was later elected senator. He was a grand master of Portuguese freemasonry.

Lima, Manuel de Oliveira de.
Lincolnshire, First Marquis of.
Li Yuan-Hung.

Locke, James. American author, chemist, and educator, died at New Haven, Conn., February 12. He was born at Buffalo, N. Y., Nov. 28, 1869. After being graduated from Yale, 1890, and receiving a Ph.D. from Heidelberg, Germany, in 1895, he became an instructor in chemistry at Yale, 1897-1902. He was professor of chemistry at the Massachusetts Institute of Technology, 1902-03. In the latter year ill health compelled him to give up teaching, and he adopted journalism and writing as a profession. He was associate editor of the *Baltimore News*, 1911-23, also of the *Baltimore American*, 1920-23. Besides contributing to various scientific and popular publications, he translated Menschutkin's *Analytical Chemistry* (1895), and wrote the novels, *The Stem of the Crimson Dahlia* (1908) and *The Plotting of Frances Ware* (1909).

Lockwood, William F. American physician and educator, died at Elkridge, Md., October 17, at the age of seventy-five. He was graduated from the College of Physicians and Surgeons, in 1875, where, after practicing in Baltimore for two years, he became demonstrator in anatomy. He left the college to accept a position as resident physician at St. Joseph's Hospital, later becoming chief of the staff, and he was also connected at one time with St. Agnes Hospital. Returning to the College of Physicians and Surgeons as professor, he was made dean in 1912. Several years after the medical school of the University of Maryland had merged with his college, in 1915, Dr. Lockwood was appointed dean of the combined institution, a position which he held until his death.

Loewenstein, Alfred.

Logan, James H. American jurist and horticulturist, originator of the loganberry, died at Oakland, Calif., July 16. He was a former district attorney at Santa Cruz, Calif., and at one time judge of the Superior Court there, but was known chiefly as the originator of the loganberry, named for him, and of mammoth blackberries. The loganberry is a hybrid blackberry and raspberry. It was presented by Judge Logan to the University of California, "for the benefit of the people of the nation," and is now cultivated in many places.

Longfellow, Alice Mary. Daughter of Henry Wadsworth Longfellow, died at Cambridge, Mass., December 7. She was the "Grave Alice" of *The Children's Hour* and was born in the Craigie House, Cambridge, in 1850, where she spent her life, often visiting scenes mentioned in her father's poems. Miss Longfellow was a founder of Radcliffe College, later serving on the board of associates. She was Massachusetts' vice regent of the Mount Vernon Association.

Lorentz, Hendrik. Antoon.

Lowell, Daniel Ozro Smith. American educator and Esperantist, died at Malden, Mass., March 12. He was born at Denmark, Me., Apr. 13, 1851. After graduating from Bowdoin College in 1874, and from the Maine School of Medicine in 1877, he practiced medicine for a year, but left the profession to become a teacher at Lisbon Falls, Me. For another year he was editor of *The Golden Argosy*, published by Frank A. Munsey. He taught in schools and academies in Maine until 1884, and in that year became a master in the Roxbury Latin School, Boston, Mass. From 1909 until his retirement in 1921 he was head master of the school. Bowdoin College conferred on him the degree of Litt.D. in 1909. Dr. Lowell was one of the leading Esperantists in America and published books on the universal language as well as on other subjects. He helped in the translation of the Gospel of St. John into Esperanto.

Loza, Eufrazio. An Argentinian statesman and former Governor of Córdoba, died at Buenos Aires, September 25. Besides being a member of the Court of Appeals, Dr. Loza was once in the Cabinet.

Ludlum, Albert C. American engineer, inventor, and manufacturer, died at New York, February 16. He was born at Brooklyn, N. Y. He was educated at the public schools of Brooklyn and began his business career as a clerk in a bank. While there he invented an adding machine. In 1889 he became connected with the Kennedy & Pierce Co., manufacturers of mining machinery at Denver, Colo. In 1906 he organized the New York Engineering Company for the manufacture of gold dredging machinery.

Lummis, Charles Fletcher.

Luther, Flavel Sweeten.

Lynch, John Gilbert Bohun, English author, died in London, October 2. Born May 21, 1884, he attended University College, Oxford, where he became interested in boxing. While doing newspaper work he wrote independently, but as his books and articles became popular, he gave up journalism. Besides his contributions to numerous magazines, Mr. Lynch wrote novels, sketches, and histories of pugilism and boxing, including: *Glamour* (1812); *Cuke* (1913); *The Complete Amateur Boxer* (1913); *Prominent Pugilists of To-day* (1914); *Unofficial* (1915); *The Complete Gentleman* (1916); *The Tender Conscience* (1919); *Forgotten Realms* (1920); *Max Beerbohm in Perspective* (1921); *Knuckles and Gloves* (1922); *A Perfect Day* (1923); *A Muster of Ghosts* (1924); *A History of Caricature* (1926); *The Prize Ring* (1926); and *Respectability* (1927), which is considered his best book.

MacChesney, Clara Taggart. American painter, died in London August 6. She was born at Brownsville, Calif., in 1861, and, after studying painting under Virgil Williams in San Francisco, she came to New York to study under H. S. Mowbray and James Carroll Beckwith. Later she went to the Colarossi School in Paris, where she worked under Courtois and Girardot. She painted peasant pictures, particularly of children, as well as portraits. Miss MacChesney won two medals at the Chicago Exposition of 1893, and the following year she won the Dodge Prize in New York. She received three medals at the Colarossi School, and the gold medal at the Philadelphia Art Club in 1900, and in 1901 her picture, "A Good Story," won the second Hallgarten prize of the National Academy of Design, in New York. She also exhibited in the Paris Salon in 1896 and 1898, and in the Saint Louis Exposition in 1904.

McCormick, Samuel Black.

McCutcheon, George Barr.

MacDonald, Charles.

MacDonald, Jessie Claire. American educator, died August 12. She was born at Indianapolis, Jan. 24, 1869, and after being graduated from Wellesley College in 1888, she continued her studies at Columbian (later George Washington) University, the Sorbonne, and the University of Pennsylvania. In 1913 she became principal of the National Cathedral School for Girls in Washington, D. C. She was at one time a trustee of Wellesley College.

Macdonald, John Kay. Canadian life insurance leader, died at Toronto, Ont., July 4. He was born at Edinburgh, Scotland, Oct. 12, 1837, and was taken to Canada when he was eight years old. He was the founder, president, and manager of the Confederation Life Association, and was active in many religious, educational, and philanthropic organizations in Canada. He was several times president of the Canadian Life Insurance Officers' Association and was a fellow of the Canadian Insurance Institute.

McGivney, Patrick J.

McGraw, James J.

MacHugh, Augustin. American playwright and actor, died at New York, August 24. While acting in Keith & Proctor's vaudeville company in New York City, he wrote his most successful play, *Officer 666*, which ran for a year on Broadway in 1912. Besides vaudeville sketches he was the author of several other plays, including: *Value Received* (1913); *What Would You Do?* (1914); *Search Me* (1915); *The Meanest Man in the World* (1920). He also collaborated with A. D. Leavitt in *It's Up to You* (1920), and he took the lead in his own play, *True to Form*, which was produced in Los Angeles, 1921.

McKee, Oliver. American journalist, and publisher, died at Randolph, N. H., August 29. He was born in Brooklyn, N. Y., and was graduated from Yale in 1884. He then worked on newspapers in New York and Boston, and on *The Times* (London). While in England he was engaged in the encyclopaedic and other work, traveling to India, China, and Japan. After his return to the United States Mr. McKee became connected with the Yale University Press, and he was assistant editor of *The Pageant of America* when he died.

MacLeod, Malcolm Hugh.

McNaughton, James. American locomotive manufacturer, died at Bronxville, N. Y., July 27. He was born at Queensville, Ont., Aug. 6, 1859. After working at Woodbridge, Ont., for a manufacturer, he went to the United States, and in 1881 entered the employ of the Northern Pacific as shop foreman at Brainerd, Minn. In 1889 he became the division superintendent of rolling stock of the Northern Pacific, and in 1890 superintendent of motive power of the Wisconsin Central (now part of the Minneapolis, St. Paul & Sault Ste. Marie R. R.). In 1899 he was made superintendent of the Brooks Locomotive Works, Dunkirk, N. Y.,

and when the American Locomotive Company was organized he was placed in charge of the Brooks and Schenectady, N. Y., plants as general manager. In 1910 Mr. McNaughton was made vice president of the company, in charge of manufacture. He resigned to become president of the Eddystone Munitions Company, at Ed-dystone, Pa., 1915-20, and in the latter year was appointed to the position of vice president of the Baldwin Locomotive Works, in charge of the New York office.

McVea, Emilie Watts. American educator, died at Cincinnati, Ohio, July 27. She was born at Clinton, La., Feb. 17, 1867. She was graduated from St. Mary's School, Raleigh, N. C., in 1884, and subsequently studied at Cornell University and Georgetown University. Her first teaching position was at St. Mary's School, of which she became principal; from 1903 to 1904 she was instructor in English at the University of Tennessee. From 1906 to 1916 she was assistant professor of English at the University of Cincinnati and from 1909 to 1916 dean of women. From the latter year to 1925 she was president of Sweet Briar College in Virginia, retiring to become president emerita. In 1918-19 Miss McVea was a lecturer for the Y. W. C. A. and the Federal Food Administration. She was secretary-treasurer of the Southern Association of College Women, 1903-04, and was also a member of the Virginia State Board of Charities and Corrections, 1822. She received the honorary degree of Litt.D. from the University of Cincinnati in 1916 and that of LL.D. from the University of North Carolina in 1921.

Madden, Martin Barnaby.
Magalhães, José Castro. Brazilian jurist, died at Bello Horizonte, Brazil, June 20.

Mair, Alexander William. Scotch classical scholar and educator, died in Edinburgh in November. Born at Deerhill, Banffshire, June 9, 1875, he was graduated from the University of Aberdeen in 1893; he then went to Gonville and Caius College, Cambridge, where he received his degree in 1898. Returning to Scotland, he lectured on Greek at the University of Aberdeen, 1898-99. He undertook a similar occupation at the University of Edinburgh in the latter year, and in 1903 was appointed professor, holding that chair until his death. He was elected Fellow of Gonville and Caius for the years 1899-1905. Professor Mair served as classical examiner at London University, 1919-23. The University of Aberdeen in 1911 conferred on him the degree of Litt.D. Besides contributing many verses to current periodicals and writing several articles for Hasting's *Encyclopaedia of Ethics*, he published two works, an edition of Hesiod, with an introduction, translation, and appendices (1908); and a volume of the Loeb series, comprising the writings of Callimachus and Lycophron (1921).

Malinowski. See Boganoff, Alexander Alexandrovitch.
Mallinckrodt, Edward.

Mallon, George Barry. American journalist, died at Baltimore, January 13. He was born at Malone, N. Y., May 20, 1865. After graduation from Amherst College, he entered journalism in New York as a member of the staff of the *Commercial Advertiser*, in 1887. From that paper he went to the *Sun*, and in 1903 became city editor of the latter paper. He held the post for ten years and assisted in the training of many men later prominent in newspaper work. He left the *Sun* to become literary adviser of the Butterick Company, publishers of magazines. For ten years before his death he was director of publicity of the Bankers Trust Company of New York, and compiled financial reviews of conditions in England, France, and Canada.

Malmgren, Finn. Swedish meteorologist with the Noble polar expedition, died in the Arctic, in June, after the disaster to the *Italia*. (See POLAR RESEARCH.) He was born at Falun, Sweden, in 1895 and studied at the Universities of Stockholm and Upsala before becoming a student of meteorology as assistant to Professor Hamberg at his altitude observatory at Portetjåkko. In 1922 he joined the staff of the *Maud*, which carried Amundsen's polar expedition of that year and which was then entering on the second stage of her voyage in the northern basin. For two years the *Maud* drifted with the polar currents, returning eventually through Bering Strait in 1925. In those three years, 1922-25, Mr. Malmgren not only served as meteorologist to the expedition under Dr. H. U. Sverdrup, the chief of the scientific staff, but pursued his studies to such good advantage that he was able to take his degree of Master of Science on his return to Sweden. Subsequently he won his doctorate. In the meantime, in 1926, he took part in the flight across the north polar basin in the *Norge*, and contributed a chapter on "Weather and Weather Warnings During the Polar Flight" to the official narrative of the expedition written by Captain Amundsen and Lincoln Ellsworth. In 1928 he was appointed lecturer and curator at Vastmanlands Dala College at Uppsala, Sweden, but

gave up the post to accept appointment as meteorologist of the Noble expedition. When the *Italia* was wrecked, Dr. Malmgren and two companions, Majors Mariano and Zappi, were separated a few days after the disaster from the rest of the party, and endeavored to make their way across the ice afoot, in the hope of meeting a rescue party or reaching a human settlement. According to the account given by Malmgren's companions, he was unable to go on, his legs having been frozen, and he begged them to leave him, in order to save themselves and possibly others. Their story led to much controversy.

Manners, John Hartley.
Mansfield, Brig. Gen. Samuel Mather.
Mantell, Robert Bruce.

Marcel, Alexandre. French architect, died at Neuilly, France, July 1. He was chief architect for the French Government, and the designer of the monument to the Lafayette Escadrille, dedicated three days after his death. M. Marcel was a member of the Institut de France and an officer of the Legion of Honor, and holder of numerous foreign decorations. Among the structures which he designed are the Senate building at Bucharest, Rumania; the Rodin Museum at Paris, and the Hippodrome at Ostend, Belgium.

March, Francis Andrew, Jr.
Marie, Dowager Empress of Russia.
Mason, The Rev. Dr. Arthur James. English clergyman and author, died at Canterbury, England, April 24. Born May 4, 1851, he was educated at Repton School and at Trinity College, Cambridge, and was a fellow of Trinity College, 1873-84, and assistant tutor, 1874-77. After serving as canon of Truro, 1877-84, and vicar of All Hallows, Barking, 1884-95, he became fellow of Jesus College, 1896-1903; Lady Margaret Professor of Divinity, Cambridge, 1895-1903; vice chancellor of Cambridge University, 1908; master of Pembroke College, Cambridge, 1903-12, and canon of Canterbury since 1895. His publications, mainly on church history, included: *The Persecution of Diocletian* (1875); *Commentary on the Thessalonians and First Epistle of St. Peter* (1879); *The Faith of the Gospel* (1887); *The Relation of Confirmation to Baptism* (1893); *Historic Martyrs of the Primitive Church* (1905); *The Church of England and the Episcopacy* (1914); and *What Became of the Bones of St. Thomas* (1920), a learned study of the question whether bones discovered in 1888 are really those of St. Thomas à Becket.

Mathews, Joseph McDowell.
Mauder, Edward Walter.
Maver, William, Jr.

Maximow, Alexander A. Russian physician and educator, died at Chicago, December 4, at the age of fifty-two. Born at St. Petersburg, he taught histology and embryology for nearly 20 years, until the revolution of 1917. He then went to the University of St. Petersburg, as professor, but, forced by Bolsheviks' activities to escape from the country in 1922, he came to the United States, and in the same year was appointed professor of anatomy of the University of Chicago, holding that position until his death. While at the university, he proved, by experiments made with F. J. Lang, that tuberculosis nodules grow either from the lung tissues or from white blood corpuscles. Dr. Maximow represented Russia at the International Zoological Congress in the United States in 1907.

Maxwell, Jonathan Dixon.
Mead, William Rutherford.
Mechem, Floyd Russell. American lawyer and educator, died at Chicago, Ill., December 11. Born at Nunda, N. Y., May 9, 1858, he was admitted to the bar in 1879 and practiced at Battle Creek, 1879-87, and at Detroit, 1887-93. Having been professor and dean of the Detroit College of Law, 1891-92, he was appointed Tappan professor at the University of Michigan in the latter year, where he remained until 1903, also serving on the State Board of Law Examiners, 1895-1903. He then went to the University of Chicago, where he taught until his death. In addition, he belonged to the first district appeal board of the Northern District of Illinois, 1917-18. He lectured during the summer sessions at Columbia University in 1919 and 1920, at the University of Colorado in 1922, and at Stanford University in 1923. He was an authority on partnership and agency law. Professor Mechem received the A.M. degree from the University of Michigan in 1894, and the LL.D. degree in 1912. He was a reporter on agency for the American Law Institute and, besides contributing to various law publications, wrote the following books: *Agency* (1889, 2nd ed., 1914); *Public Officers* (1890); *Mechem's Hutchinson on Carriers* (1891); *Cases on Agency* (1893); *Cases on Partnership* (4th ed., 1924); *Elements of Partnership* (2nd ed., 1920); *Sales of Personal Property*, 2 vols. (1901); *Outlines of the Law of Agency* (3d ed., 1923); and *Cases on Damages* (3d ed., 1902); *Mechem and Gilbert's Cases on Damages* (1909).

Meeker, Ezra. American author and pioneer on the Oregon trail, died at Seattle, Wash., December 3. Born at Huntsville, Ohio, Dec. 29, 1830, he received little formal education, working as a printer's apprentice and journeyman printer. Starting in 1852, he traveled to Puyallup, Wash., by oxcart, one of the first to cross the frontier, near Portland, Oreg. Settling in Puyallup, he raised hops. He again crossed the continent, to Washington, D. C., in an oxcart in 1906. After retiring from business he worked for the preservation of records and landmarks of the Oregon trail, becoming president of the Pioneers of America. Mr. Meeker wrote: *Washington Territory West of the Cascade Mountains* (1870); *Hop Growing in the United States* (1883); *Pioneer Reminiscences of Puget Sound* (1905); *The Oregon Trail* (1907); *Uncle Ezra's Pioneer Stories for Children; Eighty-five Years of a Busy Life* (1916); *Seventy Years of Progress in Washington* (1921); *Ox-Team Days* (1922); and *Kate Mulhall* (1926).

Menconi, Frank G. American sculptor, died at Union City, N. J., April 24. He was born at Barga, Italy, Apr. 24, 1884. He was educated abroad until his sixteenth year, when he went to America with his parents. He continued his studies at Cooper Institute, New York. He designed the temporary Victory Arch erected in New York for the homecoming of the American soldiers from the World War, and, among other works, the Boston memorial to Mrs. Mary Baker Eddy and the sculptural decorations on the new extension of the University of Illinois. He revived an ancient art known as "graffito," a process of engraving on cement in colors. Specimens of the art were used as decorations of public buildings at Washington, D. C.

Meredith, Edwin Thomas.

Merrill, William Bradford.

Metaxas, Sir Demetrios George. Greek diplomat, died at London, England, February 1. He was born at Syra, Greece, and was educated at Athens, where he entered the diplomatic service at the foreign office. He served as a diplomat at Rome, Berlin, Belgrade, and London. He was secretary of the conference of Berlin, 1880, and also during the negotiations at Prevesa for delimiting the new Greco-Turkish frontiers. He was Greek minister to Great Britain, 1895-1908. He retired from the diplomatic service several years before his death and made his home in London. In 1906 King Edward VII conferred on him the Grand Cross of the Royal Victorian Order.

Meyer-Waldeck, Alfred.

Michalewicz, E. Jewish leader of the Socialist party in Poland, died at Warsaw, October 30. He was born at Brest-Litowsk, in December, 1876, his real name being Joseph Izbiński. He early adopted the pseudonym, B. Michalewicz, and under the influence of socialists, he became active in politics at the age of seventeen. He was one of the founders of the Bund, the Jewish Socialist Labor party, with which he worked during the remainder of his life. He was several times exiled and imprisoned for his activities, once escaping from a five-year exile to Archangel. Besides his interest in Socialism, he contributed to the development of Yiddish literature in Eastern Europe.

Michelena, Santiago. Dominican banker and sugar grower, died April 29. He was born in Porto Rico. He resided in the Republic of Santo Domingo for many years and was one of the leaders in the financial and sugar interests of the country. Ten years before his death he sold his banking house, S. Michelena & Company, to the National City Bank interests of New York, but retained his connection with the house in an advisory capacity.

Miles, Basil.

Mills, William Corless. American archaeologist and educator, died at Columbus, Ohio, January 18. He was born at Fyrmont, Ohio, Jan. 2, 1860, and received a B.Sc. from Ohio State University in 1898. In the same year he became curator and librarian of the Ohio State Archaeological and Historical Society, and a year later curator of the Ohio State University Museum. He was connected with Ohio State University for 46 years. He was a leading authority on the Indian mounds of Ohio, and passed most of his time investigating them and other Indian remains. He was the author of *Archaeological Atlas of Ohio* (1914); *Map and Guide to Fort Ancient* (1920); and other reports and papers on kindred subjects.

Minor, Charles Launcelot. American physician, died at Biltmore Forest, N. C., December 26. Born at Brooklyn, N. Y., May 10, 1865, he was graduated from the medical school of the University of Virginia in 1888. After serving in hospitals in New York and Vienna, he practiced in Washington. He moved to Asheville, N. C., in 1895, where he was instrumental in creating an important centre for the cure of tuberculosis. Dr. Minor was president of the American Climatological and Clinical Association, 1912-13, of the National Association for the Study and Prevention

of Tuberculosis, 1917-18, and of the Southern Medical Association, 1923-24. He was also a director of the National Tuberculosis Association. The University of North Carolina conferred on him the LL.D. degree. He contributed a chapter on "Symptoms and Diagnosis" to Klebs' work *Tuberculosis* (1909).

Miron, Salvador Diaz.

Molitor, John. American architect and engineer, died at Philadelphia, April 19, at the age of fifty-four. He was city architect of Philadelphia and designer of virtually all of the buildings of the Sesqui-Centennial Exposition, held in 1926. Mr. Molitor was appointed city architect in 1924. Before that time he had been chief of the division of housing and sanitation of the city government, to which office he was appointed in 1914, when it was created.

Montague, Andrew Philip. American educator, died at Panama City, Fla., December 3. Born in Essex County, Va., Sept. 27, 1854, he was graduated from the University of Virginia in 1875, receiving the A.M. degree from Columbian (now George Washington) University in 1879 and the Ph.D. degree in 1888. While at Columbian, he served as Latin tutor, 1875-79, adjunct professor, 1879-82, and professor, 1882-97, being also principal of the preparatory school, 1884-93, and dean of the university, 1895-97. He was appointed president of Furman University in 1897, accepting similar positions at Howard College, Birmingham, Ala., 1902-12, and at Columbia College, Lake City, Fla., 1912-19. Going to Mercer University, Macon, Ga., in 1919 as professor of Latin and public speaking, he became dean in 1923, vice president in 1924, and acting president in 1927. Dr. Montague was president of the Florida Educational Association from 1915 until his death. Richmond College conferred on him the LL.D. degree in 1896. He edited *Selected Letters of Cicero* (1890); and *Selected Letters of Pliny* (1893).

Montague, Charles Edward.

Montgomery, George Alexander. Canadian railroad official, died at Sault Ste. Marie, Ont., June 27. He was born at Bradford, Ont., Feb. 11, 1871, and after a public school education began his railroad career at Newmarket, Ont., with the Grand Trunk Railroad. He remained with the road three years, and in 1889 went to the Canadian Pacific, rising to the superintendency of the Superior division by 1900. In 1902 he became chief clerk of the Algoma Eastern Railway, and in 1916 president of that road and vice president and general manager of the Algoma Central and Hudson Bay Railway.

Monty, Rodolphe. Canadian lawyer and former secretary of state, died at Saint Hyacinthe, P. Q., December 1. Born at Montreal, November 30, 1874, he attended Ste. Marie de Monnoir College, and was graduated from the Université Laval, Quebec, and from the law school of McGill. Called to the bar in 1897, he practiced until his death in Montreal and Quebec, being made King's counsel in 1909. He was appointed secretary of state in September, 1921, by Arthur Meighen, the Conservative Premier, but the administration was defeated in the December elections of that year. Mr. Monty was treasurer of the council of bar for two years, and examiner for the bar for five years. He was also president of La Société de Repatriement et de Colonisation de la Province de Quebec.

Moore, Francis. American soldier, brigadier general, U. S. Army, retired, died at San Antonio, Tex., May 1. He was born in Scotland, Apr. 6, 1841. He entered the Union Army as a private in the First Colorado Cavalry in 1861, and served in the Civil War, being successively promoted to sergeant, captain, major and lieutenant colonel. He received brevet promotion to the last named rank for "faithful and meritorious service during the war." After the close of the Civil War he entered the regular army as a second lieutenant in the cavalry, and rose through the various grades until he attained the rank of brigadier general in 1901. General Moore was retired by operation of law in 1905.

Morales, Ramon Saenz. Nicaraguan poet, died at Managua, Nicaragua, September 6, at the age of 38. His verses were popular in Central America and South America.

Mora y del Rio, Archbishop José.

Moreira, A. Barros. Brazilian Ambassador to Belgium, died at Brussels, August 11. Being minister to Belgium in 1921, he was made ambassador when President Pessoa raised the rank of the Brazilian Legation at Brussels to that of an Embassy.

Morgan, James Appleton.

Morgan, James Morris. Veteran of the Confederate States Navy and Army and writer, died at Washington, D. C., April 22. He was born at New Orleans, La., in 1845, and was a student at the U. S. Naval Academy at the outbreak of the Civil War, in 1861. He left his studies to enlist in the Confederate Navy, and served on the *Alabama* under Semmes. Later he

commanded a battery in the defense of Richmond, Va. After the war he was in the Egyptian Army, and then returned to assist as an engineer in the erection of the Statue of Liberty in New York Harbor. He served as U. S. Consul at Melbourne, Victoria, in the first Cleveland administration, and on his return to the United States became assistant manager of the International Banking Corporation. His book, *Recollections of a Reeler*, telling of his Civil War experiences and published a few years before his death, was favorably reviewed.

Mosher, Eliza Maria.

Motoda, The Rt. Rev. Joseph Sakunoshin. Japanese clergyman, bishop of the first independent Japanese diocese of the Nippon Sei Ko Kwai (Holy Catholic Church of Japan), died at Osaka, Japan, April 16. He was born at Kumamoto, Japan, Feb. 2, 1861, of Christian parents. He studied at St. Paul's College, Tokyo, also at Kenyon College, Gambier, Ohio, the University of Pennsylvania, Bexley Hall, and the Philadelphia Divinity School. He was ordained in 1896, and returned to Japan as a missionary. He then became headmaster of St. Paul's College and Middle School, and later Japanese president of St. Paul's University, before his election as bishop in 1923. He assumed charge of his diocese immediately after the great earthquake and labored hard to reconstruct his charge. In 1924, the Philadelphia Divinity School conferred the degree of D.C.L. on Bishop Motoda, following his degree of D.D. from Kenyon College in 1922. In 1925 he visited the United States and was highly honored by the Protestant Episcopal General Convention at New Orleans, La.

Mowat, Herbert Macdonald. Canadian jurist, died at Toronto, Ont., April 24. He was born at Kingston, Ont., Apr. 11, 1863. He studied at Queen's University and received his law degree there in 1886. In the same year he entered law practice in Ontario, and quickly rose to a prominent position among the younger attorneys of the Dominion. In 1899 he became a Queen's Counsel. He was elected to the Canadian House of Commons in 1917, and in 1921 was appointed to a place on the bench of the Supreme Court of Ontario. He was an active member of the British Empire League of Canada. He was an officer in the Queen's Own Rifles, and saw active service in the World War, winning promotion to the rank of major.

Mowbray, Henry Siddons.

Mullins, Edgar Young. American Baptist clergyman, died at Louisville, Ky., November 23. Born in Franklin County, Miss., Jan. 5, 1860, he attended the Agricultural and Mechanical College of Texas, 1876-79, and was graduated from the Southern Baptist Theological Seminary in 1885, later continuing his studies at Johns Hopkins University, 1891-92. Ordained into the Baptist ministry in 1885, he held a pastorate at Harrodsburg, Ky., and three years later he was called to the Lee Street Church in Baltimore, while from 1896 until 1899, he served at the First Church, of Newton, Mass. Dr. Mullins was made president of the Southern Baptist Theological Seminary at Louisville in 1899, a position which he retained until his death. He was secretary of the board of foreign missions at the Southern Baptist Convention, 1895-96, and president of the convention of May, 1921-24; at the time of his death he was president of the Baptist World Alliance, having served since 1923. Carson and Newman College, Tenn., conferred the D.D. degree on Dr. Mullins in 1896, and McMaster University, Toronto, Canada, honored him similarly in 1925. He also received the LL.D. degree from Richmond College, Va., and Baylor University. Besides editing *The Evangel*, of Baltimore, 1890-95, Dr. Mullins wrote the following books: *Why is Christianity True?* (1905); *The Axioms of Religion* (1908); *Baptist Beliefs* (1912); *Freedom and Authority in Religion* (1913); *Commentary on Ephesians and Colossians* (1913); *The Life in Christ; The Christian Religion in its Doctrinal Expression; Talks on Soul Winning* (1920); *Spiritualism a Delusion* (1920); and *Christianity at the Cross-Roads* (1924).

Munkittrick. See Talbot, Howard.

Murray, Sir John.

Newcastle, Seventh Duke of.

Newman, Frances. American author and librarian, died suddenly at New York, October 22. She was born at Atlanta, Ga., about 1888, and was graduated from the Library School of the Carnegie Library of Atlanta in 1912. She returned to that institution, after acting for a year as librarian at the Florida State College for Women. Miss Newman contributed to several magazines, and in 1924 her story, *Rachel and Her Children*, published by the American Mercury, won the O. Henry prize. She also wrote, *The Short Story's Mutations* (1924), and *The Hard Boiled Virgin* (1926), a novel which met with bans from censors and diverse opinions from critics. Her last book was *Dead Lovers* (re *Faithful Lovers*) (1928); and her translations of

the stories of Jules Laforgue were unpublished at the time of her death.

Nichols, William Henry, Jr. American manufacturer and chemist, died at Center Island, N. Y., at the age of fifty-four. He was born at Brooklyn, N. Y., the son of William Henry Nichols, a well-known chemist and manufacturer. The younger Nichols was educated at the Brooklyn Polytechnic Institute and the School of Mines of Columbia University, 1894. He was vice president and a director of the Allied Chemical & Dye Corporation and an official or director of several other large chemical manufacturing concerns. He was a member of the American Chemical Society, the Society of the Chemical Industry, and the American Institute of Mining and Metallurgical Engineers.

Nicolson, Arthur. See Carnock, Lord.

Noakowski, Stanislaw. Polish painter and architect, died at Warsaw, October 2. Born in 1867, he taught for a long period in the University of Moscow, and he was at one time professor of art and architecture in the St. Petersburg Academy of Arts, being also a member of the St. Petersburg Academy. His paintings, which were based on the motives of Polish architecture, were highly valued by artists throughout Europe. He returned to Warsaw after the World War, and became professor at the Polytechnic, having written numerous books on the science of architecture.

Noguchi, Hideyo.

Nordenskjöld, Nils Otto Gustav.

Noren, Heinrich Gottlieb.

Normand, Louis Philippe. Canadian physician and officeholder, died at Three Rivers, P. Q., June 27. He was born at Three Rivers, Sept. 21, 1863, and was graduated from Laval University, 1886; he received a certificate from the Chicago Polyclinic in 1896. He was widely known in Canadian and French medical circles, and in 1906 was president of the Third Congress of French-Speaking Physicians of North America; in 1907 he was president of the College of Physicians and Surgeons of Quebec, and was reelected in 1910. In 1922-23 he was president of the Canadian Medical Council. He was also a fellow of the American College of Surgeons. Dr. Normand was active in political life and served as mayor of his birthplace and home city, Three Rivers.

Oregon, Alvaro.

O'Brien, William.

Ocell, E. J. English actor, died at London, May 26, at the age of ninety-three. He was called "London's last Bohemian," and was for many years a picturesque figure at the Yorick and Savage clubs. His reminiscences of actors and actresses of former generations were numerous and varied. He made his first appearance in London in 1870 in Hervé's comic opera, *Chilperic*, and in the course of his long career played in the companies of Sir Henry Irving, Edward Terry, Sir Herbert Beerbohm Tree, George Rignold, Will Terriss, and others. About twenty years before his death he was admitted as a "poor brother" of the Charterhouse.

Ogden, Isaac Gouverneur. American railway official, died at Montreal, Canada, February 4. He was born at New York in 1844. Leaving school at sixteen, he entered the employ of a New York mercantile house. Later he was employed by Fisk & Hatch, bankers. In 1871 he became paymaster and accountant of the Chicago & Pacific R. R. Five years later he was promoted to auditor, and in 1881 began the connection with the Canadian Pacific Railway which lasted until his death. He was first the auditor of the western division, and in 1887 became comptroller of the system. In 1901 he was made a vice president in charge of finance. The department of which he had direct control started with six employees and had more than nine hundred when he died.

O'Grady, James M. E. American lawyer and politician, died at his birthplace, Rochester, N. Y., November 3. He was born Mar. 31, 1863, and was graduated from the University of Rochester in 1885. Being admitted to the bar in the same year, he became connected with the district attorney's office in Rochester. He was made school commissioner in 1887, and, becoming president of the board of education, he served until 1892. He was elected as a Republican to the State Assembly from the second Monroe district in that year. During his successive terms, he was appointed to the rules committee, and was made chairman of the committee on cities, and of the ways and means committee. He also acted as speaker, 1897-98. Mr. O'Grady was seated in the U. S. House of Representatives from the Thirty-eighth New York District in 1899, remaining in Congress for one term.

O'Grady, Standish Hayes.

Okura, Kihachiro, Baron. Japanese merchant, died at Tokyo, April 22, at the age of ninety-one. Born the son of a poor fish dealer, Okura rose to become one of the wealthiest and most influential men of Japan. He received his title in December, 1915, after he had ac-

quired a large fortune, for "meritorious services to business circles." His first business venture was in the importation of foreign weapons. Later he founded a foreign tailor's shop, said to be the first in Japan. In 1880 he was sent to America in the interests of Japanese tea. He established an engineering firm in 1884, and was contractor for the army in the Chino-Japanese and Russo-Japanese wars. He was interested in hotels, paper manufacture, theatres, steamship lines, electric lighting plants, silk companies, shoe factories, sugar refining, and brewing, besides his own company. In all he was owner or controller of sixty-three firms.

Oldfield, William Allan.

Oliver, James Harrison. American naval officer, rear admiral, U. S. Navy, retired, died at Shirley, Va., April 6. He was born in Houston County, Georgia, Jan. 15, 1857, and was graduated from Washington and Lee University in 1872 and from the U. S. Naval Academy in 1877. He advanced through successive grades until January, 1917, when he became a rear admiral. In 1914 he became director of the naval intelligence office, and he was later a member of the neutrality board. In March, 1917, he was appointed first Governor of the American Virgin Islands. He was retired in January, 1921.

O'Neill, Baron Edward. Irish jurist and politician, died at Eraserstown, County Derry, Ireland, November 19. Born Dec. 31, 1839, he attended Trinity College, Cambridge, becoming second Baron of Shane's Castle, Antrim, Ireland, on the death of his father in 1883. As a Conservative, he represented County Antrim in Parliament, 1863-80.

Opdyke, Howard. American educator, died at Schenectady, N. Y., June 14. He was born at New York, Nov. 5, 1872. He was graduated from Williams College in 1893 and almost immediately went to Union College, Schenectady, N. Y., as instructor in mathematics and physics. In 1899 he was made assistant professor of physics. From 1901 to 1903 he studied at the Polytechnic School and the University of Zurich, Switzerland, and in the latter year was appointed professor of physics at Union. In 1919 he was appointed to the chair of theoretical mechanics, which he held until his death.

Opel, Heinrich von. German automobile manufacturer, died at Mainz, Germany, May 26. He was the head of the motor-car manufacturing firm of the same name, with factories at Rüsselsheim, Hesse. The Opel experiments with automobiles propelled by the explosive power of rockets attracted international attention.

Oppenheim, Samuel. Austrian astronomer and educator, died at Vienna, August 15. Born in Moravia in 1857, he was graduated from the University of Vienna in 1880, and received the Ph.D. degree in 1884. After being at the university observatory at Vienna, he went to the Vienna-Ottakring observatory in 1889, and while working there also gave private instructions in astronomy. After teaching in Arnau and in Prague, he was appointed as professor at the University of Vienna in 1911, remaining there until his death. Dr. Oppenheim was particularly interested in gravitational astronomy.

Ossory, Bishop of. See, Brownrigg, Right Reverend Abraham.

Osthau, Edmund. American painter, died at Marianna, Fla., January 30. He was born at Hildesheim, Germany, Aug. 5, 1858, and studied at the Josephinum Gymnasium, Hildesheim, and at the Royal Academy of Arts, Düsseldorf, 1874-82. He went to America in 1883 and made his home at Toledo, Ohio, where he became principal of the Toledo Academy of Fine Arts in 1886. He left the academy in a few years, however, to devote all his time to painting, and won international recognition with his depiction of hunting and fishing scenes and dogs and horses.

Outcault, Richard Felton.

Outerbridge, Alexander Ewing, Jr. American metallurgist and educator, died at Philadelphia, Pa., January 15. He was born in Philadelphia July 31, 1850, and was educated at the Episcopal Academy, Philadelphia, and by a private tutor in analytical chemistry; later he attended lectures on physics and chemistry as assistant to Prof. Henry Morton. He was appointed assistant in the assay laboratory at the U. S. mint, Philadelphia, 1868. From 1880 until his death he was engaged in private practice as a metallurgist. He lectured on industrial economics at the Wharton School of Finance, University of Pennsylvania. In 1901 he was appointed professor of metallurgy at the Franklin Institute. He received the John Scott Legacy Medal and premium from the City of Philadelphia and the Elliott Oresson Gold Medal for discoveries in the molecular physics of iron.

Packard, James Ward.

Paetow, Louis John. American educator, died at Berkeley, Calif., December 22. Born at Milwaukee, Wis., Jan. 9, 1880, he was graduated from the University of Wisconsin in 1902, receiving the M.L. degree in

1903, and in addition to studying at the University of Paris in 1905, he was Harrison fellow in history at the University of Pennsylvania, 1904-06, and took the Ph.D. degree in the latter year. Having taught history in a high school at Grand Rapids, Wis., 1903-04, he was acting professor of history at the University of Colorado, 1904-05, history instructor at the University of Wisconsin, 1906-07, and associate in history at the University of Illinois, 1907-11. He then joined, as assistant professor of medieval history, the University of California, where he remained until his death, being appointed associate professor in 1917, and professor in 1919. Dr. Paetow, who was considered one of the most learned scholars of medieval history, belonged to a number of historical societies. He wrote; *Arts Course at Medieval Universities* (1910); *Guide to the Study of Medieval History* (1917), and translated or edited *Battle of Seven Arts*, by Henri d'Andeli (1914); *The Morale Scholarium of John of Garland* (1927), and *The Crusades*, and other historical essays presented to Dana C. Munro (1927).

Pain, Barry.

Pankhurst, Emmeline.

Parker, George Frederick. American editor and author, died at New York, in June. He was born at Lafayette, Ind., Dec. 30, 1847. He studied at the University of Iowa, 1868-70. Three years later he entered journalism, and edited newspapers in Iowa, New Hampshire, Pennsylvania, and at Washington, D. C., and New York. He was managing editor of the *New York Press*, 1887-88, and contributed to the *London Times* for ten years after 1895. He was assistant postmaster of Philadelphia, 1885-87, U. S. consul at Birmingham, Eng., 1893-98, and commissioner in the United Kingdom for the Louisiana Purchase Exposition, 1901-04. Mr. Parker was connected with the Democratic National Committee for many years and was well known for his devotion to the memory of Grover Cleveland; he wrote *Recollections of Grover Cleveland*, published in 1909. He was president of the Grover Cleveland Association. He received the honorary degree of LL.D. from Simpson College, 1908, and Washington and Lee University, 1909, and an A.M. from Iowa State University, 1909.

Passmore, Ellis Pusey. American banker, died at Philadelphia, Pa., January 22. He was born at Rising Sun, Md., Feb. 1, 1869, and was graduated from Swarthmore College, 1893. He received the honorary degree of M.A. from Swarthmore in 1918. Mr. Passmore began to work in a bank at fifteen and returned to banking after he had completed his college course. He served as cashier of the National Bank of Avondale, Pa., and of the Traders' National Bank of Scranton, Pa., and as vice president of the Franklin National Bank, Philadelphia, a governor of the Federal Reserve Bank of Philadelphia, and president of the Bank of North America, Philadelphia, before becoming president of the Bank of North America and Trust Company in 1923. He was a former president of the State Bankers' Association of Pennsylvania.

Patten, James A.

Patterson, Andrew Henry. American professor of physics, died September 9 at Little Bear's Head, N. H. He was born at Winston-Salem, N. C., Sept. 28, 1870, and, having been graduated from the University of North Carolina in 1891, he continued his studies at Harvard. He joined the faculty of the University of Georgia in 1894, as instructor of physics, and, becoming professor of physics and astronomy in 1898, he remained with the University until 1908, when he transferred to the University of North Carolina, as professor of physics. In 1911 he became dean of the School of Applied Science. He was given the D.Sc. degree by the University of Georgia in 1927.

Patterson, Mrs. Flora Wambaugh. American mycologist, died at Brooklyn, N. Y., February 5. She was born at Columbus, Ohio, Sept. 15, 1847. She studied at Antioch College, Antioch, Ohio, and the Wesleyan College of Cincinnati, Ohio, and for three years at Radcliffe College, Cambridge, Mass. She was later assistant at the Gray Herbarium, Harvard University, and in 1896 became assistant pathologist of the Bureau of Plant Industry, U. S. Department of Agriculture, Washington, D. C. From 1898 to her retirement in 1923, she was mycologist of the department, in charge of pathological and mycological collections. She was a fellow of the American Association for the Advancement of Science and a member of the Phytopathological Society. In 1895 she was assistant editor of *Economic Fungi* and she contributed frequently to bulletins of the U. S. Department of Agriculture and to scientific journals.

Payro, Roberto J. Argentinian journalist, poet, and novelist, died at Buenos Ayres, April 6. He was educated at the National College, Buenos Ayres, where later he taught. His first book, a collection of verses, was published when he was seventeen, and a year later

he published his first novel. Two more books appeared before he was twenty-two, and then he became a journalist. In 1888 he established *La Tribuna* at Bahia Blanca, Argentina, and in 1891 became a member of the staff of *La Nacion* of Buenos Ayres, retaining the connection until he died. He published several novels and books of travel and wrote plays.

Paz, Luis. Bolivian jurist, died October 6, at the age of seventy-four. He was president of the Supreme Court of Bolivia and, besides his extensive law practice and legal studies, had written *Historia de Bolivia*.

Peacock, Alexander Rolland. American steel manufacturer and former partner of Andrew Carnegie, died at New York, July 12. He was born at Dunfermline, Scotland, the birthplace of Mr. Carnegie. He went to America early in life, and was a clerk in a linen store in Pittsburgh, Pa., when he attracted the attention of Mr. Carnegie. The latter gave his young countryman an opportunity in the steel business, and the latter was so successful that he became eventually a partner of the manufacturer. His activities were mainly in the selling end of the business. He was credited with selling 65,000 tons of rails to the Canadian Pacific R. R. and 65,000 tons of steel for the New York subway. In later years Mr. Peacock went to New York and then became engaged in the real estate business.

Pearson, Edward Jones.

Peelle, Stanton Judkins.

Pelham-Clinton, Henry Pelham Archibald Douglas. See Newcastle, Duke of.

Pena y Reyes, Antonio de la. Mexican historian and politician, died June 25, at the age of sixty. He was author of many books and articles on Mexican history and internal and international problems, and was also active in politics. He was at one time a member of the Mexican Legislature and a member of government commissions to Cuba and Italy.

Perez, The Rev. Joaquin. Mexican ecclesiastic, died June 21. He was patriarch of the Mexican National Church, which was established in 1926 with the avowed purpose of obeying the laws of Mexico respecting the practice of religion in the Republic, and of disregarding the authority of the Roman Catholic Church.

Perron, Karl. A celebrated German dramatic baritone, died in Dresden, in August. He was born at Frankenthal, in 1858, studied under Stockhausen in Frankfurt and made his debut as a concert singer in 1880. The success of his operatic debut, in 1884, as Wolfram in *Tannhäuser*, in Leipzig, led to an immediate engagement there. From 1891-1913 he was one of the brightest stars of the Dresden Hofoper. In 1889 and 1896 he sang at Bayreuth.

Perry, John Hoyt. American lawyer, died at Averill, Vt., September 2. He was born at Southport, Conn., July 26, 1848, and was graduated from Yale, 1870, and from the Columbia Law School two years later, returning to Yale for a year of post-graduate work. He practiced at Norwalk, Conn., 1872-86, serving as a member of the Connecticut House of Representatives, 1877-78 and 1881, and as the speaker of the House, 1889. Moving to Bridgeport, Conn., in 1887, he practiced for two years, when he was appointed Judge of the Court of Common Pleas, an office which he held until he returned to private practice in 1893, retiring in 1902. He became vice president of the Connecticut Constitutional Convention in the same year, and he was elected to the State Senate, 1913-15.

Petrunkевич, Ivan Ilitch.

Phillips, Harriet Sophia. American painter, died at New York, July 30. She was born at Delta, N. Y., in 1849. She attended the seminary at Fort Edward, N. Y., and the normal academy at Fredonia, N. Y., before studying art at New York, Munich, and Paris. Her paintings were exhibited at New York and other American cities and at Munich and Paris, and she gave many of them to the University of Akron, Ohio, where they are displayed in a special room.

Pierce, Carlton Brownell. American lawyer, died at New York, August 8. He was born at Trenton, N. J., June 22, 1857, and having been graduated from Rutgers College, he attended the Albany Law School, and later practiced for five years in Cooperstown, N. Y., before moving to New York. Mr. Pierce was elected to the New Jersey State Assembly in 1918, having a residence in Cranford, and he later served a six-year term in the State Senate. He was also at one time judge in the Court of Common Pleas, at Elizabeth, N. J.

Pine, Max. American labor leader, died at Maywood, N. J., March 2, at the age of sixty-two. He was born in Russia, and went to America when young. He engaged at first in tailoring, but left it soon to devote himself to the cause of labor unionism, as secretary of the United Hebrew Trades at New York. He was also active in politics as a Socialist and was one of the founders of the Jewish daily, *Forwärd*, of New York. He was prominent in Jewish relief work during and

after the World War, and went to Russia as a member of the Joint Distribution Committee for Jewish War Sufferers.

Pinkham, The Rt. Rev. William Cyprian.

Piper, Edgar Bramwell. American editor, died at Portland, Ore., May 3. He was born at Warsaw, Ind., Feb. 25, 1865, and at the age of eleven was taken by his family to Oregon. He began to work as a printer when he was 13, but found time later to study at Willamette University, Salem, Ore., from which he was graduated in 1886. He was employed by newspapers at Portland, Ore., San Francisco, Calif., and Seattle, Wash., and from 1904 to 1909 was managing editor of the *Morning Oregonian*, Portland, Ore. In 1910 he became editor of the paper, and he held that position until his death. He was vice president of the American Society of Newspaper Editors, a director of the North Bureau of the Newspaper Alliance, and a member of the national committee for the celebration of the second centenary of the birth of George Washington. Willamette University conferred the degree of LL.D. on him in 1909.

Pitaval, The Rt. Rev. John Baptiste.

Place, Ira Adelbert.

Platt, Charles. American physician, chemist, penologist, and author, died at Ardmore, Pa., June 14. He was for two years chief chemist in the private laboratories of Thomas A. Edison at Llewellyn Park, N. J. Dr. Platt was born at Montclair, N. J., Mar. 16, 1869, and was graduated from Lehigh University with the degree of B.S. in 1890. He then studied at Johns Hopkins University, the University of Edinburgh, L'École de Médecine, Paris, the Homeopathic Hospital, London, and the Hahnemann Medical College, Philadelphia. He was with Mr. Edison from 1890 to 1891, and from 1894 to 1909 was professor of chemistry and toxicology at the Hahnemann Medical College, becoming emeritus professor of chemistry in 1909. From 1900 to 1919 he practiced medicine in Philadelphia. He retired from practice to devote himself to writing on scientific subjects. He was deeply interested in penology and was president of the National Probation Association, 1925-26; director of the Pennsylvania Committee on Penal Affairs and chairman of the Citizens' Committee of the Municipal Court of Philadelphia. He was a fellow of the Chemical Society of London and an honorary member of the Society of Biological Chemistry of London. He wrote: *Qualitative Analysis and Medical Chemistry*; *Practical Medical Chemistry*; *The Psychology of Thought and Feeling*, and *The Psychology of Social Life*.

Plummer, William Edward. English astronomer, died May 22. Born at Deptford, Mar. 26, 1849, he studied privately and entered the Royal Observatory at Greenwich. He later assisted Dr. J. R. Hind at Mr. Bishop's Observatory at Twickenham, before becoming senior assistant at the Oxford University Observatory. He was subsequently made director of the Liverpool Observatory, and astronomer to the Mersey Docks and Harbor Board, positions which he held until his death. Mr. Plummer also served as honorary reader in astronomy at the University of Liverpool from 1900 until his death and in 1895 was appointed astronomy examiner at the University of Edinburgh. He was a fellow of the Royal Astronomical Society and at one time was president of the Liverpool Astronomical Society. His writings include the following publications: *On the Motion of the Solar System*; *Researches in Cometary Astronomy*; *Annual Reports from the Liverpool Observatory*; *Examination of Anemometer Records* (1896); and *Great Cluster in Hercules* (1905).

Pohlig, Karl.

Polachek, Solomon. American Talmudic scholar and educator, died at New York, July 8. He was born at Meitshet, Russia, in 1877, and emigrated to America in 1921. He was professor of the Talmud at the Rabbi Isaac Elchanan Theological Seminary, New York, and was known all over the world as an authority on Jewish law.

Poland, Sir Harry (Bodkin). English barrister, who was for nearly eighty years a member of the bar, died at London, March 2. He was born at London, July 9, 1829. He was educated at St. Paul's School and became a barrister in 1851 and a bencher of the Inner Temple in 1879. He appeared in practically every famous criminal trial in England prior to his retirement in 1895 (when he was knighted), and as one of the counsel to the Home Office and Treasury represented the Government in famous cases, notably that of the Fenians charged with attempting to blow up Clerkenwell Prison. He was active for many years in law reform, and it was largely through his efforts that the act was passed by which prisoners were allowed to give evidence in their own behalf. He was recorder of Dover, 1874-1901, honorary freeman of the same place, and alderman of the London County Council.

Pope, Thomas E. American chemist and educator,

died at Whitinsville, Mass., October 30, at the age of eighty. He was born at New Bedford, Mass., and was graduated from Harvard. After teaching at Ames Agricultural College, Ames, Iowa, he was appointed professor of chemistry at the Massachusetts Institute of Technology, where he remained for thirty years.

Porter, Major General Sir Robert. British military surgeon, died at Beckenham, England, February 27. He was born in the County of Donegal, Ireland, Jan. 31, 1858, and was educated at Foyle College, Londonderry, Ireland; Glasgow University, and Paris. He entered the British military service in 1881 and saw service in several campaigns, including those in Ashanti, 1895-96, and the South African War, 1899-1902. He won decorations in both wars. In the World War, he was from 1915 to 1917 director of the medical service of the Second Army, and won promotion to the rank of major general. He received the Croix de Guerre of Belgium and the distinction of a Commander of the Order of the Crown of the same country. He was made a Companion of the Bath in 1916, a Companion of St. Michael and St. George in 1919 and a Knight Commander of the Bath in 1921.

Post, Louis Freeland.

Pothier, Aram J.

Potter, Brig. Gen. Charles Lewis.

Potts, Ramsay Douglas. American army officer, died at his birthplace, Washington, D. C., October 17. He was born Sept. 1, 1850, and having been commissioned second lieutenant in the Third Artillery, Mar. 7, 1867, he was graduated from the Artillery School three years later. He rose through successive grades and served in Cuba during the Spanish-American War, 1898, and in the Philippine Islands, 1901-03. He commanded the United States Artillery School, at Fort Monroe, Va., 1904-06, acting at the same time on the National Board of Ordnance and Fortifications, and as president of the Artillery Board, of the Artillery School Board for the revision and drill regulations of the coast artillery. He was then made a member of the General Staff of the United States Army, and was commissioned brigadier general, Jan. 31, 1908. He commanded the Department of the Gulf, 1908-09, Fort William McKinley, and Department Luzon, P. I., 1909-10. The following year, he was appointed commandant of the Army Service Schools, at Fort Leavenworth, Kan., on January 16, and commander of the Central Division, on July 1. He retired April 30, 1914.

Pourtales (J. L.) Frederick (W. J.), Count. Former German diplomat and ambassador to Russia at the outbreak of the World War, died at Bad Nauheim, Germany, May 3. He was born at Oberhofen, Switzerland, Oct. 24, 1853. He was Prussian Minister to Bavaria in 1907 when he was advanced to the rank of ambassador and sent to St. Petersburg as imperial representative there. As such it was his duty to present to the Russian Government the German declaration of war in 1914. After the War he lived in retirement on his estate at Glumbowitz, Silesia.

Powell, Clinton Latham. American educator, died at Baltimore, Md., May 25. He was born at York, Pa., Oct. 29, 1880, was graduated from Amherst College, and continued his studies at Columbia University. He was professor of English at Amherst.

Preston, Homer M. American financier and developer of oil fields, died at Kiantone, N. Y., April 2. He was born at Farmington, Pa., Dec. 1, 1860. He was educated at public schools, and early in life entered the oil business in Pennsylvania. He operated successfully in that territory for many years, and then turned his attention to Oklahoma. There he was associated with the Royal Dutch interests. He retired from active interest in the oil business about 1918 and passed the rest of his life on large farms which he had purchased in Chautauque County, New York, and Warren County, Pennsylvania. He was identified with the development of the carbon-black industry in West Virginia and Louisiana, and had extensive financial interests in banks and public utilities. Mr. Preston was active as a Democrat and served as a member of the Democratic State Committee of New York and as an alternate to the Democratic National Convention of 1924.

Pringle, William Mather Rutherford. English politician, died at London, April 1, at the age of fifty-three. He was born in Berwickshire, Scotland, and was educated at Glasgow University. He read law at the Middle Temple. From 1910 to 1913 Mr. Pringle sat in Parliament as a Liberal, representing Northwest Lancashire, and from 1922 to 1924 he represented the Penistone division of Yorkshire. He was a prominent member of his party, although he never held office, and with the late Earl of Oxford and Asquith led the opposition in the party to Lloyd George. In 1927 a group of Liberals, led by Mr. Pringle and Viscount Grey of Falloden, announced the formation of the Liberal Council, which would not recognize Lloyd George's leadership yet would remain within the Na-

tional Liberal Federation. Mr. Pringle was a recognized authority on the political history of England and on parliamentarianism.

Protogeroff, General Alexander.

Pudukota, Rajah of (His Highness Rajah Martand Bhairava Tondiman Bahadur). Indian ruler, died at Neuilly, France, May 28. He was born Nov. 26, 1875, and succeeded his father in 1886. He was invested with full power in 1894, on the completion of his nineteenth year. Pudukota, one of the native states of the East Madras Presidency of India, with an area of 1179 square miles and a population of 426,813, has been ruled by the Tondiman dynasty from time immemorial. The late Rajah granted his people a representative assembly for consultative and legislative purposes, and a state council of three to act in an advisory capacity. King George V conferred on him in 1913 the Grand Cross of the Order of the Indian Empire. During the World War he was an ardent supporter of the British cause. He passed most of his time at Cannes, France, his affairs in India being administered by a brother.

Puente y Patron, Ricardo González de la. Spanish naval officer, died at Madrid, October 23. Born in 1855, he entered the navy, and was commissioned Captain General in April, 1922. Being on the general staff, he became its vice president and chief admiral.

Puiseux, Pierre Henri.

Purman, William J. American lawyer and legislator, member of the Forty-third United States Congress, died at Washington, D. C., August 13. He was born in Center County, Pa., Apr. 11, 1840, and after studying law, he served with the Union Army during the Civil War. Assigned to duty in Florida in 1865, three years later he was elected to the Florida Constitutional Convention. From 1868-69 he was judge of the Jackson County Court, being elected to the State senate, where he served from 1869-73. He became assessor of internal revenue of the United States for the district of Florida in 1870-72, and the following year he took his seat in the United States House of Representatives, as Republican Representative-at-large from Florida, being reelected to the succeeding Congress, but defeated in 1876.

Putney, Albert Hutchinson.

Quesada, Presentacion.

Raditch, Stefan.

Rai, Lala Lalpat.

Rathbone, Henry Riggs.

Raymond, E. T. See Thompson, Edward Raymond.

Raymond, Robert Mathew.

Reamer, Lawrence. American dramatic critic, died at New York, February 18. He was born at Louisville, Ky. He was graduated from Columbia University and from the law school of the university, and studied abroad. In 1893 he became a member of the staff of the New York Sun, and after many years' service as a reporter he became dramatic critic, and wrote as such until 1920. Then he became a writer of editorials, especially those that dealt with the drama, music, literature, and other arts. He was considered especially well informed concerning operatic works and their presentation.

Reed, Charles Alfred Lee.

Reed, Frank Otis. American educator, died at Tucson, Ariz., December 8. Born at Orange, Mass., July 20, 1876, he was graduated from Amherst in 1899, and after attending the universities of Paris, Madrid, and Halle, received from Harvard the M.A. degree in 1904, and the Ph.D. degree in 1905. Professor Reed commenced teaching at Amherst in the year of his graduation and subsequently was appointed professor of Romance languages at the University of Wisconsin. At the time of his death, he was professor of Spanish at the University of Arizona.

Reid, William. South African astronomer, died at Cape Town, S. A., June 8. In January, 1927, the Harvard Observatory at Cambridge, Mass., received a cablegram from the astronomical clearing house at Copenhagen, Denmark, announcing the discovery of a supposedly new comet of the eighth magnitude, to be called Reid's comet. It was assumed that the discoverer was Mr. Reid, of the Good Hope Observatory, who already had discovered seven other comets.

Reinach, Theodore.

Reinhardsen, Col. Gustave S. American Salvation Army official, died at Mount Vernon, N. Y., July 3. He was born in Norway in 1866, and was a sailor in his early years. In 1883 he joined the Salvation Army, and he rose in its ranks until he became a colonel, and national auditor and chief financial secretary of the American branch of the Army.

Remey, Rear Admiral George Collier.

Restrepo, Bernardo Herrera. Roman Catholic prelate of Colombia, South America, archbishop of Bogotá and primate of Colombia, died at Bogotá, January 2. He was eighty-three years old. Educated in France and Italy, Archbishop Restrepo early went to Colombia and

spent forty years as head of the archdiocese of Bogotá.

Rhoads, John Neely. American ophthalmologist, died at Philadelphia, Pa., January 29. He was born in Montgomery County, Pennsylvania, in 1860, and was educated at the Trenton, N. J., Normal School and the Jefferson Medical College, Philadelphia. He became a lecturer at the college soon after his graduation, and established the children's clinic there. He served at the Jefferson and St. Agnes Hospitals until 1899, when he became ophthalmologist at the Polyclinic Hospital. Dr. Rhoads was credited with the invention of more than 35 medical instruments and appliances, and was the author of numerous professional articles.

Riccio, Vincenzo. Italian politician, died in Italy, August 21, at the age of seventy. Having been under-Secretary of the interior in Sonnino's cabinet before the World War, he was appointed to the Ministry of Posts by the first war Prime Minister, Salandra, and he was made Secretary of Agriculture during Orlando's premiership in 1917. He was appointed Minister of Public Works in 1922, and at the time of his death he was a member of the Chamber of Deputies.

Rice, William Clarke. American painter and illustrator, died at New York, February 14. He was born at Brooklyn, N. Y., Apr. 19, 1875, and was graduated from the College of the City of New York. He studied art at the school of the Art Students' League. He was engaged principally in the production of illustrations for magazines and the painting of portraits and mural decorations. His mural paintings were placed in public schools, hotels, and other public buildings, of New York. He also taught drawing and design. Mr. Rice was a member of the Architectural League of New York and of the National Society of Mural Painters.

Richards, Herbert Maule.

Richards, Theodore William,

Richmond, Harry Alden.

Richmond, Mary Ellen. American social worker, died at New York, September 12. She was born at Belleville, Ill., Aug. 5, 1861, and was graduated from the Baltimore High School, and became general secretary of the Baltimore Charity Organization Society in 1891, and of the Philadelphia Charity Organization Society in 1900. She was appointed director of the Charity Organization Department of the Russell Sage Foundation in 1909, and served in that position until her death, devoting herself particularly to the problem of child marriages. She received the M.A. degree from Smith College in 1921. Besides editing several publications on social work, Miss Richmond wrote: *Friendly Visiting Among the Poor* (1899); *The Good Neighbor in the Modern City* (1907); *Social Diagnosis* (1917); *What is Social Case Work?* (1922); and she collaborated in *Child Marriage* (1925).

Richmond, and Gordon, Seventh Duke of.

Ricker, Edward P. American hotel proprietor, died at his birthplace, Poland Springs, Me., December 22, at the age of eighty-one years. He developed the Mansion House from a small country inn to one of the most important of the Ricker chain of hotels. He was active in the Republican party.

Ries, Elias Elkan.

Rivera, José Eustasio. Colombian politician and author, died at New York, December 1, at the age of forty. Born at Neiva, Colombia, he became a member of the Chamber of Deputies, being at one time its president. He was also president of various committees to investigate legislative matters. He was appointed secretary to several embassies, and represented his country at the centenary independence celebrations of Peru and Mexico. At the time of his death, Dr. Rivera was in the United States arranging for the translation of his novel, *La Voragine*, a fifth edition of which was being published.

Rixey, Rear Admiral Prestley Marion.

Roberts, Theodore. American actor, died at Los Angeles, Calif., December 14. Born at San Francisco, Calif., Oct. 8, 1861, he attended the California Military Academy, Oakland. He first appeared on the stage as Barabas in *Richelieu*, May 1, 1880. He was on tour with William H. Crane and Stuart Robson, 1881-82. After many American engagements he made his debut in London as Henry Canby in *Arizona*, Feb. 3, 1902. Although he at first scorned the moving pictures, Mr. Roberts was in the production of *The Call of the North*, 1914. Subsequently signing a life-long contract with Paramount Pictures, he became one of the popular "old man" characters of the screen. Among his best portrayals, though out of his usual homely rôle, was that of Moses in *The Ten Commandments*.

Robertson, Felix Huston. American soldier, brigadier general in the Confederate States Army, died at Waco, Tex., April 20. He was born at Washington, Tex., Mar. 9, 1839, and studied at the U. S. Military Academy, 1857-61, resigning in January, 1861. In March of the same year he was commissioned as second lieutenant of artillery in the Confederate States

Army. He rose successively to captain and lieutenant colonel of artillery before becoming brigadier general of cavalry in the corps of General Joseph Wheeler. It was said that Robertson was the youngest man to be commissioned as general in either the Union or the Confederate Army in the Civil War, and he was said to be also, before his death, the last surviving member of the general staff of the Confederate States Army. After the Civil War he studied law and he was admitted to the bar of Texas in 1876, but in 1903 he became a farmer, at Crawford, Tex. In 1927 the United Confederate Veterans, in convention, bestowed upon him the title of honorary commander-in-chief.

Rose, Frank Herbert. English journalist, playwright, labor leader, and member of Parliament, died at London, July 10. He was born at London, July 5, 1857, and was educated at the British School, Lambeth, London, and in evening classes. He worked as an engineer until 1893 and as a trade-union organizer until 1900. From that year until his death he was engaged in journalism and the writing of plays and in his duties as a Labor member of the House of Commons for Aberdeen North (since 1918). He was one of the most active opponents of Communism in the Labor Party and was also a strong critic of the proposed nationalization of industry in Great Britain. He wrote *The Coming Force*, and *Our Industrial Jungle*, besides numerous pamphlets and articles on economic subjects; also stories, sketches, etc., and the plays, *The Whispering Well*, *Trouble in the House*, *The Second Mrs. Banks*, *The Young Guv'nor*, and others.

Round, John Horace. English historian, died at Brighton, England, June 24. Born at Brighton, Feb. 22, 1854, he was educated at Balliol College, Oxford, where he took his master's degree with first-class honors in modern history. He insisted upon the necessity of critical examination of original records in the writing of history, and his vehemence in controversy entailed the making of many enemies. However, his erudition and painstaking scholarship were generally recognized, and he early established a reputation as a constructive historian. He was especially noted for his studies in the histories of the notable families of England, and from 1914 to 1921 he held the office of honorary historical adviser to the Crown in peerage cases. The influence of his work on the development of historical scholarship in England, especially in relation to feudal and mediæval times, was profound. The University of Edinburgh conferred on him an Hon. LL.D. He contributed to historical reviews, to the *Dictionary of National Biography*, etc., and published *Geoffrey de Mandeville* (1892); *Feudal England* (1895); *The Commune of London* (with a great deal of material dealing with London at the end of the twelfth century, discovered by Round himself, and quite as valuable for London as the two preceding titles are for England in general in the same period 1899); *Calendar of Documents Preserved in France* (1899); *Studies in Peerage and Family History* (1901); *Peerages and Pedigrees* (1910); *The King's Serjeants* (1911).

Rowan, William Andrew. American, high official of the order of Free and Accepted Masons, died at Pelham, N. Y., January 2. He was born at Vienna, Mo., in 1875. He was a building contractor by trade. Mr. Rowan was elected master of Ancient Lodge, New York City, in 1910, and in 1911 he was appointed district deputy grand master of the Eighth Masonic District of New York State. In 1922 he was elected deputy grand master of the State and was reelected in 1923. In May, 1924, he was chosen grand master of the State and was reelected in the following year. He was made an honorary thirty-third degree Mason in 1924.

Royall, William Bailey. American educator, died at Wake Forest, N. C., January 27. He was born at Mount Pleasant, S. C., Sept. 2, 1844. He studied at Furman University, was graduated in 1859, and was at Wake Forest College when the Civil War began. He served in the Confederate Army throughout the war. He received his M.A. from Wake Forest in 1866, and began to teach Greek in that institution in the same year. He was professor of Greek at Wake Forest from 1871 until he died; among his pupils were numbered twelve men who became heads of Southern colleges, and two who became presidents of theological seminaries. Dr. Royall was ordained to the Baptist ministry in 1869. He received the degree of D.D. from Judson College in 1887 and that of LL.D. from Furman University in 1907.

Rozwadowski, Thaddeus. Polish soldier and general, died at Warsaw, October 18, at the age of sixty-six. General Rozwadowski was Chief of the Polish General Staff when the Russian Bolsheviks were defeated in 1920. He was later imprisoned because a company which he organized to aid mobilized soldiers became bankrupt.

Rule, William.

Rushdi, Fasha Hussein.

Ryan, Thomas Fortune.

Ryerson, Edward Larned. American iron and steel merchant, died at Chicago, Ill., January 19. He was born at Chicago, Nov. 24, 1854, and was graduated from Yale in 1876. In the same year he entered the wholesale iron and steel business that had been established by his father in 1842, and from 1881 to 1911 he served as president, leaving that office to become chairman of the board of directors. He was also a director of the Merchants' Trust Company of Chicago. Mr. Ryerson was active in the advancement of the musical, art, and literary interests of Chicago, and was president of the Newberry Library from 1914 and governing member of the Chicago Symphony Orchestra and of the Art Institute of Chicago.

Sackville, Third Baron (Lionel Edward Sackville-West). British peer and soldier, died at Knole, Sevenoaks, Kent, England, January 28. He was born May 15, 1867, and was educated at Wellington and at Christ Church, Oxford, where he took his degree with honors in modern history. He was formerly lieutenant-colonel of the West Kent Yeomanry, and he served in the World War in Gallipoli, Egypt, Palestine, and France. Lord Sackville in 1908 succeeded his uncle, the second Lord Sackville, who was a well-known diplomat, when minister to Washington, in 1883, the second Lord Sackville incurred the displeasure of the American Government by alleged interference in American politics, and was recalled. The third Lord Sackville was called upon in 1910 to defend his title and estates against a claimant who called himself a son of the diplomat, but who was defeated.

Sage, Agnes Carolyn. American author, died at Hackensack, N. J., November 12. She was born in Brooklyn, N. Y., Mar. 17, 1854, and attended the Dearborn Seminary in Chicago. Having lived at Oswego during her childhood, she moved to Chicago in 1870, and in 1875 returned to Brooklyn. She went to New Jersey in 1900, where she remained until her death. Later known as the author of children's stories, she started her literary career with an article published in 1873, and thereafter contributed to numerous magazines. In 1887, she wrote her first juvenile book, *Christmas Elves*, which she followed by several others, including: *The Jolly Ten* (1888); *A Little Colonial Dame* (1898); *A Little Daughter of the Revolution* (1899); *The Boys and Girls of the White House* (1909); and *Two Girls of Old New Jersey* (1912).

Said Pasha, Mohammed.

Sanford, Harry Charles. American civil engineer, died at Englewood, N. J., April 22. He was born at Mantua, Ohio, in 1869, and was graduated from Valparaiso University, Valparaiso, Ind., as a civil engineer. He was chiefly engaged during his professional career in tunnel, subway, and bridge work, among his earlier experiences being a connection with John B. McDonald, the contractor who built the first subway for New York City. He was co-inventor of the Coughlin-Sanford swing-rail frog. In 1925 Mr. Sanford became vice president of the Rosoff Subway Construction Company, working on the new Eighth Avenue subway, New York City. He was connected for nearly thirty years with the Degnon Construction Company, of which he was a director, and he was a director of the Degnon Terminal Railway Company and vice president, treasurer, and director of the Universal Speed Control Company.

Sapah-Gulian, S. Armenian patriot and editor, died at Greystone Park, N. J., April 29. He was born at Sunyatz Ashkar, Armenia, Feb. 17, 1861. He was principal of a school in Armenia and was prominent in the agitation for the amelioration of Armenian conditions under Turkish rule, until he was compelled to seek refuge at Paris. There he studied at the Sorbonne, and became editor of the Armenian nationalist newspaper, *Hunchak*, organ of the Hunchakian party. When the Young Turks assumed control at Constantinople, Mr. Sapah-Gulian founded there an Armenian newspaper, *Norashkar*, but at the outbreak of the World War he was compelled to fly again; twenty of his associates were executed. He escaped first to Egypt and then to America; he had visited the United States in 1903 and had founded in Boston an Armenian newspaper, *Eridassard Hayastan* ("Young Armenia"). This he removed in 1918 to New York, where he edited it until his death.

Sarwat Pasha, Abdel Khalek.

Scheer, Admiral Karl Friedrich Rienhard von.

Scheler, Max Ferdinand.

Schlaikjer, Erich Friedrich. German author and actor, died February 11. He was born at Apenrade, Nov. 20, 1867, and after following the usual course of study, he attended a theatrical school. Entering the Seminar Hadersleben in 1888, he served as an instructor until 1892, and acted until 1894. He then left the stage, and devoted himself to writing. His books include: *Die Schönheitswandler* (sketches 1897); *Hinrich Losen* (drama, 1900); *Berliner Kämpfe* (essays, 1901); *Des Pastors Riecke* (comedy, 2d and

3d ed. 1902); *Der lahme Hans* (drama, 1914); *Mein Freund Niels und andere* (sketches, 1905); *Ausserhalb der Gesellschaft* (drama, 1908); *In Schlimmen Händen* (novel, 1914); *Doktor Franzens Abenteuer* (farce, 1915); *Die Welt der Gestorbenen* (1920); *Im Kampf mit der Schande* (political essays, 1920); and *Die Vision der schwedischen Margret* (1922).

Schlapp, Max Gustav.

Schmitt, Christian.

Schmitt, Ettore. See Svevo, Italo.

Schmitz, Eugene F.

Schneider, Albert.

Schneider, Jacques.

Schoenberger, George Christian. American civil engineer died at New Orleans, La., September 24. He was born at Buras, La., Jan. 17, 1875, and was graduated from Louisiana State University in 1898. He then worked with Federal engineers on levee construction, for the Mississippi River Commission, and in 1917 he was made a member of the board of State engineers in charge of levee construction, becoming chief State engineer in 1925. Mr. Schoenberger's engineering experience had been gained in work on the Mississippi River, and during the flood of April, 1927, he controlled the dynamiting of the Poydras levee, which saved New Orleans.

Schroeder, Alvin.

Schwabach, Felix. German financier, died at Berlin, January 7. He was born at Sondershausen, Germany, June 20, 1853, and was educated at the universities of Leipzig, Heidelberg, and Berlin, where he studied law and political economy from 1873 to 1876. From 1876 to 1903 he was in the service of the Government railways, and in 1904 he visited the United States on a Government mission connected with the study of labor problems. During the World War he formed part of the German Government staff at Brussels. He was a member of the Reichstag in 1907. Herr Schwabach was connected with financial houses in Germany and was reputed to be one of the best international economists in Europe. With Privy Councillor Hoff, he wrote a book on the control and operation of American railroads.

Schwanhauser, William. American engineer and inventor, died at New York, January 15, at the age of seventy-two. He was born at Würzburg, Germany. He was graduated from the Polytechnic Institute of Mittweida, Saxony, in 1874. After service with Osterheld & Bickmeyer, Yonkers, N. Y., in the development of pumps, typewriters, motors, reapers, and mowers, and with the Otis Elevator Works, Yonkers, as assistant general superintendent, he became connected with the Worthington Hydraulic Works in 1885. He supervised the manufacture of pumps, and in 1895 was placed in charge of the Worthington plant in Germany. In 1906 he became chief and consulting engineer of the International Steam pump Company, later the Worthington Pump and Machinery Corporation. He took a prominent part in the introduction of compound- and triple-expansion engines and of a device for returning to the boilers steam that had been wasted previously.

Sedley, W. H. See Brown, Sedley.

Seep, Joseph. American pioneer in the oil industry, died at Titusville, Pa., April 1. He was born at Voerden, Germany, May 7, 1838, and was taken to the United States in 1849. In early life he was a cigar-maker, but later engaged in cotton buying at Lexington, Ky. In August, 1859, the first oil well in the United States was sunk at Titusville, and Mr. Seep, foreseeing the possibilities of the industry, early removed to that town. From that time until a few weeks before his death he was actively engaged in the oil business, and was one of the best-known men in it. He was the oldest survivor of the former business associates of John D. Rockefeller, Sr. While still a young man, Mr. Seep was commissioned by leading refineries to purchase crude oil in the Pennsylvania fields, and at one time he maintained 37 offices in various parts of the United States. When the Standard Oil Company was formed, in 1871, he became associated with it. One of its subsidiary companies was the South Penn Oil Company, with which Mr. Seep was intimately identified, and when the original Standard Company was dissolved, in 1911, he was made president of the South Penn Company. Later he became chairman of the board of directors of the company, and he held that post until his death. He was the oldest director of the Seaboard National Bank of New York, which he helped to organize, and had many other large business interests, especially in the Mine and Smelter Supply Company, of Denver, Colo. He was noted for his gifts to Roman Catholic charities, and he was made by the Pope a Knight of the Order of St. Gregory.

Seested, August Frederick. American journalist, died at Kansas City, Mo., October 2. He was born at Tondern, Denmark, Mar. 26, 1864, and, moving to the

United States in 1880, settled in Kansas City, Mo., where he found work with the *Star*. Remaining with that paper, he became general manager in 1902, and in September, 1927, he was made president of the company.

Seeley, Levi. American educator, died at Amherst, Mass., December 23. Born at North Harpersfield, N. Y., Nov. 21, 1847, he was graduated from the Albany Normal School in 1871, and received the Ph.D. degree from the University of Leipzig in 1886. Before going to Germany, in 1883, he was principal of New York public schools at Orient, 1871-74, New Hamburg, 1874-75, Patchogue, 1875-81, and from 1881 until 1883 he was superintendent of schools at Lansingburg, N. Y. On his return to the United States, he again served as school principal, at Cobleskill, 1886-87, and at Ferry Hall Seminary, Lake Forest, 1887-94. After traveling in Europe for a year, he was appointed, in 1895, professor of pedagogy at the Trenton Normal School, where he remained until his retirement in 1920. Williams conferred on Dr. Seeley the honorary A.M. degree in 1871. He wrote: *The Grube System of Numbers* (1887); *The Grube Idea* (1890); *The German Common School System and Its Lessons to America* (1896); *History of Education* (1899); *The Foundations of Education* (1901); *A New School Management* (1903); *Seeley's Question Book* (1905); *Elementary Pedagogy* (1906); and *Teaching, Its Aims and Methods* (1915).

Semon, Larry. American motion-picture comedian, died near Victorville, Calif., October 8. Born while his parents were traveling with a theatrical troupe in Mississippi, in 1890, he grew up with the vaudeville company, and, inheriting his father's gift for drawing, he was sent to an art school. After working at odd jobs, he became a cartoonist on the *New York Sun*, and while there, established a connection with the Vitagraph Company. He worked for two years in that company's studios before making a sudden and complete success as the slapstick hero of a short comedy film. His name was soon announced with numerous motion pictures, among the most popular of which were, *Stop, Look, and Listen*, and *The Wizard of Oz*.

Shaffer, Newton Melman.

Shakespeare, John Howard.

Shaw-Lefevre, George John. See Eversley, First Baron of old Ford.

Sheldon, Charles. American explorer and author, died in Nova Scotia, September 20. He was born at Rutland, Vt., Oct. 17, 1867, and was graduated from Yale University in 1890. Three years later he became assistant superintendent of the Toledo division of the Lake Shore & Michigan Southern Railway, and he was general manager of the Consolidated Car Heating Company, in Albany, N. Y., 1894-98, and of the Chihuahua & Pacific Railway, in Mexico, 1898-1902. Mr. Sheldon devoted himself to exploring and hunting expeditions in the Yukon Territory, in Alaska, and in Mexico, writing several books of his adventures, including: *The Wilderness of the Upper Yukon* (1911) and *The Wilderness of the North Pacific Coast Islands* (1912).

Sheldon, Charles Mills. American artist and correspondent resident in England, died at London, March 15. He was born at Lawrenceburg, Ind., June 24, 1866. After receiving a public school education, he studied art at the Académie Julian, Paris, under Constant and Lefebvre. His work consisted mainly of illustrations of military campaigns and other outstanding events in many parts of the world, and he also wrote articles describing the events. He traveled in the Southern United States in 1889 for the Associated Press; from 1892 to 1895 he was illustrator for the *Pall Mall Budget*, and in 1896 he became an artist and correspondent for *Black and White*. He described the Spanish-American War for that magazine and for *Leslie's Weekly*. He was with Kitchener at Khartoum, and he was present at the coronation of King Edward VII, the marriage of King Alfonso XIII of Spain, the South African War, the opening of the Assuan Barge, and the Durbar at Delhi. In the World War he went to the British front as a special artist for the Northcliffe press.

Shumway, Edgar Solomon. American educator and classicist, died at Brooklyn, April 18. He was born at Belchertown, Mass., June 16, 1856. He was a graduate of Amherst College, 1879, and studied Roman law and similar subjects at the Universities of Berlin and Marburg and at the archaeological institutes at Rome and Athens. His first teaching position was at Cheltenham Military Academy, 1880-82; then he became, in succession, professor of Latin and Greek at the State Normal School, Potsdam, N. Y., 1882-83; adjunct professor and professor of Latin language and literature at Rutgers College, 1888-1900; lecturer on Roman law, University of Pennsylvania, 1900-04; head of the classical department, Manual Training

High School, Brooklyn, N. Y., 1904-26. He was prominent in movements for the betterment of the conditions of teachers, especially in New York City, and was a member of numerous learned societies. Rutgers College conferred the degree of Ph.D. on him in 1893. Dr. Shumway wrote and edited books on the classics and life of Greek and Rome, including: *A Day in Ancient Rome*; *Latin Synonyms*; *Syllabus of Classical Archaeology*; *Synopsis of Sources, Literature, and Language of Roman Law*.

Siemens, Alexander.

Sims, Charles.

Sinha, Lord.

Skinner, Belle. American philanthropist and collector of musical instruments, died at Paris, France, April 9, at the age of forty-seven. She was born at Skinnerville, Mass., and was graduated from Vassar College. Shortly after her graduation she traveled in France and was impressed with the beauty of the village of Hatton-châtel. This little place, in the St. Mihiel salient, was wrecked in the World War, and Miss Skinner devoted much of her time and large sums of money contributed mainly by herself to the work of reconstruction. This was finished just before her death, but she never saw the result of her labors. In recognition of her services to France the Government of that country made her a chevalier of the Legion of Honor and an officer of public education, and bestowed on her the Médaille de la Reconnaissance Française. She was the owner and collector of the "Belle Skinner Collection of Musical Instruments."

Skinner, Charles Rufus.

Skinner, Mrs. Henrietta Channing Dana. American author, died at New York, January 29. She was born at Cambridge, Mass., Feb. 22, 1857, the daughter of Richard Henry Dana, author of *Two Years Before the Mast*. She was educated at private schools in America and Germany, and also attended Radcliffe College, 1886-88, and studied music at Stuttgart, Germany, and at Paris under César Franck. She was a frequent contributor of short stories and travel articles to magazines, and published four books. *Espiritu Santo* (1890); *Heart and Soul* (1891); *Faith Brandon* (1911); and *Their Choice* (1913). She was honorary governor general of the Order of Descendants of Colonial Governors and a member of various other patriotic societies.

Skouloudis, Stephanos.

Sloan, William. Canadian statesman, died at Victoria, B. C., March 2, at the age of sixty-one. He was minister of mines of British Columbia since 1916, and provincial secretary from 1924 to 1927. A few months before his death he relinquished the post of provincial secretary which he had held in three administrations.

Sloane, William Milligan.

Slocum, Herbert Jermain. American army officer, colonel, U. S. A., retired, died at Washington, March 29. He was born at Cincinnati, Ohio, Apr. 25, 1855, and was graduated from the U. S. Military Academy in 1876. He was assigned to the infantry, but was transferred almost immediately to the cavalry, in which branch his army career was passed, save for three years, 1899-1902, when he was in the quartermaster corps. He was graduated from the cavalry school in 1883. At the time of the raid of Pancho Villa, of Mexico, on Columbus, N. M., on Mar. 9, 1916, Colonel Slocum was in command of the Thirtieth U. S. Cavalry on the border, and he sent troopers into Mexico after Villa and directed the fighting until General Pershing, with a large force of men, assumed command. Slocum had been organizer of the Cuban Rurales in 1900 and adviser to the Military Governor of Cuba, 1906-1909.

Sluder, Greenfield. American physician, died at his birthplace, St. Louis, Mo., October 9. Born in 1865, he was graduated from Washington University in 1888, and continued his medical studies at Vienna, 1896-98, at Berlin, 1900, and at London 1905. He served in the intervals at the Washington University Medical School as instructor 1891-96, and as lecturer in laryngology, 1898-1905. In the latter year he was appointed professor and director of otolaryngology, holding that position for twenty years. Besides belonging to a number of medical societies, including the American Medical Association, he was at one time president of the American Laryngological Association. Dr. Sluder wrote a number of medical articles, as well as two authoritative books on sinuses, *Concerning Some Headaches and Eye Disorders of Nasal Origin* (1918); and *The Method of Tonsillectomy by Means of the Alveolar Eminence of the Mandible and Gulolette, Together with Review of the Collateral Issues* (1923).

Smart, George Thomas.

Smith, Alexander.

Smith, Charles G. American insurance underwriter and financier, died at Stamford, Conn., August 19. Born in Brooklyn, N. Y., 1859, he was first employed by the Phoenix Insurance Company of that city when

he was nineteen years old. After working as special agent for the Queen Insurance Company, he became manager of the Factory Insurance Association of Hartford at its establishment in 1890; he was secretary of the Great American Insurance Company eight years later, becoming president in 1917, and chairman of the board in 1928. He was also at the head of other companies including the Massachusetts Fire & Marine Insurance Company, the American National Insurance Company, and the Mount Royal Insurance Company. Mr. Smith was one of the founders of the American Foreign Insurance Company, of which he subsequently became vice president, and was a director of several banks and corporations.

Smith, Edgar Fahs.
Smith, Brig. Gen. George Rodney. Former paymaster general U. S. Army, died at Washington, D. C., May 24. Born in New York State, May 7, 1850, he was graduated from the U. S. Military Academy and entered the Twelfth Infantry as second lieutenant, June 16, 1875. Promoted through the successive grades, he was commissioned lieutenant-colonel in the paymaster general's department, Jan. 25, 1904, and on Feb. 16, 1912, was made paymaster general with the rank of brigadier general. He retired from active service on February 15 of the following year.

Smith, James Francis.
Smith, Walter Lloyd. American jurist, died in Bermuda, March 6. He was born at Elmira, N. Y., Apr. 18, 1856. He was graduated from Princeton in 1877 and was admitted to the New York bar at Elmira, N. Y., in 1879. He practiced law at Elmira until he was appointed to the bench of the Supreme Court of New York in 1888, in succession to his father, who had retired. In 1908 he became presiding justice of the appellate division of the Third Department, serving there until 1915, when he was designated associate justice of the appellate division of the First Department. In 1925 he was compelled by ill health to resign. Judge Smith was elected to the New York Supreme Court bench three times for terms of four-teen years each.

Sonneck, Oscar George Theodore. Great-great-granddaughter of Louis Philippe, King of France, died near Evian, October 11. She was born at Neuilly, Oct. 19, 1898. Being the second daughter of the Duke of Vendôme and Princess Henriette of Belgium, she was a member of the cadet branch of the French Valois and Bourbon houses.

Sorge, Kurt Oscar.
Sorlie, Arthur Gustav.
Speck, William A. American educator and authority on Goethe, died at New Haven, Conn., October 9, at the age of sixty-three. He became a professor at Yale University, 1913, and brought with him the finest Goethe collection outside of Germany. He continually added to his material with the discernment of one familiar with Goethe, his country, and his influence. Professor Speck left to the Yale library his rare collection, which is particularly complete in the German legend, and in the English translations of the German.

Spendiarov, Alexander. A Russian composer, died in the Crimea, in March. He was born in Kachov, in 1871, and received his musical education from Rimsky-Korsakov in Petrograd. In Russia his orchestral and choral compositions are highly esteemed, while outside of his native land he is known chiefly as a composer of masterly *a capella* sacred choruses.

Spicer, J. Lindley. American leader of the Friends (Quakers), died at White Plains, N. Y., May 18. He was born at Glens Falls, N. Y., Dec. 6, 1854. He was educated at the Fort Edward Collegiate Institute and at Oakwood Seminary, a school maintained by the Friends. He served as missionary in the Adirondacks, New York State, for the American Sunday School Union, and was leader of the Friends' Meeting House in New York City, with the title of field secretary of the adult school. Mr. Spicer wrote children's stories, and was a contributor to *The American Friend* and other religious periodicals.

Sproul, William Cameron.
Squair, John. Canadian educator, died at Toronto, Ont., February 15. He was born at Bowmanville, Ont., in 1850 and received his education at the University of Toronto, graduating in 1883 with a gold medal in modern languages. Immediately after his graduation he was appointed to the teaching staff of the university, and remained there, as fellow, lecturer, associate professor, and professor of French, until he retired from active duty and became professor emeritus in 1916. In 1914 he was made an Officer de l'Instruction Publique of France, and in 1924 a chevalier of the Legion of Honor, in recognition of his work in teaching French. He was editor and author of many textbooks.

Starck, Admiral Oscar. Former Russian naval officer, died in Finland, November 15, at the age of eighty-

two. He was in high command at the outset of the Russo-Japanese War, in 1904, when the Japanese battleships defeated the Russian Navy outside the Harbor of Port Arthur.

Statler, Ellsworth Milton.
Stead, Francis Herbert. English clergyman and social reformer, died at London, January 14. He was born at Howdon-on-Tyne, England, Oct. 20, 1857, and was educated at Owens and Airedale colleges, at Glasgow University, and in Germany. He was a reporter for provincial newspapers in 1874-76, studied for the Congregational ministry (1876-84); was pastor of a church at Leicester (1884-90), and editor of the *Nonconformist and Independent* (1890-92). Actively identifying himself with social-betterment work, he became warden of the Robert Browning Settlement, 1894, and later, with Charles Booth, initiated the conferences at which the National Committee on Old-Age Pensions (1898) originated. He was the convener of the Browning Hall Conference on housing and locomotion in 1901 and originated Labor Week in 1910. He was also the convener of the League to Abolish War (1916) and of the international conference on labor and religion (1919). He published: *Handbook on Young People's Guilds* (1889); *The Kingdom of God, a Plan of Study* (1894); *How Old-Age Pensions Began to Be* (1909); *Eighteen Years in the Central City Swamp* (1913); *No More War*, a novel (1917), and other works on sociology and religion. He was the brother of the late William T. Stead, editor and reformer (1849-1912).

Steinmetz, Major Joseph Allison.
Sternberg, Leo J. Russian ethnologist, died August 14. Born in 1861, he was among the many Siberian scientists exiled, for political reasons, to Sakhalin Island. While there, 1889-99, he investigated the Gilyak, Ainu, and Orok races, and he later studied the Gilyak and Tungus people of the River Amur. Returning to Russia, he lectured at the Geographic Institute and at the University of Leningrad and was made head curator of the anthropological museum of the Academy of Sciences.

Stetson, Augusta Emma.
Stevens, Emily.
Stevenson, Eugene. American jurist, died at Paterson, N. J., May 22. He was born at Brooklyn, N. Y., June 28, 1849, and after graduation from New York University, 1870, studied at the law school of the same institution. He was admitted to the bar of New Jersey in 1874. From 1881 to 1886 he was prosecutor of Passaic County, New Jersey, returning to private practice until 1901, when he was appointed vice chancellor of the State of New Jersey. He held this office for three terms of seven years each, and retired in 1921. He was president of the New Jersey State Bar Association in 1900. From 1904 until his death he was a member of the council of New York University, and he served as its vice president from 1910 until his death. In 1920, on the fiftieth anniversary of his graduation, the university honored him with the degree of LL.D.

Stilwell, Arthur Edward. American financier and railroad builder, died at New York, September 26. He was born at Rochester, N. Y., Oct. 21, 1859, and was educated at public schools. After moving to the West and engaging in the printing business, he was an officer in the Travelers Insurance Company, of Hartford, Conn., until 1887. He built the Kansas City Sub Belt Railroad, the first of the seven railways which he financed, and also constructed a line between Kansas City and the Gulf of Mexico. He became president, in 1891, of the road which was later known as the Kansas City Southern Railway Company. He subsequently designed and built Port Arthur, Texas, and the Port Arthur Ship Canal. He founded the National Surety Company, and was its president for four years, and he was also president of the American Patents Development Company, and director of the Fort Lee & Manhattan Realty Company. Mr. Stilwell, who believed in spiritualism, wrote several books on that and other subjects.

Stock, Eugene. English missionary worker, died September 7. Born Feb. 26, 1836, he was in business until 1873, when, being editor of the *Church of England Sunday School Institute*, 1867-75, he became secretary of the Church Missionary Society, a position which he held until 1906, editing the society's publications until 1902. While employed by the Church he traveled in the colonies, in India, and in the United States, and he became one of the original members of the London Diocesan Conference, 1883, and the House of Laymen, 1885. He was made Diocesan Lay Reader for the Diocese of London in 1891, and subsequently for the Diocese of Rochester and Winchester, and he became a member of the National Church Assembly at its establishment in 1925. He received the D.C.L. degree from the University of Durham in 1908. Besides contributing to church magazines in England and the

United States, he wrote several books, including: *Lessons on the Life of Our Lord* (1871); *Lesson Studies on Genesis* (1880); *The History of the Church Missionary Society*, 4 vols. (1889-1916); *Story of the Bible* (1906); *English Church in the Nineteenth Century* (1919); and *Beginnings in India* (1917).

Stone, Martin F. American physician, died at Baltimore, Md., July 29, at the age of forty-three. He was a special student in medicine at Johns Hopkins University in 1908, and a year later became head of a sanatorium at Towson, Md. In 1921 he was appointed an instructor in clinical medicine at Johns Hopkins, and he filled that position until his death. He was held in high esteem as a student of tuberculosis and a writer and speaker on the subject; during the World War he served the American Government as a consultant in lung diseases, and he made a survey of the government tuberculosis hospitals. In the later years of the War he was medical director of clinics for the American Red Cross in Italy.

Stranahan, Nevada N. American lawyer and officeholder, died at Peterborough, England, July 6. He was born in Oswego County, New York, Feb. 27, 1861. He was educated at the Falley Seminary and at the law school of Columbia University, and began the practice of law at Fulton, N. Y., soon after his admission to the bar in 1884. He was active in the Republican politics of New York State, and served four years in the State Assembly and seven years in the State Senate. After holding office as district attorney of Oswego County, he was appointed in 1901 collector of the Port of New York, for a four-year term. He was reappointed in 1905, but two years later was compelled by ill health to relinquish the office.

Strathclyde, Alexander Ure.
Stratton, Eliphalet Platt. American marine engineer, naval architect and inventor, died at Garden City, N. Y., March 22. He was born at College Point, N. Y., June 12, 1844. After studying at the Walnut Hill Academy, Geneva, N. Y., and the Flushing Institute, Flushing, N. Y., he became connected with the George Quintard Iron Works of New York and the New York Mail Steamship Company. He was also chief engineer for the New York and West India Steamship Company, and an inspector of steam vessels in the port of New York. For a time he was chief engineer and chief surveyor of the American Bureau of Shipping and a member of its board of governors. Among his inventions was the Stratton separator, a device for use in handling steam and hot water. He was a member of societies of naval architects and engineers.

Stratton, Frederick Eugene. American educator, died at New York, June 4. He was born at Athol, Mass., July 5, 1847, and was graduated from Williams College in 1871; in his senior year he was a member of a scientific expedition sent by the college to Central America. He pursued postgraduate studies at Harvard University, the University of California, and the University of Wisconsin. Until 1883 he taught in New England schools, and for the next nine years was high school principal at Davenport, Iowa. From 1892 to 1904 he was principal of an academy connected with Carleton College, Northfield, Minn., and then taught Greek at the college. He went to Fargo College as professor of Greek in 1906, was dean of the college, 1906-11, and college librarian until his retirement in 1923. He wrote: *The Game of the Greek Verb*.

Straus, Simon William. American financier, died at Chicago, Ill., April 2. He was born at Ligonier, Ind., Dec. 23, 1866, and after receiving a public-school education became connected with his father's mortgage and loan business in 1884. He was admitted as a partner in 1888, and in 1898 became president of S. W. Straus & Company, Incorporated. At the time of his death he was president of the Straus Brothers Company and Straus Brothers Investment Company; also of the Franklin Trust and Savings Bank, of Chicago, and of the American Society for Thrift. Mr. Straus was the originator of the "Straus plan" for financing loans on buildings and industrial plants.

Stritt, Marie. German actress and suffrage leader, died September 18. Born at Schässburg, Feb. 18, 1855, the daughter of Josef Bacon, she was educated privately, and on Oct. 24, 1879, married Albert Stritt. After becoming a successful actress, she devoted her interests to the woman-suffrage movement, writing on the subject and editing the *Frauenfrage* from 1899 until 1921. She was also president of a suffrage organization from October, 1911, until October, 1919.

Strong, Benjamin.

Stuart, Leslie.

Stuck, Franz von. German painter, died at Munich, August 30. He was born at Tettweiss, Lower Bavaria, 1863, and while he attended the Munich Academy, he contributed comic drawings to *Fliegende Blätter*, as well as to other papers. He first made a reputation as a painter with "The Guardian Angel of Paradise,"

being known as a romanticist with leanings to brilliant coloring and decorative composition. For a number of years his primitively simplified allegorical studies were in vogue in Europe and in the United States. Among the best known of his paintings are, "Die Sünde," which hangs in Palermo, "Medusa," in the Venice Gallery, "Wilde Jagd," in the Carnegie Gallery, Pittsburgh, "Der Krieg," (War) in the Munich Gallery, and "Die Sphinx," in the Budapest Gallery. He was also a sculptor and architect of talent.

Sudermann, Hermann.

Summers, Charles Lee. American physician, died at Baltimore, Md., July 15. He was sixty-four years old. Dr. Summers had an international reputation as a pediatrician, and was organizer of the babies' and children's clinic of the University Hospital at Baltimore. For a number of years he was a member of the staff of the Children's Hospital of the University of Vienna, one of the largest institutions of its kind. In the ten-year period from the time of his organization of the children's clinic at Baltimore until his death, more than 120,000 children received free treatment there, it was estimated.

Svevo, Italo.

Sweeney, Edward C. American cable manager, died at New York, January 10. He was born at Liverpool, England, Apr. 13, 1857, and began his career as a telegrapher with the Electric & International Telegraph Company, the London & Northwestern Railway Company, the British Postoffice and the Direct United States Cable Company. He acted as operator for the last-named company in England and at Torbay, N. S. When the French Cable Company was established in 1879, Mr. Sweeney was the first telegrapher selected, and he remained with the company until he retired as manager. When he died he was vice president of the United States & Hayti Cable Company.

Sweet, Owen Jay. American soldier, brigadier general U. S. Army, retired, died at New York, January 4. He was born at Kent, Conn., Sept. 4, 1845, and was barely seventeen when he was commissioned as second lieutenant in the One Hundred and Thirty-seventh New York Infantry, on Sept. 6, 1862, and went into service immediately in the Union Army in the Civil War. He fought in several battles, including Fredericksburg, Chancellorsville, and Gettysburg, and was with Sherman on the march to the sea, being the first Union officer to enter the Confederate fortifications at Savannah. At the end of the war he was brevetted major for "gallant and meritorious services." He entered the regular service as a lieutenant, and was advanced through the grades until he was retired with the rank of brigadier general in 1909. In the meantime he served against the Indians and in the Philippines.

Sweet, Thaddeus C. American manufacturer and representative in Congress of the Thirty-second New York District, died at Whitney Point, N. Y., May 1, in an aviation accident. He was born at Phoenix, N. Y., Nov. 16, 1872. He was educated at the public schools and high school of Phoenix. At eighteen he became a clerk in a clothing store, and for two years was a traveling salesman. He entered business with his brother in 1895 under the firm name of Sweet Bros. Paper Manufacturing Company, and was president of the firm until his death. He was also chairman of the board of directors of the Oswego County Trust Company. Mr. Sweet was a Republican and was a member of the New York State Assembly from 1909 to 1920; he was speaker from 1914 to 1920. He was elected to Congress in 1923, 1925, and 1927.

Swinburne, William Thomas. Rear admiral, U. S. N., retired, died at San Diego, Calif., March 3. He was one of the few remaining officers of the navy who had seen service in the Civil War. He was born at Newport, R. I., Aug. 24, 1847, and entered the navy Sept. 29, 1862. After graduating from the U. S. Naval Academy in 1866, he served on various stations. He reached the rank of commander in 1896, and commanded the *Helena* in the North Atlantic fleet during the Spanish-American War. He captured the Spanish steamer, *Miguel Jovar*, and participated in the engagements of Lunas and Manzanilla. In 1899 he joined the fleet under Admiral Dewey at Manila, and later assisted General Lawton in his campaign. Promoted to captain in 1901, he commanded the *Texas* in 1902-04. He was a member of the General Board in 1904-06, and in the latter year was made a rear admiral. Thereafter he was commander-in-chief of the Pacific squadron until 1909, in which year, after a short period at the Naval War College, he was retired.

Tacci, Giovanni Cardinal. Roman Catholic prelate, died at Rome, June 30, at the age of sixty-four. He was born at Mogliano, Italy. He was apostolic delegate at Constantinople from 1904 to 1907, when he became papal nuncio at Belgium. In 1916 he became major domo of the Holy See, and in 1918 prefect of the sacred palaces. On June 16, 1921, he was elevated to

the cardinalate, with the title of Archbishop of Nicæa, and was made secretary of the Congregation of the Eastern Church, of which Congregation the Pope himself is prefect. It exercises jurisdiction over all persons and things pertaining to the Oriental Rite.

Talbot, The Rt. Rev. Ethelbert.

Talbot, Howard.

Tams, J. Frederick. American naval architect and yachtman, died at Tuxedo Park, N. Y., May 27, at the age of eighty. He was born at Philadelphia, Pa., and was educated at New York. He was noted for more than a generation as one of the leading designers of yachts in America; from 1900 to 1913 he was associated with Clinton H. Crane in the firm of Tams, Lemoine & Crane. Their boats were keen rivals of those of the Herreshoffs for supremacy in American waters.

Taylor, Robert Fenwick. American jurist, former chief justice of the Supreme Court of Florida, died at Tallahassee, Fla., February 26. He was born in the District of Beaufort, South Carolina, Mar. 19, 1849, and was educated by private tutors and at the Maryland Military Institute. He was admitted to the bar in 1870, and began practice in Florida. He was a member of the Florida constitutional convention in 1885, and was appointed an associate justice of the Supreme Court of the State in 1891; he was elected to the same office in 1892 and reelected four times for six-year terms. He served three times as chief justice, and was retired in 1925, his long service being praised by the legislature, which voted to him full pay for life.

Taylor, William Sylvester.

Tegnér, Esaias. Swedish educator and philologist, died at Lund, November 28, at the age of eighty-four. Professor Tegnér, who was a grandson of Esaias Tegnér, the poet, was dean of the Swedish Academy. He wrote many textbooks in philology.

Tennyson, Hallam.

Terry, Dame Ellen (Alice).

Tetuan, Duke of. See Vargas, Juan O'Donnell.

Thompson, Edward Raymond.

Thompson, Henry Yates. Former proprietor of the *Pall Mall Gazette*, London, and collector of books and illuminated manuscripts, died July 8. He was born at Dingle Cottage, near Liverpool, England, Dec. 15, 1838. He was educated at Harrow and at Trinity College, Cambridge, winning honors in the classics at school and college, and was called to the bar at Lincoln's Inn, 1867. He did not practice his profession, however. In 1868 he was secretary to Earl Spencer, Lord Lieutenant of Ireland. In 1878 he married the daughter of George Smith, founder and proprietor of the *Pall Mall Gazette*, and the latter turned over the paper to his son-in-law, who conducted it until its sale to W. W. Astor in 1893. Subsequently, Mr. Thompson devoted himself to the collection of illuminated manuscripts and rare books, many of which he presented to the British Museum and other English public institutions. The sales of his collections in 1919-21 ranked among the greatest of their kind ever held. He was made an Officer of the French Legion of Honor in 1907.

Thompson, James Walter.

Thompson, Jefferson de Mont. American financier, philanthropist, and promoter of aviation, died at New York, January 28. He was born at Huntsville, Ala., May 15, 1864. After graduation from the University of Alabama in 1884, he entered business in New York. He became interested in aviation before the World War, and visited Europe to study its possibilities, especially with reference to the use of the airplane in police work. He was chairman of the New York State Aviation Commission. He was also a member of the Delaware River Water Resource Commission established by the State of New York to cooperate with similar New Jersey and Pennsylvania bodies in the devising of ways and means of apportioning and using the water of the river by the three States.

Thompson, William Howard. American officeholder, former U. S. Senator from Kansas, died at Washington, D. C., February 9. He was born at Crawfordsville, Ind., Oct. 14, 1871, and removed to Kansas with his parents when he was nine. After graduating from the Seneca, Kan., Normal School in 1888 he studied law under his father, and was admitted to the Kansas bar in 1894. A Democrat in politics, he served as clerk of the Kansas Court of Appeals from 1897 to 1901, was judge of the Thirty-second District of Kansas in 1906-13, and elected United States Senator for the term of 1913-19. He was a delegate-at-large from Kansas to the Democratic National Convention of 1916 and a member of the platform committee. After he returned from the Senate he practiced law at Kansas City, Kan., and at Tulsa, Oklahoma, to which State he moved in 1923. Four years afterward he went to Washington, D. C., to live.

Thornton-Duesbery, The Rt. Rev. Charles Leonard.

English churchman, Bishop of Sodor and Man, died March 11. He was born at Glen Helen, Isle of Man, Feb. 3, 1867, and became a deacon of the Church of England in 1890 after studying at Shattallan Hall, Isle of Man, and at Trinity College, Dublin. He became a priest in 1891, and held various charges in small English cities and in London before becoming Bishop of Sodor and Man in 1925. His see is the smallest of the Church of England, and the incumbent has the right to a seat but not to a vote in the House of Lords. Bishop Thornton-Duesbery was an evangelical of a liberal type.

Thornycroft, Sir John Isaac.

Thurber, Howard Ford. American engineer and telephone company official, died at New York, April 21. He was born at Brooklyn, N. Y., Aug. 6, 1869, and studied at the Polytechnic Institute of Brooklyn and Cornell University, obtaining the degree of M. E. in 1890. In the same year he became associated with the development of the telephone (then in its early years) as engineer assistant, Metropolitan Telephone & Telegraph Company, New York. He remained with that company and its successors until shortly before his death. He became president of the New York Telephone Company in 1919 and chairman of the board in 1924, retiring in 1927 because of ill health.

Tierney, Father Richard Henry.

Titterington, Morris M. American inventor, died at Pottsville, Pa., July 11, in an airplane accident. Mr. Titterington was an inventor and a manufacturer of instruments for the use of fliers, especially of the earth inductor compass, which he invented. He learned to fly in 1914, joined the Sperry Gyroscope Company, and was sent to France and England to study aviation instruments. During the World War he worked with the Sperrys in the development of an aerial torpedo. In 1921, with Charles Colvin and the late Brice Goldsborough, he formed the Pioneer Instrument Company, of which he was vice president.

Tolman, Albert Harris. American educator and Shakespearean authority, died at Chicago, December 25. He was born at Lanesboro, Mass., June 17, 1856, and after graduating from Williams College in 1877, served as principal of the high school at Chicopee Falls, Mass., 1879-82, before continuing his studies at Johns Hopkins University, 1882-84. He was professor of English at Ripon College, Wis., 1884-93, and there joined the first faculty of the University of Chicago, being assistant professor of English literature, 1893-1907, associate professor, 1907-14, and professor from 1914 until he was made professor emeritus in 1925. He also served as assistant examiner and dean in the colleges, 1895-1900. Williams College conferred on him the L.H.D. degree in 1916. Dr. Tolman edited *Julius Cæsar*, and an *Introduction to Shakespeare* (1901), and wrote: *The Views about Hamlet, and Other Essays* (1904); *Questions on Shakespeare*, 2 vols. (1910); *Questions on Shakespeare, Select Comedies*, 7 pamphlets (1912); and *Falstaff and other Shakespearean Topics* (1925).

Toole, Wade. Canadian professor of animal husbandry and head of that department at the College of Agriculture of Ontario, died at Guelph, Ont., January 11. He was one of the leading authorities in the Dominion of Canada on livestock, and was head of his department at the college for ten years.

Torrey, Reuben Archer.

Towne, Charles Arnette.

Tracy, James Madison.

Tracy, Louis.

Trematon, Viscount. Son and heir of the Earl of Athlone, Governor General of South Africa, died at Lyons, France, April 15, as the result of an automobile accident on April 1. He was a nephew of Queen Mary of England, sister of the Earl of Athlone. He was born at Claremont, Usher, England, Aug. 24, 1907, and was christened Rupert Alexander George Augustus. The family name was originally Teck, but this was abandoned during the World War, with other German names, ranks, and titles, when the former Duke of Teck became the Marquis of Cambridge and his younger brother was created Earl of Athlone and Viscount Trematon. The latter title was borne by the son of the earl, according to custom, as a "courtesy" title. The mother of the late viscount was Princess Alice of Albany, a member of the British royal family. The Viscount was educated at Eton, and, from 1925, at Cambridge.

Trepov, Prince Alexander Feodorovitch.

Trevelyan, Sir George Otto.

Trickett, William.

Tschudi, Georg J. Friedrich von. President of the German Air Council, died at Berlin, October 7. He was born at Wiesbaden, Jan. 29, 1862, and he entered the German military service in 1881. He was influential in the development of aeronautics, and was appointed commander of the balloon division of the army in 1895, accompanying the German balloon ex-

hibition to the St. Louis Exposition in 1904. On his return from the United States, he organized the wireless telegraph division in the army's signal service. He served during the World War as commander of the German air base at Antwerp. After the war he continued to work in the aviation department, and in 1928 he managed the arrangements for an airplane exhibition in Berlin. Besides heading the air council, Major Tschudi was vice president of the Aero Club.

Twitchell, Herbert Kenaston, American banker, died at Brooklyn, July 11. He was born at Weybridge, Vt., Nov. 26, 1865. He studied at Beeman Academy, New Haven, Vt., and at the age of nineteen entered the insurance business. His first banking position was with the Charter Oak National Bank of Hartford, Conn., 1887, and in 1889 he became assistant teller of the Chase National Bank, New York. He remained with that bank until 1907, when he was made assistant cashier of the Chemical National Bank. He rose to the vice presidency of the latter institution in 1911 and to the presidency in 1917. In 1920 he became chairman of the board, and in 1923 he assumed the presidency of the Seamen's Bank for Savings, holding that office until his death. He was a director or official in many financial and commercial organizations, and was also one of the commissioners of the Port of New York Authority. Mr. Twitchell was active in philanthropic, educational, and Presbyterian Church affairs. Middlebury College bestowed the degree of LL.D. on him in 1926.

Urach, Duke of (Count William of Württemberg). Head of a junior branch of the formerly reigning house of Württemberg, died at Rapallo, Italy, March 26. He was born at Stuttgart, Germany, Sept. 27, 1897. He was descended through his mother from the royal house of Monaco, and he married Princess Wiltrude of Bavaria in 1924. He served in the World War in the German artillery.

Vail, Harry E. American rowing coach, died at Gagetown, N. B., Canada, October 8, at the age of sixty-seven. After several years as a successful sculler, he turned his attention to coaching club crews, and was with the Neptune Rowing Club, St. John, N. B., the West Pennsylvania and the Vesper Boat clubs of Philadelphia, before going to the Ariel Boat Club, Baltimore, where he remained for eighteen years. He accepted a position as associate coach at Harvard University, 1900, and in 1909 he was made head coach at Georgetown University. He was appointed coach of the Wisconsin University crew, 1911, where he worked until his death.

Valencia, Ramon Gonaes. Former president of Colombia, died October 4. He resigned his position as vice president of the Republic in March, 1905. During the revolt centering at Barranquilla, 1909, when President General Rafael Reyes left the country, Dr. Valencia was proclaimed President and established at the capital, Bogotá. Word of Reyes' formal resignation came, Aug. 3, 1909, and Restrepo was then elected President.

Vargas O'Donnell, Juan, Duke of Tetuan. Spanish Minister of War, died October 12. He was born in 1864, the third Duke of Tetuan. His Irish ancestors had moved to Spain during King James II's reign, and Queen Isabella II had granted his grandfather a dukedom in 1859. The Duke, who had been Governor of Madrid, acted as War Minister during Primo de Rivera's directorate, from 1923 until Dec. 3, 1925, and he served at the head of the War Department under the de Rivera civil government, until his death.

Varrentrapp, Rear Admiral. German naval officer, died at his birthplace, Frankfort-on-Main, December 24. Admiral Varrentrapp commanded the *Schlesien*, of the Second Battleship Squadron, during the battle of Jutland, May 31, 1916. He retired from his command of the Wilhelmshafen naval station after the revolution of November, 1918.

Vegas, Herera, Argentine banker and politician, died November 17. He was president of the Banco Hipotecario, at Buenos Aires, and he served as minister of finance, by appointment of President Dr. Marcelo T. de Alvear, 1922-23.

Vellie, Willard Lamb. American manufacturer, died at his birthplace, Moline, Ill., October 24. Born May 10, 1866, he attended Philby's Academy, Andover, and was graduated from Yale in 1888. He first worked in his grandfather's firm, Deere & Company, manufacturers of agricultural machinery, later becoming director. He soon added to the already extensive Deere interests by organizing the Vellie Carriage Company. He formed the Vellie Motor Corporation a few years later, and also founded the Vellie Monocoupe Aircraft Corporation, being president of both organizations at the time of his death.

Venne, Lottie. English actress, died at London, July 16. She was born May 28, 1852. She made her debut at London in 1867 in *A Dream of Venice*, and thereafter, until her last stage appearance in 1924 as

the Duchess of Penny in a revival of *The Claimant*, she acted in more than two hundred plays, many of which were successes. Among her recent rôles were those of Mrs. Gilwattle in *The Man From Blankley's* (1917); the ex-Queen of the Paradise Islands in *Press the Button* (1918); Mrs. Shuttleworth in *Home and Beauty* (1919); Mary Knowle in *The Romantic Age* (1920), and Lady Catherine Champion-Cheney in *The Circle* (1921).

Villard, Mrs. Fanny Garrison.

Wagner, Frank Caspar. American engineer and college president, was killed in an automobile accident near Terre Haute, Ind., November 21. He was born at Ann Arbor, Mich., Oct. 5, 1864, and was graduated from the University of Michigan in 1884, receiving the B.S. degree the following year. He did engineering work for the Thomson-Houston Electric Company, 1886-89, and after being appointed assistant professor of mechanical engineering at the University of Michigan in 1890, he taught at that institution until 1896. He then joined the faculty of the Rose Polytechnic Institute, serving as associate professor of steam engineering, 1896-1904, professor of steam and electrical engineering 1904-20, professor of mechanical engineering 1920-23, and president of the Institute from 1923 until his death. He had also been administrative engineer of Indiana for the United States Fuel Administration, in 1918. The Rose Polytechnic Institute conferred the D.Sc. degree on Dr. Wagner in 1924, and the University of Michigan made him a Doctor of Engineering in 1927. Besides contributing to scientific journals, he wrote *Notes on Applied Electricity* (1903).

Wahl, Maj. Gen. Lutz.

Walker, Thomas Barlow.

Walls, The Rt. Rev. Frederic. English churchman, former bishop (Anglican) of Wellington, N. Z., died at Bournemouth, England, June 24. He was born at Hastings, England, in 1853. He was educated at St. Paul's School and at Caius College, Cambridge University, and distinguished himself in the classics and theology, winning a fellowship at the university. He was dean of Caius College, 1878-91, and divinity lecturer, 1878-94; select preacher to the university in 1897, 1903, and 1908, and held other offices of distinction at Cambridge. In 1895 he became bishop of Wellington, N. Z., and remained there until 1911. In that year he returned to England to become archdeacon of Wilts, and in 1916-19 was archdeacon of Sherburne. From 1913 he was canon of Salisbury. He was a man of high intellectual power and one of the leaders of the Established Church in England.

Walsh, Thomas. American poet and critic, died at his birthplace, Brooklyn, October 29. Born Oct. 14, 1875, he attended Georgetown University, 1893-92, and he continued post-graduate work at Columbia, 1892-95. He wrote articles, poems, and criticisms for English and American magazines, and was a contributor or editor of various reference works. The Society of the Army of the Potomac awarded him its honorary medal for a memorial ode on the Battle of Antietam, and from Spain he received the Grand Cross of Isabel the Catholic. Being an authority on the literature of Spain and South America, he also received various official recognitions from both, becoming a member of the Royal Academy of Seville. Georgetown University gave him the Litt.D. degree, and Notre Dame honored him with the LL.D. degree in 1917. He was associate editor of the *Commonweal*, but he was best known through the poetry which he wrote and the collections he edited. These works included: *The Prison Ships* (1909); *The Pilgrim Kings* (1915); *Eleven Poems of Rubén Darío* (1916); *Gardens Overseas and Other Poems* (1917); *Hispanic Anthology* (1919); *Don Folquet* (1920); and *The Catholic Anthology* (1927).

Wanamaker, Lewis Rodman.

Ward, Colonel Sir Edward (Willis Duncan). Supply officer in the British Army, died at Paris, September 11. He was born at Oban, Scotland, Dec. 17, 1853, and after attending private schools, entered the British army in 1874. Becoming major in the Army Service Corps the following year, he served with the Sudan Expedition in 1885. After staff service in Ireland and Great Britain he was sent out with the Ashanti Expedition, 1895-96. Colonel Ward was in charge of the food supply for Ladysmith during the siege from Nov. 2, 1899, to Feb. 28, 1900, and was Director of Supplies of the South African Field Force. Returning from the war, Colonel Ward was appointed assistant quartermaster general, at London, in February, 1901, and the following April he was made Permanent Under-Secretary of State in the War Office, holding that position until January, 1914. He did much to perfect the organization of the army, contributing to the success of Haldane's reforms, and instituting the Officers' Training Corps. At the beginning of the World War when it was necessary to reinforce the Metropolitan Police, the Home Office appointed Colonel Ward

chief staff officer to reorganize and manage the special constabulary and its Reserve, a service in which he continued until his resignation in 1924. Colonel Ward was created a Knight Commander of the Bath in 1900, a Knight Commander of the Royal Victorian Order in 1907, a Baronet in 1914, and a Knight of the Grand Cross of the British Empire in 1919. He was also an officer in the French Legion of Honor, and he was made a Knight of Grace in the Order of Saint John of Jerusalem in 1920.

Ward, Willard Parker. American mining engineer, died at Savannah, Ga., January 17. He was born at New York, Oct. 12, 1845, and was graduated from Columbia College in 1865; he studied at the mining schools at Clausthal and Berlin, Germany, 1865-69. He was engaged in the profession of mining engineering from 1869, especially in the mining of gold and silver from the Western States of the United States after 1883. Mr. Ward was the first maker of ferromanganese in the United States, in 1874.

Warren, Willard Clinton. American publisher, died at New York, March 8. He was born at New Canaan, Conn., Jan. 9, 1866, and received a public-school education. He began his publishing business by establishing the *Commercial Record*, in New Haven, Conn., in 1884. From this beginning he expanded his interests until he became head of one of the largest magazine groups in the United States, with publication at New York, Boston, Providence, R. I., and New Haven, Conn. His magazines included *The Bankers Magazine*, *The House Furnishing Review*, *Banker and Tradesman*, *Banking Law Journal*, *Commercial Record*, *American Shoemaking*, *Fibre and Fabric*, *Record and Guide*, *The Business Law Journal*, *Granite*, *Marble and Bronze*, and *The New England Grocer*.

Warwick, Earl of. Washburn, Charles Grenfell. American lawyer and public official, died at Lenox, Mass., May 25. He was born at Worcester, Mass., Jan. 28, 1857. He was graduated from Worcester Polytechnic Institute, 1875, and from Harvard in 1880, and was a classmate at Harvard of Theodore Roosevelt. He entered the wire business on leaving college and became a successful manufacturer, in the meantime studying law and being admitted to the Massachusetts bar in 1887. He was elected as a Republican to the Massachusetts House of Representatives, in 1897 and to the State Senate in 1899, and in 1902 was a member of the commission to revise the corporation laws of the State. In 1906 he was elected to the national House of Representatives to serve out an unexpired term, and was reelected in 1907 and 1909. He was a director of the Federal Reserve Bank of Boston. He wrote a biography of Theodore Roosevelt.

Washing, William Henry. Weiller, Jean-Lazare. French senator and financier of scientific projects, died August 12. Born in France in 1859, he attended the Lycée St. Louis, and went to Oxford University, later entering the diplomatic service in the course of which he visited the United States. He established the first telephone service in France, and was said to have invented taximeters. It was he who offered the Wright Brothers the opportunity of going to France in 1908, to demonstrate their biplanes, and he secured for France the Wright patents, and donated a plane to the French War Office. M. Weiller was serving as a senator from the Lower Rhine at the time of his death.

Weiss, André.

Welch, Samuel Wallace. American physician and sanitarian died at Montgomery, Ala., August 22. He was born at Alpine, Ala. Feb. 14, 1861, and, after being graduated from Howard College, Marion, Ala., and continuing his studies at Tulane University, he decided to take up medicine, and was graduated from the College of Physicians and Surgeons, at Baltimore, in 1893, later doing post-graduate work at Johns Hopkins and at the College of Physicians and Surgeons at Columbia University. He returned to Alpine in 1893 to practice, and four years later he was elected to the county board of health. In 1903 he was made a member of the State committee of public health, and of the State board of medical examiners, subsequently becoming chairman of the latter organization. He became State health officer in 1917, holding that position until his death. In 1919 he prepared and had put through the legislature, a bill amending the medical laws of Alabama. From 1922 he was chairman of the public health division of the American Medical Association and of the Southern Medical Association, becoming councillor of the Southern body in 1925. He was, at one time, president of the Alabama State Medical Association and from 1927-28 he presided over the Association of Health Authorities of North America. He also served as a delegate to the international tuberculosis conference at St. Louis in 1905, and at an international convention on demography

and hygiene at Washington, D. C., in 1912. From 1895-1915, Dr. Welch acted on the board of trustees of Howard College and in 1928 he received the LL.D. degree from the University of Alabama.

Westenhaver, David C. Weyman, Stanley John. Wharton, Anne Hollingsworth. Wharton, Henry M. American Baptist clergyman, editor, and author, died at Baltimore, Md., June 23. He served for a time in the Confederate Army in the Civil War. He studied law and practiced for five years before entering the Baptist ministry, for which he prepared at the Southern Baptist Theological Seminary. He was pastor of churches at Luray, Va., and Baltimore. He was chaplain general of the United Confederate Veterans for many years until 1927. He was publisher and editor of the *Baltimore Baptist* and wrote several books, his latest being *Messages of Mercy*, published in 1927.

Whelan, Charles Elbert. American lawyer, author, and politician, died at Madison, Wis., November 30. Born at Mazomanie, Wis., Aug. 26, 1862, he worked on several newspapers before moving to Madison, and becoming city editor of *The Madison Journal*. He attended the University of Wisconsin at the same time, receiving the LL.D. degree in 1894. After being assistant attorney-general of Wisconsin, 1896-97, he was elected mayor of the city on the Republican ticket in 1898, serving for one term. He was made president of the Wisconsin League of Municipalities in the same year. From 1899-1900 he was grand master of the Masons of Wisconsin. Mr. Whelan became supreme national lecturer of the Modern Woodmen of America in 1898, holding that position until 1926, when he was made editor and publisher of the organization's magazine. He wrote several books, including: *He That Seeketh Findeth* (1918); *Essential Truth in Religion* (1922); a play called *The White Minstrels* (1922); *The State—The Child—The Part-Time School* (1924); *Poems* (1926), and *Inspirations* (1927).

Whipple, Charles A. American mural painter, died at Washington, D. C., May 2, at the age of sixty-eight. For many years Mr. Whipple was engaged in retouching the famous Brumidi paintings and others in the United States Capitol, Washington, D. C., and he was a familiar figure to the thousands of visitors to the building. He was known as the painter of a panel, "The Spirit of 1917," in the Capitol, and he also painted several figures in the historical frieze around the rotunda. Mr. Whipple was commissioned annually by Congress to work on the Capitol paintings.

Whiteing, Richard.

Whitman, William.

Wien, Wilhelm.

Wilber, David Forrest. Former American consul, died at Upper Dam, Me., August 14. He was born at Milford, N. Y., Dec. 7, 1859, and was graduated from Cazenovia (N. Y.) Seminary in 1879. Moving to Oneonta, N. Y., he engaged in farming and stock breeding. In 1894 he became a member of the New York State cattle tuberculosis committee, and he was later elected president of the Holstein-Friesian Association of America, and of the American Cheviot Sheep Association of the United States and Canada. In 1895 he was elected to Congress from the Twenty-first New York District, and was reelected to the succeeding Congress in 1897. He entered the consular service in 1903, being stationed at Barbados, and two years later he became consul general at Singapore. He afterward was given successive assignments as consul in Halifax (1907-09), Kobe, Japan, (1909-10), Vancouver, B. C., (1910-13) and Zurich (1913-14). He served at Genoa, Italy, 1915-21, and in the latter year became consul general at Auckland, New Zealand. In 1922 he was given a similar post at Wellington. After his return to the United States, Mr. Wilber was a Republican presidential elector from New York in 1924.

Wilbur, Cressy Livingston.

Wilcox, Delos Franklin.

Wilder, Harris Hawthorne.

Wille, Bruno. German author, died September 14. Born Feb. 6, 1860, he became one of the most talented literary representatives of the naturalistic cult. His poetry and fiction occupy a place in modern German literature similar to that of the scientific writings of Wilhelm Bölsche. Dr. Wille was at the head of the "Allgemeinde" of Berlin, and he aided in the foundation of the *Freie Volksbühne*, which proved an important influence in the current German drama.

Williams, Frederick Wells.

Williams, Henry G.

Williams, Samuel. American editor, died at Cincinnati, Ohio, February 14. He was born at Chillicothe, Ohio, Dec. 2, 1827, and was graduated from Ohio Wesleyan University in 1848. It was said that Dr. Williams, who had the honorary degree of LL.D., was at the time of his death the oldest American graduate, the oldest alumnus of Ohio Wesleyan University, and

the oldest member of Phi Beta Kappa. He was editor for the Methodist Book Concern, of Cincinnati, for more than fifty years, and he accumulated a library of books on the history of the Methodist Episcopal Church that was said to be unequalled in the United States. Dr. Williams bequeathed this collection to Ohio Wesleyan University.

Williams, Talcott.
Willis, Frank Bartlette.
Wills, Sir George Alfred.
Wilson, Bishop Luther Barton.
Winant, Forrest. American actor, died at Alameda, Calif., February 1. He was born at New York, Feb. 21, 1888. He was educated at Stevens Institute. His success in school plays brought him to the professional stage, and he made his first professional appearance at New York in 1907. He appeared frequently in stock companies and toured the United States in *The Three of Us*. After appearing in several other plays, he made his greatest success as a co-star with Fay Bainter in *East Is West*. He took charge of a stock company house at New Brunswick, N. J., relinquishing it, by reason of ill health, about a year before his death.

Wingate, George Wood.
Winslow, Col. Eben Eveleth.
Wise, Thomas Alfred.
Woelfkin, Cornelius.
Wood, James J.
Works, John Downey.
Wrangel, General Peter Nicholaievitch.
Wright, Arthur Silas. American educator, died December 2. Born at Decatur, N. Y., Mar. 7, 1858; he was graduated from Union College in 1882, receiving the A.M. degree from that institution in 1886, after having attended the Princeton Theological Seminary, 1884-85. He then studied at the University of Leipzig, 1885-87. On his return to the United States he became junior professor of modern languages at Union College, 1887-92, and in 1893 he was appointed professor of modern languages at Case School of Applied Science, retiring from that position in 1924. Union conferred on him the L.H.D. degree in 1921.

Wright, James Homer. American pathologist, died at Boston, January 9. He was born at Pittsburgh, Pa., Apr. 8, 1869. He was graduated from Johns Hopkins University in 1890 and from the medical department of the University of Maryland in 1892. He was the Thomas A. Scott fellow in hygiene at Harvard University, 1892-93. From 1893 to 1896 he was assistant in pathology at Harvard, from 1896 to 1907, instructor, and from 1897 until his death, assistant professor. He was also director of the pathological laboratory of the Massachusetts General Hospital, Boston, from 1896 on. Harvard conferred on him the honorary degree of S.D. in 1905 and the University of Missouri that of Sc.D. in 1907. With Dr. F. B. Mallory, he was the author of *Pathological Technique*, which was published in 1897 and which went into eight editions.

Wrong, Edward Murray.
Wylie, Elinor.
Wynn-Carrington, Charles Robert. See Lincolnshire, First Marquis of.

Yechiel, Meier. Polish Jewish scholar and ascetic, died in Poland, March 12. He was born at Skiernewice, Poland. Early in life he established an independent school of Chasidim ("the pious" or "saints"), whose ascetic principles he personified in a very high degree. He and his followers held that life on earth is not to be enjoyed, and for more than forty years he fasted six days every week, eating only on Saturday, when fasting is forbidden by Jewish law. He also went to bed fully clad in order not to enjoy his rest. As the "Ostrovitzer Rabbi," head of the Jewish community at Ostrowiec, Poland, his reputation was widespread in Poland and adjoining countries, and he had many followers. He was a recognized authority on Jewish law and customs, and wrote many books on the subject, but he forbade their publication in his lifetime.

York, Edward Palmer.
Young, Rev. John B.
Young, William Alexander.
Yuan-hung, Li. See Li Yuan-hung.
Yule, Sir David, Bart. Anglo-Indian merchant, died at St. Albans, England, July 3. He was born Aug. 4, 1858, of Scotch ancestry, and at an early age went to India to engage in business. He rose steadily in wealth and influence for more than fifty years at Calcutta and eventually controlled 80 separate companies, most of which he had built up himself. The principal firm was Andrew Yule & Company, Ltd. He was a director of the Midland Bank (England), the Mercantile Bank of India, Vickers, Ltd., and the Royal Exchange Assurance. He was considered one of the wealthiest men in the British Empire, and he gave away large sums of money to charities and public enterprises. He was knighted in 1912 and elevated to a baronetcy in 1922.

Zaldumbide, Carlos Freile. Former President of Ecuador, died at Paris, August 22. Being president of the Senate when President Emilio Estrada died in 1911, he became acting President of the Republic, and he reassumed the office for a short time after President Flavio Alfaro was assassinated the following year.

Ziwet, Alexander.

NEGRI SEMBILAN, nã'grê sem'belãn'. A federation of nine divisions, constituting a state in the Federated Malay States. See **FEDERATED MALAY STATES**.

NEJD, SULTANATE OF. See **ARABIA**.

NEON TUBES. See **ELECTRIC LIGHTING**.

NETHERLANDS, THE, or **HOLLAND**. A constitutional monarchy of Europe, bordering on the North Sea, which bounds it on the west and south; bounded on the east by Germany and on the south by Belgium. Capital, The Hague.

AREA AND POPULATION. On Jan. 1, 1927, the total area was 12,593 square miles, exclusive of water; population, according to the census of 1920, 6,865,314; according to the communal lists for Dec. 31, 1926, 7,526,606, density per square mile in 1926, 597.7. According to the figures for 1926, 46.36 per cent of the population, or 3,489,190, were inhabitants of towns of 20,000 or more, the remainder being classified as rural. In 1926 the movement of population was: Births, 177,459; deaths, 73,357; marriages, 55,299. The emigration, mostly to North America, was 3156 in 1926. The largest cities with their populations, Dec. 31, 1926 were: Amsterdam, 726,527; Rotterdam, 562,991; The Hague, 408,634; and Utrecht, 151,055.

EDUCATION. Elementary education is free and compulsory between the ages of 7 and 13, the cost being shared by the state and the communes. Public elementary schools in 1924-25, 3751, with 16,330 teachers and 500,768 pupils; private elementary schools numbered 3601, with 13,126 teachers and 577,184 pupils; public infant schools, 229, with 1001 teachers and 35,808 pupils; private infant schools, 1277, with 2887 teachers and 114,104 pupils. For higher education there are the four public universities at Leyden, Utrecht, Amsterdam, and Groningen, with totals of 389 members in the faculties and 6491 students. Besides, there are a technical university, a private university, navigation schools, commercial schools, schools for working people, etc.

PRODUCTION, ETC. Agriculture and animal husbandry in the Netherlands are highly intensive. There were 2,289,000 acres of arable land in 1926, or about 27 per cent of the total area; 3,129,000 acres of permanent meadow, and 583,000 acres of woods and forests. Most of the crops in 1927 were adversely affected by continuous wet weather during the summer. The area and production of the principal crops in 1927 were as follows: Wheat, 150,000 acres, 5,096,000 bushels; rye, 482,000 acres, 13,594,000 bushels; barley, 66,000 acres, 3,027,000 bushels; oats, 366,000 acres, 22,873,000 bushels; potatoes, 425,000 acres, 90,021,000 bushels; sugar beets, 171,000 acres, 1,852,000 metric tons; flax, 27,000 acres, 12,125,000 pounds of fibre. According to the livestock census of 1921, there were 2,063,000 cattle, 1,519,000 swine, 668,000 sheep, 272,000 goats, and 364,000 horses.

The Netherlands coal-mining industry, practically all of which lies in the Province of Limburg, is steadily gaining in importance, not only to the domestic market but also to the Euro-

pean, where it was of little account a few years ago. The net Limburg production in 1927 reached 9,323,012 tons, as compared with 320,000 in 1900, when there were only three coal-producing mines, all privately owned and operated. At that time the Government appointed a commission to decide whether it should take over part of the available coal area and to consider the conditions under which the remaining territory could be exploited by private companies. As a result, in 1901, the Government took about 40,000 acres, all then available except that part for which concessions already had been granted. The state mines gradually outstripped the private mines in production, as was indicated by the output of 3,492,000 tons for the privately owned mines in 1927 as compared with 5,831,110 tons from the state-owned mines.

In 1926 there were 309 distilleries, 10 sugar refineries, 18 beet-sugar refineries, 13 salt works, 213 breweries, and 3275 tobacco factories. Diamond cutting and shipbuilding are other important occupations. In 1926, 5194 vessels of all kinds were engaged in the fisheries. The value of the herring fishery was 10,407,138 guilders and that of fresh fish, 12,353,000 guilders. The oyster catch in the same year amounted to 1,365,760 kilos.

COMMERCE. Imports in 1927 were valued at \$1,022,346,000 and exports at \$761,974,000. The value of exports was 74.5 per cent of the import figure, the highest ratio since 1917. The large re-export trade is not included in either imports or exports. As compared with 1926, the dollar value of imports increased by 4.4 per cent and of exports by 8.7 per cent. The normal excess of imports is balanced by such invisible items as return on investments and earnings of shipping. There was a decided increase in imports of wheat, rye, and corn. Cotton goods increased heavily in quantity and were also considerably higher in value. Imports of flour and flour products were also greater. Total imports of chemical products, oil products, and lumber increased. There was a decline in imports of kerosene and fuel oil, but a sharp advance in imports of gasoline. Exports in most groups registered an increase with animal and vegetable products showing the largest advances, followed by vehicles and machinery, hides and skins, leather and shoes, oil, tar products, and textiles. There was a pronounced decline in exports of minerals, metals, and manufactures thereof.

FINANCES. A continuation of the financial prudence which had characterized recent Netherlands budgets was reflected in the proposals for 1929. Proposed expenditures under the ordinary service were placed at 593,651,000 florins, practically the same as those of the preceding year, while the receipts, estimated at 661,798,000 florins, were somewhat higher, despite tax reductions that became effective during 1928. Actual or anticipated receipts under the ordinary service since 1925 had been well in excess of expenditures. Under the extraordinary service, also known as capital service, proposed expenditures totaled 189,221,000 florins—a heavy decline as compared with those of 1928—and receipts were also lower at 44,152,000 florins. The budget provided, however, for the redemption and conversion of the 1923 "C" dollar loan amounting to 100,000,000 florins, the only foreign loan outstanding. Without this item the unfavorable balance for the capital service would be reduced

to 45,000,000 florins, and the net deficit for both the ordinary and capital services would reach approximately 37,000,000 florins.

The total public debt of the Netherlands on Sept. 1, 1928, stood at 2,813,127,000 florins, comprising a floating debt of 190,891,000 florins and a consolidated debt of 2,622,236,000 florins. The floating debt included principally treasury notes and bills totaling 115,511,000 florins; silver certificates, 11,508,000 florins; balance due the Netherlands Bank, 14,301,000 florins; and balance due the post and telegraph services, 34,805,000 florins. The treasury made but one public offering in 1928, consisting of 45,000,000 florins, in three and six months' bills issued October 1. As compared with the year previous, the statement of the consolidated debt on Sept. 1, 1928, showed a reduction of about 150,000,000 florins.

COMMUNICATIONS. In 1926, 28,852 vessels of 36,602,000 net registered tons entered the ports of the Netherlands and 29,017 vessels of 36,589,000 tons cleared.

Although operated by an organization known as the Netherlands Railways, the transportation system in the Netherlands is not entirely owned by the Government. The Netherlands Railways as the operating or management company has no capital structure. The Government, however, owns 22,000,000 florins of the Staatsspoor's capital of 40,000,000 florins and 27,500,000 florins of the Hollandsche Spoor's 50,000,000 florins capital—giving it a controlling interest in both companies. The combined balance sheet of the two companies for 1927 showed that the net profit amounted to 2,029,737 florins. The total number of passengers carried in 1927 rose to 52,286,352 from 48,132,326 in 1926. Freight carried totaled 20,360,693 metric tons—a gain of 373,754 tons over the previous year. At the end of 1927, the Netherlands Railways had about 40,000 pieces of rolling stock, 39,776 of which were in use on steam lines. Trunk-line and local-service locomotives numbered 1318, while 17 locomotives were in use on the tram lines. Passenger cars numbered 5155 and freight cars 31,402. The railways spent 16,340,685 florins in repairs to and upkeep of rolling stock in 1927. There are approximately 2255 miles of railway line in the country.

GOVERNMENT. Executive power is vested in the sovereign and legislative power conjointly in the sovereign and the Parliament, which is called the States-General and consists of two houses. The upper house is composed of 50 members, elected by the provinces, and the lower house of 100 deputies, elected directly. Ruling sovereign in 1928, Wilhelmina Helena Pauline Maria, born Aug. 31, 1880, succeeded to the throne on the death of her father, Willem III, Nov. 23, 1890, and crowned Sept. 6, 1898. The cabinet as appointed on March 8, 1926, was as follows: Premier and Minister of Finance, Dr. D. J. de Geer; Foreign Affairs, F. B. van Blokland (appointed Mar. 30, 1927); Interior and Agriculture, Dr. J. B. Kan; Justice, Dr. J. Donner; Colonies, Dr. J. C. Koningsberger; War, J. M. J. H. Lambooy; Public Works, Dr. H. van der Vegte; Marine, J. M. J. H. Lambooy (interim); Labor, Commerce, and Industry, Dr. J. R. S. de Bruijne; Instruction, Science, and Arts, Dr. M. A. M. Waszink.

HISTORY. The year passed very quietly in the Netherlands, no untoward incidents being reported in the press. The Government stated that

the uprisings in the Dutch East Indies had been suppressed completely and that it was doing everything in its power to attract the attention of the natives from the lure of Bolshevism to the benefits of nationalism.

NEVADA. POPULATION. According to the Fourteenth Census of the United States, the population of the State Jan. 1, 1920, was 77,407, and no subsequent estimate had been made. Capital, Carson City.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1928	368,000	733,000 ^a	\$8,309,000
	1927	368,000	638,000 ^a	6,092,000
Potatoes	1928	6,000	840,000	714,000
	1927	6,000	780,000	663,000
Wheat	1928	18,000	482,000	590,000
	1927	18,000	460,000	575,000

^a tons.

MINERAL PRODUCTION. The combined value of the gold, silver, copper, lead, and zinc mined in the State in 1927 was \$23,322,589, as against a corresponding total of \$24,549,991 for 1926. The combined total of ores treated was somewhat lower in 1927 than in 1926, and an increase in the mine production of copper, the most important of the five metals in point of production value, was more than offset by lower prices for this metal and by decreases in the mine production of the other four. Gold produced amounted to 150,346 fine ounces for 1927; for 1926, 175,382; silver, 5,397,179 fine ounces for 1927 and for 1926, 6,518,983; copper, to 120,259,276 pounds in 1927 and in 1926 to 101,827,937; lead, to 15,784,818 pounds for 1927 and 22,367,965 for 1926; zinc, to 6,344,523 pounds for 1927 and for 1926, 10,817,833. The minor part of the total mineral output of the State not covered by these metals was largely made up of the gypsum production, which was 350,972 short tons in 1926, and in 1925, 350,130; in value, \$1,527,235 in 1926 and in 1925, \$1,721,809. Tungsten ore was produced in a somewhat larger scale in 1926, the output having a value of \$356,700. The total value of the State's mineral products was \$27,613,232 for 1926; for 1925, \$26,469,901.

FINANCES. State expenditures in the year ending Dec. 31, 1927, as reported by the United States Department of Commerce, were: for maintenance and operation of departments, \$2,123,925 (of which \$449,664 was for local education); for interest on debt, \$72,102; for permanent improvements, \$1,634,662; total, \$3,830,599 (of which \$1,847,344 was for highways, \$402,723 being for maintenance and \$1,443,621 for construction). Revenues were \$4,062,117; of this, property and special taxes formed 33.8 per cent; departmental earnings, 6.5 per cent; licenses, including gasoline sale tax, 12.7 per cent. Assessed property valuation was \$203,070,872; State taxation thereon, \$1,229,171. The net State indebtedness on Dec. 31, 1927, amounted to \$1,650,376.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 2200.2. There were built in 1928, 1.18 miles of additional first track.

EDUCATION. Vocational courses received greater attention in 1928, and work was done on the preparation of a revised course of school study. There were, in the school year 1927-28, 16,596

enrolled public-school pupils, of whom 3292 were in high school. Teachers numbered 845. Their salaries averaged \$1532.

CHARITIES AND CORRECTIONS. Among the State agencies connected with the welfare institutions were the Board of State Prison Commissioners and the Commissioners for the Care of the Indigent Insane. The chief State institutions were the State Orphans' Home, Carson City; Nevada Hospital for Mental Diseases, Reno; Nevada State Prison, Carson City; School of Industry, Elko. The inmates of the State Prison on Jan. 1, 1928, numbered 190, and formed 245 to the 100,000 of the population. Patients in the State Hospital for Mental Diseases numbered 224.

LEGISLATION. A special session of the State legislature convened January 16 and adjourned February 4. Among other matters, it legislated to regulate State deposits in banks, to specify the duties of the State treasurer and State controller and with regard to the bonding of state officers and employees.

POLITICAL AND OTHER EVENTS. The increase of the number of divorces granted in the State, to 1953 in 1928, was attributed to the reduction of the residence requirement to three months. Plans to develop a deposit of silica sand for use in glass making on the Pacific coast were brought forward.

ELECTION. In the election of November 6 Hoover and Curtis, the Republican National candidates, obtained 18,327 votes, to 14,090 for Smith and Robinson, Democratic. United States Senator Key Pittman, Democrat, was reelected, as was also Representative-at-large S. S. Arentz, Republican.

OFFICERS. Governor, Fred B. Balzar; Lieutenant-Governor, Morley Griswold; Secretary of State, W. G. Greathouse; Treasurer, Ed Malley; Attorney-General, M. A. Diskin; State Comptroller, E. C. Peterson; Auditor, True Vencil; Superintendent of Public Instruction, Walter Anderson.

JUDICIARY. Supreme Court: Chief Justice, J. A. Sanders; Associate Justices, Ben W. Coleman and Edward A. Ducker.

NEVADA, UNIVERSITY OF. A coeducational, State institution of higher education at Reno, Nevada, founded in 1874. There was an enrollment of 849 students for the autumn term of 1928, of whom 508 were men and 341 were women. These were distributed among the various departments of the university as follows: Arts and sciences, 597; normal school, 37; engineering, 159; agriculture, 24; and home economics, 32. The summer session of 1928 had a registration of 117. There were 74 members on the faculty. The productive funds of the university amounted to \$358,439, and the income for the year to \$652,664. The library contained 48,934 volumes. President, Walter E. Clark, Ph.D., LL.D.

NEW BEDFORD, COTTON STRIKE. See STRIKES AND LOCKOUTS.

NEW BRUNSWICK (brūnz'wīk). One of the Maritime Provinces of Canada, lying east of Maine and south of the province of Quebec. Area, 27,985 square miles; population, according to the census of 1921, 387,876. The capital is Fredericton, with a population in 1921 of 8114. The largest cities with their populations in 1921 are St. John, 47,166 and Moncton, 17,488. The chief industries are agriculture, mining, manufactures, fishing, and lumbering. The acreage and yield of the principal crops for 1927 were as

follows: Wheat, 9871 acres, 157,000 bushels; oats, 203,536 acres, 5,841,000 bushels; barley, 6387 acres, 168,000 bushels; rye, 359 acres, 7000 bushels; mixed grain, 2822 acres, 73,000 bushels; other grains, 48,297 acres, 978,000 bushels; potatoes, 42,744 acres, 6,090,000 cwt.; roots, 12,235 acres, 2,589,000 cwt.; hay and clover, 559,019 acres, 813,000 tons; fodder corn, 3975 acres, 38,000 bushels. The livestock census in 1926 showed 53,159 horses; 116,530 milch cows; 107,932 other cattle; 156,616 sheep; 71,568 swine; and 854,621 poultry. The total value of the fisheries in 1927 was \$4,406,602. The province possesses various minerals including iron, gypsum, coal, building stone, antimony, copper, and manganese. The only active mining, however, is in coal and gypsum. The coal output in 1927 amounted to 171,777 short tons. In 1925-26 the exports from the province amounted to \$97,876,375 and the imports for consumption amounted to \$26,904,574. In the same year there were 1941 miles of railways open for operation. The province is under a lieutenant-governor appointed by the governor-general of Canada, and a legislative assembly of 48 members elected for five years. As a result of the election held in August 1925, the political grouping in the assembly was as follows: Conservatives, 35; Liberals, 12; Independent, 1. Lieutenant-Governor in 1928, W. F. Todd; Prime Minister and Attorney-General, J. B. M. Baxter; Secretary-Treasurer, A. J. Leger; Agriculture, Lewis Smith; Public Health and Labor, Dr. H. I. Taylor; President of the Executive Council, L. P. D. Tilley; Lands and Mines, C. D. Richards; Public Works, D. A. Stewart; Minister without Portfolio, E. A. Reilly. The province is represented by 10 members in the Canadian Senate and 11 in the House of Commons.

NEW CALEDONIA, käl'é-dō'n'yā. A French colony, comprising the island of New Caledonia, the southernmost of the Melanesian Islands, lying between 20° 1' and 22° 26' S. latitude and 161° 30' and 144° 40' E. longitude; and the following dependencies: Isle of Pines, Wallis Archipelago, Loyalty Islands, Huon Islands, and Futuna and Alofi. The island of New Caledonia has a length greater than 248 miles and an average width of 31 miles. Area, 7650 square miles. Population, according to the census of 1921, 47,505, of whom 14,172 were free, 2310 of convict origin, and 25,123 Melanesians and Polynesians. Capital, Nouméa, with 9336 inhabitants in 1921. No convicts have been sent to the penal settlements on Nou Island since 1896. Coffee, copra, cotton, manioc, corn, bananas, tobacco, and pineapples form the principal agricultural products. The mineral resources are said to be very rich and varied, comprising cobalt, chrome, nickel, iron, manganese, all of which are abundant; also antimony, mercury, silver, gold, lead, copper, and cinnabar. In 1925 the value of mineral exports was 4,019,334 francs. The other leading exports include coffee, copper, copra, guano, and preserved meats. The chief imports are wine, coal, flour, and rice. In 1926, 123 vessels of 176,749 tons entered and 123 of 174,008 tons cleared the ports of New Caledonia. Imports in 1926 amounted to 141,746,983 francs and the exports, 90,652,759 francs. About two-thirds of those that entered were French. There is a narrow-gauge railway from Nouméa to Paita, about 20 miles long; an extension to Bourail, a distance of 105 miles, has been proposed for some time. The

colony is administered by a governor assisted by a privy council, made up of officials, and by an elected council-general. Governor in 1927, M. Guyon, appointed in 1925.

NEWCASTLE, SEVENTH DUKE OF (HENRY PELHAM ARCHIBALD DOUGLAS PELHAM-CLINTON). English peer, died at London May 30. He was born at London, Sept. 28, 1864, and succeeded his father in 1879. He was educated at Eton and at Magdalen College, Oxford. He was not robust and took no part in public life but devoted himself to study, traveling, and to support of the Anglo-Catholic party in the Church of England, of which he was one of the foremost leaders. He was also interested deeply in the life, history, and customs of the gypsies. He was a member of the London School Board, 1894-97, and a fellow the Royal Colonial Institute. By inheritance he was lord high steward of Retford, master forster of Dartmoor, and keeper of St. Briavel's Castle. He was much attached to America and visited the United States nearly twenty times. He was succeeded in his hereditary honors by his brother, Lord Henry Francis Pelham-Clinton Hope, who was known in America as the former husband of May Yohe, actress, and as former possessor of the famous Hope diamond.

NEW ENGLAND FLOODS. See FLOODS.

NEWFOUNDLAND, nü'fūnd-länd'. An island possession of Great Britain in the north-eastern part of the Gulf of St. Lawrence. Area, 42,734 square miles; population, according to the census of 1921, 259,358, estimated in 1926, 262,177. Dependent upon Newfoundland is the populated strip of Labrador, with an area of 120,000 square miles and a population in 1926 of 3977. Capital, St. John's, with a population in 1926 of 40,059. Other towns and their populations in 1921 were Bonavista, 4025; Harbor Grace, 3825; Carbonear, 3320. The birth rate in 1926 was 27.44 per thousand and the death rate 13.60 per thousand. The immigrants in the same year numbered 12,505 and the emigrants, 15,323. There were 1139 schools of all kinds in 1926 with a total attendance of 59,088.

The value of exports from the island in 1926-27 amounted to \$30,050,000 and the value of imports \$25,814,000. The outstanding feature of the import trade in the fiscal year ended June 30, 1927, was the decline in the share enjoyed by Great Britain. Imports from Canada and the United States remained at about the previous level. Exports during the year increased about one-fifth. Products of the fisheries constituted half of the total, but pulp and paper exports accounted for all the increase. In 1925-26 the revenue was \$9,752,521 and the expenditure \$9,865,167. For the fiscal year ending June 30, 1927, government revenue was much below expenditure. It appeared from available data that the budgetary situation eased somewhat in the later months of 1927 because of a heavier revenue from increased imports. The Government floated a \$5,000,000 loan during the year and the funded public debt reached a total of \$77,000,000; on June 30, 1926, it was \$67,018,000.

In 1927 there were 974 miles of railway line, of which 905 belonged to the Government. The railway system was reported to have carried in 1927 the largest number of passengers and the greatest amount of freight since it was taken over by the Government in 1924. The Government also operates 12 steamers. In 1926 there were 864 post offices, 7500 miles of telegraph wire, 12,000 miles

of telephone wire, and 6000 telephone instruments. The gross receipts of post and telegraphs were \$525,000 for the year 1926-27.

Executive power is vested in a governor, assisted by an executive council of not more than 10 members, and legislative power is vested in a council of not more than 24 members and an elected house of representatives of 40 members. Women have the franchise. Governor and Commander-in-Chief in 1928, Sir William L. Alardyce. In the elections held late in October, 1928, Sir Richard Squires, the leader of the Liberal party, was returned to power with a large majority in the House of Representatives. Sir Richard served as Prime Minister from 1919 to 1924.

NEW GUINEA, gín'ē. An island of the East Indies, the third largest in the world, ranking after Australia and Greenland. Area, variously estimated at from 310,000 to 335,000 square miles; population estimated to be slightly below 1,000,000. It is divided under Australian, Dutch, and British control, the distribution being as follows: The northeastern portion, constituting the former Kaiser Wilhelmsland, to Australia; the western part, to 140° E. longitude, to the Dutch East Indies; the southeastern part is the British colony of Papua. See DUTCH EAST INDIES, GERMAN NEW GUINEA, and PAPUA.

NEW HAMPSHIRE. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 443,083. The estimated population on July 1, 1928 was 456,000. The capital is Concord.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1928	475,000	665,000	\$9,281,000
	1927	480,000	605,000	9,774,000
Potatoes	1928	12,000	1,856,000	1,325,000
	1927	12,000	1,800,000	2,520,000
Corn	1928	14,000	560,000	672,000
	1927	15,000	615,000	646,000

^a tons.

MINERAL PRODUCTION. Stone production was higher in 1926, the latest recorded year, and made up nearly half of the mineral total of the State. There were quarried 148,250 short tons of stone in 1926; in 1925, 130,120. The value of stone quarried in 1926 totaled \$1,908,284; of that quarried in 1925, \$1,712,138. Clay products reached a total value of \$881,997 for 1926, and of \$828,541 for 1925. The mica product of 1926 attained the value of \$274,103. Besides sand and gravel production, that of feldspar was also in considerable amount. The total value of the State's mineral production in 1926 was \$4,144,645; in 1925, \$3,464,837.

FINANCE. State expenditures in the year ended June 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$5,907,726 (of which \$593,170 was aid to local education); for interest on debt, \$74,215; for permanent improvements, \$1,826,294; total, \$7,808,235 (of which \$2,863,302 was for highways, \$1,515,964 being for maintenance, and \$1,347,338 for construction). Revenues were \$7,783,195. Of this, property and special taxes formed 41.1 per cent, departmental earnings and charges for officials' services 9.3 per cent, and sales of licenses and taxation of gasoline, 38.5 per cent. Property val-

uation was \$663,865,495; State taxation thereon, \$3,036,018. State net funded debt on June 30, 1928, was \$1,817,720.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 1198.10. No additional construction was reported in 1928.

EDUCATION. A four-year programme of education was completely established at each of the two State Normal schools. The school-age population of the State (aged from 5 to 16 years) for 1927-28 was given as 90,616. There were enrolled in the public schools in that academic year 75,399 pupils. Of these, 62,410 were in elementary and 12,989 in high schools. Expenditures of the year for public-school education totaled \$7,561,337.39. Salaries of teachers averaged: for men, high school, \$2139.59, elementary, \$1539.57; for women, high school, \$1422.60, elementary, \$1132.09.

CHARITIES AND CORRECTIONS. The State Board of Charities and Correction as constituted by act of 1926 was the chief central welfare agency. It had various powers and duties, particularly toward children and the deaf, the dumb, and the blind. The chief State institutions were: State Hospital (insane), Concord, 1645 patients on June 30, 1928; Laconia State School (Feeble-Minded), 437; State Industrial School, Manchester, 196; State Prison, Concord, 129; Soldiers' Home, Tilton; State Sanatorium (tuberculosis), Glenciff 95. The U. S. Department of Commerce reported in regard to mental patients in State hospitals there were 1575 on Jan. 1, 1928, or 346.2 per 100,000 of population. In the year 1927 there were 307 first admissions, or 67.5 per 100,000 of population.

POLITICAL AND OTHER EVENTS. Dartmouth College carried out an extensive building programme, which included the Baker Library, a natural science hall, and a dormitory; it undertook also the construction of a fine arts building to be named after Frank P. Carpenter of Manchester, the donor; of Sanborn House, a donated building for the English department; and of two dormitories. The State of New Hampshire made its first bond issue subsequent to 1919; the amount, \$586,000, was for hospital, school, armory, and general improvement purposes. The discovery of a dike of feldspar of a type economically valuable for fluxing purposes, situated near Alstead, was reported by Professor C. E. Locke; the new deposit was described as situated near one that had been worked for a number of years.

ELECTION. In the election of November 8, was cast much the largest vote to that time recorded in New Hampshire. For President and Vice President, Hoover and Curtis led with 115,404 votes, to 80,715 for Smith and Robinson. The two United States Representatives, both Republican, were reelected. C. W. Tobey, Republican, was elected governor, and four of the five elected councilors were Republican.

OFFICERS. Governor, Huntley N. Spaulding; Secretary of State, Hobart Pillsbury; State Treasurer, Henry E. Chamberlin; Attorney-General, Jeremy R. Waldron; Commissioner of Education, Ernest W. Butterfield.

JUDICIARY. Supreme Court: Chief Justice, Robert J. Peaslee; Associate Justices, John E. Allen, Thomas L. Marble, Oliver W. Branch, Leslie P. Snow.

NEW HAMPSHIRE, UNIVERSITY OF. A co-educational, State institution of higher learning

at Durham, N. H., founded in 1866 at Hanover, N. H., as a part of Dartmouth College, transferred to Durham as State College in 1893, and made the State University in 1923. It consists of a college of liberal arts, a college of agriculture, and a college of technology. The 1928-29 enrollment was 1523, of whom 1099 were men and 424, women. The summer session had a registration of 348 students. The faculty numbered 148. The endowment amounted to \$1,030,000, and the income for the year totaled \$1,452,322. The college year 1925-26 was the first under the millage law of 1925, which provides an annual amount equal to one mill for each dollar for the assessed valuation of the State. This fund, which in 1927-28 amounted to \$656,524, together with income from other sources, was sufficient for the maintenance of the institution and for the gradual construction of a complete physical plant in accordance with a comprehensive plan for the development of the university. In 1928 a \$200,000 power plant was completed. The library contained 63,000 volumes. President, Edward Morgan Lewis, LL.D., Litt.D.

NEW HEBRIDES, *heh'ri-dez*. A group of islands in Melanesia, including the following islands: Espiritu Santo, Mallicolo, Efate or Sandwich Island, Epi, Erromanga, Tanna, Fotuna or Eironnian, and Aneityum. The group is under the joint administration of France and Great Britain, according to conventions of February, 1906, and Mar. 18, 1922. The interests of British, French, and natives are guaranteed; the conditions of land holding in the islands are fixed; and the regulation and recruitment of labor provided for. The area is approximately 5700 square miles and the population about 60,000, of whom in 1926, 211 were British and 680 French. Many missionary schools have been established, chiefly by the Presbyterian faith. The land for the most part has not been cleared, but large tracts have been settled in the interior. The area under cultivation is planted chiefly with coconuts, cocoa, cotton, and coffee. Bananas, oranges, and all tropical fruits grow well. Trade is chiefly with Sydney and New Caledonia. The imports in 1926 amounted to 30,457,405 francs and the exports were valued at 43,267,835 francs, of which about one-fourth were British. The chief imports are provisions, clothing, metals, and furniture, and the chief exports are corn, copra, coffee, cotton, coconuts, and cacao. The joint revenue in 1926 was 1,777,199 francs and expenditure 1,217,559 francs. British revenue in 1926 amounted to £825 and expenditure to £15,661. Direct steamship communication has been established with France, via Tahiti and Panama. British High Commissioner, M. Eyre Hutson; French High Commissioner, M. Guyon; British Resident Commissioner, G. A. Joy (acting); French Resident Commissioner, M. d'Arbussier.

NEW JERSEY. **POPULATION**. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,155,900. The estimated population on July 1, 1928, was 3,821,000. The capital is Trenton.

AGRICULTURE. The accompanying table gives the acreage, production, and value of the principal crops in 1927 and 1928.

MINERAL PRODUCTION. The output of clay products, which forms more than half of the yearly total of the State's mineral production was higher in 1926, the latest recorded year, than 1925. The total value of such products was

AGRICULTURE—ACREAGE AND PRODUCTION

Crop	Year	Acreage	Prod. bu.	Value
Potatoes	1928	57,000	9,120,000	\$4,560,000
	1927	57,000	9,177,000	10,095,000
Hay	1928	263,000	479,000 *	6,926,000
	1927	274,000	487,000 *	8,398,000
Corn	1928	181,000	6,968,000	6,759,000
	1927	179,000	7,160,000	6,086,000
Peaches	1928	1,625,000	2,194,000
	1927	2,304,000	3,456,000
Sweet potatoes	1928	15,000	2,175,000	2,610,000
	1927	15,000	1,890,000	2,268,000
Wheat	1928	60,000	1,200,000	1,488,000
	1927	60,000	1,380,000	1,725,000

* tons.

\$47,512,514 for 1926 and \$46,010,624 for 1925. Of these totals, brick and tile contributed \$23,046,186 in 1926 and \$21,610,853 in 1925; pottery, \$24,466,328 in 1926 as against \$24,399,771 in 1925. Zinc ranked second of the State's minerals in point of value of yearly product. The total of zinc produced in 1926 was 80,629 short tons. The mining of iron ore, though not any longer one of the State's leading mineral industries, made some advance in 1926, when 212,152 long tons of ore were shipped from mines, and this advance was for the most part maintained in 1927, when 202,720 tons were shipped. The value of the shipments of the latter year was \$860,393; that of the 1926 shipments, \$925,403. The total value of the mineral products for 1926 was \$77,065,713; for 1925, \$76,761,313.

FINANCE. State expenditures in the year ended June 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of State governmental departments, \$44,053,408 (of which \$16,896,733 was aid to local education); for conducting public service enterprises, \$156,160; for interest on debt, \$3,071,760; for permanent improvements, \$24,709,156; total, \$71,990,484 (of which \$21,868,567 was for highways, \$6,100,970 being for maintenance and \$15,767,597 for construction). Revenues were \$76,045,226. Of this, property and special taxes formed 65.4 per cent; departmental earnings and charges for officials' services, 5.5; sales of licenses, 19.7. The State at the time levied no sales tax on gasoline. Property valuation was \$6,111,703,758; State taxation thereon, \$36,545,466. Net funded State debt on June 30, 1927, was \$63,274,551. Outstanding State highway debt was \$29,000,000.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 2294.27. There were built in 1928, 3.1 miles of additional first track, 1.41 miles of second track, 12.16 miles of third, and 10.68 of fourth, or other track.

EDUCATION. There was a general movement toward inserting programmes of health education in new curricula in the entire State. In connection with this movement, as related in the *Journal of the National Education Association*, was the appointment of a State director of health education. There were enrolled in the public schools of the State in the academic year 1927-28, 772,022 pupils. The number of teachers was 26,414; of school buildings, 2300. Of the pupils, 54,700 were transported to schools at public expense. Of the pupils, 18,269 were enrolled in evening schools; 45,954 in kindergartens; in elementary day schools, 601,043; in day high schools, 100,045. Current expenses of the year for public schools totaled \$68,575,728.80. Salaries

of day school-teachers, superintendents excluded, averaged \$1931.11 a year.

CHARITIES AND CORRECTIONS. The central authority for the care of dependents, defectives, and delinquents of the State rested in 1928 in the Department of Institutions and Agencies. This body, created in 1918, consists of the governor, ex-officio, and eight appointed non-salaried members. It coördinates activities, prepares budgets, lays down general policies, furnishes expert staff services to individual institutions, and has authority to inspect municipal and county institutions. It appoints a commissioner as its chief executive officer. State institutions for the care or custody of individuals, with the numbers of their inmates on December 1, 1928, were Grey-stone Park State Hospital (insane), 3600; Trenton State Hospital (insane), 2503; State Colony for Feeble-Minded Males, New Lisbon, 343; State Colony for Feeble-Minded Males, Woodbine, 333; State Institution for Feeble-Minded (females), Vineland, 1060; North Jersey Training School (female defectives), Totowa, 301; State Village for Epileptics, Skillman, 976; Sanatorium for Tuberculous Diseases, Glen Garden, 301; State Prison, Trenton, 1685; New Jersey Reformatory (males), Rahway, 601; New Jersey Reformatory (males), Annandale, 201; New Jersey Reformatory (women), Clinton, 176; State Home for boys (delinquents), Jamesburg, 592; State Home for Girls (delinquent), Trenton, 238; Home for Disabled Soldiers, Kearney, 107; Home for Disabled Soldiers, Sailors, Marines, and their Wives and Widows, Vineland, 210.

LEGISLATION. The 152nd State legislature convened January 10 and held session until early in April. After a recess of about three months, it reconvened July 10, and the session was thereafter protracted until after election because of the political situation in the State. In the first session was enacted a measure (repealed later owing to strong opposition) to authorize the construction and operation of a privately owned toll road between Camden and Atlantic City, a route largely utilized by motor traffic originating in Pennsylvania. Maximum compensation for injured workmen under the State compensation system was increased by statute to \$20 a week. Banks and trust companies received the right to refuse payment on any check presented a year or more after date. A law was passed permitting summary proceedings for an employer's failing to pay wages and providing money penalties for the offense. An existing act giving motor buses the right of way on highways was repealed. A series of bills embodying recommendations of the commission for uniform traffic laws were passed, but were vetoed by Governor Moore chiefly as giving too much leeway in regard to speed limits. In the resumed session, however, the measures were passed with amendments and were signed by the governor. They set maximum highway speeds at 10 miles an hour in school zones, 15 miles an hour in taking corners, and 40 miles an hour on country roads, but authority remained with municipalities to regulate speeds within their own areas. Pedestrians were forbidden to cross streets at oblique angles.

The proposal contained in Governor Moore's message at the convening of the legislature, that it repeal the State Prohibition Enforcement Act, was not carried out. The State Senate, early in the session, voted in favor of an investigation

of the banking department. The investigation was largely occupied with allegations of political favoritism in the granting of banking charters. A resolution of both houses provided for the creation of a committee of eight to investigate questions of public interest affecting any State department, board, or commission. There followed an inquiry into voting practices in Hudson County, a Democratic area of which the vote had vitally affected the results of several State elections. Upon disclosures in the course of this inquiry, the legislature in its resumed session passed a measure to remove Thomas A. McDonald, Superintendent of the Hudson County election bureau, and to name his successor. Vetoed by Governor Moore, this measure was repassed over his veto. The reasons advanced for the removal were discoveries of numerous improper registrations and evidence to the effect that Democrats had voted Republican ballots in primary elections.

The legislature, through the Case committee, extended its investigation into the affairs of Hudson County, and about a week before election day the committee summoned Mayor Frank Hague of Hudson to testify before it. This he refused to do, alleging that the purpose of the proceedings was to affect the vote in the State. After the election an attempt was made to arrest Hague in his home on a charge of contempt. He agreed to surrender himself on this charge, and later defeated the contempt charge in the Chancery court.

POLITICAL AND OTHER EVENTS. The Wanaque Reservoir of the North Jersey District Water Commission, to serve eight cities of the northern part of the State was completed and partly filled early in the year. Work on it had begun in the autumn of 1918. Impounding the waters of the Wanaque River by a dam 1500 feet long, it had a capacity of 29,000,000,000 gallons and cost about \$29,000,000. Contracts were negotiated between the Pennsylvania Railroad and the city of Newark for the construction of a railroad and tube system terminal to cost about \$25,000,000. The Lackawanna system announced in April its intention to proceed with the work of electrifying the Morris and Essex line to Dover and branches to Gladstone and to Montclair, at a cost of \$14,000,000. Efforts to establish a motor-bus line between Camden and Atlantic City were opposed before the public utilities commission by railroad interests. Efforts to enforce Sunday closing of moving picture houses in Milburn and Westwood early in the year led to threats of reprisals in the form of action to close other forms of business, such as garages, drug stores, and gasoline filling stations. To check the growth of the Japanese beetle pest in rural New Jersey, a shipment of India wasps was imported from Calcutta. It was the theory that these wasps were natural parasites on the beetle grub, in which they laid their eggs.

Following the removal of the superintendent of elections in Hudson County (see *Legislation*, above) a new superintendent appointed by the legislature proceeded to a purgation of the registration lists, from which more than 20,000 names were removed. Many of these were restored in the last few days before the election, by action of the local courts.

ELECTION. The voters of the State, on November 6, gave a heavy majority for the Republican presidential and vice presidential candidates,

Hoover and Curtis, in what was much the largest total vote that the State had ever cast. Hoover carried every county except Hudson, where Smith on the presidential vote obtained a majority of about 50,000. Senator Edward I. Edwards, Democrat, running for reelection, was defeated by Hamilton F. Kean, Republican. A prevailing Republican group of United States Representatives was likewise elected. For the first time in 11 years a Republican governor was elected, in Morgan F. Larson, who defeated William L. Dill, Democratic. The popular vote for president was: Hoover (Rep.), 925,796; Smith (Dem.), 616,517.

OFFICERS. Governor, A. Harry Moore; Secretary of State, Joseph F. S. Fitzpatrick; Treasurer, Albert C. Middleton; Comptroller, Newton A. K. Bugbee; Attorney-General, Edward L. Katzenbach; Commissioner of Education, Charles H. Elliott.

JUDICIARY. Chancellor, Edwin Robert Walker; Supreme Court: Chief Justice, William S. Gummore; Justices: Samuel Kalisch, Frank S. Katzenbach, Jr., Thomas W. Trenchard, Charles W. Parker, Charles C. Black, James F. Minturn, Luther A. Campbell, Frank T. Lloyd.

NEW JERUSALEM, CHURCH OF THE. An organization which is also known as the New Church, and popularly called Swedenborgian, because based upon the statement of Christianity set forth in the writings of Emanuel Swedenborg, Swedish scientist, philosopher, theologian, and seer (1688-1772). The two bodies that now compose it in the United States are the General Church of the New Jerusalem and the General Convention of the New Jerusalem, while in Great Britain the General Conference of the New Church corresponds to the General Convention in the United States. The first New Church society in America was founded at Baltimore in 1792, and the General Convention of the New Jerusalem in the United States was organized in 1817. In 1890 a considerable number withdrew, forming later the General Church of the New Jerusalem. The polity of the church is modified episcopacy; the worship in the church is generally liturgical, chants being extensively used. Missionary work is carried on in Denmark, Sweden, Germany, France, Switzerland, Lettland, Czechoslovakia, Austria, South Africa, India, Japan, British Guiana, and Dutch Guiana.

THE GENERAL CHURCH OF THE NEW JERUSALEM. This body was organized in 1897 under episcopal government with headquarters at Bryn Athyn, Pa., a new community where the church established the following institutions: A cathedral church of unusual architectural interests, built in the manner of the great cathedrals of the fourteenth century; the Academy of the New Church, which has a valuable museum and library and departments from kindergarten to junior college; and theological and normal schools; with an enrollment of 267 in 1928. The General Church differs from the older bodies in the New Church mainly in its stricter attitude toward the theological writings of Swedenborg (considering them to be the Gospel or Word of the Lord at his Second Advent) and in the endeavor to establish parochial schools. It had an international membership in 1928 of 1933 with 3 bishops, 35 pastors, 5 ministers, and 24 societies, 15 of which were in the United States and Canada, 2 in England, and others in Sweden,

Holland, Belgium, France, Natal, New South Wales, and Brazil. A native mission was carried on in South Africa, with headquarters at Alpha, O.F.S. The north wing of the Cathedral at Bryn Athyn was used for the first time at the children's Christmas service on December 23. Among the periodicals published by the General Church were *New Church Life*, its official monthly magazine, *New Church Sermons*, *The Journal of Education*, and *The Bulletin*.

THE GENERAL CONVENTION OF THE NEW JERUSALEM IN THE UNITED STATES OF AMERICA. In 1928, the General Convention consisted of about 5700 communicant members, united into 85 societies, territorially organized as 12 associations and 7 societies. The ministerial membership was 115; and the amount expended for missions and benevolences for the year ending Apr. 30, 1928, was \$22,000. Educational institutions of the General Convention included a theological school at Cambridge, Mass., a junior college at Urbana, Ohio, and the Waltham School for Girls, Waltham, Mass. Periodicals included: the *New-Church Messenger*, weekly, Brooklyn, N. Y.; the *New-Church Review*, quarterly, Boston, Mass.; the *New-Church League Journal*, monthly, Boston, Mass.; *The Helper*, weekly, Philadelphia, Pa.; and *Sunday Afternoons*, weekly, Boston, Mass. The Convention held its 1928 meeting at its national church in Washington, D. C., in May. Helen Keller, a member of this body, was the principal speaker. The 1929 Convention was to be held in New York City.

THE GENERAL CONFERENCE OF THE NEW CHURCH. This body which is organized in Great Britain and corresponds to the General Convention in the United States, is the largest organization of the New Church, its 70 societies reporting an adult membership of 6295, together with 656 "isolated receivers," 1053 junior members, and 5775 Sunday school attendants, in 1928. The Conference meets annually, the president holding office for one year. Its principal publications are *New Church Magazine* (quarterly) and *New Church Herald* (weekly). Publication societies are The Swedenborg Society (London, founded, 1810), Missionary and Tract Society, and Manchester New Church Publishing Society. A number of isolated congregations, especially within the British Empire, are affiliated with the General Conference. Its South African Native Mission, with headquarters at Krugersdorp, reported 2639 adult members.

NEW MEXICO. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 360,350. The estimated population on July 1, 1928, was 396,000. The capital is Santa Fe.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Cotton	1928	108,000	90,000 ^a	\$6,825,000
	1927	95,000	70,000 ^a	6,980,000
Hay	1928	219,000	437,000 ^b	7,268,000
	1927	226,000	464,000 ^b	6,158,000
Beans, dry	1928	214,000	856,000	2,696,000
	1927	195,000	975,000	2,828,000
Corn	1928	199,000	3,482,000	3,099,000
	1927	166,000	2,490,000	2,316,000
Wheat	1928	186,000	2,054,000	2,201,000
	1927	55,000	570,000	676,000
Sorghum, grain	1928	188,000	3,884,000	2,030,000
	1927	171,000	2,894,000	1,915,000

^a bales, ^b tons.

MINERAL PRODUCTION. The mine output of copper in the form of recoverable content of ores contributes normally about 40 per cent of the combined value of all minerals produced. In 1927 the mines produced but 74,251,863 pounds of copper, as against 81,642,379 in 1926; the price being lower in 1927, the total value of copper for that year was \$9,726,994, as compared with \$11,429,933 for 1926. Gold production was to the value of \$604,838 in 1927 and \$405,803 in 1926. There were mined 890,083 fine ounces of silver in 1927, a considerable advance over the 450,934 ounces of 1926; the total value for 1927 was \$504,677; for 1926, \$281,383. The lead output also was much greater, being 16,052,855 pounds for 1927, as against 6,960,366 for 1926; in value, \$1,011,330 for 1927 and for 1926, \$556,829. Zinc production more than doubled, 59,603,000 pounds for 1927, from 24,104,800 for 1926; in value, \$3,814,592 for 1927 and \$1,807,860 for 1926. Thus the combined value of the year's production of the five metals, gold, silver, copper, lead, and zinc, in 1927 was \$15,662,076, and well in excess of the \$14,841,808 of 1926. Of coal, the mine output was slightly increased, being 2,935,539 net tons for 1927, as against 2,817,923 for 1926; the totals were valued at \$9,179,000 for 1927 and \$8,916,000 for 1926.

The estimated 1928 production of metals was: gold, 31,546 ounces; silver, 822,478 ounces; lead, 14,462,000 pounds; copper, 88,214,000 pounds; zinc, 65,658,000 pounds. These quantities were valued respectively as follows: gold, \$652,114; silver, \$481,150; lead, \$882,182; copper, \$12,879,244; zinc, \$3,939,480. The combined value for all five metals was \$18,834,170.

Petroleum production fell to 1,203,000 barrels (1927) from 1,666,000 barrels (1926); in value, \$1,600,000 (1927, estimated) and \$3,720,000 (1926). The total value of the State's mineral products for 1926 was \$28,513,991; for 1926, \$25,696,009.

FINANCE. State expenditures in the year ended June 30, 1927, according to the U. S. Department of Commerce, were: for maintenance and operation of State governmental departments, \$4,917,254 (of which \$1,115,808 was aid to local education); for interest on debt, \$176,495; for permanent improvements, \$3,052,077; total, \$8,146,096 (of which \$3,946,731 was for highways, \$996,097 being for maintenance and \$2,950,634 for construction). Revenues were \$6,998,951. Of this, property and special taxes formed 27.6 per cent; departmental earnings and charges for State officials' services, 12.7 per cent; sales of licenses and taxation of gasoline, 21.5 per cent. Property valuation was \$315,373,405; State taxation thereon, \$2,623,523. Net funded State debt on June 30, 1927, was \$3,321,279. Highway bonds totaling \$2,670,000 were outstanding.

TRANSPORTATION. The total number of miles of railroad line under operation in the State on Jan. 1, 1928, was 2997.59. No construction of additional mileage was reported in 1928.

EDUCATION. A plan was brought forward with support of both political parties to reorganize the State Department of Education in such fashion as to place the power to appoint the State Superintendent in the hands of the Board of Education, and to provide more systematic management of State school lands and State school funds.

CHARITIES AND CORRECTIONS. The first building unit of a home for mental defectives, at Las

Lunas, was constructed in 1928, under a State appropriation; the institution was under the authority of a statutory board of managers, and was expected to begin operation about Jan. 1, 1929. The chief central authority of the State in the welfare field in 1928 was the Department of Public Welfare, which included a Bureau of Public Health and a Bureau of Child Welfare. Outside of the work usual to a health organization, it was active in the placement of dependent, delinquent, and defective children. It did not control the State institutions. The chief of these were: School for the Deaf, Santa Fe; Institute for the Blind, Alamogordo; New Mexico Insane Asylum, Las Vegas; Reform School, Springer; State Penitentiary, Santa Fe; State Miners' Hospital, Raton; Home and Training School for Mental Defectives (see above).

POLITICAL AND OTHER EVENTS. The State was involved in the controversy over the Boulder Dam project, State Water Commissioner Wilson issuing an appeal in March to Representatives from the States in the river basin to oppose the dam. At the Federal Trade Commission's inquiry into the activities of public utility interests, it was asserted in testimony that ex-governor Mecham's law firm had been under retainer from an association of utility interests while he attended the interstate conferences at Denver in 1927. The ranch of Albert B. Fall, ex-Secretary of the Interior, near Three Rivers, described as the largest one-unit ranch in the country, was reported sold in July to Texas cattle interests. Excavations in an area near the headwaters of the Cimarron River, conducted by Barnum Brown of the American Museum of Natural History, brought to light remains of bison of an extinct type and spearheads unlike those of known American Indians, in a situation indicating an antiquity of some 20,000 years. Loss of pasturage attributed to the prevalence of jack rabbits led to active efforts to slaughter these creatures in the spring.

ELECTION. The vote of the State in the election of November 6 went to Hoover and Curtis on the Republican National ticket; they received 69,617 votes, to 48,094 for Smith and Robinson, Democratic candidates. Bronson Cutting, Republican, United States Senator by appointment, was elected for the full regular term. O. A. Larrazolo, Republican, was elected to the Senate for the unexpired term. Richard C. Dillon, Republican, was reelected Governor. John Morrow, Democrat, was reelected United States Representative-at-large.

OFFICERS. Governor, R. C. Dillon; Lieutenant-Governor, Edward Sargent; Secretary of State, Jennie M. Fortune; State Auditor, Miguel A. Otero; State Treasurer, Warren R. Graham; Attorney-General, Robert C. Dow; Superintendent of Public Instruction, Lois Randolph.

JUDICIARY. Supreme Court: Chief Justice, Frank W. Parker; Associate Justices, C. M. Botts, Samuel Bratton, John C. Watson.

NEW ORLEANS. See LOUISIANA.

NEW SOUTH WALES. One of the six original States of the Commonwealth of Australia; located in the southeast part of the continent; bounded on the north by Queensland; on the south by Victoria; on the east by the Pacific Ocean; and on the west by South Australia. Area, inclusive of the Federal Territory, 310,372 square miles; population, including aborigines, according to the census of 1921, 2,101,968. The Federal Territory in 1921 had an area of

912 square miles and 2572 inhabitants. Sydney, the capital, had a population in 1921 of 905,047, including suburbs and shipping. At the end of 1927 the population was estimated at 2,360,326, for all of New South Wales, and 1,039,390 for Sydney. Other towns with their population at the end of 1926 were: Newcastle and suburbs, 99,850; Broken Hill, 24,010; Auburn, 17,710; Parramatta, 16,400; Granville, 16,800; Bankstown, 17,270; and Lithgow, 16,380. The movement of population in 1926 was: Births, 53,126; deaths, 22,188; marriages, 19,219. During the same year the immigrants numbered 62,395 and the emigrants, 43,575. Education is controlled by the State and instruction is compulsory between the ages of 7 and 14. At the beginning of 1927 there were 3179 government schools, with 11,313 teachers, with 343,187 pupils enrolled, and an average attendance of 271,690. There were 702 private schools, of which 482 were Roman Catholic, with an enrollment of 2795 teachers and 67,537 pupils.

Wheat is the principal agricultural crop and the chief fruit crop is oranges. The area sown for wheat during the 1926-27 season was 3,649,730 acres. Other grains and other citrus fruits, potatoes, tobacco, bananas, and apples are raised. The production of wool in 1926-27 amounted to 495,820,000 pounds and the wool clip was valued at £35,237,000. On June 30, 1926, the state had 53,860,000 sheep, 2,937,130 cattle, 651,035 horses, and 382,674 swine. The estimated value of the forestry products in the fiscal year 1925-1926 was £1,871,000. A total of 11,413 factories employing 145,958 persons was reported in New South Wales for the year ended Dec. 31, 1927, representing a decrease of 416 factories and 2664 employees. Manufacturers of clothing and textile fabrics employed the greatest number of persons during the year, followed by metal-working and machinery establishments. No new industry was reported, but there were many extensions of existing plants. The rapid growth of the motor trade resulted in the erection of many modern buildings.

The annual value of the minerals produced in New South Wales is more than twice that assigned to the combined output of all the other States of the Commonwealth. The principal factors are coal, coke, silver, lead, zinc, and limestone cement. The output of coal in 1927 was 11,126,114 tons valued at £9,782,002 at the pit's mouth. The external commerce in 1927 was as follows: Imports, oversea, £68,946,777; exports, oversea, £62,815,076. On June 30, 1927, 5750 miles of Government railways were open; the revenue for 1926-27 was £18,906,543; the expenditure, £13,795,853; the number of passengers carried, 141,615,806. There are seven private railways having a total mileage of 112 miles (mainly colliery lines).

Executive power is vested in a governor assisted by a cabinet, and legislative power in a bicameral legislature, consisting of a legislative council and a legislative assembly. The legislative council, which must not consist of less than 21 members, is appointed for life by the Crown, and consisted of 96 members in 1927. There are 90 members in the Legislative Assembly. Governor in 1928, Admiral Sir Dudley R. S. De Clair; Premier and Colonial Treasurer, T. R. Bavin.

NEW YORK. POPULATION. A census by the State was taken in 1925. This showed a population of 11,162,151, compared with 10,385,227 by

the Federal census in 1920. The population of New York City increased from 5,620,048 in 1920 to 5,873,356 in 1925. The Borough of Manhattan decreased from 2,284,103 in 1920 to 1,945,029 in 1925. All the other boroughs increased their populations. The U. S. Census Bureau estimate for July 1, 1928, was: New York City, 6,017,500; Borough of Bronx, 951,900; Borough of Brooklyn, 2,308,500; Borough of Manhattan 1,752,000; Borough of Queens, 854,400; Borough of Richmond, 150,700. The estimated population of the State on July 1, 1928, was 11,550,000. The capital is Albany.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1928	4,665,000	6,513,000 ^a	\$73,316,000
	1927	4,918,000	7,389,000 ^a	83,277,000
Potatoes	1928	284,000	32,376,000	21,044,000
	1927	270,000	28,620,000	35,775,000
Corn	1928	650,000	22,100,000	21,879,000
	1927	668,000	22,542,000	21,640,000
Oats	1928	1,020,000	33,660,000	18,176,000
	1927	1,000,000	35,000,000	19,250,000
Apples	1928	21,900,000	24,090,000
	1927	13,600,000	19,270,000
Wheat	1928	316,000	4,702,000	6,428,000
	1927	301,000	6,291,000	7,875,000
Barley	1928	169,000	4,648,000	3,625,000
	1927	188,000	5,452,000	4,362,000
Buckwheat	1928	192,000	3,475,000	3,128,000
	1927	201,000	4,221,000	3,546,000

^a tons.

MINERAL PRODUCTION. The output of pig iron, which made up 40 per cent of the total mineral production of the State in 1926, increased somewhat to 2,401,432 long tons for 1927, from 2,389,665 for 1926; the total had, however, a less value, \$40,803,579 for 1927 as against \$44,970,166 for 1926. The by-product coke ovens of the State continued their rapid rise, producing in 1927, 3,523,000 short tons of coke, as compared with 2,827,805 in 1926, which in turn had greatly exceeded 1925 production. Value of the 1927 coke total was not available; that of 1926 coke was \$17,453,226. Clay products, second in magnitude of the components of the State's mineral industry, attained \$29,999,053 for 1926, the latest recorded year; for 1925, \$24,550,751. Cement production was increasingly large: for 1927, 10,775,375 barrels; for 1926, 8,795,768. In value, cement shipments were: 1927, \$16,380,009; 1926, \$14,864,066. Ferro-alloys were extensively produced; the output was 104,198 long tons in 1926 and 115,764 in 1925; in value, \$13,045,938 in 1926 and \$12,811,534 in 1925. The gypsum industry was steady, producing 1,723,460 short tons in 1926 as against 1,730,254 in 1926; in value, \$16,794,589 in 1926 and in 1925, \$16,219,906. Salt producers disposed of 1,964,080 short tons of salt in 1927, slightly less than the 2,001,590 tons of 1926: the totals were valued at \$6,121,461 for 1927 and \$6,364,829 for 1926. Stone output was: 1926, \$13,713,620; 1925, \$12,358,238. The total value of the mineral products of the State, duplications eliminated, was for 1926, \$112,016,262; for 1925, \$102,035,557.

FINANCE. State expenditures in the year ended June 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$144,710,772 (of which \$55,516,611 was for local education); for interest on debt, \$13,718,555; for permanent improvements, \$46,935,004; total, \$205,364,331 (of which \$37,504,245 was for high-

ways, \$16,372,198 being for maintenance and \$21,132,048 for construction). Revenue was \$215,473,758. Of this, property and special taxes formed 53.0 per cent; departmental earnings and charges for State officers' services, 3.7; sales of licenses, 33.0. Assessed valuation of property was \$20,795,221,086; State taxation thereon, \$22,722,895. Net funded State debt on June 30, 1927, was \$244,294,698. Much of the debt was offset by sinking fund assets; the total outstanding funded debt was \$342,000,309. Of outstanding debt, \$259,649,400 was for highways.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 8364.39. There were built in 1928, 19.52 miles of additional second track, 9.5 of third, and 9.5 of fourth, or other track.

At the close of the 1928 season of the New York State Barge Canal, it was reported that a total of 3,089,998 tons had been carried, an increase of 508,106 tons and a gain of 20 per cent over the 1927 totals, and breaking all-time tonnage records.

EDUCATION. More than 50 rural school sections, so Commissioner of Education Graves asserted in the *Journal* of the National Education Association, had up to the end of 1928 organized central school districts under the State Central Rural School Act, in the first three years of its operation. Work was done in planning a State-wide programme of junior-high-school instruction. For the academic year 1926-27, the school-age population of the State was placed at 2,587,901. There were enrolled in the public schools of the State 2,020,426 pupils, of whom 1,678,540 were in elementary and 341,886 in high schools. Expenditures of the year 1927 for public-school education totaled \$294,312,333.31. Salaries of teachers averaged \$2085.88.

CHARITIES AND CORRECTIONS. Activities of the State in the care or custody of persons were divided chiefly among three administrative departments: the Department of Correction, which cared for the prisons, reformatories, and criminal insane; Department of Charities, headed by a State board of 12 commissioners, which supervised almshouses, Indian affairs, private and local child-welfare and medical institutions, and administered certain special schools and hospitals; the Department of Mental Hygiene, which had authority over mental hospitals and schools.

State institutions, with their populations as in the fiscal year 1927, were Auburn Prison, Auburn, 1610; Clinton Prison, Dannemora, 1584; Great Meadow Prison, Comstock, 1124; Sing Sing Prison, Ossining, 1671; Dannemora State Hospital (criminal insane), 622; Matteawan State Hospital (criminal insane), 1017; State Reformatory, Elmira, 1290; State Training School, Albion, 200; State Reformatory for Women, Bedford Hills, 306; Institution for Defective Delinquents, Napanoch, 615; State Training School for Girls, Hudson, 395; State Agricultural and Industrial School, Industry, 661; Thomas Indian School, Iroquois, 193; State Women's Relief Corps Home, Oxford, 181; Hospital for Treatment of Incipient Pulmonary Tuberculosis, Raybrook, 308; Orthopedic Hospital for Children, West Haverstraw, 204; State Schools for Mental Defectives at Newark, 1203; Rome, 2604; Syracuse, 988; Letchworth Village, 2107; and Craig Colony, Sonyea, 1486; State Hospitals for the Insane: Binghamton, 2916; Brooklyn, 2550; Buffalo, 2525; Central Islip,

6500; Helmut, 1428; Wingdale, 541; Poughkeepsie, 4242; Kings Park, 5479; New York, 7214; Middletown, 3027; Rochester, 2001; Ogdensburg, 2429; Utica, 1929; Willard, 2628; State Camp for Veterans, Bath, 199; State School for the Blind, Batavia, 163. Mental patients in State Hospitals on Jan. 1, 1928, numbered 45,131, and formed 392.7 to the 100,000 of the population; prisoners in eight State penal institutions numbered 7531.

LEGISLATION. The State legislature convened in annual session January 4, and adjourned March 22. Governor Smith in his financial message submitted for the fiscal year 1928-1929 a budget calling for a total expenditure of \$229,269,065, which was to leave a surplus of about \$15,779,000 over existing surplus and expected revenues from existing sources. Accordingly no new taxation was sought. The total of appropriations passed in the course of the session increased the budget total by about \$3,000,000. The State ad valorem property tax rate was cut to one-half mill, from one mill, at the recommendation of the governor; a total tax reduction of about \$12,500,000 was thus effected. As a sequel to the defeat, at the polls, of the attempt made by the Republican legislative majority in 1927 to bring about a constitutional change providing for the election of State officers every four years, in presidential years, the governor and the Democratic minority put forward a bill to have these officers elected quadrennially, but in non-presidential years. This measure failed of passage, as did a measure for reapportionment of representation in the Legislature on the population basis. An extensive modernization of the housing law of the State was not passed, but the emergency rent laws, restricting the freedom of action of landlords, were again in part extended, so as to apply until June, 1929, upon apartments up to a rental of \$10 a month, and until Dec. 1, 1928, on those renting at from \$10 to \$15 a month. Of bills brought forward by the Baumes Crime Commission, dealing with the treatment of crime, eleven were enacted; these provided for the punishment of "fences," receivers of stolen goods, by admitting the uncorroborated testimony of the thief against the receiver; required that a purchaser of goods make reasonable inquiry as to the seller's right to dispose of them; permitted increase of the penalty for second-degree murder above 20 years, at the discretion of the judge; reformed the State Board of Parole, and created a Director of Parole, with subordinates, and with duties that included helping paroled prisoners to get employment. In order to render the plans for the elimination of grade crossings effectual, the Legislature passed at the recommendation of Governor Smith a measure to authorize the State to bear a portion of the localities' share of the cost of crossing elimination. There was enacted a measure to encourage and to regulate aviation.

The labor law was amended with regard to children under fourteen years of age so that they might not be employed in any gainful occupation, and to require that children under seventeen file with the employer, if working, an employment certification or vacation work permit. Work before 8 A. M. or after 6 P. M. was forbidden for those under sixteen. For the employment of children not physically sound, permits terminating every six months and renewable only after physical examination were required. Loan sharks were restricted and the business of

salary loans was regulated by an act restricting interest on such loans to 6 per cent, and specifying that repayment in excess of the original advance must be regarded as interest. A bill to reorganize the administration of workmen's compensation was vetoed by the governor as interfering with administrative functions. The field for the investment of legally limited funds was broadened, especially in admitting insurance investments in junior security issues.

The State adopted the reciprocal waiving of State tax on decedents' estates, retroactive to July 1, 1925, and adopted in all by 22 States; a previous enactment had been declared void by the State Court of Appeals because of discrimination between residents and non-residents in the wording. A measure to levy the entire decedent's estate tax on the residuary legatee was vetoed. Bills to authorize the construction of three private toll bridges were vetoed likewise. The New York City government was empowered to agree with the New York Central Railroad on the elimination of grade crossings along Eleventh Avenue. A measure to give the Board of Port Authority charge of a survey of transit conditions in the area about New York City was vetoed as overburdening the board. For the purchase of additional land for the restoration of the Revolutionary battlefield of Saratoga, \$90,000 was appropriated. The power of home rule as applying to large cities was extended in certain respects. A constitutional amendment was resolved, to permit voters to register on certain dates prior to September 20. An extensive programme of Governor Smith's including a referendum on his proposal of a water power authority, the creation of a commission to study motor vehicle accident compensation and numerous other features was rejected by the opposing majority.

POLITICAL AND OTHER EVENTS. Assertions of official misconduct brought in the previous year against Mrs. Florence E. S. Knapp, former Secretary of State of New York, with regard to the taking of the State census of 1925, were investigated by Randall J. Le Boeuf, Jr., appointed to the task by Governor Smith as a commissioner under the Moreland Act. The Le Boeuf report, filed January 22, found evidence of criminal irregularities and recommended that the State prosecute Mrs. Knapp and others. The District Attorney of Albany County, to whom the duty was first assigned, found the evidence insufficient to warrant prosecution. The governor on March 9 directed the State attorney-general to supersede the county prosecutor. Mrs. Knapp was accordingly indicted by a special grand jury, and was brought to trial at the beginning of May after delay due to the difficulty in securing the return to the State of a connection sought as a witness against her. It was testified that the name of the ostensible recipient had been forged on numerous pay checks for work supposed to have been done for the census, and that the proceeds of such checks had come into the possession of Mrs. Knapp. The trial jury disagreed, but the case was retried before another jury, and Mrs. Knapp was found guilty of grand larceny May 26. The case gained great attention because Mrs. Knapp had been the first woman to occupy a public elective post of high rank in the State.

The working of the State workmen's compensation law was investigated early in the year by the Industrial Survey Commission. As a re-

sult of accusations of wasteful handling of the compensation fund, brought at this investigation, Governor Smith at the end of January appointed Professor Lindsay Rogers, a Moreland Act commissioner, to inquire into the affairs of the Labor Department and of the Workmen's Compensation Bureau. The Report of the commissioner, rendered in June, acquitted the department and the compensation bureau of fraud, but recommended that the entire administration of the compensation law be put in the hands of the Industrial Board, the agency for the granting of claims.

A decision of the State Court of Appeals upheld an act of 1925 forbidding the control of State banks by voting trusts. This decision had the effect of dissolving a voting trust that controlled the Bank of America, one of the oldest banks in the country. On the termination of the voting trust, the Giannini interests, identified with the Bancitaly, gained control. Construction of a State office building at Albany, near the Capitol, was begun February 28, but was delayed by difficulty with the foundations.

Among the most important structural developments in and about New York City was the opening of two highway bridges between Staten Island and New Jersey, on June 20. One of these, named Goethals Bridge, connects Howland Hook with Elizabeth, and is 8000 feet in length; the other, named Outerbridge Crossing, extends from Tottenville to Perth-Amboy, and has a length of somewhat over 10,000 feet. The structures were built by the Board of Port Authority and were put into operation as toll bridges. The extension of the Fourteenth-Street-Eastern line of the Brooklyn-Manhattan Transit system was completed to Canarsie and opened for through service July 14.

The city took steps to acquire a municipal airport: a suggestion that the War Department allow it to acquire Governors Island for this purpose was not favorably regarded by Army authorities, but the Board of Estimate voted \$500,000 in February for the initial development work on Barren Island, an 800-acre tract in Jamaica Bay. No construction was undertaken in connection with the pending water supply projects of the city, delayed by failure to reach interstate agreement on the partition of the waters of the Delaware River, in the Legislative sessions of 1927. Hearings were held, however, at Kingston early in March, on a proposed plan by which the city would proceed to divert to its water system the waters of Rondout Creek, the Neversink River, and the East Branch of the Delaware River, without dependence on the approval of other States.

Accusations with regard to the building of sewers in the Borough of Queens were investigated by commissioners appointed by Governor Smith. The defense succeeded in enjoining the first of these investigators, Justice Townsend Scudder, from sitting, on the ground that he could not simultaneously hold judicial office and act as a delegate of the Governor. Clarence J. Shearn, a former supreme court justice, was then appointed in Scudder's place. He proceeded with the investigation of Borough President Maurice E. Connolly of Queens' Borough, who resigned his office early in April. Connolly was later convicted of conspiracy and condemned to a fine and prison sentence of a year.

Efforts to reach an arrangement by which the

city might establish municipal ownership of the transit system continued under the direction of Samuel Untermyer as special counsel to the Transit Commission. Finding the terms to be expected from the city unacceptable, the Interborough Rapid Transit system declared a rise in its fare to seven cents, which it did not, however, put into force, and applied to a special statutory Federal court of three judges to sustain its right to do so. The court accepted jurisdiction and after extended hearings and argument granted the Interborough an injunction to prevent the Transit Commission from interfering with the fare rise, which was declared legitimate on the ground that the later subway contracts had invalidated earlier fare regulation and that these contracts themselves must allow of alteration in the fare, by nature of the lack of power to make them absolute. The matter was appealed to the United State Supreme Court, and the operation of the 7-cent fare was held in abeyance pending the final outcome.

ELECTION. The Democratic presidential candidate, Governor Alfred E. Smith, being not only the Governor of the State but a native of New York City, the Democratic campaign in New York State was particularly intense. Factional disputes in the Democratic ranks in Queens County, connected with the choice of a successor to the Borough President of Queens, who left office under charges of mishandling the sewer construction contracts, diminished the Democratic vote in one important centre. The vote of November 6 gave Hoover and Curtis, the Republican National candidates, a plurality of slightly more than 100,000 over Smith and Robinson, in a total vote of considerably over 4,000,000. The Smith majority in New York City, was 453,805; it did not quite offset the Hoover majority in the remainder of the State. The presidential popular vote of 1928 was: Hoover (Rep.), 2,193,344; Smith (Dem.), 2,089,863. Senator Royal S. Copeland, Democrat, running for reelection, defeated the Republican candidate, Alanson B. Houghton, Ambassador to Great Britain. The political complexion of the State's delegation of Representatives was not extensively changed. On the State ticket, Franklin D. Roosevelt, Democrat, a strong supporter of Governor Smith, was elected governor, defeating Albert E. Ottinger, the republican candidate, by a close vote.

OFFICERS. Governor, Alfred E. Smith; Lieutenant-Governor, Edwin Corning; Secretary of State, Robert Moses; Comptroller, Morris S. Tremaine; Attorney-General, Albert Ottinger; Commissioner of Education, Frank P. Graves.

JUDICIARY. Court of Appeals: Chief Judge, Benjamin N. Cardozo; Associate Judges, Cuthbert W. Pound, Frederick E. Crane, William S. Andrews, Irving Lehman, Henry T. Kellogg, John F. O'Brien.

NEW YORK UNIVERSITY. A non-sectarian institution for the higher education of men and women in New York City chartered in 1831. It comprises the following divisions: at University Heights, a college of arts and pure science, college of engineering, Guggenheim School of Aeronautics; at Washington Square, the graduate

school, school of law, school of commerce, accounts and finance, Washington Square College, school of retailing, school of education, university extension division, and institution of education; at Wall Street division, the graduate school of business administration, and courses in the schools of commerce, accounts, finance, and retailing; medical college, on East 26th Street; and dental college on East 23rd Street. The enrollment for the year 1927-28 in all divisions of the University, after deducting all duplications, was 33,692. The enrollment in the different degree-conferring units was as follows: university college of arts and pure science, 871; school of law, 1786; university and Bellevue Hospital Medical College, 473; college of engineering, 534; graduate school, 474; school of education, including both graduate and undergraduate divisions, 4013; school of commerce, accounts, and finance, including the Wall Street division, 3705; Washington Square College, 6394; graduate school of business administration, 554; school of retailing, 646; and college of dentistry, 414. In other divisions the enrollment was as follows: extension division, 3204; department of fine arts, 1611; public health (correspondence) courses, 95; life insurance training courses, 174. The faculty of the University numbered 1456 for the year 1927-28, including 84 appointments or promotions of professorial rank, made in the previous university year, six of the new appointments being of the rank of full professor, and 11 promotions being of that rank. The productive funds for the year 1927-28 amounted to \$4,290,325, and the income to \$5,569,656. The libraries contained 340,092 volumes. Among other substantial gifts received in the course of the year were a bequest of \$500,000 from the late Miss Emily O. Butler; from the Herman M. Biggs Memorial Fund Committee, for the Medical College, \$65,616; more than \$100,000 in anonymous gifts for laboratory and library installations at Washington Square College; a bequest of \$50,000 from the estate of the late Elbert H. Gary; a collection of early newspapers for which Horace Greeley set type and a collection of his original manuscripts, from his daughter, Mrs. Henry Clendenin. Plans were adopted for the erection near Washington Square, of a twelve-story building of Gothic design for the department of education, to be ready for occupancy in the autumn of 1929. Chancellor, Elmer Ellsworth Brown, Ph.D., LL.D.

NEW ZEALAND, ze'land, DOMINION OF. A self-governing British dominion in the southern Pacific Ocean, about 1200 miles east of Australia; consisting mainly of two islands, North and South islands; but comprising also Stewart Island and Chatham Island and a number of small islands. Capital, Wellington.

AREA AND POPULATION. The total area excluding the annexed islands is 103,568 square miles, distributed as follows: North Island, 44,131; South Island, 58,120; Stewart Island, 662; Chatham Island, 372; outlying islands, 284. According to the census of 1921, the population was 1,218,913. The population, April 1, 1927, was 1,439,980 for New Zealand proper, inclusive of Maoris (64,234); residents of Cook and other annexed islands, 14,088, and of Western Samoa (mandated territory), 42,028. On Mar. 31, 1928, the population for New Zealand alone was 1,388,700. The estimated population of the chief cities of New Zealand on Apr. 1, 1927, was as fol-

lows: Auckland, 202,400; Wellington, 126,750; Christchurch, 122,000; Dunedin, 83,250.

EDUCATION. Education is compulsory between the ages of 7 and 14. According to statistics, for Dec. 31, 1926, there were 2601 public primary schools, 6883 teachers, 216,807 scholars on the rolls, and an average attendance of 194,097. The native schools numbered 130, with 282 teachers and 6591 pupils; the private primary schools numbered 301, with 26,778 pupils. For secondary education there were 41 incorporated or endowed schools with 568 teachers and 13,651 students. The University of New Zealand was formerly solely an examining body, but by an act of 1926 it now actually consists of the following four university colleges: Otago University, Dunedin; Canterbury University College, Christchurch; Auckland University College; and Victoria University College, Wellington. The total number of students in 1926 was 4653.

PRODUCTION, ETC. In 1926 there were 1,990,000 acres of arable land in New Zealand, or about 3 per cent of the total area; 16,680,000 acres of permanent meadow and pasture; 163,000 acres of trees, shrubs, and bushes; and about 13,000,000 acres of forests. On Jan. 31, 1927, there were 3,242,000 cattle, 516,000 swine, 25,372,000 sheep, 26,000 goats, and 302,000 horses. Animal husbandry is much the major industry of the country. New Zealand is not an important cereal producing area. Oats and wheat are raised for local consumption, but a certain amount of grain is normally imported. The wheat crop for 1926-27 (7,952,000 bushels) was much above normal and a still larger crop was harvested in 1927-28 (about 9,200,000 bushels). Normally, about one-fourth of the oat crop is harvested for grain, the remainder being used as forage. The yield for 1927-28 in oats was estimated at 3,650,000 bushels against 4,997,000 for the preceding year. The barley yield in 1927-28 was 781,000 bushels and the potato yield 4,424,000 bushels. It was expected that the apple crop for 1927-28 would exceed 2,500,000 bushels, of which 900,000 cases would be shipped abroad. The wool production in 1926-27 (226,032,000 pounds) was the largest ever recorded. In the same year 57,762,000 pounds of pork, bacon, and ham were produced.

Mining is not important except in a few localities. Coal, gold, and silver are the leading products. Production of coal is limited because the Dominion is plentifully supplied with water power. New Zealand factories are confined largely to the preparation of pastoral and dairy products for the market, such as meat freezing, butter making, etc. During 1926-27 there were 4790 establishments with 81,649 employees, which distributed £16,866,000 in wages. Increases were noted over the preceding year in motor and cycle plants and furniture and cabinet-making factories, but for manufactures as a whole there was practically no change. The value of the factory output in 1925-26 was \$411,000,000.

COMMERCE. New Zealand's domestic prosperity is so dependent upon the satisfactory status of its foreign trade relations that unfavorable trade balances are regarded with considerable concern and uneasiness. Following the unfavorable balance of 1926, the business community entered upon the new year determined to right the situation. New import commitments were made with caution, and bankers tightened credit in all branches of business, particularly where imports

were concerned. As a result of this policy, and of an increase in the value of exports, oversea trade in 1927 was favorable to the Dominion to the comfortable amount of £3,714,408. Imports were valued at £44,782,046, as compared with £49,889,563 for the preceding year, while exports increased from £45,275,575 in 1926 to £48,496,354 in 1927. Very few items of import registered gains, while losses were spread widely over the list. The bulk of the £5,106,617 decline, however, was accounted for by smaller receipts of motor vehicles and parts, sugar, apparel and clothing, benzine, and motor spirits. The advance of £3,220,779 over 1926 exports was attributable chiefly to larger shipments of butter and wool, butter alone advancing £2,220,193 in value.

The United Kingdom as usual was New Zealand's best customer, taking goods valued at £36,877,887, or about 76 per cent of the total, and in exchange supplied almost 48 per cent of the Dominion's imports. New Zealand's efforts during the year to reduce imports were most effective as regards those commodities supplied mainly by the United States, such as motor vehicles and parts, and motor spirits. As a result the American share of the Dominion's imports declined from the 20 per cent which that country supplied in 1926 to around 18 per cent in 1927.

New Zealand's trade position greatly improved during the year ended Sept. 30, 1928. Exports reached £56,248,592, against imports of £44,140,402, resulting in a favorable balance of £12,108,190. During the 12 months ended Sept. 30, 1927, exports of £45,845,343 and imports of £46,169,234 gave an unfavorable balance of £323,891.

FINANCE. The following table from the Commerce Year Book for 1928 gives the actual results of the 1926-27 budget and the estimates for 1927-28:

GOVERNMENT RECEIPTS AND EXPENDITURES
[Thousands of Pounds Sterling]

	1926-27, actual	1927-28, budget
Ordinary receipts	24,943	24,677
Customs and excise	8,874	8,885
Land tax	1,229	1,205
Income tax	3,422	3,425
Death duties	1,690	3,403
Other taxes	1,685	
Posts, telegraphs, and telephones (gross)	2,853	3,254
Interest on railway capital liability	2,043	2,180
All other receipts	8,147	2,825
Equivalent total ^a (\$1000)	121,385	120,091
Ordinary expenditures	24,356	24,259
Debt service	9,746	9,740
National defense	1,020	958
Pensions	2,458	^(b)
Education	2,980	3,003
Posts, telegraphs, and telephones (working expenses)	2,343	2,394
Losses on isolated railway sections and branch lines	429	^(b)
All other expenditures	5,380	8,164
Equivalent total ^a (\$1000)	118,528	118,056

^a Converted at par. ^b Not available.

The public debt on Mar. 31, 1927, amounted to \$1,196,434,000.

COMMUNICATIONS. The merchant marine in 1926 comprised 558 vessels (all sizes) with a capacity of 202,354 gross tons. In the same year 678 vessels of 2,261,000 net registered tons entered the ports of the Dominion and 665 of 2,237,000 tons cleared.

For the year ending Mar. 31, 1928, the New Zealand Government Railroads reported gross revenue of £8,524,538 and total expenses of £6,685,123, as compared with gross revenues of £8,434,654 and total expenses of £6,490,880 for the previous year. Gross earnings declined from £1,943,774 in 1926-27 to £1,839,415 in 1927-28 while the deficit after interest charges was £291,452 in 1927-28 as against £99,659 in 1926-27. There was a reduction from the previous year of 622,500 in the number of passengers handled, but an increase of about 45,000 tons in freight handled. At the end of 1927-28 there were 678 locomotives in service, or 20 less than in 1926-27. There were in service 26,736 units of freight equipment and 1612 passenger cars. The total length of line at the end of 1926-27 was 3281 miles, of which only 117 miles were privately owned and operated.

GOVERNMENT. Executive power is vested in a governor-general appointed by the Crown and legislative power in the governor-general and a general assembly of two houses, namely the Legislative Council of 41 members (September, 1927), appointed for seven years but to be elected after the expiration of the terms of the members sitting in 1923, and the House of Representatives, consisting of 80 members, elected by the people for three years. The Governor-General in 1928 was General Sir Charles Fergusson. The cabinet was constituted as follows: Prime Minister, Railways, Native Affairs, etc., J. G. Coates; Finance, W. D. Stewart; Postmaster-General, Telegraphs, External Affairs, Immigration, etc., W. Nosworthy; Labor, Mines, and Marine, G. J. Anderson; Lands, Industry, and Commerce, A. D. McLeod; Minister for Cook Island, Sir M. Pomare; Agriculture, O. J. Hawken; Attorney-General, Justice, and Defense, F. J. Rolleston; Health, J. A. Young; Education, R. A. Wright; Public Works, K. S. Williams.

HISTORY. The outstanding event of the year in New Zealand was the general election held on November 14. Premier Coates, the leader of the Reform party, was badly defeated and his party lost control of the legislature. The position of prime minister was taken over in the middle of December by Sir Joseph Ward, the leader of the United Liberal party. The question of prohibition, which must be voted upon at stated intervals in New Zealand was placed before the voters and the majority was more than 100,000 in favor of retaining the license system in practice.

NICARAGUA, nē'kà-rū'gwà. The largest of the Central American republics. It is bounded on the north by Honduras, on the east by the Caribbean Sea, on the south by Costa Rica, and on the west by the Pacific Ocean. Capital, Managua.

AREA AND POPULATION. The area is estimated at about 51,660 square miles, of which 4500 square miles are lake area. Population, according to the census of 1920, 638,118, or about 14 inhabitants to the square mile. The coast line is 300 miles on the Atlantic and 200 miles on the Pacific. The population consists almost entirely of Indians and Negroes and mixtures of the two with white blood. The proportion of pure white blood is about 10 per cent. About 75 per cent of the population lives in the western half of the country. The eastern and western sections differ greatly and there is very little communication between them, the journey by trail and river being difficult. Travelers going from one coast to

the other usually go by way of Costa Rica or through the Panama Canal.

The population of the various cities in Nicaragua in 1926 as shown by a census made by their respective departments of sanitation was reported to be as follows: Managua, the capital, 32,536; Leon, 23,565; Granada, 18,066; Masaya, 13,763; Chinandega, 10,307; Rivas, 4081; Matagalpa, 3142; and Corinto, 2307.

EDUCATION. Primary education covers a period of six years, following European rather than American lines. According to statistics for 1925, there were 460 primary schools, with 1105 teachers, an enrollment of 30,210, and an average attendance of 24,490. Secondary education is given in eight institutions, three being wholly governmental, three partially subsidized municipal, and two normal schools. The attendance at these schools was 466. In addition to the schools mentioned there are 160 schools, municipal and private, both primary and secondary, having about 439 teachers and 8222 pupils. These private schools are nearly all conducted by religious organizations. Higher education is provided by five professional faculties, unsalaried and receiving little governmental aid, three of law and two of medicine.

PRODUCTION, ETC. Nicaragua is essentially an agricultural country. As in the past, it must depend upon its agricultural products, seconded by timber and mineral wealth, for its widest future development. The principal agricultural products are bananas and other fruits, coffee, and coconuts. Other crops are wheat, rice, and tobacco. The chief purely economic reason for the unfavorable features of 1927 may be found in the smaller coffee crop of 1926-27. Exports were barely half as great in value as in 1926. The 1927-28 crop, while less than in 1925-26, was estimated to be about 17,500 short tons (for export), or 50 per cent larger than in 1926-27. The sugar crop of 1926-27 was also much smaller, being about 11,250 short tons as compared with 17,500 tons in 1926. Estimates of the 1927-28 crop placed it at 17,500 short tons of which 12,500 tons would be available for export. There are valuable forest woods, especially mahogany and cedar, which enter into the exports; also dye woods, gum, and medicinal plants. The mineral resources include gold, silver, copper, and precious stones. Manufacturing, apart from sawmills, is confined to a few sugar mills, distilleries, and small industries for articles of home consumption.

FINANCE. The revenues of Nicaragua in 1927, exclusive of loans, advances, credits, and similar items, were \$4,918,295. This figure included \$4,685,601 actually collected and delivered to the Government and \$52,694 placed on deposit by the collector of customs. The exact expenditures were not specifically stated in the report of the High Commission. They could not have been stated definitely, for there were many liabilities pertaining to the year 1927 which had not been finally determined. All of these liabilities accrued as a result of the civil struggle; they consist of claims and debts, most of which will have to be passed upon by the claims commission, established under a law of Dec. 1, 1926, before the amount is definitely fixed. The commission began to receive claims on July 1, 1927. By Dec. 31, 1927, claims and vouchers totaling \$16,813,821 had been filed by individuals and by Government ministries. Of the \$4,918,295 collected,

\$1,589,078 was expended for interest and amortization of the debt and \$3,329,217 for administration and war expenses. The total funded debt on March 31, 1927, amounted to \$10,183,000.

IMPORTS AND EXPORTS BY PRINCIPAL COMMODITIES

Commodity	Total trade	
	Quantity	Value (\$1,000)
	1927	1927
General imports, total	10,208	10,208
Meats and lard	1,112	180
Wheat flour	78,880	520
Vegetables	3,109	180
Spirits distilled	25,060	107
Cigars and cigarettes	198,480	152
Leather	92,417	177
Boots and shoes	120,340	219
Cotton manufactures	3,566	2,328
Jute bags	1,255	154
Woolen manufactures	107,847	155
Silk and manufactures	73,340	285
Gasoline, naphtha	17,430	132
Kerosene	19,629	153
Iron and steel	5,707	639
Agricultural machinery	284	105
Electrical machinery	88	103
Other machinery		491
Automobiles and parts	161	169
Chemicals, drugs, dyes, medicines		436
Perfumery, cosmetics, toilet preparations		145
Soap	1,787	166
Domestic exports, total		8,986
Bananas	2,386	1,442
Coffee	22,542	4,082
Sugar, refined	11,906	443
Hides and skins	847	206
Mahogany	16,555	1,337
Gold		614
Silver		22
Containers, empty	1,388	121

COMMERCE. The preceding table from the *Commerce Year Book* for 1928 gives the items of the trade of 1927.

The United States supplied 66.4 per cent of the imports and took 55.6 per cent of the exports.

COMMUNICATIONS. The number of steam vessels engaged in foreign trade entered at Nicaraguan ports in 1927 was 434 with a capacity of 639,000 net registered tons. Steam vessels clearing numbered 438 with a capacity of 649,000 tons. There are 163 miles of railway line belonging to the Government and 20 miles of private line. For the year ended June 30, 1927, 577,000 passengers were carried and 87,000 metric tons of freight, with gross receipts of \$921,000. There are 101 post offices and 919,000 pieces of mail were handled in 1926. In the same year there were 1800 miles of telegraph wire, 899,000 telegrams were sent, and the gross telegraph receipts were \$129,000; 1143 miles of telephone wire, 1095 instruments, and gross receipts of \$39,000.

GOVERNMENT. Executive power is vested in a president who acts through a responsible ministry, comprising departments of foreign affairs and public instruction, finance, interior, justice, war and marine, and public works; legislative power is in a bicameral legislature consisting of a chamber of 40 deputies elected for four years by universal suffrage, and a senate of 13 members elected for six years. The constitution is modeled after that of the United States. President in 1928, Alfonso Diaz.

HISTORY

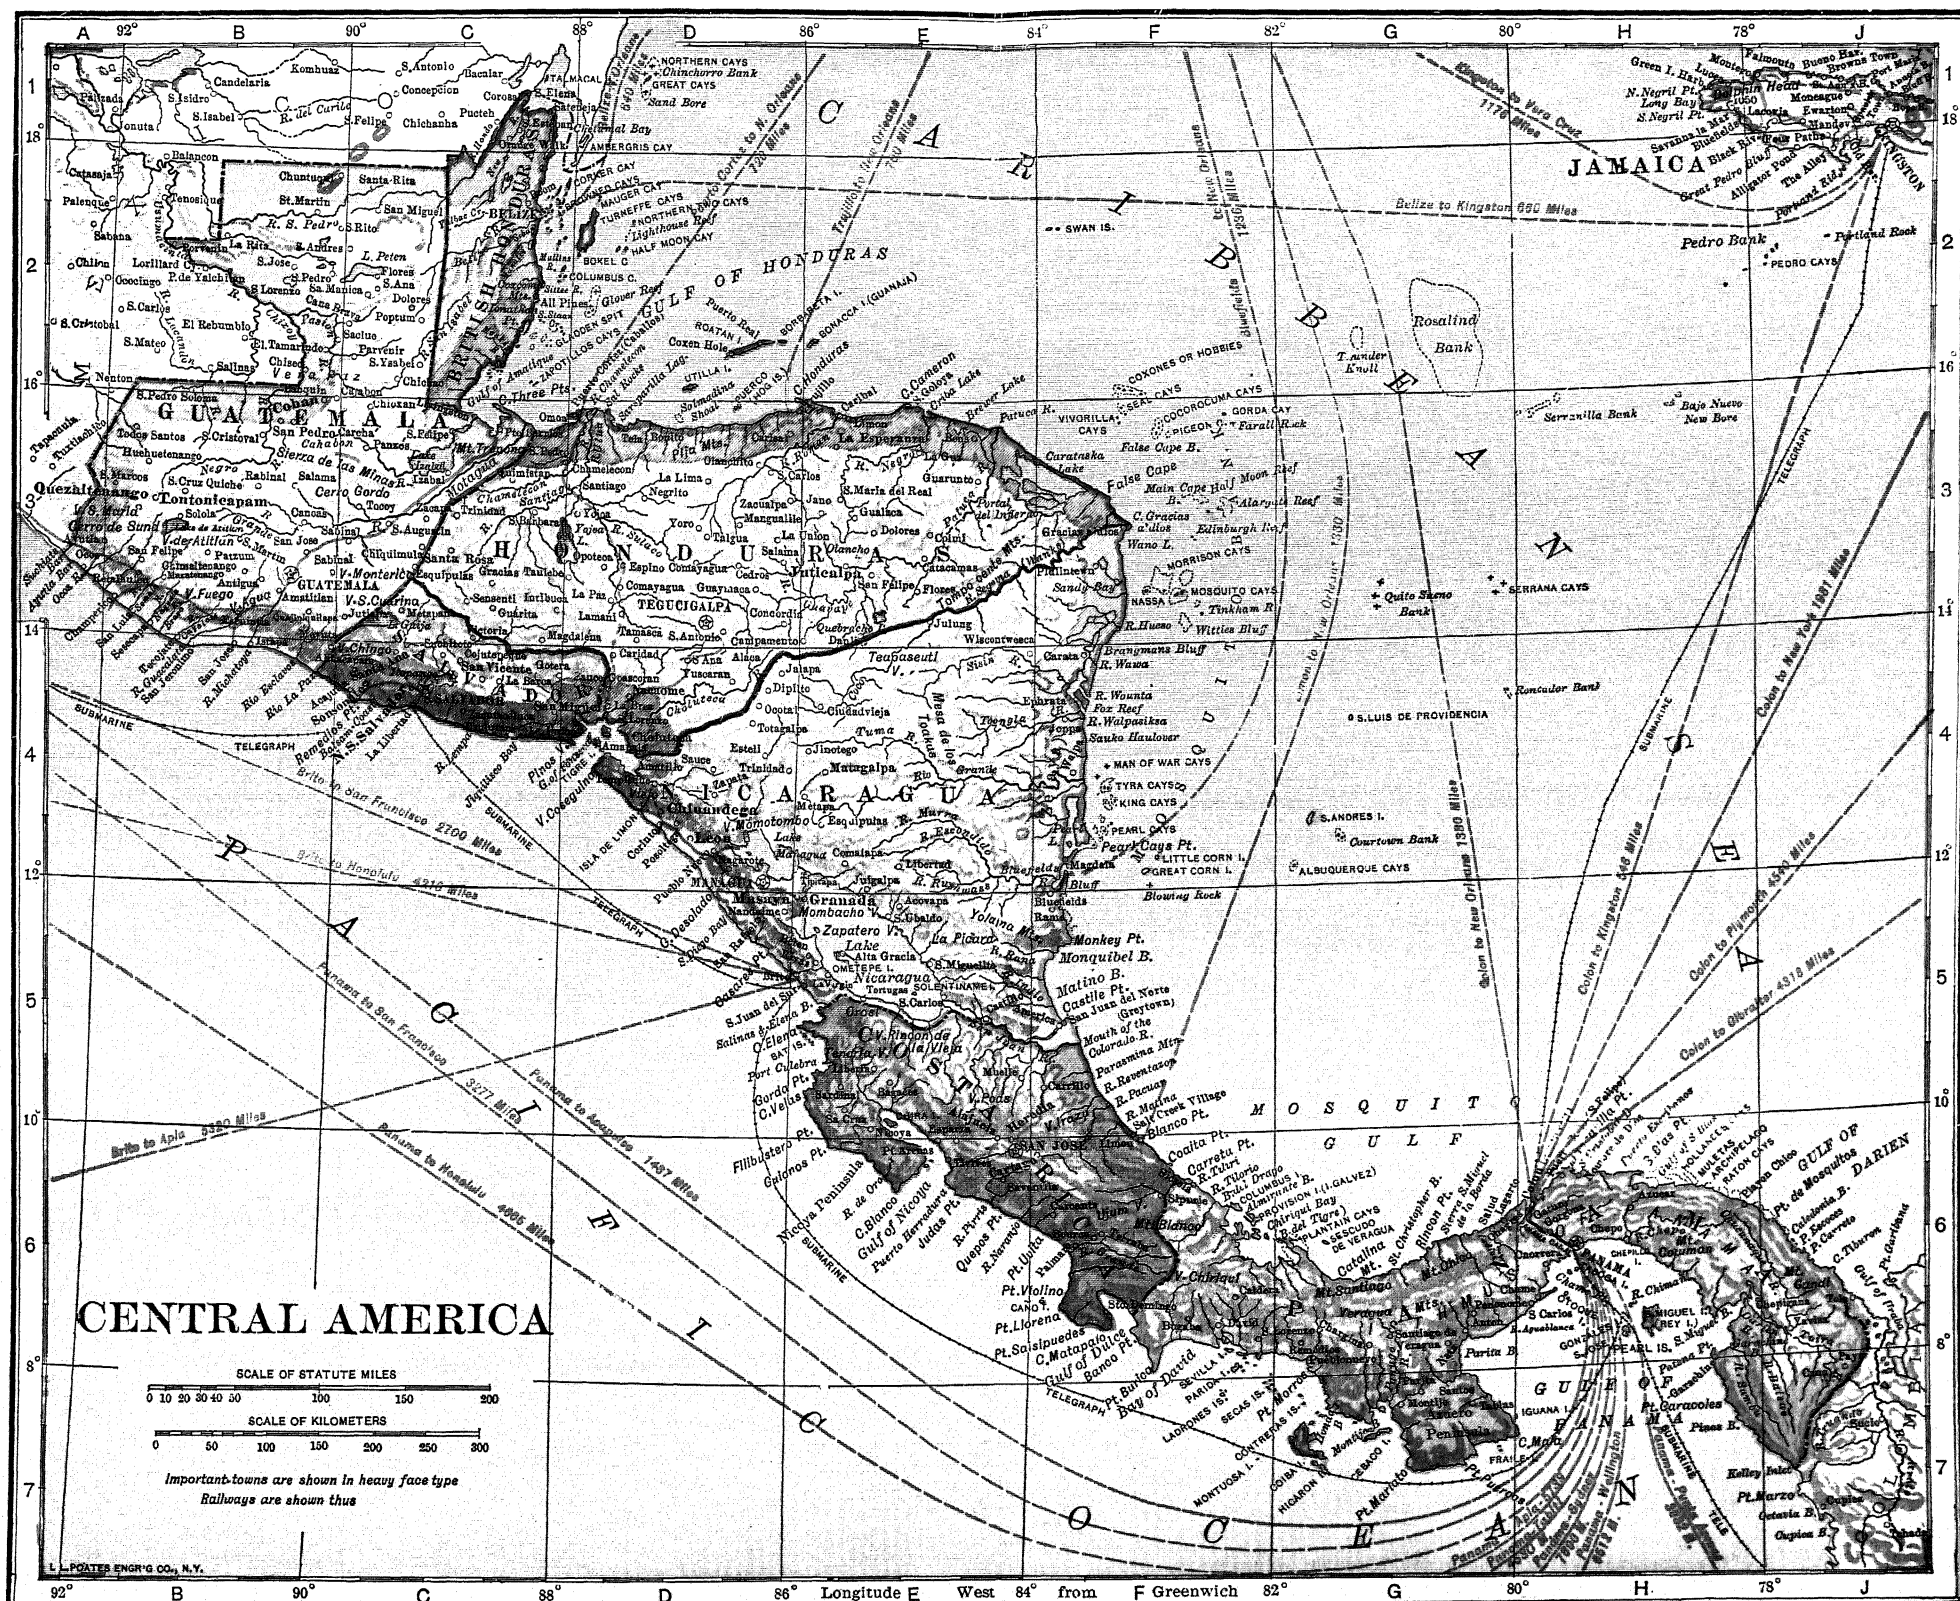

The revolt of General Sandino, who refused to accept the American plan of holding an impartial

election (see preceding YEAR BOOK), continued throughout the year, but with gradually diminishing force. The United States Government, determined to suppress this so-called bandit, increased the forces of marines and supplied them with airplanes in the early part of the year and the American press from time to time cited notable advances with the resultant death or wounding of many of the followers of Sandino with scarcely any loss of life on the part of the marines. In the meantime there was severe criticism of the American policy both at home and abroad.

The plan for the control of the elections to be held in the fall to be under the complete supervision of Brig. Gen. Frank R. McCoy, U. S. A., met with considerable opposition on the part of the Conservative leader, General Chamorro. A bill to grant General McCoy full powers was passed by the Senate, but was virtually rejected in the House and a measure substituted which would practically take all the power from the American supervisors. The American authorities and President Diaz rejected this measure and stoutly maintained that the Stimson agreement, described in the preceding YEAR BOOK, would be carried out. While the discussion was at its height, the Liberal party held a convention and nominated General José Moncada and Dr. Antonio Medrano for the presidency and vice presidency, respectively. It will be recalled that General Moncada was the leader of the Liberal revolt against President Diaz which was ended by the Stimson agreement. The Conservatives in the lower chamber finally rejected the electoral bill on March 13.

This action was followed by a decree of President Diaz to the effect that the National Board of Elections (General McCoy's group) were vested with full and general authority to supervise the elections of 1928 and to prescribe all measures necessary for the registration of voters, for the casting and counting of ballots and regarding all other matters that may pertain to the election. On July 26 the Conservative party selected as their candidate for the presidency, Adolfo Bernard. He was a compromise choice between President Diaz and General Chamorro, neither of whom was strong enough in the Conservative convention to have his particular candidate nominated. General McCoy made thorough and efficient plans for the conduct of the election. Registration days were provided for in late September and early October, the sale of liquor was absolutely forbidden, an American official was to be stationed in each of the 351 voting stations, and voters were to be marked chemically to prevent "repeating." Almost 145,000 citizens registered on the days set aside for that purpose, creating a record number of voters for the country.

In addition to the Nicaraguan constabulary, almost 10,000 United States marines and sailors were stationed throughout the country on election day, November 4. The election was carried out without any disorders, however, and as a result General Moncada, the Liberal candidate, was returned the victor over his Conservative opponent, Adolfo Bernard, by a majority of approximately 20,000. Over four-fifths of the registered voters appeared at the polls to cast their ballots. In the legislature, the results were about equal. In the Senate the Liberals and Conservatives had an equal number of representatives and

in the house the Conservatives had one more member than the Liberals.

It was reported that the election was carried out peaceably even in those districts which were supposed to be under the control of General Sandino. Apparently, the method of conducting the election was satisfactory to both parties and they spared no effort to show acts of friendliness toward General McCoy and the United States in general. General McCoy and the National Elections Board handed in their resignations on December 15 and on December 29 the new Nicaraguan Congress almost unanimously passed a resolution of approval of the work of the Board. General Moncada was to be inaugurated on Jan. 1, 1929.

At the close of the year, it seemed that peace was at last to dawn upon the war-torn country. Although nothing much has been mentioned here concerning the activities of the marines and Sandino, suffice it to say that his forces were scattered in the north and he, himself, was virtually without a following. According to a report from marine headquarters issued on December 31, more than 1700 "rebels" had surrendered during 1928 and "the entire country is in the most peaceful state it has even been, notwithstanding some local rumors and reports to the contrary." Actual American and Nicaraguan losses in the conflict are probably unknown. Secretary of the Navy Wilbur stated that from May 4, 1927, to Apr. 17, 1928, 21 marines lost their lives. The loss among the followers of Sandino were placed as high as 1000, although this figure is purely conjectural. See UNITED STATES, ADMINISTRATION.

NICOLSON, ARTHUR. See CARNOCK, LORD.

NIGERIA, COLONY AND PROTECTORATE OF. A West African territory, belonging to Great Britain, divided into two groups of provinces, known respectively as the Northern and Southern Provinces. The area is approximately 335,700 square miles and the population, according to an estimate in 1927, 18,765,690, of whom 10,232,832 were in the Northern Provinces (area, 258,000 square miles). There were 5200 Europeans in 1927. For administrative purposes the mandated territory of Kamerund is attached to Nigeria. The seat of government is at Lagos. In 1925 in the Northern Provinces there were 53 government schools and 124 unassisted private schools, the total average attendance in the government schools being about 2125. It was estimated that there were 28,702 Mohammedan schools, with 335,208 pupils. In the Southern Provinces in the same year there were 49 government schools with an average attendance of 7751; 205 assisted schools with an enrollment of 37,077; 3200 unassisted schools, with an enrollment of 133,900. The chief products are palm kernels, palm oil, rubber, peanuts, animal products, shea butter, ivory, cacao, kola nuts, coffee, drugs, and tobacco. The forests supply mahogany, which is exported. Iron, lead, and tin are worked by the natives, and gold, silver, lignite, monazite, galena, and manganese ore are found. Nigeria is the sixth largest producer of tin in the world, the total output in 1926 being 10,562 tons of tin concentrates. The imports in 1926 were valued at £13,597,480 and the exports at £17,339,618. The chief article of import was manufactured goods and the chief articles of export, palm oil and palm kernels. The total shipping which entered and cleared from the ports of Nigeria was 3,096,115

tons, of which 1,787,417 tons was British. The revenue in 1926-27 was £7,734,429 and the expenditure £7,584,692; public debt, £23,559,209. Railways open for traffic in 1926 totaled 1265 miles.

The administration is in the hands of a governor and an executive and legislative council. Governor. Sir G. Thomson.

NITRATE OF SODA PRODUCTION. See CHILE.

NITROGEN, NITROGEN COMPOUNDS. See FERTILIZERS.

NOBEL PRIZES. The Swedish Academy on November 12 awarded the Nobel Prize for Literature for 1928 to the novelist, Mme. Sigrid Undset, the third Norwegian author to receive this honor. On the same occasion, the Nobel Prize for Literature for 1927 went to Henri Bergson. Mme. Undset, the greatest living woman writer of Norway, became known to the English-speaking world largely through the translations of *Kristin Lavransdatter* and *Olaf Audunssøn i Hestviken*, which appeared in 1925 and 1928, respectively. She was born in Kallundborg, Denmark, May 20, 1882, was educated in a business college, and worked as municipal clerk in Christiania until 1909, two years after the appearance of her first novel. Mme. Undset is a historical novelist who applies the methods of modern realism in treating the life of the thirteenth and fourteenth centuries. Henri Bergson, French author and philosopher, who received the prize held over from 1927, is a member of the Académie Française, to which he was elected in 1914. After teaching for a number of years in various schools, he became a professor in 1900 in the Collège de France, with which he was connected until his resignation in 1919. For a time he served as the first head of the League of Nations Institute for Intellectual Co-operation, but retired on account of poor health. M. Bergson is best known for his theory of evolution, which appeared in 1907 in *Creative Evolution*. This work has exerted a profound influence on both science and philosophy.

The Nobel prizes for Chemistry for 1927 and 1928 were awarded to Prof. Heinrich Wieland, of Munich, Germany, in recognition of his investigations of the complex compound known as bile acid, and to Dr. Adolf Windaus, of Goettingen, Germany, for his study of vitamins. Dr. Windaus, who is a member of the German Academy of Natural Sciences, professor in the University of Goettingen, and head of the Chemical Institute there, brought to a climax the investigations carried on in the United States and Germany for many years on the antirachitic properties of food. His experiments proved that ultra-violet light, either in the sunlight or artificially produced, will activate ergosterol, a remedy against rickets. (See RICKETS.) Professor Wieland was not only a chemist, but had received doctorates in philosophy, engineering, and medicine, was a member of the academies of Munich, Goettingen, and Heidelberg, as well as editor of *Liebig's Annals of Chemistry*, and a writer on organic and bio-chemistry. The award to Professor Wieland was in recognition of his discovery of the structure which gives bile its color, and the relation between this compound and chlorophyll, the coloring matter of green leaves, and hemoglobin, the coloring matter of blood.

The 1928 Nobel Prize in Medicine was awarded on October 25 to Dr. Charles Nicolle, head of the

Pasteur Institute in Tunis, for his contributions to anti-typhus warfare. His earlier studies of typhus fever in Algiers and subsequent contributions by himself and others were of great value in banishing the spotted-fever pestilence from the armies of the more progressive countries during the World War.

The 1928 physics prize was reserved until 1929. The monetary value of each of the awards in 1928 amounted to about \$42,060, the largest amount yet presented, due to the remission of some of the Swedish taxes and also to better business conditions which increased the yield on the investments. The prizes were for \$32,478 each in 1927.

NOGUCHI, no'gōō-chē, HIDEYO. Japanese-American physician and bacteriologist, died at Accra, Gold Coast, West Africa, May 21. The death of Doctor Noguchi, one of the world's foremost medical scientists, was caused by African yellow fever, which he was investigating for the Rockefeller Foundation, of New York. He died in an attempt to discover the relation between the African and the American forms of yellow fever, and it was said that as an indirect result of his own illness with it, which had confined him to a hospital from Dec. 28, 1927, to Jan. 9, 1928, he had found the cause of the dreaded African form. His own was the first case to come under his observation. On May 30, 1928, Dr. William Alexander Young, director of medical research at Accra and assistant to Dr. Noguchi, died there of the same disease (see biographical sketch under YOUNG, W. A.), and, in 1927, it carried off Dr. Adrian Stokes, English investigator. See NEW INTERNATIONAL YEAR BOOK 1927.

Dr. Noguchi was born at Inawashiro, Japan, Nov. 24, 1876. He was educated at public schools and was tutored in English, French, and German, speaking all three languages fluently. He was graduated from the Tokyo Medical College in 1897 and became assistant in the General Hospital there. He held several public medical offices in Japan, among them that of quarantine officer of the Yokohama Harbor Station in 1899, and for a time was physician in charge of the Central Hospital at Newchwang, China. In 1901 he went to the United States and studied at the University of Pennsylvania. In 1903-04 he was connected with the Staten Serums Institute, Copenhagen, Denmark. Returning to America, he worked at the Carnegie Institution in Washington, and in 1904 he joined the staff of the Rockefeller Institute, New York, of which he became a member in 1914.

During work on yellow fever in South America in 1918, Dr. Noguchi isolated a germ believed to be the cause of yellow fever. From it he developed a preventive vaccine and a causative serum that proved fairly efficacious if used within two or three days after the onset of the disease. Dr. Noguchi gave special attention to the serpent venoms, the microscopy of infantile paralysis, hydrophobia, and syphilis, and to the spirochetæ; and he found a method of hemolytically diagnosing syphilis, following Wassermann's method, the so-called Noguchi luetin reaction. His most striking achievement after joining the staff of the Rockefeller Institute was the discovery of the yellow fever microorganism and serum. The list of diseases which engaged the attention of Dr. Noguchi, and concerning which he made important discoveries, is a long one. Be-

sides those already mentioned, trachoma, jaundice, and rabies may be named. In the case of trachoma, it was said that his researches on and his isolation, in September, 1927, of an organism which would reproduce the disease in monkeys, would eventually go far toward the eradication of this dangerous disease of the eyes.

For many years before his death, the work of Dr. Noguchi met with recognition from governments, universities, and bodies of scientists of many kinds. The Imperial Government of Japan conferred a titular professorship upon him in 1911 and the degree of Ph.D. in 1914. Among the universities which conferred degrees on him were the University of Pennsylvania, the School of Medicine and Pharmacy of Yucatan, Brown University, Yale University, and the University of Paris. The Emperor of Japan admitted him to the Order of Merit in 1915 and the City of Philadelphia bestowed on him the John Scott Medal in 1921. His other honors included knighthoods in Japanese, French, Spanish, Danish, and Swedish orders of chivalry, and he held memberships in the Association of American Physicians, the Association of American Pathologists and Bacteriologists, the American Society for experimental pathology, and many other societies, American and foreign. He wrote, besides reports, papers, etc., the following: *Snake Venoms* (1909); *Serum Diagnosis of Syphilis and Luetin Reaction* (1910); *Laboratory Diagnosis of Syphilis* (1923). See YELLOW FEVER.

NORDENSKJÖLD, nō'ren-shēld, NILS OTTO GUSTAF. Swedish geographer and explorer, died at Göteborg, June 2. He was born on the Island of Sjögelö, Småland, Dec. 6, 1869. He was a nephew of the famous geographer and explorer, Baron Nils Adolf Erik Nordenskjöld. He was educated at Upsala, where he became docent in mineralogy and geology in 1894 and where he gained the doctorate (1894). In 1905 he became professor of ethnology and geography at Göteborg. In 1895-97 he made a scientific expedition to the Strait of Magellan and Patagonia and in 1898 an expedition to Alaska. As a geologist he participated in the exploration (1900) of Christian IX Land, east Greenland, and later (1909) investigated the districts of Holstenborg and Ivigtut, southwest Greenland. He commanded the Swedish Antarctic Expedition (1901-04) which added Oscar II Land to the known area of Palmer (Graham) Land, discovered Crown Prince Gustav Channel, and made important contributions to antarctic knowledge, especially in geology. He spent 20 years lecturing and writing to pay off the debts incurred in publishing the scientific treatises resulting from that expedition. His last expedition was one to the western part of South America, which he made in 1920. Nordenskjöld was honored by various scientific societies at home and abroad and was a member of the committee of the International Polar Commission. Apart from his many technical memoirs, which included studies in geography, Antarctic ice conditions, cretaceous fossils, and plant remains discovered during his explorations, he wrote *The Geology and Physical Geography of East Greenland* (1908) and *Antarctica* (1904, in six languages).

NOREN, nō'ren, HEINRICH GOTTLIEB. A German composer, died at Rottach, in July. He was born in Graz, Jan. 6, 1861. A pupil of Massart in Paris, he filled positions as concert-master in various orchestras until, in 1896, he settled in

Krefeld as director of his own conservatory. From 1902-7 he was professor at Stern's Conservatory in Berlin, then lived in Dresden until 1911 and returned to Berlin, devoting himself entirely to composition. In 1907 he attracted considerable attention with *Kaleidoskop*, a series of variations for orchestra on a theme from Strauss's *Heldenleben*. Although intended as an act of homage to the famous composer, the latter instituted a lawsuit, which, in the end, proved a most valuable advertisement for Noren. His other works include a Symphony in B minor, *Vita*; *Elegische Gesangsscene* for cello and orchestra; a violin-concerto in A minor; chamber-music, and numerous choruses for male voices. In manuscript, he left an opera, *Der Schleier der Beatrice*.

NORMAL SCHOOLS. See UNIVERSITIES AND COLLEGES.

NORTH AMERICA. See EXPLORATION.

NORTH CAROLINA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,559,123. The estimated population on July 1, 1928, was 2,938,000. The capital is Raleigh.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Tobacco	1928	730,000	475,230,000 *	\$87,918,000
	1927	659,000	485,683,000 *	106,850,000
Cotton	1928	1,890,000	840,000 *	77,700,000
	1927	1,728,000	861,000 *	83,948,000
Corn	1928	2,305,000	42,642,000	43,921,000
	1927	2,352,000	53,626,000	48,800,000
Hay	1928	804,000	794,000 *	13,502,000
	1927	858,000	818,000 *	14,462,000
Potatoes	1928	95,000	10,545,000	6,854,000
	1927	72,000	7,368,000	11,052,000
Sweet potatoes	1928	80,000	7,840,000	6,664,000
	1927	89,000	10,146,000	8,117,000
Peanuts	1928	195,000	185,250,000 *	9,065,000
	1927	211,000	201,294,000 *	9,058,000
Wheat	1928	444,000	5,150,000	7,828,000
	1927	483,000	5,168,000	7,494,000
Oats	1928	191,000	4,202,000	3,278,000
	1927	273,000	5,733,000	4,128,000
Soy beans	1928	196,000	1,081,000	1,735,000
	1927	184,000	1,410,000	2,115,000

* pounds, * bales, * tons.

MINERAL PRODUCTION. Foremost of the State's mineral industries in total yearly output, clay products again in 1926, the latest year recorded, slightly exceeded the total of stone production, which was a close second. Clay products of 1926 amounted to \$4,256,901; those of 1925 to \$3,868,962. Stone was quarried to the quantity of 1,843,480 short tons in 1926 and 1,565,690 in 1925; and to the value of \$4,005,087 in 1926 and \$3,478,855 in 1925. The production of sand and gravel in 1926 attained \$968,021. Leading the States in the production of crude feldspar, North Carolina attained an output for 1926 of 91,433 long tons, as against 76,806 in 1925; in value, \$602,020 for 1926 and \$496,563 for 1925. Among the other mineral products of 1926 were coal, copper, and mica, all in totals of less than \$250,000. The total value of the State's mineral products was \$12,566,882 for 1927; \$10,992,793 for 1926; for 1925, \$9,504,063.

The production of food fish is an important industry in North Carolina. The total catch for 1927 amounted in value to \$1,515,596.36, distributed as follows: Shad, \$551,836.78; trout, \$293,457.91; blue fish, \$71,301.38; croakers, \$99,-

444.51; herring, \$116,253.99; mullets, \$91,248.11; rock, \$76,243.76; mackerel, \$42,574.34; all others, \$173,235.58.

FINANCE. State expenditures in the year ended June 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$18,142,100 (of which \$2,074,306 was aid to local education); for conducting public service enterprises, \$9,952; for interest on debt, \$6,125,268; for permanent improvements, \$22,501,890; total, \$46,779,210 (of which \$24,534,293 was for highways, \$4,206,686 being for maintenance and \$20,327,607 for construction). Revenues were \$35,826,832. Of this, special taxes formed 21.5 per cent (there being no general property tax); departmental earnings and charges for State officials' services formed 11.9 per cent; sales of licenses and taxation of gasoline, 50.1 per cent. Net funded State debt, notably increased in the course of the year, was on June 30, 1927, \$147,981,294. Highway bonds outstanding totaled \$94,999,600.

TRANSPORTATION. The total number of miles of railroad line under operation in the State on Jan. 1, 1928, was 5223.1. No construction of additional mileage in 1928 was reported.

EDUCATION. The facilities for rural-school instruction were increased, according to State Superintendent Allen, in the *Journal* of the National Education Association, by provision for daily transportation of 25,000 more pupils and for extending the school term to eight months, from six, for 30,000 additional children. For the academic year 1927-28, the school-age population was placed at 996,122. There were enrolled in the public schools of the State 848,778 pupils, of whom 748,087 were in elementary, and 100,691 in high schools. Expenditure for public-school education in 1926-27 totaled \$36,701,501.36, of which \$25,565,974.73 was current. Salaries of teachers in that year averaged \$768.94.

CHARITIES AND CORRECTIONS. The State Board of Charities and Public Welfare as operating in 1928 was composed of seven members, one by law a woman, elected by the General Assembly upon recommendation of the governor, for six-year terms. The board had an executive officer, the Commissioner of Public Welfare. Through divisions of child welfare, mental health, institutions, county organization, school attendance, and work among Negroes, it performed the functions indicated. The work was largely on a county basis. Institutions under the board's supervision were: State Hospital for the Insane, Raleigh; State Hospital for the Insane, Morganton; State Hospital for Colored Insane, Goldsboro; Caswell Training School, Kinston; State's Prison, Raleigh; East Carolina Training School for Boys, Rocky Mount; Stonewall Jackson Training School for Boys, Concord; State Home and Industrial School for Girls, Samareand; Morrison Training School for Delinquent Negro Boys; North Carolina Orthopedic Hospital, Gastonia.

POLITICAL AND OTHER EVENTS. Participation of the State with Tennessee in the joint work of acquiring lands for the contemplated Smoky Mountain National Park was delayed by litigation brought by a lumber company in the area involved. The issue of \$2,000,000 of bonds of North Carolina was postponed to await the outcome of the suit. The State continued its policy of defraying road construction with bond issues, offering an issue of \$10,000,000 of its bonds in April. The State of Connecticut, after bringing

suit against North Carolina to recover on \$290,000 of repudiated bonds of the Reconstruction era, which had come into the hands of one of the State institutions, withdrew its case in the United States Supreme Court. Investigations of the pottery industry in Ohio were conducted, with a view to possible pottery development in North Carolina, where recent power installations supplied opportunities for industrial expansion.

ELECTION. North Carolina gave a Republican majority for the first time since 1872 in the popular vote for President on November 6. A strong movement against the Democratic presidential candidate, Alfred E. Smith, had got under way in advance of the State primaries of June 2. Some of the opposing faction favored Cordell Hull, of Tennessee, while others were favorable to any candidate friendly to prohibition. Senator Simmons took strong adverse ground to the Smith nomination, on prohibition grounds, and advocated Smith's defeat. Religious sentiment among the inhabitants of the State as well as prohibition principles rendered Governor Smith unacceptable. The regular Democrats made an appeal to party loyalty, and a large Democratic vote was actually cast. Party defection did not extend to the State ticket. O. Max Gardner, Democratic nominee, was elected Governor. The popular vote for President was: Hoover (Rep.), 348,923; Smith (Dem.), 286,227.

OFFICERS. Governor, Angus Wilton McLean; Lieutenant-Governor, J. Elmer Long; Secretary of State, J. A. Hartness; State Treasurer, B. R. Lacy; Auditor, Baxter Durham; Attorney-General, Dennis G. Brummitt; Superintendent of Public Instruction, A. T. Allen.

JUDICIARY. Supreme Court: Chief Justice Walter P. Stacy; Associate Justices, W. J. Adams, Heriot Clarkson, George W. Connor, W. J. Brogden.

NORTH CAROLINA, UNIVERSITY OF. A State institution for the higher education of men, at Chapel Hill, N. C., founded in 1795. The enrollment in the autumn of 1928 was 2504 regular students, with 3514 in extension courses. There were 2019 registered for the summer session. The faculty had 215 members. The productive funds of the institution amounted to \$2,232,575, and the annual income to \$1,254,400. The library contained 200,000 volumes. President, Harry Woodburn Chase, Ph.D., LL.D.

NORTH CENTRAL, formerly NORTHWESTERN, COLLEGE. A coeducational institution of higher learning at Naperville, Ill., founded in 1861. In the autumn of 1928 there was an enrollment of 597 students, of whom 323 were men and 274 women. There were 41 members on the faculty. The productive funds of the college amounted to \$723,000, and the current income for the year was \$137,600. The library contained 15,000 volumes. In 1927, Kaufman Hall, a new dormitory, with rooms for 45 young women and dining-room accommodations for 145, was erected in 1927, at a cost of \$84,000, the gift of Mr. and Mrs. Jacob Kaufman, of Kitchener, Ontario, and of Mr. and Mrs. Henry Pfeiffer of New York. President, Edward Everett Rall, Ph.D.

NORTH DAKOTA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 646,872. On July 1, 1925, it was 641,192, according to the census taken by the State. No estimate of the population of the State was made in 1928. The capital is Bismarck.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Wheat	1928	10,367,000	142,923,000	\$115,469,000
	1927	10,246,000	130,191,000	133,745,000
Hay	1928	2,273,000	3,346,000 "	20,657,000
	1927	2,400,000	3,644,000 "	23,833,000
Barley	1928	2,179,000	55,654,000	23,893,000
	1927	1,663,000	42,406,000	25,020,000
Flaxseed	1928	1,148,000	8,115,000	16,311,000
	1927	1,242,000	10,184,000	18,739,000
Corn	1928	997,000	24,426,000	14,900,000
	1927	959,000	23,975,000	14,864,000
Oats	1928	1,934,000	59,954,000	17,986,000
	1927	2,125,000	45,688,000	15,991,000
Rye	1928	1,271,000	12,710,000	9,660,000
	1927	1,381,000	23,063,000	18,450,000
Potatoes	1928	141,000	14,805,000	4,442,000
	1927	113,000	11,526,000	5,763,000

" tons.

MINERAL PRODUCTION. Coal was mined in the State in 1927 to the quantity of 1,485,000 short tons, as against 1,370,244 in 1926, the product of 1926 having a value of \$2,378,000. Sand and gravel to the value of \$240,525 and clay products to approximately \$150,000 formed almost all the remainder of the mineral production. The total value of the mineral products of the State was \$2,804,837 for 1926; for 1925, \$2,662,029.

FINANCE. State expenditure in the year ended June 30, 1927, as reported by the U. S. Department of Commerce, was: for maintenance and operation of governmental departments, \$8,427,548 (of which \$1,490,788 was aid to local education); for conducting public service enterprises, \$5,235,518 (spent chiefly in mill and elevator operations); for interest on debt, \$1,632,457; for permanent improvements, \$3,792,278; total, \$19,087,801 (of which \$4,393,811 was for highways, \$691,371 being for maintenance and \$3,702,440 for construction). Revenues were \$19,428,280. Of this, property and special taxes formed 23.3 per cent; departmental earnings and charges for officials' services, 7.5; sales of licenses and taxation on gasoline, 13.7. Property valuation was \$998,180,492; State taxation thereon, \$3,842,995. Net State funded debt on June 30, 1927, was \$4,519,097.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 5273.68. No new construction of railroad mileage in 1928 was reported.

EDUCATION. A course of study for elementary schools was prepared in 1928, in accordance with the Stratmeyer-Burner report, and with allowance for the time element and grade conditions in rural schools. The total number of persons of school age at the end of the academic year 1926-27 was placed at 217,936. There were enrolled in the public schools of the State 171,498 pupils, of whom 146,999 were in elementary schools and 24,499 in high schools. The expenditures (1927) for public-school education totaled \$17,474,309. Salaries of teachers averaged \$109.88 a month.

CHARITIES AND CORRECTIONS. As operating in 1928, the Board of Administration, created in 1919, exerted control over the State institutions for the care or custody of persons, as well as the State university and eight other State schools of higher learning. The welfare institutions of the State were: School for the Deaf, Devil's Lake; School for the Blind, Bathgate; Tuberculosis Sanatorium, Dunkeith; Institution for the Feeble-Minded, Grafton; Hospital for the Insane, Jamestown; State Training School, Mandan;

State Penitentiary, Bismarck; The State Hospital at Jamestown had on Jan. 1, 1928, 1444 mental patients. Feeble-minded and epileptics in State care numbered 520.

POLITICAL AND OTHER EVENTS. A petition of some 23,000 signatures was presented to the Secretary of State in February, demanding that the portion of the State constitution providing alcoholic Prohibition be brought up for repeal before a popular referendum vote. The referendum on this proposal, held June 26, resulted in the maintenance of State prohibition, by a small majority. North Dakota had inserted the prohibition clause in its original constitution in 1889, and had always retained it; the June vote for repeal was 4789 less than that for retaining the clause, as compared with a majority of 8717 in the year 1916, against the repeal of the State prohibition enforcement law. In July was filed an initiative petition to submit to the voters at the November election a proposal that the State issue bonds to a total of \$25,000,000 to reimburse the depositors of State banks that had failed, between the dates of Jan. 1, 1919, and May 15, 1928. It was estimated that more than 80,000 depositors had lost by such failures. A great experiment in State ownership and operation, the State mill and elevator at Grand Forks, was reported to have lost \$37,516 in the two opening months of 1928 on its operations, and to have incurred up to the end of February a total operating loss of \$1,463,208. Plans were reported as formed by the Montana-Dakota Power Company to extend a natural-gas pipe line across the State from Montana to carry gas to the communities along the eastern border.

ELECTION. The National campaign in North Dakota centred largely about the effort to win the voting element that had cast its ballot for La Follette on the Progressive ticket in 1924. The failure of Governor Smith, the Democratic presidential candidate, to capture this vote led to the victory of the Republican National candidates, Hoover and Curtis, by a considerable majority. The popular vote for President was: Hoover (Rep.), 131,441; Smith (Dem.), 106,648. United States Senator Lynn J. Frazier, running on the Republican ticket, was reelected, as were the three Representatives of the State, all Republican. George F. Shafer, Republican, was elected governor.

OFFICERS. Governor, A. G. Sorlie; Lieutenant-Governor, Walter Maddock; Secretary of State, Robert Byrne; State Treasurer, C. A. Fisher; Auditor, John Steen; Attorney-General, George F. Shafer; Superintendent of Public Instruction, Bertha R. Palmer.

JUDICIARY. Supreme Court: Chief Justice, W. L. Nussle; Associate Justices: Luther E. Birdzell; A. M. Christianson, A. G. Burr, John Burke.

NORTH DAKOTA, UNIVERSITY OF. A State institution of higher education at University Station, Grand Forks, N. D., founded in 1883. The enrollment for the autumn of 1928 was 1650, of whom 1025 were men and 625 women. This number was distributed as follows: Graduate, 40; liberal arts, 705; commerce, 127; education, 384; engineering, 185; law, 62; medicine, 56; and high school, 61. For the summer session of 1928 the total registration was 348, of whom 159 were men, and 189 women. The faculty numbered 139. The productive funds totaled \$1,700,-

000 and the income for the year, \$857,800 (exclusive of boarding department and trust funds), from the following sources: Federal land funds, \$65,000; student fees and rent \$60,000; other local income, \$15,600; State appropriation for maintenance, \$415,900; State appropriation for buildings and improvements, \$280,000; and State appropriation for public service, \$21,300. The general University library contained 95,215 volumes. President, Thomas F. Kane, Ph.D., LL.D.

NORTHERN LAND. Although it was popularly spoken of as Lenin Land, Nicholas II Land has been officially renamed Northern Land by the Soviet Government. Located in Lat. 79°N. and Long. 103°E. to the north of Cape Chelyuskin, it is separated from this northernmost extension of Asia by a strait of 32 nautical miles. It was discovered by the Russian Hydrographical Expedition to the Arctic, 1912-1915, and its east and south coasts were then mapped. Press reports announced that the ill-fated *Italia* Expedition reached Northern Land on the second flight and found no land, but until the scientific results are published it is impossible to tell whether or not this expedition has made any contribution to the knowledge of Northern Land.

NORTHERN TERRITORY. A territory belonging to the Commonwealth of Australia, situated in the central and northern part of the island continent; transferred to the Commonwealth, Jan. 1, 1911; divided for administrative purposes into two territories, North Australia and Central Australia on Mar. 1, 1927. Area, 523,620 square miles; population, according to the census of 1921, exclusive of aborigines, 3867; estimated in 1927, 4085. The Aborigines are estimated to number about 20,000. Principal town, Darwin, on the Harbor of Port Darwin. While the soil is capable of a varied production of crops of tropical and semi-tropical zones, agriculture has not been developed chiefly because the climate is unsuitable for Europeans. Down to June, 1926, the total value of all minerals produced was £3,419,505. The imports in 1925-26 were £34,168; exports, £35,902; revenue, £97,298; expenditure, £382,268; debt, £2,193,496. Government Resident for North Australia, R. H. Weddell; for Central Australia, J. C. Ca-wood.

NORTHWESTERN UNIVERSITY. A co-educational institution of higher education at Evanston and Chicago, Ill.; founded in 1851. It is composed of the college of liberal arts, the graduate school, the school of engineering, and schools of commerce, journalism, music, education, and speech, in Evanston; and the schools of law, medicine, dentistry, commerce, and journalism, in Chicago. For the autumn term of 1928 there was an enrollment of 11,105, of whom 5,424 were registered in the school of commerce in Chicago. For the summer session of 1928, 2115 students were enrolled. The faculty of the University numbered 742. The endowment, as of June 30, 1928, was \$15,940,876, and the income from these funds for the fiscal year 1927-28 was \$816,852. In the various libraries of the university there were approximately 280,000 bound volumes and 150,000 pamphlets. President, Walter Dill Scott, Ph.D., LL.D.

NORTHWEST PROVINCES. The Prairie Provinces of Canada. See CANADA.

NORTHWEST TERRITORIES. The term applied to the large tract in Canada to the east

of the Yukon Territory, stretching northward to the Arctic from the Prairie Provinces and westward to the north of Hudson Bay and Hudson Strait; comprising the territories formerly known as Rupert's Land and the Northwestern Territory, excepting those portions which form the provinces of Manitoba, Saskatchewan, Alberta, and the Yukon Territory. Area, 1,309,682 square miles; population, according to the census of 1921, 7988. They are under the administration of the Northwest mounted police, directed by a commissioner at Ottawa, aided by a deputy commissioner, and a council of five. Commissioner, William Wallace Cory.

NORWAY. A constitutional monarchy of northwestern Europe, occupying the western and northern half of the Scandinavian peninsula and separated from Sweden by the Kjölen Mountains, with an extreme length of 1110, and an extreme width of 250, miles; formerly united with Sweden, but separated, June 7, 1905. Capital, Oslo.

AREA AND POPULATION. The area is 124,964 square miles and the population according to the census of 1920, 2,649,775, of whom 1,864,371 lived in rural districts. The capital, Oslo, had a population of 258,483 on Dec. 1, 1920. Other large cities with their populations in 1920: Bergen, 91,443; Trondhjem, 55,030; and Stavanger, 43,778. Before Jan. 1, 1925, the capital, Oslo, was called Christiania. The movement of population in 1926 was: Births, 54,692; deaths, 29,593; marriages, 15,836; emigration, 9326, of whom 6497 went to the United States and 2570 to Canada.

EDUCATION. Primary education is compulsory, the school age being from $6\frac{1}{2}$ to 14 years in urban districts and 7 to 14 years in rural districts. During 1925-26 the number of pupils in elementary schools was 396,127 and in secondary schools, 28,784. There is only one university, that at Oslo, which had 3250 students in 1926.

PRODUCTION, ETC. About 75 per cent of the area of Norway is unproductive, and forests are the principal resource of the remainder. In 1926 the area of arable land was 1,671,000 acres or 2.2 per cent of the total land area; there were 622,000 acres of permanent meadows, and 18,531,000 acres of forests. In 1927 there were 1,209,000 cattle, 300,000 swine, 1,608,000 sheep, 290,000 goats, and 183,000 horses. The acreage and production of the principal crops in 1927 were as follows: Wheat, 22,000 acres, 563,000 bushels; rye, 23,000 acres, 634,000 bushels; barley, 143,000 acres, 4,747,000 bushels; oats, 241,000 acres, 12,169,000 bushels; mixed grain, 16,000 acres, 12,000 metric tons; potatoes, 123,000 acres, 22,232,000 bushels; hay (1926), 1,025,000 acres, 2,486,000 metric tons.

The fishing industry is one of the most important in Norway, and 100,000,000 codfish is the annual average catch, besides large quantities of herring and other fish. Through excellent packing methods, the industry has developed a market in the principal countries for its canned fish, and the making of fish product specialties has been undertaken. Whaling was unusually profitable during 1928, oil production having increased to 745,000 barrels from 660,000 barrels in 1927.

The forest industries have always formed a very important branch of Norwegian economic life, with wood products holding first place among exports. The normal annual export of lumber amounts to about 1,000,000 cubic meters. The

export of pulp, mechanical and chemical, has been maintained at an annual level of about 730,000 metric tons, while newsprint exports have shown a steady gain from 98,000 metric tons in 1913 to 221,000 metric tons in 1927. Iron pyrite is the most important mineral product for both its sulphur and copper content. In 1926 the total value of mineral production was \$5,131,000 and the total value of metal production \$18,127,000. There were 10,512 manufacturing establishments employing 136,437 workers.

COMMERCE. According to the *Commerce Year Book* for 1928, the Norwegian imports in 1927 were valued at \$256,232,000 and exports at \$175,936,000. In crown values (krone at par, \$0.2680) the imports were 983,807,000 crowns and exports 675,379,000 crowns. Imports showed a decrease from 1926 in terms of crowns of 10 per cent, while exports fell off by 15 per cent. On account of the enhancement in the exchange value of the crown, however, imports in terms of dollars showed an increase of 5 per cent while exports declined very slightly. As compared with 1926, there was a decided decline in quantity in the importation of meats, animal fats, and copra, and a considerable increase in the imports of corn, mineral oils, and coal. The values of individual imports and exports for 1927 were not available. The most conspicuous changes in the export trade were a marked quantitative decline in whale and other marine-animal fats, planed lumber, and saltpetre, and a large increase in newsprint paper. The export of fish in bulk was somewhat less than in 1926 but greater than in 1925. The quantity of canned fish exported was a little greater than in 1926 and over one-fourth larger than in 1925.

The position temporarily held by Germany in 1926 as the principal source of Norwegian imports was lost in 1927 and the usual order of countries of origin was reestablished with Great Britain leading, Germany second, and the United States third. Great Britain maintained its position as the leading market for Norwegian exports, but Germany replaced the United States in the second position.

FINANCE. The following table from the above-mentioned source gives the actual receipts and expenditures for 1926-27 and the estimates for the 1927-28 budget:

GOVERNMENT RECEIPTS AND EXPENDITURES
[Thousands of Kroner]

	1926-27, actual	1927-28, budget
Receipts	398,822	413,100
Taxes and customs	311,670	329,735
State railways (net)	1,471 ^a	5,688
Post and telegraphs (net)	6,223	43,159
All other ordinary	44,938	37,487
Capital receipts	37,487	413,100
Expenditures	405,770	112,293
Finance and customs	112,293	48,335
National defense	48,335	46,714
Public welfare	46,714	63,632
Public instruction	63,632	87,507
All other ordinary	87,507	47,289
Capital expenditures	47,289	106,884
Equivalent (\$1000) at par:		
Receipts	106,884	110,711
Expenditures	108,746	110,711

^a Deficit.

The total indebtedness of Norway on July 1, 1928, according to official statistics, amounted to 3,384,700,000 crowns, of which the debt of the National Government accounted for 1,524,600,000 crowns. The municipal debt, including loans for

municipal hydro-electric plants, totaled 873,500,000 crowns; official banks, 590,800,000 crowns; other banks, 17,700,000 crowns; credit associations, 64,000,000 crowns; shipping companies, 12,700,000 crowns; street-car companies, 29,500,000 crowns; and industrial companies, 271,900,000 crowns. The outstanding financial event of 1928 was the stabilization on May 1 of the Norwegian currency at par on a gold basis.

COMMUNICATIONS. Norway has long enjoyed the distinction of possessing the greatest per capita marine tonnage in the world. Although Norwegian shipping suffered relatively greater loss of tonnage during the War than that of any other country, having lost over 49 per cent of its entire merchant marine, by the end of 1927 the total tonnage, at 2,943,000 gross tons, was nearly 300,000 tons greater than in 1914. The gross revenue from shipping of about \$115,000,000 in 1927, partly makes up for the adverse balance of trade of the country. In 1926, 8150 vessels of 5,984,000 net registered tons entered the ports of Norway and 8235 vessels of 5,989,000 tons cleared.

The total length of railway line in 1927 was 2254 miles of which 2025 were state and 229 private lines. In the same year there were 627 locomotives, 1187 passenger cars, 13,344 freight cars (1926), 22,069,000 passengers were carried, 9,802,000 metric tons of freight were handled, and the gross receipts were 91,369,000 crowns.

GOVERNMENT. Executive power is vested in the King, who acts through a cabinet or council of state, and legislative power in the Parliament or Storting of 150 members, elected for three years by universal suffrage without distinction as to sex. As a result of the elections held in November, 1927, the following parties were elected for the period 1928-30: Labor party, 59; Conservatives and Moderate Liberals, 31; Liberals, 31; Agricultural party, 26; Communists, 3. The King in 1928 was Haakon VII (born Aug. 3, 1872; elected King Nov. 18, 1905). The members of the cabinet appointed Feb. 13, 1928, were as follows: Prime Minister and Foreign Affairs, J. L. Mowinkel; Education and Ecclesiastical Affairs, S. M. Hasund; Justice, H. M. Evjenth; Agriculture, H. J. Aarstad; Public Works, O. M. Mjelde; Social Affairs, T. Vaerland; Finance, P. Lund; Defense, T. Anderssen-Rysst; Commerce and Industry, L. Oftedal.

HISTORY. As a result of the election held in November, 1927, the Conservative party lost considerable ground in the Storting. As a result, the Lykke cabinet resigned and the King requested the leader of the Agriculturists, M. Mellbye, to form a government. When he failed to do so, the King turned to the Labor group, the largest single party in the legislature. M. Hornsrud, the leader of this party, succeeded in forming a cabinet on January 26, but it lasted scarcely two weeks, when it fell on the question of a vote of confidence. On February 13, the cabinet mentioned above under *Government* came into power. M. Mowinkel, the new Prime Minister, had served in that capacity for a short time in 1924.

NORWEGIAN LITERATURE. See **SCANDINAVIAN LITERATURE.**

NOTRE DAME, UNIVERSITY OF. A Roman Catholic institution for the higher education of

men at Notre Dame, Ind., founded in 1842. The enrollment for the autumn term of 1928 was 2991, which represented an increase of 141 over 1927-28. The summer session enrollment was 1023. The faculty numbered 160, of whom 20 were new members. The library contained approximately 200,000 volumes. President, the Rev. Charles L. O'Donnell, C.S.C., Ph.D.

NOVA SCOTIA, nō'vā skō'shā. One of the Maritime Provinces of Canada. Area, 21,428 square miles; population, according to the census of 1921, 523,837. Capital, Halifax, with a population in 1921 of 53,372. Other large towns: Sydney, 22,545; Glace Bay, 17,007; Amherst, 9998; Dartmouth, 7899; New Glasgow, 8974; Sydney Mines, 8327; Truro, 7562; Yarmouth, 7093. In 1925 the movement of population was: Births, 11,400; deaths, 6045; marriages, 2922. Education is free, compulsory, and undenominational. There are four universities and 3089 schools, with 3320 teachers and 112,391 pupils. In the technical schools there were 4601 pupils. Nova Scotia is largely an agricultural and fruit-growing country. The chief product is apples, the output of which, in 1926 was about 850,000 barrels. The output of the chief minerals in 1926 was: Coal, 5,652,314 long tons; pig iron, 294,054 tons; coke 453,228 short tons; and small quantities of steel ingots, limestone, and dolomite. Nearly 24,000 men are employed in the fisheries, which, next to British Columbia, are the most extensive in Canada. The total market value of fish caught in 1926 was \$11,750,000. The imports for consumption in 1926 were valued at \$21,367,022, and the exports at \$50,496,594. There are 1451 miles of railway.

Executive power is vested in a lieutenant-governor appointed by the Dominion Government of Canada for five years, who acts through a responsible ministry or council; and legislative power in a council of 21 members appointed for life by the Crown, and an assembly of 43 members. The province is represented in the Dominion Senate by 10 members and in the House of Commons by 16. Lieutenant-Governor in 1928, James C. Tory; Premier, Provincial Secretary, and Treasurer, E. N. Rhodes; Public Works and Mines, Col. G. S. Harrington; Attorney-General, W. L. Hall; Highways, P. C. Black; Natural Resources, J. A. Walker; Ministers without portfolios, Dr. Le Blanc, J. F. Fraser, and W. N. Rehfuss.

NOVAYA ZEMLYA, (No'va Zem'bla). The Soviet government renewed its activities in the archipelago of Novaya Zemlya. On June 30, 1924, it issued a decree centralizing its interests in the arctic islands to the north of European Russia. It appointed a commissioner who, from his headquarters at Archangel, supervises the affairs of these islands, of which the most important are the north and south islands of Novaya Zemlya, Kolguev and Waigatch.

NUTRITION. See **FOOD AND NUTRITION.**

NUTS. See **HORTICULTURE.**

NYASALAND, or **NYASSALAND, PROTECTORATE.** A British protectorate, formerly known as British Central Africa; situated on the southern and western shore of Lake Nyassa, extending northward to the Zambesi River. Area, 37,890 square miles; population in 1926, 1650 Europeans, 850 Asiatics, and 1,290,885 natives. The chief towns are Blantyre and Zomba, the seat of the Government, Education is in the hands of foreign missionary societies, under

which there were in 1926: 2702 schools, with 195 European teachers, 179,053 pupils enrolled and an average attendance of 115,240. Among the chief products are tobacco, coffee, cotton, tea, and livestock. The imports in 1926-27 were valued at £791,054; and exports at £671,086. The chief articles of export are tobacco, cotton, fibres, corn, and tea; of import, manufactures of cotton, provisions, and raw materials. Great Britain supplied more than half of the imports. Revenue for 1926-27 was estimated at £348,320 and expenditures at £318,899. The administration is under a commander-in-chief, aided by an executive and legislative council, composed of nominated members. Governor and Commander-in-Chief in 1928, Sir C. C. Bowring.

OATS. The production of oats in 1928 of 29 countries reporting to the International Institute of Agriculture, Rome, was estimated at 4,670,800,000 bushels, an increase of 12.8 per cent over the production of 1927 and 13.4 per cent above the average for the five-year period 1922-26. The acreage in these countries was 136,959,000 acres, which was 1.1 per cent below the acreage of 1927 but 5.2 per cent above the average acreage of the five-year period. Production in 1928 of the leading oats producing countries outside the United States was reported as follows: United Socialist Soviet Republics, 1,109,197,000 bushels; Canada, 503,882,000 bushels; Germany, 426,000,000 bushels; France, 336,257,000 bushels; Poland, 261,119,000 bushels; and England and Wales, 97,510,000 bushels. Argentina, the leading oats-growing country of South America, reported a yield of 52,291,000 bushels for the crop year 1927-28.

According to estimates published by the U. S. Department of Agriculture, the United States, in 1928, produced 1,449,531,000 bushels and stood first in yield among the countries of the world. The production in 1927 was 1,182,594,000 bushels. The area devoted to the crop was 41,733,000 acres in 1928 and 41,941,000 acres in 1927, and the average yield per acre for the two years was 34.7 bushels and 28.2 bushels, respectively. The average yield per acre in 1928 was 2.9 bushels above the average yield per acre for the preceding ten years. On Dec. 1, 1928, the average farm price was 40.9 cents per bushel and on this basis the total value of the crop amounted to \$592,674,000, as compared with a total value of \$531,762,000 for the preceding crop on a corresponding basis of 45 cents per bushel.

Oats were grown in all the States and the production in the leading ones was reported as follows: Iowa 240,040,000 bushels, Illinois 174,338,000 bushels, Minnesota 153,338,000 bushels, Wisconsin 108,532,000 bushels, Indiana 93,684,000 bushels, Ohio 89,281,000 bushels, and Nebraska 78,936,000 bushels. The average yield per acre ranged from 17.4 bushels in Florida to 47 bushels in Idaho and Washington. The average farm price on Dec. 1, 1928, ranged from 30 cents in North Dakota to 88 cents in Florida and South Carolina.

During the year ended June 30, 1928, the United States exported 6,034,000 bushels of oats and 68,192,000 pounds of oatmeal and imported 202,000 bushels in the form of grain. The results of a study made by the Department of Agriculture indicated that the average cost of growing an acre of oats varied from \$17.40 in 1922 to \$19.01 in 1927. The average cost per bushel varied from 50 to 54 cents during the six years, 1922-27.

With relatively low yields in the South Central States in 1927, the cost of production per bushel rose 20 cents, while with relatively high yields in the Western States it fell 10 cents as compared with the cost in 1926.

OBERLIN COLLEGE. A non-sectarian institution for the higher education of men and women at Oberlin, Ohio, founded in 1833. The registration for the first semester of 1928-29 was 1617, while that of the summer session of 1928 was 185. In 1927-28 the faculty had 248 members. The productive funds of the institution as of Aug. 31, 1928, amounted to \$16,278,714, and the income for the year was \$1,444,515. The library contained 299,179 bound, and 200,429 unbound, volumes. President, Ernest Hatch Wilkins, Ph.D., Litt.D., LL.D.

OBITUARY RECORD OF THE YEAR. See NECROLOGY.

OBREGON, ó'brá-gōn', ALVARO. Mexican soldier and statesman, assassinated at San Angel, Mex., July 17. He was born in the District of Alamos, Sonora, Mex., Feb. 17, 1880. His early life was spent on a *hacienda*, or plantation, and he evinced considerable ability in mechanics and invention. He was a successful planter in 1912 when he began his career as a soldier and statesman by enlisting in the cause of Francisco I. Madero, who had revolted against Diaz and was in turn menaced by the uprising of Orozco. Obregon recruited and equipped a force of 400 Yaqui Indians and took the field as their commander in a brilliant campaign in Sonora and Chihuahua which forced Orozco to flee to the United States. After the suppression of the Orozco revolt, Obregon returned to his agricultural life, but in 1913 he joined Venustiano Carranza in his opposition to Victoriano Huerta, who had become provisional President of Mexico after deserting Madero for the rebels. Madero was executed, Feb. 23, 1913. Obregon displayed his military skill again in his warfare on the Federalists, winning the battle of Santa Rosa in June, 1913, and being advanced to the rank of general. In 1914 he was commander of the Constitutional Army of the West. His successful storming of Sinaloa and Culiacán, and the capture of Guadalajara (July 9) served to open the way for the advance of Carranza on Mexico City, and on Aug. 15, 1914, General Obregon led the Constitutionalist forces into the capital. Huerta had resigned as President and had fled.

Four factions then contended for supremacy in Mexico, with Zapata and Villa as chief opponents of Carranza. Obregon remained faithful to Carranza and defeated Zapata in Puebla early in 1915, capturing the city. He reoccupied Mexico City after the departure of the forces of the Convention (Jan. 27, 1915), but evacuated the city again on March 10. During April, May, and June, 1915, Obregon undertook a campaign against Villa for the control of central Mexico. He repulsed the attacks of Villa at Celaya (April 15-19) and defeated his enemy in the battle of León (May 31-June 4), where Obregon was severely wounded, losing his right arm.

The subsequent period was one of constant turbulence in Mexican politics, accentuated by difficulties between Mexico and the United States that culminated in the occupation of Vera Cruz by American forces and Pershing's punitive expedition into northern Mexico in 1916 because of Villa's border raids. General Obregon was the chief supporter of President Carranza and was

the leader of the more radical of Carranza's followers. On Mar. 11, 1917, Carranza was elected President. From that time until the Spring of 1920, the time of the next constitutional presidential election, Obregon remained at the head of the army, with influence and power that steadily overshadowed the head of the Government. He was popular among the soldiers, and was also favored by the radicals and by foreign interests; the latter believed that he would be more amenable than other Mexican leaders in regard to enforcing the provisions of the new Mexican constitution that were distasteful to them. By this constitution, that of 1917, Carranza could not obtain another term as President, but he put forward a candidate, held to be only a stalking horse for himself. Obregon put himself in opposition and Carranza ordered his arrest, but the former hurried to Sonora and placed himself at the head of a revolt. After the capture of Vera Cruz by the enemies of Carranza, the President fled and met death—by suicide, according to report, but doubtless by assassination, in the general belief. On May 24, 1920, the Mexican Congress chose Adolfo de la Huerta as provisional President, and in September Obregon was elected President with only nominal opposition. He took office Dec. 1, 1920. He served out his four-year term, marked by efforts at labor and agrarian reforms, and by increasingly improved relations with the United States on various subjects in controversy between the two countries, especially debt funding and the mineral and oil concessions. The United States formally recognized the Obregon government on Aug. 31, 1923. In the following year President Obregon, debarred from reelection by the 1917 constitution, put forward General Plutarco Calles, his minister of the interior, as a candidate. Calles was elected, but not before Obregon was called upon to put down by force a serious revolt led by Adolfo de la Huerta, then finance minister. In this Obregon was aided materially by the support of Washington, which sent arms and ammunition to the Obregonistas and refused them to the rebels.

During Calles's administration, marked by troubles with the United States and the Roman Catholic Church, it was held generally that Obregon was a very influential factor, and when the term of the former neared its end, Obregon was again nominated for the Presidency. He was elected July 1, 1928, and was assassinated sixteen days later by a young man who shot him at a luncheon party given in celebration of his election. See MEXICO under *History*.

O'BRIEN, WILLIAM. Irish journalist and parliamentary leader, died at London, England, February 25. He was born at Mallow, Ireland, Oct. 2, 1852, and was educated at the Cloyne Diocesan College and Queen's College, Cork. At an early age he was employed by the *Daily Herald*, of Cork, but his real start in journalism was made in 1875, as a member of the staff of the *Freeman's Journal*. In 1880 he founded *United Ireland*, one of the most militant of Irish newspapers. O'Brien's activity with pen and voice brought him nine times into court for political offenses and cost him two years' imprisonment. He shared his captivity with Parnell and other Land League leaders. At Parnell's request, O'Brien wrote the famous "No Rent Manifesto." In 1883 he was returned to Parliament for Mallow, his native town, and until 1895

he was one of the leaders of the Irish cause at Westminster. From 1887 to 1890 he was a dominant figure in Irish Nationalism. Five years later, however, he withdrew from Parliament because of dissensions in his party.

In 1890 O'Brien visited the United States and collected large funds for the benefit of the Irish cause. After Parnell's conviction he became one of the leaders of the anti-Parnell faction. In 1898 he originated a new agrarian movement under the name of the United Irish League, and founded the *Irish People* as its organ. He was again a member of Parliament for Cork City after 1900, and retired finally in 1918 to live quietly at Mallow. O'Brien was called by Parnell the most scholarly man and one of the ablest debaters of the Irish party. Although modest and retiring in disposition, and of medium height and scholarly appearance, in politics he was always a storm centre and a hard fighter. He wrote two novels, *When We Were Boys* (1890), a story (written in prison) of the Fenian movement, and *A Queen of Men* (1897), dealing with Grace O'Malley, a heroine of ancient Ireland. He wrote also *Recollections* (1905), which was highly praised by critics; *An Olive Branch in Ireland and Its History* (1910); *Evening Memories* (1920); *The Irish Revolution and How It Came About* (1923); *Edmund Burke as an Irishman* (1924), and *The Parnell of Real Life* (1926).

OCEANIA, ō'shē-ān'īā, FRENCH ESTABLISHMENTS IN. A French colonial possession consisting of groups of small islands scattered throughout a wide area of the eastern Pacific. The total area of the establishments is estimated at 1520 square miles; population in 1926, 35,862, of whom 29,644 were natives. The principal island is Tahiti, which contains the chief town, Papeete, with a population of 4601, of whom 2126 are Frenchmen. The group of islands of which Tahiti forms a part is known as the Society Islands. The other groups are the Marquesas Islands, Tuamotu Island, Leeward Islands, the Gambier, Tubuai, and Rapa groups, and a number of outlying islands. Various tropical fruits are grown and exported. Pearls and mother-of-pearl are important products. Imports in 1926, 49,943,864 francs; exports, 53,650,477 francs. The chief imports are tissues, wheat, flour, and metal work, and the chief exports, copra, mother-of-pearl, vanilla, coconuts, and phosphates. The local budget for 1927 was expected to balance at 15,167,573 francs. The most important islands communicate by a New Zealand steamship service with San Francisco, New Zealand, and Australia. The administration is in the hands of a governor assisted by an administrative council. See EXPLORATION.

OCEANS, OCEANOGRAPHY. See EXPLORATIONS.
OFFICERS' RESERVE CORPS. See MILITARY PROGRESS.

O'GRADY, STANDISH HAYES. Irish author, died May 18. Born at Castletown Berehaven, County Cork, Sept. 18, 1846, he attended Trinity College, Dublin, where he won scholastic honors, and received the B.L. degree. Although admitted to the bar, he entered journalism and, later devoting himself to literature, wrote Irish histories and novels, and mythological and legendary Celtic tales. His work has been valued as an important stimulus to the national literature of the nineteenth century, which, written in the English language, took the place of the Gaelic, and en-

riched the style and mood of English literature. Besides editing, with Sir G. Carew, *Pacata Hibernia* (1896), Mr. O'Grady wrote: *History of Ireland's Heroic Period* (2 vols., 1878-80), republished as a romantic trilogy under the titles: *The Coming of Cuculain*; *In the Gates of the North*; *Triumph and Death of Cuculain*. Other of his books were: *History of Ireland, Critical and Philosophical* (vol. i, 1881); *Red Hugh's Captivity* (1889); *The Bog of Stars* (1893); *The Story of Ireland* (1894); *Ulrick the Ready* (1896); *The Flight of the Eagle*; *Finn and His Companions*; *Lost on Du-Corrig*; *The Chain of Gold*; and *The Coming of Cuculain Cycle*, 3 vols. See PHIOLOGY, MODERN, under Celtic.

OHIO. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 5,759,394. The estimated population on July 1, 1928, was 6,826,000. The capital is Columbus.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1928	3,646,000	136,725,000	\$103,911,000
	1927	3,378,000	109,720,000	84,484,000
Hay	1928	2,787,000	3,706,000	43,339,000
	1927	3,144,000	5,159,000	47,460,000
Wheat	1928	842,000	9,475,000	12,888,000
	1927	1,615,000	29,068,000	36,335,000
Oats	1928	2,413,000	89,281,000	37,498,000
	1927	1,900,000	60,800,000	27,360,000
Potatoes	1928	128,000	12,054,000	9,040,000
	1927	118,000	12,180,000	14,616,000
Tobacco	1928	41,800	33,440,000	6,019,000
	1927	30,100	24,652,000	4,531,000

^a tons, ^b pounds.

MINERAL PRODUCTION. The pig-iron production of the State continued second to that of Pennsylvania only. Shipments declined, in conformity with a general decrease in this industry, to 8,104,066 long tons for 1927, from 9,177,127 for 1926; the value of the pig iron shipped in 1927 was 150,125,790; for 1926, \$176,433,401. The mine output of coal fell sharply to 15,799,597 net tons for 1927, from 27,872,488 for 1926; in value it decreased to \$30,376,000 for 1927, from \$54,759,000. Labor troubles interfered with operation during much of the year. The coking industry suffered less, the by-product coke output being 7,129,000 short tons in 1927, as against 7,547,836 for 1926; in value, \$40,344,524 (1926). The clay products of 1926, the latest recorded year, were in value \$97,873,102; in 1925, \$97,991,821. In this field of production Ohio was again the leader among the States. The natural gas output of 1926 was 47,363,000 M cubic feet, surpassing that of 1925, which was 43,235,000 M cubic feet; the totals as to value were: 1926, \$25,403,000; 1925, \$22,377,000. In 1926, 10,817,000 gallons of gasoline were made from natural gas; in 1927 the quantity was 11,400,000 gallons. The value of this product was \$1,402,000 for 1926, and \$998,000 for 1927. Petroleum production rose from 7,272,000 barrels for 1926 to 7,529,000 for 1927; in value, however, the product fell from \$19,180,000 for 1926 to \$15,200,000 for 1927 (estimated). The cement produced in 1927 attained the quantity of 8,853,869 barrels, as compared with 7,556,493 for 1926; and cement shipments reached the value of \$14,242,901 for 1927 and for 1926, \$12,831,503. The

lime output was: 1927, 987,000 short tons (estimated); 1926, 1,056,589 short tons. In value it was: 1927, \$9,445,000 (estimated); 1926, \$10,348,880. The stone production was large in 1926, being to the value of \$13,763,207, as against \$13,084,572 in 1925. The total value of the mineral products of the State, duplications eliminated, was \$253,883,995 for 1926; for 1925, \$247,506,588.

FINANCE. State expenditures in the year ended June 30, 1927, as reported by the U. S. Department of Commerce, was: for maintenance and operation of governmental departments, \$41,843,672 (of which \$3,111,486 was aid to local education); for conducting public service enterprises, \$109,536; for interest on debt, \$976,174; for permanent improvements, \$10,912,780; total, \$53,842,162 (of which \$19,686,268 was for highways, \$13,176,744 being for maintenance and \$6,509,524 for construction). Revenues were \$53,627,085. Of this, property and special taxes formed 20.7 per cent; departmental earnings and charges for officials' services, 11.3; sales of licenses and taxation on gasoline, 47.6. Property valuation was \$13,350,444,355; State taxation thereon, \$3,337,611. Net funded State debt on Jun. 30, 1927, was \$19,127,835.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 8880.92. There were built in 1928, 11 miles of first, and 20.37 of second, track.

EDUCATION. An advance in teaching standards was accomplished in 1928, according to the statement of Director of Education J. L. Clifton in the *Journal of the National Education Association*, by the elimination of one-year teacher-training courses; the withdrawal from teacher training of colleges not making this work a major function was also effected. The school population of the academic year 1926-27 was given as 1,503,796. There were enrolled in the public schools of the State 1,266,565 pupils. Of these, 1,045,838 were in elementary schools and 220,727 in high schools. Expenditures for public-school education in the course of the year were: current, \$97,590,664; total including capital outlays, \$154,581,061. The salaries of teachers averaged approximately, as estimated, \$1450.

CHARITIES AND CORRECTIONS. A variety of correctional and charitable functions are vested in the State Department of Public Welfare, having at its head a single Director. The department was organized under a statute of 1921. Its duties in 1928 included the direction of 21 State institutions, the oversight of county homes, jails, and reformatories, and of child-caring agencies; the placement and guardianship of dependent children; hospital care of child cripples; administration of the pay-patient law; execution of State pardons and paroles, and supervision over the county probation system; identification and investigation of criminals and cases; various activities among the blind, and direction of the manufacture and sale of prison-made products, these being widely used among public offices and institutions in the State. For the year 1927 the number of inmates of all State institutions under the departments was 29,550. These institutions were: State hospitals at Athens, Cleveland, Columbus, Dayton, Lima, Massillon, Longview, and Toledo; Ohio Hospital for Epileptics; Institutions for the Feeble-minded, Columbus and Orient; Ohio State Sanatorium; Ohio Soldiers'

and Sailors' Home; Madison Home; a boys' and a girls' industrial school; Ohio Penitentiary; London Prison Farm; Ohio State Reformatory; Ohio Reformatory for Women; Bureau of Juvenile Research.

POLITICAL AND OTHER EVENTS. Senator Frank B. Willis, while on a campaign to gain the support of the Ohio Republican State delegation for his candidacy for the presidential nomination, died suddenly in Delaware, Ohio, his home town, on March 30. Lack of time prevented the substitution of another name for his on the primary ballots of the State. He received, posthumously, more than 70,000 votes in the Republican primary. Governor Donahey appointed as his successor to the Senate seat Cyrus Locher, a Democrat and State Commerce Director. Lieutenant-Governor Bloom became Commerce Director, and William G. Pickrel was appointed Lieutenant-Governor.

The upsetting of the Marshall law by the United States Supreme Court decision of 1927 having left the inferior tribunals of the State in a somewhat uncertain position, the Ohio State Bar Association at its July meeting declared in favor of the enactment of a law to create county courts, at the county seats, to handle misdemeanors and minor civil actions and to do away with the magistrates' courts. Chief Justice Marshall of the State Supreme Court declared that the State constitutional provision of 1912, limiting that court's power to pass on matters of constitutionality, had resulted in serious discrepancies in the interpretation of the law in different appellate districts.

Industrial conflict continued in the coal-mining regions of the State until late in the year, as in others of the soft-coal states of the unionized field. Evictions were enforced May 1, against several hundred miners who had been living as tenants in company-owned dwellings in Harrison, Belmont, and Jefferson counties. Defections in the ranks of the union adherents occurred in the Hocking Valley in April. Governor Donahey made efforts without avail to settle the coal wage differences. Following the action of the miners' policy committee in releasing districts to negotiate for themselves, late in July the Ohio Miners' Union sought to negotiate with the operators of the State, who in considerable numbers held out against entering into new collective bargaining. In the winter of 1927-28, State militia were used to administer emergency relief to striking miners' families. Near Crooksville, oil was struck in important quantities in April. The State fish and game division purchased deer with the purpose of propagating them as wild game under protection of the law, until they should grow numerous enough to hunt.

In Cleveland a proposal to amend the city charter so as to terminate government by city manager was advocated by Harry L. Davis, former governor and mayor. The plan would have restored government by mayor and council. It was submitted for the second time to popular vote, at a special election on April 24, and was defeated by an adverse majority of 2763 votes. City Manager Hopkins in July opposed the grant of higher rates sought by the East Ohio Gas Company seeking a new six-year charter. In Cincinnati the common pleas judges voted in January to adopt the chief justice system of organization, but after a brief trial reverted March 26 to a presiding justice. Plans were

worked out for the building of a union passenger station at Cincinnati, by the Cincinnati Terminal Company, to serve the seven principal railroads entering the city. Work was begun on the proposed station site, near Lincoln Park, in July, and the station was to be finished in 1932.

The Baltimore and Ohio Railroad effected an innovation in the steel industry of the Miami Valley by putting into operation a branch line from Hamilton to Middletown, specially reconstructed to carry trains of 150-ton ladle cars bearing molten iron from the Hamilton furnaces to the American Rolling Mill plant at Middletown. The conveying system was designed to eliminate the remelting of pig iron. Acquisitions of additional land increased the area of the Cincinnati municipal aviation field, Lunken Field, to 564 acres, making it according to report the largest such field in the country at the time. At Columbus, a City Hall building, in place of that destroyed by fire in 1921 and costing \$1,000,000, was completed, at Broad and Water streets. At Akron, the Board of Education voted to take over from the city the control of the Akron Public Library under the State school district library law, the board having authority to lay a tax for the support of the institution, for which municipal appropriations had been deemed inadequate.

ELECTION. In the election of November 6, after Pennsylvania, Ohio gave the second greatest majority of any State for the Republican National candidates, Hoover and Curtis. United States Senator Simeon D. Fess, Republican, was re-elected, defeating Charles V. Truax, Democrat. For the unexpired term, Theodore E. Burton, Republican, was elected to the Senate, defeating Graham P. Hunt, Democrat. For Governor, Myers Y. Cooper, the Republican candidate, was elected over Martin L. Davey, Democrat. John T. Brown, Republican, was elected Lieutenant-Governor. In the general sweep, the Republicans obtained every seat in the State senate and all but 11 of the seats in the lower house of the legislature. The three Democratic seats in the State's delegation in the House of Representatives were retained. The Ohio popular vote for Hoover was 1,627,543; for Smith, 864,210; Hoover's plurality, 763,333.

OFFICERS. Governor, A. V. Donahey; Lieutenant-Governor, William G. Pickrel; Secretary of State, Clarence J. Brown, Treasurer, Bert B. Buckley; Auditor, Joseph T. Tracy; Attorney-General, Edward C. Turner.

JUDICIARY. Supreme Court, Chief Justice, Carrington T. Marshall; Associate Justices, Reynolds R. Kinkade, James E. Robinson, Thomas A. Jones, Edward S. Matthias, Florence E. Allen, and Robert H. Day.

OHIO NORTHERN UNIVERSITY. An institution for the higher education of men and women at Ada, Ohio, founded in 1871, and under the direction of the Methodist Episcopal Church. It consists of the George Franklin and Sarah Catherine Getty College of Liberal Arts, colleges of education, engineering, and pharmacy, the Warren G. Harding College of Law, the A. D. Juilliard College of Music, school of commerce, and departments of expression, fine arts, and physical education. In the autumn of 1928 there were 1189 students registered, and in the summer school, 628. The faculty had 62 members. The productive funds of the institution amounted to \$42,860, and the income for the year to \$352,-

925. There were 15,000 volumes in the library. A new gymnasium and a music hall were constructed during the year. President, Albert Edwin Smith, Ph.D., D.D., LL.D.

OHIO RIVER CANALIZATION. See CANALS.

OHIO STATE UNIVERSITY. A State institution for the higher education of men and women at Columbus, Ohio, founded in 1870. The enrollment for the autumn term of 1928 totaled 10,412, distributed as follows: Graduate school, 844; agriculture, 793; applied optics, 30; liberal arts, 2429; arts-education, 107; commerce and administration, 1827; education, 1716; engineering, 1548; pharmacy, 188; veterinary medicine, 110; dentistry, 245; law, 297; medicine, 330; school of nursing, 31. There were, in addition, 3504 students registered in the summer quarter of 1928. The faculty in the autumn quarter had 883 members, an increase of 43 over 1927. The endowment amounted to \$1,150,914, and the income for the year to \$6,804,063, while total expenditures were \$6,556,662. The University also had current assets amounting to \$3,668,633, and the buildings and equipment were valued at \$15,896,897. The library contained 310,000 volumes. President, George W. Rightmire, LL.D.

OHIO UNIVERSITY. A State institution for the higher education of men and women at Athens, Ohio, founded in 1804. The student enrollment for the autumn term of 1928 was 2215, of whom 1109 were in the college of liberal arts, 775 of these being men and 334 women; in the college of education there were 1106 registered, 295 men, and 811 women. In the liberal arts the students were distributed as follows: 161 seniors, 175 juniors, 294 sophomores, and 422 freshmen, with 4 specials, 48 special music students, and 5 graduate students. The distribution in education was as follows: 130 seniors, 154 juniors, 304 sophomores, and 511 freshmen, 4 specials, and 3 graduate students. Of the registration of 1098 in 1928 summer session, 204 were men and 894 women. The faculty numbered 260. The library contained 63,900 bound volumes. President of the University, Elmer Burritt Bryan, L.H.D., LL.D.

OHIO WESLEYAN UNIVERSITY. An institution for the higher education of men and women at Delaware, Ohio, under the control of the Methodist Episcopal Church; founded in 1844. For the autumn semester of 1928 the total enrollment was 1803, distributed as follows: Seniors, 264; juniors, 377; sophomores, 465; freshmen, 611; special students, 16; conservatory, 45; graduate students, 25. The faculty numbered 163. The productive endowment of the University amounted to \$2,048,922, and the income for the year to \$607,344. The library contained more than 118,000 volumes. President, Edmund D. Soper, D.D., LL.D.

OIL. See CHEMISTRY, INDUSTRIAL; PETROLEUM.

OIL ENGINES. See INTERNAL COMBUSTION ENGINES; SHIPBUILDING.

OKLAHOMA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,028,283. The estimated population on July 1, 1928, was 2,426,000. The capital is Oklahoma City.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Cotton	1928	4,249,000	,000 ^a	\$101,480,000
	1927	3,601,000	1,037,000 ^c	102,663,000
Corn	1928	8,050,000	70,150,000	47,702,000
	1927	8,177,000	84,190,000	49,672,000
Wheat	1928	4,413,000	59,576,000	59,576,000
	1927	3,708,000	33,372,000	40,046,000
Grain sorghum	1928	1,709,000	30,762,000	19,072,000
	1927	1,744,000	34,880,000	17,440,000
Hay	1928	1,068,000	1,333,000 ^b	14,027,000
	1927	1,181,000	1,455,000 ^b	13,408,000
Oats	1928	890,000	23,140,000	10,876,000
	1927	1,112,000	21,128,000	9,296,000
Potatoes	1928	63,000	5,040,000	3,780,000
	1927	45,000	2,925,000	5,265,000
Sweet potatoes	1928	20,000	1,780,000	1,691,000
	1927	23,000	2,438,000	1,590,000

^a bales, ^b tons.

MINERAL PRODUCTION. The State exceeded every other in the quantity of petroleum that it produced in 1927 and in particular surpassed California, which had led in 1926. The petroleum produced in Oklahoma in 1927 attained 277,274,000 barrels, as against 179,195,000 in 1926. As rise in quantity was accompanied by a fall in price, it resulted that the value of the product fell to \$397,000,000 (estimated) for 1927, from \$413,900,000 for 1926. Natural gas output was high in 1926, the latest recorded year, reaching 286,421,000 M cubic feet, as against 249,285,000 M for 1925; in value, \$42,140,000 for 1926 and \$36,121,000 for 1925. Natural-gas gasoline was made to the quantity of 549,500,000 gallons in 1927, as compared with 475,716,000 in 1926; in value, \$28,904,000 for 1927 (estimated) and \$41,433,000 for 1926. Zinc mining, the chief other mineral activity, fell off sharply, the total mine production of zinc in 1927 being 206,611 short tons, as against 272,567 in 1926; zinc produced was valued at \$26,446,208 for 1927; at \$40,885,050 for 1926. The total value of the mineral products of the State attained the remarkable figure of \$569,518,693; for 1925 it was \$501,767,118. The coal production was 3,818,054 net tons in 1927 and 2,842,673 in 1926; in value, \$11,570,000 in 1927 and \$9,042,000 in 1926. The lead output of 1927 was 51,680 short tons; 1926, 69,704. In value it was \$6,511,680 for 1927; \$11,152,640 for 1926.

FINANCE. State expenditures in the year ended June 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$17,250,096 (of which \$3,185,197 was aid to local education); for interest on debt, \$124,931; for permanent improvements, \$10,763,728; total, \$28,138,755 (of which \$11,472,648 was for highways, \$2,090,358 being for maintenance and \$9,382,282 for construction). Revenues were \$31,676,172. Of this, property and special taxes formed 9.8 per cent; departmental earnings and charge for officials' services, 7.0 per cent; sales of licenses and taxation of gasoline, 51.5 per cent. Property valuation was \$1,697,367,213; State taxation thereon, \$848,684. The net State funded debt amounted on June 30, 1927, to \$3,074,803.

EDUCATION. A programme was adopted in 1928 for the establishment of accredited elementary schools, according to State Superintendent Vaughan in the *Journal* of the National Education Association. Small high schools were reorganized in accordance with a particular type of curriculum designed for their needs. The effort was made to establish the 8-month term throughout the schools of the State, through

the measure to that end passed by the previous legislature.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 6601.51. There were built in 1928, 20 miles of additional first track.

CHARITIES AND CORRECTIONS. Oklahoma alone of the States of the Union has a commissioner of charities and corrections elected by popular vote, with power to appoint his subordinates. He is the head of a State department, performing a variety of functions. Among these are the investigation of public charities; the inspection of State, county, and municipal institutions; guardianship over orphan, defective, dependent, and delinquent children in all public institutions, and prosecution of suits at law on behalf of such children's estates. In 1927, 12,963 children came under the department in divers ways. During the year 1126 persons were admitted to State hospitals for mental disease, or 47.2 per 100,000 of general population. On Jan. 1, 1928, there were 3794 such patients. The State institutions in 1928 were: State Penitentiary, McAlester; State University Hospital, Oklahoma City; State Reformatory, Granite; State Industrial School for Girls, Tecumseh; State Industrial School for Colored Girls, Taft; Deaf, Blind, and Orphans' Home, Taft; State Training School for White Boys, Pauls Valley; State Training School for Colored Boys, Boley; State School for the Deaf, Sulphur; Oklahoma School for the Blind, Muskogee; State Institution for the Feeble-minded, Enid; Western Oklahoma State Tuberculosis Sanitarium, Clinton; State Tuberculosis Sanitarium, Tahleah; Soldiers' Tuberculosis Sanitarium, Sulphur; Union Soldiers' Home, Oklahoma City; Oklahoma Confederate Home, Ardmore; Central State Hospital for the Insane, Norman; Western Hospital for the Insane, Supply; Eastern Hospital for the Insane, Vinita; Whitaker State Orphans' Home, Pryor; West Oklahoma Home for White Children, Helena.

POLITICAL AND OTHER EVENTS. The corporation license fee fixed by the State law of 1927 was contested in the Federal courts, as discriminatory against foreign corporations, in that this law set the fee for a corporation license at one dollar per \$1000 for foreign capital invested in the State while charging only 5 cents per \$1000 for domestic corporations. Suit was brought in the Federal Court at Tulsa by members of the Quapaw Indian tribe to cancel the leases of their lead-bearing lands in Ottawa County, on which yearly lease payments ran to about \$2,000,000. It was asserted that these leases had been improperly made when Albert B. Fall was Secretary of the Interior, in 1923. The conflict of legislature and governor in 1927 was reflected by the circulation of a petition early in 1928 to submit to a referendum vote at the November election a proposal to authorize the legislature to convene of its own motion, without need of the governor's summons, when it might see fit. The validity of part of the signatures, numbering in all about 80,000, was challenged by opponents of the proposal. In August a governor's mansion at Oklahoma City was completed.

The intention of the U. S. Army authorities to remove the School of Fire from Fort Sill was opposed by the State delegation at Washington. A group of financial backers was formed in July to build a \$3,000,000 hotel of 25 stories in Okla-

home City. Plans for a \$5,000,000 union passenger station in Oklahoma City, to be built on land furnished by the city at its own cost of about \$4,000,000, were approved by the Interstate Commerce Commission in May.

ELECTION. Solid political and press support in the State was lacking to the Democratic presidential candidate, Alfred E. Smith. Ex-Senator Owen, one of the leading political figures in the State, bolted the Democratic National ticket early in the campaign. In the election of November 6, the voters gave Hoover and Curtis, the Republican National candidates, 394,052 votes; to Smith and Robinson, Democratic, 219,206. In the election of United States Representatives, the Democrats lost several seats but retained a majority of the delegation. The Indian inhabitants of the State voted in large numbers and were generally in favor of the Republican ticket for the reported reason that Senator Curtis had Indian blood.

OFFICERS. Governor, Henry S. Johnston; Lieutenant-Governor, W. J. Holloway; Secretary of State, Graves Leeper; State Auditor, A. S. J. Shaw; Attorney-General, Ed Dabney; State Treasurer, R. A. Sneed; Superintendent of Public Instruction, John S. Vaughan; State Examiner and Inspector, John Rogers.

JUDICIARY. Supreme Court Justices: Charles W. Mason, E. F. Lester, James I. Phelps, John B. Harrison, Robert A. Hefner, Albert C. Hunt, Fred P. Branson, J. W. Clark, Fletcher Riley.

OKLAHOMA, UNIVERSITY OF. A State institution for the higher education of men and women, at Norman, Okla., founded in 1892. The enrollment for the autumn of 1928 totaled 4915, of whom 3237 were men and 1678 were women. These were distributed as follows: Graduate school, 226; arts and sciences, 2530; business, 239; education, 82; engineering, 780; fine arts, 347; law, 281; medicine, 197; nursing, 100; and pharmacy, 133. For the summer session, 2373 students were registered, including 855 men and 1518 women. The faculty had 333 members. The productive funds of the University amounted to \$3,200,000, and the income for 1927-28 to \$2,328,525, from the following sources: State appropriations, for maintenance, \$1,237,500; and library, \$250,000; and from student fees, \$191,014. The library contained 100,000 volumes. President, William Bennett Bizzell, Ph.D., LL.D.

OLD-AGE PENSIONS. There can be no doubt that this social insurance project is rapidly becoming a public question in the United States today, largely as a result of the programme of education being carried on by the American Association for Old-Age Security. This organization was instrumental in the drafting of a model old-age pension bill that was presented before the New York Legislature in the spring; it helped bring about the organization of State committees on old-age security in Massachusetts and Maryland; it fathered the first national conference to discuss the problems of old age which was held in New York on April 10. At this meeting papers were read, and discussions participated in, by the following: Prof. J. P. Chamberlain of Columbia University, J. L. Cohen of the Canadian Labor Research Bureau, Leifur Magnusson of the Washington International Labor Office, James H. Maurer of the Pennsylvania Federation of Labor, I. M. Rubinow of the Philadelphia Jewish Welfare Society, Bishop J. H. Darling-ton of Pennsylvania, Thomas Kennedy of the

United Mine Workers of America, J. G. Higgins of the United Association of Journeymen Plumb-ers, Dr. J. H. Holmes of the New York Commu-nity Church, State's Attorney B. S. Bell of Rock Island, Ill., and Senator George Nordin of St. Paul, Minn. At this conference the director of the New York Home for Aged Couples pointed out how old-age insecurity was reaching all classes in society by listing the following professions among the inmates of his home: an artist, a musician, a broker, an engineer, an organist, a teacher, a clergyman, and a lawyer.

The following are among the outstanding events of the year in the field of old-age pen-sions: the passage of a complete social insurance code, including provision for old age and invalid-ity, in *France*; the passage of a noncontributory old-age pension law by the Government of the *Union of South Africa* (see below); the passage of similar laws by the governments of *Greenland* and *Hungary*; the acceptance by the provinces of *British Columbia*, *Saskatchewan*, *Manitoba*, and the Territory of *Yukon* (see below) of Federal as-sistance in the creation of old-age pension funds. In the United States, a bill for a straight pen-sion scheme was introduced before the *New York* Legislature, while an appropriation of \$10,000 was voted for the continued study of old age by a legislative committee; a public hearing on old-age pension legislation was held by the *Minne-sota* senate-interim committee; in *Maine* a study of old-age pensions was begun by the secretary of the State board of charities and the commis-sioner of labor; in *Rhode Island* the State com-missioner of finance was authorized by the 1928 legislature to study pension systems; the *Califor-nia* State department of social welfare was making an extensive survey of the needs of the dependent aged in that State. The question entered politics with the inclusion of a promise to consider old-age pensions in the platform of the *New York* State Democratic party; similarly, the Democratic candidate for governor in *Massachu-setts* announced himself as favoring an effective old-age pension law.

NATIONAL CIVIC FEDERATION STUDY. Early in the year the National Civic Federation made pub-lic the results of a survey it had completed into the existence of old-age dependency. On the basis of the data obtained, the National Civic Federa-tion concluded that the problem was highly over-rated and that the need for old-age pensions was slight. The survey was based on interviews had with a group of 13,785 persons of over 65 years liv-ing in 11 cities and two country towns in the States of New York, New Jersey, Pennsylvania, and Connecticut. None of the persons was insti-tutionalized. The survey found that the following was the distribution of ownership of property:

Property owned:	Number of persons ^a	Percentage distribution
\$10,000 or over	3,546	25.8
\$7,500 to \$9,999	844	6.1
\$5,000 to \$7,499	1,475	10.7
\$4,000 to \$4,999	617	4.5
\$3,000 to \$3,999	648	4.7
\$2,000 to \$2,999	708	5.2
\$1,000 to \$1,999	701	5.1
\$100 to \$999	1,024	7.4
Under \$100	129	.9
None	4,068	29.5
Not stated	25	...
Total	13,785	100.0

It will be observed that 42 per cent had prop-erty in the value of \$5000 or over, while 29.6 per

cent had no property. The examination of in-comes showed that but 19.1 per cent of the group had no incomes, while one-fourth earned \$1500 or more annually. The critics of the report, and they were many, pointed out that these data did not warrant the conclusions drawn. In the first place, the dependent aged were not included in the inquiry, in the second place the investigation had limited itself to urban communities and evidently to a selected group as well, while, also, the conclusions differed considerably from the findings of the Massachusetts study made in 1926, which examined the economic status of 18,000 aged persons. Here it was found that one-third of the group had incomes of less than \$300 an-nually and that 39.4 per cent owned property valued at less than \$1000, while 30.8 per cent had no property whatever. The implication was that the Massachusetts study was conducted under impartial auspices and presented a better view of the situation. Nevertheless, these facts were pointed out in the National Civic Federa-tion's study: more than one-fourth of the aged persons had no property and 16.8 per cent had neither property nor income, that is to say, one person out of every six had no visible means of support; two-fifths of the group were dependent upon aid from friends or relatives, while the number who were entirely dependent upon out-side aid was between 20 and 25 per cent.

Dr. I. M. Rubinow, perhaps the outstanding au-thority in the United States on social insurance, in an article in the *New Republic* for Apr. 5, 1928, in pointing out these and other criticisms of the report, said:

Whether a straight pension of a system of social in-surance or a combination of both will prove to be the best method [of caring for the dependent aged] is a subject for expert study and investigation. But the whole subject cannot much longer be neglected by American legislatures. One may reasonably hope that the social conscience of the American people will not disregard much longer the problem of proper provision for the aged, only because some 30 or 40 per cent and not 85 or 100 per cent require it.

Further light on one of the lacunæ of the Civic Federation report was shed by a study of the dependent aged of San Francisco. Here it was found that there were in that city in 1925, 2156 dependent aged persons who made up 6 per cent of the population who were of over 60 years. Of these, 1800 were receiving institutional care and the remainder were the recipients of outdoor re-lief. The report points out that the unmarried and childless predominate among the dependent aged, and that there is no correlation between old-age dependency and immigration, and that the foreign born do not have a disproportionate share of the aged dependents.

TRADE-UNION ACTION. In discussing pro-grammes of social insurance, one must not lose sight of the important efforts being made by trade-unions in the handling of old age and in-validity. The fact is, as the *Monthly Labor Re-view* indicated in a series of significant articles in its January and February issues, a large group of trade unions had already applied themselves with varying success to the solution of these problems. The following national and interna-tional unions had evolved programmes: bridge and structural iron workers, bricklayers, electri-cal workers, granite cutters, printing pressmen and assistants, street railway employees, print-ers, locomotive firemen and enginemen, locomo-tive engineers, and railway trainmen, all of which

have some plan of old-age pensions. In addition, the following operate their own homes for the aged: carpenters, printing pressmen, railroad employees, railway conductors, printers.

MASSACHUSETTS. In 1923 a commission in this State was appointed to inquire into the feasibility of setting up a State programme for the care of the aged. After extended hearings, the committee brought in two reports—the majority report, favoring a State pension scheme for the care of the aged; and the minority report, recommending the improvement of the indoor-relief system. One section of the minority report suggested that the State be permitted to receive bequests toward a fund for the assistance of aged persons. In its 1928 session, the Legislature of Massachusetts passed a measure embodying the above recommendation as its solution of the problem of the dependent aged. The treasurer of the State, after such a fund, to which the State does not contribute, has reached the half-million mark may give out doles to aged persons whom he deems worthy. The minimum age for males is 65; for females, 60 years. Social workers in Massachusetts, in pointing out the futility of the measure, called attention to the fact that there were in the State between 70,000 and 80,000 persons who could claim doles under the law and that out of the income of the bequest fund at least one in every thousand would receive relief.

MONTANA. How successfully old-age pensions work out was demonstrated by Silver Bow County, Montana, which in August paid old-age pensions to 102 persons. Eight persons received the maximum, \$25 for the month; two received \$20, and 92 received \$15. By contrast it should be noted that formerly it had cost the counties of the State to maintain an inmate in a poor farm an average of \$518.91 yearly or \$43.18 per month.

CANADA. Mention was made in the 1927 YEAR BOOK of the passage by the Canadian Parliament of an old-age pension law, funds of which were to be built up by equal contributions from the provinces and the Dominion. British Columbia was the first province to sign the pension agreement with the Dominion. Saskatchewan, Manitoba, and the Territory of Yukon signed agreements in 1928. The British Columbia scheme went into effect in September, 1927. From that month until Mar. 31, 1928 (six months), the province undertook the care of 2712 aged persons who represented 22.6 per cent of the population 70 years of age and over. The average monthly pension was \$17.43 and the total amount paid in pensions was \$262,904, of which the Federal Government contributed one-half. Of the pensioners, 1579 were men and 1133 women. Nineteenths of these aged persons were born in either Canada or Great Britain. Among the recipients of the pensions was to be found property valued at \$1,268,938 or an average of \$468 per person.

SOUTH AFRICA. In June the Government of South Africa announced the passage of an act for the purpose of granting noncontributory pensions to aged persons. The following will be entitled to pensions: All white and all colored persons aged 65 and over living in the Union of South Africa who are British subjects and resident in the Union for 15 out of the 20 years preceding the date of application for a pension. Marriage with an alien does not disqualify a woman otherwise eligible. Pensions are to go to

those white persons whose annual income does not exceed £51 and to colored persons with annual incomes less than £33. The pensions for white persons range from £3 to £30 for those having less than £24 yearly. In the cases of married persons, the income of the husband is to be considered as one-half of the total means of both.

DENMARK. In 1927 Denmark reorganized its invalidity insurance code, the following being its chief provisions: All persons who are members of sickness insurance funds are insured under the new system until their sixty-second year. The law, which is voluntary, applies to working people whose maximum incomes range between 2200 and 3500 crowns, and these become recipients of insurance benefits when their incomes are reduced to one-third of their customary earning power. The maximum benefit is 800 crowns annually. The fund is maintained by contributions from the worker, the employer, and the State. Provisions also are made for treatment and include hospitalization, artificial limbs, reeducation, etc. With the reaching of the pensioner's sixty-second year, his contributions cease, as do those of the employer; but the benefits continue, one-half being paid by the State and the other by the commune in which he resides.

OTHER COUNTRIES. In *England* the pensionable age was reduced from 70 to 65. Under the Contributory Pensions Act of 1925, some 16,300,000 persons were insured, while at the end of 1927, 336,163 men and 674,254 women were receiving pensions. In *New Zealand*, on Mar. 31, 24,875 persons were receiving old-age pensions. The average annual pension amounted to £41 15s. In *Russia*, the Council of People's Commissars recommended a decree which provides for the pensioning of peasants of 65 years and over who are unable to support themselves.

OLDFIELD, WILLIAM ALLAN. American congressman, died at Washington, D. C., November 19. He was born at Franklin, Ark., Feb. 4, 1874, and was graduated from Arkansas College in 1896. At the outbreak of the Spanish-American War, he enlisted with the Second Arkansas Volunteers, serving as sergeant and later as first lieutenant in Company M. After being mustered out of the Army at the end of the war, he was admitted to the Arkansas bar in 1899. Oldfield's political career started with his appointment as prosecuting attorney for the third judicial circuit of Arkansas in 1902, a position which he held until 1906. A party-loyal Democrat, he was seated in the Sixty-first Congress, as a representative from the second Arkansas district, in 1909. He was successively reelected through the Seventieth Congress, serving his ninth year as Democratic whip of the House at the time of his death. Being made a member of the Ways and Means Committee in 1915, he proved an influential speaker on financial matters, advocating extensive tax reductions. He was acting chairman of his party's congressional campaign committee in 1924, and chairman in 1926, and in 1928 held a similar office on the Democratic congressional committee in the latter year. He aided in the foundation of the unsuccessful *National Democrat* in 1925, a magazine which was to have furnished publicity for the Democratic party. Mr. Oldfield spoke frequently in favor of Gov. Alfred E. Smith during the presidential campaign of 1928.

OLYMPIC GAMES. The ninth Olympic Games were held at Amsterdam, Holland, the

various events stretching over a period of several weeks and ending officially on Aug. 12, 1928. Germany made a remarkable showing and when team accomplishments were finally registered, it was found that this nation had carried off first honors, with the United States ranking second. The events included in this rating were track and field athletics, rowing, swimming, boxing, catch-as-catch-can wrestling, Greco-Roman wrestling, fencing, gymnastics, yachting, cycling, modern pentathlon, equestrian sports, weight lifting, football, and hockey.

Allowing ten points for first place, five points for second, four points for third, three points for fourth, two points for fifth, and one point for sixth, the Germans amassed a total of 45½ points. The other nations scored as follows: United States, 39; Holland, 34½; Italy, 33½; Sweden, 32½; Finland, 25; Great Britain, 18; France, 16; Argentina, 12½.

In the women's track and field contests, Canada was victorious, with the United States second and Germany third; the winter sports were won by Norway, with the United States second and Sweden third. The lacrosse competitions, where a triple tie existed among the United States, Canada, and Great Britain, were not included in the above scoring totals.

The team records in the several events were:

Track and field—United States, first; Finland, second; Great Britain, third; Germany, fourth; Sweden, fifth; Canada, sixth.

Rowing—United States, first; Great Britain, second; Switzerland, third; Italy, fourth; Germany, fifth; Australia, sixth.

Swimming—United States, first; Germany, second; Great Britain, third; Sweden and Holland, tied for fourth; Japan, sixth.

Boxing—Argentina and Italy, tied for first; United States, third; Holland, fourth; Sweden, fifth; New Zealand and Hungary, tied for sixth.

Catch-as-catch-can wrestling—Finland, first; Sweden, second; Switzerland, third; United States, fourth; Canada, fifth.

Greco-Roman wrestling—Germany, first; Finland, second; Switzerland, third; Hungary, fourth; Estonia, fifth; Egypt, sixth.

Fencing—Italy, first; France, second; Hungary, third; Germany, fourth; United States, fifth; Argentina, sixth.

Gymnastics—Switzerland, first; Czechoslovakia, second; Jugoslavia, third; France, fourth; Finland, fifth; Italy, sixth.

Yachting—Norway first; Sweden, second; Denmark, third; Holland, fourth; Estonia, fifth; Finland, sixth.

Cycling—Holland, first; Denmark, second; Great Britain, third; France, fourth; Italy, fifth.

Modern pentathlon—Sweden, first; Germany, second; Holland, third; Italy, fourth; Finland, fifth; Great Britain, sixth.

Equestrian sports—Holland and Poland, tied for first; Germany and Spain, tied for third; Sweden, fifth; Norway, sixth.

Soccer—Uruguay, first; Argentina, second; Italy, third; Spain, fourth.

Field hockey—British India, first; Holland, second; Germany, third; Belgium, fourth.

Weight lifting—Germany, first; France, second; Austria, third; Italy, fourth; Egypt, fifth; Estonia, sixth.

The track and field events probably attracted more general interest than any other feature, the United States leading the way in point scoring with a total of 173. The triumph of the United States was due to the strong showing the athletes of that country made in the field events. Finland captured second honors with 102 points, chiefly the result of pronounced strength in the distance runs. The other nations to score points were: Great Britain, 46; Sweden, 44; Germany, 44; Canada, 38; France, 27; Japan, 19; South Africa, 14; Ireland, 10; Norway, 7; Hungary, 5; Haiti, 5; Chile, 5; Italy, 4; Philippines, 3; Switzerland, 3; Holland, 1.

A list of the track and field champions crowned at the ninth Olympic Games at Amsterdam follows:

16-pound shot, Kuck, United States; running high jump, King, United States; 10,000-meter run, Nurmi, Finland; 100-yard dash, Williams, Canada; 400-meter hurdles, Lord Burghley, Great Britain; 16-pound hammer throw, O'Callaghan, Ireland; 100-meter dash (women), Miss Robinson, United States; 800-meter run, Lowe, Great Britain; running broad jump, Hamm, United States; discus throw (women), Miss Kono-packa, Poland; 110-meter-high hurdles, Atkinson, South Africa; 200-meter dash, Williams, Canada; pole vault, Carr, United States; discus throw, Houser, United States; 1500-meter run, Larva, Finland; running hop, skip, and jump, Oda, Japan; javelin throw, Lundquist, Sweden; 800-meter run (women), Frau Radke, Germany; 400-meter run, Barbuti, United States; 5,000-meter run, Ritola, Finland; 8000-meter steeplechase, Lonkola, Finland; Marathon, El Ouafi, France; running high jump (women), Miss Catherwood, Canada; 400-meter relay, United States; 1600-meter relay, United States; 400-meter relay (women), Canada.

The United States swimmers triumphed most impressively, capturing 10 out of a possible 16 first places. The champions were:

100-meter free style, Weissmuller, United States; high dive, Desjardines, United States; low dive, Desjardines, United States; 100-meter back stroke, Kojac, United States; 800-meter relay, United States (Clapp, Laufer, Kojac, Weissmuller); 200-meter breast stroke, Japan; 1500-meter free style, Sweden; 400-meter free style, Argentina; water polo, Germany.

The women's swimming champions were: high dive, Miss Pinkston, United States; 100-meter free style, Miss Osipowich, United States; 400-meter free style, Miss Norelius, United States; 400-meter relay, United States (Lambert, Osipowich, Garratti, Norelius); low dive, Miss Meany, United States; 200-meter breast stroke, Germany; 100-meter back stroke, Holland.

The biggest surprise of the Olympics, perhaps, came in the boxing competitions, through the failure of the United States to win a single final. The champions were:

Flyweight, Kocsis, Hungary; bantamweight, Tamagnini, Italy; featherweight, Vanklaeveren, Holland; lightweight, Orlando, Italy; middleweight, Toscani, Italy; light heavyweight, Avendano, Argentina; heavyweight, Rodriguez, Argentina.

Next to track and field contests, the various rowing events doubtless created the greatest enthusiasm, the climax coming in the eight-oared struggle between the University of California crew, from the United States, and the Thames Rowing Club of Great Britain. The Californians won by a margin of three-quarters of a length. The British led for the first 150 meters, but at that point the collegians hit up their stroke to assume a supremacy which they never relinquished to the end.

Another colorful feature was the Marathon which was won by El Ouafi, an Algerian running in the colors of France. In the Paris Olympics of 1924, El Ouafi finished eighteenth and was not considered at all likely to capture the Amsterdam competition. The Algerian, however, displayed amazing stamina and covered the 26 miles of the course in 2 hours, 32 minutes, 57 seconds, or less than 22 seconds behind the Olympic record set in 1920 at Antwerp by Hannes Kolehmainen of Finland. It was estimated that half the population of Holland witnessed this thrilling race and 40,000 were gathered in the Amsterdam Stadium at the finish. Miguel Plaza, a Chilean news vendor, took second place, while Joie Ray, the United States favorite, finished fifth.

OMAN. An independent Moslem state in southeastern Arabia, extending for about 1000 miles along the southern coast of the Gulf of Oman; guaranteed in its integrity by Great Britain and France. Area, about 82,000 square miles;

Keystone View Co.

OLYMPIC GAMES AT AMSTERDAM, 1928
THE AMERICAN TEAM MARCHING AROUND THE STADIUM AT AMSTERDAM, HOLLAND

population estimated at 500,000; chiefly Arabs, but with a considerable Negro element along the coast. The capital, Muscat, and the neighboring town of Matrah, have a combined population of about 20,000 made up almost entirely of Negroes and Baluchis. Imports, which consist chiefly of rice, coffee, and cotton piece goods, and exports, which comprise dates, dried limes, pomegranates, and dried fish, are from and to India for the most part. The reigning Sultan in 1928 was Seyyid Taimur bin Faisal bin Turki, who succeeded his father Oct. 5, 1913.

ONTARIO. The second largest province of the Dominion of Canada (after Quebec), situated between Quebec on the east and Manitoba on the west. Area, 407,262 square miles; population according to the census of 1921, 2,933,662. The estimated population in 1927 was 3,187,000. The capital is Toronto, with a population in 1921 of 521,893; estimated in 1926, 670,945. Other large cities: Ottawa (capital of the Dominion), 107,843; Hamilton, 114,151; London, 60,950. In 1926 there were 7105 elementary schools and 422 secondary schools, with an attendance of 739,674 pupils, and instructed by 18,410 certified teachers.

Agriculture is the chief occupation of the province. The land under cultivation was estimated at 14,000,000 acres. The acreage and yield of the more important crops in 1927 were: Wheat, 870,957 acres, 21,963,000 bushels; Oats, 2,689,295 acres, 96,815,000 bushels; barley, 514,802 acres, 16,010,000 bushels; rye, 72,323 acres, 1,367,000 bushels; flax, 7080 acres, 67,000 bushels; mixed grain, 799,333 acres, 28,456,000 bushels; other grains, 384,454 acres, 7,674,000 bushels; potatoes, 153,468 acres, 9,898,000 cwts.; roots, 107,181 acres, 18,503,000 cwts.; hay and clover, 3,383,722 acres, 5,239,000 tons; fodder corn, 367,772 acres, 3,497,000 tons. The farm values for 1925 were: land, \$879,212,000; buildings, \$480,027,000; improvements, \$164,188,000; livestock, \$233,160,000. The total value of mineral products in 1928 amounted to \$100,238,933, according to preliminary official estimates, a record for all time. This production included metallic minerals, \$71,199,917, an increase over the previous year of 13.7 per cent; nonmetallic minerals, \$7,679,133; structural materials, \$14,688,310; and clay products, \$6,671,573, an increase of 14 per cent. The metallic minerals accounted for 71 per cent of the total production and the 1928 output could be compared with \$62,631,255 in 1927 and \$59,166,249 in 1926. In 1928, gold, which included some silver, accounted for \$32,688,817. The revenue of the province for 1927-28 was \$55,790,000, and the expenditure, \$55,613,000. There are about 11,000 miles of railway.

The executive power is vested in a lieutenant-governor, appointed for five years by the governor-general of Canada, and a responsible ministry; legislative power is in a single chamber of 112 members, elected for four years. Women have the franchise and the right to election to the chamber. Ontario is represented in the Dominion Senate by 24 members and in the House of Commons by 82, Lieutenant-Governor in 1928, W. D. Ross; Prime Minister and President of the Council, G. Howard Ferguson; Attorney-General, W. H. Price; Treasurer, J. D. Monteith; Secretary and Registrar, L. Goldie; Education, G. Howard Ferguson; Agriculture, J. S. Martin; Public Works and Highways, G. S. Henry; Lands and Forests, W. Finlayson; Mines, Charles Mc-

Crea; Labor and Health, Dr. Formes Godfrey; Ministers without Portfolio, R. J. Cooke and Leeming Carr. See CANADA.

OREGON. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 783,389. The estimated population on July 1, 1928, was 902,000. The capital is Salem.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Wheat	1928	1,027,000	23,318,000	\$24,083,000
	1927	1,065,000	26,782,000	29,996,000
Hay	1928	1,140,000	2,323,000 "	26,446,000
	1927	1,133,000	2,342,000 "	25,143,000
Oats	1928	304,000	10,944,000	5,581,000
	1927	310,000	10,540,000	5,586,000
Potatoes	1928	52,000	6,240,000	4,368,000
	1927	52,000	6,240,000	4,680,000
Hops	1928	17,000	17,000,000 "	3,400,000
	1927	16,000	15,904,000 "	3,976,000
Corn	1928	82,000	2,952,000	2,952,000
	1927	81,000	2,916,000	2,770,000

	1927	91,000	3,185,000	2,452,000
Apples	1928	6,950,000	6,255,000
	1927	4,320,000	4,752,000

" tons, " pounds.

MINERAL PRODUCTION. Stone, sand, and gravel contributed about one-half of the total value of the mineral production of the State for 1926. The metal production, though secondary in point of value, rose in 1927. Gold was mined to the extent of 14,676 fine ounces in 1927, as compared with 13,243 in 1926; in 1927 it was valued at \$303,383; in 1926, at \$273,759. The silver produced rose to 45,830 fine ounces for 1927, from 28,733 for 1926; in value it was \$25,986 for 1927, and \$18,553 for 1926. Some copper and some lead also were mined. The value of stone quarried in 1926 was \$2,152,512. The total value of the State's mineral products was \$6,941,355 for 1926; \$7,826,711 for 1925.

FINANCE. State expenditures for the year ended Sept. 30, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$11,976,691 (of which \$442,844 was aid to local education); for conducting public service enterprises, \$3769; for interest on debt, \$2,906,486; for permanent improvement, \$7,182,648; total, \$22,069,594 (for which \$9,822,556 was for highways; \$3,137,610 being for maintenance and \$6,684,946 for construction). Revenues were \$22,954,710. Of this, property and special taxes formed 26.4 per cent; departmental earnings and charges for officers' services, 5.8 per cent; sales of licenses and taxation of gasoline, 50.7 per cent. Property valuation was \$1,110,677,349; State taxation thereon, \$5,286,824. Net State funded debt on Sept. 30, 1927, was \$36,155,029. Highway bonds outstanding were \$34,466,750.

There occurred in eastern Oregon in 1923 much refinancing and exploratory activity with a bearing on possible future production. The estimated 1928 production of gold was \$209,000; the total production of the metals, gold, silver, copper, and lead, in 1928 was valued at \$261,000.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 3361.74. There were built in 1928, 26 miles of additional first track.

EDUCATION. Normal-school facilities for a previously unserved portion of the State were provided by the building in 1928 of the Eastern Oregon Normal School at La Grande. A survey was made in Portland of the causes for which pupils had been dropped from elementary or from high schools. The school-age population of the State in 1927 was 256,885. There were enrolled in the public schools 185,959 pupils, of whom 144,701 were in elementary schools and 41,258 in high schools. Expenditure for public-school education totaled, for the year, \$23,783,853. Salaries of teachers averaged, for men, \$167.60 a month; for women, \$119.08 a month.

CHARITIES AND CORRECTIONS. The State board of control, as functioning in 1928, exercised the central authority over a system of State institutions for the care of certain of the sick and of delinquents, the blind, the deaf, the feeble-minded, and the veteran soldiers. The board was created by statute of 1913, and consists of the governor, secretary of state, and state treasurer. It appoints the executive heads of the charitable and correctional institutions and makes purchases for these institutions. Under a law of 1917, the direction of the State Penitentiary was put in the sole hands of the governor, but the board has continued to contract for penitentiary supplies and improvements. The board exercised in 1928 a visitorial power over 11 State-aided homes, nurseries, and aid societies. The State institutions wholly under its direction were: Oregon State Hospital (mental), Salem; Eastern Oregon State Hospital (mental), Pendleton; State Institution for Feeble-minded, Salem; Oregon State Training School (delinquent boys), Salem and Woodburn; State Tuberculosis Hospital, Salem; State School for the Blind, and State School for the Deaf, Salem; State Industrial School for Girls, Salem; State Soldiers' Home, Roseburg; Oregon Employment Institution for the Blind, Portland.

POLITICAL AND OTHER EVENTS. The State Public Service Commission sought to enforce a ruling that required railroads to grant a through single rate on shipments from the producing region to the milling or processing point and thence later to the destination of the finished product. Suit against the ruling was brought in the Federal District Court at Portland by a number of the railroads, on the ground that it would involve them in serious loss of revenue. The branch line of the Great Northern Railway system to Klamath Falls was completed and was opened for traffic May 11. An initiative petition was presented to bring before the voters of the State at the November election a proposal to prohibit the declaration of an emergency on the part of the State legislature as an occasion for the passage of any bill to repeal or amend a law having the approval of the people. A special election was held in Portland in April on the question whether to ratify a proposed merger of the two leading power companies of the city—the Port-

land Electric Company and the Northwestern Electric Company; the voters rejected the proposal by a heavy vote of about two to one. The automobile license law of the State, apportioning the cost of licenses on the basis of weight instead of value, was widely discussed.

ELECTION. In the election of November 6, the State gave a popular vote of 205,341 for the Republican presidential and vice presidential candidates, Hoover and Curtis; for Smith and Robinson, Democratic candidates, 109,223. A delegation of three Republican members was elected to the United States House of Representatives. Hal E. Hoss, Republican, was elected secretary of state; Thomas B. Kay was reelected state treasurer; I. H. Van Winkle, Republican, was reelected attorney-general.

OFFICERS. Governor, I. L. Patterson; Secretary of State and State Auditor, Hal E. Hoss; Treasurer, Thomas B. Kay; Attorney-General, I. H. Van Winkle; Superintendent of Public Instruction, Charles A. Howard.

JUDICIARY. Supreme Court: Chief Justice, John L. Rand; Associate Justices: Thomas A. McBride, Henry J. Bean, George M. Brown, George Rossman, Harry H. Belt, and O. P. Coshov.

OREGON, UNIVERSITY OF. A State institution of higher education at Eugene, Oregon, founded in 1872. The enrollment for the autumn term of 1928 was 3237, divided as follows: Undergraduates, 2796; graduates, 129; law school, 83; medical school, 229. Of the total, 1884 were men and 1353 women. In the summer session of 1928, the registration totaled 1295, of whom 369 were men and 926 women; of these, 1064 were undergraduate and 231 graduate students. The faculty in the autumn term of 1928 numbered 211. The total income for the year 1928 was \$1,687,862. The main library contained 195,491 and the medical school library, 9734 volumes. Among the gifts received by the University during the year were the following: From the General Education Board, \$36,000 for the University of Oregon School of Medicine, at Portland; from the late Elizabeth H. Harmon, a bequest of \$28,722 for a fine arts building; from Mrs. Gertrude Bass Warner, valuable additions to the Murray Warner Collection of Oriental Art; and from Frank L. Chambers, land valued at \$15,000. During the summer of 1928, a new dormitory to house 275 men and serve 400 was built at an expenditure of \$338,683, the construction cost being financed by an issue of bonds to be retired from the earnings of the building. President, Arnold Bennett Hall, J.D., LL.D.

OREGON STATE AGRICULTURAL COLLEGE. A Federal and State institution for the higher education of men and women at Corvallis, Oregon, founded in 1868, when the State designated Corvallis College as the recipient of the Federal land-grant funds and began to appropriate State funds; the institution was permanently designed as the State Agricultural College in 1870 and became wholly a State institution in 1885. Degrees are granted in 10 schools: Agriculture, chemical engineering, commerce, engineering and mechanic arts, forestry, home economics, military science, mines, pharmacy, and vocational education. The enrollment for the autumn term of 1928 was 3464, of whom 2357 were men and 1107 women. The summer session registration was 1420. There were 299 members on the teaching faculty in 1927-28. The income for the same period from the original land-grant fund and

other Federal funds from the State of Oregon (millage tax), student fees, etc., as well as from certain appropriations from Oregon counties for extension work, totaled \$2,116,226, as follows: for resident instruction, \$1,280,165; agricultural experiment station, \$273,173; extension service, \$279,364; miscellaneous, \$283,524. There were 85,000 catalogued volumes in the library. A new physics building, costing \$148,014; a men's dormitory, \$438,810, comprising five halls of residence for men, with a capacity of 340 students; and the Memorial Union Building, \$544,778, were completed and occupied during 1928. President, William Jasper Kerr, D.Sc., LL.D.

OUTCAULT, ɔt'kault, RICHARD FELTON. American newspaper artist and humorist, originator of colored comic sheets, died at Flushing, L. I., September 25. He was born at Lancaster, Ohio, Jan. 14, 1863, and was graduated from McMicken University, Cincinnati. While drawing comic illustrations for the *New York World* in 1895, he adopted the suggestion that vivid color would make his pictures more popular, and thenceforth the hero of "Hogan's Alley," a figure he had created, appeared in a bright yellow dress, becoming widely known as the "Yellow Kid," and giving rise to the current phrase, "yellow journalism." Mr. Outcault transferred this one-toothed creation to the *New York Journal* in 1896, going in the following year from that paper to the *New York Herald*, where he started a series called "Pore li'l Mose" in 1901, and the long-lived "Buster Brown" in 1902. He founded and became president of the Outcault Advertising Company, of Chicago, and he published several of his comic figures in book form, including: *Buster, Mary Jane, and Tige* (1908); *Buster Brown, the Busy Body* (1909); *Real Buster and the only Mary Jane* (1909); *Buster Brown in Foreign Lands* (1912); *Buster Brown—the Fun Maker* (1912); and *Buster Brown and His Pets* (1913).

PACKARD, JAMES WARD. American inventor and automobile manufacturer, died at Cleveland, Ohio, March 20. He was born at Warren, Ohio, Nov. 5, 1863. He was graduated from Lehigh University in 1884 with the degree of M.E., and entered the employ of the Sawyer-Man Electric Company, of New York, in the same year. In 1890 he returned to Warren and organized the Packard Electric Company, manufacturing electric lamps; he was one of the pioneers in the industry and invented many processes and devices used in electric lighting. He became interested in the automobile in its early days, and in 1893 had the plans drawn for the first Packard machine. The financial depression of the time halted his work, but by 1897 he had organized the Packard Motor Car Company, which was known at first as the Ohio Automobile Company. He was president of the company until 1903, then chairman of the board of directors, and was a member of the board until he retired from active business in 1915. Mr. Packard gave away large sums of money in philanthropy; his largest gift was one

of \$1,000,000 to Lehigh University for an electrical and mechanical engineering laboratory.

PAIN, BARRY (ERIC ODELL). English author, died at Watford, England, May 5, at the age of sixty-two. He was educated at Corpus Christi College, Cambridge, where he was a classical scholar. For a time he was a private tutor, but as early as 1889 he had met with literary success, his "Hundred Gates" appearing in the *Cornhill* that year. Some of his parodies and sketches had been published in *Granta*, the Cambridge University magazine, and when he took up writing as a profession he contributed to *Punch* and the *Speaker*. He was a member of the staff of the *Daily Chronicle* and of *Black and White*, and for a time edited the weekly *To-day*, in succession to the late Jerome K. Jerome. His work (which was mainly humorous, although he wrote also detective tales and others dealing with the occult), was little known in America until 1914-15, when he visited the United States. He wrote, among other books: *In a Canadian Canoe* (1891); *Playthings and Parodies* (1892); *Eliza* (1900); *Another Englishwoman's Love Letters* (1901); (with Blyth), *The Shadow of the Unseen* (1907); *Proofs Before Pulping* (1909); *Stories in Grey* (1912); *Stories without Tears* (1912); *The New Gulliver* (1913); *Mrs. Murphy* (1913); *One Kind and Another* (1914); *The Short Story* (1915) *Marge Askinforit* (1921); *This Charming Green Hat Fair* (1925); and *Essays of To-day and Yesterday* (1926).

PAINTING. The general trend of painting both in Europe and America showed a return to the academic school. This may not at first be apparent when so many of the academies were just beginning to accept the modernists and even to honor them with prizes. The Carnegie Institute in Pittsburgh for two years had given its highest prize to works of the modern French school. Yet, if one considers that the *Still Life*, by Derain, which won the prize in the 1928 exhibition is an example of Derain's more academic work, the statement still holds true. It was the artists themselves who were becoming a little more conservative. It was noticeable in such exhibitions as that of the Whitney Studio Club that the younger artists were showing more drawings and were concentrating their efforts on studies. This perhaps foretold a weeding out of fashion from the definite advances of the modern schools.

Events in the world of painting included a number of discoveries. A panel of St. Francis of the school of Perugino was identified as one of the predella panels belonging to an altarpiece by Raphael formerly in the convent church of St. Antonio in Perugia and now in the Metropolitan Museum. A lost altarpiece by Benozzo Gozzoli was discovered by a parish priest in the parochial church of San Andrea in Italy. Several important frescoes were discovered in Italy, including some in the historic chapel of Santa Barbara in Castelnuovo. Another group was thought to have been done by Massaccio, and still another, in a church at Pistoia, by Pietro Lorenzetti. A series of frescoes of the early sixteenth century were found in the Gothic church of Maria Saal in Vienna. They represent the genealogical table of Christ and were thought to have been done by an artist of Durer's circle. Other discoveries were: the Ma-

donna del Baldaccio found in England, a Tintoretto in an obscure German church, a Rembrandt in Spain, and a large number of Rowlandsons discovered in a garret.

Among the interesting events in New York was the plan of the Museum of the City of New York, which temporarily was occupying the Gracie Mansion, to erect a new building. The sum of \$2,000,000 was needed to build and endow the new museum at Fifth Avenue and 103rd Street. Plans of colonial design by Joseph H. Freedlander had been accepted and work was to start.

BIBLIOGRAPHY. Important publications of the year include: A. Venturi, *Michaelangelo*; T. B. Clark, *Portraits by Early American Artists of the 17th, 18th, and 19th Centuries*, an important work in the history of American painting; Paul de Lapparent, *Toulouse-Lautrec*; Florent Fels, *Vincent Van Gogh*; Charles Diehl, *L'Art Chrétien Primitif et l'Art Byzantin*, a work by the well-known French authority; F. Carco, *La Légende et la Vie d'Utrillo*; Allan Marquand, *The Brothers of Giovanni della Robbia*; P. Soupault, *William Blake*; Puig Y. Cadafalch, *Le Premier Art Roman*; Walter Pach, *Ananias, Or the False Artist*; A. Bredios, *Jan Steen*; Leon Werth, *Claude Monet*; A. Calabi, *Pisanello*; J. B. de la Faille, *L'Oeuvre de Vincent Van Gogh*, a catalogue of Van Gogh's paintings; Pierre Couthon, *La Vie de Delacroix*; A. P. Oppe, *Thomas Rowlandson*.

NECROLOGY. Among the men in the world of art who died in 1928 were: Harry Siddons Mowbray, nationally known painter of murals; Arthur B. Davies, famous American artist; Frederick Arthur Bridgeman, an artist known particularly for his genre and historical paintings; Frederick S. Lamb, New York artist; Warren Davis, American painter and etcher; William Clark Rice, artist and mural decorator; Franz von Stuck, decorator of the Munich school; Samuel L. Scherer, director of the City Art Museum, St. Louis; Walter G. Strickland, director of the National Gallery of Ireland and vice president of the Royal Irish Academy; Sir Frank Dicksee, president of the Royal Academy; Bashford Dean, curator of armor at the Metropolitan Museum; Loys Delteil, learned French authority on prints; Charles A. Loesser, art collector and critic; Herschel V. Jones and Edwin S. Bayer, well-known collectors. For most of these, separate biographies will be found.

See ART EXHIBITIONS; ART MUSEUMS.

PALÆONTOLOGY. See GEOLOGY.

PALESTINE. A territory comprising that part of historic Palestine which lies to the west of the River Jordan; formerly a vilayet of the Turkish province of Syria; since the War a new State organized under British mandate, providing a national home for the Jews.

AREA AND POPULATION. The area of Palestine under British mandate is about 9000 square miles. The population, according to the census of Oct. 23, 1922, was 757,182, of whom 590,890 were Moslems; 83,794 Jews; 73,024 Christians; 7028 Druses; 163 Samaritans; 265 Bahais; and the remainder Sikhs, Hindus, and Metawilehs. Capital, Jerusalem, with a population in 1922 of 62,678. Other large towns with their populations in 1922 are Jaffa, 47,709; Haifa, 24,634; Gaza, 17,480; Hebron, 16,577; Nablus, 15,947. The Jewish settlements are grouped in the four districts of Judea, Samaria, and upper and lower Galilee. The total population of Jews permanently settled

in Palestine has risen since the War from 55,000 to 130,000, or nearly 70 per cent of the entire population. The fact that the proportion of immigrants having independent means is rapidly increasing is even more important for the future economic development of the country than is the increase in the actual number of immigrants. Jewish immigrants in 1926 totaled 3395 while the emigrants numbered 6978. See JEWS.

EDUCATION. There are 314 schools maintained by the Government, which are attended by 19,937 pupils. The Government also maintains training colleges for teachers. To a very large extent the Christian and Jewish communities provide for the education of their children in schools supported by the church. The Zionist Organization controls 177 schools attended by 17,174 pupils, and other Jewish bodies control schools attended by 9307 pupils, making a total of 255 Jewish schools attended by 26,481 pupils. There are 183 Christian schools attended by 15,145 pupils. There are also about 50 Moslem schools privately maintained by local committees, which provide for about 3500 schools. Most of the non-government schools receive a grant-in-aid on a per capita basis. There is a Hebrew university in Jerusalem, which was opened in 1925.

PRODUCTION, ETC. The orange crop, which constitutes the principal export item, totaled 2,214,000 cases during 1926-27, as compared with 1,515,000 cases in 1925-26 and 2,146,500 cases in 1924-25. There has been a steady expansion of area under orange cultivation, especially around Jaffa, and a large increase in the export of this fruit was expected in the near future. Experiments were carried on during the year with a view to developing the export of grapes. Cereal returns were reported to have compared favorably with the previous year, large increases being recorded for durra and sesame and average returns for wheat and barley. Gradual progress was made along industrial lines during the year. Certain industries were aided by a new customs tariff, which either reduced or abolished the duty on many materials used in manufacture. The limited purchasing power of the population, however, continued to retard the development of industries entirely dependent upon the home market, but industries which export a part of their production were favored by an increased demand from nearby markets, as Syria and Egypt. This increase was chiefly in leather, cement, textiles, olive oil, and soap. A few small manufacturing plants, mainly those making biscuits and candy, made progress on the local market in competition with foreign products. Various new enterprises were launched during the year. As most of the industries are small and their working capital limited, the increased activity has only had a slight effect on the national economic structure. Their sustained operations, however, absorbed some of the labor released from building operations.

The government monopoly on salt was abolished Nov. 1, 1927, and mining of rock salt was begun at the southern end of the Dead Sea by a local concern, with a view to supplying the Palestine market. The damage sustained from earthquakes during July (see YEAR BOOK for 1927) created an urgent demand for emergency funds and had a temporarily unfavorable effect on economic conditions. Work was started during the latter part of 1927 on the Jordan hydro-electric concession, which covers the exclusive utilization of the Jordan and Yarmuk rivers for

hydro-electric purposes, and involves the construction of dams, reservoirs, canals, pumping stations, etc. The project is an important factor in the economic progress of the country, since it would aid industrial development that was handicapped by the necessity of importing all fuel. A concession for the exploitation of the mineral wealth of the Dead Sea was agreed to in principle during 1927. The mineral resources of the country had not been fully investigated, but preliminary surveys indicated that the Dead Sea deposits represent at present the country's most valuable mineral asset considered from a commercial point of view.

COMMERCE. Foreign trade in 1927 was marked by an increase of 43 per cent over 1926 in value of exports, including specie shipments, and a small decline in imports for consumption. The imports were valued at \$31,339,416 in 1927 as compared with \$32,089,436 in 1926; the exports at \$9,251,400 and \$6,422,700, respectively. Imports of boots, shoes, and leather, coal, wood for orange cases, olive oil (unrefined), and confectionery showed increases over 1926; most of the other items registered decreases. The principal commodities increasing in exports were oranges, laundry soap, edible oils, sesame, durra, barley, cement, raw wool, and watermelons. Egypt furnished 28.39 per cent of Palestine's imports: the United Kingdom, 13.71; Syria, 14.26; Germany, 9.02; France, 5.7; Italy, 4.85; the United States, 4.3. The United Kingdom took 34.75 per cent of Palestine exports, followed by Egypt, with 29.1 per cent; Syria, 13.72; France, 5.89; Germany, 4.75; the United States, 1.61 per cent.

Imports from the United States were valued at \$1,335,400 as compared with \$1,670,000 in 1926. Wheat flour and automobiles constitute the principal imports from the United States. Exports to the United States amounted to \$231,000 in 1927 and \$202,000 in 1926. These exports consist chiefly of raw wool, curios, rugs, and citrons.

FINANCE. The financial statement of the Government for the period April 1–December 31, 1927, showed receipts totaling £P1,739,400 and expenditures reaching £P1,944,400, thus producing a deficit of £P205,000. Approximately £P346,500 were spent on public works, as compared with an estimate of £P145,800; this extra work, although not of an urgent nature, was undertaken with a view to ameliorating the unemployment situation. Returns from customs, excise, and port dues showed a small decrease from the previous year, attributed in part to exemption of local industry from import duties on certain raw materials, including cotton and yarns of linen, jute, hemp, and flax, corkwood, offal of olive oil, etc. The new currency, based on the pound sterling, was introduced on Nov. 1, 1927, and is guaranteed by both the British and Palestine governments. This currency is entirely covered by British securities. The Palestine pound, as the new unit is called, is divided into 1000 mills, and replaces the Egyptian currency hitherto in local circulation, estimated at between £E1,500,000 and £E2,000,000. The exchange of currency was completed by Mar. 31, 1928.

COMMUNICATIONS. During 1927, 2626 vessels of 1,605,713 tons entered from foreign ports. The railway lines totaled slightly over 737 miles and were all operated by the Government.

GOVERNMENT. The country is administered by Great Britain under a mandate of the League of

Nations. Under the constitution adopted on Sept. 1, 1922, executive power is vested in a High Commissioner and an executive council, and legislative power in a body of 22 members besides the High Commissioner, consisting of 10 official and 12 unofficial members. The latter are elected and there must be not less than two Christian and two Jewish members. This legislative council has not been elected as yet because of the absence of the Arabs from political affairs. The Jewish population has an unofficial elected National Committee to represent the Jewish population in its dealings with the administration. The British Government and the Palestine administration recognize the World Zionist Organization which in Palestine is represented by the Palestine Zionist Executive, as the agency of the Jewish people in all matters pertaining to the upbuilding of the Jewish National Home. High Commissioner in 1927, Field-Marshal Lord Plumer (appointed July 1, 1925).

HISTORY. Palestine experienced a year of comparative quiet, no disturbing items appearing in the press during the period under survey. Lord Plumer was succeeded by Sir Robert Chancellor as High Commissioner. For a discussion of the Zionist movement, consult the article, **JEWS**.

PALESTINE EXPLORATION FUND. See **ARCHAEOLOGY**.

PANAMA. A republic of Central America, lying between Costa Rica and Colombia, constituting an independent State after November, 1903; formerly a department of Colombia. Capital, Panama.

AREA AND POPULATION. Panama has an extreme length of 480 miles, and its width varies from 37 to 110 miles. The area is estimated at 32,380 square miles; population, according to the census of 1923, 442,522. The natives are a mixed race, combining Spanish, Indian, and Negro blood. The larger cities are Panama, the capital, 59,458; Colon, 31,203. The movement of population in 1925 was: Births, 12,013; deaths, 6020; marriages, 589. Of the births, 8617 were illegitimate.

EDUCATION. Primary instruction is free and compulsory for all children from 7 to 15 years of age. There were 86,266 children of school age in 1927 and 62,984, or 74 per cent, were attending school. There were 446 primary schools in 1926, with 1492 teachers and an enrollment of 54,214 pupils; the number of private schools reached 71 with an enrollment of 9156 pupils; and the enrollment in the night schools for adults was 1345. The number of students enrolled in the National Institute had attained the number of 1573.

PRODUCTION. Although the soil of Panama is very rich, only a small part of it is properly cultivated. The principal agricultural products are bananas, cacao, coconuts, coffee, rubber, sugar, tobacco, and sarsaparilla. Mahogany and other woods are produced. Cattle raising is successfully carried on. Banana growers enjoyed a fairly prosperous year in 1927, the total exports from the Republic amounting to 4,623,000 bunches, valued at \$2,987,000, as compared with 4,531,000 bunches, valued at \$2,632,000 in 1926. This increase was owing to greater production in the comparatively new area on the watershed of Gatun Lake. The coffee production for 1928 was estimated at 1,800,000 pounds, or twice as large as in 1927, and 500,000 pounds greater than in 1926. Mining and manufacturing are relatively unimportant.

Small quantities of manganese and gold are produced. Manufacturing is confined largely to articles for local consumption.

COMMERCE. The reported imports in 1927 (\$14,516,000) were slightly greater than in 1926 (\$14,289,000). The importance of transit shipments is indicated by the fact that of the exports from the United States to Panama in 1927 (according to United States statistics), valued at \$34,051,000, about \$15,000,000 was for the Republic proper and \$10,000,000 for the Canal Zone; the remainder was probably to be accounted for by trans-shipments to other Latin-American countries. It was estimated that purchases by zone employees, tourists, and travelers account for approximately half of the imports of the Republic proper. The reported exports of Panama are normally only one-fourth or one-fifth of the imports, but this is owing in part to undervaluation and to failure to report many goods going into the Canal Zone for local use. Bananas make up from 60 to 70 per cent of the exports.

FINANCE. Panama operates under a biennial budget. The proposed budget for 1927-29 balanced at \$14,302,488. In December it was reported that the proposed budget for 1929-31 would amount to \$15,600,000. Of this amount estimates of customs revenue accounted for \$5,400,000; stamps and stamped paper, nearly \$2,000,000; taxes on retail liquor sales, \$1,200,000; and taxes on cattle slaughter, approximately \$500,000. The public debt on Oct. 1, 1927, exclusive of bonds of the National Bank guaranteed by the Government, totaled \$13,491,000, as compared with \$11,049,000 on June 30, 1926. The bulk was external debt amounting to \$10,333,500. Most of the internal debt is floating.

COMMUNICATIONS. There were in 1928 about 311 miles of railway in Panama including the Canal Zone. The principal line is the Panama Railroad, with a length of 158 miles, owned and operated by an American corporation. During 1926-27 this line carried 496,000 passengers, 302,000 tons of freight, and had gross receipts of \$5,748,000, of which \$3,721,000 was for the operation of rail traffic and \$2,027,000 was for steamship traffic. There are 96 post offices; 4206 miles of telegraph wire; 22,344 miles of telephone wire, and 7866 instruments; 346 miles of highway; and 4584 automobiles registered.

GOVERNMENT. Under the constitution adopted Feb. 13, 1904, and amended Dec. 26, 1918, executive power is vested in the President elected for four years and ineligible for a succeeding term; and legislative power in a chamber of deputies of 46 members, elected for four years. President in 1928, Rodolfo Chiari, assumed office, Oct. 1, 1924.

HISTORY. The outstanding event in Panama in the course of the year was the election of a president to succeed Rodolfo Chiari. The Liberal party, of which President Chiari is the leader, nominated Florencio H. Arosemena and the Conservative party, led by former President Porras, nominated Dr. Jorge Boyd. The issues were rather clouded, the whole campaign revolving around a desire on the part of the "ins" to stay in and the "outs" to get in. Dr. Porras appealed to the United States Government to supervise the elections to be held in August in a manner similar to that pursued in Nicaragua, but Secretary of State Kellogg refused on the grounds that the American Government expected the Panamanian Government to maintain its own order and to carry out a fair election. The Conservative party

declared that this was merely another indication that the United States was keenly interested in the keeping of the Liberals in power because Washington hoped thereby to have the treaty (discussed in the preceding YEAR BOOK) ratified. Just before election day on August 5, Dr. Porras, the Conservative leader, issued a proclamation to his followers to abstain from voting. Apparently his position was upheld by the members of the Conservative party because Florencio H. Arosemena was elected by a large majority.

The new president was an engineer by profession, born in Panama City in 1872, and educated in his native land and in Germany and Switzerland. He practiced his profession both in Europe and in several South American countries. Although he did not hold public office, except for a brief period as member of the municipal council of Panama, he was a strong member of the Liberal party and an ardent supporter of President Chiari. President Arosemena was inaugurated on October 2. Dr. Ricardo J. Alfaro, Dr. Carlos Lopez, and Eduardo Chiari were nominated as presidential designates for the Arosemena administration. On November 3, the twenty-fifth anniversary of the independence of Panama was celebrated throughout the country.

PANAMA CANAL. During the calendar year 1928, 6334 commercial vessels, an average of 17.31 daily, passed through the Panama Canal, carrying 29,401,581 tons of cargo. Their net tonnage was 28,943,437, and the tolls amounted to \$26,375,962.41. The commerce of the year was second only to that of the fiscal year of 1928, which ended June 30, when 6456 transits brought \$26,944,499.77 in tolls. The previous record had been set during the calendar year of 1927, in which 6085 vessels, with cargoes of 29,102,538 tons, and a net tonnage of 28,610,984 paid \$26,231,022.94.

Vessels of 23 nationalities made up the total commercial traffic through the Panama Canal during the calendar year 1928. Forty-one and eight-tenths per cent of the total commercial transits were vessels of the United States; 28.7 per cent were British vessels; and the remaining 29.5 per cent were distributed among the other 21 nationalities. The accompanying tabulation shows the total commercial traffic through the Canal during the calendar year 1928, segregated according to the nationality of vessels, together with corresponding totals for the calendar years 1927, 1926, and 1925.

The number of tank ships decreased, however, during the calendar year 1928, due, it was thought, to development of oil production on the Atlantic seaboard. The combined net tonnage of the 981 tank ships passing through the Canal was 5,306,038, and they carried 4,954,422 tons of cargo, chiefly crude petroleum and gasoline, paying tolls of \$4,638,012.34. These oil shipments comprised 15.5 per cent of the commercial transits of the year, compared with 21.9 per cent in 1927; 18.3 per cent of the net tonnage, compared with 26.6 per cent of the previous year; 17.6 per cent of the tolls, compared with 25.4 per cent; and 16.9 per cent of the total cargoes, compared with 24.3 per cent. Compensating for the decline in tank ships, the wheat shipments were more than doubled during the fiscal year of 1928, becoming the third most important export, after mineral oils and lumber. Of the 3,035,884 tons of wheat, over 96 per cent of which was consigned to the United Kingdom or Continental

Europe, 1,901,241 tons came from Canada, 1,124,588 from the United States, 5144 from South America, and 4911 from other areas. Canada, with large crops in Alberta, and improved grain facilities at Vancouver, increased her wheat export of 1927 by 1,183,321 tons.

From the time the Panama Canal was opened to traffic, Aug. 15, 1914, until the end of 1928, 50,018 ships passed through, with a net tonnage of 218,869,099, carrying 230,115,595 tons of cargo, and paying a total of \$206,671,023.06 in tolls.

PANAMA CANAL ZONE. The strip of land five miles wide on each side of the Panama Canal granted to the United States in the treaty of Nov. 18, 1903. Area, 554 square miles, of which 163½ are taken up by Gatun Lake; civil population, June 30, 1927, 27,624, of whom 7461 were Americans. The above-mentioned treaty provided that the cities of Panama and Colon were to remain within the jurisdiction of Panama, but the United States was to have control over both the cities and their harbors in matters pertaining to sanitation and quarantine. The status of the zone is that of a military reservation under the Governor of the Panama Canal, appointed by the President of the United States. Governor in 1928, Col. Meriwether L. Walker, U. S. A. See PANAMA CANAL.

PAN-AMERICAN CONFERENCE. The sixth Pan-American Conference met in Havana, Cuba, January 16 to February 20, with the Hon. Antonio de Bustamante of Cuba, a member of the International Court of Justice, as presiding officer. By a vote of 16 to 5 (nations), the sessions of the Conference and of the Committees were opened to the public. The Hon. Charles Evans Hughes, chairman of the American delegation, was vice chairman of the Conference. The members of the American delegation were Dwight W. Morrow, Ambassador to Mexico;

Henry P. Fletcher, Ambassador to Italy; Noble Brandon Judah, Ambassador to Cuba; Charles E. Hughes, Chairman; Ray Lyman Wilbur, President of Leland Stanford University; Judge Morgan J. O'Brien; Senator Oscar W. Underwood, of Alabama; Dr. L. S. Rowe, Director-General of the Pan-American Union, and Dr. James Brown Scott, of the Carnegie Institute. The first of these conferences met in Washington in the winter of 1889-90; the second, in Mexico City in 1901; the third, in Rio de Janeiro in 1906; the fourth, in Buenos Aires in 1910; the fifth, in Santiago, Chile, in 1923. They all have contributed to the upbuilding of Pan-Americanism, which may be said to date from 1826 when, upon the initiative of Simon Bolivar, an attempt was made to organize at Panama a conference of envoys from republics of the Western World "to deliberate upon objects of peculiar concernment in this hemisphere." This early effort to cooperate in the Western World found expression in Henry Clay, who was known as "the most determined champion in the United States of the Latin-American nations"; in the work of John Quincy Adams, and, much later, in the energetic initiative of James G. Blaine, who, as Secretary of State in the Cabinet of President Benjamin Harrison, planned in 1889 the conference "to consider and discuss methods of preventing war between the nations of America," which conference began the series of which the Havana session was the sixth.

In the views of many, the outstanding features were the welcome accorded President Coolidge and his address at the inaugural session. In it he went back to the olden days and paid tribute to the sturdy pioneers who sought out the land "where God might write anew the story of the world." He urged upon the delegates that they "most of all must be guided by patience, tolerance, and charity." He pointed out that "a

Divine Providence has made us a neighborhood of republics." Finally, in a fervent peroration, the President said:

The light which Columbus followed has not failed. The courage that carried him on still lives. They are the heritage of the people of Bolivar and of Washington. We must lay our voyage of exploration toward complete understanding and friendship. Having taken that course, we must not be turned aside by the fears of the timid, the counsels of the ignorant, or the designs of the malevolent.

With law and charity as our guides, with that ancient faith which is only strengthened when it requires sacrifices, we shall anchor at last in the harbor of justice and truth. The same Pilot which stood by the side of the great discoverer, and the same Wisdom which instructed the founding fathers of our republics, will continue to abide with us.

In the course of the President's address he declared:

It is a high example that we have set for the world in resolving international differences without resort to force. If these conferences mean anything, they mean the bringing of all our people more definitely and more completely under the reign of law. After all it is in that direction that we must look with the greatest assurance for human progress.

We can make no advance in the realm of economics, we can do nothing for education, we can accomplish but little even in the sphere of religion, until human affairs are brought within the orderly rule of law. The surest refuge of the weak and the oppressed is in the law. It is preëminently the shield of small nations. This is necessarily a long, laborious process, which must broaden out from precedent to precedent, from the general acceptance of principle to principle.

New activities require new laws. The rules for the governing of aviation are only beginning to be considered. We shall make more progress in the end if we proceed with deliberation. No doubt you will find in your discussions many principles that you are ready to announce as sound and settled rules of action.

Among some of the more striking statements which were widely quoted were:

It is better for the people to make their own mistakes than to have some one else make their mistakes for them.

We are thoroughly committed to the principle that they are better fitted to govern themselves than anyone else is to govern them.

All nations here represented stand on an exact footing of equality. The smallest and the weakest speaks here with the same authority as the largest and the most powerful.

We realize that one of the most important services which we can render to humanity, the one for which we are peculiarly responsible, is to maintain the ideals of our Western World.

What happens in this hemisphere is of more vital interest to all of us than what happens across any of the oceans.

The greater a nation becomes in wealth and production, the more it has for the service of its neighbors, the larger its markets for the goods of others.

In his plea for the orderly rule of law, President Coolidge sounded really the keynote of the Conference. Dr. Rafael Martinez Ortiz, Secretary of State for Cuba, laid particular emphasis on this point, and in his address opening the First Plenary Sessions he quoted from the utterances of two Latin-American statesmen who had urged the rule of law instead of the rule of force. It was an interesting coincidence that one of these was Ignacio Mariscal, Mexican Minister of Foreign Affairs, who spoke to the Second Pan-American Conference of the "efforts directed toward obtaining among men the predominance of justice and the banishment of force as a substitute for law." Another was from Victoriano de la Plaza, Argentine Minister of Foreign Affairs, who spoke hopefully of the passing of the era of "political dissensions that gave opportunity for such unfavorable opinion against the aptitudes for self-government and proper administration of the republics of Latin-American origin."

Dr. Antonio S. de Bustamante, the president of the conference, stressed particularly the need for a rule of law in the Americas, and referred to the world's two great forces, saying:

Each individual, like each nation, has in reserve two enormous forces which have moved humanity since the beginning of existence—love and hate. The latter is a destructive power the most serious manifestations of which are, in national societies, crime, and in international society, war.

The other is a constructive force less visible but more sweet, more permanent but less clamorous. With love has been achieved everything noble that exists upon the earth.

Mr. Hughes's blunt statement that "we have no policy of aggression" toward the Latin-American republics, and that we intend to withdraw from Haiti and Nicaragua "as soon as it is possible" was appraised as "decidedly the most important and constructive pronouncement of the conference."

At a dinner given by the American Chamber of Commerce in Havana, Mr. Hughes said:

Pan-Americanism rests upon four pillars.

The first is independence. It is the firm policy of the United States to respect the territorial integrity of the American republics. We have no policy of aggression.

The second pillar of Pan-Americanism is stability. Independence is not enough. Independence gives opportunity, but stability is essential to take advantage of it. It is our desire to encourage stability in the interest of independence.

The third pillar of Pan-Americanism is mutual good will.

The fourth pillar is coöperation. Coöperation among the Pan-American States does not mean the organization of a superstate. It does not mean that any of the twenty-one American republics, or any group of these republics, will attempt to dominate others. It is the coöperation of equals for common advantage in those directions where there is prospect of success.

Eight commissions were appointed, among which the work of the Conference was divided: Organization of the Pan American Union; Codification of Public International Law; Codification of Private International Law; Problems of Communications; Intellectual Coöperation; Economic Problems; Social Problems; and the Reports on Treaties, Conventions, and Resolutions.

The second commission, of course, had the vital task—that of working out the programme of the orderly rule of law among the republics of the New World. Former Secretary Hughes was made senior member of the group representing the United States. Assigned to assist him were Henry P. Fletcher, Senator Underwood, and James Brown Scott. The other republics assigned men of equal standing to this vitally important commission. Argentina named Honorio Pueyrredon, its Ambassador to Washington, who subsequently resigned from the Conference and as Ambassador, because the Conference would not put itself on record against high protective tariffs in Pan-America. Brazil selected Rail Fernandes, former delegate to the League of Nations; Costa Rica, Ricardo Castro Beeche, Foreign Minister; and El Salvador, Gustavo Guerrero, Foreign Minister. Each was head of his country's delegation.

If diplomatic tact, an appreciation of the feelings of the other American republics, and a readiness to accept a modest rôle in the organization of conference machinery are sufficient to place relations between the United States and Latin America on a sound basis of mutual understanding, then the attitude adopted by the United States

PAN-AMERICAN CONFERENCE AT HAVANA

delegation at Havana materially advanced those ends. This was the opinion of the Foreign Policy Association.

That the United States was anxious to dispel suspicion of its motives was obvious. At the opening sessions, Mr. Hughes showed a willingness to conform to the wishes of the other nations as to what subjects should be discussed and he tactfully declined the chairmanship of important committees.

In his address to the American colony in Havana, January 21, Mr. Hughes voluntarily raised the vexed question of Nicaragua, saying, "We are at the moment in Nicaragua, but what we are doing there and the commitments we have made are at the request of both parties and in the interest of peace and order and a fair election." The conciliatory and tactful diplomacy of the American delegation had its effect. Questions which, if barred by the United States, would have aroused indignation and distrust, assumed a mild form in open discussions.

The Mexican proposal amending certain articles of the convention for organizing the Pan American Union on a treaty basis was widely interpreted by American correspondents as an attack on the policies of the United States. Actually, however, the proposal upholds the one point on which the United States has insisted above all others, namely, that "in no case shall the Pan American Union be given political functions." In addition to this amendment, only three of the seven points proposed by Mexico are of particular significance:

1. That the American republics be not necessarily represented at the Pan American Union by their diplomatic representatives at Washington.

2. That the posts of chairman and vice chairman of the Governing Board be held in turn, according to alphabetical order, by each of the representatives of the Latin-American republics.

3. That the post of Director-General be held in turn by the chairmen of the Pan-American committees established in the American republics, according to alphabetical order.

The first point was raised by Costa Rica at the meeting of the Conference in 1923, on the ground that states not recognized by the United States could not be members of the Union as long as the Governing Board is made up of the diplomatic representatives accredited to Washington. A compromise solution was agreed upon: Every government was to enjoy representation in the Union "as a right," but the Governing Board was to be composed, as heretofore, of the diplomatic representatives accredited to Washington and the Secretary of State of that country.

Mr. Hughes without directly referring to the Mexican proposals, explained that the United States desired the Pan American Union to be organized in the way "our friends of the other republics wish it to be organized." He was indifferent, he said, as to what was done in regard to the election of the chairman of the board (who has always been the Secretary of State), but he pointed out the difficulties in the way of having the American republics represented in the Union except by the heads of their diplomatic missions in Washington. He indicated that the post of Director-General of the Union required continuity, and could not be as effectively administered if it was to be held in turn by different individuals. In no case did he express open op-

position to any of the suggested amendments.

For Pan-American Conference at Washington see BOLIVIA.

PAN-AMERICANISM. The outstanding event of the year was the Sixth International Conference of American States at Havana, January 16 to February 20 (see PAN-AMERICAN CONFERENCE). One of the most important topics on the agenda of the conference was the organization of the Pan American Union on the basis of a convention. Heretofore, its activities had been governed by resolutions adopted at successive conferences. The conference adopted the draft of a convention prepared by the Governing Board, which, however, did not make any radical changes in the organization of the Pan American Union. Briefly summarized, the changes introduced are:

(1) A provision that the Governing Board should be composed of the representatives that the governments of the American republics may wish to appoint; it being provided, however, that the appointments may devolve upon the diplomatic representatives of the respective countries at Washington.

(2) A specific declaration that neither the Governing Board nor the Pan American Union shall exercise functions of a political character.

(3) A provision that the instruments of ratification of the treaties, conventions, protocols, and other diplomatic instruments signed at the International Conferences of American States shall be deposited at the Pan American Union, which shall communicate notice of the receipt of such ratifications to the other States.

(4) That, wherever possible, the Governing Board shall establish relations of close cooperation between the Pan American Union and other official Pan-American organizations.

(5) That the Governing Board shall fix the status of the members of the staff of the Union, determining their salaries and conditions of retirement.

(6) That the member states may withdraw from the Pan American Union at any time, but shall pay their respective quotas for the period of the current fiscal year.

It is provided in Article XIV of the convention that it shall become effective when the States represented at the conference receive notice that all the ratifications have been deposited with the Pan American Union. Realizing that some time must inevitably elapse before the convention was ratified by all the members, and desirous of putting into immediate effect some of the more important modifications, the conference adopted a resolution containing provisions to be effective provisionally pending the approval of the convention by all the republics of the American Continent. This resolution put into immediate operation the more important modifications including the changes relative to the membership of the governing board; the declaration that neither the Governing Board nor the Pan American Union shall exercise functions of a political character; the provision relating to the determination of the conditions of retirement of the members of the staff; and the provision that the States members of the Union may withdraw from the organization at any time, but that they shall pay their respective quotas for the period of the current fiscal year.

The resolutions adopted at the Havana Conference added considerably to the responsibilities of the Union. These new duties may briefly be summarized as follows:

(1) Duties relating to the calling of conferences of a special or technical character.

(2) Duties of an educational and cultural nature and those relating to social problems.

(3) Special investigations and securing data.

(4) Obligations relative to the deposit of ratifica-

tions of conventions and notification thereof to the States, members of the Union.

(5) Duties relating to the Seventh International Conference of American States to assemble at Montevideo in 1933.

After the adjournment of the Havana Conference, the Pan American Union labored to give effect to the resolutions of the conference, and considerable progress was made in this respect. The steps taken and the results accomplished were the subject of a special report submitted by the Director-General, Dr. L. S. Rowe.

In addition to the Sixth International Conference of American States held at Havana, a number of other important conferences of a Pan-American character have been held.

Pan-American Commission on Consular Procedure, recommended by the Third Pan-American Commercial Conference, convened at the Pan American Union in Washington on Oct. 10, 1927, and continued in session until October 24, with representatives of all the states members of the Union in attendance. The purpose was to consider the simplification and standardization of consular procedure in the American republics. Constructive conclusions were reached which were submitted to the Governing Board of the Union and in turn transmitted to the governments for the information of their delegates to the Havana Conference which approved the conclusion of the commission and recommended that they be adopted by all the governments. At the same time the Havana Conference recommended that another meeting of the commission be held to consider the subject of consular fees.

The Eighth Pan-American Sanitary Conference assembled at Lima, Peru, from Oct. 12 to 20, 1927, with representatives of eighteen countries in attendance. The Conference adopted twenty-eight resolutions and a protocol to the Pan-American Sanitary Code, clarifying the procedure to be followed with respect to ratifications of the code. It was decided that the Ninth Pan-American Sanitary Conference should be held in Buenos Aires during 1930. The personnel of the Pan-American Sanitary Bureau was reconstituted at Lima as follows: Dr. Enrique Paz Soldan, of Peru, Honorary Director; Dr. Hugh S. Cumming, Surgeon-General of the United States Public Health Service, Director; Dr. Mario G. Lebreto, of Cuba, Vice Director; and the following members of the Board: Dr. Solon Nunez, of Costa Rica, Dr. Ramon Baez Soler, of the Dominican Republic, Dr. Justo F. Gonzalez, of Uruguay, Dr. João Pedro de Albuquerque, of Brazil.

The Fifth Pan-American Child Welfare Congress, with official delegates from fourteen republics of the American Continent in attendance at Havana, met December 13. One hundred and twenty resolutions were adopted by the Congress, one of the most important commending the inauguration of the American Institute for the Protection of Childhood in Montevideo, and recommending that it receive the support of the American governments that have not yet adhered. The Sixth Congress was to be held at Lima, Peru, in 1929.

The First Pan-American Conference on Eugenics and Homoculture was convoked in compliance with a resolution of the Fifth International Conference of American States, and met at Havana from Dec. 21 to 23, 1927. Delegates from fifteen republics took part. A number of important resolutions were adopted, one provid-

ing for the establishment in Havana of a Pan-American Bureau of Eugenics and Homoculture. It was decided that the Second Conference should meet at Buenos Aires at the same time as the Ninth Pan-American Sanitary Conference.

During the first six months of its fiscal year, much attention was given by the Union to the preparations for the Havana Conference. To supplement the programme of the Conference prepared by the Governing Board, the Union published a comprehensive handbook for delegates, containing a history of the preceding Conference together with data on all the questions included in the programme of the Havana Conference. In addition a series of monographic publications containing documentary material for the use of delegates was issued on the following topics:

- a. Conclusions of the Inter-American Electrical Communications Conference.
- b. Convention on Literary and Artistic Copyright, signed at the Fourth International Conference of American States.
- c. Resolutions of the First Pan-American Congress of Journalists.
- d. Convention on the Protection of Trade Marks, 1910, and Convention for the Protection of Commercial, Industrial, and Agricultural Trade Marks and Commercial Names, 1923.
- e. Resolutions of the First and Second Pan-American Standardization Conferences.
- f. Conclusions of the First Pan-American Conference of National Directors of Public Health.
- g. Conclusions of the First and Second Pan-American Red Cross Conferences.
- h. Resolution on Principles and Procedure in Public Health Administration, adopted at the Fifth International Conference of American States.
- i. Conclusions of the First Pan-American Congress of Highways.
- j. Report on the Development of Methods for the Pacific Settlement of International Disputes.
- k. Projects on International Law, formulated by the International Commission of Jurists.
- l. Report of the Pan-American Railway Committee.
- m. Project of Convention on Commercial Aviation, formulated by the Governing Board on the basis of the Conclusions Adopted by the Inter-American Commission on Commercial Aviation.
- n. Final Act of the Pan-American Commission on the Simplification and Standardization of Consular Procedure.

The practical services performed by the Union were greatly strengthened by the four special series recently established dealing with the following subjects: Agriculture, Education, Public Health and Social Welfare, and Finance, Industry, and Commerce. To these pamphlets, published in Spanish and Portuguese, the widest possible circulation was given and they were found helpful to educators, agriculturalists, exporters, and importers, as well as to those interested in public health matters. See PAN AMERICAN UNION.

A Division of Agricultural Coöperation was established in May. Even in the brief period of its existence it had been called into consultation and has replied to inquiries concerning various problems of cultivation and plant pests. Most of the work of the division had been directed toward establishing contacts with departments of agriculture in the different countries of America, with institutes of agricultural studies and research, experiment stations, magazines, and newspapers of both official and private character devoted to agriculture.

INTER-AMERICAN COMMISSION OF WOMEN. Seven members of the Inter-American Commission of Women to study the civil and political status of women in the countries of the American continents, were appointed by the Governing Board of the Pan American Union on April 4th. Miss Doris Stevens of the United States, chair-

man of the Committee on International Action of the National Women's Party, was designated chairman of the commission. The other members, drawn by lot were Panama. Señorita Clara Gonzales, LL.B.; Venezuela, Señora Lucila L. de Pérez Díaz; Argentina, Dr. Ernestina A. de Lopez Nelson; Salvador, Señora Maria Álvarez de Guillén-Hivas; Colombia, Señora María Helene de Hinestrosa; Haiti, Mme. Téliigny Mathon.

The action of the Governing Board was pursuant to a resolution adopted at the Sixth International Conference of American States at Havana, which contemplated a commission of women composed of one representative from each of the twenty-one republics of the American continents, the first seven to be selected by the Governing Board of the Pan American Union and these in turn to appoint the representatives of the other fourteen countries. The purpose of the Commission was to prepare the juridical and other information that might be necessary to enable the Seventh International Conference of American States to undertake a study of the civil and political equality of women on the American continents.

The Pan-American Conference on Conciliation and Arbitration met in Washington in December and devoted considerable effort to bringing about an amicable settlement of the situation which grew out of a boundary dispute between Bolivia and Paraguay which reached a crisis at the time of the Conference. For a time there seemed to be little hope of averting hostilities and the Bolivian representative withdrew from the meeting but was later authorized by his Government to return. A special committee was appointed by the Conference for the purpose of finding peaceful means of adjusting the differences and both countries finally accepted an offer to mediate the dispute; a protocol was drawn up by the commission, providing machinery for the investigation of the clashes which took place at Fort Vanguardia on December 6, and at Fort Galpon Boqueron on December 16, although up to the end of the year no action was taken to clear up the more important question of the boundary controversy.

PAN AMERICAN UNION. An international organization maintained by the 21 American republics for the development among them of good understanding, friendly intercourse, commerce, and peace. It is controlled by a Governing Board composed of the Secretary of State of the United States and the diplomatic representatives in Washington of the other republics, and is administered by a director-general and assistant director chosen by this board.

During the year a number of important conferences of a Pan-American character were held. See **PAN-AMERICAN CONFERENCES**, and **PAN-AMERICANISM**. The Union also followed its usual custom of furnishing illustrated material and programmes of study for stimulating the study of Latin-American history and culture in the schools of the United States. Among its publications in use in universities, colleges, and schools of the United States and in various other lands are *Seeing South America*; *Ports and Harbors of South America*; *Seeing the Latin Republics of North America*; and *Viajando Por Los Estados Unidos*. In addition to these, the Union publishes the *Bulletin*, in Spanish, Portuguese, and English. There are also booklets on Latin-American countries, their capitals, products, agriculture, educa-

tion, etc. Statistical matter compiled by the Union related to inter-American commerce, and included a booklet on each republic and a general survey of Latin-American trade for the year. The Union extended its services to women's clubs, and continued its policy of giving radio nights, introducing Latin-American music into the United States. The Pan American Sanitary Bureau, located in the Union Building at Washington, placed at the disposal of the republics of the continent the results of the sanitary progress of the year. It issues the *Pan American Sanitary Bulletin* monthly and distributes it throughout the Latin-American republics. The Director of the Pan American Union in 1928 was Dr. L. S. Rowe; Assistant Director, Dr. Esteban Gil Borges. The headquarters are in the Pan American Union Building, Washington, D. C.

PANKHURST, EMMELINE. English suffrage leader and outstanding figure in the fight for woman suffrage in England, died at London, England, June 14, at the age of sixty-nine. She was born at Manchester, England, and was educated at private schools in England and L'École Normale at Paris. In 1879 she was married to Dr. Richard Marsden Pankhurst (died 1898), who was devoted to work for social reform. In 1889 Mrs. Pankhurst, with her husband, helped to found the Women's Franchise League. Her connection with this and other societies, her work as a Manchester poor-law guardian (1874-98), as registrar of births (1898-1900), and as a member of the Manchester School Board gave her valuable practical political experience. In 1903 she founded the Women's Social and Political Union—an organization destined to achieve world-wide notice—as a resourceful, militant fighter for woman suffrage in the days before the War. The "burking" of the woman suffrage bills in Parliament up to 1912 roused it to activity. There followed a period of parades, speech-making, arson, destruction of mail in mailboxes with acids, etc., that was termed a "women's revolution." It held the attention of the entire world, and in everything Mrs. Pankhurst, who had an outwardly calm and demure demeanor save when aroused, was foremost. From Apr. 3, 1913, to Mar. 14, 1914, she was sentenced to jail, released and rearrested no fewer than twelve times. In all her suffrage activities she was assisted by her two daughters, the Misses Christabel and F. Sylvia Pankhurst. Mrs. Pankhurst invented the "hunger strike," since used by other prisoners. She lectured in America in 1909, 1910-11, and 1913 in behalf of the suffrage cause.

The World War and England's participation in it worked a radical change in Mrs. Pankhurst's activity. She and her followers suspended their activities as militant suffragists, organized the Women's Party, and helped in the mobilization of the woman power of Great Britain for winning the War. She traveled to Russia, Canada, and the United States in that cause. The winning of suffrage for women followed. In the last years of Mrs. Pankhurst's life she suffered from ill health which necessitated her residence for a time in Canada and Bermuda. She returned to England in 1925 and professed her support of Conservative principles. She thought of standing for Parliament, but declined the offer of Lady Astor to yield to her the seat for Plymouth held by the British-American peeress. She wrote many

pamphlets on woman suffrage and poor-law reform and an autobiography, *My Own Story* (1914).

PAN-PACIFIC INSTITUTE. The year 1928, although the interim period between the Honolulu Conference of the Institute in 1927 and the Conference planned for 1929 in Japan, was an active one both for the headquarters in Honolulu and for the constituent national councils. A large part of the time of the general secretary was devoted to negotiations with the national councils in China and Japan to secure representatives from both countries on the central staff in Honolulu. The research secretary spent several weeks in the Orient, surveying the research work of the national research committees. The result of this survey was embodied in a report which served as the basis for subsequent approaches to the foundations for assistance in carrying on international research work. The central staff in Honolulu publishes a news bulletin and a clip sheet, to keep the various national groups and their friends informed regularly of Institute activities in other parts of the world.

The American Council of the Institute functions in two relationships: as a unit of the Institute in the whole programme of research and conference preparation; and as an independent, but allied, body in its own programme of educational and research work. Through its educational committee it had been studying the leading colleges and universities in the United States, to discover to what extent Oriental history, literature, philosophy, politics, and art figure in their curricula. The American Research Committee was initiating a study of Pacific coast shipping, to be a part of a more comprehensive study which may be undertaken later by the International Research Committee.

The American Council established a Bay Region Committee of the Institute in San Francisco, which might serve as a model group for similar local units both in the United States and in other countries, to discuss local problems and stimulate interest locally in Pacific affairs generally.

The other national member councils in Canada, Great Britain, Australia, New Zealand, China, and Japan were active. Their work had been a result partly of the Conferences in 1925 and 1927 and their commitments therein, but their activities were mainly in the interest of establishing sound, permanent, national bodies, under the general administration of a sound, international secretariat, for a continuing programme of research and education in matters pertaining to the Pacific.

The Pan-Pacific Union (see *YEAR BOOK* 1927) is a separate organization under the government patronage of groups in the several Pacific countries with a secretary (Alexander Hume Ford) in Honolulu.

PAPER. The statistical report of the American Paper and Pulp Association, covering the year 1928, indicated increased production of both paper and wood pulp. The United States wood-pulp products for 1928 were estimated at 4,427,000 tons, compared with 4,313,403 tons valued at \$207,352,666 in 1927. The production of sulphate pulp increased in 1928, as it had in the previous year. Other products varied as indicated by the table in the next column.

Of the 219 establishments reporting the manufacture of wood pulp in 1927 to the U. S. Census of Manufactures (1928), 61 were situated in

New York, 33 in Wisconsin, 26 in Maine, 13 in Washington, 12 in Michigan, 12 in Pennsylvania, and the remaining 62 in 18 other States.

UNITED STATES WOOD-PULP PRODUCTION

	Tons of 2000 pounds	
	1928 ^a	1927
Mechanical	1,570,000	1,610,000
Soda	521,000	487,478
Sulphite	1,573,000	1,561,000
Sulphate	725,000	593,955
Total	4,427,000	4,313,403

^a Estimated.

The paper production in the United States also increased during 1928, being 10,250,000 tons, compared with 10,002,070 tons valued at \$872,206,847 in 1927. Newsprint again dropped in amount in 1928, as did felts, and building and cover papers, but wrapping paper showed a large increase. The accompanying table, also compiled by the American Paper and Pulp Association, gives comparative figures for the two years in the leading departments of paper production.

UNITED STATES PAPER PRODUCTION
[Tons of 2000 pounds]

	1928	1927
Newsprint	1,415,000	1,519,737
Book	1,409,000	1,323,782
Board	4,000,000	3,773,608
Wrapping	1,600,000	1,525,305
Fine	525,000	508,808
Tissue	325,000	316,070
Felts and building	570,000	625,589
Absorbent	64,000	63,766
Cover	25,000	26,333
All other	317,000	314,072
	10,250,000	10,002,070

Of 700 establishments reporting the manufacture of paper in 1927 to the U. S. Census of Manufactures (1928), 136 were situated in New

U. S. CENSUS OF MANUFACTURES, 1928
SUMMARY FOR PAPER AND PULP INDUSTRIES
OF THE UNITED STATES—1927

	Paper 709	Pulp 219
Number of establishments		
Wage earners (average for the year) ^a	98,566	24,794
Wages ^b	\$180,474,739	\$ 31,527,358
Cost of materials, mill supplies, fuel and purchased power, total ^b	\$527,785,538	\$151,325,425
Materials and supplies ...	\$512,935,626	\$134,231,864
Fuel and power	\$ 59,849,912	\$ 17,093,561
Products, total value ^b ..	\$919,891,565	\$218,198,201
Paper and paper board produced for sale ^c	\$807,696,857	
Pulp		\$207,332,666
Other products ^d	\$111,921,608	\$ 10,865,535
Value added by manufacture ^e	\$347,105,927	\$ 66,872,776
Horse power ^f	2,642,806	(^g)

^a Not including salaried employees.

^b The amount of manufacturers' profits cannot be calculated from the census figures, for the reason that no data are collected in regard to a number of items of expense, such as interest on investment, depreciation, taxes, insurance, and advertising.

^c Includes \$83,344,533, value of paper and paper board made for consumption in mills other than those in which produced.

^d Converted paper products, \$110,641,403; all other \$1,280,205.

^e Value of products less cost of materials, mill supplies, fuel, and purchased power.

^f Combined total for both industries.

^g Not reported separately; included under "Paper."

York, 80 in Massachusetts, 55 in Pennsylvania, 53 in Ohio, 51 in Wisconsin, 42 in Michigan, 37 in New Jersey, 32 in Connecticut, 30 in Illinois, 26 in Indiana, 25 in Maine, 24 in New Hampshire, 14 in Vermont, 12 in Washington, 11 in California, 10 in Maryland, and the remaining 71 in 19 other States. The table gives statistics as to the American paper and pulp industries.

Paper base stocks valued at \$112,295,501 were imported into the United States in 1928, compared with imports valued at \$113,632,216 in 1927. These imports included: pulpwood, classified as rough spruce, 460,919 cords valued at \$4,578,060; other rough, 54,159 cords valued at \$502,474; peeled spruce, 705,095 cords valued at \$7,748,574; other peeled, 273,087 cords valued at \$2,529,184; rossed spruce, 49,898 cords valued at \$742,392; other rossed, 3180 cords valued at \$56,611; wood and other pulp mechanically ground, 222,499 cords valued at \$5,443,495; sulphite wood pulp, 948,431 tons valued at \$55,955,555. The latter was of two kinds, bleached and unbleached, and was supplied principally by: Canada, 350,558 tons valued at \$22,805,358; Sweden, 333,367 tons valued at \$18,451,565; Finland, 94,278 tons valued at \$4,157,042; Germany, 63,525 tons valued at \$4,231,959; Norway, 63,668 tons valued at \$4,230,090. Sulphate wood pulp, unbleached (kraft pulp) valued at \$21,170,948, compared with a valuation of \$20,684,298 in 1927, came principally from Sweden which supplied 193,145 tons valued at \$10,136,956, and from Canada, which supplied 139,945 tons valued at \$8,718,108; imports of sulphate wood pulp, bleached, totaled 14,590 tons valued at \$894,587, compared with 10,789 tons valued at \$708,712 in 1927. The imports of rags for paper stock totaled 439,892,896 pounds valued at \$8,195,224, an increase from 1927, when the total value was \$7,646,864.

Paper and paper manufactures imported in 1928 were valued at \$156,384,548 as compared with \$149,365,343 in 1927. Of this amount, printing paper, standard newsprint, 4,313,732,865 pounds, valued at \$139,410,918, was the principal item. This can be compared with 3,974,129,203 pounds valued at \$131,488,784 in 1927. The largest supply came from Canada which contributed 3,552,695,242 pounds valued at \$126,151,545; Newfoundland and Labrador followed with 228,343,968 pounds valued at \$7,124,171, while Sweden ranked third with 111,438,867 pounds valued at \$2,949,230, and Finland fourth with 80,478,655 pounds valued at \$2,080,710. The second largest item of paper and manufactures included cigarette paper and cigarette books and covers which totaled 11,689,018 pounds valued at \$3,213,981, compared with 14,685,107 pounds valued at \$4,291,637 in 1927. Tissue and copying paper totaled 3,569,369 pounds valued at \$2,052,865, which represented an increase over 1927. Pulp boards in rolls, 54,315,525 pounds valued at \$1,185,858 were imported as well as paper boxes, 2,804,320 pounds valued at \$1,789,421.

The total exports of paper and manufactures from the United States in 1928 amounted in value to \$30,932,651, compared to \$26,945,746 in 1927. These exports included newsprint paper, 22,780,530 pounds valued at \$866,046 as against 24,657,313 pounds valued at \$1,191,033 for 1927; and book paper, not coated, 24,509,919 pounds valued at \$1,789,604. Other leading exports of paper and manufactures were: wrapping paper, 36,757,253 pounds valued at \$2,586,848; tissue

and crêpe paper, 4,995,465 pounds valued at \$1,096,324; box board, 48,669,581 pounds valued at \$1,353,561; paper board and strawboard other than bristols and bristol board, 42,124,168 pounds valued at \$2,149,565; wall board of paper or pulp, 61,539,772 pounds valued at \$2,068,788; boxes and cartons, 28,434,923 pounds valued at \$1,899,446; and vulcanized fibre sheets, strips, rods, and tubes, 5,523,712 pounds valued at \$1,455,175. See CHEMISTRY, INDUSTRIAL; AGRICULTURE; and CORN for manufacture of paper from cornstalks and other farm refuse.

PAPUA, pā'pū-ā. A territory of the Australian Commonwealth, comprising the southeastern part of the island of New Guinea and all the groups of small islands between 8° and 12° S. latitude and 141° and 155° E. longitude; formerly known as British New Guinea; transferred to the Australian Government Sept. 1, 1906. Area, 90,540 square miles, of which about 87,786 are on the Island of New Guinea. On June 30, 1927, the population was as follows: Europeans, 1366; Papuans (estimated), 275,000. Port Moresby is the capital and a port of entry. Other ports of entry are Samarai, Daru, and Kula-madua.

A large proportion of the natives are civilized, and many of them are taught in schools maintained by the four Christian missions in the territory. On Dec. 31, 1925, there were 62,981 acres of plantations. The chief crops are coconuts (50,506 acres), rubber (7728 acres), and sisal hemp (3560 acres). The forests contain valuable timber, and the mineral resources, which are considerable, include gold, copper, osmiridium, lead, zinc, tin, and iron. The only minerals exported have been gold, copper, and osmiridium. Indications of petroleum have been found over an area of 1000 square miles, and borings were being continued in 1928 under the auspices of the Australian Government. The chief imports are foodstuffs, tobacco, drapery, and hardware; the chief exports are copra, gold, hemp, pearls, and rubber. The exports in 1927 were valued at £454,462 and the imports at £455,904. There is a considerable trade between Australia and Papua, steamship communication being regularly maintained; 226,948 tons entered and cleared in 1927. The local revenue in 1927 was £111,508 and the expenditure, £167,728. The Australian Government grants an annual subsidy of £50,000. The territory is administered by a lieutenant-governor appointed by the Governor General of Australia, and an executive and a legislative council, both consisting of official or nominated members. Lieutenant-governor and chief judicial officer in 1928, Sir J. H. P. Murray.

PARAGUAY, pār'ā-gwā. An inland republic of South America; bounded on the west and south by Argentina, on the east by Argentina and Brazil, and on the north by Brazil and Bolivia. Capital, Asunción.

AREA AND POPULATION. The estimated area of Paraguay proper, which lies between the Paraguay and Alto Parana rivers, is estimated to be 61,647 square miles; in addition, Paraguay lays claim to a tract between the Paraguay and Pilcomayo rivers known as the Chaco; the ownership of this territory, however, is disputed by Bolivia. In the 1927 annual report of the Minister of Finance there was given what was claimed to be the first comprehensive census of population that had been compiled since 1886.

This was made by the Department of Agriculture and showed a total population for the country of 828,969.

Inasmuch as the total area of Paraguay was approximately 172,000 square miles, this would give a density of population in eastern Paraguay of about 12 inhabitants per square mile; in the Chaco of less than one-half, and in the entire country of about 5 per square mile. In Paraguay proper the people are of mixed blood; namely, Guarani, Indian, Spanish, and Negro, the first mentioned predominating. The largest cities with their populations, estimated in 1926, are Asunción, the capital, 113,684; Villa Rica, 26,000; Concepción, 11,000; Luque, 13,000, Carabegua, 12,000; and Encarnación, 7500.

EDUCATION. Education is free and nominally compulsory. During 1926 there were 90,133 pupils in government primary schools, 3201 in private schools, and 2083 in other schools, including 369 in the university. In the summer of 1928 it was stated that there were 100,023 pupils enrolled in public and private primary schools in 1927, a considerable increase over the enrollment of 1926. Dr. Justo P. Prieto was appointed president of the National University to fill the place left vacant by Dr. Eusebio Ayala, who was appointed a member of the Bolivian-Paraguayan Boundary Commission.

PRODUCTION. Most of Paraguay is neither mountainous nor swampy; its rainfall is sufficient for agricultural purposes and its climate, although subtropical, is agreeable and healthful. In addition, practically its entire area, amounting to 122,000 square miles, exclusive of the Chaco, which was in dispute between Paraguay and Bolivia, is tillable, although only a small portion of it had been brought under cultivation. There were in 1926 about 200,000 hectares under cultivation. Corn, oranges, and manioc covered the greater part of this area, and cotton, tobacco, yerba mate, the remainder. All these crops except cotton, tobacco, yerba mate, and oranges are grown almost exclusively for home consumption. Yerba mate is the chief forest product, which accounts for the relatively small acreage under cultivation. The production of cotton had increased from practically nothing 10 years ago to 2560 metric tons (ginned cotton) in 1927. Another industry for which Paraguay is especially fitted is stock raising. It was estimated that about 34.4 per cent of the entire area of the country was devoted principally to the raising of horses, cattle, sheep, and hogs. According to the livestock census of 1926, there were 3,270,000, cattle, 209,901 horses, 195,192 sheep, and 45,483 hogs. Most of the cattle available for the market are slaughtered and their carcasses either consumed at home or exported in the form of meat extract, preserved meats, and jerked beef. The business of converting these carcasses into articles for export is done by three meat-packing plants, which in 1926 slaughtered 115,767 cattle.

Paraguay is rich in forest products, nearly two-thirds of its area being covered with trees. These forests include a great variety of soft and hard woods which are suitable for general construction purposes, furniture and cabinet making, and naval construction, and which are annually exported in large quantities in the form of logs and sawn timber, mostly to Argentina and Uruguay. One of the important trees found in Paraguay is the quebracho, which is highly prized for its tannin content and is also used

for railway ties. In 1927 exports of quebracho extract amounted to 47,000 metric tons, or more than four times the quantity exported in 1913. Iron, manganese, copper, and other minerals are said to be abundant, but there is practically no mining. The principal manufacturing industries are meat-packing and the production of animal by-products, quebracho extract, beverages, shoes, and flour.

COMMERCE. Notwithstanding obstacles, economic progress in Paraguay has been steady, as is evidenced by the growth in exports, which amounted to 14,282,040 gold pesos in 1927, an increase of 8,723,233 pesos over 1914. Of these exports 40.6 per cent were forest products, largely quebracho extract and lumber; 35.3 per cent animal products, largely cattle hides, preserved meats, and meat extract; 23.2 per cent agricultural products, largely oranges, yerba mate, cotton, and tobacco; and the remainder mineral and other products. Over 80 per cent of these exports (about 85 per cent in 1927) go to Argentina, largely for reshipment to other countries, and the remainder principally to the United States, Germany, and Great Britain. United States purchases of Paraguayan products amounted to \$801,101 in 1927, an increase of \$14,124 over 1926. Paraguay's imports amounted to 11,977,766 gold pesos in 1927, an increase of 6,828,301 gold pesos over 1914. Of these imports 33.5 per cent were contributed by Argentina, 18.6 per cent by the United States, 10.9 per cent by Great Britain, and 9.6 per cent by Germany. Imports include a great variety of goods, of which the most important are textiles, hardware, wheat, chemicals, and ready-made clothing.

FINANCE. The figures in the following table submitted by the President in his annual message to Congress at its opening in April, 1928, are an evidence of the increased prosperity of Paraguay, the total receipts and expenditures of the past four years nearly equaling those of the eight years prior to 1924. Moreover, although the expenditures from 1924 to 1928 increased, there was a balance of more than 2,000,000 pesos, gold, which was used in part for extraordinary expenditures, while during the preceding eight years there was a deficit of 2,506,912.75 pesos. The totals of the various years were as follows:

<i>Year</i>	<i>Receipts Pesos, gold</i>	<i>Expenditures Pesos, gold</i>
1916	3,070,903.15	3,488,505.51
1917	2,940,758.39	2,263,441.07
1917-18	4,378,972.35	4,687,205.07
1919	5,121,341.57	6,022,486.53
1920	2,180,399.23	2,523,703.94
1920-21	3,665,887.34	3,517,101.36
1921-22	2,723,110.30	3,412,088.57
1922-23	2,868,209.43	3,541,967.46
Total	26,899,581.76	29,406,494.51
Deficit	2,506,912.75
	29,406,494.51	29,406,494.51
1923-24	4,498,829.14	3,777,977.33
1924-25	5,516,173.81	4,169,068.49
1925-26	5,550,753.02	4,883,272.05
1926-27	5,186,243.62	5,146,461.18
Total	20,751,999.59	17,976,779.05
Extraordinary expenditures	1,815,356.21
	20,751,999.59	19,792,135.26
Balance	959,864.33
	20,751,999.59	20,751,999.59

The total national debt on July 31, 1928, was reported as 6,503,898 gold pesos and 27,267,179 paper pesos.

COMMUNICATIONS. Another great obstacle to the fuller economic development of the resources of the country is the lack of adequate means of transportation. There are few good roads, and although several rivers are navigable they constitute in general the boundaries of the country and, consequently, serve only the outlying sections. There is only one public railway, 274 miles long, and another small one, or about 2.3 miles of railway per 1000 square miles. A touring club of Paraguay had been established which sought to stimulate public interest in better roads, and many railway projects were being discussed. The most important of these was the one providing for a railway to connect Asunción with Bahia, Brazil. The construction of this railway will not only give Paraguay a second outlet to the Atlantic—the other being through Buenos Aires—and a shorter route to Europe and the United States but will also lay open to exploitation another large portion of the country which at present is practically non-productive.

GOVERNMENT. Executive power is vested in a president elected for four years, who acts through a ministry of five members; and legislative power in a congress of two houses; a senate of 20 members and a house of representatives of 40 members elected directly by the people. President in 1928, Dr. Eligio Ayala, who assumed office on Aug. 15, 1924. Dr. Ayala was succeeded by Dr. José P. Guggiari on Aug. 15, 1928.

HISTORY. Paraguay went through the throes of a presidential election during the course of the year. In the campaign for electors, the Liberal party gained a majority of the positions over the Republican party. José R. Guggiari was the candidate of the Liberals and Eduardo Felitas of the Republicans. Señor Guggiari campaigned on a platform of the peaceful settlement of the boundary dispute with Bolivia. For a discussion of this vexatious affair which nearly resulted in war toward the end of the year, consult the historical section of the article, BOLIVIA. Señor Guggiari was declared elected to the presidency when the legislature convened in May to count the electoral vote. The vice president was Dr. Emiliano Gonzalez-Navero. José P. Guggiari was born in Asunción on Mar. 17, 1884, and was educated to the law in his native country. After a highly successful career before the bar, he entered politics and served as a Liberal member of the legislature from 1912 to 1920, when he was appointed by President Gondra to the portfolio of Minister of the Interior. He served in this capacity for a period of two years and was again returned to the Chamber of Deputies for several more terms. He was president of the Chamber of Deputies when called to the position of chief magistrate of the country. During 1927 he was vice president of the Paraguayan commission to the international conference on the Paraguayan-Bolivian boundary question which met in Buenos Aires.

PARK COLLEGE. A non-sectarian institution for the higher education of men and women at Parkville, Mo.; founded in 1875. The enrollment for 1928-29 totaled 501, distributed as follows: Seniors, 61; juniors, 73; sophomores,

161; freshmen, 197; and specials, 9. The faculty numbered 36, of which number, 1 associate professor and 5 instructors were added during the year. There were 36,000 volumes in the library. The endowment funds of the college amounted to \$1,660,000, from which the income was \$84,000. Tuition and fees amounted to \$91,000, donations, \$47,500 and other sources yielded \$9,500. A plan of honors work was adopted in 1927, to which 10 per cent of the senior class of 1927-28 were admitted, from the departments of biology, chemistry, education, English, modern foreign languages, physics, and sociology. President, Frederick W. Hawley, D.D., LL.D.

PARKS, NATIONAL. Lands maintained by the United States Government, under acts of Congress, for the preservation of their scenic or other unique features, and set apart for the use of tourists and visitors. During the 1928 season 2,522,188 persons visited the National parks, and 502,656 the National monuments, making a total of 3,024,844 visitors, an increase of 227,004, or 8 per cent, over 1927, previously the record year for travel. The accompanying tables from the report of the director of the National Park Service, by giving the number of visitors to each park and monument, indicate the trend of the tourists for the fiscal year 1928.

Name of park	1928
Hot Springs	199,099 ^a
Yellowstone	280,984
Sequoia	98,035
Yosemite	460,619
General Grant	51,988
Mount Rainier	219,531
Crater Lake	113,323
Platt	280,638 ^a
Wind Cave	100,809
Sullys Hill	24,979
Mesa Verde	16,760
Glacier	53,454
Rocky Mountain	235,057 ^a
Hawaii	78,414
Lassen Volcanic	26,057
Mount McKinley	802 ^b
Grand Canyon	167,226
Lafayette	134,897
Zion	30,016
Total	2,522,188

^a Estimated.

^b Actual park visitors; many miners and prospectors passed through park.

Sitka (Alaska)	13,000 ^a
Tumacacori (Arizona)	17,341 ^a
Verendrye (North Dakota)	115,000 ^a
Wupatki (Arizona)	1,500 ^a
Yucca House (Colorado)	174
Total	502,656

^a Estimated.

During the fiscal year of 1928 appropriations were \$4,889,685 and revenue was \$808,255.81, which was an increase of \$104,406.21 over the 1927 receipts. Various gifts totaled \$32,697.57. In an effort to modernize the roads and trails of the parks, Congress approved of an ultimate expenditure of \$60,000,000, or \$5,000,000 annually, instead of the usual \$2,500,000.

During the year the total area of the 20 parks became 11,846 square miles, due to the addition on September 15 of Bryce Canyon's 22 square miles, formerly in the National monument system, as authorized by Acts of Congress of June 7, 1924, and Feb. 25, 1928, and to the further addition through boundary adjustments of 6 square miles to the Hawaii National Park, 80 acres to Lassen Volcanic Park, 48 acres to the Grand Canyon, and about 340 acres to Yosemite National Park. The area of the National monuments was increased to 3,723.7 square miles by the addition of 880 acres to the Chaco Canyon, about 6 acres to the Aztec Ruins, and 26,240 acres to the Craters of the Moon.

It was proposed further to add to the system by the transference to the Department of the Interior of 10 parks and 9 monuments under the War Department, to be known as "National Historical Parks," and by the addition of the new eastern projects, Shenandoah and the Great Smoky Mountains National parks. Toward the purchase of land for the latter, the Laura Spelman Rockefeller Memorial offered to match all gifts up to \$5,000,000, so that estimates and purchases already had begun and it was hoped that the park would be opened in a few years. The Legislature of Virginia appropriated \$1,000,000 toward the former project, friends outside the State \$550,000, and the area required to make the region a park was reduced by legislation from 385,000 plus acres to 327,000. Earlier, the people of Virginia subscribed \$1,200,000 for the establishment of this park. On April 25 Congress accepted jurisdiction over Mesa Verde National Park, as offered by the State of Colorado.

During the year the forests were well protected from insect ravages, and in spite of a very dry season little damage was done by fire. Conditions were favorable for wild animal life, and the waters of the parks were again planted with fish. During the winter season, travel was greater than ever before, and it was hoped to encourage this movement by securing for Yosemite National Park the winter sports of the Olympic Games of 1932, which are to be held in Los Angeles.

The Laura Spelman Rockefeller Memorial gave \$10,000 so that educators might report on the educational possibilities of the parks. The Memorial also granted \$118,000 for the building of museums in the Yellowstone Park. The construction of a museum and auditorium was started near Old Faithful, and others were planned. A committee, appointed by the American Library Association, was to establish libraries in the parks. An observation station and trail-side museum at Yavapai Point in the Grand Canyon were dedicated on July 19. Archaeological work was done in the Mesa Verde National Park and at the Aztec Ruins and Gran Quivira National monuments.

In the Yellowstone National Park a new geyser of about 90 by 140 feet, with 4- to 6-hour eruptions 80 to 100 feet in height, occurring every

10 to 14½ hours, broke out in the lower basin.

The Tenth National Park Conference was held in San Francisco from February 15 to 21. Among the many problems discussed, the most important were those of an engineering, educational, personnel, or sanitational nature. A definite policy in regard to airplane travel to and from and in the parks was considered necessary in order to regulate this traffic. A conference including National Park officials, interested railroad and transportation officials, and others, was to be called during the winter of 1929 to formulate such a policy.

PATENTS. See UNITED STATES, under *Patents*.

PATTEN, JAMES A. American grain commission merchant and financier, died at Evanston, Ill., December 8. He was born at Freeland Corners, Ill., May 8, 1852, and attended country schools. After being a clerk in a store, 1869-71, he worked on his grandfather's farm, 1871-74. Moving to Chicago, he studied the grain business, while working as a State grain inspector, 1874-78. He then joined a brokerage firm, and with his brother, in 1880, established a grain commission firm. Successful in this undertaking, Mr. Patten joined the firm of Bartlett, Frazier & Carrington in 1903, partially retiring in 1910. Mr. Patten was in the public eye in 1909 when he was accused of cornering the market by securing control of 23,000,000 bushels of wheat. He denied that he won his fortune through grain manipulations; he speculated daringly, however, and made and lost large sums, particularly in his operations in competition with the Armour's. After the Sherman Anti-trust Act was passed, July 2, 1890, he was twice indicted, and once convicted for acting in restraint of trade. Mr. Patten was Republican mayor of Evanston, 1901-05. At the time of his death he was a director of several concerns, including the Continental & Commercial National Bank, the Commonwealth Edison Company, the Chicago Title & Trust Company, and the Chicago, Rock Island & Pacific Railway Company.

PEACE AND PEACE MOVEMENTS, THE BURTON RESOLUTION. This resolution referred to in the YEAR BOOK for 1927 and introduced by Representative Burton in the United States Congress December, 1926, declared it to be the policy of the United States to prohibit the exportation of arms, munitions, or implements of war to any country which engages in aggressive warfare against any other country in violation of a treaty, convention, or other agreement to resort to arbitration or other peaceful means for the settlement of international controversies. It was unanimously reported favorably and was to be considered at the session in 1929, when it was probable that it would be elaborately discussed.

Despite the unanimous vote in its favor by the Foreign Affairs Committee, the resolution aroused vigorous opposition from Secretary of War Davis, Secretary of the Navy Wilbur, and representatives of the American Legion and the Chemical Foundation. Passage of the resolution would seriously impair National defense plans, according to Secretary Davis, by limiting the

production of private munitions factories on which the Army depends for much of its war material. Secretary Wilbur, testifying March 17, declared that the output of American munitions plants would be lessened by their inability to fill orders from foreign countries in time of war, and that in time of peace these countries would be inclined to place their orders abroad. Charles H. Hertz, technical adviser of the Chemical Foundation, told the committee that the development of the American chemical industry which is competing with foreign countries, would be "seriously retarded" by the passage of the Burton Resolution. When cross-questioned by members of the Foreign Affairs Committee, Mr. Hertz admitted that American chemical companies could begin to turn out large supplies of chemicals and other munitions "within a week or ten days" if the Government needed them in time of war. It was pointed out by the committee that this statement was proof that the resolution would not interfere with the National defense programme. Committee members took exception to many of the statements made by Secretary Wilbur, indicating that the resolution was likely to be again approved, despite the opposition.

CAPPER AND OTHER RESOLUTIONS. There were several resolutions before the Senate Committee on Foreign Relations on the subject of World Peace, including Senator Capper's resolution (see YEAR BOOK for 1927) relating to the renunciation of war, and Senator Borah's, relating to the outlawry of war. No action was taken on any one of them and possibly the Kellogg treaties (q.v.) would be regarded as satisfactory substitutes.

INTERNATIONAL PEACE BUREAU. The Twenty-sixth Annual Peace Congress of the bureau was held at Warsaw, Poland, June 25, 1928. There were twenty countries and international associations represented at the congress, with 170 delegates in attendance. Germany had the largest national delegation, some 90 delegates having sent in an application. There was an Australian representative in the person of Mrs. E. C. Smythe, who was engaged on peace work in Vienna. There were three commissions which handled the main subjects of the congress: Actualities, Disarmament, and the Economic Organization of Peace.

Diplomatic and official representatives of many countries were in attendance at the inaugural session held in the Town Hall on June 25. It was significant that the warmest ovation of the morning was accorded to Dr. Quidde, of Germany, the Nobel Prize winner of 1928, at the point when he declared that just as he and his friends had struggled for the freedom of the Poles under the old Germany, so they now stood for the policy that under no circumstances would Germany and Poland ever go to war. Buisson, the joint Nobel Prize winner, was in the audience. He was brought to the platform on Dr. Quidde's suggestion, and also contributed to the speeches. See NOBEL PRIZES.

Three resolutions stood out from the rest. They occupied most attention of the commissions and evoked the deepest interest in the sessions of the congress, before being adopted. One dealt with economic organization and was introduced by M. Delaisi, of France. The other dealt with the situation in respect of disarmament. The third welcomed the Kellogg proposal. The Delaisi resolution stressed the dangers of economic nationalism and urged the development of the pur-

chasing power of agricultural countries as the sound line of immediate development. These are the pertinent sentences:

With reference to economic relations between European nations, the congress is of opinion that the balance cannot be attained except by the development of the purchasing power of agricultural countries, by means of international credits so as to solve simultaneously the unemployment crisis in industrial countries and the agrarian crisis in agricultural countries.

For this reason the congress suggests that the League of Nations should place upon the agenda of the next economic conference the question of the organization of credit in the agricultural European countries, and meanwhile it urges the development of the League bodies responsible for the study of economic and financial questions.

Two other economic resolutions welcomed the work of the International Economic Conference and suggested further extensions of this work:

1. The International Peace Congress welcomes the efforts of the International Economic Conference tending to reduce the artificial economic obstacles and notes that such efforts correspond in a very large measure to the demands made by earlier Peace congresses, and demands the immediate carrying out of the Geneva Resolutions, in particular those which contemplate the reduction of customs duties, free exchange of industrial and agricultural products, facilitation of transport, conclusion of long-term commercial treaties, based on the needs of all States and Nations and not serving only a few interested territories and circles. The International Peace Congress desires an enquiry into the equitable distribution of raw materials.

2. The International Peace Congress draws the attention of the League of Nations to the dangers of economic-political, and in particular of commercial-political, disputes, which under pressure of public opinion may seriously endanger peace.

3. The International Peace Congress expresses the desire that the League of Nations should, within three months of the outbreak of an international economic dispute, take the initiative in convening the parties to the dispute to negotiate direct, and apply all possible means to settle the dispute—impartial enquiries, summoning of experts, setting up of Conciliation Committee, as a last resort placing the matter before an impartial Arbitration Court.

Resolution 11 read as follows:

1. The International Peace Congress sees in the renewed increase of purely private-economic international cartels and trusts which extend to various countries no sure means tending to the economic organization of peace and advocates international control from the social-political and a world-economic point of view, such control to be under the auspices of the League of Nations.

2. The International Peace Congress consequently renews its request for the setting up of an international economic council on the lines of the International Labour Office of the League of Nations.

The disarmament resolution was mainly the work of M. le Foyer, the Secretary General of the French Federation of Peace Societies. It set out *seriatim* the failure to achieve agreement for general disarmament during the past year at Geneva and recalled the obligations of Article 8 of the Covenant and "calls for the convocation of the preparatory commission before the meeting of the 9th Assembly and the meeting of the World Disarmament Conference after the 9th Assembly and before the close of 1928."

In the event of the preparatory commission not being convened, or in the event of failure, the resolution called for a disarmament conference with responsible political representatives "competent to deliberate effectively, to take the initiative, and to make decisions."

The resolution closed by warning the governments of their solemn responsibilities with regard to disarmament and appealed to the peoples "to hasten to insure their common defense by the organization of disarmament."

A resolution described the American (Kellogg) proposal as an event of the greatest significance and called upon all the powers to secure its general adoption without reservation.

A further disarmament resolution dealt with the private manufacture of arms and recalled the fact that the International Peace Movement had always recognized the dangers resulting from the manufacture of armaments. On various occasions resolutions had been adopted in order to circumvent this great danger, the last previous occasion being that of the meeting of the General Assembly in Paris, 1927. Unfortunately, the League of Nations had only drawn very insufficient conclusions from the "grave objections" to the private manufacture of armaments. The League, it was declared, should at least publish within the near future the definite and full statistics concerning private and State production and private and State traffic in war materials which had so frequently been asked for: it should further give definite information concerning the export of war materials. This did not affect the fundamental demand of the Peace Movement for prohibition of the export of war material.

An omnibus resolution dealing with China was passed at the instance of the Actualities Committee, also another appealing to the German Government for the pardon of two German Pacifists, Kuster and Salomon, who had been condemned for alleged illegal activities; a third urged "the speedy conclusion of an equitable commercial treaty between Germany and Poland to serve as a basis for normal and lasting economic relations between the two countries."

In the course of the council meeting at the Warsaw Peace Congress, the question of the possibility of strengthening the bureau through the appointment of a director and a larger staff was discussed, the bureau having been without a director since 1914. To that end a committee was appointed to raise the necessary funds.

UNIVERSAL RELIGIOUS PEACE CONFERENCE. A preliminary Conference was held in Geneva, September 12, 13, 14. Dean Shailer Mathews was chairman of the conference committee, and Dr. Henry A. Atkinson, general secretary. One hundred delegates representing all the living historic faiths were present. The committee voted without dissenting voice to hold a full conference in 1930. A committee of one thousand was to be formed to "read a new meaning into the declaration that war is an outlaw." This Committee was to be composed as follows: Christians 250 (of which the Protestant and Roman Catholics were to have 100 members each and the Eastern Church, 50); Confucianists, 75; Buddhists, 150; Hindus, 100; Jains, 25; Jews, 60; Moslems, 125; Parsees, 25; Shintoists, 50; Sikhs, 25; Taoists, 25; Miscellaneous, 90.

Among the delegates to the Conference were Dr. Henry A. Atkinson, of New York, General Secretary of the Church Peace Union; Dr. William P. Merrill, of New York; Dr. S. Parkes Cadman, of New York; Dr. Frank Oliver Hall, of Tufts College; Dr. F. Nansen, of Norway; Henry Wickham Steed, of London; Dr. Hertz, Grand Rabbi of the British Empire; Dr. Reinach; Dr. Chen, of Peking, President of the Confucianists of the World; and the Maharajah of Burdwan. Dean Shailer Mathews, of the University of Chicago, was appointed chairman of the World Committee. The final resolutions adopted were in effect that there should be no attempt to create a league of

religions, nor to formulate a "synthetic" type of worship. The sole purpose was to bring together the representatives of religions of the world to discuss this question: "What can religion contribute toward establishing world peace?"

THE CHURCHES AND WORLD PEACE. Three significant activities stand to the credit of the churches during the year 1928. The first was the *Anti-Big-Navy Campaign of January and February*. The churches were apparently shocked when they learned of the proposals of the U. S. Navy Department and that a vast navy building programme had been presented to Congress. Secretary of the Navy Wilbur stated to the House Committee that this five-year programme was the first step in a twenty-year programme which, as calculated, would cost \$2,500,000,000 for construction only. A campaign to inform the churches of this proposal was promptly projected. A hundred thousand churches and pastors were urged to present the information to their people, who in turn were urged to give the proposals careful study, and then to inform their representatives in Congress of their desires. These efforts, united with those of many groups and organizations and a vigorous discussion in the daily press, brought such a flood of letters, petitions, and telegrams that the House Committee on Naval Affairs reversed its votes and reduced the plan from 71 to 16 war vessels, to cost approximately \$240,000,000. Although the bill in this reduced form was adopted by the House of Representatives, the Senate did not regard it as of sufficient importance to deal with it before adjournment in May.

THE PEACE PACT OF PARIS. The churches recognized almost at once the possibilities of the proposal of M. Briand, in April, 1927, that the United States and France enter into a solemn covenant to renounce and outlaw war as an instrument of national policy in their mutual relations. In May the Federal Council of the Churches of Christ in America passed a resolution urging acceptance of the proposal, but making it known at the same time to other nations that the United States would be pleased and would hope to make similar treaties with them. Notwithstanding the apparent indifference of the Department of State to the proposal, in November (1927) a delegation of outstanding church leaders waited on the President and the Secretary of State, urging the importance of M. Briand's proposal. The Government began to exhibit interest in it. During the winter, spring, and summer, the Churches followed with their prayers the progress of the negotiations and many resolutions were adopted at national and local church gatherings. In support of the movement and to help insure ratification of the Pact, the emphasis of the Federal council's programme for the services on the tenth anniversary of the Armistice was placed on the Peace Pact.

THE TWENTY-SECOND NATIONAL PEACE CONGRESS (Rennie Smith, Secretary, 29 Victoria Street, London, S. W. I.). This meeting was held in Caxton Hall, London, July 6 and 7, and was devoted to a discussion of Anglo-American relations. Among the speakers were Lord Henry Cavendish-Bentinck; Dr. G. P. Gooch; Gilbert Murray; Lieutenant-Commander Kenworthy; Philip Kerr; Lord Thomson. The American speakers were Emily Green Balch, and Prof. William I. Hull. The topics discussed were the Kellogg proposals

for the renunciation of war; the freedom of the seas and the Naval situation; the "Outlawry" movement, the economic relations of Great Britain and the United States.

Among the organizations affiliated with this Congress are the National Free Church Council, the Coöperative Union, Ltd., the Women's Coöperative Guild, the Cobden Club, the Friends' Peace Committee, the National Association of Schoolmasters, Theosophical Order of Service, Fellowship of Reconciliation, Boys' Life Brigade, British Federation of Youth, Vegetarian Society, World Peace Union, Christian Spiritualist Churches, the National Brotherhood Council, the Women's International League, the Iron and Steel Trades Confederation, the No-More-War Movement, the Church of England Peace League, the Peace Society, Holiday Fellowship, Ltd., Girls' Life Brigade, Arbitrate-First Bureau, Union of Democratic Control, the Union of Post-Office Workers, and Workers' Travel Association. The Council is a comprehensive body without political or religious bias and is designed to coördinate the English work for peace.

INTERNATIONAL GOOD-WILL CONGRESS. A meeting was held in New York, November 11, 12, and 13, celebrating the tenth anniversary of the signing of the Armistice. It was held under the auspices of the World Alliance for International Friendship through the Churches. Among the speakers were: the Honorables William E. Borah, Theodore E. Burton, and William E. Dever; Jane Addams; William Green; Pres. Robert R. Moton; Bishop William P. McDowell; the Reverends Harry Emerson Fosdick, Joseph Fort Newton, Reinhold Niebuhr, and John A. Ryan; Chester H. Rowell; Rabbi Stephen S. Wise; and William Allen White.

NATIONAL COMMITTEE ON THE CAUSES AND CURE OF WAR. Its third conference was held in Washington, January 15-19. As at the two previous conferences, Mrs. Carrie Chapman Catt, general chairman, presided. The organizations represented were: American Association of University Women; Council of Women for Home Missions; Federation of Women's Boards of Foreign Missions of North America; General Federation of Women's Clubs; National Council of Jewish Women; National League of Women Voters; National Women's Trade Union League; National Board of the Young Women's Christian Associations. Recommendations were made to these organizations that they give active and concerted support to the efforts of the Department of State for the conclusion of either a multilateral treaty or bilateral treaties, based on the principles of the renunciation of war as an instrument of National policy and for the use of existing, and the creation of needed, machinery for the peaceful settlement of international disputes.

Recognizing the fact that women of other countries also were deeply concerned in building for world peace, resolutions were passed to communicate with leading women's groups in other nations, inviting their coöperation in international efforts to use the massed efforts of the woman power of the world for the creation of peace sentiment. The conference authorized addressing the President expressing hope that a way might be found to reopen negotiations looking toward adherence of the United States to the Permanent Court of International Justice.

CARNEGIE ENDOWMENT FOR INTERNATIONAL PEACE. Soon after the Endowment was organized

in 1910, foundations were laid for a library, adequate to its needs, to be maintained not only for the use of the officers of the Endowment but to supply information to the public on the subjects in which the Endowment was interested. The principal objects of the Endowment are the advancement of the cause of peace and the increase of knowledge and understanding among nations, the abolition of war, the peaceful settlement of international disputes, the study of the causes and effects of war, the development of international law, the education of public opinion regarding war and its prevention, and the maintenance of organizations deemed useful in accomplishing these purposes.

Three divisions of the Endowment were organized, each with a director in charge; the Division of Intercourse and Education, the Division of Economics and History, and the Division of International Law. The first two divisions were located in New York City, under the direction of Dr. Nicholas Murray Butler and Dr. John Bates Clark, respectively. Dr. Clark retired and was succeeded by Dr. James T. Shotwell. The Division of International Law, the library, and the headquarters of the Endowment are located at No. 2 Jackson Place, Washington, D. C., under the direction of Dr. James Brown Scott, secretary of the Endowment.

The major portion of the library collection of 40,000 volumes consists of treatises on international law and relations, international arbitration and the peace movement, history, diplomacy, law, standard reference books, periodicals, newspapers, and serials. The interests of the Endowment being world-wide, the library is necessarily broad in its scope; and books on economics, political, military, and naval sciences occupy a large portion of the shelves, as well as works on education, literature, biography, and bibliography. All of these resources are available for reference by the interested public, and books which can be spared are loaned to government officials, libraries, students, and research workers.

The library has been called the reservoir which supplies most of the information requested of the Secretary's Office. From the *Chronicle of International Events*, kept daily by the librarian, many questions dealing with events of any importance in international affairs, past, present, and forthcoming, may be immediately answered without further research. When inquiries indicate that widespread interest is being taken on some international problem, a reading list on that subject is compiled and mimeographed for free distribution to libraries on the mailing list and for use in answering inquiries. Twenty-five such lists were available at the end of the year on subjects of special interest.

The library of the European Bureau of the Carnegie Endowment in Paris was formed in 1914 under the name of Frederic Passy Library, as the books then composing it came from the library of M. Passy. This nucleus was enlarged by numerous works on history, international law, political economy, and international concord and forms a unique source of documentation of international law, much used by students from many countries studying in Paris.

Nearly nine hundred libraries in the United States and foreign countries were depositories for all the Carnegie Endowment publications, numbering nearly five hundred, and a select list of libraries receive regularly the publications

of the Division of Economics of History, including the series of studies known as the *Economic and Social History of the World War* to be completed in about one hundred and fifty volumes. The International Conciliation pamphlets being published by the Division of Intercourse and Education, as well as many of the monographs listed in the Endowment's YEAR BOOK, were being distributed free to libraries.

Collections of about two thousand volumes on American history, literature, science, and culture had been presented to several important foreign libraries in the hope that the books would be fruitful in spreading accurate knowledge of American life and in promoting the growth of international friendship. Additional books were being sent to these libraries from time to time and smaller collections on public law had been presented to universities in Germany, Austria, Hungary, Poland, and the other European countries through the agency of the books for Foreign Countries Committee of the American Library Association.

The Division of Intercourse and Education some years ago established a custom of "placing in public libraries in smaller towns of the United States, books that should help to acquaint the general reader with what other people in other lands are thinking, how they are living, and how they are governed." Such collections, called "International Mind Alcoves," had been selected and distributed to one hundred and seventy-eight libraries. Books on international affairs also were provided for the use of international relations clubs in colleges and universities, together with a *Fortnightly Summary of International Events*.

THE AMERICAN PEACE SOCIETY. This organization celebrated the One hundredth Anniversary of its founding in 1828 by holding a World Conference on International Justice at Cleveland, Ohio, May 7, 8, 9, 10, and 11. The programme arranged by Dr. James Brown Scott consisted of two parts—one the general assemblies with a series of addresses; the other a series of six study commissions which met and subsequently reported upon six key problems of international life. May 6 was Peace Sunday; May 7, Ohio Day; May 8, American Peace Society Day; May 9, Neighbors' Day; May 10, World Day; and May 11, Report Day.

The first commission dealt with the International Implications of Industry, John M. Parker, former Governor of Louisiana, chairman; Dr. Harold G. Moulton, vice chairman; Whiting Williams, secretary. It studied and discussed major international activities of banks, trade organizations, chambers of commerce, labor and other groups, in their relations to a better international understanding and behavior. The second commission on the International Implications of Justice, Prof. Philip Marshall Brown, chairman, dealt with the contributions of international law to the problems of international peace. The third commission on Methods of Organization for the Promotion of International Peace, Pres. Ernest H. Wilkins, of Oberlin College, chairman, was open to peace and patriotic groups in the interest of a better understanding between them and a more effective cooperation for their common ends. The fourth commission, on the International Implications of Education, John J. Tigert, United States Commissioner of Education, chairman, was composed of representatives

of schools and colleges. The fifth commission, on the International Implications of Religion, Bishop William Fraser McDowell (Methodist), chairman, the Rev. William W. Van Kirk, secretary, was open to the representatives of all creeds. The sixth commission, on the International Implications of Social Agencies, Dr. Edward T. Devine, chairman, considered the peace movement as a new and important phase of world effort.

The Commission on the International Implications of Justice reported the following prepared by its chairman, Professor Brown:

Believing that American political and social institutions have achieved results of universal significance, feeling that certain American principles of government and justice might profitably be applied to the relations of nations, the *Commission on International Justice* reminds the American Peace Society, on this its one-hundredth birthday, of the following principles for the achievement of international justice and peace:

1. All nations which have been formally recognized as members of the family of nations are entitled to equal rights and are subject to equal duties under international law.

2. International law finds its authority in the common consent of nations, as evidenced by usage, treaties, decisions of international commissions and tribunals, declarations of national executives, legislatures, and courts.

3. The interests of nations are defined, respected, and protected by mutual understandings and forbearance, and conflicting interests reconciled by processes of conciliation. They are not necessarily dependent upon coercion.

4. Disputes among nations are to be adjusted by peaceful methods which respect the equal rights and duties of States under international law.

5. When ordinary methods of diplomacy prove ineffective, recourse to commissions of inquiry, conciliation, and arbitration is recommended as the method most consonant with the orderly conduct of international relations. The purpose of commissions of inquiry is the dispassionate investigation of the facts giving rise to a dispute and a recommendation of the procedure deemed most suitable for the eventual settlement of the controversy. Pending such investigation and report, provision should be made for a *modus vivendi* to insure that the respective rights and interests of the parties to the dispute should suffer no serious injury.

Disputes generally recognized as nonjusticiable should be settled by recourse to good offices, mediation, commissions of inquiry, or to friendly composition. They may be referred, in case the parties agree, to special arbitral tribunals.

6. Disputes of a juridical nature should be submitted to special tribunals, to the Permanent Court of Arbitration, to the Permanent Court of International Justice, or to mixed commissions already established or created *ad hoc*.

Such tribunals, courts, and commissions should be empowered under special circumstances and conditions to decide upon the preliminary question whether or not a dispute is of a juridical nature. Such a decision should be rendered by a majority of at least three-fourths of the judges constituting the court before it may assume jurisdiction over the case.

The Permanent Court of International Justice may not properly be called upon to express an advisory opinion on questions of a political, nonjusticiable nature. The fifth reservation of the United States Senate to the statute of the Permanent Court of International Justice is approved as a means of safeguarding the purely judicial functions of the court.

The dignity and independence of the Permanent Court of International Justice should be protected by (a) the election of its judges in such a manner as to insure its continuous existence, and (b) by rendering its financial maintenance independent of special periodical appropriations by the League of Nations.

The Hon. Theodore E. Burton, of Ohio, was president of the conference; A. D. Call, the director; and Lacey Z. C. Zapf, the secretary. Senator Burton was succeeded as president of the society by William Fortune of Indianapolis.

In connection with its one-hundredth anniversary, the society recalled that the year 1928 marked other notable anniversaries. Sir William Randal Cramer, founder of the Interparliamentary Union, was born in Fareham, Hampshire,

England, Mar. 18, 1828. The desire of his life was to do something toward the ultimate abolition of war and he believed that the hope for such a thing lay in international arbitration. In 1871 he conceived a plan for a High Court of Nations which was adopted by the Council of the International Arbitration League, of which he was also the founder. Because of his work in organizing the Interparliamentary Union, he received the Nobel Peace Prize.

P. W. Wilson, writer for the *New York Times* announced that H. G. Wells was not the man who first had outlined history: that history outlining began in Ireland with Marianum Scolius, author of the *Chronicon Universale* which included everything from Creation to the date of this history. This Benedictine monk was born in 1028. Chaucer, father of English literature, was probably born in 1328; that Bunyan the author of *Pilgrim's Progress* was born in 1628; that Goldsmith, author of the *Deserted Village* and of *She Stoops to Conquer* was born in 1728; that George Meredith was born in 1828, and that Thomas Hardy died in 1928; that both Tolstoi, interpreter of the human spirit, and Nikolai Tchernyshevsky, founder of Nihilism, was born in 1828; and that Henrik Ibsen, Norwegian dramatic poet and moralist, was born at Skien, Mar. 20, 1828.

The American Peace Society received June 6, from the Vereenigin Voor Volkenbond en Vrede, with headquarters at The Hague, a gold medal known as the "Grotius-Médaille."

In commemoration of the anniversary, the American Legion adopted a preamble and series of resolutions to the effect that the American Legion was in accord with the purposes and policies of the American Peace Society, and that they were thoroughly in accordance with the declared principles of the American Legion; and that the Legion owed it to members and the public to take a definite and constructive stand upon all matters of importance pertaining to the promotion of international peace; therefore, the National Executive Committee of the Legion expressed the belief that on this basis the World Conference on International Justice sponsored by the American Peace Society had great potential promise of substantial and well-directed progress toward the promotion of peace and good will" as sought in accordance with the principles of the American Legion in a sane, conservative, and loyal advance toward an honorable, self-respecting international peace.

Pursuant to an Act of the State Legislature, passed Mar. 15, 1927, the State of Maine celebrated at Center Minot, Maine, July 21, 1928, the one hundred and fiftieth anniversary of the birth of William Ladd and the one hundredth anniversary of the foundation of the American Peace Society. In the presence of a large gathering of men and women, the Governor of the State unveiled a huge boulder monument. The ceremony throughout was a fitting tribute not only to William Ladd but to the spirit of Maine. The monument was built beside the open road along which William Ladd most frequently traveled.

THE WORLD PEACE FOUNDATION. Edwin Ginn, its founder, while widely known to his contemporaries as a successful publisher of school textbooks, deserves a larger fame. At a time when it was the fashion to speak wholly sentimentally, if at all, concerning peace, he achieved a concept of peace which has come to most people only as one of the drastic lessons of the

World War. To him, peace meant more than a lull in open hostility; more, even, than renunciation of war; it meant the affirmative type of international relations toward which so many nations turn today for economic as well as military security. Prerequisite to such measures, he foresaw, was a widespread general understanding of the rest of the world and its affairs. Accordingly, Mr. Ginn launched in his home city, Boston, out of his private fortune, the World Peace Foundation. It since has been engaged, not in adding to the vast and argumentative literature of propaganda, but in making available for American readers reliable fact material on international relations and international coöperation. Toward this end it has secured the American agency for the entire documentation of the League of Nations, the International Labor Office, and the Permanent Court of International Justice. It maintains at Boston not only a complete stock of these publications for sale to librarians and specialists but also one of the outstanding libraries on international relations in the United States, and a reference service which is conducted without charge.

The Foundation is a publisher as well. Its *Yearbook of the League of Nations* is an analysis in English of each year's work of the League. Its study of the World Court by Manley O. Hudson, of Harvard Law School, was the only case-by-case summary of the work of the Permanent Court to the beginning of 1928. It had on the press in 1928 a book on the work of the International Labor Organization which was to present in one volume the complete story of this monumental programme for the industrial peace of the world which Samuel Gompers declared must precede a lasting peace between nations.

PEARSON, EDWARD JONES. American engineer and president of the New York, New Haven & Hartford Railroad Company, died at Baltimore, Md., December 7. He was born at Rockville, Ind., Oct. 4, 1863, and was graduated in civil engineering from Cornell University in 1883. After working in the engineering department of the Missouri Pacific Railway in 1881, he was engaged on railway construction in the Indian Territory and Texas in 1882, and on terminal development at Portland, Ore., 1883-84. He was then made supervisor of the St. Paul and Minnesota division of the Northern Pacific Railway, and put in charge of construction train service until 1890, when he became division engineer of lines east of Livingston. In addition to being made, in 1892, principal assistant engineer of the Chicago Terminals, which the Northern Pacific had leased, Mr. Pearson received similar positions with the Chicago & Calumet Transfer Company, and the Winconsin Central Railway. Employed in 1894 as superintendent of the Yellowstone, Rocky Mountain, and Pacific divisions, and as assistant general superintendent in charge of transportation, he subsequently became chief engineer of the Northern Pacific. The Chicago, Milwaukee & St. Paul Railway also employed him as chief engineer, on the Pacific extension, 1905-11. He later served as first vice president of the Missouri Pacific-Iron Mountain Railway, from June 1, 1911 until Mar. 26, 1915, and of the Texas & Pacific Railway Company,

1915-16. Mr. Pearson accepted the vice presidency of the New York, New Haven & Hartford Railroad in 1916, becoming president, May 1, 1917; when the Government undertook the direction of the road, he was appointed Federal Manager, June 10, 1918. Made president again in February, 1920, when the railroad was returned to private ownership, Mr. Pearson remained with the company and was successful in placing the property on a paying basis with a highly efficient standard of operation. At the time of his death, he had presented a resignation which would have taken effect on Dec. 31, 1928.

PEELLE, päl, STANTON JUDKINS. United States judge, died September 4, at Washington, D. C. He was born in Wayne County, Ind., Feb. 11, 1843. After serving in the Civil War from 1861 until 1865, with a regiment of Indiana Volunteers, he was admitted to the bar in 1866, and practiced at Winchester, Ind., for two years. He then moved to Indianapolis where he practiced until 1892, being a member of the Indiana House of Representatives from 1877 until 1879, and of the United States House of Representatives in the Forty-seventh Congress from 1881 until 1883. He was an alternate delegate-at-large to the Republican National conventions in 1888 and 1892. He was appointed judge of the United States Court of Claims by President Harrison in 1892, and presided in that court as chief justice from 1906 until his retirement in 1913. Judge Peelle was a professor of the law of partnership and bailment at George Washington University from 1901 until 1911. He was president of the board of trustees of Washington College of Law, the Presbyterian Home for the Aged, and the Garfield Hospital from 1910 until 1924. He was a commander of the Military Order of the Loyal Legion of the District of Columbia from 1916 until 1917. He received the LL.D. degree from Valparaiso University in Indiana and the same degree from Howard University in Washington.

PELHAM-CLINTON, HENRY PELHAM ARCHIBALD DOUGLAS. See NEWCASTLE, DUKE OF.

PELLA'GRA. BLACK TONGUE IN DOGS. In the June 8 number of the *Public Health Reports* of the U. S. Public Health Service there is an exhaustive article on the disease known as "black tongue" in dogs and its possible identity with human pellagra. A research was undertaken to discover experimentally in animals an analogue of human pellagra and this had been in progress for over two years. The dog was chosen because the spontaneous disease, black tongue, bears some resemblance to human pellagra. Attempts were made to produce it by feeding sound animals on the diets known to favor the development of the disease in mankind, and animals with black tongue with the food substances which antagonize the disease in the human subject. The research which was being conducted by Drs. Goldberger, Wheeler, Lillie, and Rogers, of the Public Health Service, was still in progress at the end of 1928, no final decisive report being possible at that time. On a diet of maize meal, which favors the appearance of the disease in man, six out of seven dogs developed black tongue in from 12 to 142 days, showing the great significance of the individual equation. The assumption is not that maize is a pathogenic food substance per se but simply does not contain the vitamin-like body which is able to prevent the disease. Black tongue may be prevented to a greater or

less extent by the use of such foods as wheat germ, beef muscle, pork liver, etc.

PENANG, pē-nāng'. One of the Straits Settlements. See STRAITS SETTLEMENTS.

PENNSYLVANIA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 8,720,017. The estimated population on July 1, 1928, was 9,854,000. The capital is Harrisburg.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1927 and 1928:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1928	2,939,000	4,667,000 ^a	\$58,286,000
	1927	3,090,000	5,085,000 ^a	68,592,000
Corn	1928	1,283,000	50,037,000	46,534,000
	1927	1,270,000	50,165,000	45,650,000
Potatoes	1928	246,000	31,980,000	20,787,000
	1927	220,000	26,400,000	31,680,000
Wheat	1928	1,108,000	17,171,000	22,148,000
	1927	1,098,000	20,301,000	25,787,000
Oats	1928	1,067,000	34,678,000	18,379,000
	1927	1,100,000	39,600,000	21,384,000
Apples	1928	8,460,000	9,729,000
	1927	6,300,000	8,820,000
Tobacco	1928	37,000	49,580,000 ^b	6,941,000
	1927	34,000	46,240,000 ^b	6,011,000
Buckwheat	1928	195,000	3,802,000	3,384,000
	1927	210,000	4,985,000	4,195,000
Rye	1928	103,000	1,596,000	1,708,000
	1927	86,000	1,462,000	1,535,000

^a tons, ^b pounds.

MINERAL PRODUCTION. The State produced nearly \$500,000,000 more of minerals in 1926 than any other in the Union, and furnished 19.18 per cent of the entire mineral production of the country, reckoned by value. It was as usual the sole producer of anthracite and the leader in output of bituminous coal, coke, cement, pig iron, ferro-alloys, and stone. The coal industry, the most important of the mineral group in this State, was depressed in 1927, on account of labor troubles affecting the bituminous output, and of slack demand, affecting anthracite. In 1927, 71,513,986 tons of anthracite were mined; in 1926, 75,390,582. The value of anthracite mined was \$420,942,000 for 1927; \$474,164,000 for 1926. The quantity of bituminous coal produced in 1927 was 133,141,639 net tons; in 1926, 153,041,638. The value of the bituminous product was \$273,144,000 for 1927; \$325,618,000 for 1926. The 153,829 workers in the bituminous mines averaged 203 days of employment in 1927. Coke production was increasingly in by-product ovens. The by-product coke output of 1927 was 11,329,000 short tons; that of 1926, 11,200,624 tons, valued at \$48,722,935. The beehive coke output for 1927, fell to 5,477,000 short tons (including the relatively small Ohio production) from 10,722,352 for 1926, valued at \$47,595,184.

The iron ore shipped from Pennsylvania mines in 1927 was but 1,124,883 long tons, and in 1926, 1,088,634; in value, \$2,559,916 for 1927 and \$2,483,056 for 1926. It supplied but a small part of the blast furnaces of the State. These produced 11,145,334 long tons of pig iron in 1927, as compared with 13,142,528 in 1926. The value of pig iron produced in 1927 was \$212,179,275 and in 1926, \$263,238,184. The cement industry showed an increase in production, to 43,732,278 barrels for 1927, from 42,865,694 for 1926; cement shipments were \$66,711,069 in value for 1927 and \$70,437,218 for 1926. Clay products were valued at \$55,041,270 for 1926, the latest year recorded, and at \$54,369,402 for 1925. The natural-gas output increased to 107,089,000 M

cubic feet for 1926, from 101,632,000 M for 1925; it was \$50,040,000 in value in 1926; \$47,089,000 in 1925. The petroleum wells of the State yielded 9,596,000 barrels in 1927 as against 8,961,000 in 1926, but the value of the 1927 product was less, being \$29,500,000 (estimated) as against \$31,930,000 for 1926. Of ferro-alloys the production again rose sharply in 1926 to 376,301 long tons, from 300,277 for 1925; \$35,975,381 in value for 1926 and \$29,143,978 for 1925. The total value of the State's mineral products was \$1,055,766,077 for 1926; \$867,196,142 for 1925.

FINANCE. State expenditures in the year ended May 31, 1927, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$82,222,896 (of which \$23,658,223 was aid to local education); for conducting public-service enterprises, \$78,079; for interest on debt, \$4,103,911; for permanent improvements, \$30,709,012; total, \$117,113,898 (of which \$37,967,816 was for highways, \$11,850,441 being for maintenance and \$26,117,375 for construction). Revenues were \$130,938,414. Of this, special taxes formed 40.9 per cent; departmental earnings and charges for officers' services, 7.2 per cent; sales of licenses and taxation of gasoline, 39.8 per cent. No general property tax was levied by the State. Net State funded debt on May 31, 1927, was \$92,400,007; all but a relatively small part of the total was in highway bonds.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1928, was 11,261.05. There were built in 1928, 12.15 miles of first, 2.18 of second, and 0.8 mile of third, track.

EDUCATION. According to State Superintendent Keith, in the *Journal* of the National Education Association, an extended study of the relations of secondary schools and colleges in the State of Pennsylvania was undertaken by the Carnegie Foundation in conjunction with State educational authorities. The school census for the academic year 1926-27 showed a total of 1,948,124 children between the ages of six and sixteen. There were enrolled in the public schools 1,848,881 pupils, of whom 1,594,808 were in elementary schools and 254,073 in high schools. The expenditures for public-school education in the year 1926-27 were \$193,990,728. The median salary of the teachers was \$1412.

CHARITIES AND CORRECTIONS. The State department of welfare, as functioning in 1928, under statute of 1921, had at its head a Secretary of welfare, (Mrs.) E. Grace McCauley, and was divided into four bureaus. The bureau of children covered the field of child welfare; in 1926 there were reported to be about 24,000 institutionalized children in the State, mostly cared for by 238 institutions, although in many cases domiciled in private families. The bureau of children administered a mothers' assistance fund, in coöperation with county authorities. The bureau of assistance had charge of dispensing other State charity funds among institutions not State-owned, and of supervising almshouses and the like. The bureau of mental health supervised insane hospitals, State and other, and other institutions for the mentally abnormal; it administered the State's mental health law. The Bureau of Restoration had charge of penal and reformatory institutions, including supervision of county prisons and the development of State

prison industries. The State maintained at the beginning of 1928 nine mental hospitals with a combined capacity of about 11,000 patients; four State schools for mental defectives (combined capacity about 3800); three sanatoria for the tubercular (capacity, 2000); ten general hospitals, for the most part small in the coal regions, for the sick and injured; two schools for the deaf (total capacity about 150); Pennsylvania Soldiers' and Sailors' Home, Erie, capacity 600; Soldiers' Orphans' Industrial School, Scotland, Pa., 269; Pennsylvania Training School for Delinquent Children, Morganza, capacity 514; State Industrial Home for Women (delinquents), Muncy, capacity 124; Pennsylvania Industrial Reformatory (males from 15 to 25), Huntingdon, capacity 804; three State penitentiaries, at Philadelphia, Pittsburgh, and Rockview, combined capacity 3350. There was under construction the new Eastern State Penitentiary at Skippack, near Philadelphia; likewise, at Selinsgrove, the State Colony for Epileptics.

POLITICAL AND OTHER EVENTS. A decision of the State supreme court closely affecting the finances of the State was rendered July 2. According to this decision the existing constitutional amendments enabling the Commonwealth to borrow \$100,000,000 for highway construction applied only to the borrowing of an initial total, and did not convey power to issue new bonds as some of the original lot were redeemed. This ruling destroyed the contention of the State administration that the \$100,000,000 represented a perpetual borrowing capacity. In consequence, the road construction plans of the State were seriously disturbed. The sum of \$200,000 was supplied by private donation to augment a State appropriation for the purchase of Cook Forest, an 8000-acre tract of uncut timber chiefly in Clarion County, said to contain the greatest stand of virgin white pine remaining in the East. The State, prior to this purchase, held a total of 1,130,000 acres of public forest land, which had been acquired in the course of 30 years.

The investigation of the Pennsylvania senatorial primary election of 1926 by the Senate's special primary investigating committee, known as the Reed committee, continued in 1928. A subcommittee of the Senate Committee of Privileges and Elections, under Senator Waterman, recounted the ballots of Philadelphia, Delaware, Allegheny, Schuylkill, Luzerne, and Lackawanna counties, to determine the contest of Vare's election, which had been brought by the defeated Democratic candidate, William B. Wilson. The Waterman subcommittee, in addition to counting the election ballots, inquired as to the printing and distribution of these ballots, to determine the possibility of fraud in these operations. It was testified that 150,000 ballots above the number required in Philadelphia had been printed, but had later been destroyed. Several poll-tax collectors in that city testified July 9 that poll-tax receipts had been issued to and distributed by "some one unknown," the apparent implication being that adherents of Vare had furnished these receipts to persons whom they wished to vote for him.

The Reed committee, investigating the primary as distinct from the election, found Sheriff Thomas W. Cunningham, of Philadelphia, in contempt of the Senate for refusing to testify the source of a sum of \$50,000 contributed by him in

1926 to the Vare campaign. Cunningham sought relief in the Federal District Court, which decided that he must stand trial at Washington. Vare himself suffered a stroke of apoplexy in August, and his illness, combined with the then current national political campaign, led to reduced activity in the Pennsylvania investigations thereafter.

A substantial number of the judges and district attorneys of the State met the members of the State Penal Commission April 6, and recommended more strict penal laws in various respects. A resolution recommended the repeal of the Ludlow Act providing indeterminate sentences, and the substitution of a system of graduated penalties, made more severe for repeating offenders. The Conowingo hydro-electric generating station of the Philadelphia Electric Company, on the lower Susquehanna River was completed as to two of its four 54,000-horse-power generating units and began operation March 1.

A suit brought in the Federal Court at Pittsburgh by members of the Ku Klux Klan seeking damages and an injunction to prevent five ousted members from conducting initiations, and a counter suit of these members for a receivership of the Pennsylvania Klan organization were dismissed, the Court finding that the evidence had established gross violations of the law and that the Klan should have no standing as a plaintiff. A feud in the labor organizations of the Pittston anthracite mining district broke out early in the year. It was waged over a difference connected with the contract mining system, and led to the assassination of several of the organization leaders. The Baldwin Locomotive Works, the largest plant of its type in the world, started in July to remove its business from the Philadelphia manufacturing district to a 650-acre site outside the city, at Eddystone, near the Delaware River. The area of Japanese beetle infestation in the State increased greatly along the East branch of the Susquehanna River, some 4000 square miles between Carlisle and Scranton being added to the quarantined district.

In Philadelphia the Broad Street subway was completed, but its operation was delayed by differences between the Philadelphia Rapid Transit Company and the city government over terms of lease and operation. Mayor Mackey proposed that the city acquire through condemnation the underlying franchise-holding companies of the transit company, as a move to municipal control of the transit situation. Early in July, the State public service commission delegated Judge Charles C. McChord to frame and recommend a lease to govern the operation of the Broad Street subway by the transit company. The city council authorized in May the construction of the projected \$40,000,000 Locust Street tube. The north wing of the \$15,000,000 Philadelphia Museum of Art was completed and was formally opened March 26. The Franklin Institute and the Benjamin Franklin Memorial combined in planning a memorial building to Franklin, to be erected on the Parkway at a cost of \$4,000,000, exclusive of \$3,000,000 of endowment for institutional activities.

At Pittsburgh, the Liberty Bridge across the Monongahela River was completed and opened March 27. At the first of the year, the city of Reading passed under the control of a Socialist administration under Mayor J. Henry Stump.

ELECTION. In the election of November 6, Penn-

sylvania gave Hoover and Curtis, Republican National candidates, the largest popular majority that they obtained in any State; the vote was: Hoover (Republican) 2,055,382; Smith (Democratic) 1,067,586. The vote for either ticket was larger than ever before, and the Democratic presidential vote of the State for the first time exceeded a million. United States Senator David A. Reed, Republican, was reelected, gaining a great majority over William N. McNair, his Democratic opponent. The usual overwhelmingly Republican delegation to the House of Representatives was elected, one of three formerly Democratic seats being lost.

OFFICERS. Governor, John S. Fisher; Lieutenant-Governor, Arthur H. James; Secretary of the Commonwealth, Charles Johnson; Treasurer, Samuel S. Lewis; Auditor-General, Edward Martin; Attorney-General, Thomas J. Baldrige; Superintendent of Public Instruction, John A. H. Keith.

JUDICIARY. Supreme Court: Chief Justice, Robert von Moschzisker; Judges: Robert S. Frazer, Emory A. Walling, Alexander Simpson, Jr., John W. Kephart, Sylvester B. Sadler, William I. Schaffer.

PENNSYLVANIA, UNIVERSITY OF. A non-sectarian institution of higher education, at Philadelphia, Pa., primarily for men, but with certain courses open to women; founded in 1740. It is composed of the College of Arts and Sciences; the Towne Scientific School (engineering and chemistry); the Moore School of Electrical Engineering; the Wharton School of Finance and Commerce; the school of fine arts (architecture, fine arts, music); the school of education; the graduate school; and the professional schools of medicine, graduate medicine, law, dentistry, veterinary medicine, and hygiene and public health. The 1928 autumn enrollment was 14,647, including all schools and departments. Of those enrolled, 8823 were candidates for degrees; 2916 were candidates for certificates; and 2908 were partial students and auditors. The enrollment in the 1928 summer session was 2271. The faculty numbered 1350. The library contained 675,000 bound volumes and 75,000 pamphlets. The productive funds amounted to \$13,916,495, and the income for the year to \$698,784. New additions to the university's buildings during the year included: the new anatomy wing of the medical laboratories and the Francis S. McIlhenny Dormitory.

Among the various gifts and subscriptions received were the following: \$150,000 from the estate of the late Miss Nina Lea, for the establishment of the Henry Charles Lea Professorship of History; a bequest under the will of Craig D. Ritchie of \$106,000, of which \$21,000 was to be used for endowment of the library, and the balance to provide income for general purposes; \$100,000 from Col. Louis J. Kolb, to establish the Kolb Foundation for the treatment of cancer; a gift of \$125,000 for medical research in the school of medicine, and the establishment of a foundation for the advancement of medical science and the promotion of education in the liberal arts, in the amount of \$1,000,000 from Edward B. Robinette. A bequest of \$500,000, to create the Charles Lennig Fund in Aid of Instruction in Theoretical and Practical Mechanics, became available during the year and was to be used to acquire scientific works, structures, instruments, etc., for the Towne

Scientific School of the University; and another bequest of \$200,000 from the estate of Charles Lennig became available to establish the Charles Lennig Beneficiary Fund, the income of which was to be used to provide free scholarships.

The freshmen who entered in the autumn of 1928 were the first whose selection was governed by a new ruling that only those applicants who ranked in the first quarter of the graduating class of a recognized secondary school would be exempt from college entrance examinations. The Provost of the University was Josiah H. Penniman, Ph.D., Litt.D., LL.D.

PENNSYLVANIA ACADEMY OF FINE ARTS. See ART EXHIBITIONS; ART MUSEUMS.

PENNSYLVANIA STATE COLLEGE. A non-sectarian, State institution for the higher education of men and women, at State College, Pa., founded in 1855. On Sept. 15, 1928, the enrollment totaled 4069, distributed as follows: Agriculture, 559; chemistry, 363; education, 603; engineering, 1170; liberal arts, 851; mines and metallurgy, 182; graduate school, 143; specials, etc., 54. There were 2786 students registered in the 1928 summer session. The faculty numbered 525, including the home economics extension staff. The productive funds of the college amounted to \$517,000, and the income for the year \$3,499,435. The library contained 108,569 volumes. A large storage building was completed in October, 1927, and work was started on a \$2,000,000 building programme. The completed projects at the end of 1928 included an infirmary, costing \$114,000; gymnasium, \$505,000; sheep barn, \$41,000; veterinary hospital, \$10,000; poultry brooder house, \$27,000; dairy barn addition, \$11,000; and winter sports park, \$24,500. Buildings under construction included: an engineering unit to cost \$350,000; chemistry unit, \$253,000; biological unit, \$180,000; a students' union and other agricultural buildings were included in the plans for the biennium 1927-29. An \$8,000,000 bond issue for the erection and equipment of buildings at the college was submitted to the voters of Pennsylvania in November, 1928. President, Ralph D. Hetzel, LL.B., LL.D.

PERSIA. A monarchy of southwestern Asia, extending north from the Persian Gulf and the Gulf of Oman to the Caspian Sea. Capital, Teheran.

AREA AND POPULATION. The area has been variously estimated at from 628,000 to 635,135 square miles; the population at from 8,000,000 to 10,000,000, about 3,000,000 of whom are nomads, among whom Turks, Kurds, Leks, and Arabs predominate. The number of Europeans has been placed at 1200. The population of Teheran has been given at 350,000, but this figure is merely conjectural. Other important cities with their estimated populations are: Tabriz, 180,000;

Isfahan, 100,000; Meshed, 85,000; and Resht, 80,000. The great mass of the people are Moslems of the Shiite sect.

EDUCATION. Educational statistics for 1927 showed that there were in Persia 298 government schools, 272 national schools, 112 private schools, 45 foreign schools, 270 religious schools (mosques), and 2257 "Maktab" schools, or a total of 3263 establishments. In the first four groups (non-religious schools) a total of 65,991 boys and 18,050 girls attended. In religious schools and Maktabas there were 134,987 pupils of both sexes. The Government pays the entire cost of the government schools and grants are paid to the public, private, and foreign schools.

PRODUCTION, ETC. Agricultural production during 1927 was generally lower than in the previous year because of water shortage and damage from locusts. Cereal production was estimated at 10 per cent below normal, but with rice 5 per cent below normal. The cotton crop of 1927 was placed at 43,200,000 pounds, or 10 per cent less than in 1926. Tobacco production was estimated at 26,500,000 pounds as compared with 25,500,000 in the previous year. Tea production was expected to reach 99,000 pounds as against 80,000 pounds in 1926. Wool production was placed at 14,000,000 pounds as against 9,810,000 in 1926. Opium production was estimated at normal, or approximately 1,950,000 pounds. Fair harvests were indicated for nuts and fruits.

Operations of the rug industry during 1927 compared favorably with the previous year. Exports for 1926-27 were valued at \$11,960,000 and estimates for the 1927-28 year forecasted an equally successful year. General conditions in the rug industry during recent years have not been entirely satisfactory and have threatened the exports of this important manufacture. This fact, together with the increasing competition being encountered in the foreign markets, caused the Government to take steps to correct the situation by appointing a commission to investigate this industry during 1927. The commission made the following recommendations: That a standard form of contract be adopted in each weaving district; that local commissions be established to settle disputes arising out of breach of contract; that the factory system be gradually extended in place of the contract system; that breeds of sheep be improved and slaughter be rigidly controlled; that schools of design and dyeing be fostered and use of imported dyes be strictly regulated. These regulations were adopted and steps taken toward their enforcement.

Petroleum is by far the principal mineral. Other mineral deposits include iron ore, coal, copper, lead, manganese, marble, cobalt, and nickel, but of most of these there is little or no production. Production by the Anglo-Persian Oil Co. for the year 1927 was put at 36,800,000 barrels, not much more than in the two previous years. Payments to the Persian Treasury in the form of royalties for the year ended Mar. 31, 1927, were £1,390,000 as compared with £728,780 for the fiscal year 1925-26.

COMMERCE. During the fiscal year 1926-27 the value of both imports and exports (excluding mineral oils) declined as compared with that for the previous year. The adverse balance was somewhat smaller. The principal items of export and import for 1926-27 are listed in the table on the next page.

PERSIA'S FOREIGN TRADE FOR THE FISCAL YEAR ENDED MARCH 20, 1927

Commodity	1926-27

Equivalent in dollars	107,762,000

* The kran averaged \$0.0976 in 1926-27.

FINANCE. Revenues for 1926-27 according to preliminary returns, totaled \$28,780,000, as compared with \$26,200,000 for the previous year. Road tolls, sugar and tea monopoly, and public domains showed the largest increases; declines were recorded from direct taxation, customs, telegraphs, and transport service. A surplus over expenditures was indicated for both years. The last budget to receive parliamentary approval was for the fiscal year 1925-26. A budget for 1926-27 was introduced into Parliament but was not passed. For the year 1927-28 expenditures were authorized monthly at the rate of one-twelfth of the sums utilized in the 1926-27 budget. The total was expected to approximate \$25,000,000. On June 20, 1927, the funded public debt totaled

£1,667,621 and the floating debt \$788,459; this compares with £1,687,036 and \$2,038,426, respectively, on Dec. 30, 1926. Interest paid during this period on the funded debt totaled £46,900, and on the floating debt, \$122,000. Treasury resources amounted to \$19,558,000 on June 22, 1927, as compared with \$17,167,000 on Dec. 30, 1926.

COMMUNICATIONS. As noted in the Year Book for 1927, a survey was made for a Trans-Persian Railway during 1927. During 1928 it was announced that a German firm had signed a contract involving 470 miles of the projected 1070-mile line. Work was to be started immediately, and the section was to be completed in three years. A number of difficulties were foreseen on this part of the line, especially with regard to transporting material, which had to be sent via the Black Sea, the Caucasus Republic, and the Caspian Sea. It was reported that the total cost of the project was to be \$80,000,000. The railroads opened for traffic in 1928 totaled about 190 miles. During 1927 approximately 400 miles of dirt-and-gravel roads and 30 miles of macadam road were built, making a total for the country of 5440 miles of dirt road and 1150 miles of macadam road.

In 1926-27 the ports of the Persian Gulf were entered by 11,276 vessels of 9,374,000 net registered tons, with a cargo of 131,780 tons; clearances totaled 11,224 vessels of 9,354,000 tons, with a cargo of 4,599,788 tons. Entrances at the ports on the Caspian Sea totaled 2176 vessels, of 390,000 tons, with a cargo of 110,560 tons; clearances, 2158 vessels of 380,000 tons, with a cargo of 74,846 tons. The river port of Karun was entered by 1140 vessels of 62,000 tons, with a cargo of 25,503 tons; clearances totaled 1140 vessels of 62,000 tons, with a cargo of 7303 tons.

GOVERNMENT. Executive power is vested in the Shah, an absolute ruler down to 1906, when he consented to a constitutional form of government with a parliament or Mejliss. The actual running of the Government is in the hands of a cabinet. Reigning Shah in 1928, Riza Khan Pahlevi, publicly proclaimed Dec. 16, 1925; crowned, Apr. 25, 1926.

HISTORY. During the early part of the year there were rumors in the press of uprisings among the peasants of the outlying provinces of the country, but these reports appeared to have been overestimated as to importance. The trouble which arose over the question of excessive taxation was easily quelled by government troops. Anglo-Persian relations were greatly improved during the year through the medium of several agreements signed between the two countries concerning trade, commerce, and the rights of citizens of Great Britain in Persia. As noted in the preceding Year Book, the American financial adviser to Persia, Dr. Arthur C. Millspaugh, had serious differences with the Persian Government, which sought to limit his powers. He refused to renew his contract, and after a brief interim when his duties were carried on by the administrator-general of finances, he was succeeded by Dr. Lindenblatt, a German banker. The release of Dr. Millspaugh was merely another evidence of the intention of the Shah to cast aside all foreign control and capitulations and place Persia on an equal footing in the family of nations with all Western countries.

The situation in Persia was parallel in many ways to that of modern China, which during the

year was also partly successful in throwing off foreign control. The Shah of Persia had a little better success than his neighbor in Afghanistan in introducing Western ideas in his country. He completely emancipated women from the century-old customs which had surrounded them, much to their apparent delight and without a revolt ensuing on the part of the natives.

PERSIAN ARCHÆOLOGY. See ARCHÆOL-OGY.

PERSIAN LITERATURE. See PHILOLOGY, MODERN.

PERU, pē-rōō'. A republic on the Pacific coast of South America; bounded on the north by Ecuador and Colombia; on the east by Brazil and Bolivia; and on the south by Bolivia and Chile. Capital, Lima.

AREA AND POPULATION. On the basis of an estimate by the Lima Geographical Society in 1915, the total area, including Tacna, is 532,047 square miles. The last official census was in 1876, when the population was fixed at 2,660,881; an estimate in 1896 placed it at 4,634,601; another in 1921 placed it at about 5,500,000, although grave doubts were expressed in some quarters as to whether the population was increasing at all. The above figures do not include an indeterminate number of uncivilized Indians. The capital, Lima, according to the official census of Dec. 17, 1921, had 176,467 inhabitants. The estimated population of the principal cities in 1925 was as follows: Lima, 220,000, with suburbs, 260,000; Callao, 66,000; Arequipa, 58,000; Cuzco, 37,000; Ica, Trujillo, and Chiclayo, 25,000 each.

EDUCATION. Primary instruction is free and compulsory. In 1928 there were 3461 public primary schols with 6012 teachers and 272,490 pupils, and 30 public secondary schools with 583 teachers and 8646 pupils. There were also six normal schools with 60 teachers and 628 pupils, and 12 trade schools with 43 teachers and 551 students. Higher education is provided at the central university in Lima, known as the University of San Marcos, as well as in a few other universities and colleges and in several technical schools.

PRODUCTION, ETC. Contrary to the general impression, it is agriculture and not mining which is the principal source of income in Peru. Fully 80 per cent of Peru's estimated population of 5,000,000 is dependent either directly or indirectly upon agriculture. The most productive part of the country is the coastal zone, a narrow strip of land extending from the Pacific Ocean to the foothills of the Andes, and except where traversed by short rivers descending from the mountains it is typical desert country. The valleys formed by these rivers are the source of more than 90 per cent of all the cotton and sugar (the principal money crops) grown in the country, and their production is carried on by irrigation. In his message read before Congress on July 28, 1928, the President stated that of the 362,000 tons of sugar produced in the past year 300,432 tons were exported at a value of £P4,597,381. A cotton crop estimated at 60,000 tons furnished exports of 57,117 tons, worth £P6,762,637. The rice crop amounted to 28,145 tons which, though an increase over the previous crop, did not prevent the importation of 34,310 tons. Irrigation work undertaken by the Government in the past eight years has placed 26,000 hectares under irrigation. Following the example of the government, private individuals have irrigated 2080

hectares. With the projects already undertaken, there were to be 50,000 hectares under irrigation in 1929, and from 1931 on 12,000 hectares annually were to be irrigated.

The President also gave in his message an account of the following industries:

Each day the development of the mining and oil industries in Peru is more apparent. The number of claims on record in 1927 was 493,967, of which 469,293 were petroleum concessions. These figures show an increase of 180,371 claims over the previous year. The mineral production in 1927 was valued at 25,214,284 Peruvian pounds, or an increase of 2,402,514 Peruvian pounds, 11 per cent, over that of the previous year. The number of workers employed in 1927 in the mining industry was 30,000; they received about 3,000,000 Peruvian pounds in wages. In the first half of this year the lead smelter in Casapalca began operations, exporting during April 474,925 kilograms with a silver content of 5845 kilograms, and in May 1, 688,499 kilograms of lead with 17,564 kilograms of silver and 3665 kilograms of gold. Cement production increased in amount 68 per cent, and in value, 77 per cent.

Petroleum production amounted in 1927 to 1,340,600 tons, worth 15,416,900 Peruvian pounds, of which 87 per cent was exported and the remaining 13 per cent used for domestic consumption. The production of natural gasoline increased 6,000,000 gallons over that of 1927, being 17,500,000 gallons. Plants for the production of natural gasoline have been enlarged in La Brea, Paríñas, and Lobitos, a new plant with capacity for producing 10,000 gallons every 24 hours having been established in the latter place.

COMMERCE. Peru's foreign trade has fluctuated directly with the agricultural situation. During these years when both cotton and sugar were commanding increasing prices, imports climbed correspondingly and when exports of these products decreased total imports likewise fell off, although the reaction was usually retarded. The principal imports into Peru are foodstuffs, machinery and vehicles, textiles, and manufactures of metals, these classifications ordinarily accounting for more than half of the total imports. The United States supplied about 45 per cent of the foodstuffs in 1927, the principal items being lard, wheat and wheat flour, and canned goods; Hong Kong furnished 15 per cent, consisting principally of rice, while Australia took third place, its contribution being composed largely of wheat. The United States is the outstanding source for Peruvian imports of machinery and vehicles, contributing ordinarily about 65 per cent of such imports. The nearest competitor is Great Britain, with Germany a close third. In textiles, however, Great Britain continued to hold the lead, followed by the United States and Germany.

In 1927 Peruvian imports totaled £P19,377,814 as compared with £P19,560,934 in 1926; exports in 1927 totaled £P31,197,725 as compared with £P23,975,784 in 1926. The increase of exports (£P7,221,941) was due to the larger foreign sales of cotton (partly due to the Mississippi floods), minerals, wool, and by-products of cotton and other materials.

FINANCE. The Peruvian budget for 1928 as passed on Dec. 31, 1927 balanced at £P11,113,650. The Peruvian budget for 1929 was £P12,220,000, apportioned as follows: For the legislative branch, £P340,000; executive office, £P1,870,000; foreign affairs, £P347,000; justice, £P1,797,000; finance, £P4,390,000; war, £P1,631,000; marine, £P675,000; and fomento, (improvement of industry and internal affairs), £P1,170,000. The internal debt increased £P171,000 and the floating debt £P647,000 in the period January 1 to June 30, 1928. The total amount

of the public debt at the end of 1926 was \$17,247,509. A national loan of \$25,000,000 in 6 per cent gold bonds, dated Oct. 1, 1928, was floated in Europe and the United States toward the close of the year.

COMMUNICATIONS. In 1926 the total length of railway line was 2118 miles, of which 1522 miles belonged to the state and 596 to private companies. In his message to Congress on July 228, 1928, the President had the following to say about railroad and highway construction:

Railroad construction during the past year throughout the Republic cost 907,617 Peruvian pounds as against 633,070 Peruvian pounds the previous year. The Ascope Railroad to the coal mines of Huayday is to be completed this year to the terminal, Cimbón, in the Province of Cajabamba. The Recuay line will be extended to the Carás line within the year. The Chuquicara-Cajabambique line providing an outlet for the Province of Pallasca, the branch from Barranca to the Lima-Huacho line, and the line from Tambo del Sol to Pachitea are being built as rapidly as possible, material worth 50,000 Peruvian pounds having been provided for the latter. Surveys for the Huancavelica-Castrovirreina line are under way, as this railroad is greatly needed for the development of that region. Other lines are under construction or being planned.

The highways completed the past year cover 2071 kilometers, constructed at a cost of 971,433 Peruvian pounds, without counting the cost of highway bridges. Besides the completed roads, there are 9053 kilometers under construction and 10,880 kilometers of highway to be constructed. The result of this highway construction is apparent in the increase of automobile imports, there now being 6000 automobiles and 4605 trucks and busses in Peru. The highway system has two main arteries north and south, branch highways from seaports to the interior, and roads bringing outlying districts into touch with railway stations. The longitudinal coastal highway has a total length of 3094 kilometers, of which 2816 kilometers are open to traffic. The Peruvian section of the Pan-American Highway has a total length of 2885 kilometers, of which 2505 kilometers are now in use.

The President during the year authorized the extension of port works in Callao, costing about \$6,000,000, to consist of a new dock with four piers for ships of 37 feet draft. From these piers freight may be transported directly by electric cars to the warehouses. The existing dock was to be used for coastwise trade. In order to protect both the old dock and the new piers, a large breakwater was to be constructed. A large petroleum station also was to be erected here with space for tanks containing 20 to 30 tons of oil to refuel ships docked at the new piers. Land was to be expropriated for the construction of factories, work shops, customs agencies, etc. These improvements, to be completed in three years, would make Callao one of the best equipped ports in South America.

GOVERNMENT. Executive power is vested in a president elected for five years and eligible for reelection indefinitely under a constitutional change adopted in 1927; and legislative power in the Congress consisting of a Senate with 35 members and a House of Representatives with 110 members. The President acts through a cabinet of seven members, appointed and removed at his pleasure. President in 1928, Augusto B. Leguía.

HISTORY. Peru passed through a calm and quiet year under the benevolent dictatorship of President Leguía. As noted in the preceding YEAR BOOK, the constitution of the country was changed to make his tenure of office as long as he retained the confidence of the people. He certainly seemed to retain that confidence throughout the year and, if anything, to strengthen his hold on his people. The United States Ambassador to Peru, Miles Poindexter, was succeeded during the

year by Ambassador Moore. For the restoration of more or less friendly relations between Chile and Peru during the year, consult the article on **ARBITRATION, INTERNATIONAL.**

PETROLEUM. The world's production of crude petroleum during 1928 was estimated by the U. S. Bureau of Mines at 1,322,896,000 barrels, an increase over 1927 of 61,823,000 barrels, or 5 per cent. Production outside of the United States increased by approximately 61,000,000 barrels, or 17 per cent, while domestic production was estimated to have been only slightly greater than that reported for 1927. As a consequence, the ratio of the United States production to the world total dropped from 71.5 per cent in 1927 to 68.2 per cent in 1928. In this preliminary summary prepared in the Petroleum Economics Division by E. B. Swanson, the following comments are made: Venezuela, with a 1928 production of 106,000,000 barrels, as compared with 63,134,000 barrels in 1927, showed the largest increase and moved from fourth place to second among the oil-producing countries, its output being 8 per cent of the world total as compared with 5 per cent in 1927. The output of Lagunillas field increased from 28,826,000 barrels in 1927 to approximately 63,000,000 barrels in 1928. The La Rosa and Mene Grande fields also showed substantial increases. The gain in Russian output resulted from gusher production in the Surakhany and Bibi-Eibat fields at Baku and in the Novo-Grozny field, as well as from increased production by pumping. Discovery of a new pool was reported at Kara-Chukhur, in the Baku area. Mexico, which has ranked second or third among oil-producing countries since 1911, dropped to fourth place when its 1928 production decreased approximately 14,000,000 barrels from its 1927 total. Production in Persia, Rumania, and the Netherland East Indies continued to increase and these countries retained their respective positions in fifth, sixth, and seventh places among the oil-producing countries. Trinidad, with a production of 7,750,000 barrels, drew close to British India and threatened its position as the leading producer among the British Colonies. The Palo Seco area, which was producing about 18,000 barrels monthly in 1927, was reported in 1928 to be producing that amount weekly. Iraq is listed separately as a producing country for the first time. The estimate of 1928 output included the production of the Naft Khanah field near Khanaquin as well as that produced in Mosul and used in field operations.

The accompanying table shows the output of the various oil-producing countries as reported officially to the U. S. Bureau of Mines for 1927 and the estimated production of these countries during 1928. These estimates were based upon information obtained from consular officers located in various foreign countries, information received from producing companies, and such official figures as were available.

UNITED STATES CRUDE PETROLEUM. According to preliminary figures compiled from reports received at the Bureau of Mines of the Department of Commerce, from companies that operate gathering lines, 900,364,000 barrels of crude petroleum were transported from producing properties in the United States during 1928. The final figure of total production, which would include crude oil consumed for fuel on the leases and the net change in producers' stocks, might amount to 902,000,000 barrels. If this figure was

WORLD'S PRODUCTION OF PETROLEUM IN
1928, BY COUNTRIES, COMPARED
WITH 1927

Countries	Barrels of 42 U. S. gallons 1928	Barrels of 42 U. S. gallons 1927
United States	902,000,000	901,129,000
Venezuela	106,000,000	63,134,000
Russia	87,800,000	77,018,000
Mexico	50,150,000	64,121,000

attained, it would represent a new record for total production, as it was slightly above the 901,129-000 barrels produced in 1927. This was somewhat surprising in view of the apparent success which attended the many efforts to control output. These efforts were confined, in the main, to West Texas and the Seminole district. In the former, though most of the wells were shut down or pinched in immediately upon completion, the total production for the year was more than twice what it was in 1927, which more than offset the comparatively small decline in the total output in the greater Seminole district. The greatest efforts at proration in Oklahoma were concentrated on the Little River pool of the Seminole district which, by agreement, was held back until August 15. This and the natural decline of the older pools in Seminole were largely responsible for the steady decrease in the output of Oklahoma during the first four months of the year. However, though Seminole continued to decline for the next few months, the output of the State showed an increase in both May and June. The probable explanation of this is that the larger companies, faced with an increased demand for high-gravity crude and being averse to withdrawing relatively high-cost crude from storage, increased their pipe-line runs in the older fields of the State. This same situation applied to Texas, to a minor extent, it was believed.

Although the production of crude petroleum remained at a comparatively high level throughout 1928, a much better balance between supply and demand was maintained than during 1927 according to the Bureau of Mines. This was illustrated by an analysis of stocks of all oils, which increased approximately 25,000,000 barrels in 1928 as compared with about 68,000,000 barrels in 1927. The domestic demand for all oils increased 7 per cent in 1928, which was the chief reason for the smaller increase in stocks.

Texas, with an output of 256,888,000 barrels, was for the first time the leading producing State. Oklahoma dropped from first to second and California, from second to third. Production in Panhandle, Gulf, and Central Texas fell off, but these decreases were more than compensated by

the increase in Western Texas, which produced approximately 125,000,000 barrels in 1928 as compared with 50,000,000 barrels in 1927. The largest factor in the decrease in Oklahoma was the decline of the Seminole district, which, exclusive of St. Louis-Pearson and Maud, produced about 110,000,000 barrels in 1928 as compared with 135,000,000 barrels in 1927. Production in California showed a slight increase due to the comeback at Long Beach and to a last-minute spurt at Santa Fe Springs. Though Kansas, the fourth State in order of production, declined in output in 1928, the potentialities of the State were greatly increased by important discoveries late in the year. The Champagnolle field of Arkansas did not come up to expectations and the output of the State again declined.

^a Final figures for 1928 will include petroleum consumed on the leases and produced but not transported from producing properties, which may amount to 2,000,000 barrels.

^b Final figures include 7,000 barrels produced in Alaska and Utah.

Classification by gravity (approx.)	1928	1927
Light crude	806,534	788,794
Heavy crude	93,830	112,335

Stocks of crude petroleum east of California increased from 352,038,000 barrels on hand January 1 to 368,431,000 barrels on hand at the end of the year. This increase, which was all in light oil grades, was composed of a small increase in foreign refinery stocks and a sizeable increase in tank-farm stocks in the mid-continent field. Stocks of light crude in California again decreased, but stocks of heavy crude and fuel oil increased.

Imports of crude petroleum in 1928 amounted to 79,583,000 barrels, as against 58,382,632 barrels in 1927, an increase of 36 per cent. Imports from Mexico, 17,584,211 barrels, again fell off from 1927 figures, 26,019,058 barrels, but those from Venezuela, 21,987,319 barrels, virtually doubled those of 1927, 11,423,575 barrels. Imports of crude petroleum from the Netherland West Indies are stated at 24,989,387 barrels in 1928, as compared with 10,136,248 barrels in 1927. Shipments of crude from California through the Panama Canal to eastern ports declined materially, becoming practically negligible.

REFINED PRODUCTS. In the United States runs to stills of crude petroleum, both domestic and foreign, in 1928 amounted to 912,831,000 barrels, an increase over 1927 of 10 per cent. Runs of foreign crude amounted to 77,674,000 barrels, as compared with 50,106,000 barrels in 1927, a gain of over 50 per cent. Gasoline production in 1928 totaled 377,183,000 barrels, which represented an increase over 1927 of 14 per cent. This increase resulted both from increased runs to stills and from an increase in percentage recovery of from 39.6 per cent in 1927 to 41.3 per cent in 1928. The increased yield of gasoline from crude was due partly to increased cracking activity. The indicated domestic demand for gasoline (not including the relatively small items for benzol, etc.) in 1928 amounted to 328,832,000 barrels, an increase over 1927 of 11 per cent. Exports were stated at 52,897,000 barrels as compared with 44,337,000 barrels in 1927. The situation as regarded stocks of gasoline at refineries in 1928 represented a departure from the experience of many former years. Stocks in the spring months did not accumulate to the usual extent, so that by midsummer some refiners found difficulty in filling their orders. In view of this, it was probable that the low point in stocks, 26,378,000 barrels on September 30, represented only working stocks.

The production of kerosene showed a slight increase over 1927, although the indicated domestic demand showed a slight decrease. The output of gas oil and fuel oil increased, but considerable of the increase was used as cracking stock and stocks east of California showed comparatively little change. The production, indicated domestic demand, and exports of both lubricants and wax increased. Stocks of wax underwent much the same experience as gasoline stocks, that is, were reduced to a very low level in midsummer.

The kerosene produced amounted to 60,156,000 barrels as against 56,113,000 in 1927, 22,066,000 barrels being exported in 1928, and 19,537,000 in the previous year. The output of gas and fuel oil amounted to 425,755,000 barrels in 1928, and 393,066,000 in 1927, of which 44,462,000 barrels were exported in 1928, and 47,391,000 in 1927. Thirty-four million, six hundred and fifty-nine thousand barrels of lubricants were manufactured in 1928, compared with 31,721,000 in 1927, of which 11,055,000 barrels were exported

in 1928, and 9,776,000 in 1927. There were also 630,144,000 pounds of wax produced in the United States during the year, and 584,347,000 pounds in 1927, 391,623,000 pounds being exported in 1928, and 340,423,000 in the previous year.

Similar commodities were imported into the United States during 1928 in the following quantities: Gasoline, 4,296,000 barrels compared to 5,002,000 in 1927; kerosene, 204,000 compared to 55,000 in 1927; gas and fuel oil, 7,268,000 compared to 8,124,000 in 1927; lubricants, 13,000 barrels compared to 8000 in 1927; and wax, 24,748,000 pounds compared to 20,462,000 in 1927.

NATURAL GASOLINE. According to preliminary figures, the production of natural gasoline in 1928 amounted to 1,776,000,000 gallons, an increase over the corresponding figure of 1927 of 11 per cent. Stocks of natural gasoline held at the plants decreased from 30,800,000 gallons on January 1 to 25,500,000 gallons at the end of the year. Blending at the plants decreased, but sales to jobbers increased.

EXPORTS. The refined petroleum oil exported from the United States in 1928 totaled 126,186,841 barrels of 42 gallons, valued at \$464,899,317, compared with 115,398,860 barrels valued at \$429,663,342 exported in 1927. The gasoline, naphtha, and other finished light products exported in 1928 amounted to 51,756,533 barrels valued at \$231,969,946, compared with 43,334,164 barrels valued at \$209,838,685 in 1927. The chief destinations of these products were: the United Kingdom, which received, in 1928, 15,640,770 barrels valued at \$60,813,838; France, 7,726,261 barrels valued at \$31,776,511; Canada, 4,409,565 barrels valued at \$18,574,007; and Australia, 2,751,815 barrels valued at \$14,202,853. Illuminating oil, such as kerosene, amounting to 21,852,626 barrels valued at \$93,477,916 was exported from the United States in 1928, compared with 19,352,102 barrels valued at \$79,303,008 in 1927. Of these exports, China, Hong Kong, and Kwantung received 4,769,165 barrels valued at \$28,360,856; the United Kingdom, 2,944,533 barrels valued at \$8,230,792; Japan, 2,371,610 barrels valued at \$8,090,970; Australia, 998,344 barrels valued at \$5,600,594; France, 1,669,660 barrels valued at \$5,295,059; British Africa, 669,191 barrels valued at \$4,641,955; and the Netherlands, 1,599,226 barrels valued at \$4,303,208. There were also 41,558,367 barrels of gas and fuel oil exported from the United States in 1928, valued at \$45,797,151 compared with 42,963,180 barrels valued at \$49,801,802 exported in the previous year. Lubricating oil amounting to 10,849,541 barrels valued at \$91,591,415 was exported from the United States during the year, compared with 9,605,757 barrels valued at \$88,843,128 during 1927.

PETRUNKEVITCH, IVAN ILITCH. Russian statesman, died at Prague, Czechoslovakia, June 14. He was born in Tchernigov, Russia, Nov. 22, 1842. In 1868 he was elected to the district assembly. Later he became a member of the Government Assembly and from 1869 to 1879 was a member of the local judiciary. In the latter year, however, as the result of his radical declarations in favor of reforms, he was banished to Tver, where he continued to take an active part in political matters. In 1886 he was permitted to return to Tchernigov, and was again elected to the local assembly. Moving again to Tver, he resumed there his political activity,

which led to a second exile. Subsequently Petrunkevitch took a very active part in the liberation movement of 1904-06. He was vice president of the Zemstvo congresses at St. Petersburg and Moscow in 1904, and in 1905 became a leader in the Constitutional Democratic party and was elected to the first Duma, of 1906. He made the opening address at its assemblage. After the dissolution of the Duma, he was one of the deputies at the Viborg convention, at which he delivered the opening address defending its course. For this he was imprisoned, with the other 160 delegates. Opposing the Soviet régime, Petrunkevitch with other Liberal leaders in Russia was compelled to leave the country, and he spent his last years in Switzerland.

PHILIPPINES, fil'i-pîns, -pêns -pîns. The largest island group of the Malay Archipelago; a possession of the United States, ceded by Spain in the treaty of Apr. 11, 1899. Capital, Manila.

AREA AND POPULATION. Only 466 of the 7000 islands which make up the group have an area of one square mile or more. The most important islands with their area in square miles are as follows: Luzon, 40,814; Mindanao, 36,906; Samar, 5123; Negros, 4902; Palawan, 4500; Panay, 4448; Mindoro, 3794; Leyte, 2799; Cebu, 1695; Bohol, 1634; and Masbate, 1255. Total area, 114,400 square miles; population, according to the census of 1918, 10,314,310. An estimate of the population in 1927, based upon official computations, placed it at 12,353,900. The population of Manila was 285,306, according to the census of 1918. According to the same enumeration, the race distribution was as follows: Brown, 9,386,826; yellow, 50,826; white, 12,399; Negro, 7623; half-breed, 34,663. The immigrants in 1927 numbered 34,768 and the emigrants 42,821.

EDUCATION. According to the Governor's report for the calendar year 1927, the enrollment in the public schools was 1,099,127 as compared with 1,061,525 in 1926. The percentage of population in school in 1927 was 9.36 as compared with 9.17 in 1926, and the percentage of school population in school was 35.56 as compared with 34.85 in 1926. While the total enrollment in the public schools had increased, there had been for five years a steady decrease in the enrollment in the non-Christian schools. This decrease was due in part to a disinclination on the part of non-Christian parents, especially Moros, to send their children voluntarily to school, and also to a suspension for reasons of governmental policy of the application of the compulsory school law. There were in 1927, 5993 primary schools in operation, 1242 intermediate schools, and 113 secondary schools. In the secondary field of education the largest increase in enrollment recorded was in the trade schools (43 per cent). The enrollment in agricultural schools increased 10 per cent. There were 25,971 teachers employed in 1927, of whom 294 were Americans. In the same year there were 655 private schools of all grades with 86,695 students. The enrollment of the University of the Philippines under all faculties was 7553 during the year 1927-28.

PRODUCTION, ETC. The Philippine Islands are preëminently an agricultural country with an

area of about 30,000,000 hectares. Of this amount, only about 3,700,000 hectares are under cultivation, 18,800,000 hectares are covered with forests, 5,600,000 are grass and open land, 300,000 are mangrove swamp, and the rest consists of unexplored area.

The nine principal crops, which are palay (rough rice), sugar cane, coconuts, abaca, corn, tobacco, manguay, cacao, and coffee, were given a total estimated value in 1927 of \$254,439,000, or 90 per cent of the total value of all Philippine agricultural produce for that year. Only five of these crops—sugar, coconut products, abaca, tobacco, and manguay—entered into external trade, aggregating a total export value of \$80,745,000, or 92 per cent of all the exports of 1927. Adding the value of processing and manufacture, the five crops were estimated as worth approximately \$143,000,000. In addition to the major crops, the islands are well suited to the cultivation of other important tropical produce, such as rubber, tea, pineapples, citrus fruits, quinine, and camphor.

Although numerous deposits of economic minerals, such as iron ore, coal, and gold, are found in almost all the islands, the mining industry is still in its infant stage. Nearly all present-day manufacturing, except that of centrifugal sugar (37 mills), coconut oil (6 mills), desiccated coconut (7 factories), and cigars and cigarettes (3 large factories), is carried on by very small units.

COMMERCE. Trade Statistics for the calendar year 1928 indicated total value of foreign trade amounting to 289,711,444, of which imports were \$134,656,898 and exports \$155,054,546. There was an increase of imports, which in 1927 amounted to \$115,851,471, and a decrease of \$519,539 in exports. The imports reached the highest value since 1920, when they were valued at \$149,000,000. Compared with the previous year, the advance in import trade amounted to 12 per cent and represented increases for practically all items of importance and especially cotton goods. With the exception of copra, decreased market values of all leading export products contributed to the decline in total export trade, sugar shipments showing a decline of \$2,750,000 in value but slight increase in quantity. Sugar, as usual, was the leading export, the total quantity exported amounting to 569,937,628 kilos, valued at \$47,542,940, of which 534,228,520 kilos, valued at \$45,891,233, went to the United States. The copra exports for the year amounted to 234,416,772 kilos, valued at \$22,542,341, of which the United States received 182,566,022 kilos, valued at \$17,603,832. Coconut oil was exported to the amount of 142,243,147 kilos, valued at \$23,489,173, of which the United States took 140,833,659 kilos, valued at \$23,279,520. The cigar exports for the year numbered 220,884,441, valued at \$4,765,149, of which 179,569,767, valued at \$3,855,672, went to the United States. The total hemp exports in 1928 were 1,381,582 bales, value \$26,593,606, being distributed as follows: To the United States, 404,046 bales, value \$9,527,045; to United Kingdom, 359,890 bales, value \$6,239,594; to Japan, 332,031 bales, value \$5,323,401; and to other countries, 285,815 bales, value \$5,503,566. The islands' trade balance, although still substantially favorable, was reduced from \$40,000,000 in 1927 to \$20,400,000 in 1928. Of the import trade, \$83,858,068, or more than 62 per cent, was with the United States, compared

with 61.7 per cent in the previous year, and \$115,585,875, or 74 per cent of the islands' exports went to the United States, against 75 per cent in 1927. Japan, with 15 per cent of the import trade, and China, Great Britain, and Germany, in the order named, were the next most important countries of origin, and Great Britain, Japan, and Spain followed the United States as purchasers of Philippine products.

FINANCE. Preliminary reports of the department of finance for the calendar year 1928 indicated a surplus of government revenues over expenditures of more than \$2,500,000. The following statement from the Governor's report shows in brief the operation of the finances of the Philippine Government in 1926 and 1927, the currency situation, the indebtedness of the Government, and the outstanding features of the economic situation.

	1927 Pesos	1926 Pesos	Per cent increase (+) decrease (-)
Total budget revenues (actual)	\$77,977,658.68	78,413,363.51	-½
Total budget revenues (estimated in budget)	72,289,450.00	74,027,800.00	-2
Total budget expenditures (actual)	74,595,811.68	90,948,609.22	-18
Extraordinary expenses ^a	76,130.00	21,289,671.79	...
Ordinary budget expenditures	74,619,681.68	69,658,931.43	+7
Total budget expenditures (estimated in budget)	76,102,487.00	69,561,754.00	+9
Total budget surplus (including continuing assets, advances to money-order fund, and unexpended appropriations)	\$35,591,566.39	32,209,719.39	+10
Net cash balance unappropriated	12,320,454.50	12,582,479.30	-2

^a Decrease mainly due to fall of import duties on rice.

^b Includes extraordinary expenditures for rehabilitation of sinking funds and Philippine National Bank and creation of loan fund under Act 3335.

^c Includes P23,271,111.89 of "continuing assets," "advances to money-order fund," and "balances of outstanding appropriations," leaving an unappropriated cash surplus on Dec. 31, 1927, of P12,320,454.50 as against P12,582,479.30 on Dec. 31, 1926.

COMMUNICATIONS. Most of the foreign shipping is done through the port of Manila, although some of the smaller ports have direct communication with foreign countries. During the calendar year 1927, 1095 vessels of 4,150,152 tons entered the ports of the islands in the foreign trade and 1093 vessels of 4,133,611 tons cleared. In the coastwise trade, 21,125 vessels of 2,802,042 tons entered and 21,317 vessels of 2,739,532 tons cleared.

The railroads of the Philippine Islands are owned and operated by private companies, the Manila Railroad Co. and the Philippine Railway Co. The Manila Railroad Co. operates the railways in the island of Luzon, comprising 1161 kilometers of 3-foot 6-inch gauge track, of which 659 kilometers are main line, 402 kilometers are branch line, and 100 kilometers are sidings. Operating revenues during 1927 amounted to \$6,519,270, as compared with \$6,326,200 in 1926, and operating expenses were \$3,806,966 as compared with \$3,847,131. The motive power and rolling stock in operation at the close of 1927 consisted of 152 locomotives, 1837 freight cars, and 194 passenger coaches. During the year six locomotives, 160 freight cars, and seven passenger coaches were purchased.

The Philippine Railway Co. operates the railways in the islands of Panay and Cebu. This comprises 212 kilometers of 3-ft. 6-in. track, all of which is main line. Operating revenues in 1927 amounted to \$681,543, and operating expenses to \$495,375, as compared with \$666,643 and \$511,208, respectively, in 1926. During the year, construction work was in progress on two kilometers of track in the city of Iloilo, in addition to a new station and grounds. This work

cost \$125,000, and the track was opened to traffic on Apr. 1, 1928. At the close of 1927 there were in operation 16 locomotives, 231 freight cars, and 54 passenger cars; five cane cars were purchased during the year.

GOVERNMENT. Executive power is in the hands of a governor-general appointed by the President of the United States, by and with the advice and consent of the Senate; and in six departmental secretaries, all of whom are Filipinos, with the exception of the vice governor (appointed in the same manner as the governor-general), who acts as secretary of public instruction. Legislative power is in a senate of 24 members and a house of representatives of 93 members, all of whom are elected by popular vote, with the exception of nine representatives and two senators appointed by the governor-general to represent certain provinces. A council of state, com-

posed of the governor-general as president, the presidents of both branches of the legislature, and the departmental secretaries, constitutes the link between the administrative and legislative departments. Governor-general in 1928, Henry L. Stimson.

HISTORY. The Philippine Islands passed a year of comparative quiet under the intelligent rule of Governor Stimson. He seemed to have made the Filipinos realize that no matter how they felt on the question of independence, they would of necessity have to exploit their economic resources whether under the American flag or their own. It was felt in many quarters that the bitter-enders among the independence groups were outmaneuvered by Mr. Stimson in his diplomatic handling of domestic problems and his apparent sympathy for the wishes and aims of the general mass of the people. One illustration of the gradual calming of the radical group in the eyes of the people was the defeat of the party favoring immediate independence in the municipal elections held in June. The successful party, the Nationalist, favored ultimate independence but believed in coöperation at that time.

On November 23 and 24, the islands were visited by a terrific typhoon, which seriously damaged crops and congested transportation. Estimates at the close of the year placed the value of crops and property permanently destroyed at about \$25,000,000 and the agricultural loss for the next two years at the same figure. Serious shortage of food at the time of the typhoon was avoided by the distribution of seeds of quickly growing food crops and immediate livelihood was provided the sufferers by employment in public-works construction.

PHILLIPS UNIVERSITY. A coeducational institution of higher learning, at University Station, Enid, Okla., founded in 1907. The student enrollment for 1927-28 in all departments was 879, and the limited freshman admission was 270. The faculty numbered 39. The productive endowment amounted to \$548,830. The library contained 16,537 volumes, exclusive of public documents. President, Isaac Newton McCash, A.M., D.D., LL.D.

PHILOLOGY, CLASSICAL. The best way to gain a fair conception of the more important contributions to classical philology is to examine lists of articles and books, or abstracts of them, or both, given in certain periodicals—*American Historical Review*, *The American Journal of Philology*, *The Classical Journal*, *The Classical Quarterly*, *The Classical Review*, *The Classical Weekly*, *Historical Outlook*, *Athenæum* (published at Pavia, Italy), *Bulletin Bibliographique et Pédagogique du Musée Belge* (a companion to *Le Musée Belge*, *Revue de Philologie Classique*), *Philologische Wochenschrift*, *Gnomon*, and *Revue de Philologie*. The reviews, too, in these periodicals are very helpful. Especially valuable is *Bibliotheca Philologica Classica*, *Beiblatt zum Jahresbericht über die Fortschritte der Klassischen Altertumswissenschaft*, whose aim is to cover all publications, both articles and books (except such as are definitely pedagogical in character), in the whole field of classical philology. No attempt is made, however, to indicate the relative value of items listed. Volumes 53 and 54, covering 1926 and 1927, contained respectively 4780 and 3821 items. Very valuable in these volumes is the "Namenverzeichnis," of 74 pages and 58 pages, which gives in alphabetical order the names of the scholars whose articles or books are named in the body of the work, with references back to the numbered items which describe articles or books.

The Year's Work in Classical Studies, published in England, lists material that appears between July 1 and June 30, under such captions as "Greek Literature," "Latin Literature," "Greek History," "Roman History," "Greek and Roman Religion," "Ancient Philology," "Greek Archaeology and Excavation," "Italian Archaeology and Excavation," "Papyri," and "Roman Britain."

The Association Guillaume Budé, in Paris, published *Dix Années de Bibliographie Classique: Bibliographie Critique et Analytique de l'Antiquité Gréco-Latine pour la Période 1914-1924: Deuxième Partie, Matières et Disciplines*. In this part the matters covered by classical philology are arranged in groups (e.g. literature, philology and linguistics, antiquities, history, law, philosophy); the books or articles dealing with those subjects are arranged by the names of the authors of the books or the articles. The "Index des Noms D'Auteurs" covers 41 pages, four columns to the page. In many instances there is a brief outline of the contents of book or article. A further valuable feature is the inclusion of references to reviews of articles or books.

To the *Loeb Classical Library* (see YEAR BOOKS, 1911-1927) additions were made, on the Greek side, of versions of Athenæus, *The Deipnosophists* (the second of seven volumes), C. B. Gulick; Epictetus (the second and last volume), W. A. Oldfather; Isocrates (the first of three volumes), G. Norlin; Josephus (the third of eight

volumes covering *The Jewish Wars*, Books IV-VII), H. St. J. Thackeray; Plutarch, *Moralia* (second of fourteen volumes), F. C. Babbitt; Procopius, *History of the Wars* (fifth of seven volumes), H. B. Dewing; Oppian, Colluthus, and Tryphiodorus, A. W. Mair; St. Basil (second of four volumes), R. J. Deferrari; Strabo, *Geography* (fifth of eight volumes), H. L. Jones. On the Latin side translations were added of Cicero, *De Re Publica* and *De Legibus* (in one volume), C. W. Keyes; Cicero, *Letters to His Friends* (second of three volumes), W. G. Williams; Cicero, *Verrine Orations* (first of two volumes), L. H. G. Greenwood; Aulus Gellius (third and last volume), J. C. Rolfe; Lucan, J. D. Duff; Seneca, *Moral Essays* (first of three volumes), J. W. Basore; Statius, complete (two volumes), J. H. Mozley. On the *Loeb Classical Library*, see *The Classical Weekly*, vol. xxi, pp. 1-3, 9-11, 17-19, 25-27.

The first complete translation of the *Chronicle*, or *History of the Two Cities*, of Bishop Otto of Freising appeared. It is the work of an American scholar, C. C. Mierow. Thus for the first time this important work is accessible to those who are not masters of Latin.

The great *Lexicon Plautinum*, by G. Lodge, was advanced by the publication of vol. ii, part iv. Thirteen hundred pages of this monumental work have appeared; it is gratifying to know that the manuscript of the remaining 480 pages is ready. This work is the most extensive undertaking that any American classical scholar has thus far, single-handed, essayed and accomplished.

In *The American Journal of Philology*, xlix, appeared "A Study in the Commercial Relations between Egypt and Syria in the Third Century Before Christ," G. McL. Harper, Jr.; "Greek Fish-Names, Part II, Part III," F. A. Wood; "The First Idyl of Moschus in Imitations to the Year 1800," J. Hutton; "The Deification of Demetrius Poliorcetes," K. Scott; "Lucilian Genealogy," A. B. West; "Three Notes on Juvenal," H. C. Nutting; "Juvenaliana," L. G. Pockock.

From *Classical Philology*, xxiii, may be mentioned "The Archetype of the Roman Agrimensores" (a more accurate title would be "The Archetype of the Corpus Agrimensorum Romanorum"), C. H. Beeson; "Administration of Justice in Rural Attica," R. J. Bonner; "The Petition of a State Farmer in Roman Egypt," C. W. Keyes; "The Administration of Justice in the Second Athenian Confederacy," H. G. Robertson; "Studies in Greek Noun-formation," G. R. Vowles; "The First Satire of Persius," G. L. Hendrickson; "Leukas-Samé," A. Shewan (the author challenges the argument of F. Brewster that the island of Leukas is the Homeric Samé. Mr. Brewster is, however, supported by A. D. Fraser: see below in this paragraph); "Tibullus in the Mediæval Florilegia," B. L. Ullman; "Homer's Ithaca and the Adjacent Islands," A. D. Fraser (the author concludes that Dulichium is Corfu, Samé is Leukas, Ithaca is Cephalonia, Zacynthus is Zante, Asteris is Thiaki); "Herodotus and Athens," J. Wells; "The Third Satire of Persius," G. L. Hendrickson; "Recent Interpretations of the *Timæus* (of Plato)," P. Shorey; "Another 1508 Aldine Pliny (the younger)," B. L. Ullman; "The Newly Discovered Cyrenaean Inscription and the Alleged *Imperium Majus Proconsulare* of Augustus," D. McFayden.

In *The Classical Journal*, xxiii, xxiv, appeared "Apophoreta," S. L. Mohler; "Phonetic Laws," E. H. Sturtevant; "The *Ab Urbe Condita* Type of Expression in Greek and English," E. Adelaide Hahn; "Crime and Criminals in Aristophanes," L. Van Hook; "Cicero: A Sketch," W. A. Oldfather; "Homeric Laughter," J. W. Hewitt; "Tiberius and the Development of the Early Empire," F. B. Marsh; "Vergil's Motivation of the *Aeneid*," F. J. Miller; "Some Survivals of Magic in Roman Religion," E. E. Burriss; "The Conquests of the Latin Language," R. G. Kent.

The Classical Weekly, xxi, xxii, contained the following articles: "Scholarship," C. Knapp; "The Classical Invasion of English Literature," H. A. Watt; "Aristotle's Lost Chapter on Comedy," K. K. Smith (a searching review of a book by L. Cooper, entitled *An Aristotelian Theory of Comedy*); "Caesar, De Bello Gallico 7.45-52. The Attack at Gergovia: A Case of the 'Limited Objective,'" L. Mac Veagh; "The Sortes Vergilianae," Helen L. Loane; "Cicero, In Catilinam 1.15: On the Translation of Declinatione, Et Ut Aiunt, Corpore," E. S. McCartney, C. Knapp, C. M. Knapp; "Roman Commerce in the Early Empire," E. W. Bowen; "Linguistic Science and Classical Philology," E. H. Sturtevant and R. G. Kent; "Centurio Romanus—'A First-Class Fightin' Man,'" C. S. Smith; "Greek and Roman Weather Lore of the Sun and the Moon," E. S. McCartney; "Latin in Colonial Virginia," Martha W. Hiden; "Some Remarks on Cicero as a Student," C. Knapp; "Is There an *Africitas*?", Sister Wilfrid.

In *Transactions and Proceedings of the American Philological Association*, lviii, which contained the papers read before the association at its meeting of December, 1927, the following articles appeared: "Cicero's Treatment of the Free Will Problem," Margaret Y. Henry; "The Insanity of the Hero—An Intrinsic Detail of the Orestes Vendetta," Florence M. B. Anderson; "The Volscians in Vergil's *Aeneid*," Catharine Saunders; "Aristotle and the Voluntary," T. Means; "Alexander's Horns," A. R. Anderson; "A Weaver of Oxyrhynchus—A Sketch of an Humble Life in Roman Egypt," Ethel H. Brewster; "Ancient Forests and Navies," A. C. Johnson; "The Language of the Greek Inscriptions from the Jewish Catacombs of Rome," H. J. Leon; "The Nomarch Nicanor," C. J. Kraemer, Jr.

From the *Philological Quarterly*, vii, we may mention "The Originality of Terence," R. C. Flickinger; "Longinus on the Sublime. Some Historical and Literary Problems," W. Rhys Roberts; "Ovid's *Carmina Furtiva*," R. S. Radford.

In England the more accessible repositories of the results of classical study are *The Year's Work in Classical Studies* (see the second paragraph of this article), *The Classical Quarterly*, and *The Classical Review*. The articles in *The Classical Review* are very numerous, and are in consequence very short. From *The Classical Quarterly* we mention the following: "Prosody and Method, II," A. E. Housman; "The Vatican Plato," L. A. Post; "'Imitation' in Plato's *Republic*," J. Tate; "Horace and the Moral Function of Poetry," J. Tate; "The *Equites Illustres*," H. Hill; "The *Periplus Maris Erythraei*," M. P. Charlesworth; "The *Parmenides* of Plato and the Origin of the Neoplatonic 'One,'" E. R. Dodds; "The Seventh and Eighth Platonic Epistles," J. Harward (the author regards these letters as the work of Plato).

Mention, however brief, must be made of two other periodicals published in the United States. One is *Language*, the organ of the Linguistic Society of America, the other *Speculum*, published by The Medieval Academy of America.

There remains space enough to mention only a few of the important books that have come to the writer's attention. Since it is, in general, clear from its title to which field of classical philology each book belongs, the books are listed in the alphabetical order of their authors' names. In a few instances a needed word of comment is added: C. Bailey, *The Greek Atomists and Epicurus*; R. H. Barrow, *Slavery in the Roman Empire*; H. J. Bayles, *Minucius Felix and his Place Among the Early Fathers of the Latin Church*; E. Bevan, *A History of Egypt Under the Ptolemaic Dynasty*; C. W. Blegen, *Zygouries: A Prehistoric Settlement in the Valley of Cleonae*; G. S. Brett, *Psychology, Ancient and Modern*; R. Briffault, *The Mothers, A Study of the Origin of Sentiments and Institutions* (3 volumes); C. D. Buck, *Introduction to the Study of the Greek Dialects* (revised ed.); M. D. Bundy, *The Theory of Imagination in Classical and Medieval Thought* (published in *University of Illinois Studies in Language and Literature*, vol. xii); J. Burnet, *Platonism*; G. M. Calhoun and Catherine Delamere, *A Working Bibliography of Greek Law; The Cambridge Ancient History*, Second Volume of Plates; P. R. Coleman-Norton, *Palladii Dialogus de Vita S. Joannis Chrysostom*, edited; R. S. Conway, *Harvard Lectures on the Vergilian Age*; L. Cooper, *A Concordance to Boethius*; L. Cooper and A. Gudeman, *A Bibliography of the Poetics of Aristotle*; N. Douglas, *Birds and Beasts of the Greek Anthology*; W. C. Edward, *The Suasoriae of Seneca the Elder* (translated and explained); T. Frank, *Catullus and Horace*;

M. N. Gillies, *The Argonautica of Apollonius Rhodius*, Book iii, edited; J. Harward, *The Epinomis of Plato*, edited and translated; T. R. Holmes, *The Architect of the Roman Empire* (Julius Caesar); J. Krohmayer and G. Veith, *Heerwesen und Kriegführung der Griechen und Römer*; R. W. Livingstone, *The Mission of Greece: Some Greek Views of Life in the Roman World*; H. Mattingly, *Roman Coins from the Earliest Times to the Fall of the Western Empire*; B. D. Meritt, *The Athenian Calendar in the Fifth Century* (this work is based on a study of the detailed accounts of money borrowed by the Athenian State); G. Murray, *The Classical Tradition in Poetry*; W. Nestle, *Eduard Zellers Grundriss der Geschichte der Griechischen Philosophie*, 13th ed.; H. N. D. Parker, *The Roman Legions*; V. Pärvan, *Dacia: An Outline of the Early Civilizations of the Carpatho-Danubian Countries* (this work bears on early Greek or pre-Greek civilization); Pauly-Wissowa, *Real-Encyclopädie der Classischen Altertumswissenschaft*, vol. xiv, part i (this part contains the articles "Lysimachus" to "Mantike"); C. W. Previté-Orton, *The Defensor Pacis of Marsilius of Padua*, edited;

E. K. Rand, *The Founders of the Middle Ages*; D. Randall-MacIver, *The Iron Age in Italy, A Study of Those Aspects of the Early Civilization which are Neither Villanovan nor Etruscan* (1927); W. Rhys Roberts, *Greek Rhetoric and Literary Criticism*; H. J. Rose, *A Handbook of Greek Mythology Including its Extension to Rome*; M. Rostovtzeff, *Mystic Italy* (a study of

the archæological evidence regarding the Greek mystery religions of the first three centuries A. D. in Rome and Pompeii); M. Schanz, *Geschichte der Römischen Literatur*, 4th ed., by C. Hosius: Erster Teil, "Die Römische Literatur in der Zeit der Republik"; R. Scoon, *Greek Philosophy Before Plato*; Stolz-Schmalz, *Latcinische Grammatik*, 5th ed., by M. Leumann and J. H. Hofmann, Zweite Lieferung, covering "Syntax und Stilistik"; D. R. Stuart, *Epochs of Greek and Roman Biography*; Dorothy Tarrant, *The Hippias Major Attributed to Plato, with Introductory Essay and Commentary*; A. E. Taylor, *A Commentary on Plato's Timæus* (a very elaborate work, by an English scholar, much praised by English reviewers, praised and condemned both by P. Shorey, in *Classical Philology*, xxiii); *Thesaurus Linguae Latine*, volume v, Fasciculus VIII, containing the articles *I. do to dolor*; A. Thumb, *Grammatik der Neugriechischen Volkssprache*, 2d ed., by J. E. Kalitsunakis; E. H. Warmington, *The Commerce Between the Roman Empire and India*.

PHILOLOGY, MODERN. The Glozel controversy which had been raging in France for two years and in which leading anthropologists, archæologists, and philologists had taken so active a part, resolved itself into an anti-climax of a somewhat ridiculous character. The French Government, having been called upon by participants on both sides of the famous quarrel, appointed M. Bayle of the Judiciary Police to make a thorough examination. Though making no pretensions to a knowledge of either anthropology or archæology, M. Bayle turned out to be an excellent detective. He selected ten objects at random from the Glozel Museum, near Vichy, and soon revealed overwhelming evidence of modern manufacture. Thus, inscriptions were shown to have been made with modern steel instruments; bone implements were found to contain gelatinous matter in the marrow; pieces of thread embedded in the pottery were colored with modern aniline dyes; a bit of grass found in a piece of earthenware had its cells intact, etc. Thus Glozel becomes a hoax and ranks among the most famous in history.

Nevertheless, this controversy had certain positive aspects. In the first place it served as a warning to scholars not to be too prone to accept so-called archæological discoveries at their face value. Every possible evidence of authenticity should be adduced before pronouncing an opinion. The writer of these lines recalls having, in his boyhood, perpetrated a hoax of a similar nature on a well-known Indian archæologist and museum director in order to prove that his theory of the manner in which arrow-points were made was not a correct one. Secondly, the extraordinary international publicity attracted to the controversy aroused more than anyone could have foreseen the interest of the reading public in anthropological and archæological investigations. It is said, e.g., that one archæological society received more than \$100,000 in unsolicited donations as a consequence of the interest shown in the discoveries made in Egypt some two or three years ago. It is unnecessary, therefore, for scholars to bewail the outcome of the Glozel fiasco.

The apparent gullibility of those great scholars, whose authority had never been questioned heretofore, may be condoned to a certain extent in view of the unusual multiplicity of discoveries made in recent years. So great is our interest in

the origins and history of prehistoric man that literally hundreds of surveys and excavations are being made in every part of the world. A few years ago, Camille Jullian, a leading archæologist of France—and who, incidentally, did not question the authenticity of the Glozel finds—informed the writer that almost before an article on the subject had gone through the process of printing, it was out of date. We should, therefore, not be astonished at reversions of opinions by scholars, so far-reaching as to appear at times catastrophic. In fact, newspapers and scientific journals have been filled during the past few years with new evaluations of evidence by Sir Arthur Keith, Henry Fairfield Osborn, Franz Boas, Ales Hrdlicka, Prof. D. M. S. Watson, and many others.

In a cable to the *New York Times*, dated August 17, Roy Chapman Andrews announced that though the hoped-for discoveries of the pre-dawn man were not made, entirely new light was thrown by his findings on the old and the new Stone Age. "Though many implements that we gathered," he writes, "date back 150,000 years, the most interesting finds show that 20,000 years ago Mongolia was much more densely populated than now by dune dwellers, who, when saturation was reached, probably spread into China and into Siberia, and thence to Alaska and also to Europe." And on July 3, Harold McCracken, leader of the so-called Morrissey party, announced that he had discovered on an Aleutian island, off the coast of Alaska, four mummies of Stone Age men. Other discoveries of scarcely less importance were announced as having been made in New Mexico and Australia.

While our unfortunate experience with Glozel may incline us to be skeptical regarding the validity of these discoveries, there was no doubt that some of them will tend to render unstable many of the "pet" theories of anthropologists, archæologists, and philologists.

Until recent years each one of these three groups of scientists seemed to resent any co-operation from the others in solving its special problems. The anthropologist felt that the origin of prehistoric man was his own special field of study, not to be encroached upon by anyone else; to the archæologist the study of the culture of prehistoric man was confined solely to his domain of research; whereas the philologist attempted to preëempt as his own all that pertained to language, its origin and history. When evidence was contradictory or lacking, free play was given to the imagination. Consequently, many beautiful theories evolved in the past are doomed, if not to utter destruction, at least to considerable modification.

For the convenience of the reader, a few of the more important summaries of investigations may be mentioned: Franz Boas, *Anthropology and Modern Life* (N. Y.) *, a popular presentation; Sir Arthur Keith, *Concerning Man's Origin* (ib.); Keith Henderson, *Prehistoric Man* (ib.); R. S. Lull, *Ancient Man* (ib.); H. F. Cleland, *Our Prehistoric Ancestors* (ib.); Mary E. Boyle, *In Search of Our Ancestors* (Boston), being an attempt to retrace man's origin and development from later ages back to their beginnings; D. Randall-MacIver, *The Iron Age in Italy* (N. Y.), a study of those aspects of that early civilization which are neither Villanovan nor

* When no date is given it means that the work was published in 1928.

Etruscan; the same author's *The Etruscans* (ib.), an attempt to show that this ancient people of Italy came from Asia Minor about 800 B.C., bringing with them a well-developed culture; Vasile Parvan, *Dacia* (ib.), an outline of the early civilization of the Carpatho-Danubian countries; C. Dawson, *The Age of the Gods* (Boston), a popular presentation of the origins of culture in prehistoric Europe and the East; and F. S. Chapin, *Cultural Change* (N. Y.), an account of man's cultural development from ancient times to the present.

G. Elliott Smith, B. Malinowsky, H. J. Spinden, and A. Goldenweiser, *Culture: The Diffusion Controversy* (ib.), represents an attempt to present the opposing theories of anthropologists and archaeologists, raging furiously among them, as to whether culture began indigenously among different races in different parts of the world, or whether it drew its sources from one single race in one land and thence spread to other continents and peoples. The work reveals two marked traits, not to be expected from scholars of such high standing. In the first place, what high-sounding theories can be built upon the flimsiest evidence, and, secondly, what extraordinary bitterness characterizes the arguments of each of the various adversaries. The first impression the reader gets is that Molière's portrayal, in *The Bourgeois Gentilhomme*, of the philosopher, the teacher of singing, and the dancing master, may also be applied to modern anthropologists. See ANTHROPOLOGY.

Sir Richard Paget, the phonetician, evolved, in an address before the British Association for the Advancement of Science at Glasgow on September 6, a new theory for the origin of language. This time he resorts to mouth gestures—which he labels pantomimic action—as the primitive means of conveyance of symbolized ideas. This theory goes back to Charles Darwin, who observed that persons cutting with a pair of scissors often moved their jaws sympathetically. "Primitive man would sing, grunt, or roar to express emotions just as the animals did," according to Sir Richard. "He would pantomime with his face and limbs to express his ideas to his fellows, and, as he pantomimed with his hands, his tongue would follow suit. But, as he came to occupy his hands more and more in his crafts, he would have to rely more on gestures of the face, tongue, and lips. Then it would come about that pantomime action would be recognized by sound as well as sight. Thus speech was born." A very attractive explanation at first sight, but which seems to recall in many ways Max Müller's pet hobby, once jocularly known as the Je-Hai-Ho theory of the origin of language.

ARCHAEOLOGY. This field is represented in K. S. Sandford, *First Report of the Prehistoric Survey Expedition* (Chicago), containing an account of some Egyptian discoveries; Bertha Porter and Rosalind L. B. Moss, *Typographical Bibliography of Ancient Egyptian Hieroglyphic Texts, Reliefs, and Paintings* (N. Y.), of which the first volume is devoted to the Theban Necropolis; W. Woringer, *Egyptian Art* (ib.), translated from the German with an introduction by B. Rackham; James Baikie, *The Glamour of Near East Excavation* (Phila.), a recital of the feverish search for the buried art, wisdom, and history of the ancient East, from the Nile to Babylon; M. G. Kyle, *Explorations at Sodom* (N. Y.); Ivar H. N. Evans, *Papers on the Ethnology and Archaeol-*

ogy of the Malay Peninsula (ib.); and G. S. Duncan, *Introduction to Biblical Archaeology* (ib.), a textbook.

SOUTH AFRICA. Contributions to the language, customs and folklore of the tribes of this region include M. C. Burkitt, *South Africa's Past in Stone and Paint* (N. Y.), being studies in archaeology; C. G. Botna, *Place Names in the Cape Province* (Cape Town); C. Bullock, *The Mashona* (ib.), a study of the natives of Southern Rhodesia; W. C. Willoughby, *The Soul of the Bantu* (N. Y.), containing research into the customs of these tribes; C. G. Botha, *Social Life in the Cape Colony in the 18th Century* (Cape Town), a brief survey; and Blaise Cendrars, *The African Saga* (N. Y.), a translation of a French collection of stories, dealing with the folklore of twenty or more African tribes, speaking widely different tongues.

CHINA AND JAPAN. The prolonged revolution in China, accompanied by an unusual awakening of ideas, as well as the progress of culture in Japan, were claiming more and more the attention of the Occident. Investigations into the past history of these countries have, therefore, a strong appeal for the reading public. Among the noteworthy contributions of the year are J. C. Ferguson and M. Anesaki, *Chinese-Japanese Mythology* (Boston), a new volume in the series entitled *The Mythology of All Races*; Huc and Gabet, *Travels in Tartary, Thibet, and China* (2 vols., N. Y.), translated by W. Hazlitt and edited, with an introduction, by Paul Pelliot of the Collège de France; Chi Li, *The Formation of the Chinese People* (Cambridge, Mass.), an anthropological study; H. F. Rudd, *Chinese Social Origins* (Chicago), an inquiry into the period before Confucius; E. T. Williams, *A Short History of China* (N. Y.), from the earliest times to the present day; Ezra Pound, *Ta Hio: The Great Learning* (Seattle, Wash.), consisting of selections from the Confucian classics; J. S. Burgess, *The Guilds of Peking* (N. Y.), recounting their history in ancient China; R. L. Hobson, *Chinese Art* (ib.), a scholarly outline by the Keeper of the Department of Ceramics and Ethnography at the British Museum; Louise W. Hackney, *Guide-Posts to Chinese Painting*, an inferior work though announced as having been edited by Paul Pelliot, a leading authority on the subject; and V. Dyson, *Forgotten Tales of Ancient China* (Shanghai), a translation into English of a large collection of legends, etc.

G. B. Sansom, *Historical Grammar of Japanese* (N. Y.), contains the history of grammatical forms and common idioms. Other works include J. I. Bryan, *Civilization of Japan* (N. Y.); the same author's *The Journal of Kenko* (Seattle, Wash.), consisting of meditations of a mediæval Japanese philosopher; *Poetry of the Orient* (N. Y.), an anthology edited by Eunice Tietjens; and J. L. French, *Lotus and Chrysanthemum* (N. Y.), an anthology of Chinese and Japanese poetry.

F. A. Ogg, *Research in the Humanistic and Social Sciences* (N. Y.) consists of the report of a survey made for the American Council of Learned Societies. John Percival Postgate, 1853-1926 (ib.), a pamphlet issued by the British Academy, contains a study of the extensive contributions of the well-known British philologist.

INDO-IRANIAN. Studies in this field suffered a severe loss last year in the death of Maurice Bloomfield, the famous pioneer philologist of Johns Hopkins University. One of the most valu-

able contributions of the year is *Zoroastrian Studies* (N. Y.), by A. V. Williams Jackson, the distinguished professor of Columbia University. The work consists of a collection of studies on Iranian religion and kindred topics. Other contributions to the same field of research include C. E. Pavry, *Iranian Studies* (Bombay, 1927), also dealing with ancient Persia; *A Persian Anthology* (N. Y., 1927), consisting of translations by E. G. Browne, edited by E. D. Ross, with an introductory memoir of the translator by J. B. Atkins; P. Salet, *Omar Khayyam* (Paris), a French study on the famous Persian author; Edw. Fitz-Gerald, *The Rubaiyat of Omar Khayyam* (London), a new edition of the well-known translation, with illustrations in color by C. Robinson; and *The Poems of Nizami* (London), described by L. Binyon, and containing reproductions in color of the paintings and ornamentations in this sixteenth-century Persian manuscript.

Turning to India, we note, first of all, E. W. Hopkins, *Legends of India* (New Haven, Conn.), consisting of reinterpretations in verse of old Hindu tales; P. D. Shastri, *Essentials of Eastern Philosophy* (N. Y.), being two addresses delivered at the University of Toronto during the Philosophical Conference of 1922; J. B. Pratt, *The Pilgrimage of Buddhism* (ib.), in which the author attempts to supply a sense of Buddhism as a whole and an understanding of the philosophy as it is lived today; J. E. Ellam, *The Religion of Tibet* (ib.), an interpretation of Buddhism as practiced in that country; M. G. Mori, *Buddhism and Faith* (Tokyo, Japan), a study of the religion as practiced by the Japanese; J. F. C. Fuller, *Yoga* (Phila.), a discussion of the mystical aspect of Brahminism and Buddhism; J. E. Abbott, *Bhikshugita, or the Mendicant's Song* (Summit, N. J.), being a translation of the twenty-third chapter of the Eknathi Bhagavata; H. R. Trevaskis, *The Land of the Five Rivers* (N. Y.), an economic history of the Punjab from the earliest times down to 1890; and E. T. Thompson, *Suttee* (Boston), described as a historical and philosophical inquiry into the Hindue rite of widow-burning.

RELIGION. A few general works of importance to the philologist may be noted: M. J. Herzberg, *Myths and Their Meaning* (N. Y.), an introduction to Greek, Roman, and Celtic mythology, intended for high-school students; E. Schure, *From Sphinx to Christ* (Phila.), a translation from the French of an outline of the evolution of religion; F. E. Williams, *Orokawa Magic* (N. Y.), a study of a primitive religious movement; *Some Authentic Acts of the Early Martyrs* (ib.), translated by E. C. E. Owne from the lives of the Saints; and G. G. Coulton, *Five Centuries of Religion* (vol. 2, London), dealing with "The Friars and the Dead Weight of Tradition, 1200-1400. A.D."

MIDDLE AGES. Among general works dealing with this vast period, mention should at once be made of Prof. Charles S. Baldwin's new volume in his comprehensive series on the history of *Rhetoric: Medieval Rhetoric and Poetic* (to 1500; N. Y.). This most welcome work reveals further the extensive scholarly equipment of the author. Other contributions include R. Guette, *La Légende de la Sacristine* (Paris), a study in comparative literature; M. Heepe, *Lautzeichen und Ihre Anwendung in Verschiedenen Sprachgebieten* (Berlin); E. K. Rand, *Founders of the*

Middle Ages (Cambridge, Mass.), a study of the cultural achievements of the Middle Ages; E. B. Osborn, *The Middle Ages* (N. Y.), discussing the mediæval mind, the Christian commonwealth, organization of society with special reference to the status of women and kindred topics; a new edition of the first volume of G. G. Coulton's *Life in the Middle Ages* (ib.), devoted to "Religion, Folklore, and Superstition"; J. W. Thompson, *Economic and Social History of the Middle Ages* (ib.); the fifth volume of Sir R. W. and A. J. Carlyle's *History of Medieval Political Theory in the West* (ib.), which treats of the political theory of the thirteenth century; H. R. Patch, *The Goddess Fortuna in Medieval Literature* (Cambridge, Mass., 1927), a scholarly investigation into the vast influence of a subject that engrossed the attention of many mediæval writers; W. R. Newbold, *The Cipher of Roger Bacon* (Phila.), a study of the Voynich manuscript by the late professor of philosophy in the University of Pennsylvania; *The Opus Majus of Roger Bacon* (2 vols., Phila.), a new translation by R. B. Burke; P. S. Allen, and H. M. Jones, *The Romanesque Lyric* (Chapel Hill, N. C.), consisting of studies in its background and development from Petronius to the Cambridge Songs (50-1050 A.D.); *Contemporaries of Marco Polo* (N. Y.), edited by M. Komroff, consisting of the travel records in the East of William of Rubruck (1253-55), John Pian de Carpini (1245-47), Friar Odoric (1318-30), and Rabbi Benjamin of Tudela (1160-73); and Merriam Sherwood and E. Mantz, *The Road to Cathay* (ib.), a work also dealing with mediæval travelers.

The Renaissance and the Reformation are studied in the following works: R. Ehrenberg, *Capital and Finance in the Age of the Renaissance* (ib.), translated from the German by H. M. Lucas; J. W. Allen, *History of Political Thought in the Sixteenth Century* (ib.), with special reference to Germany, Switzerland, England, France, and Italy; G. G. Coulton, *Art and the Reformation* (ib.), an historical study; Hilaire Belloc, *How the Reformation Happened* (ib.); and H. Boehmer, *The Jesuits* (Phila.), a historical study of the famous order.

CELTIC. Standish Hayes O'Grady, well-known Irish scholar, died on May 18, in his eighty-second year. He was regarded by many as the originator of the so-called Celtic Renaissance, which, according to Matthew Arnold, introduced into English literature of the nineteenth century "its turn for style, its style for melancholy, and its turn for natural magic." His chief works are *History of Ireland, The Story of Ireland, The Coming of Cuchulainn, The Flight of the Eagle, Ulrick the Ready, The Heroic Period*, a romantic trilogy, and *The Chain of Gold*.

In Irish, two important contributions of Roland M. Smith deserve mention: "The Alphabet of Cuigne Mac Eoin," published in the *Zeitschrift für Celtische Philologie* (xvii, 45-72), and "The Speculum Principium in Early Irish Literature," in *Speculum* (ii, 411-455). E. Parkinson, *The City of Downe* (Belfast), supplies a history of Downpatrick, Ireland. Stephen Gwynn's *Ireland* (N. Y.) describes the beautiful and historical spots of that country. Other works include Pauline Henley, *Spenser in Ireland* (N. Y.), consisting of a study of the Irish environment of the English poet, Edmund Spenser, as considered in its historical aspects; J. C.

Molony, *The Riddle of the Irish* (N. Y.), containing chapters on the early and later history of Ireland, an interesting comparison between Ireland and India, and other topics; and Dr. Crone, *Concise Dictionary of Irish Biography* (N. Y.).

On August 24, the North American Manx Association was organized at Cleveland, Ohio, with the following officers: Honorary President, A. B. Crookall of Douglas, Isle of Man; Honorary Vice President, Richard Cain of Douglas; President, J. E. Christian of Cleveland; and First Vice President, Dr. John Moore of Chicago. As this appears to be the first Manx society ever formed outside the Isle of Man, its work should prove most interesting.

The American Iona Society continued during the year under the able leadership of President Richard M. Montgomery, of New York, its active campaign for funds to be devoted to the erection of a centre of Gaelic culture in Scotland. Publications of interest include L. C. Wimberly, *Folklore in the English and Scottish Ballads* (Chicago), a study in literary history; *Old Scotch Songs and Poems* (N. Y.), phonetically spelt and edited by Sir James Wilson; Isabel Cameron, *A Highland Chapbook* (Stirling), containing valuable Celtic folklore; and D. Coghill, *The Elusive Gael* (Stirling), a study of Highland Scottish character.

A. K. H. Jenkin, *The Cornish Miner* (London) relates his history from pre-Roman times down to the present day.

During the summer the National Library of Cardiff, Wales, had on exhibition a collection of the Laws of Howel Dda which were codified during the reign of this King in the early part of the tenth century. The oldest extant manuscript on exhibition was in Latin and dated from A.D. 1175-1200. On the other hand, the most ancient Welsh manuscript—in which language the laws were first composed—which the Library had on display, dated from about A.D. 1200 and is known as the *Llyvyr Du*, or the *Black Book of Chirk*.

W. B. Johnson, *Folk Tales of Brittany* (N. Y.) consists of a collection of interesting myths, most of which are still current among the Bretons of Northern France.

SLAVIC. A curious example of the confusion of tongues—a form of Anglicized Slavic—is brought to public attention in a word-list published in *The Interpreter* (N. Y.). Most readers are doubtless aware of the fact that the Italians of this country have even developed a literature in a form of Anglo-Italian, many words of which have crept into the Italian literature at home, e.g., the poetry of Giovanni Pascoli. Now the Slavs and other immigrants hailing from eastern Europe are attempting to solve the same problem in a somewhat similar manner; i.e., adding a native suffix to the English word. Thus, "fine shoes" become "sapogi" or "buty" to the Poles, Russians, Ukrainians, Solvaks, and Jugo-Slavs, while our "floor," being so different from their own, becomes "flor"; "store" becomes "shtor"; to "move," unknown in their country, becomes to the Hungarian "muffolni"; to the Lithuanian "issimufyt," and to the Russian "mufuyet do khauzu."

The following works may be mentioned: C. J. C. Street, *Slovakia, Past and Present* (Westminster, Eng.), a brief history of the country; Lucia M. Borski and Kate B. Miller, *The Tailor and Other Fairy Tales* (N. Y.), translated from the Polish; and J. Gregor and R. Fulop-Miller,

Das Russische Theater (Vienna), containing an account of the nature and history of the Russian theatrical movement.

ENGLISH. As indicated in the YEAR BOOK survey of MODERN PHILOLOGY for the year 1927, the famous Oxford English Dictionary, the correct title of which is *A New English Dictionary on Historical Principles*, was brought to a close by the publication on April 19 last of the concluding section, "Wise-Wyzen" in Part Two of Volume Ten. The collection of the material for this stupendous undertaking was begun more than seventy years ago, and the publication of it was initiated in 1884 under the supervision of Sir James A. H. Murray, H. Bradley, W. A. Craigie, and C. T. Onions. A few statistics may be of interest in regard to this great work: More than 414,825 words are defined and their meanings illustrated by 1,827,306 quotations, chronologically arranged. Of the 240,165 main words, 177,970 are current, 54,464 obsolete, and 9,371 alien. Ninety large columns of fine print are devoted to "Water," its compounds and derivatives. There are three columns in each of 15,438 pages, and, according to the *Periodical* (Oxford Univ. Press), it has been calculated that these columns if placed end to end would extend well over seven miles, while the lines of type similarly placed would reach 178 miles. There are more than 24,000,000 printed words in the Dictionary, and the total cost was about \$1,500,000.

Works of interest to the general public as well as to the specialist include the following: H. C. Wyld, *Short History of English* (N. Y.), a revised edition containing a bibliography of recent books on the subject and lists of texts and editions; G. H. McKnight, *Modern English in the Making* (ib.), a history of the development of the English language through Chaucer, Spenser, Shakespeare, to Dr. Johnson's dictionary; O. Jespersen, *Modern English Grammar* (London), of which part i is devoted to sounds and spelling, and parts ii and iii to syntax; S. Cox, *The Teaching of English* (N. Y.), a series of personal talks; A. Levitas, *Commercial English* (ib.), a handbook; Margaret P. McLean, *Good American Speech* (ib.), containing chapters on the international phonetic alphabet, intonation, etc., as aids in simplifying and standardizing the pronunciation of English; M. H. Wesen, *Crowell's Dictionary of English Grammar* (ib.), a handbook of American usage in which the guiding principle of the author is that "grammar was made for man, not man for grammar"; J. F. Sheahan, *The English in English Bibles* (Poughkeepsie, N. Y.), a study of biblical language; and G. H. W. Rylands, *Words and Poetry* (N. Y.), a study of poetic values, with an introduction by Lytton Strachey.

Works devoted to English literature include A. Esdalle, *The Sources of English Literature* (N. Y.), a guide to bibliographies and catalogues; L. Magnus, *English Literature in its Foreign Relations* (ib.), a study of foreign influences on English literature; and S. Halkett and J. Laing, *Dictionary of Anonymous and Pseudonymous English Literature* (vols. iii and iv, London), a new and enlarged edition, by Dr. J. Kennedy, W. A. Smith, and A. F. Johnson, extending as far as the letter P.

W. W. Lawrence, *Bæwulf, an Epic Tradition* (Cambridge, Mass.) is a thoroughly scholarly exposition of the literary and historical background of Bæwulf. Chaucer, and the mediæval

period are represented in H. S. Bennett, *England from Chaucer to Caxton* (N. Y.), which is a collection of passages of literary interest illustrating English life from Chaucer's time to the end of the mediæval period; *The Canterbury Tales of Geoffrey Chaucer* (Boston), a new edition; a very scholarly edition of the same work by Prof. J. M. Manly of the University of Chicago; and E. G. Miller, *English Illuminated Manuscripts of the XIVth and XVth Centuries* (Paris), a collection of beautifully illustrated manuscripts.

E. Hicks, *Sir Thomas Malory: His Turbulent Career* (Cambridge, Mass.) is the first biography of the author of the *Morte d'Arthur*, which has been called "not only the greatest of English prose romances, but also in a very real sense the pioneer of the English novel," and of which the only perfect copy printed by Caxton that is known to exist is now in the Morgan Library of New York.

The Elizabethan Period is dealt with in R. W. Chambers, *The Saga and the Myth of Sir Thomas More* (London), published in the *Proceedings of the British Academy*; V. von Klarwill, *Queen Elizabeth and Some Foreigners* (N. Y.), containing a series of unpublished letters found in the archives of the Hapsburg family and translated by T. N. Nash; G. R. Potter, *Elizabethan Verse and Prose* (ib.), an anthology; and W. Thorp, *The Triumph of Realism in Elizabethan Drama, 1558-1612* (Princeton, N. J.), a dissertation of Princeton University.

S. A. Tannenbaum, *The Assassination of Christopher Marlowe* (N. Y.) supplies an ingenious explanation of the circumstances attending the poet's death.

E. H. C. Oliphant, *Shakespeare and His Fellow Dramatists* (2 vols., N. Y.) contains the text of fifteen Shakespearean plays and thirty by contemporaries of the great dramatic poet. Among other works relating to Shakespeare and his epoch are A. Gray, *How Shakespeare "Purged" Jonson* (Cambridge, Eng.), an essay on Elizabethan drama; H. H. Furness, Jr., *A New Variorum Edition of Shakespeare* (Phila.) containing the tragedy of *Coriolanus*; S. Brooke, *On Ten Plays of Shakespeare and Ten More Plays of Shakespeare* (London), being essays on the leading dramas of the poet; G. F. Bradby, *The Problems of Hamlet* (London), a series of essays in interpretation; F. Madan, *Catalogue of Shakespeareana* (Edinburgh), consisting of notes in articles and books dealing with Shakespeare; W. J. Lawrence, *Shakespeare's Workshop* (Boston), essays on Shakespearean subjects; D. N. Smith, *Shakespeare in the Eighteenth Century* (London); and A. H. Thorndike, *Shakespeare in America* (London), the annual Shakespeare lecture of the British Academy, 1927.

Dr. S. A. Tannenbaum's *Shakespeare Forgeries in the Revels Accounts* (N. Y.) attempts to prove that all previous studies of the famous Revels Accounts of 1604-5 and 1610-11—the well-known forgeries of Peter Cunningham—have been superficial and unscientific and that the purpose of the forger was, among other things, to establish the dates of composition of some of Shakespeare's plays.

Works relating to the seventeenth and eighteenth centuries include *Milton on Education* (New Haven, Conn.), consisting of the *Tractate of Education* and supplementary extracts, edited by O. M. Ainsworth; E. J. Dent, *The Foundations*

of English Opera (N. Y.), a study of musical drama in England during the seventeenth century; R. Head and F. Kirkman, *The English Rogue Described in the Life of Meriton Latroon* (ib.), a reprint of a book first published in 1665; Sir Leslie Stephen, *History of English Thought in the Eighteenth Century* (2 vols., London), a new edition; and M. Dorothy George, *England in Johnson's Day* (N. Y.), a survey of social life in England as presented by contemporaries of Dr. Johnson.

The following dictionaries and repertories are worthy of mention: *A Treasury of English Aphorisms* (Boston), edited by L. P. Smith; H. B. English, *Students' Dictionary of Psychological Terms* (Yellow Springs, Ohio), containing definitions of over two thousand terms; P. D. Hugon, *Our Minds and Our Motives* (N. Y.), a compilation of the facts and theories of human behavior; Winnifred S. Fales, *Household Dictionary* (ib.), a handbook for the home; J. Spiegel, *International Business Dictionary* (ib.), which is the second edition of the *Standard Business Dictionary* extended in its scope beyond the borders of the United States to include the business terms of the entire commercial world; L. Herendi, *Complete Dictionary of Banking Terms in Three Languages* (ib.), in English, French, and German; W. F. Spalding, *Dictionary of the World's Currencies and Foreign Exchanges* (ib.), in the form of a concise encyclopedia; a revised edition of *The Literature of Business* (ib.), edited by A. G. Saunders and H. L. Creek; and the second volume (B) of *Universal Knowledge* (ib.), a dictionary and encyclopedia of arts, sciences, history, biography, law, literature, religions, nations, races, customs, and institutions.

GERMANICS. An important event in the history of cultural relations between Germany and the United States is the reestablishment at Columbia University of the Deutsches Haus which was discontinued during the World War. Among the activities of the House will be an annual German book exhibition. A useful contribution along these lines is the first volume of A. B. Faust's *The German Element in the United States* (N. Y.), which treats of the political, moral, social, and educational influence of the Germans in this country.

The Oxford Book of German Verse (London), edited by H. G. Fiedler, is a valuable anthology extending from the twelfth to the twentieth century. Other works of interest include J. W. Thompson, *Feudal Germany* (Chicago), a comprehensive study of the German people in the Middle Ages; R. H. Fife, *Young Luther* (N. Y.), an outline of the German Reformer's intellectual and religious development up to 1518; A. Hyma, *Luther's Theological Development from Erfurt to Augsburg* (ib.); and S. Liptzin, *Lyrical Pioneers* (ib.), being investigations into German social poetry; and Eva Fiesel, *Die Sprachphilosophie der deutschen Romantik* (Tübingen), a scholarly investigation. B. Fridsma, *The Place of the Frisians in Dutch History* (Grand Rapids, Mich.) is a brief survey of the important rôle played by this little-known people in Holland.

The American-Scandinavian Foundation continued its praiseworthy activities under the editorial supervision of Prof. W. W. Lawrence. Among its contributions of the past year were *Norway's Best Stories* (N. Y.), edited by Hanna

A. Larsen, and translated by Anders Orbeck; and *Sweden's Best Stories* (ib.), by the same editor, with translations by C. W. Stork. C. Bergendoff, *Olavus Petri and the Ecclesiastical Transformation in Sweden* (ib.) consists of a study in the Swedish Reformation. Mention also may be made of the following: Julia D. Adams, *The Swords of the Vikings* (N. Y.), a selection of stories from the works of Saxo Grammaticus; and S. J. Beckett, *The Fjords and Folk of Norway* (ib.), a new and revised edition.

ROMANCE. The most useful contribution to the general field of research in the Romance languages is the Spanish translation of W. Myer-Lübke, *Introducción a la Linguística románica* (Madrid), a new version based on the third German edition, with notes and additions, by Américo Castro of the University of Madrid. Other works worthy of mention include *Philologische Studien aus dem romanischgermanischen Kulturkreise*, offered to Karl Voretzsch on his sixtieth birthday, and *Zum Gedenken an seine erste akademische Berufung vor 35 Jahren*, and edited by B. Schädel and W. Mulertt (Halle, 1927); L. T. Ojeda, *La geografía prehistórica del Mediterráneo* (Valparaíso), being the substance of a lecture given in the Ateneo of that city; the same author's *Los idiomas latinos: proceden de una lengua ibero-ligur?* (ib., 1927); P. S. Allen and H. M. Jones, *The Romanesque Lyric* (Chapel Hill, N. C.); M. Heepe, *Lautzeichen und Ihre Anwendung in verschiedenen Sprachgebieten* (Berlin); E. C. Hills, *Drift in the Romance Languages* (N. Y.), a reprint from *Hispania*; H. Rheinfelder, *Das Wort Persona* (Halle); O. J. Tallgren, *Survivance arabo-romaine du catalogue d'étoiles de Ptolomée* (Helsinki), containing philological studies on various manuscripts; *Modern Language Instruction in Canada* (2 vols., Toronto), published by the American and Canadian Committee on Modern Languages; R. Guiette, *La Légende de la Sacristine* (Paris, 1927), a study in comparative literature; *Periodica* (X-XIV), containing complete sets of scholarly journals in *Koehler's Antiquarium* (Leipzig, 1927); and *Supplementheft XIV der Zeitschrift für Romanische Philologie* (Halle, 1927), consisting of the Bibliography of 1924, edited by F. Ritter.

The student is also referred to the "American Bibliography for 1927," issued in the *Publications of the Modern Language Association of America*, and of which the French section was prepared by Prof. H. C. Lancaster of Johns Hopkins (pp. 49-60); Spanish, by Professor J. P. W. Crawford of the University of Pennsylvania (pp. 60-65), and Italian, by Prof. J. E. Shaw of the University of Toronto (pp. 66-69). The *Romanic Review* (N. Y.) also contained the first part of "Romance Linguistics in 1927" (pp. 366-378) by Prof. Pauline Taylor of New York University. The three sections published included *General, Vulgar, and Medieval Latin and Phonology*.

FRENCH. Professor Bernard Fay, of the University of Clermont-Ferrand, France, and Prof. Daniel Morent, of the University of Paris, continued in the *Romanic Review* (N. Y.) their very interesting discussion of the methods of literary criticism. The former upholds a form of impressionism in which beauty is emphasized—a modification of the standardized theories of Matthew Arnold, Emile Faguet, and Croce—while the latter prefers the historical method as

first introduced by Taine and later developed by the Germans and Gustave Lanson. It is needless to add that the debate is of the utmost importance to students of literature and its history.

The eighth edition of the dictionary of the French Academy was announced by the *New York Times* in the summer as approaching completion. Though representing 50 years of study and discussion, this dictionary will be limited to two volumes and will contain only about 28,500 words. The difference between the imposing Oxford English Dictionary mentioned above and the Academy's product is that the former is inclusive and the latter rigidly exclusive. This divergence of point of view is further marked in that the editors of the English dictionary assumed a liberal attitude, welcoming wherever possible neologisms and even such colloquialisms as appeared to be engrafted permanently into the English language, whereas the Academy's Dictionary committee of six is distinctly conservative, aiming on all occasions to defend the French language against all foreign accretions.

The grave danger of the Academy's method is that it will perforce tend to render the language static, for, as René Doumic, Permanent Secretary of the Academy, states: "Our rule is to accept new words only when they have been current sufficiently long to warrant the belief that they will take a place in the language." While there is sound reason to object to such snobbish intrusions as "sport," "5 o'clock," "high life," "meeting," "leader," "vacation," "car," "footing" (for "walking"), it is absurd to pretend to exclude all English importations, for one can well imagine how impoverished our English language would be if we had not freely borrowed from the French our vocabulary of automobiling, aviation, etc. That the Academy does not, however, adhere strictly to its self-imposed rules, may be seen in the fact that it accepted in its membership Abel Hermant, whose *Xavier, ou les Entretiens sur la grammaire française* (Paris) is liberal, to say the least, and whose "discours de réception" was found, by M. Willy, to contain more than twenty words not existing in the Academy's dictionary. The august institution also "crowned" Henri Bauche's *Le Langage populaire* (Paris), which is, in brief, a study of Parisian argot. All of which merely emphasizes the fact that the influence of the Academy, largely because of its autocratic and reactionary attitude—as a consequence of which it is almost entirely out of touch with the rapid changes taking place in French life—is steadily on the wane. As M. Hermant says of the third and fourth conjugations of the French verb, it is "dying."

Bibliography, in which the French have generally excelled, is represented by numerous contributions, of which the most important are the following: a reprint of the famous Brunet, *Manuel du libraire et de l'amateur de livres* (9 vols., Paris); *Les Trésors des Bibliothèques de France* (part vii, Paris), published under the supervision of R. Cantinelli and E. Dacier; A. Blum, *Les Origines du livre à gravure en France* (ib.), devoted to the typographical incunabula; *Catalogue des thèses et écrits académiques* (part 41, ib.), published by the Ministry of Public Instruction; L. Carteret, *Le Trésor du bibliophile romantique et moderne, 1801-1875* (4 vols., ib.); L. Delteil, *Annuaire des ventes de livres, 1926-1927* (ib.); and A. Grandin, *Bibliographie générale des sciences juridiques, poli-*

tiques, économiques, et sociales (ib.), comprising the years 1926 and 1927. General works on French literature include J. Haas, *Kurzgefasste französische Literaturgeschichte von 1549-1900* (III Band, Leipzig), dealing with the period from 1715 to 1820; *Handbuch der Frankreichkunde* (part i, Frankfurt); W. Gottschalk, *Die humoristische Gestalt in der französischen Literatur* (Heidelberg); V. Klemperer, *Geschichte der französischen Literatur* (Band V, Leipzig); and D. Mornet, *Histoire de la littérature et de la pensée françaises contemporaines, 1870-1925* (Paris), a very scholarly and stimulating study.

The mediæval period of French literature is represented in the following: *Mélanges offerts à M. Alfred Jeanroy* (ib.), edited by J. Bédier, W. P. Shepard, A. Langfors, A. Thomas and J. J. Salverda de Grave; B. A. Jeanroy, *Le Roman de la Rose* (ib.); F. Schneegans, *Le Théâtre édifant en France au XIV^e et XV^e siècles* (ib.); Margaret Schlauch, *Medieval Narrative* (N. Y.), a collection of translations; R. Bossuat, *Drouart La Vache, traducteur d'André Le Chapelain 1290*, (Paris); the same editor's *Les Livres d'Amours de Drouart La Vache* (ib.); A. Hilka, *Drei Erzählungen aus dem didaktischen Epos, L'Image du Monde* (Halle); L. Hoffrichter, *Die ältesten französischen Bearbeitungen der Melusinensage* (Halle); R. T. Holbrook, *Guillaume Aleïs et Pathelin* (Berkeley, Calif.); E. von Jan, *Das literarische Bild der Jeanne d'Arc* (Halle); O. Kjava, *Études sur deux poèmes français relatifs à l'Abbaye de Fécamp* (Helsinki); and J. Beck, *Les Chansonniers des Troubadours et des Trouvères* (two vols., Phila.), containing photostatic reproductions of the music of the troubadours.

Studies in the French Renaissance include F. C. Palm, *Politics and Religion in Sixteenth-Century France* (Boston); Anatole France, *Rabelais* (N. Y.); Rabelais, *Gargantua and Pantagruel* (ib.), containing an excellent biographical sketch by H. Clouzot; Montaigne, *Essays* (2 vols., N. Y.), translated by E. J. Trechmann; and F. Strowski, *Saint François de Sales* (Paris), being a history of the religious sentiment in France in the sixteenth and seventeenth centuries.

Among the recent valuable contributions to the study of French literature in the seventeenth and eighteenth centuries, the following deserve mention: S. S. Forester, *Louis XIV* (N. Y.), a biography; E. Magne, *Bibliographie des œuvres de Boileau-Despréaux* (Paris); C. S. Gutkind, *Molière und das Komische Drama* (Halle); Pascal, *Pensées sur la vérité de la religion chrétienne* (2 vols., Paris), edited by J. Chevalier; Karl Vossler, *Jean Racine* (Munich); H. C. Chatfield-Taylor, *Creators of Modern Comedy* (2 vols., N. Y.), containing Molière with an introduction by the late T. F. Crane and Goldoni with a foreword by Stark Young; V. Thaddeus, *Voltaire, Genius of Mockery* (ib.), a biographical study; J. J. Rousseau, *Correspondance générale* (vol. ix, Paris), edited by T. Dufour and P. Plan; *The Confessions of J.-J. Rousseau* (N. Y.), translated by W. C. Mallory; and A. Lacey, *Piwérécourt and the French Romantic Drama* (Toronto).

A few noteworthy works relating to the nineteenth century include M. Souriau, *Histoire du Romantisme en France* (2 vols., Paris); A. Billy, *La Littérature française contemporaine* (2d. ed., Paris); C. P. Cambiaire, *The Influence*

of Edgar Allan Poe in France (N. Y.); Louise B. Dillingham, *The Creative Imagination of Théophile Gautier* (Bryn Mawr, Pa.), a study in literary psychology; E. M. Grant, *French Poetry and Modern Industry, 1830-1870* (Cambridge, Mass.); M. Rudwin, *Romantisme et Satanisme* (Paris); P. Moreau, *Chateaubriand* (Paris), a biographical study; L. P. Shanks, *Flaubert's Youth, 1821-1845* (Baltimore); M. Josephson, *Zola and His Time* (N. Y.); J. Larnac, *Colette, sa vie, ses œuvres* (Paris); H. S. Schwartz, *Alexandre Dumas, Fils, Dramatist* (N. Y.); W. L. Schwarz, *The Imaginative Interpretation of the Far East in Modern French Literature, 1800-1925* (Paris); E. Sée, *Le Théâtre français contemporain* (Paris); Paul Souday, *André Gide* (12th ed., ib.); the same author's *Paul Valéry* (12th ed., ib.); N. Ségur, *The Opinions of Anatole France* (N. Y.), translated by J. L. May; Hilda Norman, *Swindlers and Rogues in French Drama* (Chicago); and *Types of Farce Comedy* (N. Y.), consisting of nine farce comedies from Aristophanes to Anatole France, edited by R. M. Smith and H. C. Rhoads.

Finally, the following studies on the French language deserve to be noted: P. Barbier, *Etymological Notes on the French Language* (Leeds, Eng.); H. Langlard, *La Liaison dans le français* (Paris); and H. Sensine, *L'Emploi des temps en français* (2d ed., ib.).

ITALIAN. The Italian Book Exhibition, held at the Casa Italiana, Columbia University, New York, from May 25 to October 15, 1928, was the first of its kind ever given in the United States. It was organized under the auspices of the Ministries of Foreign Affairs and Public Instruction of Italy and the Institute of Italian Culture in the United States.

The Casa Italiana Exhibition contained about 15,000 volumes, representing every domain of thought and extending from the period of Dante to the present day. For an excellent account of the history of fine book making in Italy, the reader is referred to W. D. Orcutt, *The Book in Italy* (N. Y.) and the *Catalogue* of the above Exhibition. The *Italiana Bibliography*, edited by T. W. Huntington (N. Y.) is, on the other hand, an approach to a comprehensive selected list of books in English relating to Italy.

Works dealing with mediæval Italian literature include L. Salvatorelli, *The Life of Saint Francis of Assisi* (N. Y.), translated by E. Sutton; E. Gilson, *St. Thomas d'Aquin* (4th ed., Paris); M. Grabmann, *Thomas Aquinas* (N. Y.); Dante, *The Inferno* (ib.), translated by S. F. Wright; L. Valli, *Il linguaggio segreto di Dante e die "Fideli d'Amore"* (Rome); E. H. Wilkins, *The University of Chicago Manuscript of the Genealogia Dcorum Gentilium of Boccaccio* (Chicago); Boccaccio, *The Decameron* (N. Y.), translated by John Payne; R. De La Sizeranna, *Le vertueux Condottiere* (Paris), a history of Federigo de Montefeltro, Duke of Urbino, 1422-1482; E. McCurdy, *The Mind of Leonardo Da Vinci* (N. Y.), a biography; Montenovesi, *Beatrice Cenci* (Rome); G. Prezzolini, *Niccolo Machiavelli, The Florentine* (N. Y.); E. Donadoni, *Ugo Foscolo* (2d ed., Palermo), a study of the critic and poet; *Poems of Giovanni Pascoli* (N. Y.), translated by Arletta M. Abbot; and L. Fiumi and A. Henneuse, *Anthologie de la poésie italienne contemporaine* (Paris).

The following linguistic studies are also worthy of note: K. Jäberg and J. Jud, *Prospectus of the Linguistic and Ethnographic Atlas of Italy and Southern Switzerland* (Geneva); G. Puccio, *La Questione della Lingua italiana a Malta* (Milan); and *Studi di Filologia Italiana* (Florence, 1927), a new review established by the Reale Accademia della Crusca.

SPANISH. The founding in 1928 of the *Revista de Estudios Hispánicos* (N. Y.) is an event of capital importance in the literary relations of the United States with South America, for the review is devoted solely to the study of the history of South American literature. The editor of the new Journal is Prof. Federico de Onís, of Columbia University, and its sponsors are the University of Porto Rico (through whose munificence it is published), Columbia University, and the Centro de Estudios Históricos of the University of Madrid. Its most valuable contribution is a comprehensive bibliography of South America published in each issue. On the subject of bibliography, we may note R. Hoecker, *Das Spanische Bibliothekswesen* (Linz), a bibliographical investigation; and Harriet D. MacPherson, *Bibliography of Spanish Books for a Medium-Sized College Library* (Boston), a reprint from the *Bulletin of Bibliography*. Works on the early period of Spanish literature include C. C. Marden, *Cuatro Poemas de Berceo* (Madrid); Winifred Sturdevant, *The Misterio de los Reyes Magos* (Baltimore, 1927), studying its position in the development of the mediæval legend of the Three Kings; John Van Horne, *El Bernardo of Bernardo de Balbuena* (Urbana, Ill., 1927); G. T. Northrup, *El Cuento de Tristan de Leonis* (Chicago); and G. Diaz de Gomez, *The Unconquered Knight* (N. Y.), a chronicle of the deeds of Don Pero Nino, translated from the mediæval Spanish tale of chivalry.

In the later periods of Spanish literature, we have F. de Los Rios, *Religion y Estado en la España del siglo XVI* (N. Y.), a publication of the Instituto de Las Españas; Rebecca Switzer, *The Ciceronian Style in Fray Luis de Granada* (ib.); E. K. Kane, *Gongorism and the Golden Age* (Chapel Hill, N. C.), a study of unrestraint in the arts; O. H. Green, *The Life and Works of Lupercio Leonardo de Argensola* (Phila.); Barbara Matulka, *The Cid as a Courtly Hero* (N. Y.), with special reference to French literature; Miguel de Unamuno, *The Life of Don Quixote and Sancho* (N. Y.), translated by H. P. Earle; Iris L. Whitman, *Longfellow and Spain* (N. Y.); and Pauline L. Goode, *Easy Spanish Books for Children* (N. Y.), a bibliography.

On South America, we have E. J. Hall and F. Aguilera, *Introducción a la historia de la América latina* (N. Y.); Bernal Diaz del Castillo, *The Discovery and Conquest of Mexico* (ib.), translated by Professor Maudslay; and G. B. Winton, *Mexico, Past and Present* (Nashville, Tenn.).

PHONETICS. Margaret P. McLean, *Good American Speech* (N. Y.), is a book on phonetics, especially intended for teachers of elocution and dramatics. M. E. De Witt, *Our Oral Word* (ib.) discusses phonetics as a social factor, while A. Crofton and Jessica Royer, *Self-Expression Through the Spoken-Word* (ib.) is a textbook on the use of the speaking voice. Readers interested in proposed international languages may consult G. Peano, *Interlingua* (Torino), devoted to Esperanto; and the Rev. E. P. Foster *Alphabet*

of Ideas or Dictionary of Ro (Waverly, W. Va.), containing a grammar and vocabulary of the world language invented by the author.

PHILOSOPHY. The year 1928 failed to bring forth a new method in philosophy, or a great intuition, or a new synthetic system in the style of Hegel or Spencer. The Idealists were the great system of builders, but they were comparatively silent, while the Realists, ascendant in the present reign of science and common-sense, were mainly critical and polemical, possessing no common doctrine except their enmity toward Idealists. Opposed in principle to the deductive method in philosophy and the speculative constructions of the past and incapable of forming inductive systems from the diffuse complication of scientific fact, the Realists have left us, oddly enough, with no system at all. Though the recent works of Russell, Whitehead, Broad, and Alexander make an admirable effort to harmonize the conclusions of the various sciences and show their relation to experience, the results are qualified and fragmentary and stamped with the mutability and uncertainty of science itself.

Though no new systems or methods had their inception in 1928, a number of solid contributions were made and several important philosophical movements advanced. In Germany, phenomenology and the related study of historical essences particularly flourished. Symbolic logic was also gaining new adherents and making new developments. Permanent progress in phenomenology and symbolic logic seemed quite possible and should be looked for in the future, since both are independent of the changing and philosophically ambiguous results of natural science.

In America the distinction between Idealist, Realist, Pragmatist, Naturalist, and Personalist became less sharp and less passionate. A need for a new analysis was felt. The clash between New and Critical Realists, so common a few years previously, had almost ceased, the interest of the contestants having turned to a more critical examination of their positions. All cults and schools tend to lose that first ardor of advocacy, to be modified and refined. The New Realist in his opposition to Critical Realism found himself close to Idealism. The Naturalist, once a rebel against Religion and Ideals, had become quite orthodox. The Pragmatist when he states his position fully is not quite a Pragmatist, and the Behaviorist, though he would rather not talk about it, really admits an epiphenomenal consciousness. Personalists were beginning to realize that no one objects to the self as such but only to certain theories about the self. The tendency of the times was toward a greater caution and a more refined analysis. Prof. R. B. Perry in an article in the *Journal of Philosophic Studies* suggested that "the present peace (in the philosophical world) is not due to conquest or exhaustion but to the invention of arbitrating concepts—," the which, breaking down the one-sidedness of the opposing schools, promote peace and steady progress.

Among the contributions of the year were two important historical works. Part v of Ueberweg's *History of Philosophy* (*Grundriss der Geschichte der Philosophie*), which deals with nineteenth-century philosophy outside of Germany, is a very valuable book, though it does not compare in thoroughness and accuracy with the corresponding volume on German philosophy of the nineteenth century. S. Radhakrishnan's second vol-
